Beginning TH COVERED WAGON—By Emerson Hough

Digitized by Google

If you like it really FRESH–

If your taste demands only the very choicest asparagus—if nothing satisfies you but that fragile tenderness and exquisite flavor which are found only in asparagus fresh-cut—and if you want this rare delicacy all year round—bear in mind that it is always available to you in various sized cans under the DEL MONTE Brand.

For DEL MONTE Asparagus is *fresh* in the truest sense of the word. Grown in California's finest asparagus beds—cut just as it peeps above the ground and canned immediately, before the fiber toughens or the flavor vanishes—it comes to your table just as tender and delicious as if you cooked it fresh from your own garden.

It is the very choicest asparagus, cooked ready to serve, in season or out of season,—whenever you want it—in hundreds of tempting ways.

Remember this when ordering

DEL MONTE Asparagus is packed and graded as to thickness or circumference of the spears or stalks—and each size is shown on the label, as Giant, Colossal, Mammoth, where extra large spears are wanted, and Large, Medium and Small where a greater number of portions is necessary. The quality, however, is always the same—as the uniform tenderness and delicacy of flavor so characteristic of DEL MONTE are not affected by the size of spear.

CALIFORNIA PACKING CORPORATION
San Francisco, California

SEND FOR THIS RECIPE BOOK

For many delightful new ways to serve DEL MONTE Asparagus, as well as the many other varieties of canned fruits and vegetables packed under the DEL MONTE Brand, send for a copy of "DEL MONTE Recipes of Flavor." It contains 64 pages of practical recipes and suggestions for making every-day meals more tempting and healthful. It is free. Address Department E, California Packing Corporation, San Francisco, California.

"Nobody will deny—that every additional mile of good roads will serve to diminish the immense costs of distribution and transportation—that mean, gnawing expense which doubles the price of virtually everything we buy." *Collier's Weekly.*

What did the Winter do to Your Roads?

In communities where the annual Spring thaw turns roads into mires of soggy mud, Spring is a season of discomfort and isolation.

Throughout the country, there are still thousands of such communities. Perhaps yours is one of them. Perhaps the picture at the top of the page is typical of some roads in your locality.

Now look at the Tarvia Roads shown at the right. These roads are waterproof and frost-proof. Neither the freezes of Winter nor the thaws of Spring have any effect upon them. These highways are firm, smooth, dustless and mudless all the year round.

Your community—*any community*—can afford such roads. They are comparatively low in first cost, and are so much more economical over a term of years that the saving makes a more extensive road program possible. In many cases the old macadam or gravel can be utilized as the foundation for a traffic-proof Tarvia top.

We should like to tell you more about the many uses of Tarvia, its ease of application and its economy as a maintenance material for hard-surfaced roads and pavements of every type. A letter addressed to our nearest office will bring you facts, figures and pictures.

Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department which keeps up to the minute on all road problems. If you will write to the nearest office regarding road conditions or problems in your vicinity, the matter will have the prompt attention of experienced engineers. This service is free for the asking. If you want *better roads* and *lower taxes*, this Department can greatly assist you.

Hinsdale-Downers Grove Road, Downers Grove, Ill.
"Tarvia-X" 1920

Road near Hanover Center, Hanover, Mass.

Whenever soap comes in contact with the skin—use Ivory

Ivory Soap comes in a convenient size and form for every purpose

Small Cake

For toilet, bath, nursery, shampoo, fine laundry. Can be divided in two for individual toilet use.

Large Cake

Especially for laundry use. Also preferred by many for the bath.

Ivory Soap Flakes

Especially for the washbowl washing of delicate garments. Sample package free on request to Division 25-D, Dept. of Home Economics, The Procter & Gamble Company, Cincinnati, Ohio.

PEOPLE of refinement have much the same ideas no matter where they live. It is not surprising, therefore, to find Ivory Soap all over this country in homes where good taste and good sense prevail—from the most luxurious households to the simplest.

No better soap can be made, because Ivory includes every one of the seven essentials that soap can have. Its abundant lather cleanses thoroughly. It is so pure and mild that it cannot harm anything it touches. It rinses so completely and easily that the first dash of clear water carries away soap and dirt and leaves the skin feeling smooth and soft. It is white and fragrant, therefore pleasant to use. For economy and convenience "it floats".

For all these reasons Ivory is not only ideal for the toilet, the daily bath, the shampoo and the nursery, but is also completely satisfactory for fine laundry and for all housework where soap comes in contact with the skin.

IVORY SOAP . . IVORY IT FLOATS . . 99 44/100 % PURE

THE COVERED WAGON

Here Lay the West, Barbaric, Abounding, Beautiful. Surely It Could Mean No Harm to Any Man

By Emerson Hough

ILLUSTRATED BY W. H. D. KOERNER

"Here 'em come, Jesse! More and more! Must be forty or fifty families."

Molly Wingate, middle-aged, portly, dark browed and strong, stood at the door of the rude tent which for the time made her home. She was looking down the road which lay like an écru ribbon thrown down across the [illegible] grass, bordered beyond by the timber-grown bluffs of the Missouri.

Jesse Wingate allowed his team of harness-marked horses to continue their eager [illegible] at the watering hole of the little stream near which the camp was pitched until, [illegible] quenched, they began burying their muzzles and blowing into the water in [illegible] enjoyment. He stood, a strong and tall man of perhaps forty-five years, of [illegible] eye and short, close-matted, tawny beard. His garb was the loose dress of the [illegible] settler of the Western lands three-quarters of a century ago. A farmer he must [illegible] been back home.

[illegible] this encampment, on the very front of the American civilization, now be called [illegible] home? Beyond the prairie road could be seen a double furrow of jet-black glistening [illegible] turning the green grass and its spangling flowers, first browsing of the plow on virgin soil. It might have been the opening of a farm. But if so, why the crude bivouac? Why the gear of travelers? Why the massed arklike wagons, the scores of morning fires lifting lazy blue wreaths of smoke against the morning mists?

The truth was that Jesse Wingate, earlier and impatient on the front, out of the very suppression of energy, had been trying his plow in the first furrows beyond the Missouri in the great year of 1848. Four hundred other near-by plows alike were avid for the soil of Oregon; as witness this long line of newcomers, late at the frontier rendezvous.

"It's the Liberty wagons from down river," said the campmaster at length. "Missouri movers and settlers from lower Illinois. It's time. We can't lie here much longer waiting for Missouri or Illinois, either. The grass is up."

"Well, we'd have to wait for Molly to end her spring term, teaching in Clay School, in Liberty," rejoined his wife, "else why'd we send her there to graduate? Twelve dollars a month, cash money, ain't to be sneezed at."

"No; nor is two thousand miles of trail between here and Oregon, before snow, to be sneezed at, either. If Molly ain't with those wagons I'll send Jed over for her to-day.

Digitized by Google

If I'm going to be captain I can't hold the people here on the river any longer, with May already begun."

"She'll be here to-day," asserted his wife. "She said she would. Besides, I think that's her riding a little one side the road now. Not that I know who all is with her. One young man—two. Well"—with maternal pride—"Molly ain't never lacked for beaus!

"But look at the wagons come!" she added. "All the country's going West this spring, it certainly seems like."

It was the spring gathering of the west-bound wagon trains, stretching from old Independence to Westport Landing, the spot where that very year the new name of Kansas City was heard among the emigrants as the place of the jump-off. It was now an hour by sun, as these Western people would have said, and the low-lying valley mists had not yet fully risen, so that the atmosphere for a great picture did not lack.

It was a great picture, a stirring panorama of an earlier day, which now unfolded. Slow, swaying, stately, the ox teams came on, as though impelled by and not compelling the fleet of white canvas sails. The teams did not hasten, did not abate their speed, but moved in an unagitated advance that gave the massed column something irresistibly epochal in look.

The train, foreshortened to the watchers at the rendezvous, had a well-spaced formation—twenty wagons, thirty, forty, forty-seven—as Jesse Wingate mentally counted them. There were outriders; there were clumps of driven cattle. Along the flanks walked tall men, who flung over the low-headed cattle an admonitory lash whose keen report presently could be heard, still faint and far off. A dull dust cloud arose, softening the outlines of the prairie ships. The broad gestures of arm and trunk, the monotonous soothing of commands to the sophisticated kine as yet remained vague, so that still it was properly a picture done on a vast canvas—that of the frontier in '48; a picture of might, of inevitableness. Even the sober souls of these waiters rose to it, felt some thrill they themselves had never analyzed.

A boy of twenty, tall, blond, tousled, rode up from the grove back of the encampment of the Wingate family.

"You, Jed?" said his father. "Ride on out and see if Molly's there."

"Sure she is!" commented the youth, finding a plug in the pocket of his jeans. "That's her. Two fellers, like usual."

"Sam Woodhull, of course," said the mother, still hand over eye. "He hung around all winter, telling how him and Colonel Doniphan whipped all Mexico and won the war. If Molly ain't in a wagon of her own, it ain't his fault, anyways! I'll rest assured it's account of Molly's going out to Oregon that he's going too! Well!" And again she said, "Well!"

Jesse Wingate

"Who's the other fellow, though?" demanded Jed. "I can't place him this far."

Jesse Wingate handed over his team to his son and stepped out into the open road, moved his hat in an impatient signal, half of welcome, half of command. It apparently was observed.

To their surprise, it was the unidentified rider who now set spur to his horse and came on at a gallop ahead of the train. He rode carelessly well, a born horseman. In no more than a few minutes he could be seen as rather a gallant figure of the border cavalier—a border just then more martial than it had been before '46 and the days of "Fifty-four Forty or Fight."

A shrewd man might have guessed this young man—he was no more than twenty-eight—to have got some military air on a border opposite to that of Oregon; the far Southwest, where Taylor and Scott and the less known Doniphan and many another fighting man had been adding certain thousands of leagues to the soil of this republic. He rode a compact, short-coupled, cat-hammed steed, coal black and with a dashing forelock reaching almost to his red nostrils—a horse never reared on the fat Missouri corn lands.

Neither did this heavy embossed saddle with its silver concho decorations then seem familiar so far north; nor yet the thin braided-leather bridle with its hair frontlet band and its mighty bit; nor again the great spurs with jingling rowel bells. This rider's mount and trappings spoke the far and new Southwest, just then coming into our national ken.

The young man himself, however, was upon the face of his appearance nothing of the swashbuckler. True, in his close-cut leather trousers, his neat boots, his tidy gloves, his rather jaunty broad black hat of felted beaver, he made a somewhat raffish figure of a man as he rode up, weight on his under thigh, sidewise, and hand on his horse's quarters, carelessly; but his clean-cut, unsmiling features, his direct and grave look out of dark eyes, spoke him a gentleman of his day and place, and no mere spectacular pretender assuming a virtue though he had it not.

He swung easily out of saddle, his right hand on the tall, broad Spanish horn, as easily as though rising from a chair at presence of a lady, and removed his beaver to this frontier woman before he accosted her husband. His bridle he flung down over his horse's head, which seemingly anchored the animal, spite of its loud whinnying challenge to these near-by stolid creatures which showed harness rubs and not whitened saddle hairs.

"Good morning, madam," said he in a pleasant, quiet voice. "Good morning, sir. You are Mr. and Mrs. Jesse Wingate, I believe. Your daughter yonder told me you were."

"That's my name," said Jesse Wingate, eying the newcomer suspiciously, but advancing with ungloved hand. "You're from the Liberty train?"

"Yes, sir. My name is Banion—William Banion. You may not know me. My family were Kentuckians before my father came out to Franklin. I started up in the law at old Liberty town yonder not so long ago, but I've been away a great deal."

"The law, eh?" Jesse Wingate again looked disapproval of the young man's rather pronouncedly neat turnout. "Then you're not going West?"

"Oh, yes, I am, if you please, sir. I've done little else all my life. Two years ago I marched with all the others, with Doniphan, for Mexico. Well, the war's over, and the treaty's likely signed. I thought it high time to march back home. But you know how it is—the long trail's in my blood now. I can't settle down."

Wingate nodded. The young man smilingly went on: "I want to see how it is in Oregon. What with new titles and the lil of fighting men cast in together out yond ought to be as much law out there as her think? So I'm going to seek my fortune in t It's too close and tame in here now. I'm"—h a bit more obviously and deprecatingly—' yonder *caballad* of our neighbors, with a bun and Indiana wagons. They call me Col. Will It is not right—I was no more than Will Ba under Doniphan. I am not that now."

A change, a shadow came over his face. He as though it were tangible.

"So I'm at your service, sir. They tell me elected captain of the Oregon train. I wanted with you if I might, sir. I know we're late- have been in last night. I rode in to explain we pull in just beside you, on this water?"

Molly Wingate, on whom the distinguished the stranger, his easy manner and his courte failed to leave their impression, answered befo band:

"You certainly can, Major Banion."

"Mister Banion, please."

"Well then, Mister Banion. The water and g The day's young. Drive in and light down. Yo saw our daughter—I know you did, for that's he

The young man colored under his bronze of denly shy.

"I did," said he. "The fact is, I met her e spring at Clay Seminary, where she taught. Sh you-all were moving West this spring—said thi last day. She asked if she might ride out with ou to the rendezvous. Well ——"

"That's a fine horse you got there," interrupt Jed Wingate. "Spanish?"

"Yes, sir."

"Wild?"

"Oh, no, not now; only of rather good spirit. I if you like. Gallop back, if you'd like to try him, my people to come on and park in here. I'd like a so with Mr. Wingate."

With a certain difficulty, yet insistent, Jed swu the deep saddle, sitting the restive, rearing ho enough withal, and soon was off at a fast pace do trail. They saw him pull up at the head of the cara motion, wide armed, to the riders, the train not at all.

He joined the two equestrian figures on ahead, and the young man whom his mother had named Woodhull. They could see him shaking hands, the a curvet or so to show off his newly borrowed mou

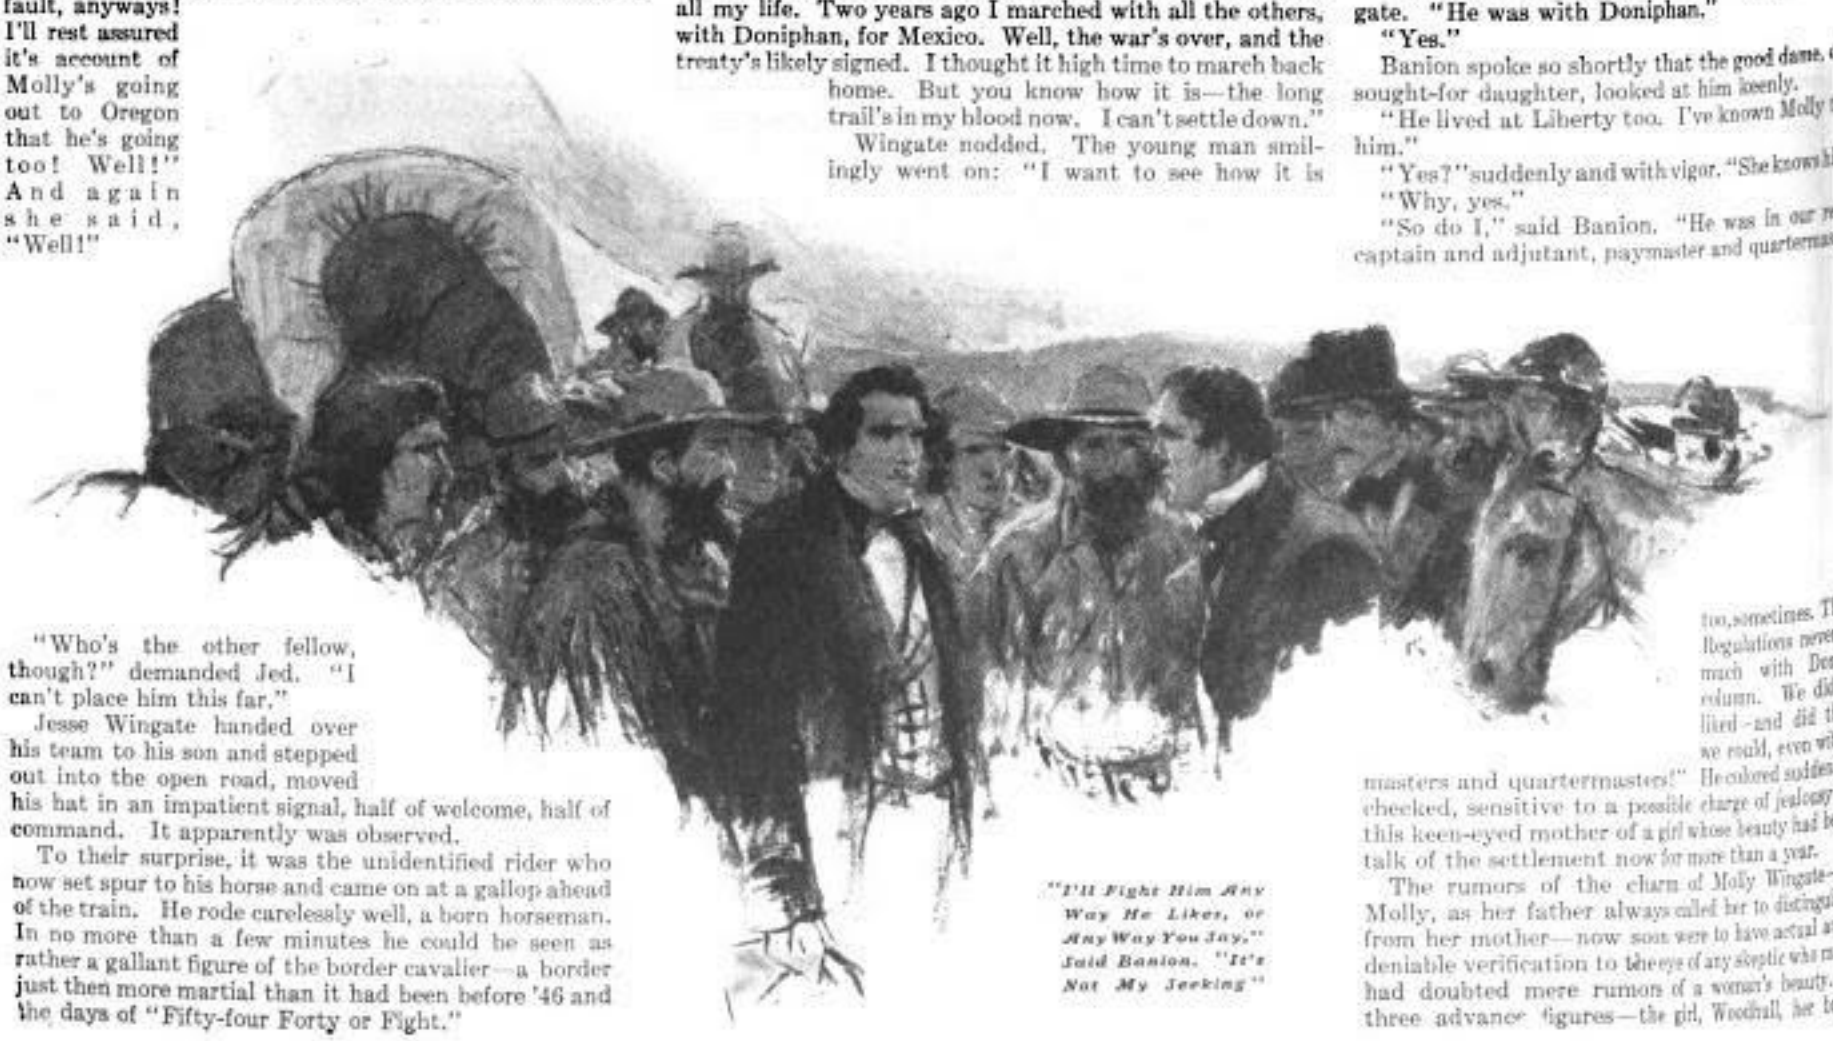
"He takes well to riding, your son," said the new approvingly.

"He's been crazy to get West," assented the f "Wants to get among the buffalo."

"We all do," said Will Banion. "None left in Ken this generation back; none now in Missouri. The Pl His eye gleamed.

"That's Sam Woodhull along," resumed Molly gate. "He was with Doniphan."

"Yes."



Banion spoke so shortly that the good dame, owner sought-for daughter, looked at him keenly.

"He lived at Liberty too. I've known Molly to ur him."

"Yes?" suddenly and with vigor. "She knows him th

"Why, yes."

"So do I," said Banion. "He was in our regime captain and adjutant, paymaster and quartermaster-

"I'll Fight Him Any Way He Likes, or Any Way You Say," Said Banion. "It's Not My Seeking"

too, sometimes. The Ar Regulations never mea much with Doniphan column. We did as w lized—and did the be we could, even with pa masters and quartermasters!" He colored suddenly, a cheekbed, sensitive to a possible charge of jealousy befo this keen-eyed mother of a girl whose beauty had been th talk of the settlement now for more than a year.

The rumors of the charm of Molly Wingate—Litt Molly, as her father always called her to distinguish he from her mother—now soon were to have actual and un deniable verification to the eye of any skeptic who may hap had doubted mere rumors of a woman's beauty. Th three advance figures—the girl, Woodhull, her brother

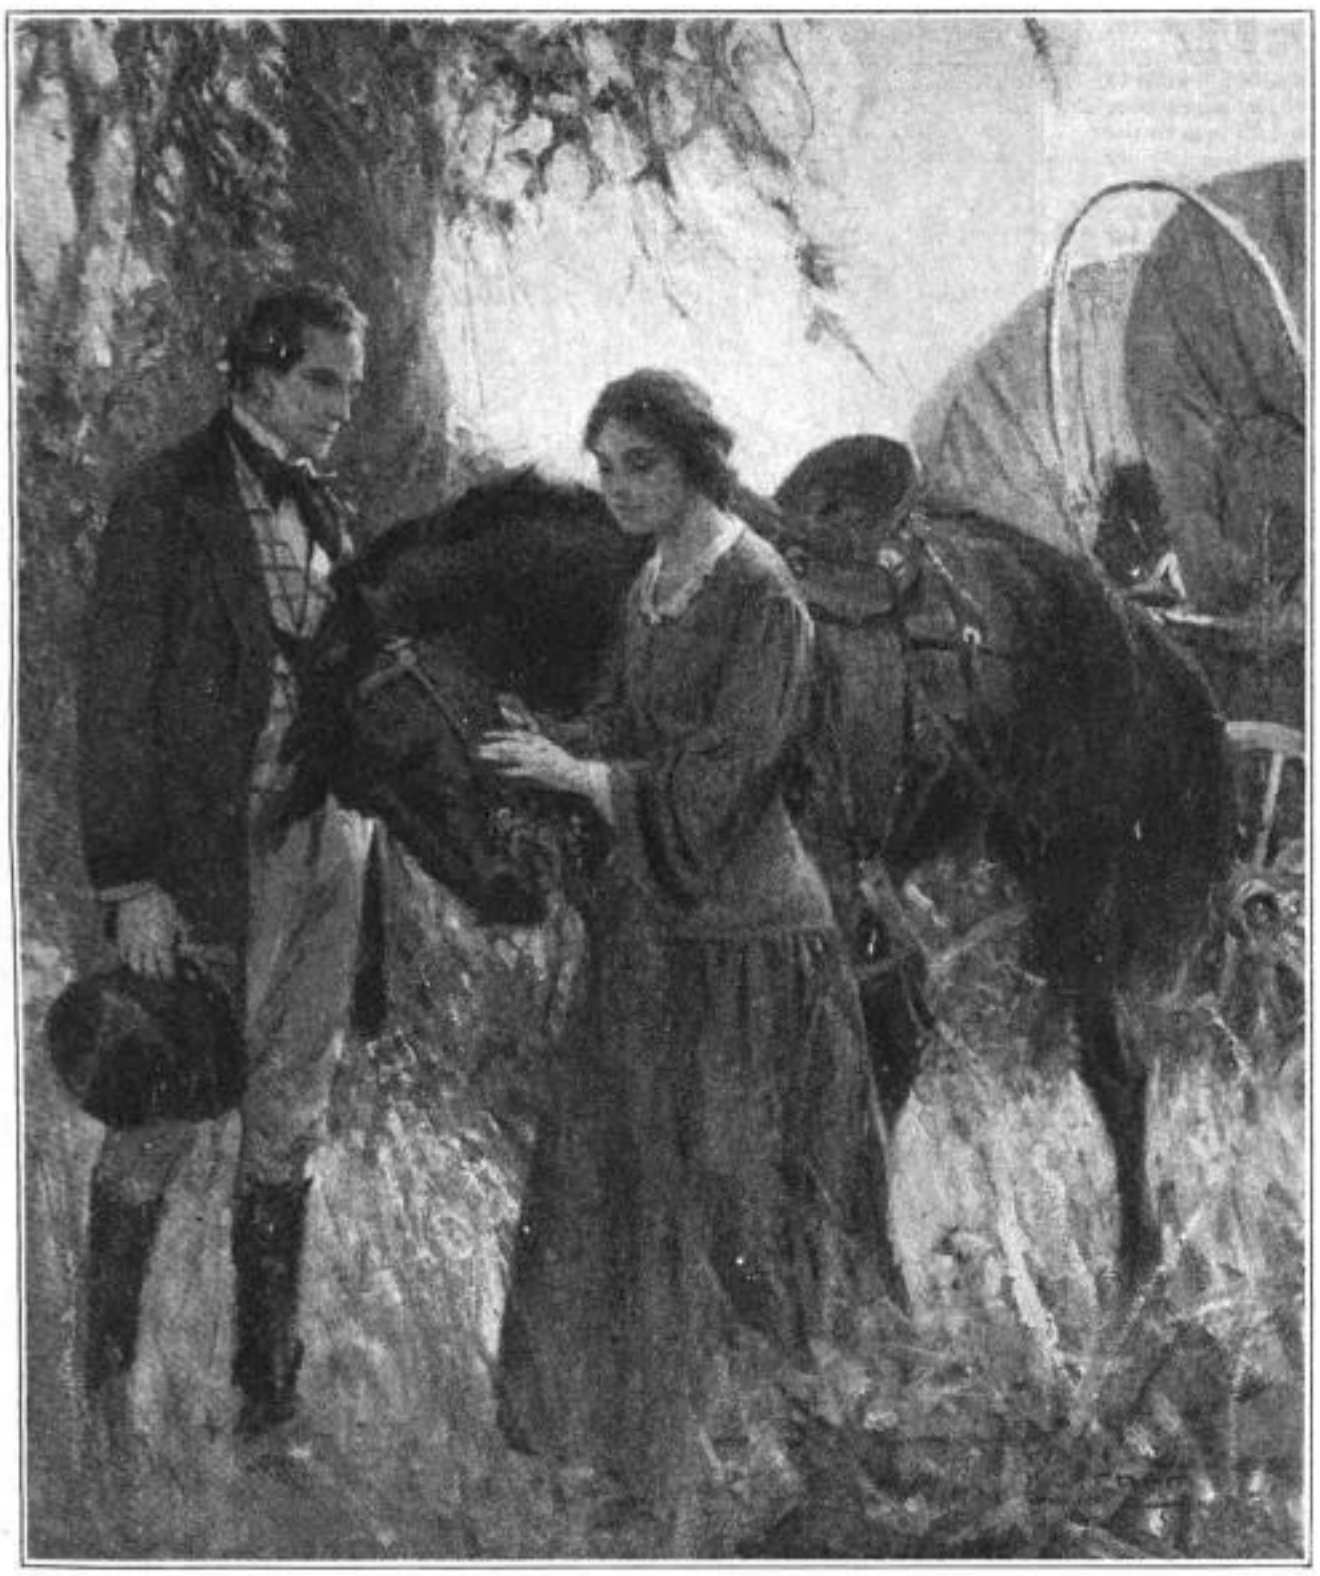
…ke away and raced over the remaining few hun-…ds, coming up abreast, laughing in the glee of …xhilarated by the feel of good horseflesh under …d the breath of a vital morning air.

…g flung off Will Banion scarce gave a look to his …ded steed. He was first with a hand to Molly …ngate as she sprang lightly down, anticipating her other …ter. Woodhull, who frowned, none too well pleased, …dismounted.

…Wingate ran up and caught her mother in her …ong arms, kissing her roundly, her eyes shining, …s flushed in the …ment of the hour, …ternal excitement …presence of these …ngers. She must kiss …m.

…the rumors were …d more than true. …ung school-teacher …ould carry her title …belle of old Liberty …here on the far fron-…tier. A lovely lass of …ineteen years or so, she …ad of eye and of …ght red-brown hair …ith a tint which ever …ttracted the eyes and …admen. Her mouth, …ew to show white, …even teeth, was wide …ough for comfort in a …ace and turned up …htly at the corners, …hat her face seemed …en sunny and care-…ree were it not for the …rnest grave, almost …ad look of the wide-…pen eyes in moments of …ought.



…bove the middle …ight of woman's stature, …had none of the lank …angularity of the typical …frontier woman of the …Cumberland lands; but was …full and well developed. …bove the open collar of …her brown riding costume …showed the flawless column …of a fair and tall white …throat. Now ripened into …womanhood, wholly fit for …love, gay of youth and its …dancing veins, what wonder …Molly Wingate could have …chosen not from two but …twenty suitors of the best …in all that countryside? …Her conquests had been …many since the time when, …as a young girl, and ful-…filling her parents' desire …to educate their daughter, …she had come all the way …from the Sangamon coun-…try of Illinois to the best …school then existent so far …west—Clay Seminary, of …quaint old Liberty.

The touch of dignity gained of the ancient traditions of the South, never lost in two generations west of the Appalachians, remained about the young girl now, so that she rather might have classed above her parents. They, moving from Kentucky into Indiana, from Indiana into Illinois, and now on to Oregon, never in all their toiling days had forgotten their reverence for the gentlemen and ladies who once were their ancestors east of the Blue Ridge. They valued education—felt that it belonged to them, at least through their children.

Education, betterment, progress, advance—those things perhaps lay in the vague ambitions of twice two hundred men who now lay in camp at the border of our unknown empire. They were all Americans—second, third, fourth generation Americans. Wild, uncouth, rude, unlettered, many or most of them, none the less there stood among them now and again some tall flower of that culture for which they ever hungered, for which they fought, for which they now adventured yet again.

Surely American also were these two young men whose eyes now unceasingly followed Molly Wingate in hot morning eyes of a morning thus far breakfastless, for the young leader had ordered his wagons on to the rendezvous before crack of day. Of the two, young Woodhull, planter and man of means, mentioned by Molly's mother as open suitor, himself at first sight had not seemed so ill a figure, either. Tall, sinewy, well clad for the place and day, even more foppish than Banion in boot and glove, he would have passed well among the damsels of any courthouse day. The saddle and bridle of his mount also were a trace to the elegant, and the horse itself, a classy chestnut that showed Blue Grass blood, even then had cost a pretty penny somewhere, that was sure.

Sam Woodhull, now moving with a half dozen wagons of his own out to Oregon, was reputed well-to-do; reputed also to be well skilled at cards, at weapons and at women.

"What a Pretty Horse You Have, Major," She Said. "What's His Name?"

Townsmen accorded him first place with Molly Wingate, the beauty from east of the river, until Will Banion came back from the wars.

Since then had been another manner of war, that as ancient as male and female.

That Banion had known Woodhull in the field in Mexico he already had let slip. What had been the cause of his sudden pulling up of his starting tongue? Would he have spoken too much of that acquaintance? Perhaps a closer look at the loose lips, the high cheeks, the narrow, close-set eyes of young Woodhull, his rather assertive air, his slight, indefinable swagger, his slouch in standing, might have confirmed some skeptic disposed to analysis who would have guessed him less than strong of soul and character. For the most part, such skeptics lacked.

By this time the last belated unit of the Oregon caravan was at hand. The features of the dusty drivers could be seen. Unlike Wingate, the newly chosen master of the train, who had horses and mules about him, the young leader, Banion, captained only ox teams. They came now, slow footed, steady, low headed, irresistible, indomitable, the same locomotive power that carried the hordes of Asia into Eastern Europe long ago. And as in the days of that invasion the conquerors carried their households, their flocks and herds with them, so now did these half-savage Saxon folk have with them their all.

Lean boys, brown, barefooted girls flanked the trail with driven stock. Chickens clucked in coops at wagon side. Uncounted children thrust out tousled heads from the openings of the canvas covers. Dogs beneath, jostling the tar buckets, barked in hostile salutation. Women in slatted sunbonnets turned impassive gaze from the high front seats, back of which, swung to the bows by leather loops, hung the inevitable family rifle in each wagon. And now, at the tail gate of every wagon, lashed fast for its last long journey, hung also the family plow.

It was '48, and the grass was up. On to Oregon! The ark of our covenant with progress was passing out. Almost it might have been said to have held every living thing, like that other ark of old.

Banion hastened to one side, where a grassy level beyond the little stream still offered stance. He raised a hand in gesture to the right. A sudden note of command came into his voice, lingering from late military days.

"By the right and left flank—wheel! March!"

With obvious training, the wagons broke apart, alternating right and left, until two long columns were formed. Each of these advanced, curving out, then drawing in, until a long ellipse, closed at front and rear, was formed methodically and without break or flaw. It was the barricade of the Plains, the moving fortress of our soldiers of fortune, going West, across the Plains, across the Rockies, across the deserts that lay beyond. They did not know all these dangers, but they thus were ready for any that might come.

"Look, mother!" Molly Wingate pointed with kindling eye to the wagon maneuver. "We trained them all day yesterday, and long before. Perfect!"

Her gaze mayhap sought the tall figure of the young commander, chosen by older men above his fellow townsman, Sam Woodhull, as captain of the Liberty train. But he now had other duties in his own wagon group.

Ceased now the straining creak of gear and came rattle of yokes as the pins were loosed. Cattle guards appeared and drove the work animals apart to graze. Women clambered down from wagon seats. Sober-faced children gathered their little arms full of wood for the belated breakfast fires; boys came down for water at the stream.

The west-bound paused at the Missouri, as once they had paused at the Don.

A voice arose, of some young man back among the wagons busy at his work, paraphrasing an ante-bellum air:

Oh, then, Susannah,
Don't you cry fer me!
I'm goin' out to Oregon,
With my banjo on my knee!

II

MORE than two thousand men, women and children waited on the Missouri for the green fully to tinge the grasses of the prairies farther west. The waning town of Independence had quadrupled its population in thirty days. Boats discharged their customary western cargo at the newer landing on the river, not far above that town; but it all was not enough. Men of Upper Missouri and

THE TIME-KILLER

By Kenneth L. Roberts

PEOPLE who have any time to kill are usually filled with a deep and intense desire to kill it in some spot far removed from their usual haunts. This desire is not so much due to their wish to avoid making a mess around the house as it is to the peculiar mental obsession known to the French as homesickness for elsewhere. French society has been afflicted for years with a passionate desire to be somewhere that it isn't. A Parisian with time to kill aims to move up to the clear, cold air of the mountains, where he can kill lots of it. When he gets to the mountains it suddenly occurs to him that possibly he might find a little more time to kill at the seashore, where the eye may roam at will across the boundless and unobstructed waves. So he moves to the seashore and at once begins to suspect that in Paris one can find more weapons with which to cause time to die a lingering and horrible death. So he moves back to Paris, where he once more hunts restlessly for other means to kill time. He has the homesickness for elsewhere.

The English, too, have it to a marked degree. All Englishmen who have incomes larger than two hundred guineas a year own tea baskets with which they go off to distant heaths or popular woods on bank holidays and week-ends for the purpose of killing time and burying it with the appropriate funeral exercises. They are constantly running up to the moors for a bit of rough shooting, or over to Switzerland to ski a bit, or off to a country house for a bit of punting or Scotch drinking, or down to Brighton for a week-end. An English week-end is sadly misnamed, inasmuch as it usually consists of Friday, Saturday, Sunday and Monday, with a bit of Thursday and Tuesday thrown in for good measure.

Of late years the American people have been growing increasingly proficient at time killing. Forty years ago the average American, confronted with a little extra time, didn't know what to do with it. Usually he took it into the front parlor and sat around on haircloth furniture with it, and became so sick of it that he never wanted to see its face again. If he felt within him the primitive urge to take it somewhere and kill it he hesitated to do so because the roads were bad, automobiles hadn't been invented, and the South was only regarded as the place where the Civil War started. Distances were great. Few people cared to travel, because it was generally believed that a person who absented himself from business more than one working day out of every five years was a loose, dangerous and depraved character. One of the most exciting things to do forty years ago was to put on a striped flannel coat and play croquet on the front lawn.

To-day, however, America has caught the germs of homesickness for elsewhere from the French and English. Florida has been reclaimed from the swamps and the Indians, the small automobile has been put within the means of stevedores, cooks, second-story workers and moderately successful story writers, and golf trousers may be worn in Western towns without causing the wearer to be shot. A road is cursed fluently by an automobilist if it is sufficiently bad to get his wheel spokes muddy. The business man who can't knock off work for two or three months a year is regarded pityingly as being either a back number, a simp or a poor man. All these things being so, Americans with time to kill can take it farther from home and kill it with more thoroughness than any other people on earth. They go into their time killing with more energy than do Europeans.

The European is usually content to do his time killing within three hundred miles of home. The American is never content unless he can travel from fifteen hundred to three thousand miles, and wind up with an orgy of time killing that would make a professional executioner look by comparison like the president of a Dorcas society.

The Land of Big Hotels

IT IS in Florida that the American time killer may be found in all his glory; and the largest, most perfect and most brilliantly colored specimens are to be found at Palm Beach. It is at Palm Beach that one finds the very rare variety measuring twenty minutes from tip to tip.

One can best understand why it is that winter-bound Northerners select Florida as the scene of their time killing by following in their footsteps and boarding a Florida-bound night train in a Northern city during a heavy blizzard.

A New Yorker With a Small Income Broke Into Society With a Crash and Married a Widow With a Fortune That Kept a Couple of Income-Tax Experts Working a Month Each Year

Early the next morning, when one disentangles the bedclothes from his neck and elevates the trick shade of the sleeping-car window after the usual severe struggle, one finds that the snow has nearly disappeared. The eye is wearied by the flat plains of North Carolina, relieved only by negro shanties and scrub pines. By afternoon North Carolina has merged into South Carolina. The flatness continues with unbounded enthusiasm; but there is no snow, and the air is milder. The pines are marked with peculiar herringbone gashes, whence flows turpentine, the painter's delight. Piny odors vaguely reminiscent of tar soap, sheep dip and cold remedies float through the half-opened windows. Later that evening, as one returns to the dining car to recover the hat which one has forgotten in the excitement of tipping the waiter, one hears frequent shrill frog choruses from the pools beside the tracks. By midnight one is ringing frantically for the porter to tear himself from his slumbers among the shoes in the smoking compartment and start the electric fans. One's rest is troubled by the heat and the increasing shrillness of the frog choruses.

On the second morning the rising sun discloses a limitless expanse of flatness, dotted with occasional palm trees and covered with a scrubby growth of near-palms or palmettos. The sun is hot and red. A black ribbon of asphalt road parallels the railroad; and at intervals along it appear flocks of flivvers nesting drowsily among the palms and the tin-can tourists. There is plent ing white sand, and plenty of stagna The air is full of swallows, and an e pelican flops languidly alongside t gazing pessimistically at the passengers. eler perspires lightly and marvels at the that it was only night before last when he s a piece of ice and got half a peck of snow back of his neck. He remembers that it i and glorious country—a fact which his co tion of the doings of Congress had cause forget.

Occasionally the train flashes past litt sitting hotly in the sun and sand amon orange and grapefruit trees. This is Flor the land looks as though it were wort ten dollars an acre—just as it has alway until someone develops it and begins to sel ner lots at a modest five thousand dollars

Around breakfast time—a mere thirty-s since the train emerged from its Northern and snowdrifts—the train crosses a shin strip of blue water and comes to rest beside that seems, at first glance, to be at least te long. It stretches off so far into the distar people up at the other end appear to be hul In reality it is only about half a mile lo only about five hundred times larger th Mowsam House, at Kennebunk, Maine.

On the station platform are women i skirts, gauzy waists and diamond bracelets. men in white trousers dash up and down th form on bicycles. The air is soft and balmy trees stretch off into the distance in every tion. Wheel chairs, propelled by dignified-l negroes who sit on bicycle seats directly the chairs and pedal vigorously, move hith yon in a stately manner. Through the paln one catches glimpses of white yachts rid anchor on the blue water.

The Industry at Palm Beach

A WHEEL chair stops at the edge of the s platform. In it are seated a dignified g man in white flannels, and a gracious lady in skirt and a sweater covered with neat ligl effects in red, green and orange zigzags. One ders whether this can be J. Pierpont Astorl Charley Schwab. Then one hears the gra lady whisper excitedly to the dignified gentle "Do you suppose that's Charley Schwab Pierpont Astorbilt over there?" and hear dignified gentleman reply in a hoarse under "Shut up or they'll think we're boobs!"

This is Palm Beach, the very center of the w time-killing industry. Palm Beach is a long, row strip of land which is separated from mainland by a long, narrow body of water kn as Lake Worth, and by a sudden increase in l expenses. On the mainland side of Lake Wor the rising young city of West Palm Beach, w one is not afraid—as he usually is in Palm Bea to offer a storekeeper or a newsboy a nickel le should regard it as some strange, unknown for coin. West Palm Beach is full of ordinary people are unacquainted with wheel chairs and think nothin walking two or three blocks, or even as much as half a if the necessity arises. They frequently get along for at a time without spending more than two dollars eighty-five cents a day.

West Palm Beach has the same sort of climate Palm Beach has, but the air of the place is somehow di ent. At Palm Beach one has the feeling that he is breatl the very same air that the world's greatest bankers society people are breathing, whereas over in West P Beach one doesn't know or care who has been breath the air. That is why so many people find the Palm Be climate very invigorating, but always feel that the clim of West Palm Beach leaves them a little weak and tir

Palm Beach, then, is a long, narrow strip of land w the ocean on one side and Lake Worth on the other. T largest hotel, which has room for thirteen hundred pay guests at any one time, but which only gets all thirt hundred of them for about a month out of the year, fro on Lake Worth; while the next largest hotel is direc across the narrow strip of land, fronting on the ocean. between are golf links, and roadways edged with pal and avenues of towering, feathery, bluish-green Australi pines, and simple little cottages that couldn't have cost cent more than forty or fifty thousand dollars. There a also a number of modest little shacks that might ha

…t their owners back half a million or so, and clubhouses …d bathing pavilions and more palms and broad white road… …ays and men in white flannels and women in diamonds …d perfumery and clinging gowns—and more palms.

Over everything there is an odor of money. Every …reeze that blows is freighted with its rich, fragrant, musky …ell, and every person that one encounters on the street …r in a hotel lobby seems to be about to spend a lot of it or to have just finished spending a lot of it.

Some people seem to like the odor and some don't seem to care so much for it. Some, in fact, seem from their …xpressions to think that this money odor has a great deal …n common with smoldering rubber or asafetida.

The impression that Palm Beach is bound to make on …ny newcomer is one of general discomfort. Everybody …eems to be staring critically at everybody else—due, of …ourse, to the fact that almost everybody hopes or …uspects that everybody else may prove to be Charley …chwab or Percy Rockefeller or Vincent Astor or one of …hose prominent society people who part their names in …he middle.

People who enter and leave the hotel dining rooms don't …eem to know what to do with their hands. They pretend …o an embarrassing ease of manner, as though conscious …hat all eyes are upon them. The people at the tables can't …eep their eyes off the people at other tables. The hotel …obbies are congested before lunch and after dinner with …ersons who have no interest in any scenery except that …hat other people are wearing. Although the beach at …alm Beach is many miles in length, all the bathers, near… …athers and bather-watchers cram themselves each noon …nto a few square yards of beach and watch one another …ike a gathering of lynxes.

People dawdle along the palm-fringed avenues and stare …t one another blankly and questioningly. People sit self… …onsciously in wheel chairs and look searchingly at people …n other wheel chairs. Bicyclists wheel languidly along …he white roads and gaze intently at everyone. "Are you Charley Schwab?" each eye seems to ask …nxiously. "Are you one of the Rockefellers? Are you anybody?"

Palm Beach is the heaven of the …icycle. In some parts of the world it …as sunk in popular esteem until it is …till else than a conveyer of telegraph …oys and an instrument for the re…oval of skin from children's knees. …ut in Palm Beach it shares with the …heel chair the honor of being the …hariot of wealth and beauty.

Everyone on Wheels

FLOCKS of bicycles are parked be…side every hotel entrance. Broad …nd flawless sidewalks are reserved for …icycles and wheel chairs. The pedes…rian who sets foot on them does so at …is own risk, and is more than apt, if …e does so, to have his coat driven …everal inches into his back by the …ront wheel of a bicycle.

There is no bicycle costume. Beau…iful lady bicyclists wear anything—…ingle afternoon gowns, flowing cos…umes with long capes, and the most …xtreme evening gowns. Large num…ers of girls persist in bicycling while …earing tight skirts, so that the gen…ral effect is somewhat similar to that …f a pony ballet made up as messenger …oys.

On side streets one frequently sees …he almost forgotten spectacle of a …eal debutante learning to ride. On …he dance floor she would float along …s lightly as a tuft of thistledown. On …bicycle she wabbles heavily and …elplessly from side to side, collapsing …t intervals against her instructor with …ll the crushing weight of a California …edwood.

The wheel chair is the favorite …alm Beach method of locomotion, …nd it is the only form of exercise ever …aken by many Palm Beach visitors. …any old inhabitants claim that …heel-chair riding is excellent for the …ver, and devote at least two hours to …t every afternoon. The negro chair …hauffeurs drive the chair along by …igorous pedaling, and the alternate …ng stroke gives the chair a gentle …ide-to-side motion, which acts as a …ild massage on the occupant. Two …ours of such exercise is considered to …e about enough by the most sagacious …alm Beachers. It is their belief that the persons who ride for three hours run a grave risk of overexerting themselves.

The chair chauffeurs, in addition to possessing tireless legs, are usually supplied with a vast fund of knowledge. This is most desirable; for many visitors speak to no one except the hotel clerks, the news-stand girls, the waiters and their wheel-chair chauffeur during their entire stay. It frequently happens that their chair chauffeur is their only guide, philosopher and friend; so the chauffeurs find it very valuable to be fairly familiar with all Palm Beach estates, to have a comprehensive grasp of the flora and fauna of the South, and to be conversant with all financial and social matters appertaining to the old-timer. They have also found that a frank exposition of their own philosophical meditations on men and things will sometimes arouse the interest and stimulate the generosity of their charges. "What sort of ducks are those, George?" usually brings the intelligent answer: "Those ain't no sort, suh. Those is just ducks." A query as to whether a wheel chair is harder to push with one or two people in it brought the reply that there wasn't no difference. But to push an empty one is the hardest. Yes, suh! Must be because no money is being made. Yes, suh!

There are many lonely men and women at Palm Beach who almost cry with gratitude when somebody speaks to them. They are like many congressmen, who are big people at home, but of less account in Washington than a head porter. Out of all the people who flock to Palm Beach to spend large amounts of money and bask in the soothing rays that emanate from the socially prominent, ninety per cent might be compared to very small potatoes in a two-hundred-acre lot. Even the majority of the people whose names are names to conjure with in Palm Beach society can't be found in the pages of Who's Who.

The majority of men who pay the bills at the big hotels are forced to struggle hard to kill time when they have finished their golf playing for the day. Enormous numbers of them seem to spend most of their spare time sitting dolefully around hotel lobbies and expecting telegrams that never come. If you fall into conversation with any man in any Palm Beach hotel lobby he invariably explains his inactivity by saying that he is expecting a telegram.

Next to expecting telegrams the most popular Palm Beach time killer seems to consist of wondering what day of the week it is. Sneak up behind any two important-looking men who seem to be discussing affairs of moment, and the chances are ten to one that you will hear the following weighty conversation: "Is to-day Tuesday or Wednesday? I sort of lose track down here."

"To-day? Why, to-day's Wednesday. No; hold on! It's Thursday, isn't it?"

"No, I don't think so. I think it's either Tuesday or Wednesday. Still, I don't know; it might be Thursday."

"No, I don't believe it's Thursday. I was expecting a telegram on Tuesday, and it would have had to come before Thursday. I guess it's Wednesday."

"Yes, I guess it is. I thought for a while it was Tuesday."

"Oh, I don't believe it's Tuesday."

"No, I guess it's Wednesday all right. That telegram ought to be here by now. How long are you staying here?"

"I don't know. I'm expecting a telegram, and I can't tell till it gets here."

So Far as the Female Contingent at Palm Beach is Concerned, an Economic Conference Hasn't a Chance With Such Big News as What Mrs. Harold Bayne Whiffle Wore

The Reign of Hookless Dresses

HAVING reached a comparatively ripe intimacy by this time, it is almost inevitable that one of them should advance one of the thousand statistical questions that are so frequently encountered at Palm Beach, such as "Did you ever stop to think how many nails it took to build this hotel?" A few seconds later both of them have produced envelopes and are figuring busily.

Men who have traveled thousands of miles for the purpose of killing time at Palm Beach will frequently argue for two or three hours and figure all over the backs of eight or ten envelopes and a couple of golf scores in an attempt to decide whether or not the value of all the diamond bracelets in Palm Beach would be sufficient to secure economic control of Russia. Newcomers to Palm Beach, knowing that America's greatest financiers flock there during the season, frequently make the mistake of thinking that two men knitting their brows over a lot of figures are probably two great money kings working up a scheme to corner the nation's hop crop. In reality they are two ordinary citizens killing a little time by choking it to death with useless statistics.

Compared with the good old days when dresses hooked up the back in such an intricate fashion that one needed blue prints, diagrams and charts in order to hook up a dress properly, there is practically no dress changing at Palm Beach nowadays. In the old days the womenfolk spent at least forty per cent of their waking hours changing their clothes. They changed their clothes whenever the wind changed. They changed their clothes every time a train came in. They couldn't eat or go out in a wheel chair or put on a string of beads or take a drink without changing their clothes. Their menfolk were kept constantly busy hooking them up the back.

To-day things are different. Dresses no longer hook up the back with their erstwhile wholeheartedness. Careful and competent observers state that many present-day dresses are safely attached to the human frame by as few as three hooks, all of which can be reached without dislocating an arm or displacing any vertebræ, and that an equal number of dresses are merely slid on over the head and worn just as they fall, without any further formality. A great many women at Palm Beach wear only two costumes each day—one for morning and afternoon, and one for evening. Not so many years ago a woman who wore only two dresses in one day at Palm Beach would have been regarded as mentally unbalanced or disgustingly pauperized.

The real snappy dressers, however, get in and out of three costumes a day; while it is not at all unusual to find

The Axiom of Peter Bell Ivc

By SAMUEL MERWIN

ILLUSTRATED BY ARTHUR D. FULLER

DAWN came redly up behind the white pile of the Public Library. When he first opened his eyes he saw it gilding the pinnacles and parapets and the less pleasing water tanks and chimneys of the skyscrapers over toward Times Square. His head rolled back on his arm then and he stared straight up through the scraggly little city trees into an unbelievably rosy zenith; finally twisting around for a view of the east. His neck was uncomfortably stiff, and his knees creaked. His back ached as well.

There was, surprisingly, mystery in Forty-second Street. It would be amusing to try painting it in this unearthly light. Tricky, because the effects changed so swiftly. Though his knack at making quick sketches in color would help; and the one gift he knew he had was a painter's memory. He regretted now that he hadn't kept his luggage with him, easel and colors and parcel of sketch boards. Very possibly they'd have been stolen while he slept. Though, for that matter, it was a question whether he'd ever see them again anyway. Or his suitcase. Ruefully he felt in his pocket for the thirty-eight cents he knew was there, and as ruefully jingled it in his hand. It was good for a breakfast.

His gaze rested on the library building. Why, he asked himself, couldn't these enormous monuments be designed in some innately American feeling? Couldn't there be an American spirit in architecture—something perhaps solider, more sweeping than the Colonial? Why, always, always, the Grecian and the Roman? That huge railway terminal he had observed in the afternoon was nothing on earth but a reproduction of the Baths of Caracalla. Why not the Temple of Karnak? Or the Mosque of St. Sophia? Or the Taj Mahal?

He turned back and considered the skyscrapers. They embodied, perhaps, these towering symbols of a greatly brusque civilization, the perfect answer to his question. They had, at least, evolved. It was as if the lawless push of America here on Manhattan Island had leaped out of the hard rock, high, high! They were frank enough, with their hard, straight lines, the carven stone in front only, leaving the vast surfaces of the side walls in brick or rpugh tile, and the thousands of office windows, that were lettered, nearly every one, with advertising matter. The lovely dawn light was spreading softly downward now, reflecting molten gold from all those windows. It was rather stirring to sit here in the gray dusk of the little park and gaze out over the grimy structure of the Elevated—already trucks were banging along beneath it—into that lofty splendor.

And the electric signs must have been blazing gayly all night. At least he seemed to have innumerable little half memories of them at different times when he had found himself squirming uncomfortably on the bench.

Certainly the Elevated trains had never stopped. While he was in that curious half-awake condition, hours on end, they had seemed one after another to run, roaring and grinding, right through his brain.

A good many other vagrants were scattered about on the benches, many of them still asleep. Flotsam of the pulsing, tireless city. They didn't matter. Come to think of it, he didn't matter himself. His eyes filled and he buried his face on his arm.

Ten minutes later he was jingling the coins again. Breakfast seemed important. He hadn't dined. One of those all-night restaurants.

"I'm kissing my things good-by," he mused bitterly; but added, more youthfully, "After all, may as well start clean." And clean it would be when the thirty-eight cents was gone. He decided to limit breakfast to twenty-five cents, buy a paper, and leave eleven cents for that start.

Briskly, then, he marched out of the park. But an hour later he was back with his paper, which he opened to the want ads. That seemed to be how you started clean. At least it was the only way he could think of.

The New York that calls itself New York was not yet awake, but the streets were already roaring curb-full of traffic, and the sidewalks were crowded with hurrying, jostling men and women—young men and women, all nervously intent.

Another hour passed.

A tall figure of a man came wandering not unamiably through the park, taking in the early-morning performance of the hurrying city through thick curved lenses set in a heavy spectacle frame of gold. Our young man glancing up over his paper noted the spectacles. You didn't see gold frames much any more. And then his quick eyes took in the rest of the rather quaint figure. The man was very tall indeed, all of six feet and three or four inches, and thin. Extremely thin, a severely spare person, clad in an outmoded rusty cutaway coat bound about the edges with fraying braid, gray trousers that surely had not been pressed for a long time and that were fringed at the bottom, a stringy tie in which, however, was stuck a remarkable scarab set in old gold, and finally a derby hat that had doubtless been black in its earlier years but was now rusty like that old-fashioned coat.

The face was spare, like the figure, clean-shaven, of a scholarly cast, even attractive. You felt, despite the odd costume, authority there, and, less definitely perhaps, a degree of force. At least there was a fullness of outline, a slight bulge outward of the profile from the nose to the chin, such as is usually found in the aggressive, fighting type of man, that contrasted strangely reflective eyes and with the huge bald the head that came into evidence wh moved that derby and passed a han across the spacious forehead.

"Do You Mind Sharing This Bench?" "No! Oh, No! Not at All!" the Young Man Found Himself Saying in Some Confusion

Our young man caught himself sta hurriedly lowered his eyes to those want But he felt the strange person pause. voice remarked, a voice that was austere tive, like the face, and very pitch, "Do you mind sharing this

"No! Oh, no! Not at al young man found himself saying confusion.

II

"YOU begin the day early," man continued. "I do, m enjoy the walk uptown in the earl ing. And it interests me to sit an poor devils who have had no oth to sleep but these benches."

"I slept on this one last nig marked the young man.

"Indeed!" There was surpris deep voice. And the young ma that his face and hat and clothir being scrutinized swiftly. your case can't be the s these vagrants."

"Why not? I land than a month ago from My money had about ru and I suppose I thou would be possible to begi ing right off here in New But it wasn't possible."

The tall man though over, and finally rema "That's nonsense, of cour

"It isn't anything o sort!"

"I beg your pardon! Y young, good-looking en comfortably enough dre you speak with bree enough—I see no reason you shouldn't pick up at any reasonable thing you w

"That's easy to say."

"It's easy to do. Naturally I'm assumi degree of cleverness. In New York it is vit be clever. May I ask, what is your line of activi

"I was supposed to be a promising y painter."

"H'm! That's bad, of course. The Ameri are not an artistic people. Oh, they can be mentarily interested in celebrated masterpieces of the past—interesting examples of the valu accumulated and sanctified publicity—but the not interested in discovering fresh genius. T like it as they like their opera and their lit ture—something safely foreign."

"That's exactly the conclusion I've come And that's why it isn't nonsense to say that —

"Pardon me again, but it is nonsense, none less. I meant only that painting is a more diffi road than others. A man can have what he wa as quickly as he wants it."

"But, gee-whiz ——"

"It is only necessary that the want be real, t it amount to a profound desire. It must be stro enough to rule him and drive him to action."

"How about these poor devils on the benches

"If you could psychoanalyze them I think you wou find that each of them has been possessed with an ov mastering desire either for women or for alcohol—or, aga for leisure. And you'd find that every one has attain his goal. Of the three, leisure is by far the hardest attain, because it must be combined with an equal strong desire, in the first instance, for money. And not ing is so disastrous in most cases as a confusion of want Mind you, I am not referring to the desires a man ma have been told he ought to have, not to the veneer of h schooling and reading, if any, but to the wants that bur in his marrow."

He paused, apparently lost for the moment in thought as if his own words had served as a springboard of th mind from which he leaped out into unseen vastnesses o philosophic speculation.

The young man drew a cigarette box from an inne pocket, hesitatingly opened it, realized that only one cigarette was left, finally and ruefully placed it in hi

ch. And as he lighted it the grim thought came for the
time in his life that matches, too, cost money.
"Take that unhappy crowd up there"—this strange
g was indicating with a bony hand an Elevated train
t chanced to be roaring and grinding by on its way to
ous streets of lower Manhattan, jammed with a
ing, helpless mass of human beings—"if you could
off the tops of their heads and look in you'd find half
them afflicted with that fatal confusion of wants. The
ng clerks want money, but they also want reputation
sporting careers and women and automobiles, and
e of them add the final hopeless complication of a
antic desire for home and children. The young women
fully as much, and want it with a barbaric intensity
would paralyze any one of the men with fear if he
w about it, which fortunately he doesn't."
"How about the other half?"
"They would be the unfortunates without strong egos.
rseas is, usually, pure ego. A passing desire to stand
. Sublimated exhibitionism. The people without it are
friendly people, what we think of as nice people, the
without desire and therefore without personal hope.
find the faithful qualities there. They should leave
w York at once and establish themselves in healthy
ge life. But as I was saying, money—just money—is
easiest thing in the world."
"Is—what!"
"Precisely that. The easiest thing in the world. Or per-
ps I should say, in New York, nowadays. Everybody
akes over heaps of it any number of times any day.
d they're always looking up and around for something
."
"I wouldn't mind stumbling over a little."
The tall man turned abruptly and gazed down at him
th an air of firm authority that was almost a little
ming.
"Just what," he asked, "do you want?"
"I— Why, I suppose I ——"
"What!"
"Well"—his eyes lowered, studied the seamed concrete
the walk, lingered forlornly on his dusty shoes as he
ndered how soon they'd be shined again—"I suppose
want to be known as a painter."
"Are you sure that's what you want?"
"Well—as sure as a fellow can be of anything. You see, I gave up college to study here. And then I had two years and a half in Paris. Got a picture into the Salon this year—Woman in Blue. I thought that would mean something—even here in New York."

The tall man moved his head firmly in the negative.

"I know—now. I've been around to all the big dealers and to some of the established painters, even to art editors of magazines. No, it doesn't mean a thing."

"Of course you can become known as a painter, if that's really what you want."

"Yes, but when?"

"Oh—surely by to-morrow."

For the first time the thought came to the young man that this strange person beside him might not be wholly sane. And his expression not unnaturally changed with this changing current of thought. This the older man evidently noted, for he pursed his lips, sat gazing intently at the Elevated structure, muttered with a touch of impatience "It's all too absurd!"—and then, in his rather abrupt way, rose.

"Come!" he said.

III

IN A SPIRIT that was in part the meekness of defeat and in part the sporting instinct of youth the younger man followed him.

They ascended the steps by the Public Library and walked out on the terrace that commands the broad sidewalk and the swiftly flowing traffic streams of Fifth Avenue. Here they stood, close by the parapet, silent in a roaring world, the older man gazing out on the endless moving picture in his curiously reflective way, the younger glancing now up at him, now moodily down.

"Painting, eh?" mused the stranger aloud. "That complicates it! That complicates it! We'll have to think about that." And then, "What's your name?"

"Case."

"Case? Nothing in that. What's the rest of it?"

"William F."

"What's the F.?"

"Frank."

"Worse and worse. I see I shall have to manufacture you out of whole cloth. Mother's maiden name?"

"Ames."

"H'm! Her mother's?"

"Williams."

"For the love of heaven, can't we find any color here? You must have a paternal grandmother. Her name?"

"Oh, yes—she came from a Southern Huguenot family."

"The name?"

"Durien."

"There! At last you're giving me a little something to build on. Now mind you, we're not speaking of fame! That's a growth. But just becoming known. Publicity, eh? A quick substitute for fame. Yes, money's the easiest thing. Look at them—look at all of them!" He waved that skinny hand toward the swelling stream of south-bound traffic. "For an hour and a half it'll keep up. All very important people—personages—whirling downtown to give orders to the crowd we saw over on the Elevated! Limousines! I wish I wanted a limousine. I'd have it before the end of the week. So easy! Look at the men in 'em—the faces. Look at that one! This one! All taking themselves seriously! Silly little men! Think of having the stupidity to be as complacent as that! And it takes years to build such faces."

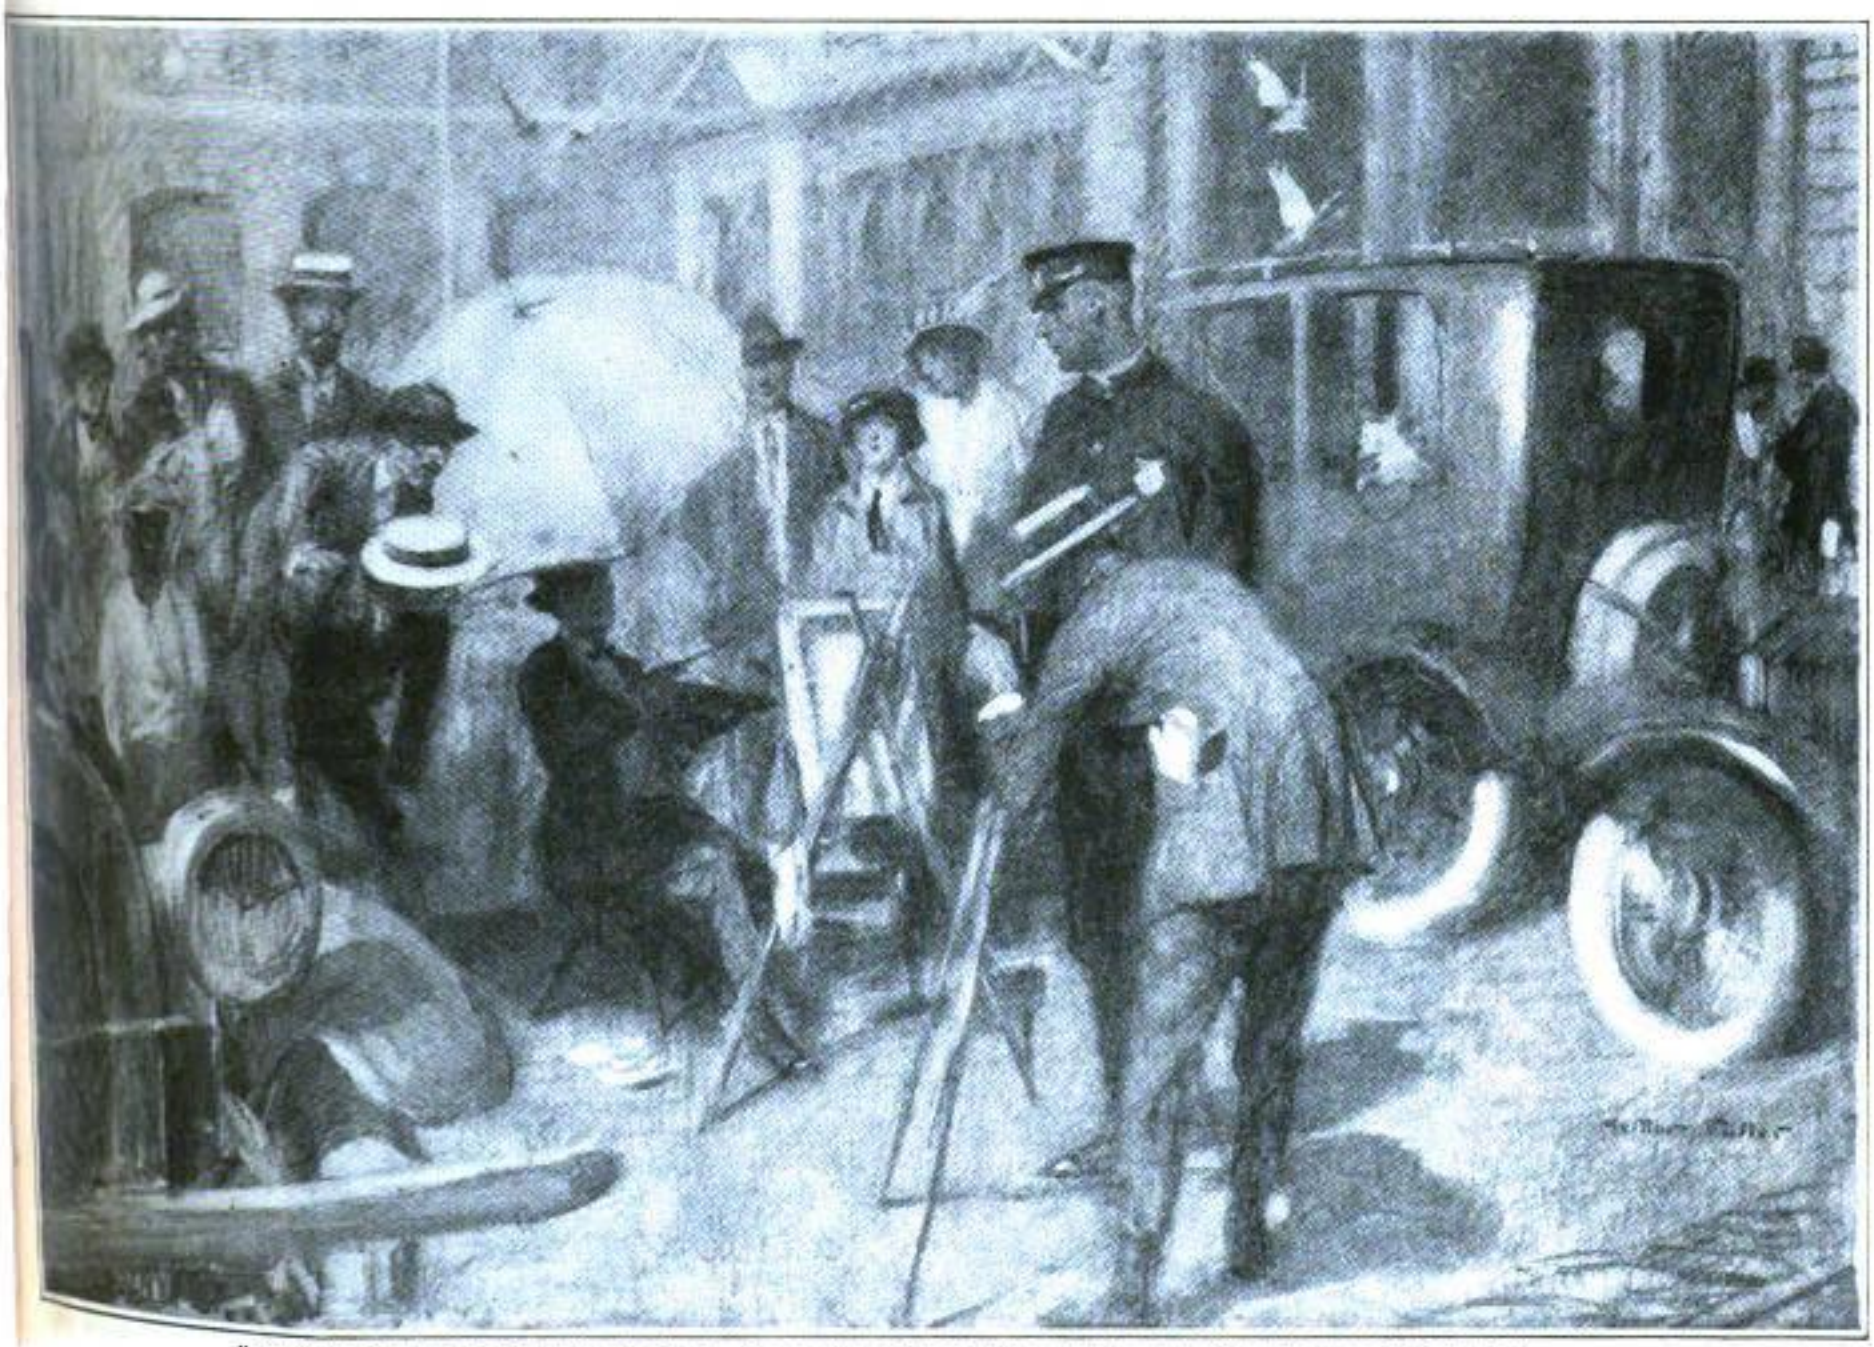
"Look here!" This from the younger man, rousing. "How would you get a limousine before the end of the week?"

"Never mind now, Durien! It isn't bad. Wait—I'm putting it together! Where are your painting things?"

"Over in the Grand Central Station. I checked them after I had to leave the boarding place. That was yesterday." His voice wavered at the ignominious memory.

"Get them. Bring them here. The library's open now. I have my own work to do. But I am going to give you an hour of my time."

"I—you see, it'll take twenty cents to get them out. Two parcels. It's the second day."



"How much have you?"

"Eleven cents."

"H'm! Wait! Let me think! That hat—you might be a shipping clerk, a broker, anything! Even a tam-o'-shanter would —— My dear boy, you're undertaking an extremely difficult thing."

"I thought you said it was easy."

"Easy when you understand. That's all there is in the world—understanding. And you haven't got it. Not yet. You even think me crazy. The fact is, I'm perhaps the only sane man in New York at this moment." He waved again toward the apparently endless flow of limousines.

"Gee-Whiz! But We Had Fun With the Crowd. Once or Twice There I Thought They Were Going to Trample Me Under"

Digitized by Google

"Look at them! Are there that many really able men in New York? Certainly not! They're just the men with direct, clear wants. They wanted limousines, and went through all hell to get them. They're the hard devils. Unscrupulous. Money stuff. The folks with humanity in them—decency—are all over there on the Elevated. But listen! What I'm trying to make you understand is that no William F. Case, in a gray suit and a four-dollar straw hat, could possibly be accepted by New Yorkers as a painter. Can't you grasp that? It's asking too much of them. They haven't the imagination. And in the second place, always remember that they're not interested in painters in the first place."

"But, really then, what's the use of ——"

"That's why you've got to reach them through the medium of entertainment. I tell you they're children—silly little children, molded by the sensational newspapers, spiritually guided by Tammany Hall, amused by the movies, buried finally in peace by the undertakers who understand comic advertising. All they ask—all they know how to ask—is that you supply the color and atmosphere they don't know how to create for themselves. Go get your painting things. Here's—let's see—a ten-dollar bill ——"

"But how can I ever ——"

"You'll soon be able to pay it back. Better take the street car; I prize my working time. And—oh, yes, step into the hat shop at the station and buy a wide-brimmed soft thing—something in velvet or plush—something you can pull down romantically on one side—and rub it in the gutter—smudge it—age it."

The young man hesitated.

"I'll wait right here," added the amazing stranger.

Young Mr. William F. Case, overwhelmed, hurried away. And the thin man in the rusty cut-away coat—an odd, old-worldly figure—stood by the marble parapet and gazed quizzically down at that rushing traffic, now and again indulging in an ironic smile at some more than commonly conspicuous vehicle, until he caught sight of a hurrying figure in a comfortably shapeless gray suit and a romantically soft brown hat, a breathless young fellow who carried a folded easel and a collapsible stool tied together under one arm, a parcel of canvases on boards under the other, and a big color box of wood in one hand. And he noted with approval that the collapsible stool was attached to something very like a folding umbrella.

"Now," he commanded, removing his rusty derby hat and squaring his immense dome of thought to the morning sun, "set up your easel and paint me. I'm giving you the best part of an hour."

"But an hour! My word! It ——"

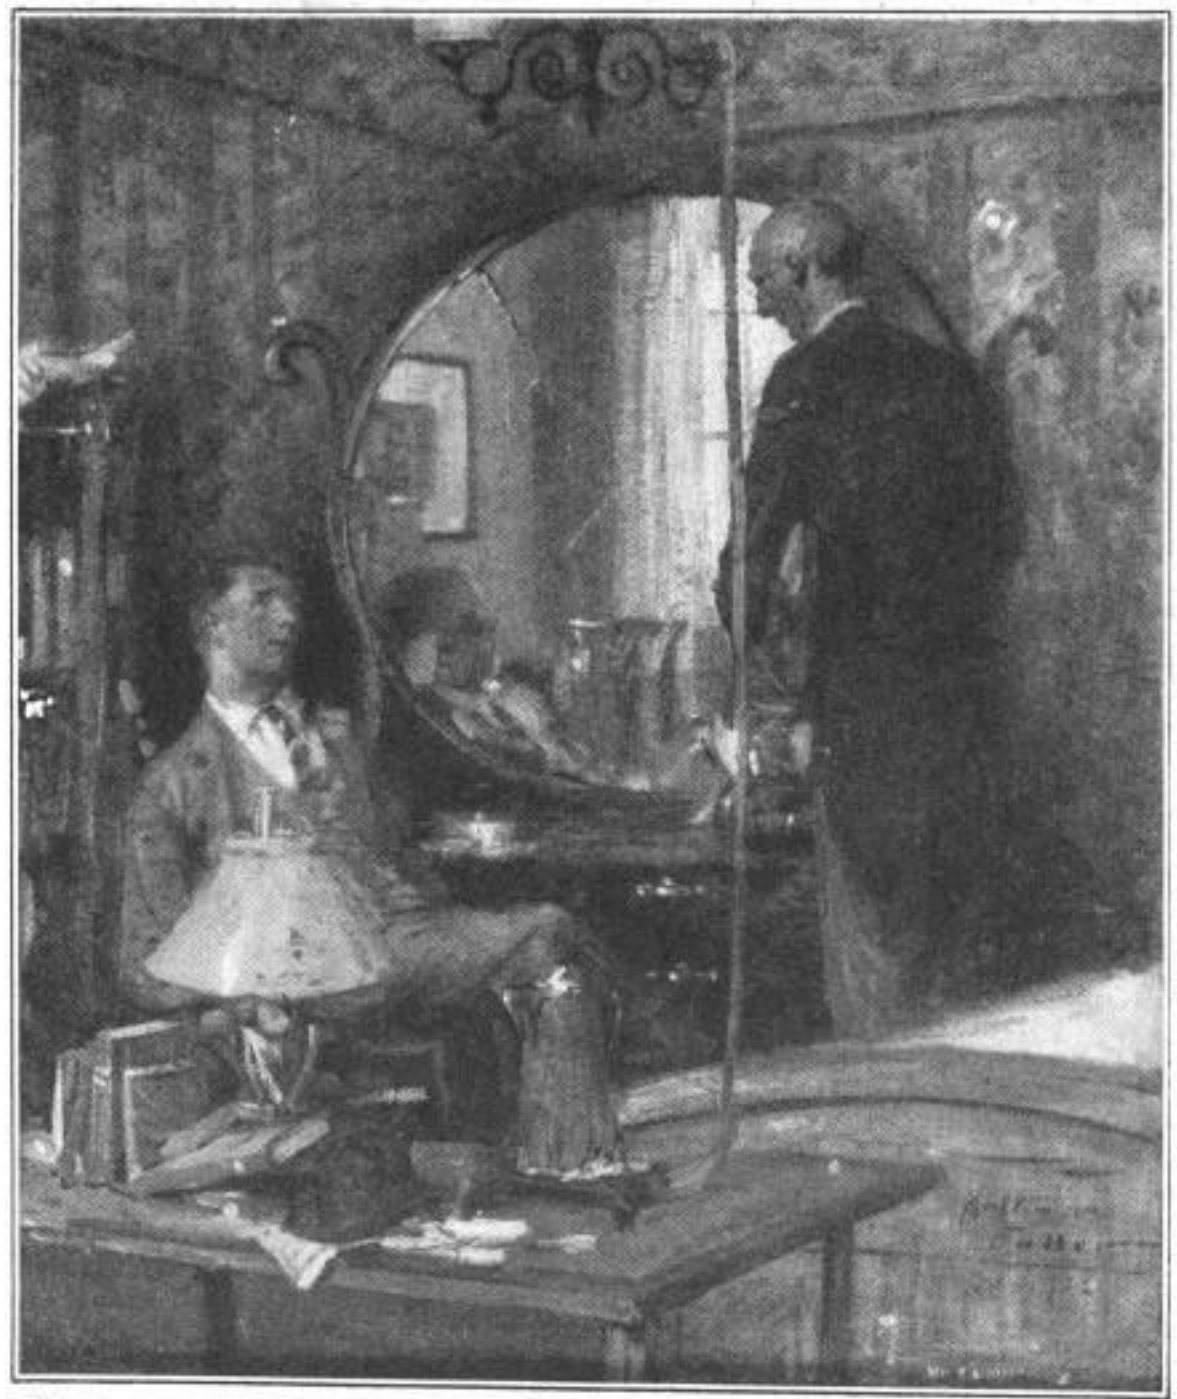
"I'm assuming that you're clever. If you're not, I'm afraid I can't help you. New Yorkers care nothing about laborious honesty! They'd think it worth—oh, at the outside, fifteen to thirty dollars a week. And they'd assume long hours. What they want is new tricks. Toys! Until you've learned that, and all it means, you haven't so much as diagnosed your problem. And don't worry about your art. A little amusement won't hurt you any. Too much overlaboring in all the arts nowadays anyway. Not enough fun. That's the mischief of tradition. And you must keep it clearly in mind that though the degree of civilization actually attained anywhere in the world is pathetically low the state of your New Yorker is lower still. If general civilization be regarded as, say, point fourteen on a scale of one hundred, your New Yorker would stand at about point eleven."

"Why so low?"

"Because he leans back on the material greatness of his city, merges his identity in it, fancies himself greater because of his relationship to it. Every thoroughgoing New Yorker is an interesting case of arrested development. Any self-reliant countryman, now, would stand at about point seventeen on our scale. All that is in your favor, since nobody in New York will ever know whether your work is good or bad. They'll only know whether or not it's talked about. Children! Oh, the real painters would know, but nobody pays any attention to them. The critics are the clamorous ones, and they have no way of finding out. They can only specialize—a few in overpraise, a few in overabuse, the rest in straddling. A man, with practice, can become expert at straddling. All set? Go ahead!"

For with a rising flush and an intent expression about the rather boyish eyes young Mr. William F. Case was fairly leaping at his task; seated on the little three-legged stool under the old sun-bleached once buff umbrella that appeared in some amusingly automatic way to be attached to it; the big rectangular palette comfortably settled about an accustomed thumb; cluster of brushes and greasy old rag fitting into familiar places among his fingers; the dusty new hat pushed carelessly back on a well-shaped head. He had taken the dare. Swiftly the colors spurted from the tubes and coiled prettily into place on the palette.

And almost instantly the crowd formed—a curious, silent crowd, that edged and shoved only a little. But it grew, spreading far back over the terrace, mounting in that respectful way the marble parapet, even forming an overflow on the sidewalk beneath, and spreading there.



Finally a mountainous policeman walked over from the corner and elbowed through that part of the crowd that was by now blocking the walk. For a moment he studied the tall man with the scholarly bald head who stood immovable and was somehow, in spite of the rusty outmoded clothing, a figure of impressive dignity, and then glanced down at the presentment of that fine head that was taking shape with amazing swiftness under the deft hand of the young man in gray. His eyes even lighted a very little. The young man surely knew his job. The fever of work was upon him. Not a hundred peering policemen could have stayed that fascinatingly swift hand.

And indeed when the officer, falling back on a sense of his position, asked, in a voice that was at once gruff and confidential, "How much longer's this going to take?" the artist replied, with the eager impatience of an absorbed child, "Only a little while," and painted on.

The tall man spoke then, very quietly: "He tells me he is painting a lot of the city types. I imagine he'll be out there on the corner after some of you before t much older."

The policeman turned away at that, and sai people on the sidewalk, "Here, move along, a lo Move along now! Can't you see you're blocking walk? Move along now! Step along!"

But the artist was wholly lost in the fever of work, and heard none of this.

"If You Think You're Reading My Mind From My Bookshelves—I'm Afraid You're Far Off the Track"

IV

"VERY good," was the tall man's comment a hand, he regarded the finished portrait. "V indeed." And the crowd behind him murmured i ment with his judgment. "You have a spirited color. Really, I'm not sure you haven't quite a fla you have technic. All first-rate. Now we'll begi

"Begin?" The artist looked up in surprise.

"Certainly." The tall man put on his hat, be and spoke in a guarded voice: "This was only a had to try you out. Stand up, if you don't mind. Now take a good look out there at the corner. I su is the most crowded corner in the world—Fifth and Forty-second Street. The most conspicuou for you would be, I should say—h'm—here on th town side, right in the middle of the crossing, betw lines of traffic, and out beyond the sidewalk line. they don't allow left turning here, and there's alw open space at that point. I want to see the wh brella planted right there."

"Do you expect me to paint Fifth Avenue? hour?"

"Certainly not. You'd have to have a permit, don't care to take the time to get one."

"Well, then, what ——"

"Please listen. There are four or five traffic offi the crossing, not counting the man in the tower. those four or five will be in command. He'll undo have chevrons on his sleeve or a gold shield or so tinguishing mark. Paint him."

"You mean—just go up and ——"

"Exactly. Paint him. Better paint him twice a him a copy. I want you to be there about two ho

Mr. Lloyd George, His Character and Career—By Francis W. Hirst

COPYRIGHT BY CENTRAL NEWS PHOTO SERVICE, NEW YORK CITY

Marshal Foch, David Lloyd George and Aristide Briand at Chequers, Buckinghamshire, "Where the War Was Won"

IN ALL parts of the United States—on the Pacific Coast, in the Middle West, in New England, New York, Pennsylvania and Virginia—I have found during my last tour—August, 1921, to February, 1922—a much livelier interest in British politics than ever before. And as a rule this interest has culminated in personal curiosity about Mr. Lloyd George. Evidently at this distance he constitutes the highest and most romantic peak in our political landscape, and just as the grandeur and charm of his own beloved Welsh mountains often depend on the clouds and mists that hide their summits, so the inconsistencies of his past, the instability of his present, and the impossibility of foretelling his future surround the first Celtic Prime Minister of Britain with an attractive halo of mystery.

There is not only universal curiosity as to his character but also a good deal of admiration for the extraordinary resourcefulness and versatility he has displayed in the last few years. Mr. Lloyd George is the only leading statesman who has held office continuously since the war. He has been a cabinet minister ever since December, 1905!

I must admit, however, that I was a little surprised, during one evening in the Faculty Club of a famous Eastern university, to hear one of the professors present declare with an air of convinced certainty: "Mr. Lloyd George is the greatest of living statesmen." Nor was he at all pleased with a proposal to amend the statement by substituting "cleverest" or "most artful" for "greatest."

My own reluctance to concede greatness to the type of statesmanship in which Mr. Lloyd George excels may be conveyed by an analogy. Let us suppose that a passenger vessel under the command of Captain Lloyd George is advertised to sail from London for New York. On that assurance—which corresponds with the pledges issued at the general election of December, 1918—a number of passengers are booked. The ship starts according to program, but after a few hours Captain Lloyd George calls his officers together and persuades them that they will have better weather if they change their course to Rio. Later on another change of weather and plan occurs, and Melbourne is announced as the port of destination.

Getting Into the Limelight

SOME of the passengers mutiny, but Captain George mollifies the majority by an argument of this kind. "You complain," he says, "that I'm not taking you to the promised land. But isn't it better to be alive in Melbourne than dead in New York? The first duty of a captain is to keep his ship afloat." In this parable you have, I think, the best justification Mr. Lloyd George's friends can adduce for the political somersaults he has turned since the outbreak of war in August, 1914.

Another defense frequently offered by Liberal Coalitionist supporters of Mr. Lloyd George against the attacks of the Independent Liberals is that their leader can find a precedent in Mr. Asquith's war administration for every infringement of Liberal principles. Did not Mr. Asquith give away the free-trade cause by the Paris Resolutions and by the enactment of three or four high protectionist duties on motor cars, watches, cinema films, and so on? Did he not—for the first time in English history—pass conscription; and did he not devise the Defence of the Realm Act—nicknamed "Dora"—which will always serve unscrupulous statesmen as a model for destroying personal liberty, freedom of business and freedom of speech in those few democracies where the citizen is protected by law against bureaucratic tyranny?

These are deadly questions for those English Liberals whose only alternative to Mr. Lloyd George is Mr. Asquith or Viscount Grey. And if it be added that Mr. Asquith and Lord Grey were responsible for the secret diplomacy which preceded the war, and are now advocates of a military alliance with France, it will be obvious that the real Liberalism—which we associate with such names as Cobden, Mill, Bright, Gladstone, Campbell-Bannerman, Lord Morley and the late Lord Bryce—the Liberalism which seeks to establish peace and good will among nations, international arbitration, disarmament, individual liberty and free trade—has little or nothing to hope for in a Grey-Asquith combination.

Whether either Mr. Asquith or Sir Edward Grey or Mr. Lloyd George felt any qualms about betraying free trade and other Liberal causes I do not know. Some think that Mr. Lloyd George's character has changed in office, and that he has developed from an evangelist into an opportunist. I venture to think that it is not so much his character as his policy—or political strategy—that has changed with the circumstances.

Born in a poor home in a mountainous district of Wales the boy lost his father at an early age, but was brought up and educated by an uncle, for whom Mr. Lloyd George always cherished a warm affection. The uncle was of course a Radical. The boy was too clever for the farm. He was quick-witted and eloquent. He might have been trained for the ministry, but in the end it was decided that he should become a solicitor. He soon distinguished himself in the minor law courts of Wales, and on the political platform, as a champion of the small tenant farmer—usually a Nonconformist—and agricultural laborer against the old Tory Anglican society and the English or Anglicized landlords. His emergence as a brilliant orator and debater both in Welsh and in English coincided with the enfranchisement of the agricultural laborer. This took effect at the general election of 1885, when Mr. Gladstone, a convert to Home Rule, asked for a majority large enough to deal with the problem of Irish government.

The agrarian feud was pretty bitter, and almost coincided in Wales with the feud between Welsh nonconformity—the free churches, as they were called—and the Church of England. Broadly speaking, those who attended the Anglican churches in Wales were Conservatives or Tories, though of course there were a few like Mr. Gladstone who were strong churchmen as well as Liberals in politics. Those who attended the free churches—Calvinistic Methodists, Baptists, Primitive Methodists, Independents, or Congregationalists, andsoon—werenearly all of them Liberals or Radicals; and as they also spoke Welsh for the most part they were inclined to be Welsh Nationalists.

Mr. Lloyd George, to use a vulgar expression, went the whole hog. He took up Mr. Chamberlain's Radical Program, issued in 1883 or 1884 by Joseph Chamberlain, John Morley and others. He demanded the disestablishment and disendowment of the Anglican Church in Wales; he sought to undermine the power of landlordism, and to introduce small holdings; he wanted temperance reform, including local option, which means the right of a district to prohibit the retail sale of intoxicating liquors, and so to put an end to public houses and saloons; finally, he was in favor of encouraging the Welsh language, Welsh music, Welsh poetry, and of reviving a Welsh nationality.

Opposition to the Boer War

AFTER a time his own ambition and local favor found him a seat in Parliament. He came to London and established himself there as a solicitor. But the law was only a second preference. His interests were centered in politics and Parliament; there he fought for the Welsh Radical cause with an uncompromising enthusiasm which made him rather obnoxious to old-fashioned Liberals and good party men, who long remembered how his criticisms of the Welsh Establishment bill, brought in by Mr. Asquith as Home Secretary in the last year of Lord Rosebery's administration, hastened the fall of that unfortunate and distracted government.

It fell in the summer of 1895. Four years later, after the Jameson Raid, when Mr. Chamberlain and Sir A. Milner involved Great Britain and the empire in a war with the two Boer republics, Mr. Lloyd George, following Mr. John Morley and Mr. Bryce and other distinguished Liberals, threw himself vigorously into the fray as an opponent of the war. He denounced it as an unrighteous and imperialistic attack upon the independence of two small republics, undertaken in the interests of the Rand mine owners and of "the Kaffir circus"—as the gold-mine section of the stock exchange was colloquially called. Some members of the Chamberlain family were connected with Kynochs—a firm which manufactured explosives. Mr. Lloyd George said bitterly, "The British Empire has to expand in order that the Chamberlain family may contract."

His opposition to the war infuriated the Imperialists and Militarists. He was told by the Liberal Imperialists—Lord Rosebery, Sir Edward Grey, Mr. Asquith, and their friends—that he was ruining his career as a Liberal politician, and that he would not be admitted into the next Rosebery administration unless he modified his attitude. Mr. Lloyd George, however, had the courage of his convictions. Possibly he felt that the majority of the Liberal

The Man With the Metal Fac

By Richard Washburn Child

ILLUSTRATED BY H. J. MOWAT

"Mr. Haslam, May I Drop Down Dead at Your Feet if You're Not the Living Image Right Now of That Thing on the Mantel!"

YOU do not suppose I wanted this thing done?"

"I assumed it. The proposal was not mine."

"You ought to know it is not like me to get into this kind of thing."

She listened to the cold hard voice of this supreme egoist, resting her magic-working finger tips on the other edge of his desk and calmly studying him with frank deep-blue eyes.

"You wouldn't come to my studio," she said lightly. "And I do not think I would have considered working in the office of any other man."

"Then why in mine? Because I offered to pay whatever you asked?"

"No. Not at all. I wanted to do your head."

"Well! Well!"

He was impatient; he was pleased.

"Is this to be done for your possession?" she asked.

"No—my mother."

Her face lighted imperceptibly.

"She wanted it. Pride, mother's pride. And as she has never made up her mind to leave the old home and come on to New York—well, you understand. A present."

"I think I do."

Haslam began to rustle the papers in a drawer. He was through with this preliminary conversation with her. Beatrice Wheaton had heard of him that he could show the end of his interest in anyone, even in the case of distinguished high commissioners of the Allies who had wanted to make him a superpurchasing agent during the war; M. Haslam at thirty-eight closed interviews as a king closes them, dismissing one or many of his subjects. He now had closed this interview.

Nevertheless, when he looked up after several minutes she was still there gazing at him. He was not skilled in women's faces; he did not often look into them, and certainly he never looked into them as one looks at the contour of a country which beckons exploration. He saw only a young woman, not tall, whose eyes were of the clearest penetrating quality, so that at once they impressed one as being the center of her personality. She was not a glorious beauty, but an eternity of good health appeared to flow out from her like a kind of golden aura. Her hair, perhaps, gave that suggestion. Some long-nourished sadness half covered with a certain bitterness of expression was disclosed about her mouth.

"Well? Well?"

"I think they are wrong," she said.

"Who?"

The ticker on his desk interrupted her answer. He seized the narrow tape, glancing at the little blue figures hungrily. She wondered how this hunger could grow so keen. What would he do with more money? At thirty-five he had amassed his fortune. Speculator, promoter, manager—keen, resourceful, famed. How could he make so much obeisance to a little tape when the sea around Capri was so blue, the night cries of Wuchang so stimulating to the imagination, the laughter of children on the filthy streets of the East Side so compromising of Eternity?

"Who is wrong?"

"They."

"They?"

"Those who have spoken of your appearance."

"Yes, yes. What do you mean?"

"I think there are two depths in your face, Mr. Haslam. I am looking for the deeper."

He glared at her sternly. "I am not used to looking at myself very much," he said in a chilled voice. "The last newspaper man or magazine reporter or whoever it was said this of me."

He picked up a clipping and read: "'Haslam has one initial, M. It is said in the biographical sketches that M. stands for Manfred, but no one calls him Manfred, and he signs only M. His most intimate friends call him Em. It is said that only two persons take that familiarity. One is his mother, and the other a barber in Nolan, Illinois, who used to go to school with Haslam and licked him in a fight.'" He read this passage and then waved his long fingers. "That's not the part," he said. "Here. Yes. 'Haslam has a face like agateware. He is handsome, virile, and carries a fine dignified head. It is a head of bronze. When anyone goes to an art gallery one may be impressed by a bronze bust, but one does not go to an art museum to make an impression on such a head. Haslam is like a thing of stone or metal; he may or may not make an impression on you, but you certainly never may hope to make one on him—and see it. He is unmarried. He has a metal face.'"

He paused with a smile of satisfaction. He said, "That is all I know—what they say. Are you sure you care as much as you did?"

"To work on you? Yes."

"Where is your studio, Miss Wheaton?"

"Why?" She looked back at him steadily.

"I am not sure this is the best place to make a portrait."

He paused, looking around his spacious and severe office.

"It may be that my mother had something to do with it." He spoke almost timidly. "She has been a remarkable woman. Some day ——"

"Some day—you will tell me? When you come for a sitting?"

"You would not consider it a pretty story—you."

"It affected your expression?"

"No doubt. Doesn't one's expression grow out of experience and training?"

He looked at her stea

"It is possible to love women—in a sense—lightly—and to hate them profoundly," he said.

"I know."

"And you will not forget?" he asked anxiously.

She shook her head with a smile. She said, "In another moment you will be telling me that you are dangerous to my welfare."

He did not laugh; he only replied as if to pursue his thought, "I said my father made my success."

She smiled again. "Is the key to success, hate of women?"

"It eliminates a great deal—a great deal of diversion. A man can lose himself in only one thing. If he does it in a woman he better keep away from Wall Street."

"Where, as your eulogist said, you obtain a metal face."

He refused to recognize the banter and said solemnly, "I have concentrated."

"On success?"

"Yes."

She stopped her work now and even wiped one little finger with her sculptor's apron so that she could throw back strands of red-gold hair which had strayed forward toward her forehead.

"I wonder how successful you are?" she said as if to herself.

"As successful as my mother ever hoped. She taught me how. The best service I could render, she said, was for me to be successful. Money does more than anything else. If anyone stood between me and success that person ought to be stepped over, around or on."

"By hook—or crook," Beatrice suggested.

"I've never had to play any other way than square."

"Merciless, however?" she suggested.

There was no answer.

She nodded and went to work once more, paring great slices and breaking great lumps of the plastic material away. They fell with dull thumps into the pail at her feet, and then the purr of the catlike city rose up from the streets and from the open spaces of the park with its bare trees, and entered the studio with the false warm luxury of the spring air. Now and then she stopped to look at Haslam, who, with a scowl, turned the pages of an architectural journal.

"Where do you live?" she asked at last.

"Alone," he said. "My apartment—Becker—my man. Two telephones. Private wire to Chicago. A refrigerator that makes its own artificial ice. Get the picture?"

"Your den?" she inquired in a tone which he believed was mocking.

His face lit up with a smile not wholly pleasing. "Yes, you are thinking it is a kind of wolf's den. It would please my mother to hear that. She learned to believe that we are all wolves—especially women. I'm not a hypocrite; I, too, am a wolf."

"I have known wolves before," she said in a voice almost caressing.

"Especially one," he said, insinuating his speculations. "Probably sometime ago he did not give you warning. I do."

She showed her utter surprise and he laughed. "It was that look around your mouth," he said. "Women only get that from some single—disillusionment."

"I have not been disillusioned," she said quietly. There was a warm, tender quality in her voice he had not heard before. "When I am disillusioned I shall be quite ready to die."

He looked about at the examples of her work.

"No," said he at last, going back into the architectural magazine. "I do not think you have been disillusioned. You could not make these plaster girls so full of joy, these bronze men so full of eagerness for living. But I do not speak with authority on that. I know the market. I know the Street. I know the wolf and all his tricks. That's really about all I know."

"I wonder whether you know yourself, M. Haslam," she said.

He arose, yawned and stared at her. His face, its long nose, its high brow, its cold eyes, its firm mouth—all were like metal.

"An appointment," he said. "Enough to-day. Day after to-morrow, eh?" He took his hat in his brisk manner and with the rapid motions of his well-preserved, lean, strong body, his quick legs, his active arms.

"You are no wolf," she said. "A wolf does not live on fear."

"You think I live on fear?"

"Perhaps."

He went out without replying, just as if it were nothing of consequence to deny or to affirm.

The next sitting brought no reference to the conversation of the first. He only said when he came in, "One has to look at you several times to be sure you're beautiful."

Beatrice may have considered that it was impolitic to reply to this. She made no answer as she took the wet cloth from the head of clay.

"So you've been working!" he exclaimed. "While I was not here. What a memory! It looks a lot like me now!"

He saw staring back into his own face the roughly modeled face of a man of iron will, somewhat cruel, with craft and cunning around the eyes, and a firm, inflexible, silent mouth.

"Ha!" he said. "You have eyes, Beatrice Wheaton, eyes!"

He came near, holding out his hand. When she took it he turned her fingers over, examined the fair pink skin and put his other palm over them.

"Well?" he said.

"I understand," she replied.

"You are not in love with anyone?" he asked.

"No," she said. "What an amazing man you are! So sure of yourself."

"Of myself—yes. Of any other—no."

She did not pull her hand away.

"I am direct," he said. "I tell you that there are two relations a sensible man can have toward a woman. One is that she is a piece of property. He parades her as a possession. She is his. He hangs jewels on her. The other is that she is a thrilling amusement. He takes her in his arms. He is tender. He is kind. He grows tired. The first is a bad investment for a man; the second a bad one for a woman."

"And that is all?"

"Absolutely. My mother says ——"

The expression of complete impatience and intolerance which passed across her face as he mentioned his mother appeared to excite him.

"What do you care what my mother taught me to believe!" he exclaimed. "What's that to you? Why do you resent it? What interest have you in me? I'm a wolf—a man with a metal face."

"M. Haslam," she said in a voice which lacked all sureness, all poise. "M. Haslam"—as if some magic was in that name.

He leaned nearer to her. He said, "You didn't take your hand away. I'm not an oracle. But I know we all have our hungers. Sometimes I feel things like that, just the way I feel the market—just the way I feel the result of a big industrial deal. You have your hungers. You can pretend to be a masterful young woman with standing, income, independence. Nevertheless, for tenderness you would give a great deal." She was silent.

"It would be the same if someone else—not me—came and held your hands warmly between his own."

She shook her head and said, "That is something of a cruelty."

"To you?" he asked.

"No," she said. "For the moment I was thinking that it was not fair to you."

He left her then and walked about, thinking. Something in his perplexed scowl caused her to go to the clay and touch the plastic forehead boldly with her two thumbs, pressing hastily and nervously a new contour.

"I am not lacking in a certain kind of tenderness," he said at last.

She did not answer.

"Do you ever take flyers in Wall Street?" he inquired suddenly. "If you wish to do so I could ——"

She interrupted sharply then, but in a low voice. "Why should I take the thing you call flyers in Wall Street?" she asked. "I have no particular use for money. I think I have more than I deserve already, and certainly more than I want."

"For God's sake!" he exclaimed spontaneously. "What do you work for, then?"

"To make your likeness tell the truth."

"To the world? Or me?" he asked as if expecting an answer.

The sun's rays were coming in then in a shaft of light which fell full upon her head. He stood looking in admiration at the brilliance with which her rich coils of hair caught this light and with startled wonder at the drops of emotion upon her cheeks.

"Perhaps," he said under his breath, with the suggestion of one who feels he has awakened sentiment, and having said this to himself he sat up more proudly like a great king and with an implacable look upon his face.

"When I was eight I was taught the lives of great, stern men," he said. "Painstakingly taught. That was when softness and weakness were taken out of me, I can tell you."

"Were they?" she said absent-mindedly.

"Certainly," he replied. "Certainly."

For the rest of the time he remained thinking, staring far away, as when at his desk he often planned his moves on the exchange and in the industrial world. Occasionally he could see her at her work, a figure of wholesome well-being, the activity of

There Was a Warm, Tender Quality in Her Voice He Had Not Heard Before. "When I am Disillusioned I Shall be Quite Ready to Die"

Digitized by Google

L'Alouette, or Silken Vengeanc

By GEORGE KIBBE TURNER

ILLUSTRATED BY TONY SARG

ON MONDAY morning, November seventh, a tall, dark, elegantly dressed man—quite evidently a stranger from some metropolitan district—stopped before a wide, attractive show window on the main street of a well-known Pennsylvania city. He stopped, set down the handsome traveling case he was carrying, and gazed deeply into the window.

He had done this for several minutes—staring in every nook and corner with sharp attention—when suddenly, as if under the impulse of an emotion he could not control, he lifted up both arms at once and shook both fists together toward the window with a hoarse and ugly oath.

"They're all alike, by ——" he said. "I'd like to kill the whole of them."

A passer-by, noting his surroundings, would have been at a loss properly to explain his unusual conduct. Before him as he said these threatening words, inside the high white-lighted window, five lovely, diaphanously clad female figures gazed back at him in cold and supercilious beauty. Banks of pure and fluffy white shone on either side; single garments lay upon casual furniture—each individually displayed with all the tender loveliness of some rare exotic bloom. And in the extreme background an unobtrusively and artistically arranged sign announced what every eye had already seen: Undies of Distinction.

This was all apparently that was in the window to which the stranger, now lowering his fists, was again hoarsely and profanely speaking.

"There isn't one of them, by ——" he said, "that won't lie to you! Deceive you!" And as he spoke these words, in sheer anger he spat upon the sidewalk.

But now, his violence somewhat subsiding, he struggled quite evidently to recover his self-control. "Well, here goes!" he said at last. "We'll have it out with him!"

Placing a carefully set smile upon his features, rearranging his modish and jauntily tied tie, he took up his traveling case from the sidewalk beside him with a gesture of determination and disgust. And the lovely ladies in their underwear gazed at him with delicate disapproval as he passed away and out of sight beneath the great gilded sign which announced: M. W. Praether & Co.

He had scarcely entered the main door when down the center aisle he saw the thin back, high ears and slightly bowed legs of the man he was seeking.

"Good morning, Mr. Dundee," he said.

The small thin man with the singularly heavy mustache turned sharply, with the quick, jerky movement which often marks the easily irritated.

"Good mornin', sir-r-r," he said in a curt Scotch accent and a voice which in every way confirmed his first appearance of irritation. "Now what can I do for you?"

"I want to talk to you—just a minute," said his visitor.

"Well!" said the other, standing waiting now in the manner of a man who is irritated, knows he is irritated, and knows he always has a perfect right to be irritated when he wants to.

The face of the stranger flushed suddenly and richly. "I want to ask you a fair question, that's all," he said.

"'Twill be a Lesson to Ye. Be Off With Ye—You and Yer Alouettes!"

"The sooner ye osk it the quicker ye'll be done!" said the other in the well-known proverbial speech of the Scotch. "Osk it!" he said in the high voice of the easily irritated.

A flush of intense and ungovernable emotion lit in the face of the man before him. His eyes stared back, hard, ugly and uncompromising. With one hand he pointed in the direction from which he had come.

"What have you done with my Alouette?" asked the stranger in loud, clear, unmistakable tones.

"Do ye know who ye're talking to, Mr. Kidder?" inquired the man of whom this odd question was asked.

"I do, yes," said Mr. Kidder firmly.

"Ye're talking to the junior partner of this house!" the other stated with a prolonged and impressive stare.

"I'm talking to the man who made an agreement with me—three agreements! And I'm asking him a fair question: What about my Alouette?"

"Your Alouette?" replied the other, with real or feigned surprise.

"Yes, sir. That camisole I sold you here two weeks ago—for a special!"

"This is Monday morning," said the junior partner in a very positive voice.

"All right," assented Mr. Kidder. "Say it is!"

"This is Monday morning," repeated the easily irrita junior partner, stepping to one side of the aisle. "I h no time to skitter on with ye upon yer Alouettes!"

"Let me ask you this first," said Mr. Kidder, block his progress against the counter and a high pile of gi hams. "Haven't I given you in the past three mon three specials?"

"If ye hove, what then?" responded the other tartly

"First that neck specialty—La Babette—that I g you at a price to retail at one dollar."

The junior partner stood silent.

"Did you sell it at one dollar—or one thirty-five?"

But the other still refused to answer.

"That was three months ago! Two months ago, on next trip, did I let you have a good thing in knickers—c A-1 fancy La Regina knickers, in top-grade heavy sat at a price to let you sell them at five dollars flat? Did y sell them at five dollars with a good dis ay, the way agreed? Or did you put them out t $6.99—with window display at all?

"And now this time I come along and give you a pri on this latest thing of ours—this L'Alouette. You agre ing to put it out as a special at two dollars or $1.99. A you to give me also a good full display at your wint opening."

Mr. Dundee now lifted up his eyes and his mustache if about to speak—but did not yet do so.

"Now did I get my window display, or didn't I?" aske Mr. Kidder. "Did you sell it at two dollars flat—or a you putting it out the way they tell me down the stree at $2.68?"

"If we are, what then?" said the junior partner, speal ing at last, but with a question rather than an answer.

"And if that's the case," asked Mr. Kidder, "is it fa for you to write in to my boss that the goods I sell you can be moved?"

But again the other answered merely with anothe question.

"Hove ye hod yer say?" he inquired with an unchang ing face. "Because if ye hove," he said, and shot a deadl glance from over his singularly heavy mustache, "be off!"

"Is that the way you talk, Mr. Dundee?" said th other.

"Be off with ye! Off my premises!" replied the othe with shrill and rising fury. "You and yer Alouettes and yer La Reginas and yer Babettes!"

"Man to man!" endeavored Mr. Kidder for the last time. But now he stopped. For the junior partner, with one last and venomous glance, had turned upon his heel and walked away.

Mr. Kidder stood watching the counter corner which he finally rounded, clenching and unclenching his hands.

"You Hold Him There," He Was Saying, "Till I Get Them Ready. Give Him a Little More Air if He Needs It"

Digitized by Google

"I wish to God I was rich!" he said then, half audibly, with almost passionate fervor. "I wish I had about a million dollars! Only for a minute! I'd ——"

Expressing this great human desire, which has been in the hearts of so many under similar circumstances, he slightly smoothed his hair and tie, passed on, and turned into another aisle leading toward the entrance to the store.

He had scarcely done this when he stopped abruptly.

"Why, Mr. Kidder!" cried a high, clear, attractive soprano voice.

II

LOOKING up he saw the speaker, a slight, vivacious blonde, carefully and modishly dressed, beside a display of silken garments at one corner of the ladies'-underwear department.

"Well, how are you? I haven't seen you for a dog's age," she said, showing her exceedingly white teeth and holding out with unfeigned cordiality her exceedingly white hand, which Mr. Kidder grasped heartily.

"Well, how's Luella?" he exclaimed, his face lighting up with an unassumed pleasure. "How's the girl?"

For she was an old acquaintance of his, and a good friend in the trade. Luella B. Smith, her name was—the assistant buyer in the ladies'-underwear department.

"Look! What were you muttering about all by your lonesome, coming down the aisle?" she asked brightly, continuing their mutual inquiries.

"Oh, me? Oh, nothing," said Mr. Kidder, his gloomy absent-minded manner suddenly returning.

"No! What was it?" she persisted.

Mr. Kidder, warmed by the bright sympathy in her voice, slightly rearranged the jeweled pin in his tie.

"Look," he asked her—half smiling and half serious at once—"did you ever wish you had a million dollars?"

"Did I ever wish I had a million dollars? Why, certainly I have," said Miss Luella B. Smith, in the quick, bright, lively voice which was evidently characteristic of her. "Don't everybody—sometime?"

"If you had it," asked Mr. Kidder, going on with his questioning, "what would be the first thing you'd do?"

"The first?" she asked, reflecting.

"Yes."

"Oh. I don't know, I'm sure. Do you?"

"I do. Yes!" said Mr. Kidder very definitely.

"What?"

"I'd make this my last trip," said Mr. Kidder.

"You would!" said Miss Smith, in evident admiration.

"I would. Yes!" said Mr. Kidder, his emotions expanding, as men's often do, under the admiring sympathy of woman. "And I'd do just two things," he continued harshly, "with half of them! I'd show them up first. And then I'd smash them! Personally!"

And he went on, under the emotional stimulus of her attention, to tell his troubles with his customers—the retailers who got all the cuts they could out of him and his house, refused to give the public the benefit of them, and then complained they couldn't move his goods!

"I'd show them all up," exclaimed Mr. Kidder, "and then I'd smash them!"

"We'll have to be looking out for you," said Miss Smith, with a suggestive look, "one of these days!"

"What do you mean?"

"I mean when you get your money finally. And you come around smashing us—on that last trip?"

"What's all this?" asked Mr. Kidder, studying her.

"Didn't I hear somewhere," she said, leaning forward over her counter, "that your folks had all kinds of money?"

"What! My folks!" said Mr. Kidder in apparent surprise.

"An uncle—or something—one of these big men in the fancy-soap business. Or so somebody told me!" said Miss Smith.

"Oh, him! That's not my uncle—that's my great-uncle," said Mr. Kidder, now sitting down himself on a customer's stool and leaning forward over the counter to talk to her. "On my mother's side. He's out on the Pacific Coast, at Los Angeles. I haven't seen him for years. A fat chance I'd have of getting anything from him."

"They told me that you were named after him," persisted Miss Smith.

"Yes. And every male child in three generations in my family—and a good share of the females! The way they always do," explained Mr. Kidder, "with the only man in the family that's got money. There must be forty, at the smallest count, by this time. He hates them all—but out of the whole forty he probably hates me worst!"

"Why? For what reason?" said Miss Smith, her interest evidently still unabated.

"I changed the name, for one reason," replied Mr. Kidder, not unmindful of her attention. "I never use anything but the initial for the first name. Justin!" he said, giving it. "Life is hard enough on the road without trailing that hick name all over the map!"

"And yet I should think ——" began Miss Smith.

"I'll do this," Mr. Kidder interrupted her humorously: "I'll sell you my chance for one dollar."

"Your great-uncle!" said Miss Smith, still musing. "He must be a pretty old man! And suppose ——"

"Well, I'll tell you," Mr. Kidder interrupted again, jollying her. "If it ever does come true I'll tell you now just what I'll do!" And he went on, naming dates and places, elaborating amusingly on his theme; while she, on her part, leaning with her elbows upon the counter and her head quite close to his, listened with the half pleased, half whimsical smile of one rehearsing an old and favorite daydream.

"The minute my million comes—that's what I'll do," said Mr. Kidder, summarizing—his emotions and imagination continually quickening under her evident enjoyment of their common dream.

"I'll go out and show them up—my customers—the kind that are making a mess of retailing goods all over the country. Some I'll drop there! Some I'll smash—personally! You've no idea how they treat you! It's worse than you get it here—yourself—working for them!"

And Miss Smith nodded appreciatively.

"And the first place I'll stop," continued Mr. Kidder, going on with his mutually pleasing imagination, "will be right here."

And as he stated this his hearer not unnaturally raised her head and eyes to look around.

"And the first one," continued Mr. Kidder—not looking at her directly for the moment he did not observe the curious dazed expression which had suddenly come upon his hearer's face—"the first one I show up right will be right here—when I talk to old Hoot Mon—your skinny little friend, Alexander Andrew Dundee!"

Interested in his theme he did not yet note the strained, fixed, almost carven expression in the face across the counter. "And what I tell him will be plenty—and real good for his hairy old Scotch soul!"

Miss Luella B. Smith moved slightly from one foot to the other, but still no sound came from her lips to warn him.

"And after that," said Mr. Kidder, jollying her—all his old lightness and buoyancy of manner coming back to him as he elaborated that old familiar favorite dream of theirs—"I'll tell you what we'll do. I'll come in and get you—and you put on your hat and coat and we'll be off—on our trip around the world! To the Orient first!" he continued imaginatively. "Free, independent, rich! We'll be off to Honolulu, snapping our fingers at the whole bunch, making our positively last appearance, our last trip!"

His imagination soaring, still absorbed in what

YOUR TOWN TO-MORROW

Granddad Seldom Found a Level Piece of Land Upon Which to Establish a City

By James H. Collins

TO-MORROW you may not know your own city. They have probably begun altering it already, or are planning to do so. If not, it doesn't greatly matter, because certain forces at work will compel far-reaching changes automatically. To-morrow your city will have wide boulevards cut through its narrow streets. These will accommodate four, six and eight lines of traffic. They will start at the center and run miles out into the country. Thousands of buildings will be torn down. Sharp street corners will be rounded off and the circle and crescent take the place of the checkerboard.

Did your city fathers, years ago, lay out a downtown boulevard or two with a strip of parkway in the center?

That beauty spot will be needed for traffic. But better beauty spots will appear miles from the downtown section. Slums and tenements will disappear too. There will be a general grading up of living standards and an equalization of real-estate values.

When you drive a car the traffic cop will no longer be able to bawl you out, for he will disappear from street crossings, guiding traffic by electric signals from a point where he can see everything but say nothing—that is, if he doesn't disappear altogether. For there will be double-decked street crossings at congested points. And traffic at ordinary street crossings will be speeded up by diffused lighting which kills the shadows that now make them dangerous.

When you go for a walk it will be a far safer and more comfortable form of exercise than to-day, for the bulk of automobile traffic will either be transferred to elevated roads for automobiles alone, or disappear into automobile subways.

The trolley cars will disappear underground or be replaced by motor omnibuses, which are not only more flexible than the trolley, dodging in and out of traffic, but are more flexible in routing. Elimination of tracks and central power plants will give desirable economies in investment and operation.

Sorting Out the Traffic

YOUR city will be linked with others all over the state and country by great trunk motor highways, with lighted traffic signals and perhaps traffic officers. Much of the motor travel between cities will be out of sight, on separate highways that do not enter the towns at all, but skirt them. There will probably be separate freight highways for motor trucking, both in the cities and between them.

And though these far-reaching changes will cost hundreds of millions of dollars, improved property values will come near paying for them in many cases if they are carried out in the right way—and the sooner the better. These changes, far from being dreams, have mostly begun taking shape already, in this city or that.

The automobile is at the bottom of it all. With the number of cars increasing to one for each two to nine families in different cities, our cities have developed street traffic comparable with high blood pressure. Less than twenty years ago New York established its first traffic-control system, adopting the methods of London. The simple wave of the policeman's hand to move a few cars across Fifth Avenue at Forty-second Street in New York has now developed into a system of moving them in units of five and ten blocks by electric signal, and still they do not move fast enough. When a new system for moving automobiles in blocks of ten in New York's theatrical district was installed the first night, a single misunderstanding of signals jammed five blocks of automobiles together in a jiffy, interlocked and at a standstill. Street accidents are steadily increasing through the growth in automobile traffic and its entanglement with pedestrians and slower vehicles.

"Say, that thing'll never be practical!" exclaimed a New Yorker when he first saw a horseless carriage. "Why, a man has to go ahead of it with a red flag!" Within five years he was driving an automobile himself.

When horses and pedestrians became accustomed to the automobile the man with the red flag was no longer necessary. But to-day he is again walking ahead, figuratively, as the traffic policeman. They have put him in towers, with red, green and yellow electric lights, and made other ingenious improvements, but he is fundamentally wrong.

"Speed limits on the automobile are a paradox," says a New York trade-journal publisher who has given much study to the traffic problem.

"The automobile is designed to run fast. That is its whole function, attraction and service. Limit it, and you lose all its benefits. Speed limits and traffic control have become necessary because we have not yet learned to separate the automobile from slower traffic, and give it highways of its own."

The first railroads ran through city streets and across country roads at the same level. Growth in railroads themselves, and the horse traffic which they stimulated, caused many accidents and necessitated the slowing down of speeds. Only when hoisted above other traffic and given their own right of way were the full possibilities of fast passenger and freight travel realized. To-day, like the iron horse, the gasoline horse needs its own right of way, not only in cities but between them.

Few of our cities were really planned—for the most part they just happened—and even the best city plans of our fathers and grandfathers have been outgrown.

The cowpath origin of city streets is familiar and amusing. People delight in its absurdities, getting lost in Boston's old water-front mazes, and verifying the fact that Pearl Street, in lower New York, crosses Broadway twice.

When first settled, São Paulo, Brazil—now the Pittsburgh of South America—was surrounded by hostile Indians, with one friendly tribe headed by Chief Tebyriça. He brought his tribe into the settlement and built a line of cabins, living there for its protection. Tebyriça and his people and the cabins have long disappeared, but the line upon which they stood is now the city's chief street, the Rua São Bento. The original street, shaped not unlike a fishhook, is surrounded by a maze of narrow, jumbled, broken alleys that made São Paulo probably the most complicated city in the world, yet a perfectly satisfactory walking-distance city to those who knew their way about—until the automobile came.

Granddad seldom found a perfectly level piece of land upon which to establish a city with room to grow in all directions, as in London or Los Angeles. His layout was usually governed by water, as the old lady discerned when she expressed surprise that large bodies of water were almost always found near important cities. Water transportation was about all granddad had, so he picked out an island like New York or a promontory like Boston. And his town site was often complicated by hills, as in Pittsburgh or San Francisco.

Towns of Three Kinds

A COWPATH town was often most convenient for getting about, so long as it was kept within walking distance and goods were delivered by wheelbarrow. When it grew larger the cowpath section was extended on a checkerboard plan providing for growth, but usually with streets too narrow for present-day traffic, and with far too few parks and breathing places if the job was done several generations ago. If granddad was very farsighted he laid down a combination of checkerboard and turnpike, as in Washington and Indianapolis, the turnpikes radiating like the spokes of a wheel, providing lines of growth, and also highways by which farmers could bring in food from the surrounding country.

In general there are only these three kinds of town—the cowpath, checkerboard and cartwheel. A cowpath town tends to congestion at the center rather than healthful growth at the radius, and makes dandy slums. The checkerboard town grows faster. The cartwheel town grows fastest of all, and most evenly and healthily. For this reason it has been found profitable to cut expensive cartwheel boulevards into old cowpath cities—Baron Haussmann spent two hundred and fifty million dollars doing it in Paris, and London spent forty million cutting Kingsway from the Strand to Holborn through a mass of dives and rabbit warrens. It has even been found profitable to level hills and fill up hollows to facilitate growth. Right in the center of Rio de Janeiro there is a three-hundred-foot hill, populated chiefly by goats and wash ladies, with an old monastery at the top. Its total valuation is probably less than that of one good lot on the splendid Avenida Rio Branco, from which one could almost hit a goat *with* a stone. Just before the war, it is said, a German syndicate offered to remove this hill free of charge, turning seven acres of central business property over to the city. The hill happens to be dirt instead of granite, a rarity in Rio de Janeiro, and the syndicate was to make its profit by filling in a hollow elsewhere and selling the land.

Looking back now, we see that granddad was often far-sighted in his town planning. But he lacked information. When he laid out a checkerboard extension above cowpath New York a hundred years ago, his scheme was excellent. Everything came to New York by water then. Ships tied

YE GENIAL HOST

By a Hotel Man

I WAS born in the hotel business, or right next door to it. We lived in a big summer resort. My earliest recollections are of tourists and race horses. My uncle sold groceries to feed the tourists, and hay to feed the horses. Naturally I grew up to believe that great success in life came only through running a hotel or running race horses. It wasn't so easy to pick up a race horse for a quarter, so I got a job as errand boy in a hotel.

Luckily I was born too close to the races to have any illusions about them. At the age of twelve it had dawned on me that all the money won at the track was spent in the hotels. Even the losers had to pay. Nothing could be simpler—I would be a hotel man and get the money coming and going.

That's exactly what I have been trying to do for thirty years. My boyish theory was quite correct, but I found that some time was required in the perfection of details before this money could be caught in rolls. There were a few things that had to be learned.

I was getting along pretty well in years, for example, before I fully realized what it meant for a guest to walk in and after shaking hands with the proprietor say, "Well, it certainly feels good to get back home."

There are some hotel proprietors who don't realize what that means to-day. Some of them never even see this homing guest. They have an idea that if a customer registers, checks out and pays his bill everything is perfectly all right. It may be all right, at that. But the fellow who comes in talking about home will come back—and bring his friends. The other may not.

I got my first real lesson as to what was required of a successful host in a rather odd way. I was on a month's vacation from my job as night manager of one of the old New York hotels, and had started South.

Our train was held up by a wreck at a little town somewhere in Kentucky. We had to stay over all night. Being curious I wandered over the town. There was a little hotel—the Commercial House, of course. The rates were two dollars a day, room and meals.

A Secret Worth Learning

IT WAS in the fall and a big stove heated the main office. Around this men sat discussing the news of the day. The proprietor's wife, off to one side in a rocking-chair, was knitting.

I was told that I could get a room—the only one left—if I didn't mind putting up with a few little inconveniences.

As I registered the lady noticed that I was from New York.

"Do you know Mr. Sheppard, of your city?" she asked. "He sells farm machinery. Often stays over Sunday."

I had to admit that I did not know Mr. Sheppard, but I had sense enough not to laugh at the question.

"Oh, I wish you did," she said. "We like him very much. I've been hoping he would come along. We are saving something for him. He's crazy about fried chicken, and I have a coop full of nice broilers that I'm fattening for him."

"I like them, myself," I said, smiling.

"Oh, do you? And do you like hot biscuits split open and covered with the gravy? That," she explained, noticing my glance at a framed photograph back of the desk, "is my daughter. She is studying music in New York. Mr. Sheppard has known her since she was a tiny little girl; used to bring her some little souvenir from the city every time he came."

I found myself asking all about the family and the town, feeling as if I had dropped in on some old friends.

I told this old lady, who, it seemed, really ran the Commercial House, that I was in the hotel business in New York. She was evidently impressed.

"With so many people coming and going I suppose you have made a lot of interesting friends," she said.

That was rather an odd way of looking at the hotel business, I thought to myself. After I had said good night and had gone to my room I pondered over that for a long time. I had not thought of expressing it that way before.

The next morning a negro boy knocked on my door to wake me up.

"The ole missus thought mos' lackly you'd want a cup of coffee 'fore you got up," he said, "an' I fetched it. She say a lot of New York gemmun lacks it dat way 'fore brekfus."

I did like it that way, though I never knew it before. It wasn't very good coffee, but it was warm and made me feel good.

When I got downstairs I found that the lady actually had fried a chicken for my breakfast, a thing I had never seen before in my life. In New York chicken was a dinner dish. I liked it though.

There were no fancy airs and not much service in the dining room, but the thought of criticism did not cross my mind. In fact I felt exactly as if I were in somebody's home. It was all new stuff to me.

I went to the desk to pay my bill and say good-by.

"Oh, there isn't any charge," said the lady. "You are a hotel man. All hotel people are our guests."

"And some day," I declared, after getting over my astonishment, "you are going to be mine, I hope?"

"Maybe, when I go to visit my daughter."

When I got back on that train and we had pulled out I knew that I was a hundred per cent better hotel man than I had ever been in my life. I could have shown that woman many things about business systems and perfection of service, but she had shown me something that no efficiency expert ever dreamed of. As a matter of fact that woman had given me the secret to my later success in the hotel business—a success, I may add, that is not small financially.

Since that time I have managed a few of the biggest hotels in America. I now assist in running a chain of them. I have catered to working men, to business men and to royalty. I find that they all like exactly the same thing that I liked down there at the little old Commercial House.

I don't mean to say that I had never had any previous inkling of what the personal touch means in running a hotel, but this visit gave me my first demonstration of what real hominess means.

After leaving the summer resort in which I was born my first job was cashier in the restaurant of a historic New York hotel—we called them cafés in those days. My desk was in a corner of the old bar, where tables were arranged along the walls to serve meals to men, most of whom were politicians and what we called sports. There I came to know a lot of famous characters, and I made a point of knowing them well. The manager had noticed my familiarity with the names of the patrons and one day he gave me the job as night clerk. Later I got to be night manager.

I'll never forget the arrival there one night of a man who registered from Texas. He wore a big pearl-gray sombrero and a funny kind of necktie. Across his vest hung a huge watch chain with a nugget of gold as a watch charm. I assigned him to Room 315. I remember the man and the room number as well as if it was yesterday. I guess it was the peculiar clothes and hat that impressed me. It was his first visit to New York.

Two years later the Texan came back to our hotel. It was his second visit, it developed. I shook hands with him and called him by name. Naturally he thought I knew his name from looking at the register, but I would have known it anyway.

"Well, Mr. Potter," I said to him, "if you like, I think I can give you the same room you had when you were here before."

He said nothing, but looked at me as if he thought I was crazy—or tricky.

"Take the gentleman to Room 315," I directed the boy.

I cannot explain it, but I remembered the number distinctly. I might have missed it on others, but the former visit of this man had impressed me.

An hour later the Texan came down to the desk.

"Say," he said, "that's the dog-gonedest thing I ever heard of in my life. That is the same room that I had before, and I haven't been in New York for two years."

"I knew it was," I said.

"Well, that beats all! That's one I'll sho tell the fellows about when I get home. Sounds like sleight-of-hand, don't it?"

Personal Hospitality

HE DID tell the boys too. During the next few years we had a steady trade from that part of Texas. The devil of it was that every one of them dared me to remember his room number. Often I had to do some stalling until I could check up a little. But we all used to joke and have a good time laughing if I happened to be caught. Profiting by my trip through Kentucky, I was making them feel at home.

That idea of personal hospitality got to be a life study with me. Strangely enough, just as I thought I had it down pretty pat it has risen up to be my most besetting problem. If anyone can tell me right now how an ultra-modern hotel, housing one or two thousand people a night, can make each of those men and women feel like one of the family he will be a genuine benefactor.

Though I am in the thick of it and managing to hold my own, this mad competition in the building of enormous hotels sort of saddens me. It is changing the running of a hotel from an art to a business. We even call it operating a hotel.

The innkeeper of old was a personality, an important factor in any community. He was a public host and the reputation of the town often depended upon his hospitality. It does yet in small towns.

To-day the proprietor of one of the great metropolitan hotels is nothing more than the president of a great stock company, his success being rated by the regularity and size of dividends. He might just as well have his office in Wall Street. If he ever sees his patrons it is at some big public dinner. Rarely does he meet them in the lobby and tell them that he will try to give them their old rooms. Nor can he find out if they like fried chicken with split biscuits and gravy. These hundreds of visitors find little of which to complain, but they wander as aimlessly and as impersonally around the lobbies as if they were in the Grand Central Station. No night clerk has the time or the opportunity to tell them what is going on in town and what has happened since they were there before. I don't know how it can be helped.

If this superdreadnought building craze keeps on, the hotels are going to run away from the people, I'm afraid—unless the people take a notion to run away first.

Often when I walk from my private office to the balcony and look down on the imposing lobby filled with this throng of guests, unknown to each other and to me, I think of that little Commercial House back in Kentucky. One a hospitable tavern; the other a convention hall. Often I wonder if the old lady is still there and if Mr. Sheppard ever came back.

There Was a Little Hotel—the Commercial House, of Course. It Was in the Fall and a Big Stove Heated the Main Office

THE GOOD UNCLE

By Perceval Gibbon

ILLUSTRATED BY JAMES M. PRESTON

THE Parc Monceaux, that dainty pleasance of beribboned *bonnes* and befrilled children, showed at its best upon that spring morning; a timid generosity of sun shone upon its young green, the white of its marble and the mirrors of its pools; and there was a tinkle of children's voices and the joyousness of their movement. And here, through the gentle and pretty pageantry of it all, went Maurice Bertholet, moving as in an aimless saunter, his hands clasped behind him, his cane slanting under his arm, his face composed and inexpressive.

"*Tiens!*" murmured one white-and-blue-linen nurse to another as he passed. "*Voilà un monsieur vraiment comme il faut!*"

Their eyes followed his tall spare figure with real appreciation. He was one of those perfect products of life who are the bloom upon the social surface of Paris, complete both inwardly and outwardly—from the soul to the fit of the coat—to satisfy its exigencies and its taste. At forty, or thereabout, he had yet the figure and the carriage of the athlete; there was a sophisticated mastery of grace in his every movement; and his face, demurely handsome, was keen without being sharp, and self-possessed without arrogance. His accouterment—black tie, dark gray gloves, gray felt hat with a deep black band—was more than merely quiet; it was even a little noticeably somber in that *bonbonnière* of a Paris playground. But one felt, on viewing him, that there must be a reason for that; it must be right or he would not be wearing it.

His saunter brought him about a bend in the way; he caught his hands from behind his back to raise his hat to a lady who was coming towards him.

"Good morning!" he greeted, with the cordial little smile he had. "You are doing your footing?"

She smiled back and gave him her hand. "*Tiens!*" she exclaimed. "You here? No, I have done my footing. And you—you were meditating, I suppose."

"It may be!"

He accepted her little gesture of invitation and turned to stroll at her side. Nurses watching in the offing smiled meaningly; they knew an assignation when they saw one, they considered; but nurses can be wrong as easily as other juries.

The two chatted a while trivially as they went; but Madame de Leyle glanced from time to time at her companion consideringly; she had not missed the somber note in his effect.

"The voice is the voice of a bachelor," she ventured at last, in reply to some small jest of his; "but the costume is the costume of a widower. There is nothing wrong I hope, Maurice."

He turned his face towards her, yet smiling with that manner of schooled courtesy which was implicit in him; but for an instant or two his eyes were grave and pained.

"I have lost a relative," he said. "You would scarcely have heard."

"Oh, I am sorry," she said. "Who was it, Maurice? Not ——"

He nodded. "Yes," he said. "It was my uncle."

She frowned thoughtfully and stole another glance at him. Insensibly they had slowed in their stroll; they came to a stop beside a marble basin whose surface was yet strewn with the dead leaves of last year's water lilies.

"I am very sorry indeed!" she said.

"I Was Going Down to Look at the Sea," said Maurice. "That, and the Wine When It is Red, are the Only Things to Look Upon Here"

"You are kind," he replied quietly. "He was practically my only relative; he was very good to me always. But, you know, I had not seen him for years."

He had one smartly shod foot on the low parapet of the basin and leaned forward, staring for a while at the water. She had leisure to survey him again, in profile, the keen quiet lines of the face, its breeding, its humor and its restraint; and once more her delicate blond brows knitted in thought. She was a woman of the perfect age, somewhere between twenty-seven and thirty-two, slim, nearly as tall as he, and brilliantly fair, with that shining quality of fairness which gives to face and neck the effect of a golden flush. Before she married the French military attaché at Washington she had been Irma Redden; she had been a widow since the great battles around Verdun; and there were moments yet, plenty of them, when the vivid American fires flashed through the social armor of the Parisienne.

"Tell me something more, Maurice," she said. "You see—we've been friends. Just what does this mean to you?"

He rose upright and dropped his foot from the parapet. His uncle had been a wealthy shipbuilder and shipowner; the allowance he conferred upon Maurice had been the latter's entire livelihood—and Irma de Leyle knew that. Maurice, his place in a fastidious world, his undeniable taste in pictures, in furniture, in frocks, in all the apparatus of elegance—these were a mere by-product of the daily work in the old-fashioned, brig-infested offices in Marseilles. She had not seen and therefore could not remember, as he had been doing all the morning, the figure of the old merchant prince, gross of girth, uproarious of voice, white-bearded and bald but swarthy yet, flamboyant as the South which bore him and made him—laboring happily, living with gusto, and merely exuding Maurice, his position and his opportunities as a man exudes sweat from his body.

"Tell me," insisted Madame de Leyle gently. "You remember—I know! Let us walk back and you can tell me about it."

They moved away again, side by side. "Well?" she asked.

Once more he smiled at her. "He has left me ten thousand francs," he replied.

She stared. "Ten thousand francs—a year?"

He shook his head. "No," he said. "I thousand a year, but ten thousand—*pc potage!* It is one quarter's installment old allowance. And"—he ceased to sm made it a that he sp all sinceri is very g him! The no reason should lea anything. his wife's n really—his wife's; and since ma again, and is a son second ma you know. really; it wa of him to les anything; h always good "But," ob Madame de "after all years! Stil son, your c of cours will ——"

She ceas speak befor amusement lit in his fac "Shall I ask him?" h gested, holdi eyes with "Shall I app him: 'Since succeed to father's we succeed also t parasite'? H twelve years younger than I; do you think such an a would move him?"

She flushed faintly. "What will you do, then?"

His shoulder moved in a restrained little shrug. something, assuredly. I do not think I shall be red to the husks, exactly. You must not think nor look you were in the presence of a tragedy."

"You have many friends," she said slowly.

"Many," he agreed. "Many good friends, thank G

They walked for a while in silence. He seemed t reflecting, with a grave gladness, upon his last words, the thought of Irma de Leyle touched the matter in h from another angle. His good friends included many of wealth and influence; there would be no difficult finding him a dignified and comfortable employment; even so, the Maurice Bertholet she knew, that cons mate work of delicate art and generous Nature, must shattered. An office, hours of routine, days abstra from the life of ease at no profit, to the life of labor! had called himself a parasite, but Irma knew wealt parasites than he with less of his gift for beautifying rôle. To harness him now would be a kind of murder.

"You have rather startled me," she said presently. don't know what to say for the moment. But I am horri distressed, Maurice!"

He turned to her at once with a quick, spontane gayety of remonstrance. He was about to laugh and cl her from her concern for him and his fortunes. But face showed real pain and sympathy, and he fell serious immediate compliance with her mood.

"But you must not be distressed," he said. "I w not have told you, but you claimed a right to know. I granted your right—I would never deny it. And but that, please believe I would have said nothing."

She did not answer, and he went on upon a lighter tc "And really, there is nothing to distress you! *Voyons* I am not a hero; I should hate to be one! When one expelled from one niche one finds another—not? And fo tunately saints are so scarce that there are always vaca niches!"

He rattled on and she listened unsmiling, watchi him. There had been a time when their friendly intima had tended to ripen into something more, but at the tin she had shrunk from it. And he, with his singular adroi ness and a tact that seemed to her the essence of kindne and consideration, had forthwith fallen back to his pos tion of familiar and endearing friendship. It was in th

Digitized by Google

possibilities that she had declined that lay the right of which he had spoken.

"Do not do anything hurriedly," she said. "I must think about this."

"You must not, indeed!" he smiled. "I will do all the thinking. In fact, I am going away to-morrow to find thinking space."

"Where are you going?"

"You would not know it," he told her. "It is a little place on the Breton coast—Le Robain they call it. Twenty cottages, an inn of sorts, an occasional Englishman on a cheap holiday, a few stray artists, and for the rest, dull green rocks, dull green country, and a sea that snarls when it does not sob and always sobs when it does not snarl. One must think there; there is nothing else to do."

"Le Robain," she repeated. "I will write—perhaps! And now I must go. My car is on the avenue."

They walked thither, saying little. But when she was seated in the car, while the chauffeur awaited the order to drive on, she leaned forward suddenly to the window, and the gold-and-rose of her face appeared suddenly as in a frame.

"Maurice!"

"What, then?" he asked.

"Maurice, you have told me everything? All that was in your mind when you came to the Parc to meet me?"

He smiled. "*Touché!*" he admitted in the swordsman's phrase. "I did come to meet you. And I have told you all."

"Well"—her eyes searched his face in vain—"perhaps I will write," she said, and sank back in her seat as the great car slid away.

He met a friend upon the boulevard and they lunched together. The friend was anxious, of course, for the news of the uncle's will was already abroad, and there came duly the question: "And what will you do?"

Maurice was ready for it; he had practiced his answer.

"I assure you," reported his lunch companion to other friends that afternoon, "I assure you, he mocks himself of the matter. He is at his ease. So, either the uncle made him a handsome allowance in his lifetime; or the cousin has declared himself willing to continue the allowance; or ——"

He shrugged and did not complete the sentence. His hearers shrugged likewise; they understood the third alternative so completely and unanimously that none ever spoke the word "marriage."

Even alone in his rooms that afternoon, with no eye to mark him, Maurice Bertholet did not relax his composure. They were charming rooms. Maurice's home fitted him as accurately and becomingly as his clothes. His five or six pictures, his five or six hundred books, his two or three bronzes, his china, his rugs, his furniture—the choice of them and their arrangement were as characteristic of him as his smile or his epigrams. As he sat with his cigar in his smoking room he looked about him, taking in the sum and detail and significance of his environment. It would remain his for a space of days that he could number on his fingers.

He made no movement or grimace of anger or regret. His mind was made up; his purpose was like a binding document, completed, signed and made effective, filed away in his clear and steady brain, not to be amended or tampered with. His life, the only life for which he was equipped, was at an end. Then it was time for death. He had selected death as the least of the evils among which he might choose, and it remained only to end up in decency.

The single inn at Le Robain—an old straggling stone farmhouse converted to hospitable uses—is accustomed to artists and economical tourists; it can even rise to the exploring or strayed motorist and the occasional weather-bound yachtsman. But it was all too frankly puzzled and awed by M. Maurice Bertholet, of Paris. It gave him a vast bedroom with a tangle of beams crisscrossed on its ceiling and a curtained bed that looked like a traveling theater and smelled like a circus. The inn had been sworn at for that in its time; but M. Bertholet only smiled delightedly and delightfully and murmured words of praise. He unlocked a suitcase and set forth toilet gear of ivory and silver, pajamas and a dressing gown of silk, and descended later to the table-d'hôte dinner in the likeness of one who has just come out of a comfortable bandbox.

There were already a couple of elderly artists in residence; they, with M. Bertholet and a lanky, diffident English youth in hairy tweed clothes, had the long table to themselves. The youth had the place opposite to him, and several times Maurice marked his shy eyes nervously reconnoitering him. He smiled inwardly; there had never been a time when he suffered from that lack of address and self-possession, and it struck him now as childlike and pathetic. He was in the mood to be gentle with all mankind.

He looked up and caught the youth staring. The latter dropped his eyes at once and reddened hotly.

"An Englishman, is it not?" inquired Maurice pleasantly in English.

"Ye-yes, sir," hesitated the boy. He could not have been more than twenty-one.

"You are an early visitor to Brittany," went on Maurice. "Especially to Le Robain. Do you stay here long?"

The lad explained eagerly. Plainly he had been miserably lonely till now, and was famished for want of talk and company. "A fellow in our office" had told him about Brittany, and he had never been out of England before.

"So as soon as I could get away from the office I started off. But I haven't seen much yet. Still, it's better than the office."

Maurice nodded, with a full sense that what Le Robain held for him, too, was better than the office.

"I can easily believe it," he said. "You will be sorry to go back."

"Aha!" The youth laughed nervously. "But I'm not going back to it—not ever. I'm my own master now. No more office for me."

"Really!"

"You see"—the boy was gluttonous for a listener—"on my twenty-first birthday I came in for my money. My father wanted me to keep on at the office ——"

"Then your father is still alive? It was not his money?"

"Oh, Lord, no!" The boy laughed. "I'm richer than him now. It was an uncle of mine—Uncle Charles, my mother's brother—that left it to me."

Maurice poured himself a glass of wine and drank it slowly. He relapsed into French for one instant. "*Tiens!*" he said, and he resumed his English forthwith. "I, too, had a good uncle," he remarked, looking at the youth with a smile. "Like you, I am the son of my uncle. Two of us, and we meet at Le Robain. It is as impossible as it is true."

The young fellow gaped uncomprehendingly. "Did—did your uncle leave you money?" he asked stupidly.

"He did," replied Maurice. "You have no monopoly in that kind of uncle. He left me all I have. And like you, it

The Print of My Remembranc

By AUGUSTUS THOMAS

IN THE spring of 1887 James G. Blaine was an important figure in the field of national politics. Less than three years before he had been defeated by Mr. Cleveland by a very narrow margin. The state of New York had been lost to Blaine by a little more than one thousand votes. Shortly preceding the election the Reverend Doctor Burchard, a member of a committee of visiting ministers, had made an address in which he spoke of the opposition to Blaine as a party of rum, Romanism and rebellion. This phrase, unnoticed by Blaine at the time, and unchallenged or uncorrected until it reached the public, had undoubtedly alienated at least the five hundred and odd votes in the state of New York upon which the election turned.

But the two years and more between that time and May of 1887 had in the public mind relieved Blaine of any responsibility for this utterance, and in a spirit of fairness there was a disposition over the country to give another chance to this gallant candidate. That he should be dangerously ill at an out-of-the-way military post in the southwest territory was of interest.

Fort Gibson is nine miles from the little railroad siding and telegraph office of Gibson. Instructed by The World to go to this place from Kansas, where I had been reporting the state elections, I found it necessary to make two round trips between the station and the fort each day, a total of thirty-six miles, on a little cow pony hired for the service. Along the trail the grass and spring flowers were showing profusely. The ride was pleasant, and during the week's stay in the quiet place it was agreeable in the saddle to think over the offer by the generous citizens of Leavenworth, under a total misapprehension on their part, to give me an afternoon newspaper. The prospect offered immeasurable possibilities to a man of thirty, not unfamiliar with politics and in thorough sympathy with the people of the section. But to accept the offer would mean the abandonment of a long-desired association with the theater. It was a difficult choice. On one side was a property established and in the hand; on the other, a dream.

Disturbing

IN GIBSON town, besides the station house, a dinky shed, at once passenger and freight depot, there were exactly two houses. One of them was occupied on its first floor by a small general grocery store and post office, with two family rooms above. The second red frame of four rooms sheltered a squaw man and his full-blood Cherokee wife, besides three or four small children, and his handsome half-breed daughter, aged eighteen. There was no hotel, no boarding house. In the squaw-man's house I shared one ground floor room with a great Dane watchdog. Before my coming he had had the bed to himself. He was a particular dog, and during my week there never grew fully reconciled to my using half of the bed. If I turned over in the night too vigorously he growled, but perhaps because I stopped promptly each time at his first growl he never bit me.

The window was open. There was no lock on the door. Two or three times each night at irregular intervals the dog suddenly bounded through the window with terrifying barks, and, as I judged by their diminuendo, regulated some distant intrusion into what he held to be the home district of that wide prairie. After a while he would come grumbling back and resume his place on our bed, and like an English tourist turn around and over as much as he liked. Each morning I washed my face and hands in a tin basin on a bench outside the kitchen and combed my hair by the help of what reflection I could get in the window glass of the open door, while the Cherokee half-breed daughter asked me how I liked my eggs.

That half-breed girl was one of the prettiest, best-mannered, best-educated girls I had seen anywhere. She was home at that season because the female seminary at Tahlequah had temporarily been put out of commission by a fire. She had a senior high-school knowledge of English literature and its accompanying studies of that grade, and she specialized in French. Of the Indian mother I had only an occasional glimpse. The white father was busy with his planting. I was the only person at table for twenty-one meals, and this dusky beauty stood opposite me at each meal and talked down at me on all subjects wherein my dependence was upon books. About Wednesday she started in to improve my mind. There was a phrase in the Cherokee tongue that she wanted me to learn. I got it perfectly, although I forgot it years ago; but I shall never forget her roguish eyes, or the perfect teeth as she smiled in its repetitions.

Women unchaperoned are the sa world over. She wasn't bold an wasn't timid, but she wouldn't tell English of it. I did all I could wit Cherokee, however, careful of course to let nobod overhear me. I gave it all the insinuation a man coul any phrase of whose meaning he was still a bit unc I repeated it while on the little buckskin pony so as forget it. An old Indian fighter at the post with w got friendly couldn't translate it. Friday night I re to take a chance. Two squaws were buying sugar grocery. The big storekeeper was speaking Chero them. After they left I got near the door, because are things a pretty girl can say to a stranger with propriety than the stranger can claim in saying to a general grocer with whiskers and a flanne and a gun.

I said, "Mr. Brown, will you translate a sen in Cherokee for me?"

"Certainly."

I can see him now tidily wiping out the big scoop on the scales with a soiled towel. Th had gone down. Outside it was dark. He w I repeated the speech just as the girl had nounced it to me, but without the teeth-an business or any coquettishness, of cours didn't want him to plead my impertinent ner as an additional excuse for violence.

As I finished and he shook the sugar cr from the towel he said: "Oh, yes, that m 'The Lord is my shepherd; I shall not wa

The Perfect Breakfast

THE next day Mr. Blaine was sufficientl covered for me to leave him to local rep Getting back to Kansas City I met by appointr our old advance man, Frank Hamilton. Ham was the owner of a weekly paper recently started, c the Kansas City Mi He was also the o of a lease of a prop theater to be calle Warder Grand O House. He offere give me one-half i est in both if I w help him in their n agement and would cline the Leavenw offer. I returned t Louis, closed my r tions with The P Dispatch, left it and contrary to the vice of my father, thought the Leav worth opportunity the greater, joi Hamilton in his en prises.

As editor and owner of his pape had a drawing acco of thirty dollars a we partly commuted i a room and dinners Hamilton's hon Breakfast and lund got outside. By Ha ilton's advice, and lowing his sturdy ample, my breakf was uniformly a cup coffee and a quarter tion of pie. I had he that certain real in lectuals in parts of England had pie breakfast—apple pie, thought—but Hamilt explained that with its crust, its fruit and its meat, min pie had all that the human system required. I often r called the story of the dyspeptic gentleman who to t maxim, "You can't eat your cake and have it too," replie that he could do just that; and to my own feeling of posse sion the generous alcoholic content of the mince pie in thi locality and time added the vague feeling of a banquet th night before and a surviving aroma of popularity.

The Kansas City Mirror was an eight-page paper of somewhat larger sheet than THE SATURDAY EVENIN POST. Four pages of what is called patent inside came t

Digitized by Google

already printed with matter about equally divided between inferior fiction and national advertisements not entirely devoid of that element. The four outside pages filled each week with original and selected matter, and the illustrations. I had an editorial column and a dramatic department. I was more interested in the latter. The local news, wherever possible, was manipulated to forward the opera-house enterprise. The dramatic notes and gossip gave preference to the attractions that we had arranged for and others that we hoped to get.

As the editor of the paper I met many old theatrical friends who came as members of the companies that visited Kansas City while the Warder Grand Opera House was being built. I also made new acquaintances. Among these the most lasting and agreeable was that with Edwin Clive Royle, since author of The Squaw Man and other plays, but then playing juveniles with Booth and Barrett. Royle's play-writing inclination was a strong bond between him and me.

Kansas City was organizing a great exposition. President Cleveland came to the town with his bride for a visit of two days, during which municipal activities—public reception, a grand ball and the like—made such demand upon the local papers that I was called in to help the reporters of the Kansas City Times, and began in that two-day engagement a valued acquaintance with the author, Eugene M. Field, brother of Eugene Field.

The opening attraction of the Warder Grand was to be the week's repertoire by Booth and Barrett under the management of Arthur B. Chase. They were to play six nights and two matinées, and were to receive a guaranteed share of three thousand dollars a performance, a minimum total of twenty-four thousand dollars. Each man was a favorite in Kansas City; Booth was a popular idol. The Warder Grand was to be a good-size house. We had plenty of publicity. Prices were more than doubled. There was no reason to doubt returns far in excess of the twenty-four thousand on the week, and Mr. Hamilton had no difficulty in giving the bond that Manager Chase required. Things looked fine.

Saving Barrett and Booth

AS THE summer waxed and waned, and as the theatrical season came upon us, it grew painfully evident that the opera house was not going to be completed in time for the Booth and Barrett opening in November. L. M. Crawford, who had a chain of theaters through Kansas towns, offered to take the contract off Hamilton's hands, as its terms permitted it to be assigned. But in his mind Hamilton saw a completed opera house, and no logic availed against that vision. A week before the date the sale opened at the Lawntown library, and every seat was promptly subscribed. But the opera house itself was a shell. There wasn't a chair in it. The stage was not completed: it had no roof. There wasn't a stitch of scenery. The carpenter in charge of the stage was a youngster then, but one of the best stage mechanics in the world, Claude Hagen. He promised to be ready with the stage, but foretold the impossibility of opening without scenery or equipment. Hamilton had felt sure of being able to rent sufficient scenery from the opposition houses, but it was impossible to get any.

On the Thursday before the opening I went to St. Louis and explained the dire distress of our enterprise to Mr. Pope. Pope knew Hamilton and liked both him and me. I started back Saturday morning with a baggage car full of scenery attached to a freight train. We reached Kansas City Sunday afternoon and had the scenery on the stage Monday morning. But there was still no roof. One stubborn beam that swung from the overhanging derricks was still to be put in place. The Booth-Barrett company called for rehearsal, walked about the cold stage in their fur coats and looked through to the threatening sky that showed above the entire auditorium.

This auditorium was empty except for some men who were filling it with temporary camp stools in rows. The rehearsal was dismissed, and as a matter of form the company reported in the evening; but during the afternoon a snowstorm had fallen, and at night there was an inch of snow on the streets and much inside the theater; no roof on the Warder Grand Opera House, and no heat. Hamilton and I, two Craig brothers who were interested in the enterprise, a stenographer and two men from the Mirror office met the arriving patrons and explained the postponement of the performance until the following night.

Julia Marlowe as Juliet

There was a good deal of grumbling then and a great deal of confusion at the ticket office the next day. During that Tuesday, however, Hamilton got some tarpaulins put over the roof and brought four large cannon stoves into the theater. These stoves were set up in the private boxes with pipes leading to the nearest outlets and kept red hot during the day. At noon Mr. Booth and Mr. Barrett, with their fur collars turned up, were on the stage again looking at the still-forbidding conditions. As there was no other assistant who knew anything about moving scenery, I was in a suit of overalls to help Hagen on the stage.

One green hand trying to take a wing across the back of the stage got it wabbling on its forefoot and then let go of it as it started to fall. If it were to drop flat-sided it would come down easily as a kite falls, and without much damage; but edgewise, and dropping as a knife blade, it had lethal possibilities. There was no time to talk. I jumped at the two stars whose backs were toward this menace, pushed them violently apart, just as the scene fell between them, striking the stage where they had been standing, splitting the wood of its two-inch stiles.

Mr. Barrett, in real tragedian fashion, said indignantly, "Don't put your hands on me, fellow!"

Mr. Booth lifted his gaze from the broken scene and said, "Thank you."

I was pretty hot at the Barrett rebuke, and told Hagen, who was also cross about it, that it would make a fair story for the Saturday Mirror. That night during one of the intermissions Mr. Barrett thanked me for pushing him out of the way, explained that he was very nervous and his irritable remark involuntary. I had no difficulty in believing this. The whole plexus of events was trying on everybody.

A Wintry Macbeth

DURING the day there had been a conference between the stars, their manager and attorneys on one hand, and on the other hand Hamilton, his bondsmen and their attorneys. This conference resulted in a decision to stand by the guaranty and to open with Macbeth. There was no dressing room in which anybody could have with safety disrobed, and no ordinary theatrical costume would have kept out the freezing temperature of the building. To shut out drafts the stage was boxed as a baronial hall with a set ceiling. Mr. Booth wore his heaviest costume, a robe in which ordinarily he played Richelieu. Barrett as Macduff wore a long quilted gown which had served in Francesca da Rimini. Minna Gale as Lady Macbeth had some equally warm and equally incongruous attire. After the first act of the play the audience, that had been freezing in their wraps—the men retaining not only overcoats but hats—began to move toward the boxes where the cannon stoves were. Those already near these furnaces made way and perishing ladies row by row approached the heat. Men stood in the outer circle stamping their feet. After two or three minutes of this there was a general readjustment of camp chairs, moving from their alignments towards these thermal centers that suggested Birnam Wood on its road to Dunsinane.

Some prudent or habitual gentlemen had brought flasks with them. Others went to the nearest places of supply, and the close of the intermission took on a convivial even if precautionary color. The greatest enthusiasm of the night—not excepting Mr. Booth's reception—was for a line which perhaps in all the previous history of Macbeth had never called for more than a giggle.

In the third scene of Act Two the Porter, roused from his slumber by the knocking at the gate, says, "But this place is too cold for hell." This was greeted with a laugh and successive rounds of applause, and then recurrent ripples as the

The Great Delusion

ONE of the oldest, most seductive and fatal delusions which mankind has suffered from is the belief that prosperity can be created by increasing the supply of money. In only slightly altered dress this ancient and exploded fraud is finding lodgment in many minds and preparing the way for inevitable disillusionment.

Most people instinctively welcome an increased supply of money. So arduous is the struggle of the individual to add to his own holdings of the lucre that there is something almost unconscious in the mental process which regards as beneficial to the people as a whole that which is eagerly desired by each person for himself. Money is the general expression of purchasing power and symbolizes all other forms of wealth. Thus it often assumes an exaggerated importance in the public mind, and there is confusion of cause and effect. People think a community is poor because there is so little money, when in truth the lack of money is due to the community's being poor.

When prices are rising and profits easily made no one complains either as to the amount or the character of money. But when prices have fallen and the farmer or merchant can no longer sell at a profit a hundred bushels of wheat or a gross of felt hats, a demand arises for the enlargement and extension of the function of money to take care of business which is waiting to be done. When a great part of the civilized world has collapsed, or almost collapsed, politically, industrially, socially and financially, it would seem as if only the slow interaction of many forces and the healing process of time could work a correction. But there are always those who believe there is a short cut back or forward to Eden, and to them the cheap-money delusion makes a powerful appeal.

But in this country at least there can be no substantial addition to the supply of money without a radical departure from the gold basis or standard of currency. Therefore those who believe that a lack of money is preventing higher prices for products and holding the country back from its normal development must first of all batter away at the gold standard. They hold that money is such because the Government certifies it, because it bears the government say-so or fiat. And if they are right money might as well be anything. It might as well be based on automobiles, on motion-picture films or kilowatt hours.

But this conception of money is fundamentally wrong. Through the experience of the ages nations have learned that money backed by gold, or ultimately redeemable in gold, has been valuable, and most other kinds of money worthless. Gold has been acceptable in itself, intrinsically, since the dawn of history. It is the ultimate real money because its value is deeply rooted in the established ways of mankind. There has never been a time when paper money was regarded as good except only as long as people had confidence that the issuing government or bank could and would if called upon redeem it in gold.

Paper money, government fiat money, may do all the work for a time, but as a great student of the subject has said, "It does so with a constant prospect of backsliding. Whether there is enough of it, or too much, or too little, is always a matter in the discretion of the government for the time being." But for any one country the value of gold is not within the control of whim or fiat at all. Its international acceptance gives it a basis on which the currency system of the country can rest securely.

But it is argued that money should have a broader base and be secured by such great forms of wealth as land or productive energy or potential producing power. France once tried issuing money upon land, the paper being known as assignats, so called because of the lands that had been assigned to secure them. At first only a small quantity was put out, and it was said that no more would be issued.

"Those French issues of paper rested not merely 'on the will of a free people,' but on one-third of the entire landed property of France; on the very choicest of real property in city and country—the confiscated estates of the Church and of the fugitive aristocracy—and on the power to use the paper thus issued in purchasing this real property at very low prices," wrote a famous historian. Yet this money declined in value as its quantity was added to, until the final result was utter ruin.

It is astounding in view of the present condition of Europe that anyone should even suggest, as the way to make everybody prosperous in this country, an increase in the supply of money. If it were not for the American dollar, based as it is on gold, there would be very little of firmness and stability remaining to-day in the currencies of the world. One of the prime causes of agricultural depression in this country is the inability of Europe to buy because of the disorganized exchanges, which in turn finds an important explanation in their debased currencies. The whole world has been upset by the worthlessness of depreciated European currencies.

But it is said that a rich, strong country like this cannot be compared with Europe in its present plight. But why not, if it adopts the same open road to destruction? The fundamental difficulty with the depreciated paper currencies of France in John Law's day and again during the French Revolution, in the American Colonies during our own Revolution, in the Confederate States, and in the Central and Eastern European countries of to-day, was and is that from the very nature of such currency systems there is no logical stopping place. The difficulty is that once having started to take drugs as a stimulus the dose must be constantly increased. Just why should we have more self-control if we start taking the same sort of dope?

No government has ever started on the road to depreciated paper currency except with the argument that it was strong and wise enough to try the experiment reasonably, moderately and without overdoing it. Yet history shows there has been no stopping place short of either general collapse or the repudiation of the money itself. Always the first effect has been to stimulate business. Naturally. But the reaction from this artificial exhilaration has been so severe that another and larger dose of the drug was required.

One means suggested for paying a soldiers' bonus is the printing of additional currency, and this method has been defended on the ground that it would stimulate prosperity. To keep up the stimulus it would be necessary to print currency for every desired object, and the last stage of the patient would be like the finish of every drug addict.

But the most pitifully tragic part of the cheap-money delusion is that the chief beneficiaries are supposed to be the farmers, laborers and others who are not connected with Wall Street or with the greedy moneyed interests. Long ago Daniel Webster said, "Of all the contrivances for cheating the laboring classes, none has been more e tive than that which deludes them with paper mon The depreciated paper currencies of Europe have cost laboring classes of that continent more in suffering than the war itself. Although wages have mounte unheard-of figures they are less in purchasing power they were before the war under the gold standard.

When the farmer or business man is led to believe his troubles are chiefly due to a lack of money he ma merely the victim of an ignorant or dishonest dres and fanatic. But he may embrace such views becaus has been unable to secure from the banks what he reg as sufficient and legitimate credit. There are profit among banks, just as among other merchants. But on other hand there are thirty thousand banks in the coun most of them owned by local people in no way conne with Wall Street or the moneyed interests. There i much competition in banking as in any other industry laborers or farmers or business men do not like the ser of existing banks they are at liberty to form new ones

Indeed many new banks are formed every year. field is wide open. It is an old, old story, that of the en prising and ambitious person who complains of the banl until one fine day he starts a bank of his own. Then sees the other side, and realizes that a bank is organi not only to make loans to ambitious but often reckless incompetent borrowers, but exists also for the purpose protecting the deposits of the people who have intrus their savings to its care.

But far too many people have a vague idea that if o the Government engaged in banking such hard and n essary restrictions upon the unlimited extension of cre could by an unexplained miracle be done away with. Th one proposal is that every postmaster be empowered make loans, and a United States senator has announc that the proper banking system is one that would provi credit to all people on terms of equality. Obviously t easiest way to bring this about, the simplest machinery f the purpose, would be an issue of currency secured by la or by productive energy, or by the undeveloped wealth Alaska, or by waterfalls, or by the potential power in t atom, in the tides and in the sun.

Such a method of extending credit would seem to be ver cheap, for it carries no interest charge. But if credit is be supplied to all the people on terms of equality, where the line to be drawn? Does it not mean that every bo rower will determine the amount of his own requirements If all the Government has to do to issue money is put i stamp of approval upon energy and power and undeve oped resources, why can it not make everyone rich all once? Certainly that is an absolutely logical and necessar deduction.

Alas, the Government cannot create value, wealt capital, credit, by a mere fiat. It is not superior to th recognized laws which govern the slow process of acc mulating savings. One of the greatest of our statesme has said that the Government did not have a sing dollar to give anyone which it did not take from someon else—a statement which should be posted up in a conspicu ous place in every city, town and village in the land.

The Government cannot start with nothing and accu mulate something, except by taxing its citizens. The ide that credit can be made available to everybody boils dow to the belief that every man should be the sole judge of hi own credit, which in turn means that he has the right t use other people's money when and as much as he please

Now of course there is nothing to prevent the Govern ment from supplying paper money based on such unlim ited security as power or energy, if the people decree tha it be so. But that's just exactly the trouble! Such securit is unlimited, and people soon cease to value what is unlim ited in quantity. Consider the air, sunlight and scenery Why not make them the base for currency? They have th advantage of being plentiful.

But alas, there's the rub. The simple fact, so easily over-looked, is that the value of money depends, among other considerations, upon its being limited in quantity. If only that basic economic law could be repealed by Congress or a constitutional amendment, then how happy and prosperous we should be!

THE COAL MINERS' CASE

By Ellis Searles

Editor United Mine Workers' Journal

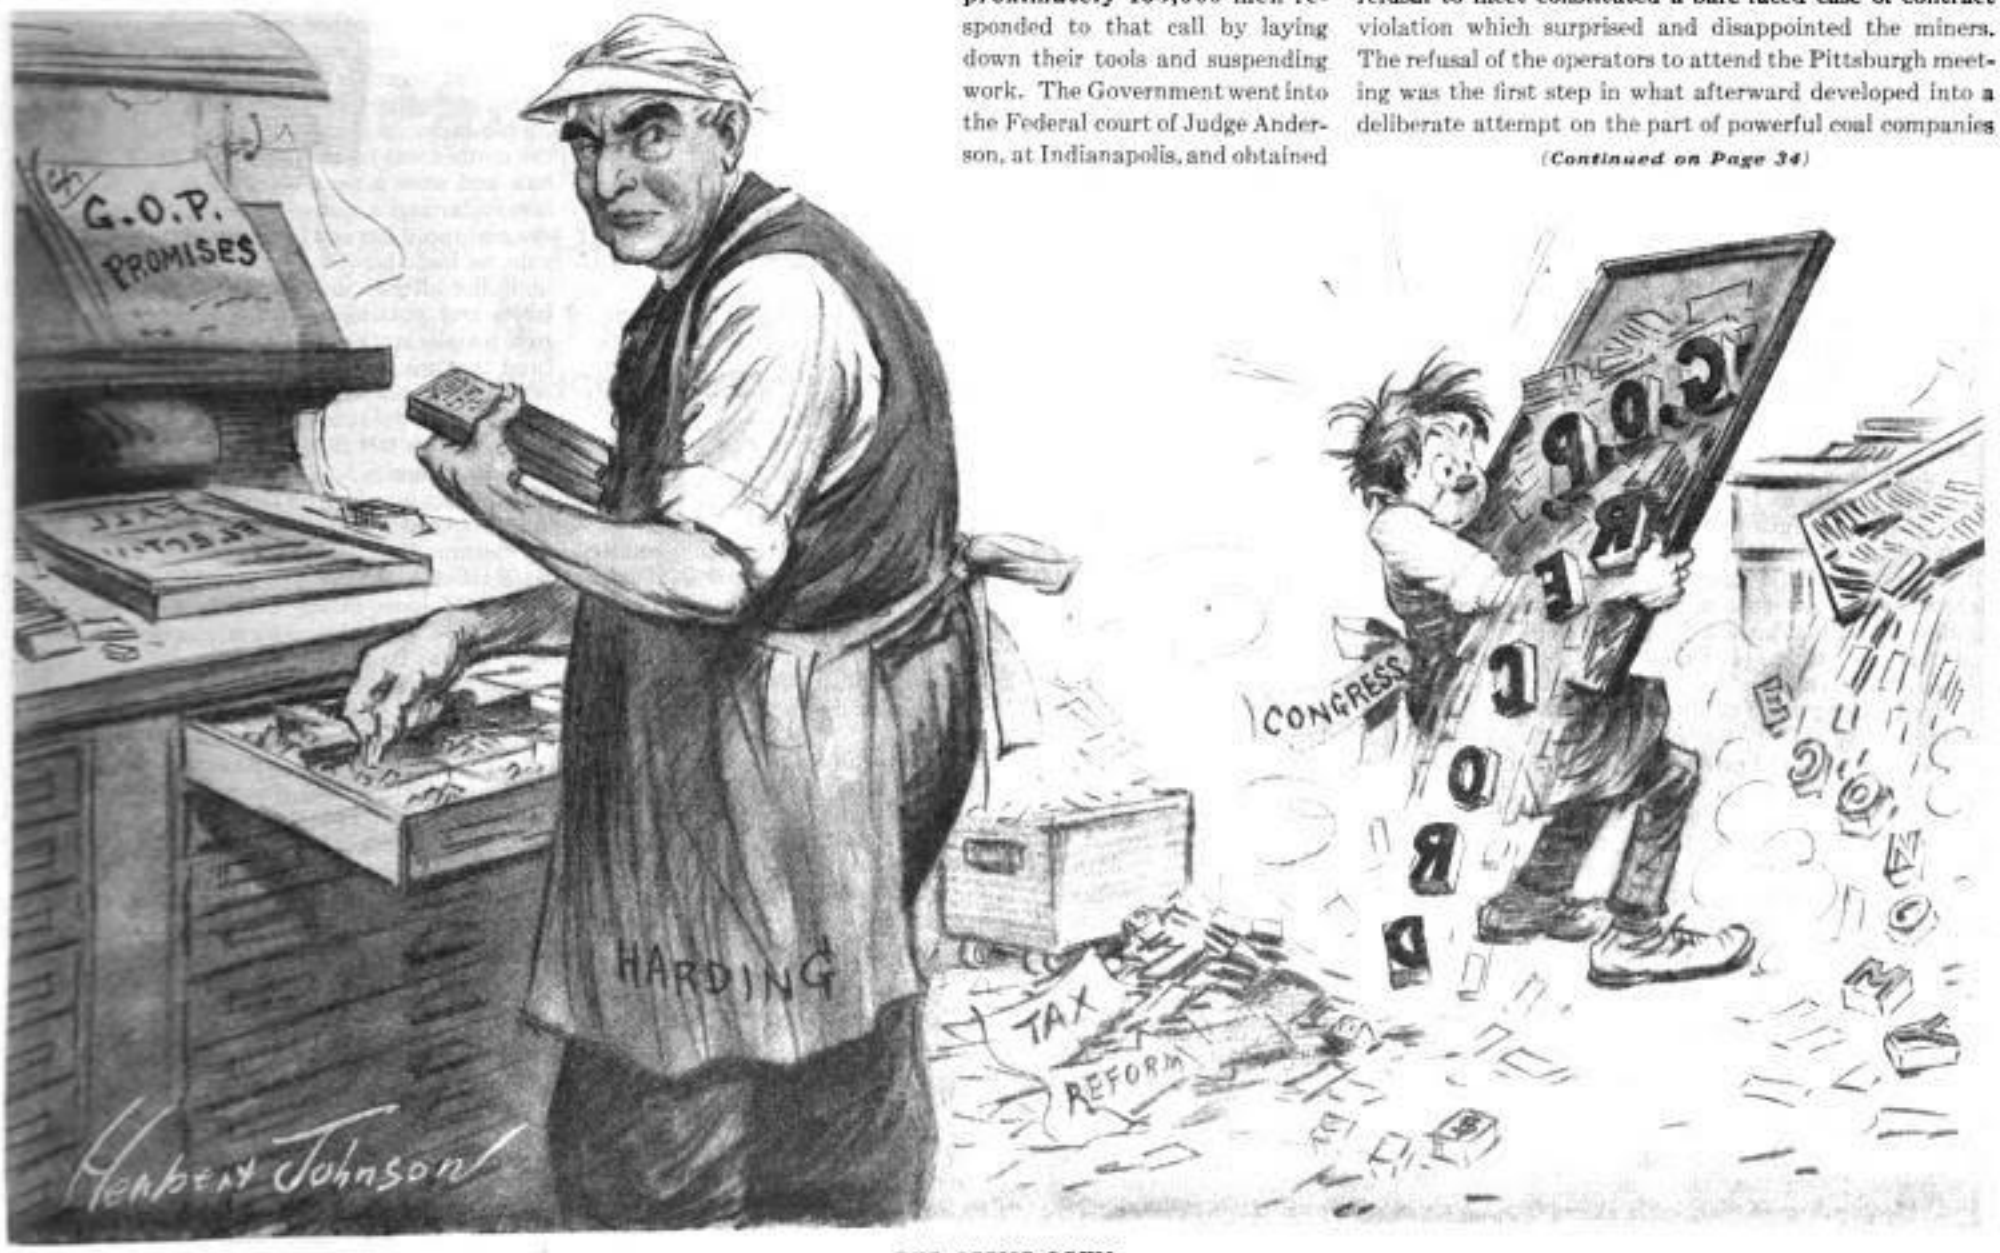
MEMBERS of the United Mine Workers of America were unable to understand the amazing action of the bituminous coal operators in refusing to meet with them in a joint conference for the purpose of negotiating a new wage agreement to take the place of the agreement that expired on March 31, this year. The operators were in honor bound to meet with the miners, and their refusal to meet was a direct, flagrant violation of the solemn agreement which miners and operators, by command of the Government, signed in New York on March 31, 1920. Not all the operators were guilty of this violation of contract, however. The refusal to meet with the miners was confined to that element among the operators that appears to be determined to destroy the coal miners' union if possible, or at least to weaken its protective influence.

At their international convention, held in Cleveland in September, 1919, the United Mine Workers adopted a set of demands that was to be presented to the operators at the joint conference. The wage agreement then in existence was to expire when the war was ended. The miners insisted that the war was over. They set the first day of November, 1919, as the date for the expiration of the existing agreement. They issued a call for the operators to meet with them in joint conference at Buffalo on September twenty-fourth to work out a new agreement.

It was unfortunate that the demands formulated at the Cleveland convention were so worded as to convey to the public an erroneous idea of what the miners meant when they declared for a six-hour workday and a five-day week. What the miners needed at that time was a first-class city editor to edit their copy before it went to the public. But they did not have one, and the demands went forth in such form as to place the miners in a false light. The operators hopped on this demand and, by the skillful use of propaganda, induced the public to believe that the miners were asking for more pay for less work. In fact, the miners were asking nothing of the kind. What they were demanding was a reasonable assurance that they would have the opportunity to work steadily six hours a day and five days a week throughout the year, instead of eight hours a day, six days a week only a part of the time.

Fruitless Conferences

WHEN they assembled for the conference at Buffalo the operators flatly refused to deal with the miners. They said the miners' scale committee was hog-tied with instructions and that it had no authority to accept anything less than the full demands of the Cleveland convention. They said they could not and would not grant those demands, and that therefore it was useless to undertake to negotiate. The operators insisted, also, that the war was not over, and that it would not be over until peace was proclaimed by the President. Because of these chimerical objections the Buffalo conference broke up. But another call was sent out, for a meeting in Philadelphia, and miners and operators reassembled in that city. The operators still maintained their stone-wall attitude of refusing to negotiate, and that joint meeting also dissolved.



Officials of the United Mine Workers issued a call for a general strike of bituminous mine workers to take place on the first of November. Approximately 453,000 men responded to that call by laying down their tools and suspending work. The Government went into the Federal court of Judge Anderson, at Indianapolis, and obtained a mandatory injunction against the United Mine Workers, commanding the officials of the union to recall and cancel the strike order. They obeyed this injunction, but the men did not return to work. The strike continued for six weeks, with practically the entire bituminous industry tied up in organized fields. It was then that President Wilson appointed the Bituminous Coal Commission to settle the controversy.

This commission held exhaustive hearings at Washington, beginning in January, 1920, and in March it handed down its award granting to the miners an increase in wages of approximately 27 per cent. President Wilson directed the miners and operators to hold a joint conference and write the award of the commission, unchanged and in full, into a contract. This joint meeting was held in New York, and on March 31, 1920, the contract was signed. Thus the coal operators signed an agreement not only with the miners but with the Government, and when they violated it they flouted the dignity and authority of the Government. In addition to the award of the commission the miners and operators agreed to and inserted in that contract a provision reading as follows:

> Resolved, that an interstate joint conference be held prior to April 1, 1922; the time and place for holding such meeting is referred to a committee of two operators and two members from each state herein represented together with the international officers of the United Mine Workers of America.

That clause was just as binding as any other part of the agreement. But, even though they signed it, the operators refused to live up to it. President Lewis issued a call for a joint meeting of operators and miners to be held in Pittsburgh, January 6, 1922, to select a time and place for the joint interstate conference that was provided for in that agreement, but the operators of Ohio and Pennsylvania bluntly refused to attend the Pittsburgh meeting. Their refusal to meet constituted a bare-faced case of contract violation which surprised and disappointed the miners. The refusal of the operators to attend the Pittsburgh meeting was the first step in what afterward developed into a deliberate attempt on the part of powerful coal companies

MERTON OF THE MOVIES

By Harry Leon Wilson

XV

New Triumphs

ILLUSTRATED BY HENRY RALEIGH

"Pinch His Cheek Once More, Lulu. Now, Merton, Look Up and Offer Her a Bottle of Ma's Preserves"

ONE genial morning a few days later the sun shone in across the desk of Baird while he talked to Merton Gill of the new piece. It was a sun of fairest promise. Mr. Gill's late work was again lavishly commended, and confidence was expressed that he would surpass himself in the drama shortly to be produced.

Mr. Baird spoke in enthusiastic terms of this, declaring that if it did not prove to be a knock-out, a clean-up picture, then he, Jeff Baird, could safely be called a Chinaman. And during the time that would elapse before shooting on the new piece could begin he specified a certain study in which he wished his actor to engage.

"You've watched the Edgar Wayne pictures, haven't you?"

"Yes, I've seen a number of them."

"Like his work—that honest-country-boy-loving-his-mother-and-little-sister stuff, wearing overalls and tousled hair in the first part, and coming out in city clothes and eight-dollar neckties at the last, with his hair slicked back same as a seal?"

"Oh, yes, I like it. He's fine. He has a great appeal."

"Good! That's the kind of a part you're going to get in this new piece. Lots of managers in my place would say, 'No, he's a capable young chap and has plenty of talent, but he lacks the experience to play an Edgar Wayne part.' That's what a lot of these wisenheimers would say. But me—not so. I believe you can get away with this part, and I'm going to give you your chance."

"I'm sure I don't know how to thank you, Mr. Baird, and I'll try to give you the very best that is in me."

"I'm sure of that, my boy; you needn't tell me. But now—what I want you to do while you got this lay-off between pieces, chase out and watch all the Edgar Wayne pictures you can find. There was one up on the Boulevard last week I'd like you to watch half a dozen times. It may be at another house down this way, or it may be out in one of the suburbs. I'll have someone outside call up and find where it is to-day, and they'll let you know. It's called Happy Homestead, or something snappy like that, and it kind of suggests a layout for this new piece of mine, see what I mean? It'll suggest things to you.

"Edgar and his mother and little sister live on this farm, and Edgar mixes in with a swell dame down at the summer hotel, and a villain tries to get his old mother's farm and another villain takes his little sister off up to the wicked city, and Edgar has more trouble than would patch hell a mile, see? But it all comes right in the end, and the city girl falls for him when she sees him in his stepping-out clothes.

"It's a pretty little thing, but to my way of thinking it lacks strength; not enough punch to it. So we're sort of building up on that general idea, only we'll put in the pep that this piece lacks. If I don't miss my guess, you'll be able to show Wayne a few things about serious acting, especially after you've studied his methods a little bit in this piece."

"Well, if you think I can do it——" began Merton, then broke off in answer to a sudden thought. "Will my mother be the same actress that played it before, the one that mopped all the time?"

"Yes, the same actress, but a different sort of mother. She—she's more enterprising; she's a sort of chemist, in a way, and puts up preserves and jellies for the hotel. She never touches a mop in the whole piece, and dresses neat from start to finish."

"And does the cross-eyed man play in it? Sometimes, in scenes with him, I'd get the idea I wasn't really doing my best."

"Yes, yes, I know." Baird waved a sympathetic hand. "Poor old Jack. He's trying hard to do something worth while, but he's played in those cheap comedy things so long it's sort of hard for him to get out of it and play serious stuff, if you know what I mean."

"I know what you mean," said Merton.

"And he's been with me so long I kind of hate to discharge him. You see, on account of those eyes of his it would be hard for him to get a job as a serious actor, so I did think I'd give him another part in this piece if you didn't object, just to sort of work him into the worthwhile things. He's so eager for the chance. It was quite pathetic how grateful he looked when I told him I'd try him once more in one of the better and finer things. And a promise is a promise.

"Still, Merton, you're the man I must suit in this cast, and if you say the word I'll tell Jack he must go, though I know what a blow it will be to him."

"Oh, no, Mr. Baird!" Merton interrupted fervently. "I wouldn't think of such a thing! Let the poor fellow have a chance to learn something better than the buffoonery he's been doing. I'll do everything I can to help him. I think it is very pathetic, his wanting to do the better things; it's fine of him. And maybe some day he could save up enough to have a good surgeon fix his eyes right. It might be done, you know."

"Now that's nice of you, my boy. It's kind and generous. Not every actor of your talent would want Jack working in the same scene with him. And perhaps, as you say, some day he can save up enough from his wages to have his eyes fixed. I'll mention it to him. And this reminds me, speaking of the cast, there's another member who might bother some of these fussy actors. She's the girl who'll take the part of your city sweetheart. As a matter of fact, she isn't exactly the type I'd have picked for the part, because she's rather a large, hearty girl, if you know what I mean. I could have found a lot who were better lookers; but the poor thing has a bedridden father and mother and a little crippled brother and a little sister that is very well, and she's working hard to send them to school—I mean the children, not her parents; I saw the chance to do her a good turn, and I h you'll feel that you can work harmoniously with I know I'm too darned human to be in this busines

Baird looked aside to conceal his emotion.

"I'm sure, Mr. Baird, I'll get along fine with young lady, and I think it's fine of you to give th people jobs when you could get better folks."

"Well, well, we'll say no more about that," repl Baird gruffly, as one who had again hidden his t impressionable heart. "Now ask the outer office where that Wayne f is to-day and catch it as often as y feel you're getting any of the Ed Wayne stuff. We'll call you up wh work begins."

He saw the Edgar Wayne film, touching story in which the tim diffident country boy triumphed ov difficulties and won the love of a pu New York society girl, meantime pr tecting his mother from the insulti sneers of the idle rich and being ma to suffer intensely by the appare moral wreck of his dear little siste whom a rich scoundrel had lured to t great city with false promises that would make a fine lady of her. Nev before had he studied the acting meth of Wayne with a definite aim in vie Now he watched until he himself b came the awkward country boy. He was prime with the Wayne manner, the appealing ingen ousness, the simple embarrassments, the manl regard for the old mother. Then word came tha Baird was ready for him in the new piece.

This drama was strikingly like the Wayn piece he had watched, at least in its beginnin Baird, in his striving for the better thing seemed at first to have copied his model almos too faithfully. Not only was Merton to be th awkward country boy in the little hillside farm house but his mother and sister were like th other mother and sister.

Still, he began to observe differences. The lit tle sister—played by the Montague girl—was simple farm maiden as in the other piece, bu the mother was more energetic. She had silver hair and wore a neat black dress, with a whit lace collar and a cameo brooch at her neck, an she embraced her son tearfully at frequent inter vals, as had the other mother; but she carrie on in her kitchen an active business in canning fruits and putting up jellies, which, sold to th rich people at the hotel, would swell the littl fund that must be saved to pay the mortgage Also in the present piece the country boy wa to become a great inventor, and this was differ ent. Merton felt that this was a good touch; it gave him dignity.

He appeared ready for work on the morning designated. He was now able to make up himself, and he dressed in the country-boy costume that had been provided. It was perhaps not so attractive a costume as Edgar Wayne had worn, consisting of loose-fitting overalls that came well above his waist and were fastened by straps that went over the shoulders; but, as Baird remarked, the contrast would be greater when he dressed in rich city clothes at the last. His hair, too, was no longer the slicked-back hair of Parmalee, but was tousled in country disorder.

For much of the action of the new piece they would require an outside location, but there were some interiors to be shot on the lot. He forgot the ill-fitting overalls when shown his attic laboratory where, as an ambitious young inventor, sustained by the unfaltering trust of mother and sister, he would perfect certain mechanical devices that would bring him fame, fortune and the love of a pure New York society girl.

It was a humble little room containing a workbench that held his tools and a table littered with drawings over which he bent until late hours of the night.

At this table, simple, unaffected, deeply earnest, he was shown as the dreaming young inventor, perplexed at moments, then with brightening eyes making some needful change in the drawings. He felt in these scenes that he was revealing a world of personality. And he must struggle to give a sincere interpretation in later scenes that would require more action. He would show Baird that he had not watched Edgar Wayne without profit.

MADE BY THE MAKERS OF CAMPBELL'S SOUPS

Healthy, happy, robust children!

How they delight in great steaming platefuls of Campbell's Beans with their tasty tomato sauce! Every time you give the youngsters this dish you are adding just so much more to their chance for perfect health which is every child's birthright. For Campbell's Beans are slow-cooked, which makes them perfectly digestible. Food that builds!

12 cents a can

Except in Rocky Mountain States and in Canada

(Continued from Page 24)

Another interior was of the neat living room of the humble home. Here were scenes of happy family life with the little sister and the fond old mother. The Montague girl was a charming picture in her simple print dress and sunbonnet, beneath which hung her braid of golden hair. The mother was a sweet old dear, dressed, as Baird had promised, in neat black, with the bit of lace and old-fashioned brooch at her throat. She early confided to Merton that she was glad her part was not to be a mopping part. In that case she would have had to wear knee pads, whereas now she was merely, she said, to be a tired business woman.

Still another interior was of her kitchen, where she busily carried on her fruit-canning activities. Pots boiled on the stove and glass jars were filled with her product. One of the pots, Merton noticed—the largest—had a tightly closed top from which a slender tube of copper went across one corner of the little room to where it coiled in a bucket filled with water, whence it discharged its contents into bottles.

This, it seemed, was his mother's improved grape juice, a cooling drink to tempt the jaded palates of the city folk up at the big hotel.

The laboratory of the young inventor was abundantly filmed while the earnest country boy dreamed hopefully above his drawings or tinkered at metal devices on the workbench. The kitchen in which his mother toiled was repeatedly shot, including close-ups of the old mother's ingenious contrivances—especially of the closed boiler with its coil of copper tubing—by which she was helping to save the humble home.

And a scene in the neat living room with its old-fashioned furniture made it all too clear that every effort would be required to save the little home. The cruel money lender, a lawyer with mean-looking whiskers, confronted the three shrinking inmates to warn them that he must have his money by a certain day or out they would go into the streets. The old mother wept at this, and the earnest boy took her in his arms. The little sister, terrified by the man's rough words, also flew to this shelter, and thus he defied the intruder, calm, fearless, dignified. The money would be paid, and the intruder would now please remember that until the day named this little home was their very own.

The scoundrel left with a final menacing wave of his gnarled hand; left the group facing ruin unless the invention could be perfected, unless mother could sell an extraordinary quantity of fruit or improved grape juice to the city folk, or, indeed, unless the little sister could do something wonderful.

She, it now seemed, was confident she also could help. She stood apart from them and prettily promised to do something wonderful. She asked them to remember that she was no longer a mere girl, but a woman with a woman's determination. They both patted the little thing encouragingly on the back.

The interiors now possible on the Holden lot having been finished, they motored each day to a remote edge of the city where outside locations had been found for the humble farmhouse and the grand hotel. The farmhouse was excellently chosen, Merton thought, being the neat, unpretentious abode of honest, hard-working people; but the hotel, some distance off, was not so grand, he thought, as Baird's new play seemed to demand. It was plainly a hotel, a wooden structure with balconies; but it seemed hardly to afford those attractions that would draw the wealthier element from New York. He forbore to warn Baird of this, however, fearing to discourage a manager who was honestly striving for the serious in photo drama.

His first exterior scene saw him, with the help of mother and little sister, loading the one poor motor car which the family possessed with mother's products. These were then driven to the hotel. The Montague girl drove the car, and scenes of this in motion were shot from a car that preceded them.

They arrived before the hotel; Merton was directed to take from the car an iron weight attached to a rope and running to a connection forward on the hood. He was to throw the weight to the ground, plainly with the notion that he would thus prevent the car from running away. The simple device was in fact similar to that used, at Gashwiler's strict orders, on the delivery wagon back in Simsbury, for Gashwiler had believed that Dexter wo run away if untethered. But of course it was absu Merton saw, to anchor a motor car in such a manner, s he was somewhat taken aback when Baird directed t action.

"It's all right," Baird assured him. "You're a sim country boy, and don't know any better, so do it plu serious. You'll be smart enough before the show's ov Go ahead, get out, grab the weight, throw it down s don't look at it again, as if you did this every time. Tha it! You're not being funny; just a hick like Wayne v at first."

He performed the action, still with some slight r giving.

Followed scenes of brother and sister offering mothe wares to the city folk idling on the porch of the ho Each bearing a basket, they were caught submitting t jellies and jams. The brother was laughed at, ev sneered at, by the supercilious rich, the handsom gowned women and the dissipated-looking men. No c appeared to wish his jellies.

The little sister had better luck. The women turn from her, but the men gathered about her and bought c the stock. She went to the car for more and the men f lowed her. To Merton, who watched these scenes, t dramatist's intention was plain. These men did not rea care for jellies and jams; they were attracted by the wil rose beauty of the little country girl. And they we plainly the sort of men whose attentions could mean n good to such as she.

Left on the porch, he was now directed to approach distinguished-looking old gentleman, probably a bank and a power in Wall Street, who read his morning paper Timidly he stood before this person, thrusting forward h basket. The old gentleman glanced up in annoyance ar brutally rebuffed the country boy with an angry flouri of the paper he read.

"You're hurt by this treatment," called Baird, "an almost discouraged. You look back over your shoulder t where sister is doing a good business with her stuff, an

Slowly the New York Society Girl Approached the Couch of the Sufferer, Tenderly She Reached Down to Infold Him

Digitized by Google

IF people have ever shown that it is the Hupmobile they want, they have shown it conclusively during the recent past.

While buying in all lines was materially reduced from its normal scale, Hupmobile sales registered a remarkable vitality and volume.

The truth is that they increased over any similar period in our history—and that increase is now reaching even larger proportions.

These facts are worthy of record, because they signify again that in times when people really seek out sound value for their money, they turn instinctively to that which is *known* to be good.

Digitized by Google

(Continued from Page 26)

you see the old mother back in her kitchen, working her fingers to the bone—we'll have a flash of that, see?—and you try again. Take out that bottle in the corner of the basket; uncork it. The old man looks up—he's smelled something. You hold the bottle toward him and you're saying so-and-so, so-and-so, so-and-so, 'Oh, mister, if you knew how hard my poor old mother works to make this stuff! Won't you please take a little taste of her improved grape juice and see if you don't want to buy a few shillings' worth'—so-and-so, so-and-so, so-and-so—see what I mean? That's it, look pleading. Think how the little home depends on it!"

The old gentleman, first so rude, consented to taste the improved grape juice. He put the bottle to his lips and tilted it. A camera was brought up to record closely the look of pleased astonishment that now enlivened his face. He arose to his feet, tilted the bottle again, this time drinking abundantly. He smacked his lips with relish, glanced furtively at the group of women in the background, caught the country boy by a sleeve and drew him farther along the porch.

"He's telling you what fine stuff this grape juice is," explained Baird, "saying your mother must be a wonderful old lady, and he'll drop over to meet her. In the meantime he wants you to bring him all this grape juice she has. He'll take it; she can name her own price. He hands you a ten-dollar bill for the bottle he has and for another in the basket—that's it, give it to him. The rest of the bottles are jams or something. You want him to take them, but he pushes them back. He's saying he wants the improved grape juice or nothing. He shows a big wad of bills to prove he can pay for it. You look glad now—the little home may be saved after all."

The scene was shot. Merton felt that he had carried it acceptably. He had shown the diffident pleading of the country boy that his mother's product should be at least tasted, his frank rejoicing when the old gentleman approved of it. He was not so well satisfied with the work of the Montague girl as his innocent little sister. In her sale of mother's jellies to the city men, in her acceptance of their attentions, she appeared to be just the least bit bold. It seemed almost as if she wished to attract their notice. He hesitated to admit it, for he profoundly esteemed the girl, but there were even moments when, in technical language, she seemed to vamp these creatures who thronged about her to profess for her jams and jellies an interest he was sure they did not feel.

He wondered if Baird had made it plain to her that she was a very innocent little country girl who should be unpleasantly affected by these advances. The scene he watched shot where the little sister climbed back into the motor car, leered at by the four New York clubmen, he thought especially distasteful. Surely the skirt of her print dress was already short enough! She need not have lifted it under this evil regard as she put her foot up to the step.

It was on the porch of the hotel, too, that he had his first scene with the New York society girl whose hand he was to win. She proved to be the daughter of the old gentleman who liked the improved grape juice. As Baird had intimated, she was a large girl; not only was she tall and stoutly built but she was somewhat heavy of face. Baird's heart must have been touched, indeed, when he consented to employ her. Merton remembered her bedridden father and mother, the little crippled brother, the little sister who was also in poor health, and resolved to make their scenes together as easy for her as he could.

At their first encounter she appeared in a mannish coat and riding breeches, though she looked every inch a woman in this attire. "She sees you, and it's a case of love at first sight on her part," explained Baird. "You love her, too, only you're a bashful country boy and can't show it the way she can. Try out a little first scene now."

Merton stood, his basket on his arm, as the girl approached him.

"Look down!" called Baird, and Merton lowered his gaze under the ardent regard of the social butterfly.

She tossed away her cigarette and came nearer. Then she mischievously pinched his cheeks as the New York men had pinched his little sister's. Having done this, she placed her hand beneath his chin and raised his face to hers.

"Now look up at her," called Baird. "But she frightens you. Remember your country raising. You never saw a society girl before. That's it—look frightened while she's admiring you in that bold way. Now turn a little and look down again. Pinch his cheek once more, Lulu. Now, Merton, look up and smile, but kind of scared—you're still afraid of her—and offer her a bottle of ma's preserves. Step back a little as you do it, because you're kind of alarmed about what she might do next. That's fine! Good work, both of you!"

He was glad for the girl's sake that Baird had approved the work of both. He had been afraid she was overdoing the New York society manner in the boldness of her advances to him, but of course Baird would know. His conscience hurt him a little when the Montague girl added her praise. "Kid, you certainly stepped neat and looked nice in that love scene," she told him.

He would have liked to praise her own work, but could not bring himself to. Perhaps she would grow more shrinking and modest as the drama progressed.

Simple, Unaffected, Deeply Earnest, He Was Shown as the Dreaming Young Inventor. He Felt in These Scenes That He Was Revealing a World of Personality

A part of the play now developed as he had foreseen would, in that the city men at the hotel pursued the lit sister to her own doorstep with attentions that she shou have found unwelcome. But she still behaved in a way could not approve. She seemed determined to meet t city men halfway.

"I'm to be the sunlight arc of this hovel," she announc when the city men came, one at a time, to shower gi upon the little wild rose. Plainly she was destined to the victim of a brute's treachery.

Swiftly it became apparent that she must pay dea for her too-ready acceptance of these favors. One af another the four city men, whose very appearance wou have been sufficient warning to most girls, endeavored lure her up to the great city, where they promised to ma a lady of her. It was a situation notoriously involving da ger to the simple country girl, yet not even her moth frowned upon it.

The mother, indeed, frankly urged the child to let all these kind gentlemen make a lady of her. The broth should have warned her in this extremity; but the broth was not permitted any share in these scenes. Only Mert Gill, in his proper person, seemed to feel the little girl w all too cordially inviting trouble.

He became confused ultimately by reason of the scen not being taken consecutively. It appeared that the litt sister actually left her humble home at the insistence one of the villains, yet she did not, apparently, creep bac months later broken in body and soul. As nearly as h could gather, she was back the next day. And it almos seemed as if later, at brief intervals, she allowed herself t start for the great city with each of the other three scour drels who were bent upon her destruction. But always sh appeared to return safely and t bring large sums of money wit which to delight the old mother

It was puzzling to Merton He decided at last—he did no like to ask the Montague girl—that Baird had tried the same scene four times, and would choose the best of these for hi drama.

Brother and sister made further trips to the hotel with their offerings, only the sister now took jams and jellies exclusively, which she sold to the male guests, while the brother took only the improved grape juice, which the rich old New Yorker bought and generously paid for.

There were other scenes at the hotel between the country boy and the heavy-faced New York society girl, in which the latter was an ardent wooer. Once she was made to snatch a kiss from him as he stood by her, his basket on his arm. He struggled in her embrace, then turned to flee. She was shown looking after him, laughing, carelessly slapping one leg with her riding crop.

"You're still timid," Baird told him. "You can hardly believe that you have won her love."

In some following scenes at the little farmhouse it became impossible for him longer to doubt this, for the girl frankly told her love as she lingered with him at the gate.

"She's one of these new women," said Baird. "She's living her own life. You listen—it's wonderful that this great love should have come to you. Let us see the great joy dawning in your face. Dream your eyes at her."

He endeavored to do this. The New York girl became more ardent. She put an arm about him, drew him to her. Slowly, almost in the manner of Harold Parmalee, as it seemed to him, she bent down and imprinted a long kiss upon his lips. He had been somewhat difficult to rehearse in this scene, but Baird made it all plain. He was still the bashful country boy, though now he would be awakened by love. The girl drew him from the gate to her waiting automobile.

FIRESTONE CORDS

The plus values in Firestone Cords are setting a new high standard of mileage and service. In addition to their selection by 62 leading car manufacturers as standard equipment they are the choice of leading commercial and motor passenger transport companies who carefully check mileage.

30 x 3½, $17.50 32 x 4, $32.40
33 x 4½, $42.85 33 x 5, $52.15

Maintaining Mileage Leadership

THE Firestone organization, justly proud of its record and its product, is keenly aware of the importance of the human factor in tire-building.

The Firestone worker is constantly reminded that Most Miles per Dollar is the Firestone standard. As he enters the main entrance of the factories he sees this message emblazoned on the company's bulletin board:

"It is our job to see that the name Firestone always means to the car owner the most miles for his money."

It is this determination to give greatest value that keeps Firestone quality improving while prices are lowered.

With Firestone mileage greater than ever before, Firestone prices now being quoted by dealers were never more favorable to the car owner.

$11.65

30 x 3½ extra size non-skid known to trade and public as this year's outstanding tire value. Advantageous buying and efficient manufacturing permit its sale now at the lowest price in history. In 30 x 3 size at $9.85.

Most Miles per Dollar

Firestone

$9.99

Oldfield "999" a 30 x 3½ non-skid full size tire. Built with 4 ply long staple fabric. In 30 x 3 size at $8.99. At these prices this tire gives a remarkably high value in quality and dependable service. Sold by Firestone dealers.

European Statesmanship and the Question of Nationalities

By BARON ROSEN

Former Ambassador From Russia to the United States

IN ATTEMPTING to trace the part that the question of nationalities has played in influencing the course of the political history of Europe ever since the French Revolution, it is desirable to establish as precise a definition as possible of the meaning of such terms as "nationality" and "nationalism." Precision in the use of these terms is desirable in order to meet such vague and sweeping assertions as, for instance, that nationalism is the cause of wars and perpetuates the evils of war in time of peace, assertions which, although true in a measure, leave it to be implied that, nationalism being the real source of the evils of war, salvation should be sought in its opposite—internationalism.

What then is nationalism? I think it could be best defined in the words of the New International Encyclopædia as "a modern historical tendency having for its object the organization in well-knit political states of populations naturally bound together by ties of nationality"—nationality itself being conceived as including community of language, traditions, morals, religion and, in a broad sense, culture. But this is not the only possible conception of nationality as the tie which holds together populations in well-defined states. In international law this somewhat vague term is used strictly as denoting merely the external condition of belonging by birth or nationalization to a nation or sovereign state. In this sense nationality, although it may, does not necessarily imply community of language, traditions, religion or culture. Indeed, in the majority of the great states of Europe such an entire community has been and still is conspicuously absent. The community which has held and still holds together the heterogeneous national or racial elements in such states, is a community of, in a broad sense, economic and political interests, either voluntarily assumed, as, for instance, in the Swiss Confederation, or imposed by the development of political events which in the course of history have determined the confines of political organisms known as states or nations.

An Outgrowth of the French Revolution

THUS the term "nationality" as used in international law could denote membership in a nation or state itself composed of several nationalities—confederated as in Switzerland, or united as in the United Kingdom of Great Britain and Ireland; or in France under the monarchy as well as now under the republic; or else composed of one dominant and several subordinate nationalities, as in the Empire of Russia and the Kingdom of Prussia and in the Ottoman Empire; or of two dominant and several subordinate nationalities, as lately in the Austro-Hungarian Monarchy under the régime of dualism. On the other hand, a nationality no longer recognized as such by international law, such as the Polish nationality, since the passing of the independent Kingdom of Poland, although for more than a century divided in its allegiance among three different states and in spite of all efforts at denationalization practiced on it by the governments of Russia and Prussia, and to some extent also by that of Austria, has never, in the consciousness of mankind, lost its character as a distinct nationality.

Then again there were nationalities racially, lingually, culturally united, but not recognized as such by international law—such as the Germans and Italians occupying territories divided into a number of separate internationally recognized states, some of them even, as in Italy, ruled over by alien dynasties, such as Lombardy, Tuscany, Modena, Parma and Naples; so that, until the creation of the German Empire and the Kingdom of Italy, the very words "Germany" and "Italy" were but geographical terms denoting certain territories inhabited by peoples of German or Italian race.

As a matter of fact, before the great political upheaval of the French Revolution the idea of statehood, the sentiment of state autonomy and loyalty to state and ruling dynasty, had been entirely overshadowing the idea of nationality. In its modern form, therefore, nationalism as a tendency toward the independence and unlimited sovereignty of nationalities, dates from and is an outgrowth of the French Revolution. It might, indeed, be said that before the revolution Great Britain and France were really national states, inasmuch as their political organization was coterminous with their national culture; but their, so to speak, unconscious nationalism had not assumed the character of a conscious force. Conscious nationalism developed in France in her struggle with hostile coalitions, and Napoleon, with a great statesman's perspicacity, did not fail to recognize its value as a driving force and to make it subservient to his plans of revolutionizing the political configuration of Europe.

The idea was subsequently taken up by German and Italian statesmen, thinkers and poets, and resulted in a movement the vicissitudes and struggles of which provided material for the history of the greater part of the nineteenth century, culminating at last in the formation of the German Empire and the Kingdom of Italy. It will be readily granted that in these cases nationalism has proved not only a powerful driving force but also a beneficent one, inasmuch as it has been instrumental in terminating chaotic conditions of multifarious particularistic and often conflicting interests by the creation of great unified political and economic organisms under the shelter of which the two nations reached a degree of material prosperity, let alone an international status that otherwise would have been unattainable.

This much will have to be placed to the credit of nationalism, for it stands to reason that under the conditions—whatever the future may have in store for us—of modern civilization, with its colossal development of industry and international trade, the absorption of numerous small independent political entities, with their individual customs barriers and obstructions to the freedom of communications and trade, by larger political and economic organisms, such as the leading modern states, can only inure to the advantage of all civilized mankind.

But nationalism, however laudable and useful as a tendency aiming at the organization of large national states, has also not infrequently developed a tendency toward oppression of minor subject or dependent nationalities included in the confines of such states. Similar tendencies are the more difficult to withstand and to combat, as they are often inspired by sincere albeit misguided patriotism when not masquerading under its convenient cloak. Of the difficulties in the way of combating them the author of this article is entitled to speak from personal experience. The dangerous character of policies pursued as an outflow of such tendencies to which he has repeatedly had occasion to call attention from the tribune of the Russian Legislative Assembly, of which he was a member, has been sufficiently demonstrated by the history of a recent past. In the guise of militant, forcibly imposed, so to speak, cultural patriotism, nationalism—intended to be a powerful means of unification—was bound by a natural reaction to become a no less powerful element of latent disunion, awaiting only a favorable turn of events in order to produce open disruption. All the four Continental empires that have been pursuing similar policies have passed through the same experience. In the cases of the Austro-Hungarian Monarchy and the Ottoman Empire it has meant their total collapse. In the cases of Russia and Germany it has brought about their partial dismemberment—permanent if definitely acquiesced in, or, otherwise, a fruitful source of perennial conflicts in the future.

Nationalism in the Nineteenth Century

IT WOULD, however, be hardly just to lay the blame for policies inspired by militant nationalism entirely at the door of the governing bodies of the countries concerned. The natural instinct of self-interest would be sufficient to prompt rulers everywhere to endeavor to conciliate subject national minorities, so as to make sure of their loyalty, rather than to foster discontent among them and to promote hostility between them and the dominant nationality in the state. Nor could rulers, however incompetent, be quite unconscious of the dangerous character of militant nationalism as a guiding principle of government and a deliberately chosen policy. The adoption and practice of such policies must be attributed not so much to the purblind incompetence of rulers as to their weak-kneed subserviency to what they hold to be the patriotic demand of so-called public opinion—that is to say, of the clamor of prejudices, ambitions and passions entertained by a small minority of nonproducers, intellectuals, writers, thinkers and professional and amateur politicians, but in which the real people, the bulk of the nation, the workers and producers, have no share until their passions are stirred by propaganda, that curse of modern society.

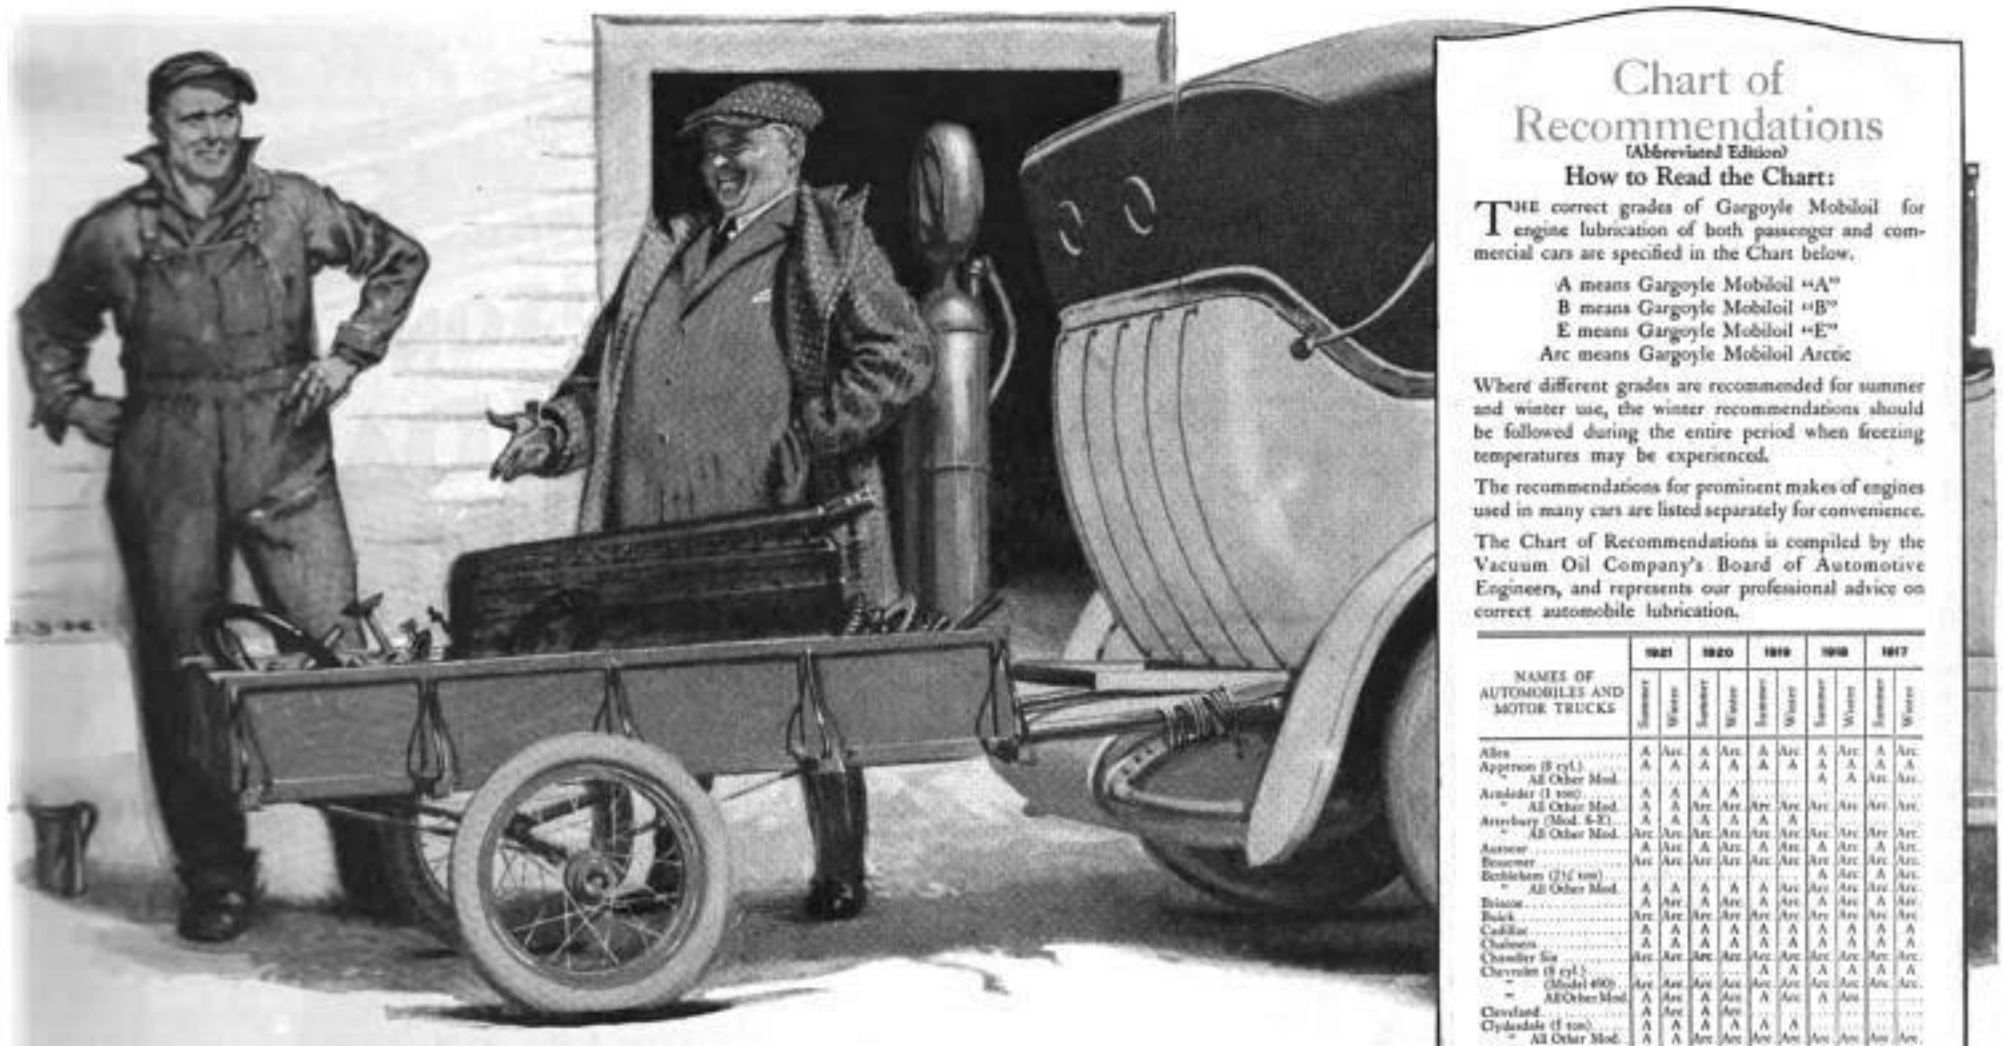
There is, moreover, another side to nationalis
If nationalism, aiming at the organization in la
political states of populations homogeneous in l
guage, culture and race, even at the cost of suppr
sion or oppression of small distinct nationalities, m
be considered as a substantially constructive force,
tionalism in smaller subject or dependent nationaliti
with its claims to what is now called self-determinati
is apt to become a mainly destructive force, beneficent
some cases, the reverse in others.

In the first category must be placed the national mo
ment in Greece originating in the beginning of the ni
teenth century, which, fostered and aided by Russ
Great Britain and France, culminated in the establis
ment of the independent Kingdom of Greece, althou
the numerous populations of Greek nationality, settled
other parts of the Ottoman Empire, had to remain und
Turkish rule. Likewise nationalism in the Balkans, whi
awakened somewhat later and led to a series of revolts
sulting in the establishment of various autonomies, un
in 1878, after the victorious campaign undertaken by Ru
sia for the liberation of Bulgaria, the independence
Rumania, Serbia and Montenegro was recognized und
the Treaty of Berlin. Also the severance of the union b
tween Sweden and Norway and the resulting establis
ment of a separate Kingdom of Norway may be regarde
as an outgrowth of the nationalistic movement whic
swayed the minds of the peoples of Europe in the nin
teenth century.

Troublesome National Fragments

PERHAPS even the creation in 1913 of an independen
Albania might be included in this enumeration, althoug
in this case, instead of arising out of a spontaneous popula
movement the condition of independence was imposed b
the diplomacy of the Great Powers as a specimen of th
specious and sometimes ludicrously unworkable device
to which it is prone to resort when at a loss how to reac
rational solutions of ticklish questions and to disentangl
knotty situations.

To the same class of national movements, deserving i
their aims, may be assigned the national movements i
Poland, Finland and the Slav countries under the Austro
Hungarian Monarchy, which remained unsuccessful unti
the great upheaval of the World War.



If now we turn to national movements whose destruc
tive force, directed against higher elements of civilization
has been the reverse of beneficent, we have, for instance
the national movements in India and Egypt. Then ther
were before the World War cases where nations havin
achieved unification have had to leave part of thei
nationals under alien rule. Examples of national frag
ments left under alien domination have been the Italian
speaking populations in the Trentino, Istria and Dalmati
under Austria-Hungary; the populations of Serbian stock
in Bosnia and Herzegovina; and, until the Balkan War
the Greek, Serbian and Bulgarian populations in Mace
donia and Thrace under Turkish rule. In all thes
cases national Irredentist movements have been con
ducted in such unredeemed territories with a view t
their annexation to the parent states representing th
national unity. As a consequence, in order to react against
similar Irredentist movements, not unnaturally deeme
dangerous to the security of the states holding under thei
sway such unredeemed territories, their governments hav
been pursuing policies of forcible assimilation which coul
but aggravate the spirit of revolt latent among the popula
tions of these territories.

Apart from the revolutionary struggles and wars trace
able to and created directly by Irredentist agitation and
movements, nationalism, aiming at the unification o
theretofore disunited nations, as in the cases of Germany
and Italy, had to resort to foreign wars in order to reach
the full realization of its ideals. It is therefore not unrea
sonable to maintain that nationalism has been the chief
cause of military conflicts in Europe in the nineteenth
century, as it has been one of the main contributory causes
of the outbreak of the late World War.

But it must be owned that although nationalism was
the direct cause of three of the wars among the Great
Powers of Europe in the last century its aims—that of
uniting in great political and economic national organisms
disunited particularistic political entities, and that of
carving out of the moribund body of a decaying empire
such as Turkey and calling to life a number of young and

"I'm prepared for the Worst . . . *Give me a Quart of Oil*"

AT LEAST 50% of all serious engine troubles are traceable to the careless request—"*Give me a quart of oil.*"

You can't dodge this fact.

There is a wide gulf between the average "pick-up" oil and Gargoyle Mobiloil.

We suggest you ask for Gargoyle Mobiloil, being particular to specify the correct grade for your car.

How the Right oil saves money

Many motorists expect entirely too little from their lubrication.

The grade of Gargoyle Mobiloil specified for your car feeds adequately to every friction point. It protects. It seals the piston rings against blow-by of gasoline and power—it saves gasoline. It cuts down operating troubles. And you will be surprised at your greater freedom from carbon.

Yes: Gargoyle Mobiloil costs a few cents more per gallon. It costs more to manufacture. But you will see the real economy of this few cents difference after you observe the operating results.

Not a gasoline by-product

Nine out of ten lubricating oils on the market are simply by-products in the manufacture of gasoline.

Gargoyle Mobiloil is *not* a by-product.

It is produced by lubrication specialists who are recognized the world over as leaders in lubricating practice. Gargoyle Mobiloil is manufactured from crude oils chosen for their *lubricating* qualities—not for their gasoline content. It is manufactured by processes designed to bring out the highest *lubricating* value—not the greatest gallonage of gasoline.

This is one of the essential reasons for the superiority of Gargoyle Mobiloil.

Warning!

Don't be misled by some similar sounding name. Look on the container for the correct name *Mobiloil* (not Mobile) and for the red Gargoyle.

Mobiloil

Make the chart your guide

Domestic Branches:	New York *(Main Office)*	Boston	Chicago	Philadelphia	Detroit	Pittsburgh
	Indianapolis	Minneapolis	Buffalo	Des Moines	Dallas	Kansas City, Kan.

Chart of Recommendations

(Abbreviated Edition)

How to Read the Chart:

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger and commercial cars are specified in the Chart below.

A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
E means Gargoyle Mobiloil "E"
Arc means Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendations should be followed during the entire period when freezing temperatures may be experienced.

The recommendations for prominent makes of engines used in many cars are listed separately for convenience.

The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

YOUR DEALER or garage man has a book which specifies the proper Edison MAZDA Lamps for other cars in addition to those listed above.

You specify the oil for your car—specify the lamps

THEY are even more important.

The right kind of oil will lengthen the life of your car. But your *own* life, in a moment of crisis, may depend upon the performance of your lamps.

So it pays to say: "A new kit of Edison MAZDA Lamps, please," instead of merely "A new bulb." You are sure, then, of three things:

1. Lamps fitted especially to your particular make and model of car. See the chart at the left.

2. Lamps backed by MAZDA Service, centered in the Research Laboratories of the General Electric Company. The same kind of lamps that have given your home better light and greater comfort at less cost.

3. Lamps that will give maximum light with minimum drain on your battery.

These three advantages are worth the little effort of saying "Edison MAZDA Lamps."

Keep an extra kit in the pocket of your car. The lamps are packed *securely* in the kit; always and everywhere they are dependable.

MAZDA Lamp Numbers 1129, 1130	52 cents each
MAZDA Lamp Numbers 61, 62, 63, 64	28 cents each
MAZDA Lamp Numbers 1141, 1142	55 cents each
MAZDA Lamp Numbers 67, 68	30 cents each
MAZDA Lamp Number 1126	50 cents each
MAZDA Lamp Number 1158	60 cents each

(Continued from Page 30)

vigorous national states—it must be owned that these aims of nineteenth-century nationalism were making for real economic progress of the world.

This much could not be said of the new nationalism and its aims, such as were born and developed in the World War and received the seal of approval in the treaties of Versailles, St. Germain and Sèvres. The realization of these aims included the complete disintegration of Austria-Hungary, a once great and powerful economic organism, and its division into several small, independent, particularistic political entities, financially insolvent and economically unsound because abruptly torn from their age-long economic interdependence. They further included the partial dismemberment of the two other great empires and the carving, out of the writhing body of one of them reduced to temporary paralysis, of a chain of independent republics such as Esthonia, Latvia, Lithuania, so far existing only in the clouds, so-called Ukrania, Georgia, Armenia, Azerbaijan, and so on.

That the eclosion of all these fantastic republics should have given intense satisfaction to the foreign and domestic enemies of Russia, as a symptom holding out the hope of a definitive disintegration and passing of a once great and powerful empire, hated on account of its political and cultural backwardness as well as feared on account of its real and potential although overrated power, is not to be wondered at. Nor is it unnatural that the numerous revolutionary nobodies, some of whom for years had been working for the undoing and ruin of their common country, should now be proud of the hardly ever hoped for opportunity of masquerading as statesmen, ministers, and so on, in their respective newborn or exhumed national states. But it would seem hardly credible that any one of them could have any faith in the permanency of a state of things which to every Russian patriot appears to be a hideous nightmare.

The Rise and Fall of Nations

IT COULD, however, hardly be questioned that the destructive, so to speak, centrifugal aims of the new nationalism were the natural reaction against the centralistic, forcibly assimilating aims of the old militant nationalism above alluded to, as pursued by the policies of the three empires in regard to their subject populations of various races and nationalities. From this point of view it may reasonably be contended that the governments of the three empires have been pursuing a particularly ill-advised, injudiciously oppressive and in its effects—as regards Russia and Austria-Hungary—truly suicidal policy. But on the other hand it must be conceded that on account of the geographic configuration and peculiar ethnographic conditions of Eastern Europe—that is to say, of the greater part of the European continent—the statesmanship of the Continental empires has had to deal with very complex and intricate problems, the solution of which presented difficulties which were, perhaps, not sufficiently realized by public opinion in Western countries with their compact, lingually, culturally and racially more homogeneous populations. It may even be doubted whether truly national and satisfactory solutions of these problems could really have been found unless it had been possible to eliminate entirely from their consideration the elements of inveterate national animosities and of lust of power and domination on one side, and of separatistic tendencies and craving for independence on the other.

In the course of history the wide expanse of territory reaching from the Baltic down to the Mediterranean had become the abode of many races and nationalities, dispersed and intermingled in such a way as to render their segregation and organization in homogeneous national entities and well-defined states a matter not only of extreme difficulty but in some cases of downright impossibility. In these conditions the only way to bring order out of chaos was for some dominant race or races to gather about them the others, perhaps less gifted with the state-building genius, and to organize with these divers elements firmly established states, each under one dominant nationality. That was the way the immanent logic of things pointed out to the course of history, and that was the part Nature seemed to have assigned to the Teuton, the Magyar and the Great Russian branch of the Slav race. That their success was due not to the wisdom and foresight of their rulers but solely to the constructive genius of imperial races may be granted, as well as that it was the unwisdom and incompetence of these rulers that brought on the final, lamentable collapse of the proud edifices that had outlasted centuries. It was healthy nationalism that had created and maintained the three empires; and it was nationalism run riot—Pan-Germanic and Pan-Slavic nationalism—that brought about their downfall and ruin.

Now that the catastrophe is upon the world it might be worth while to examine briefly what it was that centuries had built up and four years of war and three years of so-called peace have destroyed.

I may be forgiven if I begin with my own country, the fate of which cannot be indifferent to the rest of the world. I shall endeavor to speak of it without giving way to feelings which every loyal son of this his own country, even if unable to share, will readily understand.

Before the war Russia was a country that occupied about the seventh part of the surface of the inhabited globe, with a population of between one hundred and seventy and one hundred and eighty million human beings dwelling in its confines in peace and plenty and in the enjoyment of complete security of life and property under a system of government which, although condemned as backward by public opinion in more advanced countries, responded in the fullest measure to the real needs of the overwhelming majority of the people in their actual state of cultural development. Her finances were in good order, her credit was excellent and unquestioned. Her public debt was large but not out of proportion to the size of her territory, her population and her natural resources. She had never in all her history defaulted any payment due her creditors. During the Crimean War, when the greatest part of her foreign indebtedness was held by England, her enemy, she never interrupted the service of the interest of her debt to her English creditors.

Russia was justly considered to be in a large measure the granary of Europe. Her young industry was developing with giant strides; her trade was flourishing and represented a large share of the world's trade. In short, the Russia of the recent past, and, let us hope, of the not remote future, was, and is undoubtedly going to be again, a most important element in the general prosperity of civilized mankind, and her temporary eclipse leaves a void which nothing can fill. Even her former outlying dependencies, Poland and Finland, will not be long in realizing that their close connection with the Russian Empire offered advantages in an economic sense for the loss of which newly recovered political independence will hardly be able to compensate. As for the new independent republics of Esthonia, Latvia and Lithuania, whose economic life is obviously so closely entwined with that of their Russian hinterland—not to mention Georgia, Armenia, Azerbaijan, and so on—they are all artificial creations favored and patronized by temporary political interests and seem to be destined to last only until the support that enabled them to set up for themselves shall have been withdrawn.

The awakening of the spirit of nationalism in these populations of various races has undoubtedly been due in no small measure to a reaction against the forcible Russification by means of which our bureaucracy, under the inspiration of militant Slavophilism and ultranationalism which had become influential toward the end of the reign of Alexander II, thought it possible to weld them closer to the Russian people. It was naturally hastened by the war and came to a head as soon as the defeat of our arms and the revolution had destroyed the state. It was, moreover, unquestionably in harmony with the general trend in human affairs, of which Doctor Slosson, in a recent address at Columbia University, justly said:

> The general trend of the times is towards particularization in politics, science, art and philosophy. In international affairs we see the break-up of empires and the multiplication of small nations. Languages are resolved into their constituent dialects and obsolescent tongues are revived. Racial divisions are emphasized and exaggerated.

Whether European civilization is going to be benefited by the introduction into the family of European nations of independent political entities in the shape of very small nations speaking such exotic languages as Esthonian, Lettish or Lithuanian is a question I shall not attempt to discuss. It seems to me, however, to be a very striking fact that at the very same time when all the really important activities of the civilized world—industry, trade, finance, with their world-wide network of interdependent interests—show an ever more decided trend toward unity—the only salvation, indeed, of the modern world—that at this very time an exactly opposite trend should prevail in political affairs. It might be interesting to determine how far what is still called statesmanship is answerable for this strange phenomenon, which, by the way, bodes no good for the future peace of the world.

The Austro-Hungarian Break-Up

ANOTHER victim of nationalism has been the Austro-Hungarian Monarchy, and a tragic victim at that, for it has suffered not partial dismemberment, like Russia and Germany, but a complete break-up equivalent to annihilation. When I say it has been a victim of nationalism I mean it in a double sense—of dominant nationalism, with its injudicious oppression from above, and of revolutionary nationalism from below. Its break-up had been long expected and been discussed unofficially and clandestinely among all those who had expectations of the rich heritage and were waiting for the decease of its possessor. As a recently appeared article in the London Fortnightly Review has it:

> Within the frontiers it was the case to a greater or less extent of all the nations which inhabited the monarchy, all of which were either speculating on the creation of national states of their own—for instance the Magyars, Czechs, Poles, Croats, Slovenes and Serbs—or longing to be united with those of the same race beyond the border—for instance the Germans, Rumanians, Italians and Ruthenians (Ukrainians).

In discussing the dogma of nationality the author of the article calls it a regular Pandora's box which, once opened, scattered its contents throughout the world, causing unrest, strife and destruction on every side, and he considers it the more dangerous as it has something so specious about it as to be able to hypnotize not only the masses, who are easily carried away, but even educated minds.

In this respect the author's opinion coincides entirely with that expressed by former Secretary of State Lansing on Page 97 of his book on the Peace Negotiations, when, regarding the principle of the self-determination of nationalities, he writes:

> The phrase is simply loaded with dynamite. It will raise hopes which can never be realized. It will, I fear, cost thousands of lives. In the end it is bound to be discredited. What a calamity that the phrase was ever uttered! What misery it will cause!

The author of the above-quoted article concedes, however, that as regards Austria-Hungary the realization of the national principle did indeed seem to be a necessity, so as at last to produce order and peace by segregating the quarreling nations within separate boundaries; but he calls attention at the same time to the fact that insuperable difficulties stood in the way of a partition which should be both just and productive of peace, and that fate itself had woven the nations of the monarchy so inextricably together that in places it was absolutely impossible to separate them from one another; and in support of this contention he points to the case of Hungary, where out of sixty-three counties there are scarcely three or four in which more than one nation is not to be found and where, moreover, the majorities are so small and the minorities so large that for this reason alone the determination of a national boundary was impossible.

He also points out that whereas the Hapsburg Monarchy was adjudged unworthy to exist because it contained many nations, on its ruin was erected a political body—Czecho-Slovakia—which is nothing more or less than a new small-scale edition of despised Austria, containing no less than six nations, and thus, from the point of view of the national principle, had equally little right to exist. It should also be kept in mind that each half of the double monarchy, Hungary as well as Austria, represented an important and powerful economic organism under the shelter of which its subject nationalities profited no less than the dominant one from the obvious advantage of being part of such an organism.

The Outlook for Germany

WHETHER the newly created states will find economic salvation in independent statehood the future will show. One thing, however, is certain, and that is that the destruction of the Austro-Hungarian Monarchy, once a powerful organism with well-conducted finances and firmly established credit, the resulting financial chaos and ruin, the substitution for this solid economic and political unit of a number of small independent states, each with its own customs barriers and obstructions to communications and trade, and beginning the life of independent statehood under a formidable load of debt and hopelessly irredeemable paper currency—cannot possibly be helpful in promoting the economic recuperation of the European world.

As for Germany, the application to her of the principle of nationalities has had a less destructive effect. Indeed, by the elimination from her body politic of Alsace-Lorraine, North Schleswig and Posen, she has become a compact, strictly national state, a condition the advantages of which may perhaps compensate her for the loss of territory implied. In any case, of all the victims of the World War, Germany is the most likely to achieve in a measurably near future a fair degree of financial and economic recuperation, provided no insurmountable obstacles are placed in her way, a condition dependent on political considerations to which I shall have to refer farther on.

Russia, in her state of temporary paralysis under the tyranny of a demented fanatic, who has in the name of a Utopian doctrine of communism systematically ruined beyond redemption in a measurably near future the whole economic structure and prosperity of the country, has been, next to the Austro-Hungarian Monarchy, the greatest sufferer from the application of the doctrine of the self-determination of nationalities by the creation of the above-mentioned chain of independent republics encircling her in the west and south. It must be owned, however, that—let alone the severance of her union with Poland and Finland, which was to have been foreseen as a result of the World War—Russia has been far less disastrously affected by the creation of these more or less ephemeral independencies than by the usurpation and still-continuing detention of power by Bolshevism in the guise of a dictatorship of the proletariat, which has turned the country into a wilderness of primitive barbarism, a prison, a lunatic asylum and a slaughterhouse. What the passing of Russia as a civilized state has meant as a blow to the

Jim Henry's Column

An Interesting Theory

You may have noticed during the past year, at the bottom of my column, this little phrase, "Mennen Talcum for Men—it doesn't show."

An advertising expert gave me the theory. He said that if a man sees a simple, true statement about an article repeated often enough, he is bound to believe it in the end and buy.

There must be something in it, for our sales on Mennen Talcum for Men have increased not quite 100%.

I don't understand such things myself. Advertising gets more mysterious to me every day. For example, I am going to devote this whole column to telling you about our Talcum for Men. When I get through, you will know how good it is and how necessary to after-shaving and after-bathing comfort, and you will fully intend to buy a box at once. Yet I may have to keep reminding you for months, before you try it.

It is unfortunate for men that talcum was used first on babies, and second, on noses. I suppose if soap had started as a beautifier, most men would still be too proud to use it.

Now, Talcum is simply a skin soother and protector. It supplies a fairy, gauze-like film which covers sensitive skin and protects it from wind, sun and the friction of clothing.

After shaving, your pores are open and your skin is sensitive, especially so where a collar rubs against your neck. Talcum protects it. Of course, Talcum makes your face feel smooth and silky, but that is unimportant, except to the amorous.

Mennen Talcum for Men is a regular male powder, made and mildly perfumed exclusively for men. Being neutral in tone, it doesn't show when used after shaving. A Talcum shower after your bath will make you feel cool and loose for hours. Of course, if you are one of these big fellows who chafe and get all raw in hot weather, you need Kora-Konia, but for general, everyday, all over comfort, try Mennen Talcum for Men.

The druggist round the corner sells it.

Jim Henry
(Mennen Salesman)

THE MENNEN COMPANY
NEWARK, N.J. U.S.A.

coherence and stability of the economic structure of the world does not seem to have been fully realized as yet.

On the whole, it can hardly be questioned, I should think, that the practical application of the principle of the self-determination of nationalities has played sad havoc with the economic interests of the world, and represents, therefore, a decided regress in the history of civilization.

But the awakening of the spirit of nationalism in an acute form, coincident with the outbreak of the World War, has affected mankind also in another way: The growing intensity of the feelings the war engendered the longer it lasted has had a marked effect on the psychology not only of the popular masses in the belligerent countries but also of their leaders, and therefore could not but influence the ultimate outcome of the war by standing in the way of a settlement which might have held out to a distracted world a better hope of real and lasting peace.

I remember, at the time when the whole world was anxiously awaiting the final conclusion of peace, expressing in a letter to a friend the pretty generally felt regret that "statesmanship had seemingly had to take a back seat since psychology was trumps"; to which my friend replied in the terse and concise language which he knows how to handle with great and trenchant effect: "You are right, psychology is trumps, but mass psychology is the devil." And, alas, there are not yet perceptible any convincing symptoms of an abatement of the influence of this kind of psychology.

As a more or less legitimate weapon of warfare the doctrine of the self-determination of nationalities was seized upon by the Allies in order to undermine and destroy one of the enemy powers, and incidentally favored obviously with a view to weaken still further a former ally rendered helpless by revolution but nevertheless feared by one of the Allies as a possible future menace to India and by another as a potential ally of Germany in the future. That the United States never was mixed up in similar dealings of European diplomacy, and openly protested against the spoliation and dismemberment of temporarily defenseless Russia, will ever be remembered with profound gratitude by a resurrected nation when the hour of her delivery shall have struck.

Were it not that war hypnosis, and the tendency to look in wartime upon all things exclusively from the point of view of the temporary exigencies of strategy, are apt to blind people's minds to considerations that otherwise would appear obvious enough, the dubious wisdom, in their own interest and especially in that of France, of the policy of the Allies in regard to the Austro-Hungarian Monarchy might have been realized by them before it was too late. It was not in vain that Talleyrand, the greatest of French diplomats of the last century, held that if Austria had not existed she would have had to be invented. But Allied diplomacy could see in Austria nothing but Germany's strongest ally, and was therefore bent on her destruction. From the strategic point of view the policy of favoring the elements making for the disintegration of the Austro-Hungarian Monarchy was entirely rational and, moreover, justified by its success. Nor was it from the moral point of view—if such a point of view could be applied to the business of war—any more or any less reprehensible than the financing by Japan of our revolutionaries at the time of the Russo-Japanese War, or the financing by Germany of the Bolsheviks. But the statesmanship of the Allies does not seem to have stopped to reflect what ultimate consequences the complete destruction of the Austro-Hungarian Monarchy might possibly lead to. Thus the accomplished dismemberment of the monarchy and the segregation of its component parts were bound to leave its original n cleus, Austria proper, with a German pop lation of barely some six millions and capital one of the largest cities in Euro in a position financially, economical politically and strategically so unsound a insecure that it will presumably compel to seek salvation either in a reconstructi in some form of the former Austrian st or in union with Germany, both combi tions being obviously unacceptable to Allies, and more especially the latter, a would imply a considerable accretion territory and population, and consequen of power, to Germany.

The paramount, the crying need of world—if modern civilization is to s vive—is peace, general peace, real pea This is a truth so obvious that no one be found reckless enough to deny it. the war spirit is not dead yet. It is s abroad and in places is still fostered propaganda. There is in Europe ly loose incendiary and explosive mate enough to cause the smoldering fires jealousy, of hatred and of revenge to bu into flame anew at any time. There is t latent, camouflaged, but none the less r and bitter conflict of interests between t two leading powers of Europe, one aimi at the economic recuperation of Germa the other at its prevention. In the pr ence of this equilibrium of contendi forces the balance of power is held America, and will be held by her as lo as she stands aloof and refrains from taki sides. America is at present the greate power on earth. She wields the bigge of big sticks, for she holds the strings the purse. Her word is law. At the coun table of nations, whatever the place a signed to her by international etiquette, s is in the proud position of being able say, as did that legendary Scotch chie tain, "The head of the table is where T MacGregor sits!"

THE COAL MINERS' CASE

(Continued from Page 23)

to force the miners to strike on April first. It cannot be construed otherwise, because they knew as well as anyone that unless a new wage agreement was reached before that date the miners would refuse longer to work. They could not be expected to continue digging coal without knowing what their wages were to be and under what conditions they were to labor.

A situation serious to the miner and to the coal-consuming public was thus brought about. It was serious to the miner because he felt that he was being driven into a strike which he did not want. It was serious to the public because a strike would mean stoppage of production and, possibly, a coal shortage. It was the same old trick that has been worked many times by coal operators. They had millions of tons of unsold coal on hand, and by forcing a strike and a cessation of production they would then be in position to demand any old price for their coal on hand, and clean up enormous profits. It has been done before, and it was evident that they proposed to do it again. The public's pocketbook was to be gouged, provided the coal operators could succeed in forcing a strike of coal miners.

There is just one way to negotiate a wage agreement between miners and operators, and that is for the two groups to meet in a joint conference, sit down at a table, in good faith thresh out their differences and come to an understanding. This is the plan that has been followed ever since 1898 by the miners and operators of the Central Competitive Field, with the exception of 1919, and it is worthy of note that in every single instance where this policy has been followed an agreement has been reached. The only reason the plan failed to work in 1919 was because the operators refused to enter a conference.

Knowing this, the miners this year were confident that a joint conference would bring a new agreement and avert a strike. The miners do not want a strike. President Lewis has made this point clear in every possible way and on every occasion. He said in his speeches and in his interviews that the miners would do every honorable thing that they could possibly do to avoid a strike, and if a strike came it would be due wholly to the indefensible violation of their written agreement by the operators and their refusal to confer with the miners. It has long been a favorite indoor sport of the union busters among the coal operators to charge the United Mine Workers of America with violations of contract. They lose no opportunity to flaunt in the face of the miners' union every single instance where miners have indulged in a local strike in violation of their agreement with their employers. But these same operators always avoid telling the public that the officials of the union penalize those contract-violating miners for their conduct. It was not long ago that 12,000 miners in Illinois engaged in a wildcat strike that was a direct violation of their agreement with the operators, and as a matter of discipline the international officials granted blanket authority for the revocation of the charters of twenty-seven local unions for taking part in the strike.

Violations of Contract

And within the last few months the charter of the entire Kansas district was revoked, the district officers removed from office, the charters of eighty-one local unions revoked and their entire membership, including the district officers, expelled from the union because they pulled off unlawful strikes and refused to put the men back at work when they were ordered to do so by the international organization and the international convention of the United Mine Workers. At the time of the great general strike in 1919, thousands of members of the union in Tennessee, Kentucky, Colorado and the Southwest were directed to remain at work because their contracts with their employers had not expired.

When these coal operators hurl their charges of contract violation against the miners they do it for the purpose of putting the miners in bad with the public and turning public sentiment against them. And yet, here we found them violating and ignoring their own written contract, which they signed in ink, in which they agreed to meet with the miners to negotiate a wage agreement and maintain peace in the coal-mining industry. It was a strange and weird performance, to say the least, and the miners felt that it was a case to which the public should turn its attention.

Immediately following the recent convention of the United Mine Workers, held at Indianapolis, and at which the present demands were formulated, the operators invited attention to the fact that the miners were again demanding the six-hour day a the five-day week, and they set up this d mand as one of their smoke screens behi which they might take refuge in their r fusal to meet with the miners. Eve person with a grain of horse sense kno that this demand for a six-hour day and five-day week means nothing these day Possibly the six-hour day may come som time, but the time for it is not ripe.

The same convention that adopted t demand for the six-hour day and the fiv day week also did something else. It cr ated a policy committee, consisting of 1 members, with full and complete authori in dealing with the crisis from the mome that the convention adjourned. The co vention placed in the hands of that poli committee blanket jurisdiction over t entire matter. Here is what the conventi adopted on that subject:

> For the purpose of meeting in a practical a constructive way all unforeseen emergenci which may arise, a policy committee, compos of the scale committee of the Central Compet tive Field, three representatives from each the outlying districts, members of the intern tional executive board and the internation officers, is authorized to take such action for t protection of our best interests as circumstanc may arise, and to advise the membership up unexpected developments which may arise a which cannot now be foreseen.

Broader or more absolute authority coul hardly be conferred upon any committ than that which is contained in that par graph. This action by the convention cr ated an effective safety valve with whic to avert any threatened explosion on t first of April. Thus the convention remove the objection offered by the operators Buffalo, in 1919, that the miners' committ had no authority to negotiate upon an other basis than the full demands a adopted by the convention.

The demands that were formulated b the United Mine Workers of America a the recent Indianapolis convention prove to be a disappointment to the bituminou operators, who insisted for many week beforehand that the miners would dema a large increase in their wages. No su increase was asked for. On the other hand the miners demanded a continuance of th present basic wage rates. In the Centr Competitive Field the basic rate of pay fo digging coal is $1.08 per ton, and the basi

Essex Coach $1345

Five Passenger

Closed Car Convenience for All Seasons and All Purposes

No previous closed car standard prepares you for the quality you find in the Essex Coach.

Frankly, that is the chief wonder of this manufacturing achievement.

And, of course, it is its quality that gives such emphasis to its low price.

But buyers, accustomed to pay far more for like advantages, must see the Coach to gain a fair conception of what is offered.

The Coach gives all the utility, protection and comforts of the closed car. By quantity production the essential closed car advantages are made possible at this price.

And remember you get these closed car qualities on the famous Essex chassis, which holds more distinguished contest and service records than any light car in the world.

Has These Fine Car Details

Dash controlled ventilator.

Sun visor.

Luggage and tool locker in rear.

Newest type easy operating crank-handle lifts on door-windows.

Four hinges on each door—very important.

Radiator shutters and motometer for efficient motor control.

Neutral gear lock.

Cord tires.

Its greatest attribute is enduring reliability, which never before so dominated among wanted qualities.

How often you hear Essex owners speak of their exemption from repair needs and service attention. All these abilities and lasting qualities are shared equally by the Coach.

That is why, at $1345, it could not fail to win a wonderful popularity.

For it gives hundreds the closed car they want at from $500 to $1000 less than they expected to pay.

And those who planned to get an open car, find the Coach fills their wants more completely, and at even less cost than any open car of comparable quality. You should see the Coach, too. It may be the very car you want.

Touring . - - $1095 **Coach - - $1345** ***Freight and Tax Extra***

ESSEX MOTORS, DETROIT, MICHIGAN

This Register has opened a new field for economy in business

IN ALMOST EVERY BUSINESS—big or little—factory or store—hundreds of dollars can be saved and errors eliminated through the use of Standard Manifolding Systems. They have effected definite, worthwhile economies for thousands of the most prominent firms in America. Wherever padded forms are used a Standard Register makes it possible to do the work in less time, with less expense and with greater accuracy.

Sheets Can't Slip

This machine has exclusive features that have revolutionized the use of manifolding devices. No matter how many carbon copies of forms you may need—whether printed on the same or different colors of paper—regardless of how complicated the forms may be, all will be exact copies, perfect in alignment. Whether you use two copies or six the machine operates without binding, the carbon will not crumple or tear, and no time will be wasted in repairs or adjustments.

Our Service Is Free

If you are interested in better methods—methods that save expense, reduce overhead, give better control of departments and eliminate errors—our Service Department will provide you with sample forms and suggestions that will aid in accomplishing the results you desire.

Check Below For Samples

Without obligation we will mail you copies of forms used by businesses similar to your own. Simply check below the forms you are interested in and pin coupon to your letterhead.

Roll Printing Costs Less

(Continued from Page 34)

wage for day labor is $7.50 per day. This may sound to some like a high price to pay for day labor, but $7.50 a day does not enable a man to earn a living for himself and his family unless he has reasonably steady employment. Soft-coal mine workers averaged only approximately 125 days' work in the entire year of 1921. If every man earned $7.50 a day for every day worked in that year it would make the average annual earnings $937.50 per man. This is less than $80 a month, and approximately $18 a week. This income would not be sufficient to enable a man to keep his family on a decent American standard of living. But statistics based on reports gathered by the United Mine Workers from the presidents of the various mining districts indicate that the average earnings for the year were around $700 per man.

Miners' Annual Earnings

Here is what some of these reports show:

PITTSBURGH DISTRICT—Average number of days worked in the Pittsburgh District for the year 1921 was 123, or 40 per cent of full time. Average daily earnings, based upon the defense fund collected by the district organization, were $6.20 per day. Average earnings for the year 1921 were approximately $763 per man.

OHIO—Average number of days worked in the year 1921 was 118. Average earnings for the year were $550 per man.

INDIANA—District President John Hessler said in his report: "No definite information is yet at hand. The mine inspector's report has not yet been published. Unofficial report shows the average number of days worked in the fiscal year ending September 30, 1921, as 148 days, which included the last three months of 1920, which was exceptionally good. The same three months of 1921 was a very poor work period."

ILLINOIS—Figures for the year 1921 are not yet available. The last report published was for the year ending June 30, 1920. This report showed that all the mines of that state operated an average of 159 days.

WESTERN KENTUCKY—The mines operated and the miners worked approximately 130 days in the year 1921. The average gross earnings per man for the year were about $80 a month. Out of his gross earnings the miner must pay for his powder, supplies, blacksmithing, tools, and so forth, which reduces his net income to a much lower figure.

WEST VIRGINIA—The approximate number of days worked by miners in the New River District in 1921 was about 80. Average earnings were about $500 per man. Hundreds of miners got only from 14 to 26 days' work during the entire year.

TENNESSEE—Approximately one-third of the total number of miners worked one-third of the time during the year, and when they worked they averaged $105 a month.

The Central Competitive Field—composed of the Pittsburgh District, Ohio, Indiana and Illinois—is the largest bituminous coal producing field in the world. It employs in the neighborhood of 200,000 union mine workers and its output in normal times is about 200,000,000 tons a year. Therefore it is fair to assume that the figures from the Central Competitive Field afford an index to conditions in the other fields of the country.

Certainly no one will contend that the coal miner made too much money last year, when his total earnings averaged about $700, or even $937.50. But in spite of this pitiful showing the United Mine Workers' convention declared for a continuance of the present scale. The miners said they were willing to take this chance. There is no assurance that they will have more steady employment during the next two-year period than they have had in the last two years, but they pinned their faith to a hope for a revival of business and industry that would afford steadier work and a better opportunity to earn a decent living.

Prof. William F. Ogburn, of Columbia University, made a study of the cost of living of bituminous mine workers in mining communities. Doctor Ogburn's study, at prices prevailing in December, 1921, showed that an annual wage of $1870 is necessary in order to support an average family of man, wife and three dependent children in health and decency and with a minimum amount of comfort; and, of course, to this must be added something for savings.

Irregular employment is the greatest evil of the coal-mining industry. No industry can be healthy in which the workers are employed only 40 to 60 per cent of full time. Such irregularity of employment results in tremendous waste not only to the employe but to the consuming public; for the public is compelled to pay the bills, waste and all. In an address at the annual convention of the American Mining Congress at Chicago, in October, 1921, George Otis Smith, director of the United States Geological Survey, said: "Our soft coal business has perhaps become the classic example of irregular employment, for the average bituminous mine in the United States can expect to run only about 215 days in the year." Mr. Smith quoted Eugene McAuliffe as estimating the cost to the nation of irregular employment in the soft coal industry at $500,000,000 annually.

When mines are idle their overhead expense goes on just the same, and the mine owners add this expense of idle days to the selling price of coal produced on operating days. Thus the public must pay for all this unsteadiness of the industry. Under normal conditions we consume approximately 500,000,000 tons of soft coal annually. This means that there is a tax of a dollar a ton on all this coal that the consumer must pay because of irregularity of operation. Why not squeeze out this waste and save this dollar a ton?

It cannot be said that the miner is responsible for this waste. He suffers from an unsteady income. He wants to work full time. In fact, he must work full time if he is to make a decent living. But until some plan is developed that will stabilize the industry this enormous waste will continue, the miner will still have irregular employment, and the consuming public will pay this tax for idle days and idle capital.

Irregularity of Operation

Capital invested in the coal industry is estimated by the United States Census as $1,903,652,355, and it is said that to be profitable it should yield at least 12 per cent, or $228,000,000 annually. If during the past thirty years the mines have been idle approximately one-third of the time, the minimum cost to the public for idle capital in the industry, for which the public pays in purchasing coal, has been by the most conservative estimate $76,000,000 annually. Probably $100,000,000 would be nearer the truth. Even in a normal year, when production reached 500,000,000 tons, this would make an increased cost at the mine of 12 cents a ton, and on the basis of last year's production, 20 cents a ton.

It is estimated that the productive capacity of the mines now in operation is 700,000,000 tons, and the annual requirements for soft coal do not exceed 500,000,000 tons. The coal required could be produced with $760,000,000 less capital outlay.

But the waste in the industry because of irregularity of operation and employment and the waste through overcapitalization and overinvestment, though adding to the burden which the coal consumer must carry, are not the only items that enter into the rape of the consumer's pocketbook. When the average citizen buys a few tons of coal and finds the price outrageously high he is quite likely to complain to the retail dealer and ask the reason for the high price. And in most cases the dealer tells the irate citizen that the trouble is largely due to the high wages paid to miners.

This is a common alibi for the dealer. But the fact is the miner is the least to blame of all the factors of price. J. D. A. Morrow, vice president of the National Coal Association, of which organization two-thirds of the bituminous operators of the country are members, testified before the Interstate Commerce Commission a few weeks ago that the average retail selling price of bituminous coal throughout the United States in October, 1921, was $10.41 a ton. He testified, further, that the labor cost in the production of coal was $1.972 a ton. The total production cost, he said, including the labor cost, was $2.91. In other words, the mine workers received $1.972 as their pay for producing a ton of coal that sold at retail for $10.41.

The miner is not responsible for the high cost of coal to the consumer. It is inconceivable that the public would ask or expect the miner to agree to a reduction in his wages when it learns these facts. Even if the miner were to accept a reduction in his wages, where is there any assurance that the reduction would be passed along to the consumer? The public must lo elsewhere to find out why and how $8.44 added to the price of coal after it leav the hands of the miner. There is a gou somewhere, but the miner does not get t money.

Every time an increase is given to t miners the price of coal is boosted to a sorb the increase. It is interesting to rec that when the anthracite miners obtain an increase in 1920 the anthracite operato added a dollar a ton to their selling price anticipation of the increase, and later add another dollar to the price to absorb t increase that was granted.

Newspaper dispatches say farmers Kansas and other Western states are bur ing corn for fuel. They say it is cheaper burn corn than coal, because of the hi price of coal, due to the enormous wag paid to the miners. But it should be r membered that this is not the first time t farmers burned corn in Kansas. They d the same thing as far back as 1897, wh the miners were working for starvati wages. They burned corn then, just as th are burning corn now, not because of hig coal prices but because corn is worth pra tically nothing in the market. It is not th high price of coal that troubles the farme It is the low price of his corn.

The miners feel that they are much mi understood and much misrepresente They have been subjected to the charg spread broadcast by propaganda of unio busting operators, that the United Mir Workers of America is a red radical institu tion that has no thought for the welfar of the nation. This charge is untrue an it is resented by the miners. It is true tha there are radicals in the union, many o them. It may well be expected that ther would be radicals among the 500,000 mem bers of the union. But there would also b radicals among 500,000 bankers, farmers doctors, lawyers or men of any other trad or profession. Therefore this vast grou of coal miners is not different in its cosmo politan make-up from any other group o similar size. But the radical element is no in control of the union. The leaders of th union are safe-and-sane conservative me and they have fought radicalism year i and year out. When the district officers o the union in the Alberta, Canada, distric became active in the one-big-union move ment two years ago President Lewis di not hesitate to revoke the district charte and throw the entire district out of th union. He afterward reorganized the dis trict and eliminated the trouble-maker from membership.

What the Miners Want

The miners hold that they are good American citizens, with the same kind of patriotism and loyalty in their hearts that exists among other Americans. Eighty thousand members of the United Mine Workers of America laid down their picks and put on the uniform of Uncle Sam in the World War. They fought to save civilization with the same fervor as other men, and with equal bravery. More than 3000 members of the United Mine Workers of America made the supreme sacrifice by giving up their lives in that war.

The half million members of the union bought many millions of dollars' worth of Liberty Bonds and War Savings Stamps. They contributed millions of dollars of their earnings to the Red Cross, the Salvation Army, the Knights of Columbus, and to every other war-relief agency. They obeyed the appeal to give till it hurts.

When the success of the war depended upon an adequate supply of fuel for the manufacture and transportation of supplies to the struggling armies of democracy in France, the American coal miners dug coal as they never dug before. Voluntarily they suspended many of their most cherished rules of employment in order that they might do their full bit. They produced 577,000,000 tons of soft coal in the year 1918, breaking all records, and the war was won.

It is not fair to raise the cry of radicalism against such men. Nor is it fair to charge them with a lack of interest in the public welfare or the safety of the nation.

Now, what do the miners want?

They want steady employment under proper working conditions and at a decent rate of wages, so they may earn enough to maintain their families on a real American standard of living. That tells their whole story. Surely the great American public will see to it that they get a square deal.

LaSalle Extension University

The Largest Business Training Institution in the World

Dept. 471-R Chicago, Illinois

Gentlemen: Send without obligation to me information regarding course indicated below, also copy of your interesting book, "Ten Years' Promotion in One."

☐ **Business Management:** Training for Official, Managerial, Sales and Executive positions.

☐ **Salesmanship—Principles and Practice:** Training for Sales and Advertising Executives, Solicitors, Sales Promotion Managers, Salesmen, Manufacturers' Agents and all those engaged in retail, wholesale or specialty selling.

☐ **Higher Accountancy:** Training for positions as Auditor, Comptroller, Certified Public Accountant, Cost Accountant, etc.

☐ **Traffic Management—Foreign and Domestic:** Training for positions as Railroad and Industrial Traffic Manager, etc.

☐ **Railway Accounting and Station Management:** Training for Railway Auditors, Comptrollers, Accountants, Clerks, Station Agents, Members of Railway and Public Utilities Commissions, etc.

☐ **Industrial Management Efficiency:** For Executives, Managers, Office and Shop Employes and those desiring practical training in industrial management principles and practice.

☐ **Modern Business Correspondence and Practice:** Training for Sales and Collection Correspondents; Sales Promotion Managers; Credit and Office Managers; Correspondence Supervisors, Secretaries, etc.

☐ **Banking and Finance:** Training for executive positions in Banks and Financial Institutions.

☐ **Modern Foremanship and Production Methods:** Training in the direction and handling of industrial forces—for Executives, Managers, Superintendents, Contractors, Foremen, Subforemen, etc.

☐ **Personnel and Employment Management:** Training for Employers, Employment Managers, Executives, Industrial Engineers.

☐ **Law:** Training for Bar; LL. B. Degree. ☐ **Commercial Law.**

☐ **Effective Speaking.**

☐ **Expert Bookkeeping.** ☐ **C. P. A. Coaching.**

☐ **Business English.** ☐ **Commercial Spanish.**

THE MAN WITH THE METAL FACE

(Continued from Page 13)

health, the golden glow that came from her as if a gentle light in her were shedding its rays upon the outer world.

At the moment of his going he was quite frank. He said, "I would like to take you in my arms."

She shook her head, denying him that privilege.

"I wonder whether I am letting too much of life slip by," he asked, just as if he held a deciding vote on a board of directors, and he wiped his perplexed forehead with his palm.

"Of course," she said. "But it would hardly do to be so precipitate."

"Why not?" he replied. "I'm a lonely man, I confess it."

"Do you think of me?"

"When I say I want to take you in my arms? Certainly. You are a lonely woman, after all."

Something in these words appeared to wilt her. There was a finality in this pronouncement. Haslam had a pleasant voice—pleasant and decisive. Like his face, his voice could be metallic, but it was not always so. Now it was sympathetic and warm, but like the voice of a wise judge pronouncing reluctantly a final sentence. She might have gone on believing that she was not a lonely woman if Haslam had not spoken so clearly and with such an obvious declaration of truth as one who says, "It is a pleasant day."

"I do not know what to make of you," she replied in a voice neither firm nor much above a whisper.

He looked at her with painstaking care—her figure, her face, her hands. Once he smiled. He saw her lean back against the shelf of plaster casts rather wearily and move her bare elbows on the rough surface of the wood as if pain gave her pleasure.

"Well, that's all," he said brusquely. "That's the fact. Some day when you feel like doing it you will come and put your arms about me. You hear what I say? There's no conceit in that. I am not conceited about that kind of thing, Beatrice. It is because we are the particular beings we happen to be. I will never speak of it again. Good-by."

At the door, turning, he glanced back at the clay bust in the center of the studio.

"You've put a lot of good hard character into that face," he said, praising her.

"Hard?"

"Yes, hard!" he said with a click, and shut the door softly.

Perhaps all she could hear ringing in her ears was that voice of his, saying without bravado and yet without doubt: "You will come and put your arms about me."

Perhaps events contributed something to the fulfillment. Haslam jumped out of his limousine, a week later. There was an uneven broken surface on the curbstone; a skidding truck had cracked out a piece of the granite on a slippery day in winter. The nick was sufficient to turn his foot; he could hear the bone in his foot yield as one can hear the breaking of a pipestem.

"And now you can have me as a helpless subject," he wrote her from the private hospital. "Four days have gone, but I'll be here many more. You have always complained that I was restless in your studio. Here you can catch me half strapped into an armchair, detesting the odors of ether drifting down the corridors and everything and everybody, but completely a captive—a one hundred per cent sitter."

She moved her model into the sitting room of his hospital suite, and nurses and young doctors peeked in and whispered.

"It's a wonderful north light," she said.

"They said you sent in those flowers," he said, pointing. "Did you?"

"Yes."

"You shouldn't have done it."

"Why?"

His answer surprised her as much as anything he had ever said. He replied, "Because I don't like to have that kind of thing done for me."

"I do not see why it is very important one way or the other," she said. "I really was not very sorry for you. Certainly not on account of your broken bones."

Haslam looked up quickly, detecting something in her meaning not completely obvious from her words. After that he drew back into that peculiar silence which had walled and masked him in the last sessions in the studio which had followed his second visit there.

The window of the room looked out over a corner lot held for speculative purposes, where the shouts of boys in spring baseball games were a daily menace to the peace of the hospital. Now the April rain was falling softly. The patches of grass sprang into vivid green and the diamond, worn by running feet, was marked out in pretty brown. It held his gaze as he meditated and she worked in a feverish mood of creativeness.

"My stars!" he exclaimed at the end. "It's dark!"

She came back from the washbasin with hands clean and pink from cold water and hard rubbing with the towel, but she fell into a chair, a little limp.

"You've worked too hard," he said. "You look weary."

"And lonely?" she replied. "I suppose you're going to say I look lonely?"

"I wasn't. But you do. Yes, you do. That's a fact. Sitting there in that rocking-chair with your hands folded and something in your face. You look as if all your success and all that goes with it hadn't given you what you seek."

"It doesn't give that to anyone," she said. "Does it?"

The building was very quiet. They could hear some distant elevator pass the floor with the click of its safety latch resounding down the hard white corridors.

Haslam was still staring at her as if her query had drained away some vitality and left him empty and cold.

"You should get used to it, Em," she said with a nervous laugh.

She had felt the hand of Destiny upon her fine shoulders, and now having spoken she sighed as with resignation, got up and came to his chair, where he was leaning back among the pillows.

"You were right," she went on. "You were right. It is absurd to believe it." And with this vague expression she put her arms about him tenderly and allowed him to take her head in the curve of his palm and bend it softly down until her cheek was sharing the warmth of his. Afterward she often thought how much this caress was like that of a brother and sister rather than one expressing the mood of lovers.

"I did not know then that your kisses would ever be any different," she said some days after he had begun to go to his offices in the great downtown.

"A brother on crutches would hardly ever be devoted enough to come every afternoon, even when the occasion was a sitting for a portrait," he replied. "I think we can never hope to return to any brother-and-sister relationship. It is rather too late."

Beatrice stared at him with a little flickering of fear on her face.

"In any case it is unwise to look ahead," he went on.

"Yes, unwise."

He nodded. "We are lucky—at least I am lucky to have this period."

"Period?"

"Yes, period; everything is a period. All that I ask of you, Beatrice, is to face all truth about me. Look at that face of mine as it has developed under your fingers. All I ask is that you should count upon my being exactly the man you have portrayed. You have shown me the real fact of my appearance. A mirror will never do it. You may have flattered me, but I see only stern single purpose in that face—the face of metal. I see all that I am and a little something of what I would like to be. On the whole I do not think any woman could hope to play much of a part in the life of a man whose face is like that."

"I understand," she said. "Come here and put your arms around me. I am cold."

He laughed as he released her.

"Let's call it a day," he said, using a characteristic phrase. "The thing is almost done. Knock off work and come for a ride in the country—the park, the Bronx, the Heights, and out into the great outdoors of Westchester as they call it in the real-estate folders."

"And find an inn?"

"Yes, and find an inn—or a farmhouse where they'll fry a chicken for us."

"Wait till I get a wrap behind this screen."

He paced up and down, his hands clasped behind his back, a little like Napoleon on the Bellerophon.

"Funny how farmhouses always str to make food like an inn, and inns alwa boast of home cooking as good as far houses," she said from behind the wall her improvised dressing room.

He laughed and picked up her fur st burying his nose in it, seeking for that p ticular aroma which was hers.

"Hurry!" he said suddenly. "Let's g away. This bust of me is giving me a sto stare. I can't get a smile out of it. looks like my boss."

"Perhaps it will be," she replied. "P haps it will."

"Don't rush out," he said, holding his arms. "Come here. You're nice you're the nicest thing in a very rott world."

Always it was like that; always an in finable mingling of joy and sadness; alwa the strange similarity to lovers who condemned to die and have only a lit span in which to live and love.

The end was quite inevitable. It ca when at last Beatrice sat across the tab from Haslam at Goriot's, where the ceili lights are only tiny imitation stars and t electric candles on the tables shed wa rays upon the living beauty of a woma sentient hands.

Haslam thought that Beatrice's finge trembled as they moved slightly the silv and porcelain before her.

"Well?" he asked, and bending a lit lower looked up into her face. He usual knew now when she had something to s to him; often he surprised her by aski before her thought had taken full sha

"Em," she said.

"Yes."

"I haven't said this to you. I was wa ing. But now there is nothing for me to do

"Go on."

"The portrait of you is done. It can to-morrow to be cast."

"In bronze?"

"Yes."

"Well, what of that? It had to be do sometime."

"I have failed with it. I cannot do wh I desired."

He chuckled. "It's far better than ever hoped any sculptor could show an body. Show, did I say? Expose, I'd bett say. And it's the real interpretation of m That's the wonder of it."

She shook her head. She said, "N Em."

"Well, it's done," he asserted. "I w not sure. I knew it would be done som time. I suspected it was about over."

The word "over" made her clasp h hands suddenly in a tense grip of her finger one upon the other.

"To-morrow—to-morrow is Saturda I'll send the clay over to Bonelli, who do my castings. And then in the afternoo I'd like to play."

He hesitated a moment before sayin "You ought to play. But now the weath er's warm, why don't you get out of th city? I wish I could. Why don't you g to some place by the sea? Didn't some body tell me you had a bungalow an studio or Italian villa or something at Pip Harbor?"

He could hear her breath quicken, an avoided looking into her staring eyes.

"No," said he. "If you mean that could go with you—of course I cannot."

She had known all the time that he ha intended an end, and she had guessed tha he had fixed its date. For this was just what he would do; it was just what a man whose face was like the one she had mod eled would do.

He had told her what he would do. He had warned her. He knew, as she knew, that she was only a fool to turn white like this with pain and shock.

"The cruel thing would be to go on," he said, closing his lips into a thin line.

He was right about that too.

"Cruel to you," he added.

She nodded.

"Will you take me to the studio now?" she said. "There is a moon. We can throw open all the windows."

"No," he said firmly. "I will take you to the door and say good night, Beatrice."

"After all," she said at last, "it will be a great wound. It is my own fault."

"We have a right to our own lives," he said. "I have to go on with mine. Even the diversion of this spring has cut down

"Oh man! I bet mother made it herself!"

Here's a treat that will warm the heart of any fellow—a great big coconut cake! The tropical richness of Baker's Coconut gives this cake a delicious taste that makes it a favorite with everybody.

The reason for the delicious goodness of this home-made coconut cake is the nature-made flavor, sealed up in the Baker air-tight can. When you open the can you have the really fresh, pure, white coconut meat exactly as it was when the ripe nut was opened.

In Baker's Coconut the natural moisture, freshness and wholesomeness are retained. That's why it is so good in cakes, cookies, pies and candies.

THE FRANKLIN BAKER COMPANY, Philadelphia

Recipe for Coconut Cake

Cream one cup sugar and two heaping tablespoons butter, add two eggs, beat until light. Sift two cups of pastry flour, add two teaspoons baking powder and one-half teaspoon salt, stir into first mixture with one cup of coconut milk or milk to which one teaspoon vanilla has been added. Mix well, place in pans, bake twenty minutes. Make icing with one cup of confectioner's sugar—beat in enough coconut milk or milk to moisten it to spreading consistency, and one teaspoon of vanilla. Stir in half of the can of coconut from which the milk has been pressed and spread remainder over top layer.
(If Baker's Coconut in the blue can is used, thoroughly press out the coconut milk.)

BAKER'S COCONUT

3 kinds

In Baker's blue can—the pure, fresh, white meat of selected coconuts grated and sealed up in the wholesome, natural coconut milk.

In Baker's yellow can—the pure, fresh, white meat of selected coconuts shredded and sweetened: sealed up while still moist with its own wholesome, natural juices.

In Baker's blue cardboard container—the dry shredded meat of selected coconuts, carefully prepared for those who still prefer the old-fashioned, sugar-cured kind.

my pungency. There's one thing for me—one love. It is the Street, the dear old Street."

He smiled, satisfied, and added jocosely, "Where they call me the man with the metal face."

"So to-night ——" she began.

"Yes, if anything is to be done—do it!"

She drew back a little, as one who has received a frontal blow.

"I understand," she replied at last. "You have been quite fair—quite consistent and—yes—generous, Em."

"For heaven's sake don't tell me what's in your heart!" he exclaimed with fervor. "Don't let's go into that."

"No."

"Favor to me. Thank you. And can I do one for you, Beatrice?"

She did not answer.

"I said ——"

"I heard you," she replied softly. "I was thinking of what you said. A favor? Yes."

"What?"

"Well, when do you intend sending this portrait in bronze to your mother? Is there any hurry?"

"No. No hurry. Why?"

"The favor I was going to ask you is a queer one. All I ask is that you keep the bronze, when it comes to you, for a month. Put it on your mantel in your library. On the desk. Or that Sheraton table in your bedroom beneath the blue silk curtains. You've told me about your possessions. You would never take me there. That is your characteristic caution. But take my portrait there."

"Bless my stars!"

"Well, will you?"

"It's mad! What a strange girl you were."

She winced but managed to say, "Will you?"

"Certainly."

"Promise? For thirty days?"

"I promise."

She put her cold nervous fingers over his calm hands.

"Oh, Em," she said, "I wonder if you will ever know how much better I knew you than you knew yourself!"

She, too, had now spoken in the past tense.

Haslam reflected afterward that it was an extraordinary promise he had made to her. He laughed as he thought of the conversation he had overheard on the last day he had been in the hospital. One of the young doctors, an interne, and a young nurse with the clear blue of childhood still in her eyes had come into his sitting room, not knowing that he was there. It had been after dusk had fallen and the doctor had lit a match and held it up before the clay face of the bust.

Again he could see the young woman slip her hand into the doctor's and again hear her voice saying, "It is certainly art. But you ought to be glad, Doc, that you do not look like that."

The young doctor had said, "It isn't weak"; and she had answered, "No, strong—horribly!"

The sculptress now had exacted a promise from him to keep the cast close to him—to live with it. She would show him the truth about himself. Well, that was absurd, because the truth about himself was pleasing to him. He laughed and told his valet to unpack the bust and put it anywhere he liked.

This had been done when Haslam returned from the theater that same evening. He did not see it at first. He threw his overcoat over a chair back, drank a full glass of water, poured out of the silver bottle, and then turned toward the fireplace as one does who, through a winter, finds comfort in coming home to find embers still glowing sleepily on the hearth.

Now, however, the warm weather had come. The hearth was quite black and swept clean. Indeed the window was open, so that the China-silk curtains danced about like ghosts. Far away the intermittent flares of a blast furnace yellowed and reddened the purple black of the city night. But a hush had come over the metropolis; Haslam could hear his watch ticking in his own pocket. He raised his eyes.

"Hello!" he said.

There it was above the hearth! The Italian mantel of carved marble held up the dark bronze, and the wall behind with its chill tint of French gray gave its outline emphasis.

Haslam was somewhat astonished that hard bronze could appear quite as flexible and living as it now did. For a moment he stared back into the immobile eyes of the portrait, filled with a strange sense that he, too, was a thing of metal, that they were alike, and two bronze faces looking into each other's cold mysteries. He smiled as he went nearer and tweaked the hard smooth nose with his thumb and one long finger in a familiar gesture of disrespect.

"Good," he said. "She had skill!"

He wondered where she was now and whether she had left the city. But that was a closed book, as he phrased it. He would be a fool to peep into its pages again. She would suffer for a while. That was not his fault. She could have read his face. She did read it. Here it was—the proof in accurate bronze. Furthermore, he had put her on notice. She had said to him that he had been completely fair. So he had been! The book had been closed in cold blood. Where she was now was no longer any business of his. He had been generous to take this stand. Continuing the dream life of their play, as he called it, would not have hurt him; it could have cut deeper scars into her.

He looked into the strong unyielding countenance of the bronze with increasing satisfaction. It would please his mother. No sentiment. Here was decision, oneness of purpose. If saints are ever to be made from extreme devotees of practical, gainful, resolute, uncompromising, ruthless determination, here was the face of a saint. Some day there would be the canonization of some Saint of the Street, some Saint of Big Business or of the Exchange. And the statue of the saint would have a face like this!

Haslam laughed.

As he laughed he thought he saw the face of bronze relax a little, as if it, too, would laugh. The room was silent, as if the progress of time had ceased a moment; there was a hush, as if a hush had come just before this lifeless bust broke into raucous laughter. But there was no sound, no laugh, not even a full smile. It might have been the way the light fell. Haslam's impression was only that the bronze lips had relaxed a little, that for a moment the eyes of the thing had become filled with a moment of tenderness. He felt as if for a moment he had been looking into the face of someone who had for him a little amusement and a little pity, a little tenderness and a little contempt.

He looked at his watch and yawned. No one knew as he knew how regularly he ate, how regularly he went to bed, how regularly he did everything. He gave the impression of a driving force which would smash all regularity into bits. But now it was half past twelve and he always went to bed at twelve. He had been standing there looking into this metal face of his, quite unconscious of the passage of time. The yawn came to a sudden end as he felt the surprise of his forgetfulness.

The next day he looked at the bust in the full sunlight. Then it was that he became convinced that Beatrice had changed something in it since he had seen the model. The difference between the clay and the bronze could not account for this change. On the first glance the thing was exactly as it had been. There were the features, unchanged. They were not lacking in whatever regular handsome modeling he could find in his own face. They still expressed in cold hard metal the character which they had expressed when the young doctor and the young nurse had passed upon them. The head, bent forward a little aggressively, was the same head of a lean powerful creature of prey. Something of the hawk and the wolf was still there as always. He nodded with assurance.

A moment later he returned to look at the thing again. He stood with his hat in his hand ready to go out, and as he stood his own face filled with doubt and perplexity. Somehow the obvious first glance at this bronze face did not disclose all. After one looked, some trick of light and shadow or of expression softened everything. As if the bronze were translucent, one could imagine that under its surface there was half hidden a better portrait of the man. The imagination perhaps brought strange tender smiles to the corners of the mouth and the corners of the otherwise stern relentless eyes. Flickers of warmth ran beneath the adamantine surface. It was as if the sculptress had done one likeness and then covered it with a thin veneer of some other likeness.

"I'm not so sure," said Haslam to h valet, who held overcoat, stick and glov "What do you think of it, Becker?"

"I couldn't say, sir. It's very good, s of you, and yet it looks one way sometim and one way at other times. Quite ot sir! I was examining of it all day yesterd after unpacking, sir. It's like an act sir—I mean to say—who has put on s I mean to say—a part, or expression, si

Haslam felt some impatience about th bronze. He would have liked to pack it and send it on to his mother. He h promised to keep it a month, and by H lam even a broker's nod was rigidly int preted as a grim promise. Men big enou and strong enough could afford to tr honor as a luxury worth having. This v his way of expressing it, and he liked t cynical note in his expression of someth virtuous which might, in fact, have be his natural instinct to maintain.

Nothing much had ever puzzled Hasla The puzzle of this bronze face troubled h increasingly. Sometimes he imagined thin lips were about to part and tell h something of vital importance. They nev spoke. They never would, and it appear nonsensical for them to appear alwa ready to disclose, when they never woul Sometimes he could see curious appea ances of tenderness in the features. was as if there were two modeled count nances in this one piece of metal.

Once, late at night, after staring in the face of metal during a moment wh it expressed in subtle vagueness a who set of qualities he had always boasted we not his, he walked quickly into his batl room, turned on the light above the sha ing mirror and stared into the reflectio of his own flesh and blood, half perplexe half eager.

"No," said he, "there's nothing in m face like that. Not a thing. It was a accident. She knew me pretty well. It just an accident of the material."

He wondered what she had done to fo get their days together. She had raised n trouble, no scene. She took everything s patiently. Perhaps she had suffered. Tha was too bad. Could not be helped. An yet it was too bad. He half closed his eyes Just then as he straightened up he though suddenly he had seen the expression of th bronze face in the mirror. It was a curiou fleeting look. But there was now only th reflection of Haslam's own countenance—the one he had known always.

In that time he had one of his great vic tories. For two years there had been a duel in the Street between Haslam an Bascom, the operator in the market fo two large bank presidents who were playin rogue elephant as speculators. Haslam ha considerable contempt for bank president who played the market apart from th ring of their own directors. As for Bascom the feud was an old one. Bascom had re neged a promise once, and Haslam ha nearly had his creditors come down o him as a result of Bascom. He had tol Bascom that he would break him some day The day had come. Partly by accident i had come. It just happened that Haslam had a client who held two hundred thou sand in Bascom's paper and had discounte it into Haslam's hands three days before Bascom was caught in a bear movement o steel. Haslam knew what to do now—th thumbscrews.

"Curious thing," said Haslam's chie bookkeeper. "They live right near us i Montclair. His wife was a flighty perso for years, but the moment she found out s baby was coming ——"

"Late in life," said Haslam.

"Well, it will outbalance any of the pai of this failure," Johnson asserted. "The two of them are like nuts about the young ster. I hope this won't be a shock to her."

There was a pause.

The bookkeeper suddenly said, "What's the matter, Mr. Haslam? You look so funny."

"Me? I look funny?" The head of the house had jumped to his feet. "How the devil do you mean?"

"Why, just your expression. I won dered if you'd changed your mind about closing Bascom out. That's all, sir."

Haslam sat down.

"Yes, I had," he said wearily. "I'm a fool to do it. I'm going to let Bascom pull through."

He walked over to the tape, whistling softly. "I can't imagine my doing this," he said. "Perhaps we don't know ourselves, after all."

SEIBERLING CORDS

Dealers' Opening Week April 3rd to 10th

Seiberling Cords and Seiberling Tubes will be offered for sale through selected dealers and completely demonstrated and explained in all principal cities during next week.

Look for local announcements by the Seiberling dealer in your community. You can identify his place of business by prominent display of the red and black Seiberling trademark on his sign and in his window.

"A Tire that Will be Known Everywhere"

Seiberling Clincher Cord -30 x 3½- $12.50

This clincher cord is identical in grade of materials and in excellence of design and workmanship, with the straight side Seiberling Cords for larger cars. There is only one grade of Seiberling Cords and Tubes—"as good as we know how to build them."

Tread stock extends from bead to bead, preventing tread-separation and giving protection against abrasion from ruts and curbs, with unusual strength at the shoulder which has been a point of weakness in many clincher cords.

The On-Air cure process gives uniform tension throughout (no wrinkles or buckles from pinching in the mold) and better distribution of tension in the finished tire.

One tread design (anti-skid) for all wheels, making tires interchangeable. Semi-flat, giving better traction and longer wearing qualities.

If no Seiberling dealer has yet been established in your community, write us for interesting description of Seiberling Cords and Tubes and nearest address where you can obtain them.

"CORDS ONLY"—Seiberling Tires are Cords only. All Tires, Tubes and other products carrying the Seiberling name and trademark are of one grade only—as good as we can make it.

SEIBERLING RUBBER COMPANY · AKRON, OHIO

TO TIRE DEALERS:

Seiberling Cords and Tubes are distributed through regular retail channels. We desire to establish connections with good business men who agree with us that high-grade products, a policy of selected and not closely competitive distribution, and service to the user form the right basis for a lasting and mutually profitable relationship. Write or wire Seiberling Rubber Company, Akron, Ohio.

"Center of the Charmed Land"

MAKE THIS YEAR'S vacation a real vacation—right next to Nature's heart.

Come to the Charmed Land. Feast your mind and your heart and your soul on the supreme masterpieces of divine handiwork—snow-clad mountains hanging in the sky and reflected in the crystal depths of beautiful mountain lakes—rushing streams and tumbling waterfalls—serene inland seas, framed with snow peaks and the greenery of primeval forests.

Fish, hike, climb, motor, toboggan, ski, canoe, swim, sail, golf—or just rest. Everything is here, the greatest out-of-doors country and absolutely the best out-of-doors climate in the world.

Come by train or motor. Six transcontinental railroads, with special summer rates, and the open road and a wonderland en route for the motorist.

Maximum temperature Seattle, 1921—80 degrees.

Send for "The Charmed Land" booklet now, and come direct to the Chamber's tourist bureau, 702 Third Avenue.

Seattle Chamber of Commerce

910 Arctic Bldg., Seattle

(Continued from Page 40)

"Well, it's all right with me," Johnson replied. "But that's what I said. I thought I could tell by your face."

That night when Haslam went home he found his valet, Becker, moving about the study as if to create the impression of being occupied by eternal labors of service.

"Look here, Becker," he said. "What about that bust? I had it made for my mother. Do you think it will do?"

The old man pressed his lips. He said: "Well, speaking very frank, sir, I thought it did you a favor, sir. When I first saw it I thought it had a little the better of you, sir. But the last week or so, sir, I'm better impressed, sir. Somehow its face has changed, sir."

"Or mine?"

"Your face changed, sir?"

"It might."

"Yes, it might. Sometimes sorrow changes faces, sir. Sometimes it's being lonely and deserted, sir. I don't believe you've had these crosses to bear—ever."

Haslam replied, "Perhaps not. Perhaps I've got 'em coming to me. Perhaps I've had 'em and didn't know it. Perhaps I've had a lot of things I didn't know I've had."

He stood smiling rather affectionately at old Becker until the latter in complete astonishment blurted out: "There, sir! If you could see yourself now, sir! Mr. Haslam, may I drop down dead at your feet if you're not the living image right now of that thing on the mantel!"

Pipe Harbor is just inside a point covered with scrub pines. At the end are treacherous rocks under the swash of low tide, but they were known by the chart and reckoned with by the skipper as he pulled the nose of Haslam's lean white trout-shaped steam yacht into the cove. The tender came down over the stern with a rattle of blocks and tackle, echoing against the rock and pine wall of shore, and the snick-snock of oarlocks sounded as the master was being rowed under the full sunlight across the waters whipped into shimmering silver by the brisk summer morning's wind.

Where the point curves into the main shore fields of grasses, still filled with white splashes of daisy blossoms, rose from the yellow beach toward the crouching group of little weathered buildings at the top of the knoll. Two old trees, which from a distance appear like elms, lean toward each other over the bungalow and the studio like two old friends. The landing place is a little shaky pier where a red dory rides fretfully on its painter.

Haslam walked up the narrow winding path through the perfumed fields, and when almost at the top he stopped and wiped the perspiration from his forehead. So he was standing hatless when she came out the door of the studio.

He waved to her.

"Come on down here," he called.

A moment of hesitation ended by Beatr moving forward quite naturally, as if had expected him for many days, but first words she said dispelled that illusi

She said in a trembling voice: "I ne expected I should ever see you again, E I had gone back to my work—my w alone."

"I guess there are other things," he sa holding out his hand.

"Yes," she said. "Is that your o boat?" She pointed toward the sea.

He nodded.

"Let's sit down here."

He was trying to think of words to her why he had come back. He drew closer, so that, sitting, leaning on th palms pressed upon the cool foliage of clover, they could look as with a sin viewpoint, above the tops of high nodd grasses, over the wide stretches of desce ing fields, flat expanse of sea and climbing blue sky.

Suddenly frightened, she exclaimed horror, "You didn't come back beca you were thinking of me?"

"No," he said. "I'm glad you spoke that. I came back because of me."

"Then you can stay forever if you wa to," she said, turning her lips toward h

"Of course," said Haslam. "Of coun That's what I wanted to say to you." I laughed. "I want to sit for you forev I want you to make me a new face."

YE GENIAL HOST

(Continued from Page 17)

In a city like New York these immense hotels became necessary. It is the only way we have been able to take care of the ever-growing stream of visitors, even if the intimate, homelike atmosphere has disappeared.

After visitors have been in New York a while I notice a tendency on their part to move to smaller hotels. In fact, a large number of buildings are being converted into apartment and family hotels. The glamour of the big palaces attracts temporarily, but in time there is a longing to get into places where one may be known, may be a personality, a guest in the true sense of the word.

Following what was regarded as my success in running several different houses giving them atmosphere and color, I became a part of one of the big organizations that operate—mind you, operate—chains of magnificent hotels. The salary would have appalled me fifteen years ago.

I am kept so busy directing the financial affairs and making reports that will show profit that I haven't the time to mingle with the people and know them. I have selected managers who were trained as I was, and they are doing as well as one could expect. Our hotels are perfectly appointed and have developed service and conveniences to the finest degree, but the thing is too big, too unwieldy for that intimate personal touch that many old-timers miss.

The difference between these hotel palaces and the little places where the proprietor considered himself a personal host is very much the same as the difference between the old accommodation train that stopped at every little town long enough for a handshake, and the great limited express that flits through, leaving nothing but a cloud of dust to mark its passage.

Personal Recognition

I do not really know the names of all our guests, and neither does our manager, but we have been ingenious enough to make them think we know them. The fact that they enjoy this apparent distinction would seem to be enough, but it isn't. I enjoyed really knowing everybody. There was sincere sentiment in it. Most of the joy of running a hotel has been taken from me. It makes me downright unhappy when I have a chance to think about it.

I am not sure that I was first, but I was certainly among the first to adopt the system for a big hotel by which we can make each guest feel that he or she is personally known. I started it out on the Coast.

The first prominent person to call attention to it was an author who came out there to write up our city in a magazine. He was accompanied by an artist, now a famous illustrator.

The pair arrived at night and the author asked to be called at eight o'clock the next morning.

"Good morning, Mr. Smith," was the pleasant greeting of the telephone operator at that hour. "It is eight o'clock. Do you wish breakfast in your room or will you come down?"

The writer responded as cheerily as you please. His surprise at being addressed by his own name, he told me afterwards, made him feel good all morning. It sort of flattered him to discover that he was known way out there.

Later in the day he met Mr. Jones, the artist, and was inclined to be a little boastful.

"This is what I call a wise town," the writer announced. "Have only been here twelve hours and the telephone operator knew who I was when she called me at eight o'clock. Pretty good, eh?"

"I'll say it's fair," agreed the artist, smiling. "She also knew mine."

Paying for Pleasant Voices

Not only were Mr. Smith and Mr. Jones called by their names, but so was every other guest in the hotel. Also they were spoken to in a pleasant voice. I had seen to that. A telephone operator may be ever so proficient, but she won't fill the bill in one of my hotels if she hasn't a pleasant, cheery voice. An insolent tone by a telephone girl will do lots more damage to a hotel than bad food.

I was in a big Eastern hotel once with a manufacturer, a wealthy bachelor. We occupied a double room. He called over the phone, asking the operator if she would have a bottle of mineral water and some ice sent up.

After a wait of half an hour he called again to know what was the trouble. "If you want anything like that whyn't you call 'Service'? Didn't you know this was a first-class hotel?"

The mere tone of that response was so insolent that my friend packed up and left the hotel. The incident spoiled his trip. Rather than make the day more unpleasant he did not report the girl.

In my hotel an operator like that would have been discharged immediately, not so much for the one mistake as for the tone of her voice. In fact, she would never have been engaged. A girl may learn better than to do a thing like that a second time, but a cheery voice cannot be acquired overnight. It must be natural. It is a qualification necessary to employment with my organization. Many girls fail to get jobs in other concerns because of an insolent inflection in their voices.

Above the telephone switchboard in the main office we had a rack placed. Over each room number there was a small slot for a card. The moment a guest registered, a card bearing his or her name in printed letters was placed in the slot corresponding to his or her room. We made it a point to see that every employe on the floor as w as the operator looked at that rack befo answering a call.

"Is there anything else I can do for y now, Mr. Smith?" the bell boy would s after making the new guest comfortab Mr. Smith would be pleased.

Later in the day the baggage wou come up from the station. The porter, b fore going up, would step out of the el vator and glance at the rack.

"Your trunk is here, Mr. Smith," I would announce at the door. "Shall bring it in now?"

In time the many Mr. Smiths may ha learned that this knowledge of names w simply a part of the machinery, but th liked it just the same.

I had a very keen and intelligent hou manager out there. In fact, he is with n now. From morning until night he han mered into every employe, from the port to the night clerk, the necessity of makir people feel that they were known and th they were at home.

This manager had a very clever metho of making guests known in the dining roon especially if they were at all important. C course he could not get them all. On on occasion the president of one of the Wes ern railroads—call him Davis, for short- stopped at our hotel and had his wife wit him. He had been there before, but alway alone.

The Delighted Mr. Davis

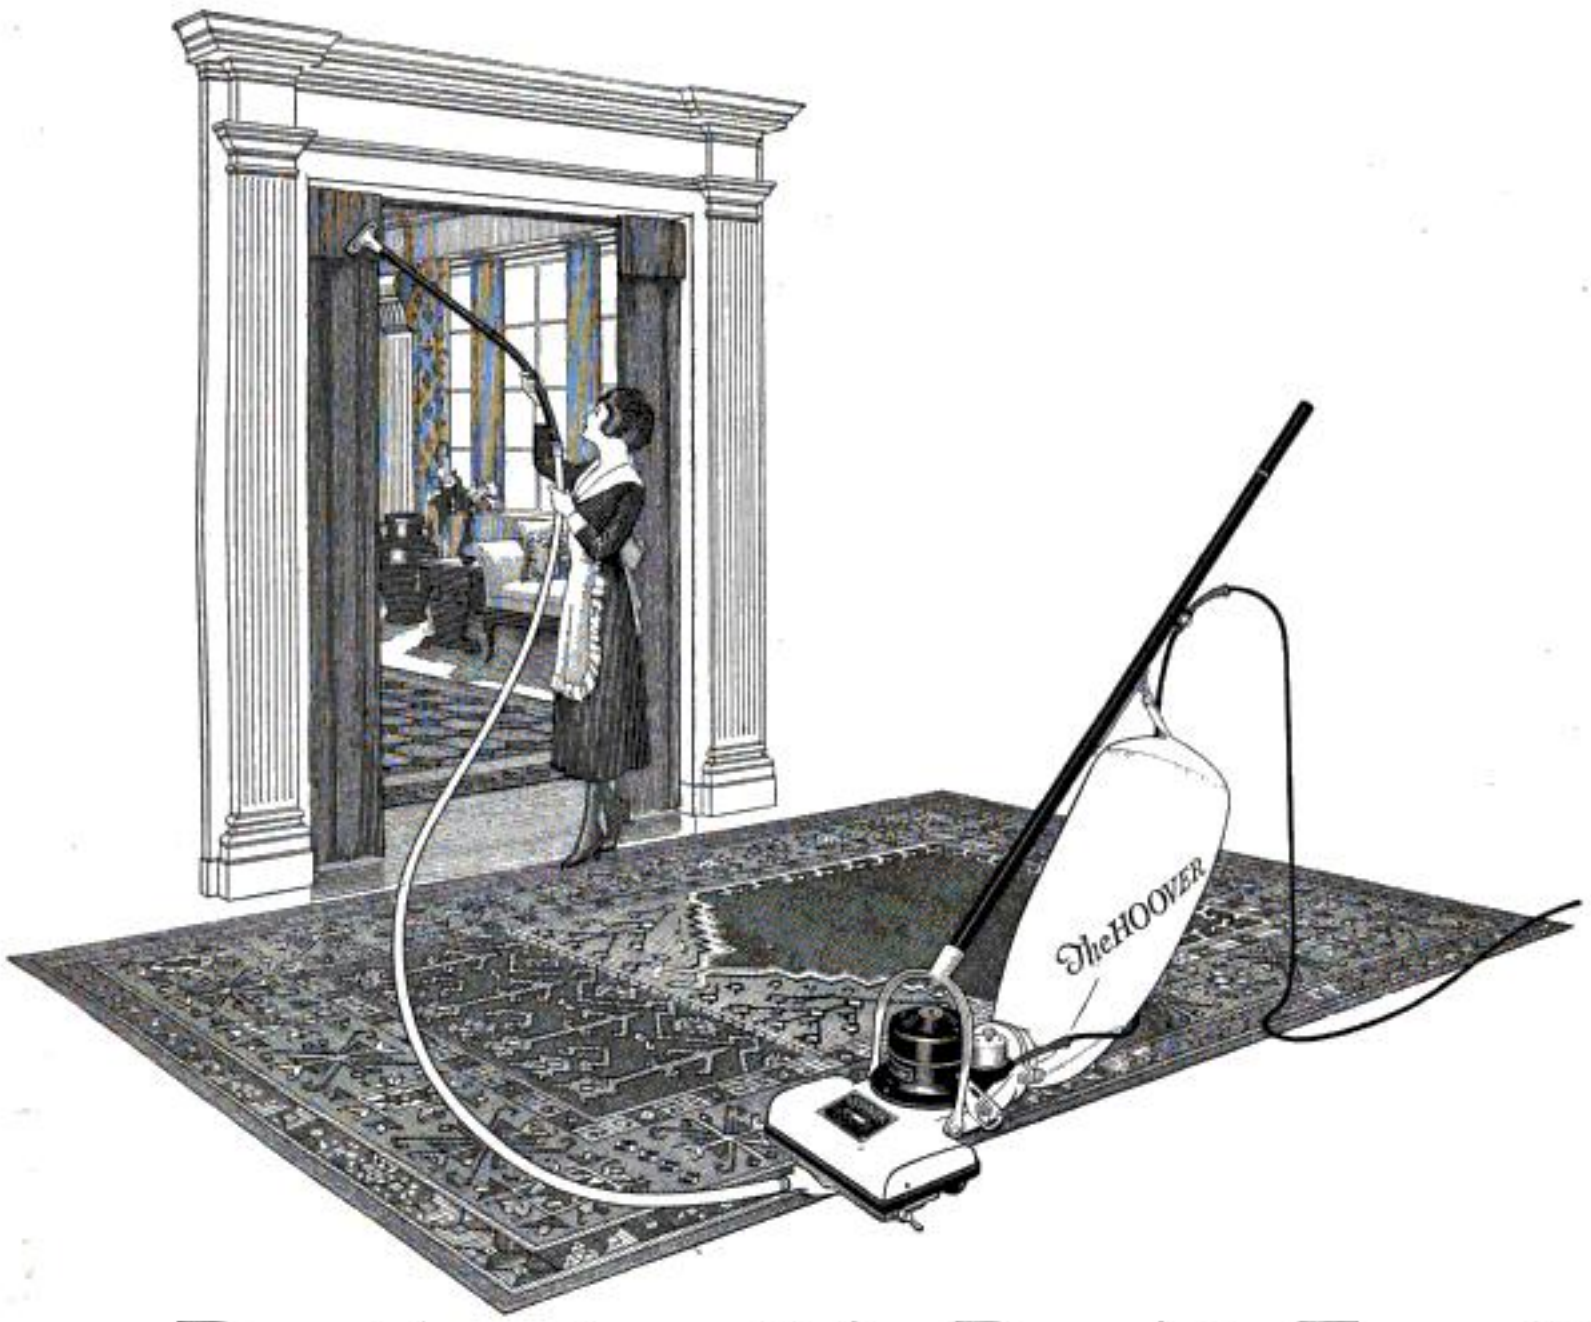
The house manager, looking over the ca list, discovered that Mr. Davis would ge up at eight o'clock—most people do, by th way. So he waited around the elevato landing until the guest had come down and with his wife, was headed for the dinin room.

Walking rapidly ahead of the couple, th manager passed the head waiter and whis pered to him: "Mr. Davis, railroad presi dent, and his wife," and went right o without turning his head.

"Good morning, Mr. Davis," greeted th head waiter.

"And Mrs. Davis," he addressed th lady, "is there any particular place yo would like to sit? Perhaps you would lik the corner, over there by the flowers."

"Why, isn't that remarkable?" said Mrs Davis to her husband. "How did that ma know my name?"



"Well," declared Mr. Davis with just touch of vanity, "he knew you were with me, didn't he? Who else could you be?"

"Of course, certainly. But isn't it re markable—his memory?"

For a moment Mr. Davis was really proud of the impression he had created. Just then the house manager came up as if he had seen the couple for the first time and pulled almost the same thing.

Clean Dustlessly—this Rapid, Easy Way

The coming of warmer days, which invariably means more open windows and the entry of additional dust into your home, need not be a dread—if you provide yourself with a Hoover.

Dustlessly, quickly, the strong suction provided by the new and greatly simplified Hoover air-cleaning attachments will whisk away all the dust which collects upon house furnishings.

These improved attachments have been developed in our research laboratories to provide Hoover owners with the most durable and highly efficient set of air-cleaning tools that long experience can devise.

With them, you can entirely remove dust from any location, high or low, without stooping or stretching, without fatigue, without befogging the air.

Then, too, they may be used to fluff up pillows or blow dirt out of places otherwise difficult of access. And instead of merely cleaning the tops of your rugs by slow, dusty sweeping, you can easily and rapidly glide The Hoover over, dustlessly cleaning the rugs as thoroughly within as without, in a manner guaranteed to add years to their life and beauty.

For this efficient cleaner electrically beats out all germ-laden, nap-wearing grit from rug depths.

Simultaneously, it electrically sweeps up stubbornest litter, erects crushed nap, freshens colors and powerfully cleans by air.

Have an immediate free demonstration in your home of The Hoover and its wonderful new air-cleaning attachments. Backed by the Guarantee Bond of the oldest and largest makers of electric cleaners, The Hoover is obtainable on easy terms in sizes for all purposes, all moderately priced.

Phone any Tel-U-Where Information Bureau or write us for the names of your nearest Authorized Hoover Dealers.

Make This Experiment

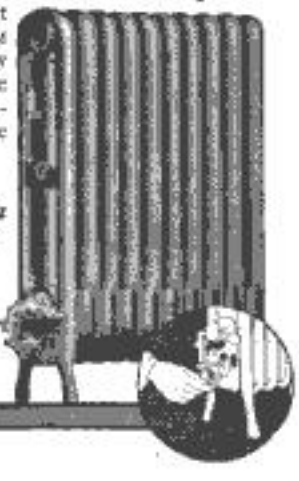
CLOW GASTEAM radiation is designed to be, and in most cases is used as, the sole means of heat—for any type of building. But as each CLOW GASTEAM radiator is complete in itself, you can make a trial of this modern way of heating at small expense.

CLOW GASTEAM for Auxiliary Heat

Perhaps one of your rooms defies efforts to heat it? Maybe your sun porch is unheated, or your attic is cold? You may wish to work in your office after the heat is turned off?

Have a CLOW GASTEAM radiator installed, and see for yourself what an economical, pleasant and efficient means of heating it is.

In Combination With Other Systems



CLOW GASTEAM is also often used in combination with existing steam or hot water systems. It can then be used in the spring and fall, when only a little heat is needed, making it unnecessary to start the furnace or boiler. In very cold weather the CLOW GASTEAM radiators can be used exactly like any ordinary steam or hot water radiators.

Architects Specify Them

Many architects specify CLOW GASTEAM radiators on every heating job—frequently as the sole means of heat in the building and sometimes in conjunction with other systems.

CLOW GASTEAM is flexible—you can have one or many radiators—and you can have heat exactly when and where you want it.

A Clow representative will be glad to tell you all about CLOW GASTEAM heating and show you a list of the people in your vicinity who are using it.

(Continued from Page 42)

This Mr. Davis, by the way, had come up from section boss to railroad president. Suddenly his old-fashioned hard sense came back to him.

"Say," he half whispered to the manager as they walked down the aisle between the tables, "you young rascal, that's all the bunk—that knowing us so well." Then he smiled. "But I'm damned if it ain't good bunk!"

Now there is quite a lot of difference between acting genial and polite and actually being genial and polite. Employes who really do not mean it, but are simply carrying out orders, often overplay their hands. Their acting becomes offensive. We have to hunt out that kind and get rid of them.

The fact that a head waiter has to resort to subterfuge to be sure of a person's name, though, does not mean that he is not naturally well mannered. He makes blunders occasionally that are very embarrassing. A major of cavalry, accompanied by a young lady, got very indignant one day because the head waiter addressed him as "the general." He took the man's honest mistake for an impertinent attempt at flattery, and I had to apologize for it.

Though the average American traveler appreciates service that is pleasant and polite he usually despises the sycophant. He would even prefer the rough and blundering servant to the obsequious one. To smooth out all these things and get thorough coöperation we still have meetings every few days, attended by all the employes who come in direct contact with the guests. Everyone from the chief of the bellhops to the cashiers and clerks is privileged and encouraged to make suggestions.

The manager usually makes a little talk at these conferences, pointing out problems and difficulties—possibly mistakes—that have come to his attention. He gives his own views on how to overcome them. When he is through if anyone has thought of a nearer cut to the same result he speaks right out and is given attention.

The main advantage of this system is that even the most humble employe understands very clearly what we are driving at, the hotel policy.

It was at one of these meetings out in San Francisco that a discussion brought out, in simple sentence, a thought that I had never been able to formulate. It expresses the basic principle of running a hotel successfully, whether it be a little inn or one of the modern palaces.

Useful Suggestions

One of the bookkeepers, I believe, had made the suggestion that we could add considerable to the income of the house by installing devices for the sale of toothbrushes, razors, shaving soap, curling irons and so on.

"That's all right," I agreed. "We certainly need the income, but I'm afraid there's a danger that too much of that sort of thing might give the place the atmosphere of a department store rather than that of a temporary home."

It was my idea, and still is, that patrons would prefer paying a higher rate for service to being bothered by catchpenny schemes. I tried to convey to those assembled the thought that guests always like to feel that they are visiting friends; that our job was to give them that sense of home comfort. I did not express this very clearly, it developed. At any rate, one man there was able to express it much better.

"Excuse me, sir," spoke up the head porter, a venerable-looking man whose kindly, dignified air was somewhat contradictory to his station—contradictory, I mean, to the way the general public expects a head porter to look. "Excuse me, sir," he repeated, rising, "but as I understand it you mean to say that when a guest comes to this hotel he should be treated just as you would treat a guest who came to your home?"

"You are getting it," I urged him on.

"In other words," he went on, "all we've got to do is remember what our mothers taught us about showing hospitality when the preacher or any other visitor came to stay all night—then do the same thing here."

The old porter had put the whole idea into a single sentence—a thing I had vainly tried to do for years. What he said there is what I consider the whole basic principle of running a hotel, so far as making guests feel comfortable.

The financial end is another matter. That can be done by a little supervision and efficiency experts—men whose work requires more application to figures and reports than to imagination.

I had typewritten copies of the old porter's expression made, and gave one to each employe of the hotel, including the cooks, the waiters and the bartenders. There was something about that thought of fixing around and polishing up your manners for the visiting preacher—the home guest—that one does not easily forget.

A few days later one of the attendants came to me with a suggestion.

"Boss," he said, "when a gentleman comes to your home and is asked to spend the night you generally offer him a suit of your pajamas, don't you?"

I told him that was true. I saw he had the germ of some good idea.

"Well, sir," he went on, "there was a gentleman who came in last night after midnight. I took him to his room and he asked me if I could buy him a suit of pajamas. He had no baggage. But it was so late I couldn't find a place open. Now I was thinking how would it be to fix up a place like that so that a man could get accommodated."

The boy had the makings of a dandy notion, all right, but he was on the wrong tack. He was thinking of a convenience for selling pajamas.

Pride in the House

Beginning with that suggestion, though, we worked out a real innovation in hotel service. We made it possible for every guest, man or woman, who came without baggage, to be supplied with nightdress, comb and brush, toothbrush—all without charge. Back of it were the words of the old porter, that we should treat guests at the hotel just as our mothers or fathers would treat an overnight visitor to our home.

I don't know if others had thought of this before, but I believe it was original with our hotel. We supplied the night housekeeper with sealed sanitary packages containing everything that a person without baggage would need to be comfortable for the night; one made up for women and one for men. There was no extra charge for this. A guest who used the emergency package was simply asked to notify the maid next morning.

She would have the night clothes freshly laundered and the hairbrush sterilized, ready for the next guest caught without baggage.

That has proved one of the most appreciated innovations in modern hotels. You should have seen the looks of incredulity and then pleased surprise when unprepared guests were offered these packages. Most of the big hotels have that as part of their service now.

Another device that still pleases the ladies is the electric slot alongside the dressing tables for heating curling irons.

The constant thought for comfort and the constant attention to details on the part of our organization made that hotel a great success. A staff like that would make any enterprise a success. The coördinated effort of all hands made our place a sort of individual institution, not just a place where a man could get a place to sleep and a good meal.

You will notice that every distinctive hotel in the country has a staff with that kind of spirit. I got the credit, of course, but that earnest group of employes really deserved it.

Pride of employes is what gives a hotel distinctive atmosphere. There is a hotel in Norfolk, Virginia, for instance, where every person from the bell boy to the manager will eagerly invite a guest to go and look at the kitchen before he is there six hours. They are so proud of its reputation for spotlessness that they want everybody to see it.

Our bell boys used to want everybody to take one of those emergency packages containing nightdress whether they needed it or not—until the novelty of it wore off.

I am now managing one of the biggest hotels in the world—one where I never get a chance to know anybody's name or to understand personal peculiarities. Most of my work is supervising departments, stopping leaks in finances, and seeing that my weekly reports show a good profit and a possible dividend to stockholders. The amount of executive labor is enormous. I am more of a financier than what the papers used to call "Ye Genial Host". term I always liked. It means somethi

In the actual dispensation of hospital I must depend upon my house manag He has been with me for years, knows bet than anybody else how much I miss romance and sentiment of being a real hc

Don't get the impression that any ho can be run by a set of clever rules a tricks. It must have a unit spirit—an prit de corps—that develops in those p ticular surroundings. California ideas m not go in Boston, and New York ideas m not go in Philadelphia or New Orleans. mosphere and color will not transplant eas

In the first place guests are not all al in temperament, cannot be treated in same way in the same hotel. Some like fined, unpretentious comfort; others l show—what they call service and fixin There is a certain class of people who l to pay excessive prices simply because tl are excessive. They want to experience sensation, new to them, of feeling rich a extravagant. We had much of that duri the great spending era following the end the war. I might add that we are not hi ing much of it now.

Then again we have genteel people, ways accustomed to refinement, who ca not afford to pay exorbitant rates, and the same time they cannot be content in atmosphere that is tawdry and coarse. Th class of people—aristocrats by nature, call them—is usually easy to please. Th rarely make complaints.

Not long ago we had a breezy guest, e dently newly rich, who engaged a suite rooms at twenty-five dollars a day—be room, sitting room and bath.

"Say," he said to the floor manager a fe hours later, "I don't see where you get to soak a fellow twenty-five bucks for th layout. I've got just as good a bathroo as this at home."

"Aren't your rooms comfortable?" aske the manager, a very diplomatic young ma He had wanted to say something el though.

"Oh, sure," admitted the guest, "but had a notion you were going to show n something new—knock my eye out."

Undesirable Guests

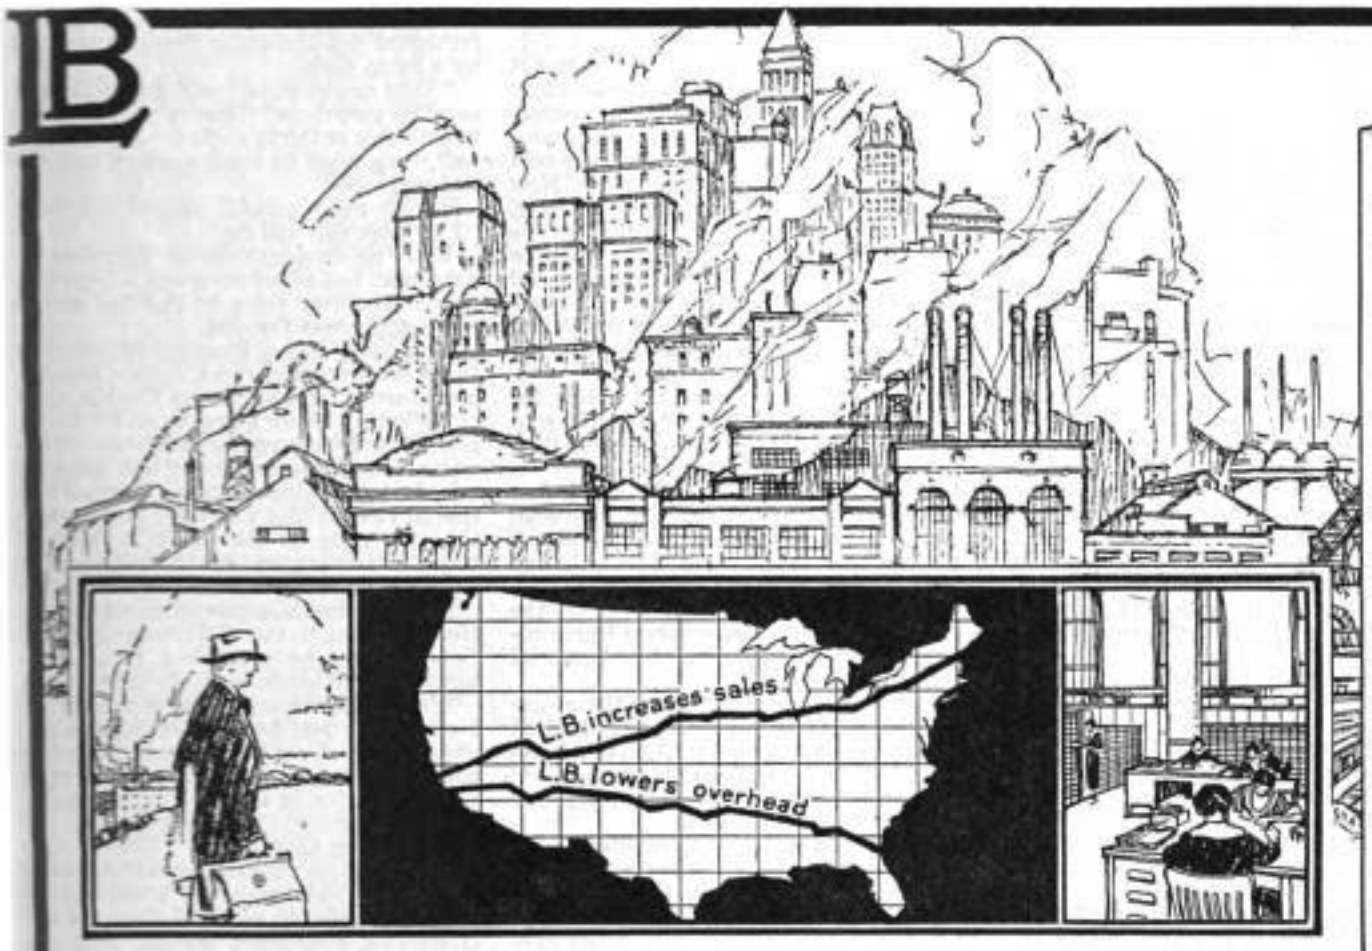
The next morning the manager had s enormous vase of brightly colored flowe placed in the man's room and sent up couple of novelty smoking stands for th sitting room. The window draperies wei made a little more gaudy, and the guest w much better pleased.

It is sometimes very difficult to allocat these guests so that their presence will n jar on each other.

No matter how hard the hotel manage ment may try to separate the rooms an deaden sound so that no one will know th kind of person occupying the adjoinin suite there is something in the air that wi in time tell. Let one objectionable perso escape the eagle eye of the house detective and in twenty-four hours nearly ever guest on the floor will know it. I don' know why, but somehow they do. Is i what those north-woods story-writers ca moccasin telepathy?

Nothing hurts a hotel so quickly an so permanently as knowledge that it ha housed persons of questionable character The best of hotels do this sometimes un knowingly. None of the best ones woul do it intentionally.

Often I have been asked how we are abl to determine the character of guests whon we have never seen before. It is done by what I might call a cumulation of observa tion. Every hotel has one or more men o unusual memories who are also expert stu dents of human nature. It is very seldom that they guess wrong. Even if they should slip, it is possible that the clerk or the bel boy will note something to arouse sus picion.



My floor man says he can tell usually by the exaggerated mannerisms of these peo ple. They are likely to be overcordial or overexacting, for effect. Of course if there is the slightest doubt the clerk regretfully informs the guest that there are no rooms left.

Some very serious mistakes have been made in ejecting guests from hotels, heavy damage suits resulting.

A first-class refined house hasn't so much trouble in this regard as is generally believed. People whose character would not stand the test as a rule do not find a quiet, genteel atmosphere congenial.

How L.B. serves modern business

"HOW can I build sales up? How can I hammer costs down?" That is today's problem. Library Bureau can help you.

Library Bureau is every day showing businesses how to make profits from sources that a few years ago were considered only as costly overhead. Library Bureau can show you how to save space, save money, save time—save waste of all kinds.

In the panel at the right are crystallized the six main divisions of L. B. service. They are the full flower of the idea that germinated at the Philadelphia Centennial in 1876. They span 46 years, and behind them are—

A country-wide organization whose constructive services are helping to solve problems in over 125,000 offices.

Ideas that, geared to your business, increase its voltage.

Inventive genius that has brought to the business world vertical filing, the card system of record keeping, the highest standard of equipment; and intelligent application of these, resulting in savings to all business.

Trained analytical ability that goes to the heart of every problem and solves it.

Send for the L. B. salesman. He is specially trained; he is widely experienced; he is constructive. You will find him an understanding man to talk to. His business is to help your business.

Send for booklet: "The Newest Force in Business Building."

The Six Big Divisions of Library Bureau Service

1. Special Service

Analysis Service: Trained experts analyze your file and record needs and furnish full recommendations. Send for booklet No. 612.

Indexing Service: Prepares and writes card records. Transfers accounts from books to card ledgers. Relieves you of the clerical burden of installing new card and filing systems. Send for booklet No. 822.

Statistical Service: A unique service to business executives. Prepares confidential statistics from figures supplied by any business. Send for folder No. 919.

2. Specialized Departments

Bank Department
Send for booklet No. 805.

Government Department
Send for booklet No. 818.

Insurance Department
Send for booklet No. 704.

Library Department
Send for booklet No. 812.

L. B. Service includes the planning of new systems, special and stock equipment, laying out filing and record departments, the preparation of rates and other confidential information.

3. Filing Systems

Alphabetic
Geographic
Numeric
Subject
L. B. Automatic Index

Library Bureau installs the filing system that best suits the needs of any business. Send for booklet No. 709.

4. Card Record Systems

L. B. Sales record—sales information at the sales manager's finger-tips. Send for folder No. 615.

L. B. Stock record—eliminates over-stocking or under-stocking.

L. B. Card ledger—saves space, time and money, over bound or loose-leaf ledgers. Send for folder No. 711.

L. B. Visible record file—combines unit feature of cards with visible feature of the book index. Send for folder No. 713.

5. Cabinets—*Wood and Steel*

They are used by 125,000 businesses. L. B. quality is standard.

L. B. has originated many labor-saving devices, such as—

Vertical units.
Card record desks.
Counter-height units.
Card ledger trays.

Send for catalogs Nos. 707 and 708.
L. B. Record Safe. Send for folder No. 712.

6. Supplies

L. B. Cards—Over 2,500,000 a day. More than 1,000 stock forms. Known for their uniform quality, accurate size and smooth edges.

L. B. Folders include every kind; notably the famous L. B. Reinforced folder which saves valuable space in file drawers.

L. B. Guides include plain, printed and celluloided guides, removable label and metal tip guides.

Send for catalog No. 702.

Deep Stuff

Now, just why do people buy Old Hampshire Bond?

Says A: "To impress the man to whom you're writing. To make him think you're as good, and your goods are as good, as the paper you write on."

But says B: "Not so. People who buy Old Hampshire Bond aren't that sort of folks. They don't consciously care a hang about impressions—they just naturally want the best. They aren't always thinking about knocking somebody's eye out. They buy fine things because the things *are* fine."

A: "All wrong, old man. Scenery counts like the dickens in getting business. Act the part and you'll land the orders."

B: "*Some* orders, perhaps—but you'll never sell my crowd anything by telling them they ought to wear good clothes, or shave every day, or use Old Hampshire Bond just because it *pays*."

Now, this is getting pretty deep. We lean toward B's point of view, we confess—but perhaps that's because B flatters our vanity.

What do you think?

For the best ten answers on each side received before May 20, 1922, we will present a $10.00 box of Old Hampshire Bond semi-business stationery, with envelopes to match, neatly engraved with your name and your home or business address.

To every one who writes us a letter on this subject, no matter whether it wins a prize or not, we will send a sample packet of Old Hampshire Bond.

Old Hampshire Bond

Hampshire Paper Company — Old Hampshire Bond — South Hadley Falls Mass.

(Continued from Page 44)

The one thing responsible for practically all modern conveniences in big hotels is the telephone. It made the mammoth hotel possible. Without the telephone in each room we could not coördinate the efforts of our big organizations. It would be impossible to keep in touch with such a large number of guests. We could not know their names, nor could we keep ourselves informed as to their wishes. In other words, the big chain hotels of to-day would be out of the question.

The best device they had in the small hotels of the old days for speeding up service was the push button on the wall with the little card of directions: Push once for the maid; twice for ice water; three times for towels, and so on. Remember?

At one of our annual conventions one of the big hotel men, brought up as a country boy, told this story:

"I'll never forget when I first came into this hotel," he said. "It was the first hotel I had ever slept in. On the wall of my room I noticed the button and the sign which read, 'Push twice for ice water.' I was a little scared and lonesome, but I couldn't resist the temptation of seeing how that thing worked. So I pushed the button twice and stood there for ten minutes, holding the pitcher under it, waiting for the water to start running."

Personally I don't believe a word of that, but it went good with all the modern hotel men gathered there to discuss improvements.

In my references to the gigantic hotels I have had New York in mind. For that reason I have not gone into the restaurant feature. There is very little to choose between first-class New York hotels in the matter of food. They are all good, all about the same. The question of cuisine is not so much a problem for the visitor as in the smaller cities, where it is sometimes difficult to find a good place to eat.

The restaurant department of New York hotels is getting more and more detached from the rooming. Our only concern is to offer the best food and service so that patrons will be induced to dine in the hotel where they are stopping. We have very few American-plan hotels, you know, where room and meals are covered by one charge. That, by the way, is another thing that has taken away much of the old-fashioned feeling of hominess.

Most visitors to New York like to go out at night and try the various restaurants which specialize in certain kinds of cooking. They are captivated by stories of quaint little restaurants that some friend has told them about secretly. It is a trait of New Yorkers to learn of some little French, Spanish or Italian eating place that no one seems to know about, and keep it all to themselves. As soon as their friends all find it out they hunt up another. The lure of these places is, after all, their individual and familylike atmosphere. Everybody likes coziness.

Right now the pressure on hotels for accommodations is relaxing, due to the general business depression. People are finding it too expensive to travel.

Personally I have always believed that the rates for rooms are too high, but with the high cost of operation and the payment of interest on money borrowed for building, I don't see how they can be avoided.

Operating a hotel in New York on the present big scale is quite different from running one in a smaller city. The financial system is very complex.

In the medium-sized city there are usually about two good hotels, with limited capacity. The main qualification of a hotel keeper there is the ability to know people—to discriminate between them in the matter of tastes.

Some men who like to consider themselves of the strictly business type imagine that everybody else thinks the same way. They have an idea that guests want things done according to rule and measure—strictly business. That kind of hotel keeper won't get along very well, even though he has the best intentions in the world. He has none of that peculiar intuition that goes to make up Ye Genial Host.

For instance, I know of one of these ruffle-browed business fellows who took over a historic old tavern out in the tourist section of Colorado. His guests ranged from millionaires looking for quiet recreation, to those whooping parties who come in flivvers looking for noise and excitement.

One of the wealthy modest guests, a quiet old fellow who had loved the country since his boyhood, suggested to the proprietor one day that he would like to throw away the menu card and have one of those old-fashioned fish-and-game dinners prepared by a camp cook.

"That can be done," said the brisk, businesslike proprietor, "but it will cost you twenty-five or thirty dollars. Fish alone—well, they must be fresh caught, and that will cost ——"

"Well, never mind," sighed the guest. "I suppose this will do."

With no imagination or intuition the hotel man had killed his guest's boyish impulse. The very thing he did not want to know about was the cost.

An acquaintance, learning of this, tried to set the proprietor right, induce him to be more tactful. He didn't get the idea at all.

"What's a fellow going to do?" the proprietor remarked argumentatively. "There was a crowd came in here last week and raised a terrible kick because I served some special venison that was twenty cents more than the price on the old bill. The only way I can do is give 'em the prices and let 'em figure it out for themselves."

This man had no sense of discrimination. He didn't know the difference in people. Consequently he proved a failure. The hotel changed hands again in three months.

Down in Delaware there is a house that I consider a real hotel, not a pretentious one, at that. On a train coming from there one night were an old gentleman of wealth and distinction, a French officer and an expert mechanic, in conversation. All were praising that hotel. Nobody but a student of human nature could have pleased all three of those men. I knew very well that the service to each of them had been given with a different touch. That hotel man knew people.

I would like to make one suggestion to the hundreds of hotel keepers who are trying to make a success in the smaller cities and in the tourist resorts:

Don't spend your whole time studying business systems. Waste must be prevented, of course. You must know where you stand every day, but you can hire good men to figure that out. Spend your time studying people. Whatever may be their walk in life, make them feel at home. Think about what that old porter said. Remember the old Commercial House.

In my opinion that will pay bigger dividends than the niftiest card-index system in the world.

THE PRINT OF MY REMEMBRANCE

(Continued from Page 21)

audience waited and congealed. The hardier ones stood through the whole play, but the house was half empty when the play was half over.

Through the balance of the week conditions were improved, but it was weeks before the house was a finished theater. The total receipts on the week were eleven thousand dollars short of the company's promised share. The manager of Booth and Barrett properly called upon Hamilton's bondsmen for their guaranty, and our weekly Mirror, with its editorial and dramatic department, went into the general liquidation.

One happening during that editorial incumbency that closed in such summary fashion is worth telling as a coincidence. The business men of Leavenworth had wished to have something written about their section that would call attention to it and yet not look like an advertisement. I wrote a story which they approved and which carried the facts, and yet which seemed to be a bit of romantic fiction. Under an arrangement at regular space rates it had been printed in the New York World, and that paper had sent me a generous commission of something over a hundred dollars. One October day a young man brought to me a pen manuscript which he wished to sell. I promised to read it, although I told him the Kansas City Mirror was not buying fiction. After a fortnight he came again. Ashamed of my neglect, I read the story as he sat there. I was prepossessed by what I thought was its easy introduction.

As I read on I said to myself, "If I had to state that case that's the way I should like to write it."

Another paragraph and I said, "Well, that's the way I did write it."

I looked hurriedly through the script and asked the young man if he was the author of the story. He said he was. He was not a large person, and behind my desk were two compositors standing at their cases and another working on the stone.

So I felt courageous enough to say to the young man, "You're a liar!"

He sprang to his feet with fine indignation. I repeated my characterization and added: "That story was printed on Sunday, May 1, 1887, in the New York World, under the title of A Leavenworth Romance."

The fellow was so astonished that he could only gasp an assent.

I said, "If you will go home to the paper from which you copied this you'll find my initials, G. T., at the bottom of that story."

He said "Yes" and went out, dazed at the mischance which had made him bring to an obscure person sitting in a Western office a yarn he had copied verbatim from an Eastern daily, only to discover that he had placed the stolen article in the hands of its author. There were ninety million other citizens of the United States.

Of course the lines of communication on this little planet of eight thousand miles diameter must occasionally intersect at points that seem supremely significant; and it may be that we should wonder at the absence rather than the occasional presence of a coincidence. But as they have their interest, I would like to jump ahead and tell the only other remarkable one that is in my own experience. I rehearsed and produced a play called The Other Girl in 1903 with Lionel Barrymore at the Criterion Theater in New York. It was in three acts. Effective ending of the second act depended upon the involuntary laughter of a parson, prompted by a wink from a prize fighter who was in the room with him. On the opening night the effect fell short. I had to leave the next day on the steamer Kroonland for Paris. Walking the deck of this boat four or five days later I still tried to analyze my failure at that point. It occurred to me that certain business between members of a group on the opposite side of the stage had made a stronger appeal to the attention of the audience than the quiet minister and prize fighter on their side had made, and I mentally kicked myself for my stupidity in not discovering this. I went at once to the wireless room and sent the following telegram to Mr. Charles Frohman:

"Have the kid touch the parson before the wink."

Mr. Frohman rehearsed this business. The action attracted the attention of the audience, who thereupon saw the wink which was the provocation for the laughter, and all that I had hoped for was secured.

About a month later Mr. Bainbridge Colby was dining with the Thomases in their apartment in the Latin Quarter. He said: "This strange thing happened: On the steamer Cedric, when I was crossing last month on my way to London, I was in the wireless room. We were a day out from New York. A message was relayed from the Kroonland. The operator was Italian and a little uncertain with English, and he asked me if I thought the message could be correct. It was from you to Mr. Frohman, and read: 'Have the kid touch the parson before the wink.' I told the operator it was all right and he transmitted it to New York."

Aside from Mr. Frohman and the members of the company, Mr. Colby was the only person on earth who could have given that answer to that operator out on the Atlantic.

With our failure to get the company's guaranty on the opening of the Warder Grand, the lease of the opera house in which I had been promised a share was forfeited, and with a winter fairly set in I was in a city where I was almost a stranger, and again without a job.

Friends have asked why in this emergent situation I did not try to recover and pick

WHAT PROPER SHAMPOOING DOES FOR THE HAIR

A Simple, Easy Way to Make Your Hair Beautiful

THE beauty of your hair depends upon the care you give it.

Shampooing it properly is always the most important thing.

It is the shampooing which brings out the real life and lustre, natural wave and color, and makes your hair soft, fresh and luxuriant.

When your hair is dry, dull and heavy, lifeless, stiff and gummy, and the strands cling together, and it feels harsh and disagreeable to the touch, it is because your hair has not been shampooed properly.

Use plenty of lather. Rub it in thoroughly and briskly with the finger tips.

When your hair has been shampooed properly, and is thoroughly clean, it will be glossy, smooth and bright, delightfully fresh looking, soft and silky.

While your hair must have frequent and regular washing to keep it beautiful, it cannot stand the harsh effect of free alkali which is common in ordinary soaps. The free alkali soon dries the scalp, makes the hair brittle and ruins it.

That is why discriminating women everywhere now use Mulsified Cocoanut Oil Shampoo. This clear, pure and entirely greaseless product cannot possibly injure, and it does not dry the scalp or make the hair brittle, no matter how often you use it.

If you want to see how really beautiful you can make your hair look, just follow this simple method:

A Simple, Easy Method

FIRST, put two or three teaspoonfuls of Mulsified in a cup or glass with a little warm water. Then wet the hair and scalp with clear warm water. Pour the Mulsified evenly over the hair and rub it thoroughly all over the scalp, and throughout the entire length, down to the ends of the hair.

Two or three teaspoonfuls will make an abundance of rich, creamy lather. This should be rubbed in thoroughly and briskly with the finger tips, so as to loosen the dandruff and small particles of dust and dirt that stick to the scalp.

The final rinsing should leave the hair soft and silky in the water.

After rubbing in the rich, creamy Mulsified lather, rinse the hair and scalp thoroughly—always using clear, fresh, warm water.

Then use another application of Mulsified, again working up a lather and rubbing it in briskly as before.

Two waters are usually sufficient for washing the hair, but sometimes the third is necessary.

You can easily tell, for when the hair is perfectly clean it will be soft and silky in the water, the strands will fall apart easily, each separate hair floating alone in the water, and the entire mass, even while wet, will feel loose, fluffy and light to the touch and be so clean it will fairly squeak when you pull it through your fingers.

Makes your hair soft and silky—bright, fresh looking and luxuriant.

WATKINS

MULSIFIED

REG. U.S. PAT. OFF.

COCOANUT OIL SHAMPOO

Rinse the Hair Thoroughly

THIS is very important. After the final washing, the hair and scalp should be rinsed in at least two changes of good warm water and followed with a rinsing in cold water.

When you have rinsed the hair thoroughly, wring it as dry as you can; finish by rubbing it with a towel, shaking it and fluffing it until it is dry. Then give it a good brushing.

When thoroughly clean, wet hair fairly squeaks when you pull it through your fingers.

After a Mulsified Shampoo you will find the hair will dry quickly and evenly and have the appearance of being much thicker and heavier than it is.

If you want to always be remembered for your beautiful, well-kept hair, make it a rule to set a certain day each week for a Mulsified Cocoanut Oil Shampoo. This regular weekly shampooing will keep the scalp soft and the hair fine and silky, bright, fresh looking and fluffy, wavy and easy to manage—and it will be noticed and admired by everyone.

You can get Mulsified at any drug store or toilet goods counter, anywhere in the world. A 4-ounce bottle should last for months.

Keeping a Child's Hair Beautiful

CHILDREN should be taught, early in life, that proper care of the hair is essential.

The hair and scalp should be kept perfectly clean to insure a healthy, vigorous scalp and a fine, thick, heavy head of hair.

When the hair is dry always give it a good thorough brushing.

Get your children into the habit of shampooing their hair regularly once a week. A boy's hair being short, shampooing takes but a few minutes. For either a boy or a girl, simply moisten the hair with warm water, pour on a little Mulsified and rub vigorously with the tips of the fingers. This will stimulate the scalp, make an abundance of rich, creamy lather and cleanse the hair thoroughly. It takes only a few seconds to rinse it all out when through.

You will be surprised how this regular weekly shampooing with Mulsified will improve the appearance of the hair, and you will be teaching your child a habit that will be appreciated in after-life, for a luxuriant head of hair is something every man and woman feels mighty proud of.

up the offer of Mayor Nealy and his banker associates to install me in ownership and direction of the Leavenworth Standard. But as I remember it the thought did not once occur to me, my ideas were so definitely turned to the East and to the theater. Except for the fact that I was subsequently successful in that field, one might with apparent justice make some animadversions upon being stage-struck. But stage-struck I was not; neither then nor afterwards have I felt any insistent wish to act. Playing was a means to the ultimate acquirement of play-writing, and I think it worth while now, with whatever weight anything I write may carry, to say a heartening word to the persistent young man in the neighborhood of thirty years who, despite the wishes of his prudent friends, feels a call to follow his private bent.

In 1863, at sixty years of age, Emerson wrote in his journal: "Tremendous force of the spring which we call native bias . . . whose impulsion reaches through all the days, through all the years and keeps the old man constant to the same pursuits as in youth!" Nearly twenty years before, in a similar mood, he had written in the same journal: "Men go through the world, each acting on a great fable, dramatically pictured and rehearsed before him. If you speak to the man he turns his eyes from his own scene and slower or faster endeavors to comprehend what you say. When you have done speaking he returns to his private music."

And his private music is his self-expression, the most important function in this personal hypnosis that we call life.

After a few days of uncertainty I began work for a couple of weeks as the artist on Willis Abbott's afternoon paper, the Kansas City News, and from there went as the resident artist to the Missouri Republican in St. Louis.

Mr. Sothern came along about this time with the promised interview concerning The Burglar. No fledgling author could ask for a more complimentary opinion than Mr. Sothern had of the play. But as a star he felt that it would be prejudicial to his hopes to undertake a drama from which he was absent during the entire second act. He wanted me to rewrite it so that he might appear in that section. But though the burglar was out of the second act physically he was very much in it as problem and menace. In my stubborn insistence upon the script as written at that time I left myself, as far as theatrical prospects were concerned, still stranded in St. Louis.

One other notable incident for me during that time is that I then made my first acquaintance with Col. Henry Watterson. The paper wanted a picture of him. Marse Henry didn't care to sit for a sketch, but when I saw him two days later he was very complimentary about the one I had made from memory after my talk with him. As a stunt that caused our mutual acquaintance I have more than once repeated it since that time.

I worked steadily on the Republican from the end of 1887 until August of 1888. The time was filled with interesting experiences; few of them, however, pertinent to my career as a playwright, although my duties as artist threw me now and then into touch with events that were dramatic. In the mind of a playwright it made a grisly front scene to be called out of bed at two o'clock in the morning and driven hastily to the levee, and with the light from one lamp taken from the side of the hack that had conveyed him there to sit astride the body of some murdered roustabout and get a memorandum sketch that would transfer to a chalk plate in time for the morning edition.

I suppose it was my exaggerated enjoyment of the dramatic element in any happening that lent zest to my good-by to the Republican and to the newspaper business. Charles Knapp, the proprietor of the paper, was a man liked by all the employes. Frank O'Neill, the editor, was a promoted reporter who had deserved his advancement. A new proprietor who came to us that summer with revolutionary ideas, none of which I recall as subsequently justified, was Mr. Charles H. Jones, a small, emphatic, laconic person, with extraordinary side whiskers and an entire absence of the personality that appeals to the Western product. He changed the honored name of the Missouri Republican to the St. Louis Republic and started in upon his campaign of economy and retrenchment. When he reached the art department he instructed the city editor to tell me that my thirty dollars a week had been cut to twenty-five.

The information came the afternoon of a day which brought a letter from Will Smythe stating that Ariel Barney offered me the position of business manager in the season soon to begin, with a young actress whom he hoped to establish as a star. The name of this young person was Julia Marlowe, and Barney and others who had seen her had a high opinion of her ability and a firm belief in her future. I was therefore able to say to the city editor that instead of submitting to a cut of five dollars I would demand a raise of fifteen if I stayed on the paper.

This did not indicate a wish to remain, but as the work on the paper had grown the management had engaged as assistant

PUBLIC LEDGER

CONSTANCE DREXEL at Washington for the Public Ledger News Service

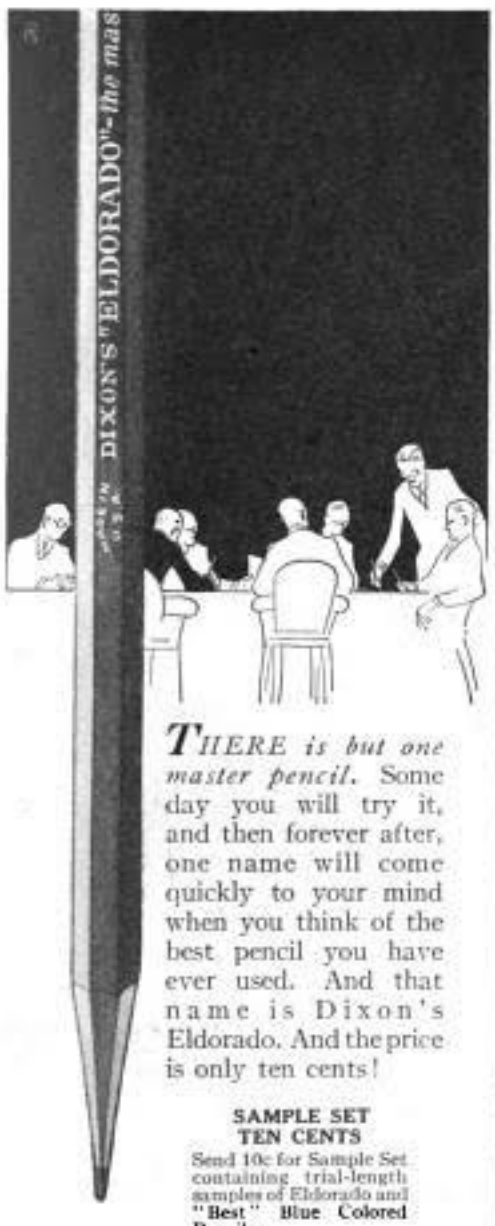
Yes, women want *news*

Not mere romances and thrills. Not news embroidered with the "feminine touch". Not patronizing lectures on the duties of citizenship.

But straight news, about the big current events which touch the lives of women and the future of their children.

Miss Drexel is at Washington to get that kind of news—the kind that male correspondents don't cover.

She was one of the first American women to get into the war, serving as a nurse in a French military hospital. Soon after, she became a correspondent. She covered the Peace Conference at Paris, and later the International Congress of Women at Zurich.



She knows news. She knows the woman's angle. That is why many newspapers publish her despatches, by arrangement with the Ledger Syndicate.

in the art department a young draftsman from the Washington University by the name of Paul Connoyer, and I felt that a Parthian demand for an increase of salary would operate as a defense against any assault upon Paul. Connoyer took over the department when I left and they got some man to help him. He later came to New York, where as a painter of landscapes and street scenes he took high rank among artists.

At that time the St. Louis Baseball Club, owned by Chris Von der Abe, was under the personal management of George Munson. Munson was a free lance, ready to try most anything, and in his experience, which ran from newspaper work to management of a swimming school, we had met and were friends. Munson had a Pullman car with twenty-four berths in it which was leaving in two days for New York with the ball club. Three of these berths were unoccupied. He gave me my choice of them, and I left St. Louis the ostensible historian of that party. Railroad fare and Pullman to New York in those days totaled about thirty dollars. It exactly bridged the gap from journalism to management, as my duties began when rehearsals did.

In that old ball club I had several friends. One still in the public eye was Charles A. Comiskey, or as he was called then, Commy. He was playing first base and acting as captain of the team. Arlie Latham, probably the greatest fun maker in the history of professional baseball, was on third. Years after Latham had ceased to play ball he was engaged as a coach because of his ability to entertain grand stand and bleachers. This was a natural gift with Latham, and its exercise was irresistibly spontaneous. The Harrisburg station on the Pennsylvania Railroad is inclosed at its west end by an iron fence about nine feet high, separating its tracks and platforms from the streets. That same fence, or one similar, was there in the summer of 1888. Our train made the usual five minutes' stop. Men were stretching their legs under the sheds of the station. Outside this iron fence a citizen of Harrisburg, with an old-fashioned set of whiskers, was passing. Latham screamed at him, and then as nearly as he could vocally reproduce the noise he dramatized a tornado, theatrically implying in the slang of the day that the wind was blowing.

The Young Playwright

The owner of the whiskers was of Celtic origin. He turned upon Latham and looked helplessly along the fence for some gateway by which he could reach him. None was there. Latham, thus protected, grabbed the iron bars of the fence, went along a section of it like a caged chimpanzee, violently shaking the bars and repeating all the time the whizzing noise that had so angered this inoffensive citizen. Through the man's anger there shot a more intelligent gleam and he started to run for the brick station house itself. Latham made a dash for the train, which fortunately pulled out as the belligerent citizen burst past the ticket taker and into the inclosure. A witness of the whole performance might have called Latham's attack unwarranted hoodlumism, but it wasn't that; it was simple exuberance of animal spirits, and very much the kind of vitality that when the offering is more a matter of personality than of intellect finds a market in the theater. Latham himself had a successful engagement later in vaudeville, after which he came back to the ball field as a coach.

For men who are trying to write for the theater and are impatient at the unavoidable delays it is worth while to take stock of my first arrival as a man in New York. I had in my trunk two long plays and five or six short ones. I was thirty-one years of age and had had an intimate acquaintance and relationship with the theater nearly all my life. I had played many years as an amateur, three or four years as the occasional member of a repertoire company in the legitimate, and had more than a year of consecutive traveling with a company in which I had an interest. I had produced four plays that I had written, had had two years in a box office and had shared for a few full minutes the lease of a theater, while never losing sight of dramatic authorship as objective. I had refused to rewrite a play for so promising an exponent as Mr. Sothern. And yet, in order to keep in touch with the business and do something that would occasionally put me at the producing center, I found myself in a forty-dollar job to count tickets for a young actress upon her first trip as a star.

In the thirty-three years that have passed since that date my observation has built up the opinion that the American playwright does not generally make better headway. There have been one or two brilliant exceptions; but as a rule the public is not interested in a man who has written from books, and to write from life requires that some time should be spent in living it. If there is somewhat in that statement that is depressing it is more than offset by the fact that hardly anything happens to a man or woman during this probationary wait that is not directly or indirectly serviceable in the playhouse. Everything is fish that comes to that pond.

Julia Marlowe, our young star, had played as a child. As a young lady she had been carefully coached in a number of parts by Ada Dow, who shortly after the season of which I write became the wife of the present veteran actor, Frank Currier. Miss Marlowe called Miss Dow Aunt Ada. Of the several parts in which she was prepared Miss Marlowe had been seen only in Parthenia, in which she unquestionably excelled any actress that her generation remembered. Col. Robert G. Ingersoll had seen her performance in this part, and had been moved to write a letter of such high praise that Mr. Barney had sought and obtained his permission to have it reproduced on his large printing. Barney as advance agent had visited St. Louis twice while I was at Pope's. My engagement was the outcome partly of the acquaintance then made. He had with him as adviser an advance man, Fred Stinson, who had conducted more than one tour for Mme. Helena Modjeska.

Julia Marlowe's Early Successes

Stinson was very wise in the matter of arranging legitimate repertoire and in getting public attention for a female star. Barney had been a newspaper man; Stinson was himself a writer with an ambition to do plays. So the association of us three men was at the start an agreeable one. Except to get the names of the company and be told the salary that each was to receive, it wasn't necessary for either Barney or Stinson to lose any time on my theatrical education. With all the duties of this position I was familiar.

In St. Louis I had gone with Barney to the critics and more than once helped him on his publicity. Notwithstanding that fact, and knowing my job, I was complimented when Barney asked me to participate in the councils of policy with him and Stinson. There was a hitch about the matter to go upon the first three-sheet. Barney and Stinson were comparing adjectives to describe the supporting company, and for one reason or another hesitating over all the trite descriptions. "Splendid," "excellent," "distinguished," "adequate," had each some recommending and some objectionable feature.

Happening to know that in certain sections of the country there had been some regret over Mary Anderson's revisiting her old territory with a company that was exclusively English, I suggested dismissing all their adjectives by using the word "American." This so caught the fancy of both men that they used it not only to describe their company but to describe their star. There was an implication of rivalry about it; but fine as Mary Anderson had been, Barney had a star who would stand comparison, however invited. All the parts that Miss Marlowe played that year I had seen played by other actresses. In nearly all the plays I had played some part myself. I felt qualified to form an opinion not only of Miss Marlowe's work but of the business which Miss Dow had devised for the other members of the company, and to which she held them with an inflexibility relaxed only when the opinion of some equally experienced person, such as Charles Barron or Mary Shaw, convinced her of its value.

Julia Marlowe had every requisite for success in star parts on the stage that a girl could need—youth and health, with their attractiveness; facial and physical beauty; stature, poise, carriage, voice, diction, proper pronunciation, mobile expression, definite and graceful gesture and competent, well-shaped, responsive hands. Her mental equipment included gayety, hospitality for humor, self-reliance, ready emotions under fair control, a capacity for attention. Or great value was that her beauty of fa was of the kind that the stage enhance It is not unusual for a parlor beauty to l lost in a stage frame; but Marlowe's fe tures were of a scale that fitted that larg canvas. This harmonious ampleness feature, the bone structure underlying i was one foundation of her voice, then now the best woman's speaking voice the American or English stage. I ha heard Charlotte Thompson and others The Hunchback, but none who by she variety and charm of tone lifted from m diocrity and made memorable such lines "I've seen the snow upon a level with th hedge, yet there was Master Walter."

As a beginner, meeting admiring calle in her hotel parlor or behind the scenes, ar even on the railway trains with the con pany, there was about the girl a slight sel consciousness, a willingness to look to Au Ada for moral support, that was altogeth girlish; but on the stage that near-timidit was transmuted into an archness qui devoid of embarrassment. This archne hovered over every playful line and inhal tion—perhaps inhalation especially, as i halation is the tide of what the Scot calle the come-hither influence.

In those early days, watched by her stu dious support, it was a question how muc of her effect was the girl herself and ho much the imprint of her instructress. Som there were who thought that a servile in itation and obedience were the full dept of the possession. And in that first yea this belief was encouraged somewhat b Miss Dow's watchfulness in the wings an frequent critical comment right after scene. For myself, however, not unpra ticed in estimating such work, and with th better vantage of seeing all from the fron there was evident an exuberant personalit of Marlowe's own, a personality thinkin and implying and conveying a most be witching overlay around all the set an studied business of the teacher. Nobody ever saw on or off the stage could put int two words the challenge and the retrea the winsomeness, the temptation and th clean innocence that Marlowe, as she sat o the log near Orlando, put into the word "Woo me."

A Company of Notables

During that period Miss Julia was mos jealously guarded. No señorita had eve a sharper-eyed duenna, and I thought the that the balcony and the Forest of Arde were both gainers because of that back ground of repression.

What a national possession a generatio has in such a woman as Marlowe! What change could be wrought on our nation speech if one such exponent might be i every great center where the girls of Amer ica could come under her repeated spell.

Besides Stinson, as playwright, ther were in that first Marlowe company Mar Shaw, Edward McWade, Albert Brunin and Dodson Mitchell, all interested in play writing, and all still prominently before th public. Miss Shaw and Bruning were wis in the maxims of the art. McWade an Mitchell subsequently became skilled an successful. Mary Shaw was easily the in tellectual center of that theatrical family not only concerning things of the theate but literature in general. Miss Shaw ha been a school teacher before she became a actress, but had not served at it so lon that she in any way tired of giving in formation. She had also been the leadin support for Modjeska, which equipped he with many of the traditions of her chose profession, but better yet, as far as he companions in the Marlowe company were concerned, gave her a fund of anecdot that made that season a joy. Mary's par ticular hero as a *raconteuse* was Maurice Barrymore. I had not met Barrymore a that time—did not meet him until nearly a year later; but when we did meet I fel pretty intimately informed of his profes sional and private career through the stories of this generous biographer.

Albert Bruning is among the prominent players of New York at the present time Previous to that Marlowe engagement Bruning had played Shakspere in German winning considerable praise in the part of Hamlet, and in that excellent and Amer ican company he was a notable actor. In Romeo and Juliet he played the part of Tybalt. As attractive as Juliet was, and as magnetic as Taber was in Romeo, and as Barron was in the part of Mercutio, when

BACKUS NOV. CO., Smethport, Pa.

(Continued from Page 50)

Bruning was on the stage as Tybalt he carried such a quiet and intense air of menace that he was the center of attention. Theatergoers of the last year or two will remember the fine impression he made as Polonius to Walter Hampden's Hamlet.

The first time we put up Romeo and Juliet, I think in Washington City, the company was short one member for its long cast. An actor who was expected from New York to play Benvolio missed the train that would have let him arrive in time for the performance. It was too late to change the bill, and at Miss Dow's suggestion I agreed to go on for the part if we could find a costume. One member lent me a pair of tights, another a pair of shoes, and so on. I definitely remember that Frank Currier furnished the doublet. He was a slighter man than I, but by dint of compression I got into his garment.

Benvolio's most important office is to catch Mercutio when he falls wounded by Tybalt in their duel. The scene went remarkably well up to this point, but when sturdy Charley Barron, wounded, dropped into my arms, this tight doublet of Currier's split up the back like a roasted chestnut, and with a ripping noise that defied neglect by anybody in the audience. I doubt if the death of Mercutio ever got so good a laugh.

Charles Barron had supported the greatest actors in the American theater. He was a product of the old Boston Museum stock and had been at times a star himself. He was an acceptable Ingomar, a good Mercutio, a fine Master Walter and an excellent Malvolio. Few actors of his day, and none of the present, had better diction on the stage; but in private discourse he was singularly uneven, at times almost inaudible. It amused the other men in the company to compare notes and see which of them had understood most of some speech of Barron's as he stood with a group on the street corner or at the stage door, mumbling as he mouthed his tobacco pipe and emitting now and then some staccato explosive that served as a stepping-stone through the maze of his unintelligible recital.

Stout Billy Owen, another Modjeska favorite, was at that time a tower of strength in any legitimate company. When he played Sir Toby and Frank Currier was Sir Andrew Ague-Cheek, with Barron's Malvolio, Taber's Duke, and young Ed McWade—the best double Miss Marlowe ever had to her Viola—playing Sebastian, with Mary Shaw and Emma Hinckley in her other women rôles, the public was offered about as good a cast of actors as America gets at any time.

The Handy Moving Van

Robert Taber, our leading man, had been a Sargent pupil and had learned his business with Modjeska and Charles Coghlan. When he had been with Modjeska the leading man had been Maurice Barrymore, and consciously or unconsciously Taber's leads with Marlowe strongly followed Barrymore. It must be said that he could not have found a better model. Taber came of fine family. His sister, who survives him, is the wife of Henry Holt, the publisher. He had had a good education and fine associates. While I was with the Marlowe company he was my nearest friend among its members. Taber liked a good laugh, but his bent was essentially serious. His happiest hours were after the play, when Miss Shaw would let him and me have supper in her room, while Rob persuaded himself and me—perhaps rightly—that he was really discussing philosophy. I would not doubt it now but for memory of Mary's laughter.

When Rob and I were alone he talked much of the star for whom in that first season he protested positive dislike and fortified his feeling by many minute fault-findings. I was some fourteen years older than the girl and a good half dozen older than Rob. The phrase "protective coloring" was then not yet invented, but I was not astonished some two years later to read of the Taber-Marlowe marriage.

We were to leave Trenton one morning for some place farther south where we had a guaranty—and needed it. The only train that would make our connection left at ten o'clock in the morning. Miss Marlowe, Miss Dow, their maid, Frank Currier and myself, who were to go to the station in the carriage, met in the hotel lobby at the proper time. After a wait of a minute or two, when the carriage didn't appear, we telephoned the liveryman, who said that the order had been for the same hour in the evening, which was absurd. His rig wasn't ready and there wasn't time to get it.

Currier and I gathered up the baggage and our mixed quintet went to the street. No passenger conveyance was in sight anywhere. To miss the guaranty in that next town meant disaster. I stopped a man who was driving a covered milk wagon. After loss of much precious time he declined to consider the proposition that I made. We moved on to the corner, hoping to find one more willing. On the side street at the intersection stood two large furniture vans with pictures of George Washington on their sides and large letters announcing their ability for long or short hauls with furniture. No drivers were in sight, but a shout into the saloon on the corner produced one. I asked him what he would charge to take the five of us to the station, about a mile away. He said two dollars. I promised him five if he got there in four minutes.

He got onto his box. Currier and I threw the luggage in over the lowered tail gate, helped the two ladies and the maid in after and climbed in ourselves. It was almost a straight run to the station. Certain obstacles in the street necessitated our crossing the car tracks once or twice, in which maneuvers the greatest living Juliet ricocheted between the thin mattresses that lined the two sides of the van.

Where Stout Could be Bought

As we neared the station we saw one of our company pleading with a nervous conductor who was running his left thumb over the heavy crystal of his watch after the manner of railroad men. Currier and I whistled shrilly, the actor saw us and explained to the conductor. A minute later we swung tail end to the railroad track like an emergency ambulance and the day was saved as Currier cried, "Out, you baggage!" The train was rocking under way as we went down the aisle to our seats, the sympathetic company full of questions to the agitated ladies.

Currier, the first man coming after, explained, still in mock heroics, "We had to drag her on a hurdle thither."

How often the human mind accepts intellectually a fact long before ever dramatically or emotionally acquiring it. Thereafter for the much-amused Marlowe the angry Capulet had a magnified reality when he scolded the cringing Juliet:

Thank me no thankings, nor proud me no prouds,
But fettle your fine joints 'gainst Thursday next,
To go with Paris to Saint Peter's church,
Or I will drag thee on a hurdle thither.
Out, you green-sickness carrion! Out, you baggage!

In the theater, as far back as I remember, when salaries were paid the old actors called it the ghost walking. Our first old man was a youngish actor named Jimmy Cooper. At that time it was customary to pay salaries Tuesday night. One Tuesday, however, the money had to be conserved to move the company. As I neared the door of Cooper's dressing room on my way backstage he watched with hopeful eyes my coming. When on the return trip I again passed him without leaving the pay envelope I heard him quote in melancholy tone Horatio's line:

But, even then, the morning cock crew loud;
And at the sound it shrunk in haste away,
And vanish'd from our sight.

The average man must always envy the well-stocked memory of the cultivated player. What a delightful element in the bright talk of John Drew, for example, are the pat quotations that sparkle through it from its remembered backing.

Arial Barney, proclaimed on the bills as presenting Julia Marlowe, had business ability. Marlowe had genius. There came a time in the association of these two factors when success impaired Barney's sense of proportion. The persons who felt the consequence of this misconception most were Stinson and myself, who had been on intimate and friendly relations with him. I think, however, that I would have gone through the other two months needed to finish the season if it hadn't been for a trick hat.

The American theater was less a business and more of an institution thirty-three years ago, and Marlowe's audiences in t cities were the nearest in formality to tho of the grand opera. Therefore in the citi her business staff dressed. I had a fur c lar and this accordion hat as I stood at t door. One form of Barney's solicitude f the star was to carry to her dressing-roo door a bottle of Guinness stout. This mi istration didn't occur often, and when did Miss Marlowe didn't like the tonic. (the first night of our second engagement Philadelphia the lobby was filled with M lowe's local admirers.

In one group were Colonel McClure, t publisher, and two of his friends. Barne who was tossing a silver quarter in h hand, at a break in their conference call to me at the door, "Thomas, Thomas Ordinarily we spoke to each other by o first names. In the surroundings referr to and under my silk hat the perempto "Thomas!" had an office-boy sound. joined him. With some display and witho leaving his friends, Barney extended t quarter and said, "I want to get a bot of stout for Miss Marlowe."

I heard myself answering, "I'm a strang in Philadelphia, Mr. Barney, but if I we you I'd try a saloon."

Colonel McClure and his friends laughe

The day I got back to St. Louis out o job again I called on John Norton at t Grand. He was talking to John Ritch who had formerly managed Mrs. D. Bowers and was then handling the thoug reader, Washington Irving Bishop.

Norton said to Ritchie, "Why, her your man!"

It was Tuesday. Bishop, who was ha ing a week's engagement in St. Louis Exposition Hall, had to open the followi Monday in Minneapolis, and his advan agent had left him without notice. I we that evening to see Bishop's work. It w astonishing, and as I came to be more a more familiar with it afterward it made up me a profound impression. It deserves be described at length; but as I am tryi to write here only that which affected n ultimate vocation, I shall tell but two stori significant of his peculiar power. In oth articles not included in these remembranc I hope to write special and extend accounts of psychic phenomena. B I explain my wish for brevity if not n achievement of it here.

A Clever Thought Reader

The Bishop experiment that impress me most that first night was his findi while blindfolded an article carried fro the stage and hidden somewhere in th vast audience. To do this the volunte who had hidden the article down a si aisle was making his second trip from t stage behind Bishop, who was eagerly dra ging him. The volunteer, determined give no help to the blindfolded telepathi was not only hanging back but was looki at the ceiling of framed glass in a refusal indicate in any manner the location sough

Near the hiding place Bishop halted, a after a fretful waver turned to the audien and cried: "This man is not complyi with conditions. He is not thinking of t place where this article is hidden. All th I get from his mind is a picture of sk lights." In a spirit of fairness the audien burst into a round of applause, regardi that reading by Bishop as more reveali than the finding of the article, which imm diately followed.

On Wednesday Bishop was ill. Ritch and I sat by his bed for our intervie I engaged to leave town that day as h advance man. I took with me nothing b some newspaper clippings. There wasn't sheet of paper or a single lithograph or an thing of the usual equipment of the ma ahead. Ordinarily for a visiting attracti in a city like Minneapolis the advertisi paper is on the walls on Thursday morni The advertisements are in the newspape and such space as the dramatic men a willing to accord the agent has already bee partly used. None of these favorable co ditions was mine.

I have had occasion to say before that wish I might write some of these stori without letting everybody know what devil of a fellow I am. But the experienc I am about to tell would lose whatev value it has if I depressed it below the leve of simple statement. I told it once in Ne York in the middle '90's, when as a more o less arriving playwright I was the guest o an organization of theatrical business men predominantly advance agents, numberin

Puffed Rice
The Bubble Grains

On This Dish

Mothers and children agree

No other cereal food in existence compares with Puffed Grains, as you know.

Children revel in them—grains puffed to bubbles, 8 times normal size. As flimsy as snowflakes, as flavory as nuts.

Perhaps every child would pick out a Puffed Grain if offered the choice of all cereal foods known.

But this is the mother's side

To mothers who know—millions of them—Puffed Grains are the ideal form of grain food.

They are whole grains, supplying whole-grain nutrition.

Every food cell is exploded, so digestion is made easy and complete. There are 16 needed elements in wheat. Puffed Wheat makes them all available.

Made from Prof. Anderson's process—the only process by which all cells are broken. Over 100 million steam explosions are caused in every kernel.

Let children eat all they will.

Puffed Rice
Steam-exploded grains.

Puffed Wheat
Puffed to 8 times normal size.

Puffed Wheat in Milk
Toasted whole-wheat bubbles—the supreme supper dish.

about two hundred. Their taking it as qualifying for honorary membership is the most expert rating I can quote to justify my belief that it is worth telling.

At St. Paul, a half hour before my arrival at Minneapolis, about eleven o'clock on Thursday morning, I got a Minneapolis paper in order to see what opposition Bishop would have in that city. The front page was covered with sensational accounts of preparations for a double hanging to occur the next day, and extended reprints of stories of the crime, the trial, and futile efforts for rehearing and for executive clemency. Two boys named Barrett, employed by a street railway, had been convicted of the murder of a passenger at a terminus of the line. One claimed to be innocent; the testimony of his brother supported him. It was plain that in regular course Friday's paper would be filled with this same kind of news, and that it would be Saturday or Sunday before the papers would print anything about Bishop with a chance of attention. The biggest possible distraction was the sensational hanging. To be noticed at all we would have to get on the band wagon; have to go with the hanging and not against it.

Arriving in Minneapolis, I had a cab driver take me to the principal evening paper. I asked the city editor if there was anything new in the matter of the Barrett boys.

He said, "Nothing."

Would he print any news concerning them? If it was news, yes. I said I had a letter to the governor of the state from Washington Irving Bishop, the thought reader, asking him to postpone the execution of the boy claiming to be innocent until Bishop could reach Minneapolis on Sunday, when he would agree to read the mind of the young man, reënact the crime and define the boy's association with it. The editor asked for the letter. Searching through my pockets, I was unable to find it. Search through my bag also failing to produce it, I told him that it must be in my trunk, but that having originally written it I could accurately reword it.

Getting Publicity

When the afternoon paper appeared its first page carried a ten-line scare head beginning, "Hope for the Barrett Boys! Thought Reader Washington Irving Bishop Asks a Stay of Execution." And then followed more descriptive lines, scaling down to the written introduction and a copy of the letter I had composed; also the important fact that Bishop was to arrive Sunday and that his arrival was preparatory to his week's engagement at the theater. That afternoon all Minneapolis had the information. I went to the jail, explained my call to the captain of the police, was permitted to see the two boys, and convinced them they had little to lose in permitting this experiment by Bishop.

I wish to say here that my confidence was based upon the fact that Bishop in Portland had made a similar visit to a criminal's cell and dramatized his crime. Both boys were glad to sign what I set down for them, which for purposes of brevity and dramatic value read simply: "We are willing to wait."

When I reached the office after leaving their cell in the jail I was confronted by a dignified, martial-looking man who as soon as the captain indicated me opened fire. He knew the object of my call; thought I should be ashamed of myself for trying to play upon the hopes of these two boys in order to get publicity for a showman. I was able quite truthfully to deny this as my sole purpose, because I had then and still have a belief that Bishop would have made good on a test. But the attorney interrupted with a loud "Rot! Remember that you are not talking now to two poor, ignorant boys, but to an attorney at law."

I said: "General, my knowledge of you as an attorney is confined to the records of this case. As both your clients are condemned to death, you must excuse me for not being impressed."

The two or three reporters followed me to the door in order to get the line right for the morning papers.

From the jail I went to the Capitol in St. Paul and handed a copy of the letter to the governor, told him of the Portland experiment and dilated upon Bishop's ability. He was considerate and noncommittal.

The regular edition of the morning papers carried full reports of all I have told and when the Barrett boys were hanged some two hours after these early editions extras issued beginning with the statement that the drop had fallen at eight minutes after six. In these extra editions the proposal and appeal of Bishop, the scenes at the jail and the governor's declination were included. The matter had been telegraphed to St. Louis also, because I received a wire from Ritchie:

"Good work. Your salary is one hundred dollars."

This was a lift of twenty-five.

Bishop arrived on time and we had a sensational opening.

The other example that I wish to report of Bishop's work is worth while, as an attempt to repeat it that spring in New York resulted in his death. We played one night in Jefferson City, Missouri. Hon. David R. Francis, recently United States ambassador to Russia, was then governor. Mike Fanning, already referred to, was his secretary. The governor, who was unable to come to the theater, sent an invitation to Bishop, Ritchie and me to take supper at the mansion. Besides the five men named there was present only the governor's sister, Miss Francis. After supper, when the governor wished to see a demonstration, Bishop asked him to go alone to his library and select a word from any book. When the governor returned we all followed him again into the library. Bishop went in an ordinary walk to the proper bookcase, took down without hesitation the proper book—there were perhaps two thousand in the room—opened this heavy law volume, turned without hesitation to the proper page, went down the page, put his finger upon a certain word.

Governor Francis said, "That's it! That's it!"

The whole proceeding occupied but little more time than I have taken in its dictation.

A few days thereafter Ritchie, Bishop and I went to New York. Bishop and J. Levy, the great cornetist, had met and agreed upon a joint tour for the following season. Ritchie and I were to be equally interested. It looked like a good business proposition. The Sunday night after our arrival in New York Bishop was a guest at a Lambs Club Gambol. He repeated this exhibition that I have described. Doctor J. A. Irwin, a member, came in after midnight, was skeptical about what he had heard, urged Bishop to repeat that test or perform one similar, and although Bishop had been cautioned against overwork of this kind by his physicians, he repeated it successfully and fell into a cataleptic fit.

A Producing Venture

On Broadway the next day a man said, "Your star is sick at the Lambs."

I found Bishop in a little hall bedroom on an iron cot, where he had been for twelve hours, a tiny electric battery buzzing away with one wet electrode over his heart and the other in his right hand. He was unconscious. Two doctors sat smoking in the adjoining room, tired with their watch of the night. I looked at the handsome face of Bishop and sat beside him for some minutes. Although he was to every appearance dead, a deeper solemnity suddenly came over his face. I stepped to the doorway.

"I think there's a change in your patient, doctors."

They came into the room and said at once, "He's dead."

In half an hour I was on the way to Philadelphia to break the news to his wife. Five hours later I was back in New York with Mrs. Bishop.

With Bishop dead, I was again out of work, this time in New York. Will Smythe was also there, and our meeting, together with the fact that Maurice Barrymore, who had just closed a highly successful engagement in Captain Swift at the Madison Square Theater, was willing to undertake a summer performance of The Burglar, embarked us all upon the production of my first four-act play in the East.

Editor's Note—This is the seventh of a series of articles by Mr. Thomas. The eighth will appear in an early issue.

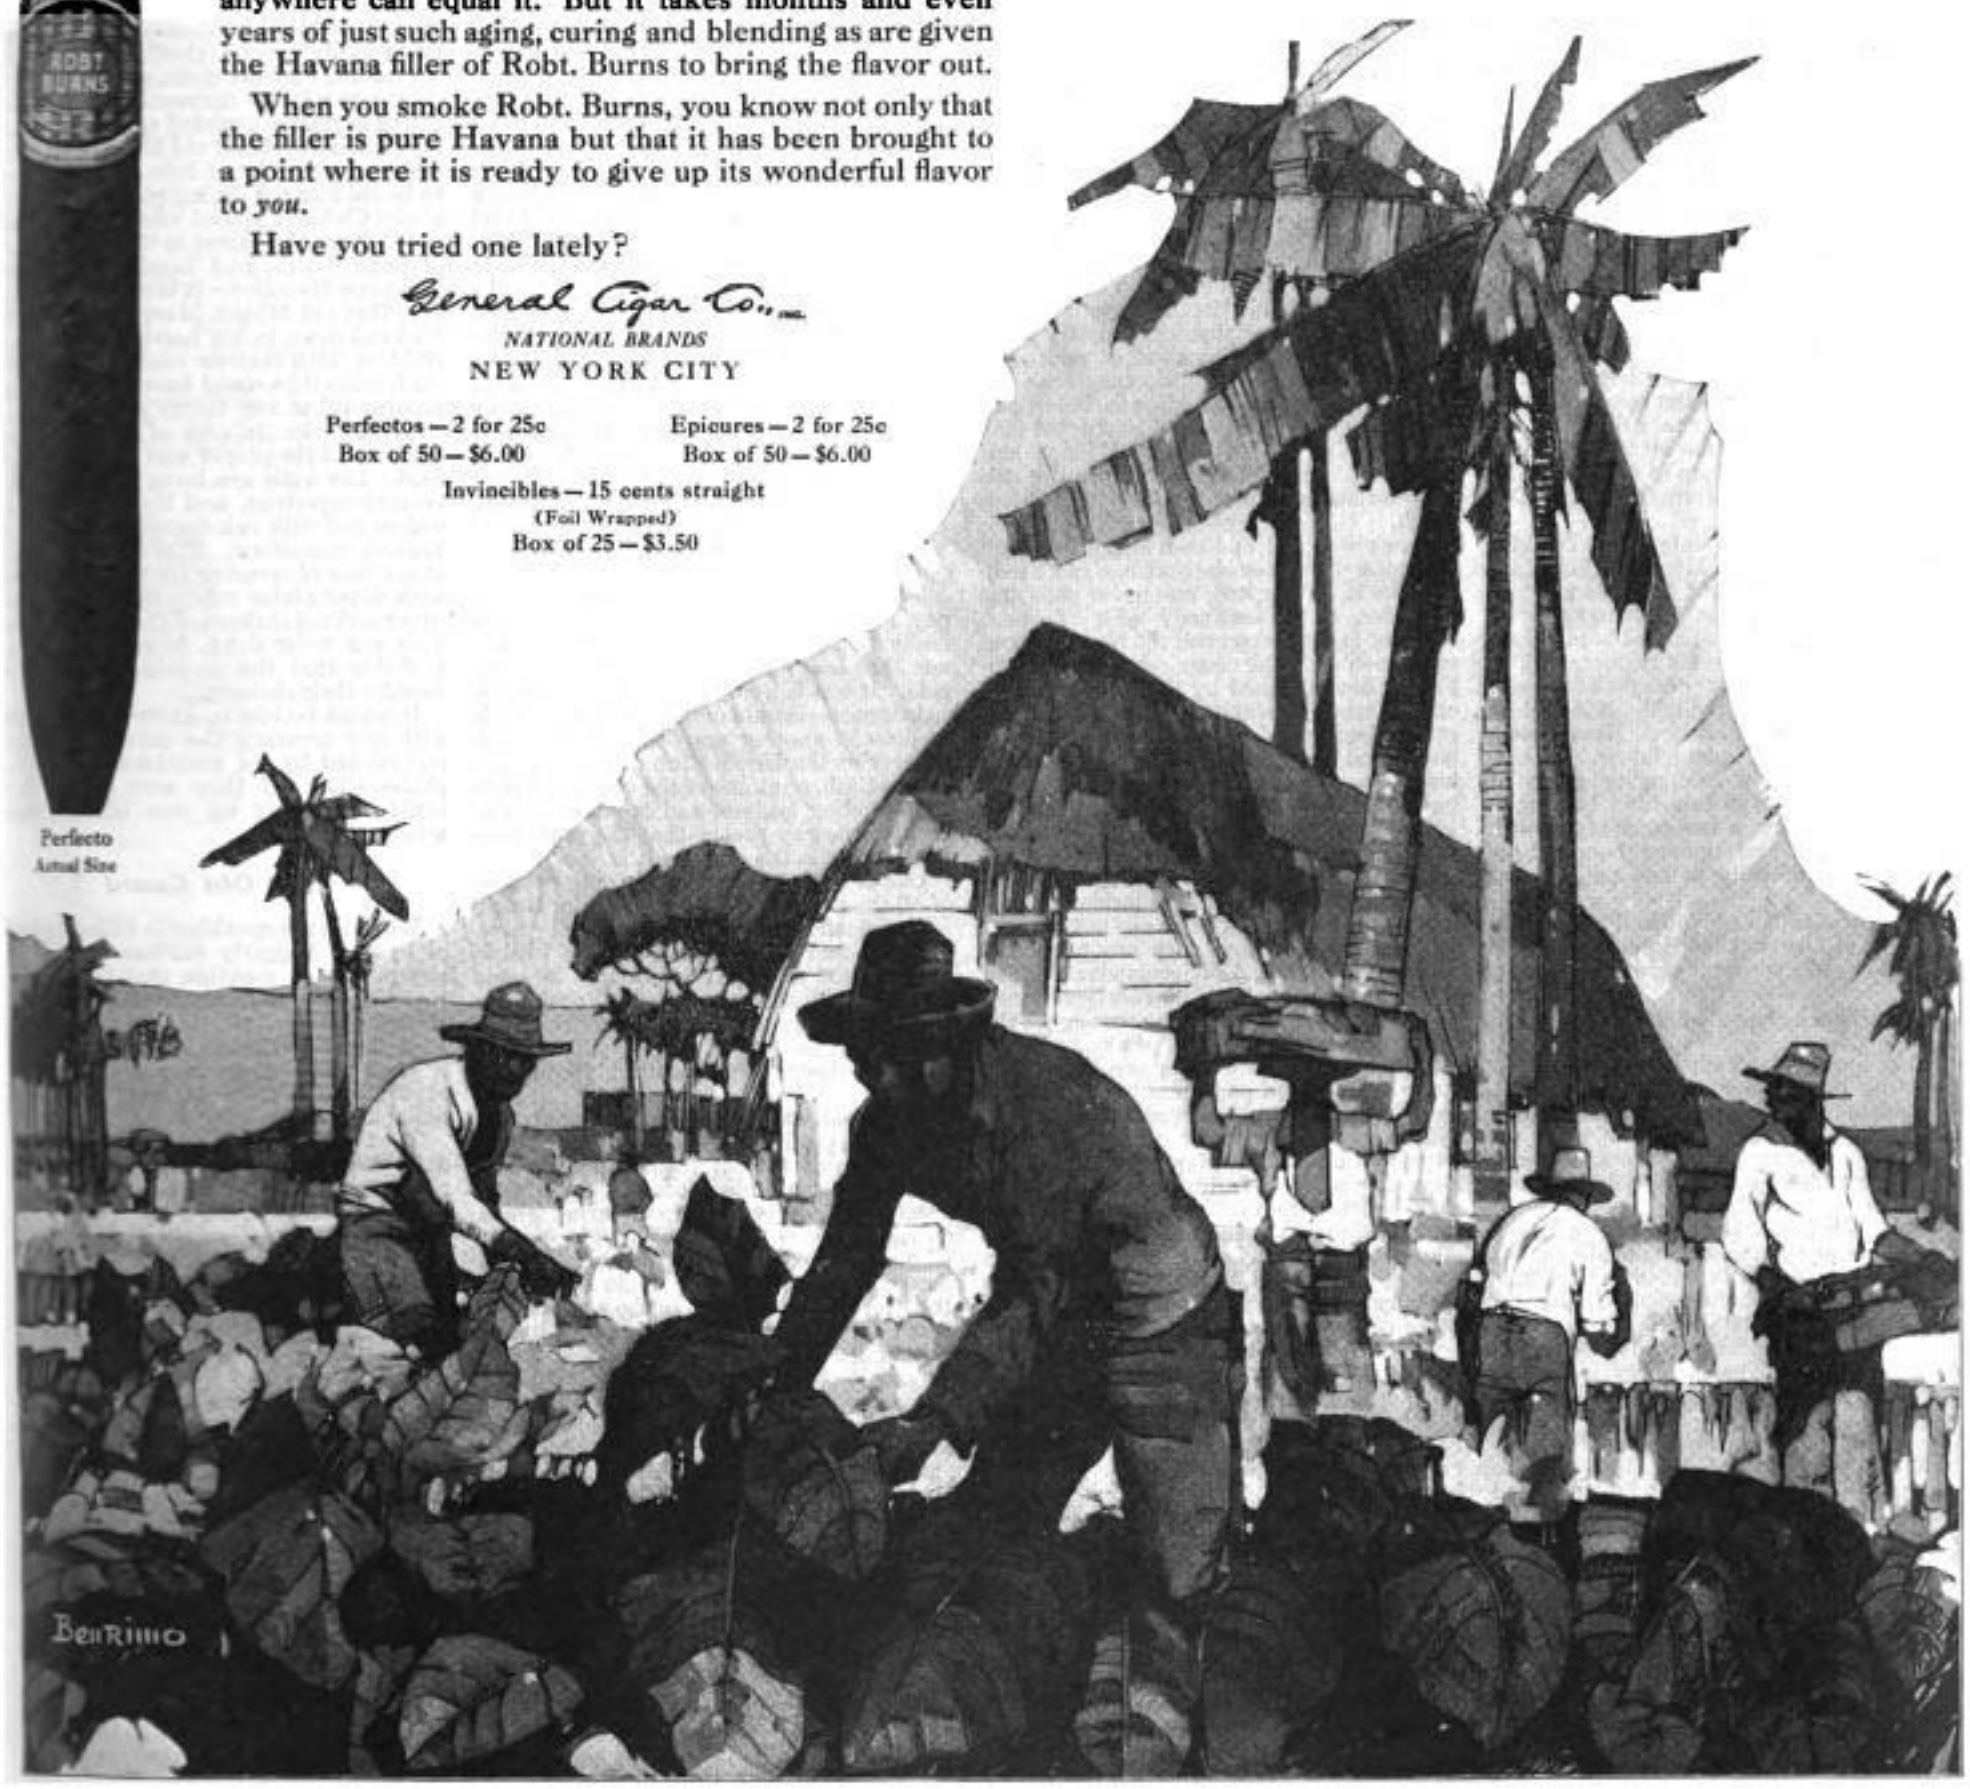
Perfecto
Actual Size

UNLESS you've tried Havana tobacco that has been properly cured and blended, you really do not know the wonderful mildness that can be merged with that distinctive Havana flavor.

The flavor is *in* Havana. No other tobacco grown anywhere can equal it. But it takes months and even years of just such aging, curing and blending as are given the Havana filler of Robt. Burns to bring the flavor out.

When you smoke Robt. Burns, you know not only that the filler is pure Havana but that it has been brought to a point where it is ready to give up its wonderful flavor to *you*.



Have you tried one lately?

THE TIME-KILLERS

(Continued from Page 7)

prominent society camp followers staggering in and out of as many as five and six daily costumes. How they ever do it will ever remain a mystery to us simple writers and oatmeal manufacturers and mattress makers from the buckwheat belt. Every morning directly after breakfast the hotel lobbies fill up with women who want to talk about dress. The Palm Beach dailies and weeklies cater to their pitiable weakness by specializing on thrilling information of this nature. So far as the female contingent at Palm Beach is concerned, an economic conference in Europe or a presidential utterance on the bonus hasn't a chance in the world with such big news as what Mrs. Harold Bayne Whiffle wore at the Beach Club last night.

Outside, the warm sun may be beating down upon golden sands and an azure sea, the wind rustling softly through the palms, and the bland air thrilling to the melodious murmur of the wheel-chair boys as they point out a million-dollar cottage, with caustic comments on the height of the wall. Yet the dress ferrets sit on with bated breaths in the cool gloom of the hotel lobbies while the papers inform their enthralled readers that:

"Very smart was the slate-colored strictly tailored suit worn by Mrs. Aurelius Vandersouse, Jr., at a recent Poinciana luncheon. Her hat was of a tone of straw perfectly harmonizing with the suit and bore only a flat bow of tomato wire for trimming. The Hon. Mrs. D. Dryver Flubyer's suit was fashioned of an imported bed-ticking fabric guiltless of any embellishment. Her chapeau was fashioned of the same fabric. Mrs. J. Eaton Swank wore a clinging gown of fromage-de-brie crêpe in a light heliotrope shade, fashioned in a one-piece style, with flowing sleeves and uneven hem, whose folds clung gracefully to the tall, slender wearer."

That's the stuff to give the Palm Beach Battalion of Dress. Like Bosco, they eat it alive. They are veritable cormorants for it.

The Democracy of the Beach

At half past eleven every morning, stimulated by the early-morning talk of dress, all the feminine population of Palm Beach, accompanied by all obtainable male escorts, set out from their hotels and homes in wheel chairs for their daily pilgrimage to the beach.

The beach is not prized by Palm Beach visitors because of its bathing facilities, but because of the perfect spirit of camaraderie and democracy which reigns there. A Philadelphia Biddle is just as apt as not to come along and accidentally rub damp sand on a South Bend Smith. Anything may happen. A Vanderbilt may ask you what time it is. There is no distinction on the beach itself between the people who emigrated from Montana to Fifth Avenue back in '01 and the people who emigrated from Odessa to Houston Street back in '91. Both of them have the same funny knobs on their knees.

The beach is the only place in Palm Beach where everybody has an equal chance; and there everybody uses the same ocean and sits around in the same sand in almost hopeless confusion. Things are so congested that if one leans back carelessly and braces himself by sticking his hand down in the sand, the chances are excellent that a couple of ladies from Kansas City or Boston will come staggering along with their eyes fixed raptly on Mrs. B. Gridley Bunn or Mrs. Quincy S. Throwtte and shear off two or three of one's fingers with their French heels.

The only portion of the beach which anybody considers worth using is the portion directly in front of the Casino, which is a large, gorgeous, white plaster bathhouse with an outdoor swimming pool and polite attendants who are always appearing at inopportune moments and helping patrons to do things which they could do much better alone—such, for example, as removing a towel from a hook or lifting a brush and comb from a shelf. This is not undue officiousness on the part of the attendants. They got that way from associating with guests who were used to being valeted.

Many people garbed in elaborate dresses stand on the terrace in front of the Casino and stare down at the people on the beach, while the people on the beach stare up at them. On chairs on the beach there are many other elaborately gowned women who examine everyone closely and are closely examined by everyone in a manner that verges on the impolite. Most of them act like rude children, but none of them point.

Down in front of the entire mob stand large numbers of professional photographers who keep a careful lookout for exciting costumes and prominent faces, and constantly snap little groups of laughing people who subsequently appear in leading Sunday papers or monthly magazines over legends like: "Far From Northern Snows; a Happy Society Group on the Palm Beach Sands; from left to right—J. Edge Smush, Mrs. B. Goodwin Eezy, the Hon. Mrs. Claribel Custard, I. Winken Ogle, Miss Patricia Swaddle. Behind the feet at the right—Perry Peevish, Jr."

Every little while the photographers find someone who is prominent and pretty without being too much overweight and overdressed; and when they do they coax her out on an unoccupied section of beach and arrange her in a position of unstudied ease and graceful carelessness, and shoot half a dozen pictures of her admiring the distant horizon with a gay, unaffected, girlish laugh.

Everything on the beach is so simple and natural and wholesome that one can't help but like it. Then, too, one never gets that offensive, salty, seaweedy odor of ocean that one is so apt to get on the New England coast, owing to the ocean odors being completely overwhelmed by the rare and powerful French perfumes that are worn by many elements of Palm Beach society. If one closed his eyes he might think that he was at a perfumery show and that somebody had kicked over all the bottles.

Palm Beach is not exactly what one would call a Prude's Paradise, but a prude can feel more at ease on the beach at Palm Beach than at any other resort in Florida. This is due to the fact that women are not allowed to appear on the beach with any portion of the leg uncovered. A policeman is stationed on the beach to see that this rule is enforced, and there is a great rejoicing among all the local prudes, who—like all prudes throughout the world—sometimes see evil where there is none, and pass blindly by the evils that everyone except themselves can see.

This rule has brought about one great benefit in that it has prevented large numbers of ill-advised and otherwise charming stylish stouts from rolling down their bathing stockings and exposing too much knee. Any rule that does this is a good rule—and it is generally agreed that there are more stylish stouts at Palm Beach than at any other resort on earth.

Life on a Hundred a Day

When the bathing hour has passed into history the merry bathers and clothes wearers sally forth in search of lunch. The ordinary run of Palm Beach visitors eat their lunch at their hotels. This act almost automatically stamps them as buckwheats, or three-day suckers, or people who aren't smart. A buckwheat is a coarse, rude, barbaric person who is addicted to the secret and loathsome vices of eating buckwheat cakes for breakfast and not spending money recklessly.

A three-day sucker is a person who stays only a few days at Palm Beach. As a time killer he is not regarded with any respect. He travels so far to kill time that he hasn't any time left to kill when he gets there. This is not regarded as smart. Anyone who stays less than two weeks is not viewed with favor by people who stay a month or more, and who know how important smartness is. If one wishes to have the respect of the cigar-counter clerks and the mail clerks and the head waiters and other Palm Beach people who—as the ultra-refined advertisements say—matter, one must above all things be smart. You might as well be dead at Palm Beach as not be smart.

Certain things are smart and certain things are not smart. It is smart, for example, for a man to go without a hat. It is smart to ride a bicycle. Any article of feminine wearing apparel that is essentially useless is smart. It is smart to speak of a thing as smart. It is not at all smart to tell a Palm Beacher that you would gladly disembowel him when you hear him use the word "smart" for the fiftieth time.

None of the big Palm Beach hotels rents rooms without meals. One must pay for his meals as well. Two people at most of the big hotels pay a minimum rate of about thirty-five dollars a day for the two—which is about the amount from which the same people would have to separate themselves at any of the big New York or Chicago or Boston or Washington hotels by the time they had finished paying for their food. But if one wishes to be smart at Palm Beach one mustn't lunch or dine at the hotel where one's meals are included on his bill. It is very buckwheat to do such a thing; very uncouth, very hick and very roughneck; not, in a word, smart. That is why the desirable Palm Beach habitués, at the height of the season, find it difficult to spend less than a hundred dollars apiece per day. One can't indulge in games of chance or keep many wheel chairs on that amount; but if one is reasonably careful and content to be only moderately smart one can get along fairly well for a hundred dollars a day.

On Being Smart

The truly smart person strives always to pay for two meals where one would normally be paid for. He strives to pay for one that he eats and for one that nobody eats. If one is living at a big hotel, one—to be smart—should make an effort to lunch or dine at another one or at the Country Club or at the Beach Club or at the Everglades Club, or at one of the cottages. It is a fascinating system, and is based on the familiar society theory that the more useless a thing is the smarter it is.

One of the smartest—in a society sense—of all the persons that come to Palm Beach is a man who never eats at the hotel where he lives, and who keeps a flock of twelve wheel-chairs always in attendance on him. Day and night his twelve wheel chairs are waiting for him and his friends. They are used about an hour a day—but it is very smart to keep them waiting; frightfully smart.

The head waiters in the restaurants become very proficient at distinguishing those who are smart from those who are not smart. In the dining room of the largest hotel there is a cross strip of carpet which is known as the dead line. The people who sit between the entrance and the dead line have been carefully looked over by the head waiter and put in the smart class. But the people who are put on the kitchen side of the dead line are dubs and buckwheats in the judgment of the head waiter. Once people are put below the dead line they rarely have a chance to come up for air, but are doomed to stay down among the other buckwheats for the remainder of their visit.

The smartest thing at Palm Beach is the Everglades Club. The Everglades Club is so smart that it almost gives itself a pain. It has only a few over four hundred members, but these four hundred include names that make a society editor's scalp tingle, and control so much money and jewels that the mere mention of them is enough to make any normal burglar tremble all over. The Everglades Club building was started in the summer of 1918 by Paris Singer, who is a wealthy society man, as a hospital for convalescent officers. The war was over, however, before the building was ever used as a hospital; and it immediately occurred to the smartest of the Palm Beach colony that the building was exactly the thing to use for a smart club where really smart people could go away by themselves and be too exclusive for words.

The proposition was put up to Paris Singer, who saw the force of it; and that's how the Everglades Club started. The initiation fee and yearly dues might be expected to be about as large as the national debt, but in reality they amount to something like one hundred dollars initiation fee and fifty dollars yearly dues. The club has built a very smart and attractive apartment house within a stone's throw of the parent building, and in it club members c rent small but smart apartments for a me twenty-five hundred dollars a season—a there are several Maine summer resor where one pays as much and gets no mo for his money.

The club has its own golf links and tenn courts; and it has a restaurant whose ch could easily enter a cheffing contest wi the leading Parisian chefs, with an excelle chance to win the diamond-studded skill or the seventeen-jeweled egg-beater. It my fixed belief that if old M'sieu Marguer who invented Filet of Sole Marguery, we to be led into the dining room of the Eve glades Club and placed where he could loo out through the palms to the placid wate of Lake Worth, and handed a platter Pompano Meunière—it is my fixed belief, say, that old M'sieu Marguery would p his head down in his hands and cry like child to think that he could have doubl his fortune if he could have started servi pompano that way thirty years ago.

The interior fixtures of the Everglad Club are of the proper sort to go with suc food. The walls are hung with sixteenth century tapestries, and the dining room wainscoted with oak from the interior of Spanish monastery. There was some tal at one time of covering the wall of one roo with silver plates made by flattening th silver cocktail shakers of the club member This was never done, however; and it probable that the members found oth uses for their shakers.

It would be idle to attempt to estimat with any accuracy the amount of mone represented by the members of the Eve glades Club. If they were pushed the could easily dig up one billion dolla among them.

The Old Guard

While we are speaking in billions instea of in mere beggarly millions it might b appropriate to mention that the most a tute Palm Beach estimators figure that th thirteen hundred guests who fill the Roy Poinciana Hotel at the height of the seaso if placed in one room and carefully a sayed, would yield at least two billio dollars.

The Country Club is another smart plac at which to lunch or dine. There is n restaurant in Europe, to my knowledg that is able to produce a better dinner tha the Palm Beach Country Club, especiall if one leaves it, as the saying goes, t François. François is the head waite and he works in conjunction with a ch named Marius, who inherited most of hi recipes from a gifted relative in the sout of France, and who spends a large part o his time when not cooking in fearing tha somebody will solve the recipes. The chie object of the Country Club is to provide golfing retreat from the buckwheats an the three-day suckers, who usually brea for the golf links immediately on arrival Consequently the links which are open t the buckwheats are apt to become so con gested that if one doesn't stick rigidly i his place in the golf procession he is mor than apt to get a couple of golf balls in th side of the head and then have to stan aside for two hours while a long parade o golfers and near-golfers hacks its way pas him. So the smart golfers go to the Coun try Club. It is there that one finds th Old Guard of Palm Beach.

The Old Guard is a hidebound organiza tion of ardent golfers who know all th intimate personal scandal about practically every dollar that has changed hands i North America since the Dutch purchase Manhattan Island from the Indians fo twenty-four dollars, and threw in enough rum to provide magnificent hang-overs fo the families of the original owners.

One must have been a resident of Palm Beach for five years before he is allowed t join the Old Guard, the theory being tha unless a golfer has lived there for five years he is not thoroughly conversant with the essential features of Palm Beach gossip and will be apt to interrupt a calm and quiet game of golf to ask who the G. Daley Squabbles are going to marry when they have divorced each other, or some other equally irrelevant and unnecessary question.

The business of being smart and appearing at the proper places at the proper hour is merely the accepted method of killing

30-Year Teeth in a 70-Year Body

Why shouldn't our teeth last as long as our bodies?

WHY should our teeth begin to go just as our bodies are in their prime? Is it natural or unnatural to lose the teeth?

Early, uncivilized men and women had teeth that stayed firm and sound for a lifetime. Skulls of primitive men and heads of mummies show strong teeth little affected by time.

The hard, uncooked foods and the rugged lives of our ancestors kept the teeth clean and the saliva always alkaline. The modern tendency of teeth is to ache, decay, and require attention long before the rest of the body has gone into decline.

Soft, cooked foods weaken the teeth by denying them exercise. In addition, tiny particles of this food left in the mouth break up and form an acid condition that attacks the structure of the teeth and causes decay.

Most people have "Acid-Mouth"

It is said that as many as nineteen out of every twenty people have "Acid-Mouth." And if it is true that "Acid-Mouth" is the chief cause of early tooth-decay, we can readily understand why so many persons lose their teeth.

Quite probably you have "Acid-Mouth," for if only one person in every twenty is free from this condition, your chances of having "Acid-Mouth" are nineteen to one.

To counteract the destructive work of "Acid-Mouth" is one of the purposes for which Pebeco Tooth Paste is made—and the reason why thousands of men and women use Pebeco night and morning.

How Pebeco checks "Acid-Mouth"

Pebeco counteracts "Acid-Mouth" by stimulating the flow of natural alkaline saliva, which is Nature's own mouth-wash, and the most effective means of neutralizing mouth acids.

But not for that reason alone is Pebeco a good tooth paste.

Like thousands of other users, you will like Pebeco for several reasons: First, because it keeps the teeth clean and healthy. Second, because it counteracts the destructive work of "Acid-Mouth." Third, because it eliminates any bad taste that may exist in the mouth. Fourth, because it gives to the mouth a sense of refreshing cleanliness.

And from the first to the last squeeze, Pebeco rolls out of the tube fresh and creamy—none is wasted.

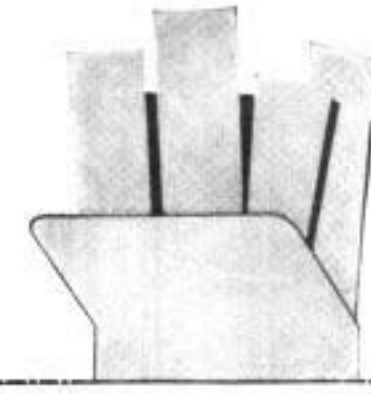
How to tell if you have "Acid-Mouth"

First, send for Litmus Test Papers and big trial tube of Pebeco

We will send you these necessary materials to demonstrate to you how Pebeco acts.

Moisten a blue Litmus Test Paper on your tongue. If it turns pink, that indicates an acid condition in your mouth. Brush your teeth with Pebeco and make another test. The paper will not change color, thus demonstrating how Pebeco helps to counteract "Acid-Mouth."

Fill in the coupon now, enclose ten cents and mail to us at once. The Litmus Test Papers and big trial tube of Pebeco will be sent you immediately.



Only one person in twenty is free from "Acid-Mouth"

LEHN & FINK, INC.

Nothing So Bea

As a wealth of well-groome

Nothing so beautiful and nothing more easily attained —if you know how. Satiny, silky, glossy hair is the reward of intelligent care. Follow the suggestions we give you here and prove it. Begin by learning how to shampoo, for this is all-important. The first step is a bottle of Palmolive Shampoo, the blend of palm and olive oils. Use as directed and watch results.

First is the wonderful softness you have never before experienced after w harsh dryness and fl derfully silky in te: Most important, you every trace of scurf doesn't get these res palm and olive oils, covered 3,000 years

For Sale Everywhere Price 50c

Olive Oil for *Gloss*—Palm O

Olive oil possesses softening qualities which neutralize the drying effects of washing. Palm oil contributes body, richness and lasting qualities. In combination they produce a thick, mild, profuse, penetrating lather which softens the scalp and reaches every root and hair cell.

This lather loosens the dandruff scales, dislodges and dissolves them, leaving the scalp and hair free to function healthfully.

The Greatest Benefit

This thorough removal of dandruff, which doctors call seborrhea, is most necessary, as even the accumulation on healthy scalps injures hair.

The dry, oily scales clog the roots of the hair, preventing proper nutrition. Soon the hair begins to fall out. The blend of palm and olive oils you get in Palmolive softens and penetrates the scales, loosening the cap-like accumulation.

Gentle m the scalp, le clean. Hair s dry, harsh a soothing oil

We will bottle of Pal write a post me the free poo" and sig come to you a valuable bo treatments v it grow. Ac

HELMET PRODUCTS FACTORY, Cincinnati, Ohio

(Continued from Page 56)

time with many Palm Beachers; but with many others it is as serious as the death of a near relative. Palm Beach is well sprinkled with people who are determined to break into New York society, and who have selected Palm Beach as the place to drive the entering wedge because results can be obtained there with greater speed, with less expense and with more noise than in any other section of the country. A young man with a small income broke into society with a crash and married not so very long ago a beautiful widow with a strangle hold on society and a fortune that keeps a couple of income-tax experts working a month each year.

He explained his system to a friend of mine with the peculiar half-childish and half-idiotic frankness that may frequently be encountered in the upper crust of society. If he had attempted to break in by way of New York, he said, he would have spent all his money on dinners and luncheons, and about as much notice would have been taken of his struggles as would be taken of a stray dish of prunes at a banquet. But by coming to Palm Beach and getting on the right side of the society reporters he was able to give one fair-sized and comparatively inexpensive luncheon and have the news telegraphed immediately to the New York papers. By doing this a couple of times a season he was able to repay all the invitations which he accepted in New York; and it was apparent to all New York newspaper readers that he was making a society splash at Palm Beach. So he was soon accepted as being socially prominent, whereupon he picked out the richest thing in sight, married it and stopped worrying.

Many people at Palm Beach feel that they must have press agents to keep them in the limelight. There is one enterprising Palm Beach press agent who supplies the newspapers with palpitating items about seven or eight social climbers, and whose earnings from this source are said to be over thirty thousand dollars a year. When one reads of a socially prominent Palm Beacher doing something fearfully original, like giving a dinner to all her friends' dogs, one may know that she has been hiring a press agent to fill her mind with original and valuable ideas.

Armor-Plate Flasks

The Palm Beach crowd is always ready to part with money for anything that looks sufficiently interesting. In order to facilitate the parting, some of the country's leading costumers and rug merchants and hat makers and jewelers have moved their branch stores into the hotel lobbies, so that the passers-by can separate themselves from their money with a minimum of exertion. There is one Palm Beach window that is known as the Alibi Window. It is full of gorgeous diamond pendants and diamond bracelets and simple little ten-thousand-dollar rings; and the Palm Beach theory is that some of the shop's best customers are men who have been raising what is somewhat loosely known as the dickens. As is well known, a man whose conscience is troubling him can frequently keep it quiet by getting his wife a pendant of diamonds set in platinum. At night, when the shop is locked up, all the jewelry is removed from the window and replaced with a large flock of frosted silver cocktail shakers whose appearance alone is warranted to give even a prohibition-enforcement agent a thirst. This spectacle is jocularly said to make the observer hunt up some whisky and get himself nicely boiled, and possibly to make him fall so low as to speak disrespectfully of the society leaders. On the following day he buys jewelry to square himself with his wife.

Large, curved pocket flasks, two of which would make fine protective armor for the entire upper part of the body if worn on opposite sides, are popular at Palm Beach, as is a new trick cane that unscrews at a joint and reveals a long slender bottle three-quarters of an inch in diameter and two feet long.

There is a great deal of fire water in sight at Palm Beach at all hours of the day and night; and the débutante who can't absorb eight cocktails without raising her voice or falling over the chairs is regarded as being handicapped by some sort of inherited weakness. One of the most frequently pointed-out personages at Palm Beach is a very fat man who can—according to the claims made for him by his admirers—drink thirty-five cocktails at one sitting without blinking. The price of Scotch whisky starts down around forty dollars a case in the summertime and works gradually upward until at the height of the season one is paying from seventy to one hundred dollars a case for it.

The building boom that has struck Palm Beach in the last five years is claimed by most of the loose claimers and enthusiastic drinkers to be due to prohibition. A great many cottages have been erected by persons of wealth and social prominence in these five years; and the prevalent architectural idea for a simple little Palm Beach cottage seems to be a Spanish modification of a Union Station, or a Court of Jewels at a successful World's Fair.

To hear the drinkers tell it, these houses have been built so that the owners could have a place in which to drink without being watched or hurried or made to feel uncomfortable. This may be possible; but if it is, the house builders are the only ones who haven't felt free to drink when and where they chose.

The Nuts in the Grove

The truth of the matter unquestionably is that the people who built houses liked the place and the climate, and so built in order to enjoy them more thoroughly than they could be enjoyed in a hotel room.

After one has spent a fatiguing afternoon pricing whisky flasks, or being pushed along avenues of palms and Australian pines in a wheel chair, or indulging in a little steady bridge and Scotch drinking, or some other equally arduous pursuit, the smart thing to do is to go to the Coconut Grove and participate in a little tea and dancing.

The Coconut Grove consists of a large and beautiful grove of coconut trees surrounding a polished dance floor. All the coconuts have been removed from the trees, owing to their well-known habit of falling off unexpectedly and utterly ruining anyone who may be lingering beneath them. Thus the only nuts in the grove are the ones who come there to dance.

The Coconut Grove starts doing business at half past five every afternoon in the bright sunlight; but in a few minutes the tropic night closes down just as advertised in all books on the South Seas.

By a little after six o'clock the only illumination comes from strings of red electric-light bulbs strung through the palms and from the occasional flare of a match as some distinguished social butterfly tries to find out how much whisky he has left in his cane.

Later in the evening the smart thing to do is to go over to what is formally known as the Beach Club, but universally spoken of as Bradley's. As trains from the North enter the Palm Beach Station the enormous bulk of the Royal Poinciana Hotel stretches out at the right of the train. On the left of the train, directly opposite the station and so close to the train that the traveler could toss even a lightweight biscuit on its roof from the car window, is a long, low, white frame building with a large revolving ventilator in one end.

This is Bradley's, Palm Beach's oldest, most celebrated and most popular charitable institution—charitable, because it assists people who have more money than they know what to do with to get rid of a part of it in a quiet and eminently respectable way.

Every large resort in the world that caters to wealthy people has its gambling houses. In Europe the municipalities run them, recognizing the fact that all people of means who are on a holiday are bound to gamble. At America's resorts the gambling houses are usually concealed; but they exist none the less; and usually, because of the secrecy that surrounds them, they are lurking places for troublesome aggregations of trimmers, bloodsuckers and crooks of various sorts.

Bradley's is different. It is run exclusively for the wealthy Northern patrons of Palm Beach. Everybody who goes there can afford to lose and lose heavily; and a list of the names of the people who play there every night would read like a list of America's leading celebrities, social lights and millionaires.

A crook would get along about as well in Bradley's as an icicle would get along in the crater of Mount Vesuvius.

Anybody in Palm Beach, from the wheel-chair boys to the policemen, can supply the inquirer with all the standard Beach Club stories, usually starting with the one about the man who lost six thousand dollars in one evening and left Palm Beach hurriedly t next morning. A few hours later one of t Bradley brothers was visited by a you woman, who was obviously in great d tress. Her eyes were red and swollen a she was sobbing convulsively. She plained that her husband had lost six th sand dollars the night before, that t money didn't belong to him, and that u less she could get the money back for h he would have to go to prison. So Bradl gave back the six thousand dollars af telling the young woman to tell her h band never again to set foot in the Bea Club. A few days afterward the same m turned up in the Beach Club and began play. Bradley summoned him to his off and asked him how he dared to do such thing after his losses had been returned his wife.

"What do you mean?" asked the ma "I'm not married."

"Then you didn't leave town becau you were ruined?" asked Bradley.

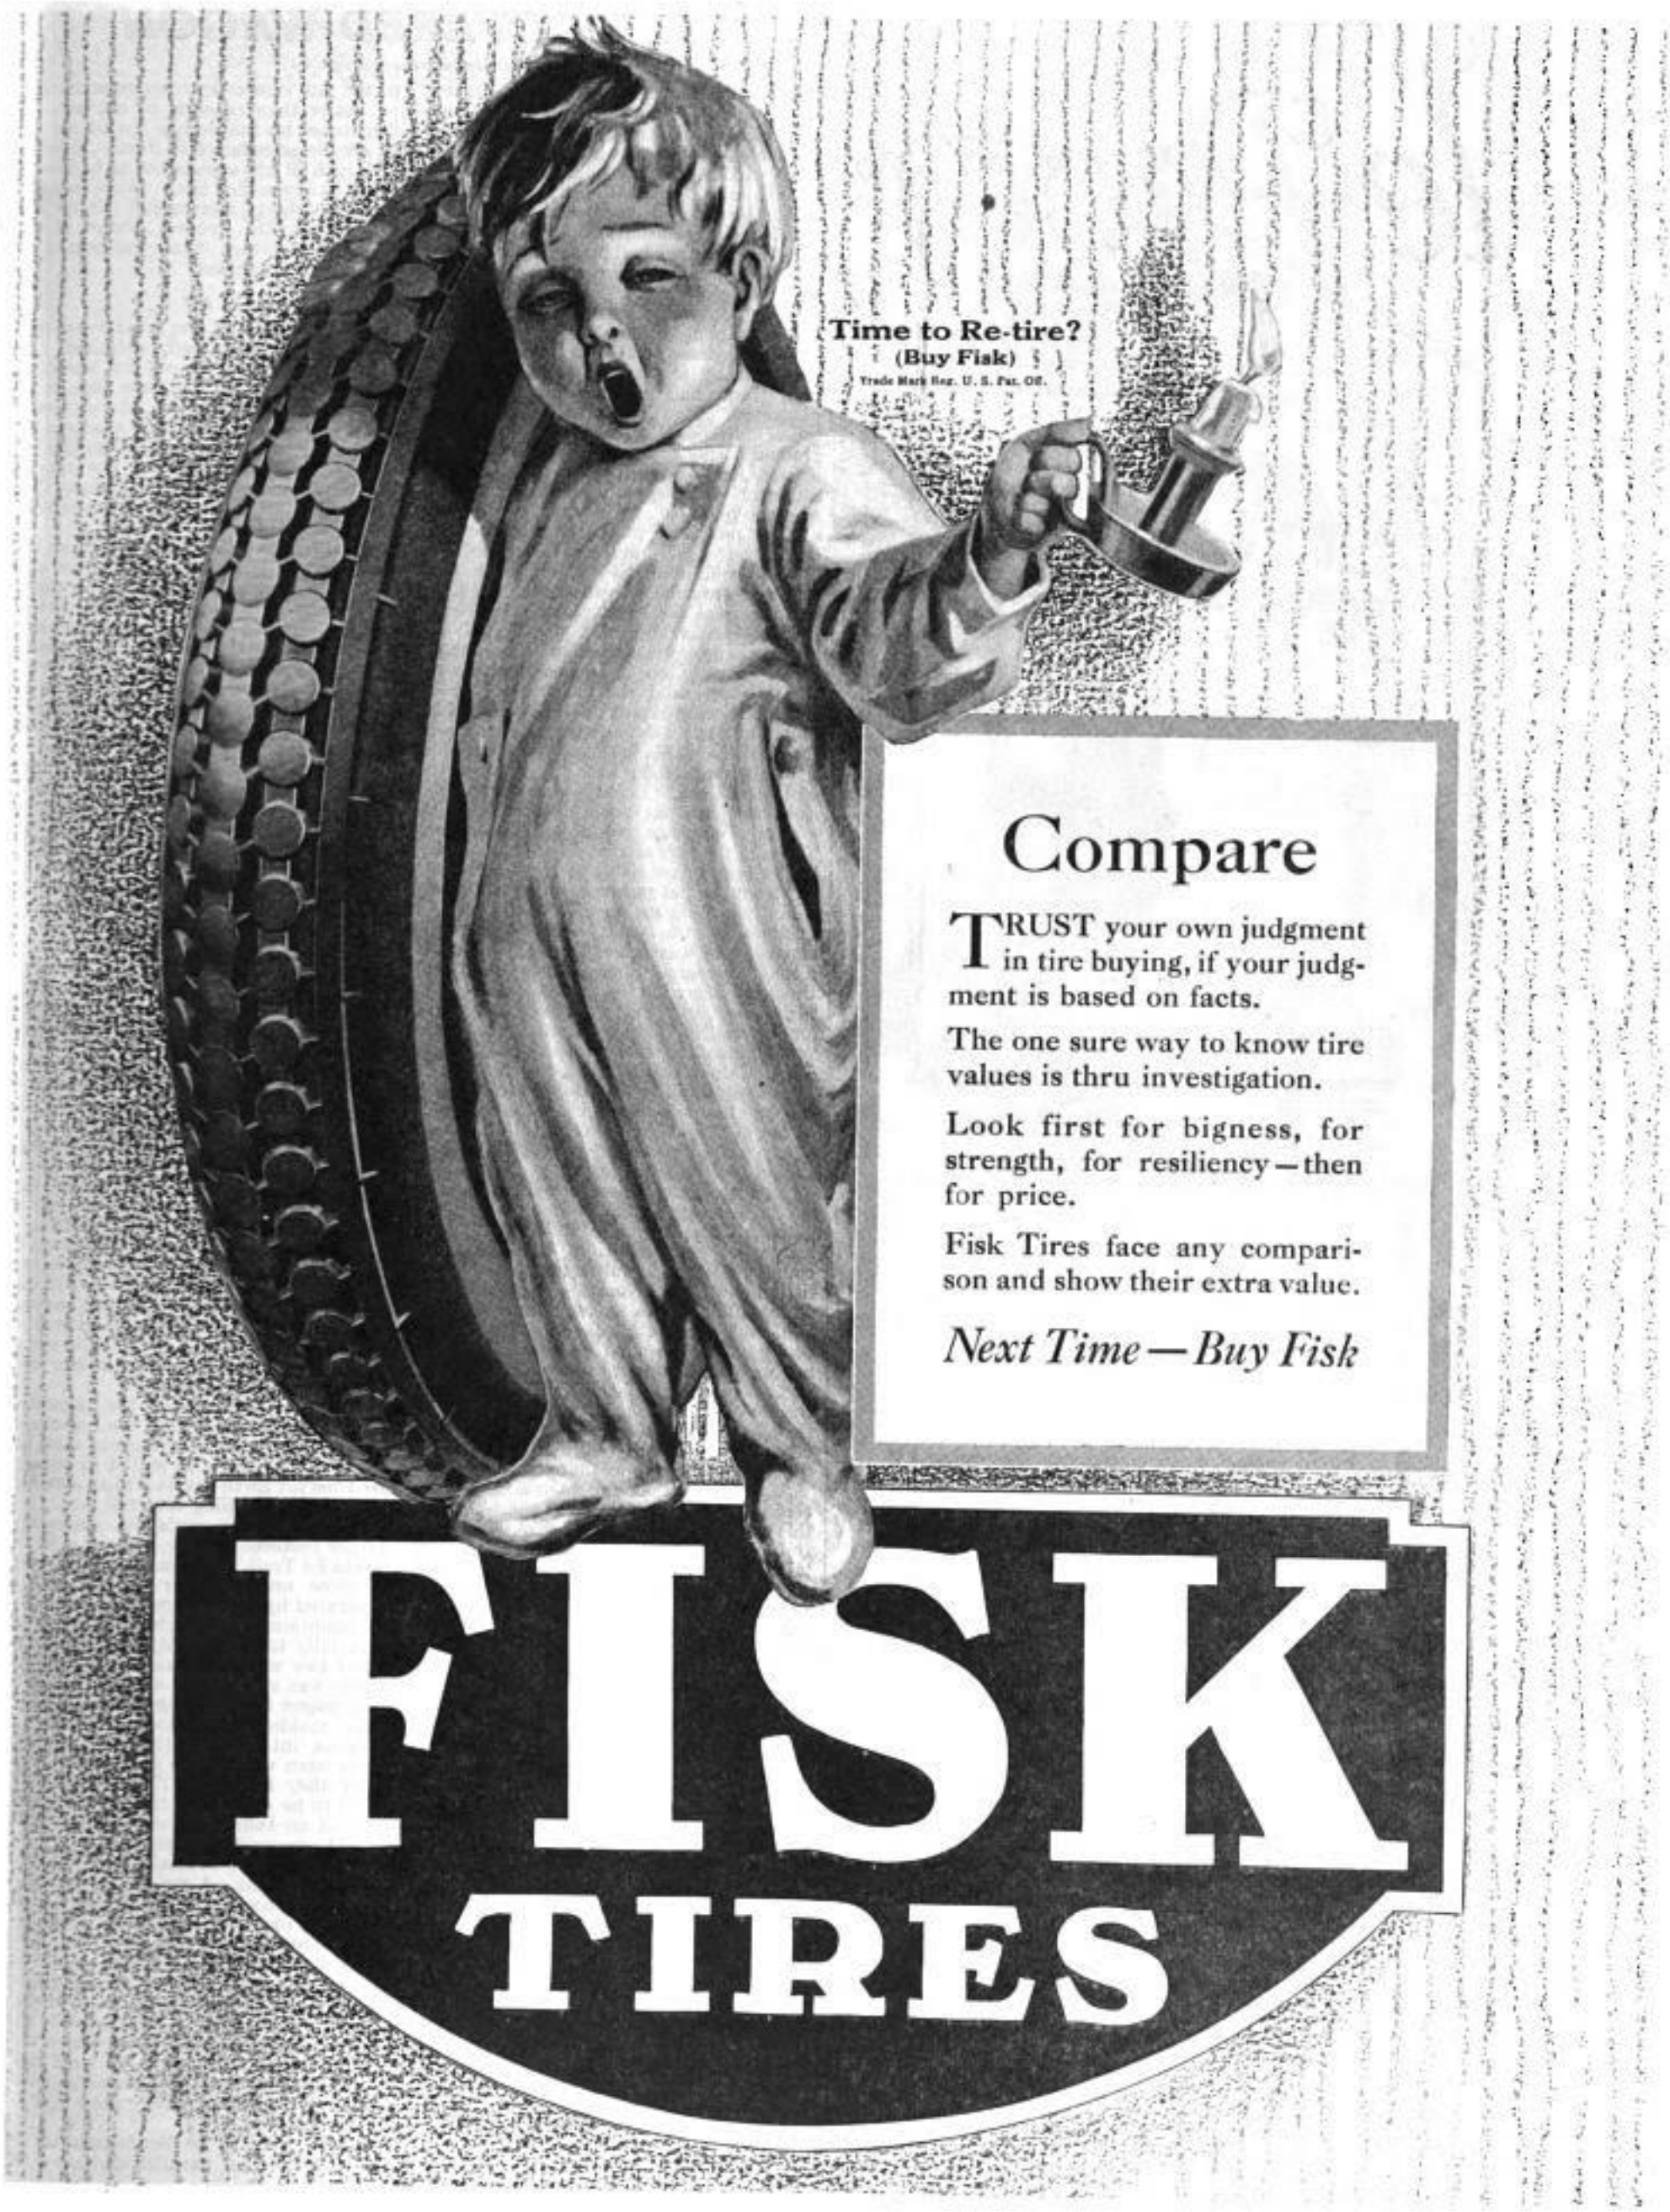
"You bet I didn't!" said the man. went down to Long Key fishing with m business partner, who came down he with me."

A woman in an adjoining room h heard the two men talking before their d parture, and had cashed in on the conve sation.

Then there is the story about the wi who used to extract uncashed chips fro her husband's clothes whenever he play at Bradley's, and who cashed them in f twenty-five thousand dollars without h husband knowing that he had lost an thing.

Then there was the one about the ge tleman who cleaned up seventy thousar dollars in one week. It is not at all unusu to see one of the big steel men or oil m placing five hundred dollars in chips on t board at each turn of the wheel and dro ping fifteen or twenty thousand dollars half an hour.

No Leisure Class



By half past nine o'clock every nigh Bradley's is so crowded that one mu almost fight his way from table to table. N matter where one threw a brick in t assemblage it would be certain to hit millionaire and carom against two oth millionaires before falling to the floo Until midnight there are usually mo women than men engaged in observing th idiosyncrasies of the little ivory ball; an the hold-up man who succeeded in holdin up the clientele of the Beach Club at eleve o'clock at night would have no difficulty a all in picking up at least ten million dollar worth of loot in jewelry alone. Many of th women wear their strings of pearls in doubl and triple loops so that they won't trip o them when they walk, and most of ther seem to think that they may get rheuma tism if they don't wear at least five dia mond bracelets on their left wrists.

One frequently sees these ladies rollin up the Lake Trail at midnight in whee chairs with a quarter million or a half mil lion dollars' worth of jewels sparkling i the moonlight. They are merely out takin the air, so that they can go back to th party which they just left and renew thei activities without falling asleep. They dance and play cards and slip a few cock tails into themselves and exchange ligh persiflage until four and five and six o'cloc in the morning.

They grow stronger and stronger as th season grows older, until toward the end they may be found going in bathing in thei ballgowns at dawn and indulging in othe tireless activities. If a tough, hardy Indian scout or Alpine mountain climber tried t follow them for three days he'd drop in his tracks with fatigue.

Such is life among the time killers of Palm Beach. They go there to kill time, and they are diligent at it. Old man Plutarch states that "Dionysius the elder, being asked whether he was at leisure, replied 'God forbid that it should ever befall me.'" The Palm Beach time killers operate on the same principle. The last thing in the world that they desire is leisure, and the person who argues that Palm Beach is frequented by the leisure class is suffering from warped perception. They have different ways of killing time. Some of them talk it to death and some of them worry it to death, and some of them smother it with money. No time gets by them; they kill it all; and however they choose to do it, they're the hardest working people in the world.

THE COVERED WAGON

(Continued from Page 5)

Lower Iowa had driven in herds of oxen, horses, mules; but there were not enough of these. Rumors came that a hundred wagons would take the Platte this year via the Council Bluffs, up the Missouri; others would join on from St. Jo and Leavenworth.

March had come, when the wild turkey gobbled and strutted resplendent in the forest lands. April had passed, and the wild fowl had gone north. May, and the upland plovers now were nesting all across the prairies. But daily had more wagons come, and neighbors had waited for neighbors, tardy at the great rendezvous. The encampment, scattered up and down the river front, had become more and more congested. Men began to know one another, families became acquainted, the gradual sifting and shifting in social values began. Knots and groups began to talk of some sort of accepted government for the common good.

They now were at the edge of the law. Organized society did not exist this side of the provisional government of Oregon, devised as a *modus vivendi* during the joint occupancy of that vast region with Great Britain—an arrangement terminated not longer than two years before. There must be some sort of law and leadership between the Missouri and the Columbia. Amid much bickering of petty politics Jesse Wingate had some four days ago been chosen for the thankless task of train captain. Though that office had small authority and less means of enforcing its commands, none the less the train leader must be a man of courage, resource and decision. Those of the earlier arrivals who passed by his well-organized camp of forty-odd wagons from the Sangamon country of Illinois said that Wingate seemed to know the business of the trail. His affairs ran smoothly, he was well equipped and seemed a man of means. Some said he had three thousand in gold at the bottom of his cargo. Moreover—and this appeared important among the Northern element, at that time predominant in the rendezvous—he was not a Calhoun Secesh, or even a Benton Democrat, but an out-and-out, antislavery, free-soil man. And the provisional constitution of Oregon, devised by thinking men of two great nations, had said that Oregon should be free soil forever.

Already there were mutterings in 1848 of the coming conflict which, among his personal friends, a certain lank young lawyer of Springfield, in the Sangamon country—Lincoln, his name was; then little known—two years ago had predicted as inevitable. In a personnel made up of bold souls from both sides the Ohio, politics could not be avoided even on the trail; nor were these men the sort to avoid politics. Sometimes at their camp fire, after the caravan election, Wingate, his wife and their son Jed would compare notes, in a day when personal politics and national geography meant more than they do to-day.

"Listen, son," Wingate one time concluded. "All that talk of a railroad across this country to Oregon is silly, of course. But it's all going to be one country. The talk is that the treaty with Mexico must give us a slice of land from Texas to the Pacific, and a big one—all of it taken for the sake of slavery. Not so Oregon—that's free forever. This talk of splitting this country, North and South, don't go with me. The Alleghanies didn't divide it. Burr couldn't divide it. The Mississippi hasn't divided it, or the Missouri, so rest assured the Ohio can't. No, nor the Rockies can't! A railroad? No, of course not. But all the same, a practical wagon road from free soil to free soil—I reckon that was my platform, like enough. It made me captain."

"No, 'twasn't that, Jesse," said his wife. "That ain't what put you in for train captain. It was your blamed impatience. Some of them Lower Ioway men, them that first nominated you in the train meeting—town meeting—what you call it, they seen where you'd been plowing along here just to keep your hand in. One of them says to me, 'Plowing, hey? Can't wait? Well, that's what we're going out for, ain't it—to plow?' says he. 'That's the clean quill,' says he. So they 'lected you, Jess. And the Lord ha' mercy on your soul!"

Now the arrival of so large a new contingent as this of the Liberty train under young Banion made some sort of post-election ratification necessary, so that Wingate felt it incumbent to call the head men of the late comers into consultation if for no better than reasons of courtesy. He dispatched his son Jed to the Banion party to ask the attendance of Banion, Woodhull and such of his associates as he liked to bring, at any suiting hour. Word came back that the Liberty men would join the Wingate conference around eleven of that morning, at which time the hour of the jump-off could be set.

III

AS TO the start of the great wagon train a little time, indeed, remained. For days, in some instances for weeks, the units of the train had lain here on the border, and the men were growing restless. Some had come a thousand miles and now were keen to start out for more than two thousand miles additional. The grass was up. The men from Illinois, Indiana, Ohio, Iowa, Missouri, Kentucky, Arkansas fretted on the leash.

All along the crooked river front, on both sides from Independence to the river landing at Westport, the great spring caravan lay encamped, or housed in town. Now, on the last days of the rendezvous, a sort of hysteria seized the multitude. The sound of rifle fire was like that of a battle—every man was sighting-in his rifle. Singing and shouting went on everywhere. Someone fresh from the Mexican War had brought a drum, another a bugle. Without instructions these began to sound their summons and continued all day long, at such times as the performers could spare from drink.

The Indians of the friendly tribes—Otos, Kaws, Osages—come in to trade, looked on in wonder at the revelings of the whites. The straggling street of each of the near-by river towns was full of massed wagons. The treble line of white tops, end to end, lay like a vast serpent, curving, head to the West. Rivalry for the head of the column began. The sounds of the bugle set a thousand uncoördinated wheels spasmodically in motion. Organization, system were as yet unknown in this rude and dominant democracy. Need was therefore for this final meeting in the interest of law, order and authority. Already some wagons had broken camp and moved on out into the main traveled road, which lay plain enough on westward, among the groves and glades of the valley of the Kaw. Each man wanted to be first to Oregon; no man wished to take the dust of his neighbor.

Wingate brought up all these matters at the train meeting of some three score men who assembled under the trees of his own encampment at eleven of the last morning. Most of the men he knew. Banion unobtrusively took a seat well to the rear of those who squatted on their heels or lolled full length on the grass.

After the fashion of the immemorial American town meeting, the beginning of all our government, Wingate called the meeting to order and stated its purposes. He then set forth his own ideas of the best manner for handling the trail work.

His plan, as he explained, was one long earlier perfected in the convoys of the old Santa Fé Trail. The wagons were to travel in close order. Four parallel columns, separated by not too great spaces, were to be maintained as much as possible, more especially toward nightfall. Of these, the outer two were to draw in together when camp was made, the other two to angle out, wagon lapping wagon, front and rear, thus making an oblong corral of the wagons, into which, through a gap, the work oxen were to be driven every night after they had fed. The tents and fires were to be outside of the corral unless in case of an Indian alarm, when the corral would represent a fortress.

The transport animals were to be hobbled each night. A guard, posted entirely around the corral and camp, was to be put out each night. Each man and each boy above fourteen was to be subject to guard duty under the ancient common law of the Plains, and from this duty no man might hope excuse unless actually too ill to walk; nor could any man offer to procure any substitute for himself. The watches were to be set as eight, each to stand guard one-quarter part of alternate nights, so that each man would get every other night undisturbed.

There were to be lieutenants, one for each of the four parallel divisions of the

(Continued on Page 64)

"DEPENDABILITY PLUS"

In an unpretentious office in one of the greatest manufacturing plants in the world, there sits a quiet, elderly man who is known to every one from the president to the smallest office boy as "Dependability Plus."

For forty years he has been in the employ of this company. There is not a question concerning the business that he cannot answer better than anyone else. He is responsible for more than half the improvements in their product; he tests and approves every change in their methods. His achievements have won him world-wide fame.

Yet, if you ask him, he will tell you that his greatest pride is in the affectionate, respectful name by which he is known to all, "Dependability Plus."

For every man who is voluntarily dependable, there are a hundred dependable only through force of circumstance. Placed in positions where dependability is a requirement, it becomes with them a forced virtue—a feeble flame that needs the constant fanning of necessity.

Voluntary dependability is a quality of the spirit. It may characterize a business as well as a man or a woman. When it does you will find the name of that business honored and respected wherever it is heard. And you will find its products of a quality that is rarely equaled.

In the manufacture of pharmaceutical and chemical products Squibb holds such a place. Squibb quality in the products described below is a revelation to persons who use them for the first time.

Squibb's Castor Oil, for example, is not the offensive, unpleasant cathartic that is taken under protest by so many people. By careful refining and purifying, the Squibb product is almost entirely freed from the detested taste and is of *greater medicinal value* as well.

This same thing holds true with other Squibb HOUSEHOLD PRODUCTS. At the Squibb Laboratories, for more than half a century, a constant process of testing and research work has raised the purity and efficacy of all Squibb products to a point that never has been reached before.

There is no reason why you should be satisfied with quality that is inferior to Squibb. But there are a score of reasons why you should prefer Squibb quality above any other.

Squibb's Bicarbonate of Soda—exceedingly pure, therefore without bitter taste.

Squibb's Epsom Salt—free from impurities. Preferred also for taste.

Squibb's Sodium Phosphate—a specially purified product, free from arsenic, therefore safe.

Squibb's Cod Liver Oil—selected finest Norwegian; cold pressed; pure in taste. Rich in vitamine.

Squibb's Olive Oil—selected oil from Southern France. Absolutely pure. (Sold only through druggists.)

Squibb's Sugar of Milk—specially refined for preparing infants' food. Quickly soluble. In sealed tins.

Squibb's Pure Spices—specially selected by laboratory tests for their full strength and flavor. (Sold only through druggists.)

Squibb's Castor Oil—specially refined, bland in taste; dependable.

Squibb's Stearate of Zinc—a soft and protective powder of highest purity.

Squibb's Magnesia Dental Cream—made from Squibb's Milk of Magnesia. Contains no detrimental substance. Corrects mouth acidity.

Squibb's Talcum Powder—a delightfully soft and soothing powder. Boudoir, Carnation, Violet and Unscented.

Squibb's Cold Cream—an exquisite preparation of correct composition for the care of the skin.

Squibb's Boric Acid—pure and perfectly soluble. Soft powder for dusting; granular form for solutions.

Sold by reliable druggists everywhere, in original sealed packages.
"The Priceless Ingredient" of every product is the honor and integrity of its maker.

train; also eight sergeants of the guard, each of whom was to select and handle the men of the watch under him. No wagon might change its own place in the train after the start, dust or no dust.

When Wingate ended his exposition and looked around for approval it was obvious that many of these regulations met with disfavor at the start. The democracy of the train was one in which each man wanted his own way. Leaning head to head, speaking low, men grumbled at all this fuss and feathers and army stuff. Some of these were friends and backers in the late election.

Nettled by their silence, or by their murmured comments, Wingate arose again.

"Well, you have heard my plan, men," said he. "The Santa Fé men worked it up, and used it for years, as you all know. They always got through. If there's anyone here knows a better way, and one that's got more experience back of it, I'd like to have him get up and say so."

Silence for a time greeted this also. The Northern men, Wingate's partisans, looked uncomfortably one to the other. It was young Woodhull, of the Liberty contingent, who rose at length.

"What Cap'n Wingate has said sounds all right to me," said he. "He's a new friend of mine—I never saw him till two-three hours ago—but I know about him. What he says about the Santa Fé fashion I know for true. As some of you know, I was out that way, up the Arkansas, with Doniphan, for the Stars and Stripes. Talk about wagon travel—you got to have a regular system or you have everything in a mess. This here, now, is a lot like so many volunteers enlisting for war. There's always a sort of preliminary election of officers; sort of shaking down and shaping up. I wasn't here when Cap'n Wingate was elected—our wagons were some late—but speaking for our men, I'd move to ratify his choosing, and that means to ratify his regulations. I'm wondering if I don't get a second for that?"

Some of the bewhiskered men who sat about him stirred, but cast their eyes toward their own captain, young Banion, whose function as their spokesman had thus been usurped by his defeated rival, Woodhull. Perhaps few of them suspected the *argumentum ad hominem*—or rather *ad feminam*—in Woodhull's speech.

Banion alone knew this favor-currying when he saw it, and knew well enough the real reason. It was Molly! Rivals indeed they were, these two, and in more ways than one. But Banion held his peace until one quiet father of a family spoke up.

"I reckon our own train captain, that we elected in case we didn't throw in with the big train, had ought to say what he thinks about it all."

Will Banion now rose composedly and bowed to the leader.

"I'm glad to second Mr. Woodhull's motion to throw our vote and our train for Captain Wingate and the big train," said he. "We'll ratify his captaincy, won't we?"

The nods of his associates now showed assent, and Wingate needed no more confirmation.

"In general, too, I would ratify Captain Wingate's scheme. But might I make a few suggestions?"

"Surely—go on." Wingate half rose.

"Well then, I'd like to point out that we've got twice as far to go as the Santa Fé traders, and over a very different country—more dangerous, less known, harder to travel. We've many times more wagons than any Santa Fé train ever had, and we've hundreds of loose cattle along. That means a sweeping off of the grass at every stop, and grass we've got to have or the train stops.

"Besides our own call on grass, I know there'll be five thousand Mormons at least on the trail ahead of us this spring—they've crossed the river from here to the Bluffs, and they're out on the Platte right now. We take what grass they leave us.

"What I'm trying to get at, captain, is this: We might have to break into smaller detachments now and again. We could not possibly always keep alignment in four columns."

"And then we'd be open to any Indian attack!" interrupted Woodhull.

"We might have to fight some of the time, yes," rejoined Banion; "but we'll have to travel all the time, and we'll have to graze our stock all the time. On that one basic condition our safety rests—grass and plenty of it. We're on a long journey.

"You see, gentlemen," he added, smiling, "I was with Doniphan also. We learned a good many things. For instance, I'd rather see each horse on a thirty-foot picket rope, anchored safe each night, than to trust to any hobbles. A homesick horse can travel miles, hobbled, in a night. Horses are a lot of trouble.

"Now, I see that about a quarter of our people, including Captain Wingate, have horses and mules and not ox transport. I wish they all could trade for oxen before they start. Oxen last longer and fare better. They are easier to herd. They can be used for food in the hard first year out in Oregon. The Indians don't steal oxen—they like buffalo better—but they'll take any chance to run off horses or even mules. If they do, that means your women and children are on foot. You know the story of the Donner party, two years ago—on foot, in the snow. They died, and worse than died, just this side of California."

Men of Iowa, of Illinois, Ohio, Indiana, began to nod to one another, approving the words of this young man.

"He talks sense," said a voice aloud.

"Well, I'm talking a whole lot, I know," said Banion gravely, "but this is the time and place for our talking. I'm for throwing in with the Wingate train, as I've said. But will Captain Wingate let me add even just a few words more?

"For instance, I would suggest that we ought to have a record of all our personnel. Each man ought to be required to give his own name and late residence, and the names of all in his party. He should be obliged to show that his wagon is in good condition, with spare bolts, yokes, tires, bows and axles, and extra shoes for the stock. Each wagon ought to be required to carry anyhow half a side of rawhide, and the usual tools of the farm and the trail, as well as proper weapons and abundance of ammunition.

"No man ought to be allowed to start with this caravan with less supplies, for each mouth of his wagon, than one hundred pounds of flour. One hundred and fifty or even two hundred would be much better—there is loss and shrinkage. At least half as much of bacon, twenty pounds of coffee, fifty of sugar would not be too much in my own belief. About double the pro rata of the Santa Fé caravans is little enough, and those whose transport power will let them carry more supplies ought to start full loaded, for no man can tell the actual duration of this journey, or what food may be needed before we get across. One may have to help another."

Even Wingate joined in the outspoken approval of this, and Banion, encouraged, went on:

"Some other things, men, since you have asked each man to speak freely. We're not hunters, but home makers. Each family, I suppose, has a plow and seed for the first crop. We ought, too, to find out all our blacksmiths, for I promise you we'll need them. We ought to have a half dozen forges and as many anvils, and a lot of irons for the wagons.

"I suppose, too, you've located all your doctors; also all your preachers—you needn't camp them all together. Personally I believe in Sunday rest and Sunday services. We're taking church and state and home and law along with us, day by day, men, and we're not just trappers and adventurers. The fur trade's gone.

"I even think we ought to find out our musicians—it's good to have a bugler if you can. And at night, when the people are tired and disheartened, music is good to help them pull together."

The bearded men who listened nodded yet again.

"About schools, now—the other trains that went out, the Applegates in 1843, the Donners of 1846, each train, I believe, had regular schools along, with hours each day.

"Do you think I'm right about all this? I'm sure I don't want Captain Wingate to be offended. I'm not dividing his power. I'm only trying to stiffen it."

Woodhull arose, a sneer on his face, but a hand pushed him down. A tall Missourian stood before him.

"Right you are, Will!" said he. "Ye've an old head, an' we kin trust hit. Ef hit wasn't Cap'n Wingate is more older than you, an' already done elected, I'd be for choosin' ye fer cap'n o' this here hull train right now. Seein' hit's the way hit is, I move we vote to do what Will Banion has said is fitten. An' I move we-uns throw in with the big train, with Jess Wingate fer cap'n. An' I move we allow one more day to git in supplies an' fixin's, an' tra hosses an' mules an' oxens, an' then start day after to-morrow mornin' wh the bugle blows. Then hooray fer Oregon

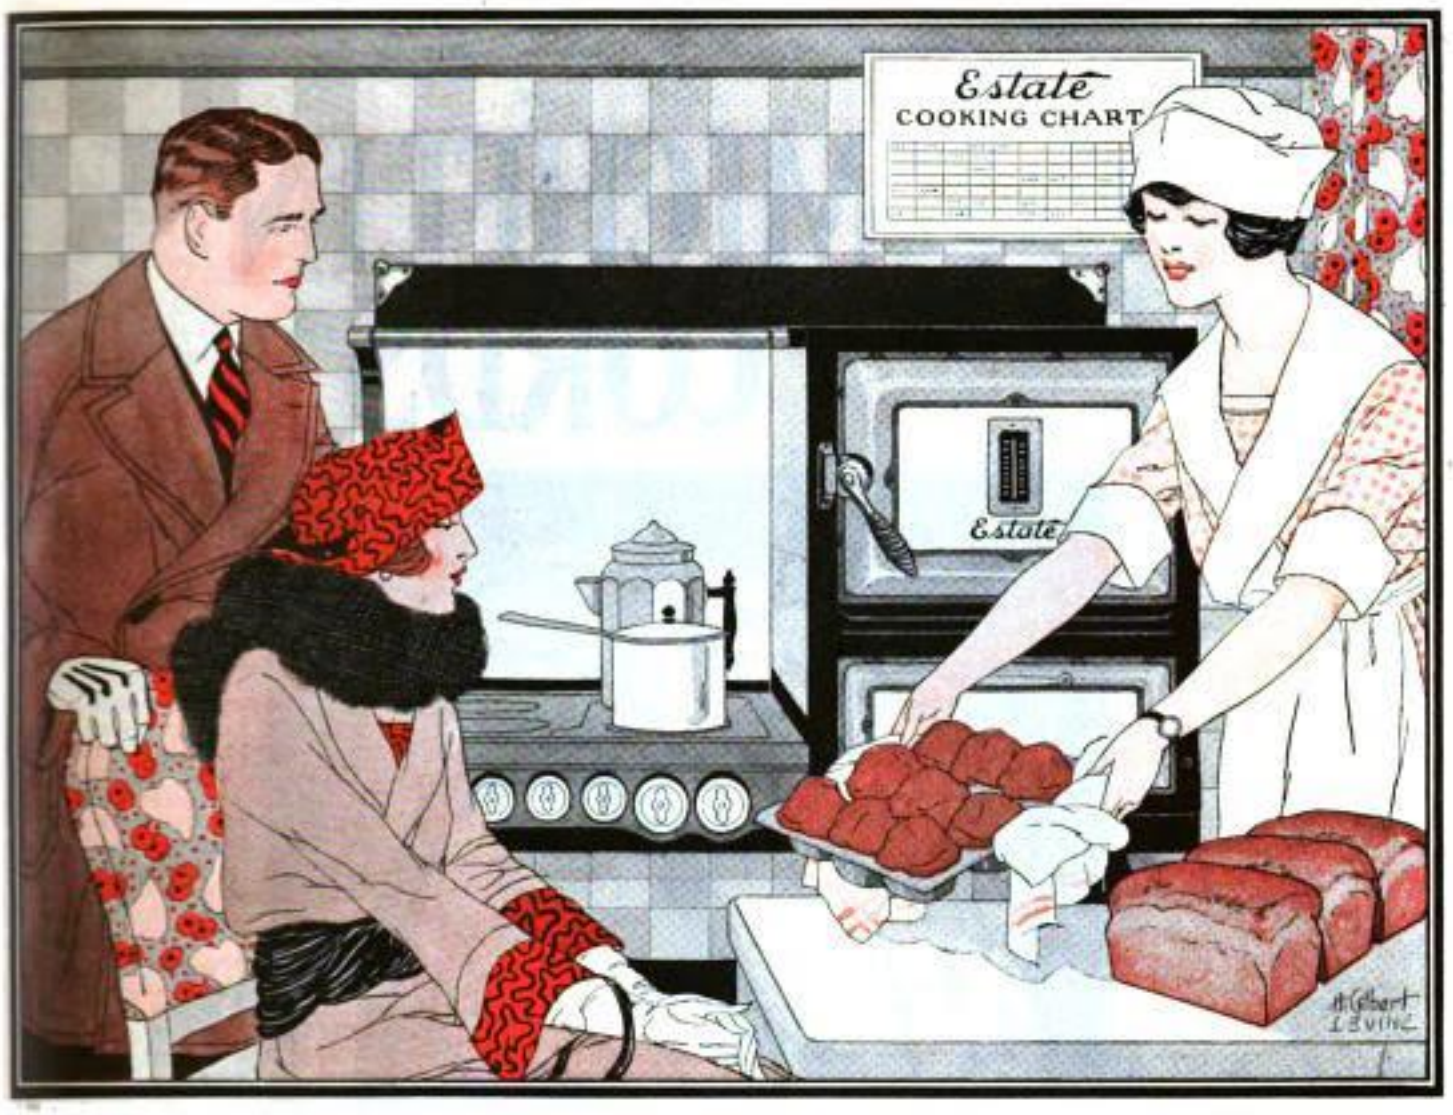
There were cheers and a general risi as though after finished business, whi greeted this. Jesse Wingate, somewh crestfallen and chagrined over the forwa ways of this young man, of whom he ne had heard till that very morning, put perfunctory motion or so, asked loyal and allegiance, and so forth.

But what they remembered was that appointed as his wagon-column captai Sam Woodhull, of Missouri; Caleb Pri an Ohio man of substance; Simon Hall, Indiana merchant; and a farmer by na of Kelsey, from Kentucky. To Will Banl the trainmaster assigned the most diffic and thankless task of the train, the ca taincy of the cow column; that is to s the leadership of the boys and men wh families were obliged to drive the lo stock of the train.

There were sullen mutterings over this the Liberty column. Men whispered th would not follow Woodhull. As for Banio he made no complaint, but smiled a shook hands with Wingate and all his lie tenants and declared his own loyalty a that of his men; then left for his own litt adventure of a half dozen wagons which was freighting out to Laramie—baco flour and sugar, for the most part; ea wagon driven by a neighbor or a neighbor son. Among these already arose op murmurs of discontent over the way the own contingent had been treated. Banio had to mend a potential split before t first wheel had rolled westward up the Ka

The men of the meeting passed bac among their neighbors and families, an spoke with more seriousness than hithert The rifle firing ended, the hilarity lessene that afternoon. In the old times the kee boatmen bound west started out singin The pack-train men of the fur trade wer shouting and shooting, and the confide hilarity of the Santa Fé wagon caravan was a proverb. But now, here in the gre Oregon train, matters were quite othe wise. There were women and childre along. An unsmiling gravity marked the all. When the dusky velvet of the prairi night settled on almost the last day of th rendezvous it brought a general feeling anxiety, dread, uneasiness, fear. Now, i deed, and at last, all these realized wha was the thing that they had undertaken.

To add yet more to the natural appre hensions of men and women embarking o so stupendous an adventure, all manne of rumors now continually passed from on company to another. It was said that fiv thousand Mormons, armed to the teeth had crossed the river at St. Joseph and wer lying in wait on the Platte, determined t take revenge for the persecutions they ha suffered in Missouri and Illinois. Anothe story said that the Kaw Indians, hithert friendly, had banded together for robber and were only waiting for the train t appear. A still more popular story had i that a party of several Englishmen ha hurried ahead on the trail to excite all th savages to waylay and destroy the cara vans, thus to wreak the vengeance of Eng land upon the Yankees for the loss o Oregon. Much unrest arose over reports hard to trace, to the effect that it was al a mistake about Oregon; that in reality i was a truly horrible country, unfit fo human occupancy, and sure to prove the grave of any lucky enough to survive the horrors of the trail, which never yet had been truthfully reported. Some returned travelers from the West beyond the Rock ies, who were hanging about the landing a the river, made it all worse by relating what purported to be actual experiences.



"If you ever get through to Oregon," they said, "you'll be ten years older than you are now. Your hair will be white, but not by age."

The Great Dipper showed clear and close that night, as if one might almost pick off by hand the familiar stars of the traveler's constellation. Overhead count less brilliant points of lesser light enameled the night mantle, matching the many camp fires of the great gathering. The wind blew soft and low. Night on the prairie is always solemn, and to-night the tense anxiety, the strained anticipation of more than two thousand souls invoked a brooding melancholy which it seemed even the stars must feel.

A dog, ominous, lifted his voice in a long, mournful howl which made mothers put

(Continued on Page 67)

Note, in the illustration, the copyrighted cooking chart on the wall—the mercury thermometer on the oven door. Both are exclusive Estate features. Read how they simplify cookery.

Come Into the Kitchen, Men

Let Us Show You How We Have Simplified Cookery for the Housewife

Here is a range that doesn't overheat the kitchen; that keeps pots and pans clean; that cooks with the precision of an adding machine—a range that gives the housewife a chance to play.

It marks a new way, a better way in cookery. When you've read about it, we believe you will want one for your wife.

For almost 75 years, we had specialized in making cooking appliances for the home. But before we started building electric ranges, we conducted a broad investigation. We talked to housewives by the score. We sought their views, so as to reduce kitchen work to a minimum.

What they wanted

We found that most women hoped some day to cook electrically—the *cleanest* way, as everyone knows. But, "Make it economical," they said. And we did.

Others sought a cooler way. They spoke of hot stoves and summer days.

So we built our cooking top and oven to concentrate the heat upon the cooking. They permit practically no heat to radiate into the room. You can keep fresh flowers on top of this oven while baking bread!

But most of all what women wanted was a range that would cut down their hours in the kitchen—a range that would give perfect cooking results without constant pot-watching.

So we evolved the Estate method of Time and Temperature Cookery—a method that eliminates all guesswork.

Now results are certain!

This new way embodies a Cooking Chart, prepared by culinary experts. It lists every sort of food from a Roast of Beef to an Angel Food Cake. Tells how long in the oven, and at what temperature each food must cook. An accurate mercury thermometer on the oven door plainly registers those temperatures.

Between the two, "Simplified Cookery" is made practical. No guesswork, no uncertainty. Results are certain—you can't go wrong.

We have a book which explains the how and why of this new-day way. Shows how the average housewife can cook with the skill of a hotel chef, yet save 25% of her time in the kitchen.

See an Estate Electric Range

Your local Electric Lighting Company or dealer will explain the details of Time and Temperature Cookery, and about the low rates being made for cooking current. But note, *the Time and Temperature method applies only to Estate Electric Ranges.* Hence, it is important to remember the name Estate when seeking a demonstration. Made in eight different models to meet all requirements.

But first—mail the coupon. Get the facts. Review them with your wife. Then inspect the range.

Also—

COMBINATION RANGES

For Electricity and Coal
For Electricity and Gas

The range shown above is the No. 81 Estate Combination for electricity and coal. The coal section, built right into the range, heats the kitchen, heats water, can be used as an incinerator and serves as an auxiliary to the electric cooking top.

out their hands to their babes. In answer a coyote in the grass raised a high, quavering cry, wild and desolate, the voice of the Far West.

IV

THE notes of a bugle, high and clear, sang reveille at dawn. Now came hurried activities of those who had delayed. The streets of the two frontier settlements were packed with ox teams, horses, wagons, cattle driven through. The frontier stores were stripped of their last supplies. One more day, and then on to Oregon!

Wingate broke his own camp early in the morning and moved out to the open country west of the landing, making a last bivouac at what would be the head of the train. He had asked his four lieutenants to join him there. Hall, Price and Kelsey headed in with straggling wagons to form the nucleuses of their columns; but the morning wore on and the Missourians, now under Woodhull, had not yet broken park. Wingate waited moodily.

Now at the edge of affairs human apprehensions began to assert themselves, especially among the womenfolk. Even stout Molly Wingate gave way to doubt and fears. Her husband caught her, apron to eyes, sitting on the wagon tongue at ten in the morning, with her pots and pans unpacked.

"What?" he exclaimed. "You're not weakening? Haven't you as much courage as those Mormon women on ahead? Some of them pushing carts, I've heard."

"They done it for religion, Jess. Oregon ain't no religion for me."

"Yet it has music for a man's ears, Molly."

"Hush! I've heard it all for the last two years. What happened to the Donners two years back? And four years ago it was the Applegates left home in old Missouri to move to Oregon. Who will ever know where their bones are laid? Look at our land we left—rich—black and rich as any in the world. What corn, what wheat—why, everything grew well in Illinois!"

"Yes, and cholera below us wiping out the people, and the trouble over slave-holding working up the river more and more, and the sun blazing in the summer, while in the wintertime we froze!"

"Well, as for food, we never saw any part of Kentucky with half so much grass. We had no turkeys at all there, and where we left you could kill one any gobbling time. The pigeons roosted not four miles from us. In the woods along the river even a woman could kill coons and squirrels, all we'd need—no need for us to eat rabbits, like the Mormons. Our chicken yard was fifty miles across. The young ones'd be flying by roasting-ear time—and in fall the sloughs was black with ducks and geese. Enough and to spare we had; and our land opening; and Molly teaching the school, with twelve dollars a month cash for it, and Jed learning his blacksmith trade before he was eighteen. How could we ask more? What better will we do in Oregon?"

"You always throw the wet blanket on Oregon, Molly."

"It is so far!"

"How do we know it is far? We know men and women have crossed, and we know the land is rich. Wheat grows fifty bushels to the acre, the trees are big as the spires on meeting houses, the fish run by millions in the streams. Yet the winters have little snow. A man can live there and not slave out a life.

"Besides"—and the frontier now spoke in him—"this country is too old, too long settled. My father killed his elk and his buffalo, too, in Kentucky; but that was before my day. I want the buffalo. I crave to see the Plains, Molly. What real American does not?"

Mrs. Wingate threw her apron over her face.

"The Oregon fever has witched you, Jesse!" she exclaimed between dry sobs.

Wingate was silent for a time.

"Corn ought to grow in Oregon," he said at last.

"Yes, but does it?"

"I never heard it didn't. The soil is rich, and you can file on six hundred and forty acres. There's your donation claim, four times bigger than any land you can file on here. We sold out at ten dollars an acre—more'n our land really was worth, or ever is going to be worth. It's just the speculators says any different. Let 'em have it, and us move on. That's the way money's made, and always has been made, all across the United States."

"Huh! You talk like a land speculator your own self!"

"Well, if it ain't the movers make a country, what does? If we don't settle Oregon, how long'll we hold it? The preachers went through to Oregon with horses. Like as not even the Applegates got their wagons across. Like enough they got through. I want to see the country before it gets too late for a good chance, Molly. First thing you know buffalo'll be getting scarce out West, too, like deer was getting scarcer on the Sangamon. We ought to give our children as good a chance as we had ourselves."

"As good a chance! Haven't they had as good a chance as we ever had? Didn't our land more'n thribble, from a dollar and a quarter? It may thribble again, time they're old as we are now."

"That's a long time to wait."

"It's a long time to live a lifetime, but everybody's got to live it."

She stood, looking at him.

"Look at all the good land right in here! Here we got walnut and hickory and oak—worlds of it. We got sassafras and pawpaw and hazel brush. We get all the hickory nuts and pecans we like any fall. The wild plums is better'n any in Kentucky; and as for grapes, they're big as your thumb, and thousands, on the river. Wait till you see the plum and grape jell I could make this fall!"

"Women—always thinking of putting up jell!"

"But we got every herb here we need—boneset and sassafras and Injun physic and bark for the fever. There ain't nothing you can name we ain't got right here or on the Sangamon, yet you talk of taking care of our children. Huh! We've moved five times since we was married. Now just as we got into a good country, where a woman could dry corn and put up jell, and where a man could raise some hogs, why, you wanted to move again—plumb out to Oregon! I tell you, Jesse Wingate, hogs is a blame sight better to tie to than buffalo! You talk like you had to settle Oregon!"

"Well, haven't I got to? Somehow it seems a man ain't making up his own mind when he moves West. Pap moved twice in Kentucky, once in Tennessee, and then over to Missouri, after you and me was married and moved up into Indiana, before we moved over into Illinois. He said to me—and I know it for the truth—he couldn't hardly tell who it was or what it was hitched up the team. But first thing he knew, there the old wagon stood, front of the house, cover all on, plow hanging on behind, tar bucket under the wagon, and dog and all. All he had to do, pap said, was just to climb up on the front seat and speak to the team. My maw she climb up on the seat with him. Then they moved—on West. You know, Molly. My maw, she climb up on the front seat ——"

His wife suddenly turned to him, the tears still in her eyes.

"Yes, and Jesse Wingate—and you know it—your wife's as good a woman as your maw! When the wagon was a-standing, cover on, and you on the front seat, I climb up by you, Jess, same as I always have and always will. Haven't I always? You know that. But it's harder on women, moving is. They care more for a house that's rain-tight in a storm."

"I know you did, Molly," said her husband soberly.

"I suppose I can pack my jells in a box and put in the wagon, anyways." She was drying her eyes.

"Why, yes, I reckon so. And then a few sacks of dried corn will go mighty well on the road."

"One thing"—she turned on him in wifely fury—"you shan't keep me from taking my bureau and my six chairs all the way across! No, nor my garden seeds, all I saved. No, nor yet my rose roots that I'm taking along. We got to have a home, Jess—we got to have a home! There's Jed and Molly coming on."

"Where's Molly now?" suddenly asked her husband. "She'd ought to be helping you right now."

"Oh, back at the camp, I s'pose—her and Jed too. I told her to pick a mess of dandelion greens and bring over. Larking around with them young fellows, like enough. Huh! She'll have less time. If Jed has to ride herd, Molly's got to take care of that team of big mules, and drive 'em all day in the light wagon too. I reckon if she does that, and teaches night school right along, she won't be feeling so gay."

"They tell me folks has got married going across," she added, "not to mention buried. One book we had said, up on the Platte, two years back, there was a wedding and a birth and a burying in one train, all inside of one hour, and all inside of one mile. That's Oregon!"

"Well, I reckon it's life, ain't it?" rejoined her husband. "One thing, I'm not keen to have Molly pay too much notice to that young fellow Banion—him they said was a leader of the Liberty wagons. Huh, he ain't leader now!"

"You like Sam Woodhull better for Molly, Jess?"

"Some ways. He falls in along with my ideas. He ain't so apt to make trouble on the road. He sided in with me right along at the last meeting."

"He done that? Well, his father was a sheriff once, and his uncle, Judge Henry D. Showalter, he got into Congress. Politics! But some folks said the Banions was the best family. Kentucky, they was. Well, comes to siding in, Jess, I reckon it's Molly herself'll count more in that than either o' them or either o' us. She's eighteen past. Another year and she'll be a old maid. If there's a wedding going across ——"

"There won't be," said her husband shortly. "If there is it won't be her and no William Banion, I'm saying that."

V

MEANTIME the younger persons referred to in the frank discussion of Wingate and his wife were occupying themselves in their own fashion their last day in camp. Molly, her basket full of dandelion leaves, was reluctant to leave the shade of the grove by the stream, and Jed had business with the team of great mules that Molly was to drive on the trail.

As for the Liberty train, its oval remained unbroken, the men and women sitting in the shade of the wagons. Their outfitting had been done so carefully that little now remained for attention on the last day, but the substantial men of the contingent seemed far from eager to be on their way.

Groups here and there spoke in monosyllables, sullenly. They wanted to join the great train, had voted to do so; but the cavalier deposing of their chosen man Banion—who before them all at the meeting had shown himself fit to lead—and the cool appointment of Woodhull in his place had on reflection seemed to them quite too high-handed a proposition. They said so now.

"Where's Woodhull now?" demanded the bearded man who had championed Banion. "I see Will out rounding up his cows, but Sam Woodhull ain't turned a hand to hooking up to pull in west o' town with the others."

"That's easy," smiled another. "Sam Woodhull is where he's always going to be—hanging around the Wingate girl. He's over at their camp now."

"Well, I dunno's I blame him so much for that, neither. And he kin stay there fer all o' me. Fer one, I won't foller no Woodhull, least o' all Sam Woodhull, soldier or no soldier. I'll pull out when I git ready, and to-morrow mornin' is soon enough fer me. We kin jine on then, if so's we like."

Someone turned on his elbow, nodded over shoulder. They heard hoof beats. Banion came up, fresh from his new work on the herd. He asked for Woodhull, and learning his whereabouts trotted across the intervening glade.

"That's shore a hoss he rides," said one man.

"An' a shore man a-ridin' of him," nodded another. "He may ride front o' the train an' not back o' hit, even yet."

Molly Wingate sat on the grass in the little grove, curling a chain of dandelion stems. Near by Sam Woodhull, in his best, lay on the sward regarding her avidly, a dull fire in his dark eyes. He was so enamored of the girl as to be almost unfit for aught else. For weeks he had kept close to her. Not that Molly seemed overmuch to notice or encourage him. Only, woman fashion, she ill liked to send away any attentive male. Just now she was uneasy. She guessed that if it were not for the presence of her brother Jed near by this man would declare himself unmistakably.

If the safety of numbers made her main concern, perhaps that was what made Molly Wingate's eye light up when she heard the hoofs of Will Banion's horse splashing in the little stream. She sprang to her feet, waving a hand gayly.

"Oh, so there you are!" she exclaimed. "I was wondering if you'd be over before Jed and I left for the prairie. Father and mother have moved on out west of town. We're all ready for the jump-off. Are you?"

"Yes, to-morrow by sun," said Banion, swinging out of saddle and forgetting any errand he might have had. "Then it's on to Oregon!"

He nodded to Woodhull, who little more than noticed him. Molly advanced to where Banion's horse stood, nodding and pawing restively as was his wont. She stroked his nose, patted his sweat-soaked neck.

"What a pretty horse you have, major," she said. "What's his name?"

"I call him Pronto," smiled Banion. "That means sudden."

"He fits the name. May I ride him?"

"What? You ride him?"

"Yes, surely. I'd love to. I can ride anything. That funny saddle would do—see how big and high the horn is, good as the fork of a lady's saddle."

"Yes, but the stirrup!"

"I'd put my foot in between the flaps above the stirrup. Help me up, sir?"

"I'd rather not."

Molly pouted.

"Stingy!"

"But no woman ever rode that horse—not many men but me. I don't know what he'd do."

"Only one way to find out."

Jed, approaching, joined the conversation.

"I rid him," said he. "He's a goer all right, but he ain't mean."

"I don't know whether he would be bad or not with a lady," Banion still argued. "Those Spanish horses are always wild. They never do get over it. You've got to be a rider."

"You think I'm not a rider? I'll ride him now to show you! I'm not afraid of horses."

"That's right," broke in Sam Woodhull. "But, Miss Molly, I wouldn't tackle that horse if I was you. Take mine."

"But I will! I've not been horseback for a month. We've all got to ride or drive or walk a thousand miles. I can ride him, man saddle and all. Help me up, sir?"

Banion walked to the horse, which flung a head against him, rubbing a soft muzzle up and down.

"He seems gentle," said he. "I've pretty well topped him off this morning. If you're sure ——"

"Help me up, one of you."

It was Woodhull who sprang to her, caught her up under the arms and lifted her fully gracious weight to the saddle. Her left foot by fortune found the cleft in the stirrup fender, her right leg swung around the tall horn, hastily concealed by a clutch at her skirt even as she grasped the heavy knotted reins. It was then too late. She must ride.

Banion caught at a cheek strap as he saw Woodhull's act, and the horse was the safer for an instant. But in terror or anger at his unusual burden, with flapping skirt and no grip on his flanks, the animal reared and broke away from them all. An instant and he was plunging across the stream for the open glade, his head low.

He did not yet essay the short, stiff-legged action of the typical bucker, but made long, reaching, low-headed plunges, seeking his own freedom in that way, perhaps half in some equine wonder of his own. None the less the wrenching of the girl's back, the leverage on her flexed knee, unprotected, were unmistakable.

The horse reared again and yet again, high, striking out as she checked him. He was getting in a fury now, for his rider still was in place. Then with one savage sidewise shake of his head after another he plunged this way and that, rail-fencing it for the open prairie. It looked like a bolt, which with a horse of his spirit and stamina meant but one thing, no matter how long delayed.

It all happened in a flash. Banion caught at the rein too late, ran after—too slow, of course. The girl was silent, shaken, but still riding. No footman could aid her now.

With a leap, Banion was in the saddle of Woodhull's horse, which had been left at hand, its bridle down. He drove in the spurs and headed across the flat at the top speed of the fast and racy chestnut—no match, perhaps, for the black Spaniard, were the latter once extended, but favored now by the angle of the two.

Molly had not uttered a word or cry, either to her mount or in appeal for aid. In sooth she was too frightened to do so. But she heard the rush of hoofs and the high call of Banion's voice back of her:

"Ho, Pronto! Pronto! Vien' aqui!"

Something of a marvel it was, and showing companionship of man and horse on the trail; but suddenly the mad black ceased his plunging. Turning, he trotted whinnying as though for aid, obedient to his master's command, "Come here!" An instant and Banion had the cheek strap. Another and he was off, with Molly Wingate, in a white dead faint, in his arms.

By now others had seen the affair from their places in the wagon park. Men and women came hurrying. Banion laid the girl down, sought to raise her head, drove back the two horses, ran with his hat to the stream for water. By that time Woodhull had joined him, in advance of the people from the park.

"What do you mean, you damned fool, you, by riding my horse off without my consent!" he broke out. "If she ain't dead—that damned wild horse—you had the gall ——"

Will Banion's self-restraint at last was gone. He made one answer, voicing all his acquaintance with Sam Woodhull, all his opinion of him, all his future attitude in regard to him.

He dropped his hat to the ground, caught off one wet glove, and with a long back-handed sweep struck the cuff of it full and hard across Sam Woodhull's face.

VI

THERE were dragoon revolvers in the holsters at Woodhull's saddle. He made a rush for a weapon—indeed, the crack of the blow had been so sharp that the nearest men thought a shot had been fired—but swift as was his leap, it was not swift enough. The long, lean hand of the bearded Missourian gripped his wrist even as he caught at a pistol grip. He turned a livid face to gaze into a cold and small blue eye.

"No ye don't, Sam!" said the other, who was first of those who came up running.

Even as a lank woman stooped to raise the head of Molly Wingate the sinewy arm back of the hand whirled Woodhull around so that he faced Banion, who had not made a move.

"Will ain't got no weepon, an' ye know it," went on the same cool voice. "What ye mean—a murder, besides that?"

He nodded toward the girl. By now the crowd surged between the men, voices rose.

"He struck me!" broke out Woodhull. "Let me go! He struck me!"

"I know he did," said the intervener. "I heard it. I don't know why. But whether it was over the girl or not, we ain't goin' to see this other feller shot down till we know more about hit. Ye can meet ——" He turned an eye to Banion.

"Of course, any time."

Banion was drawing on his glove. The woman had lifted Molly, straightened her clothing.

"All blood!" said one. "That saddle horn! What made her ride that critter?"

The Spanish horse stood facing them now, ears forward, his eyes showing through his forelock not so much in anger as in curiosity. The men hustled the two antagonists apart.

"Listen, Sam," went on the tall Missourian, still with his grip on Woodhull's wrist. "We'll see ye both fair. Ye've got to fight now, in course—that's the law, an' I ain't learned it in the fur trade o' the Rockies fer nothin', ner have you people here in the settlements. But I'll tell ye one thing, Sam Woodhull, ef ye make one move afore we-uns tell ye how an' when to make hit, I'll drop ye, shore's my name's Bill Jackson. Ye got to wait, both on ye. We're startin' out, an' we kain't start out like a mob. Take yer time."

"Any time, any way," said Banion simply. "No man can abuse me."

"How'd you gentlemen prefer fer to fight?" inquired the man who had described himself as Bill Jackson, one of the fur brigaders of the Rocky Mountain Company; a man with a reputation of his own in Plains and mountain adventures of hunting, trading and scouting. "Hit's yore ch'ice o' weapons, I reckon, Will. I reckon he challenged you-all."

"I don't care. He'd have no chance on an even break with me, with any sort of weapon, and he knows that."

Jackson cast free his man and ruminated over a chew of plug.

"Hit's over a gal," said he at length judicially. "Hit ain't usual; but seein' as a gal don't pick atween men because one's a quicker shot than another, but because he's maybe stronger, or something like that, why, how'd knuckle and skull suit you two roosters, best man win and us to see hit fair? Hit's one of ye fer the gal like enough. But not right now. Wait till we're on the trail and clean o' the law. I heern there's a sheriff hangin' round yere some'rs."

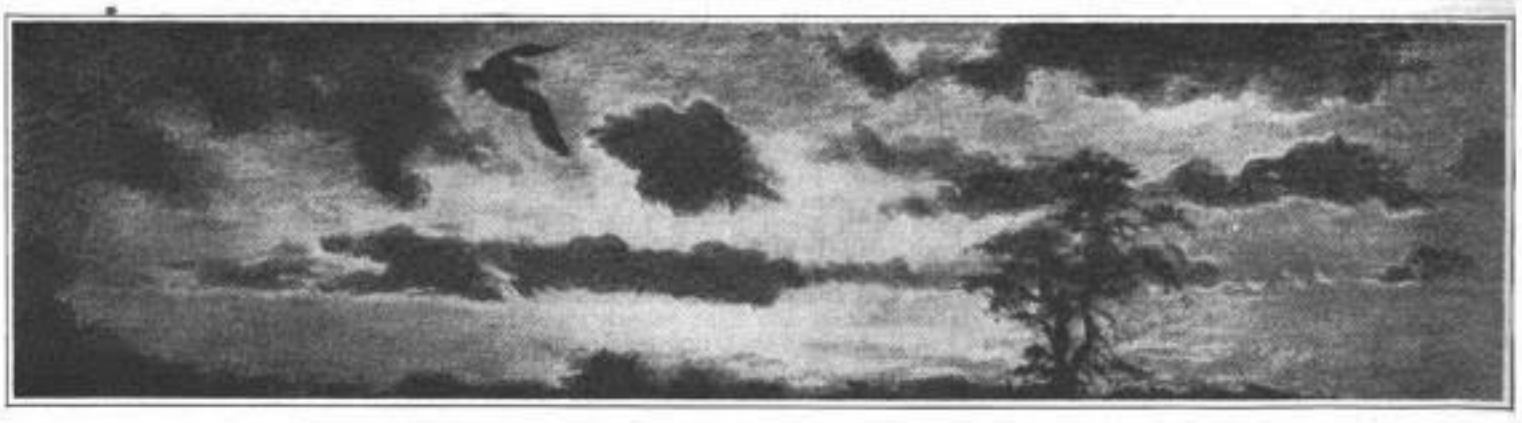
"I'll fight him any way he likes, or any way you say," said Banion. "It's not my seeking. I only slapped him because he abused me for doing what he ought to have done. Yes, I rode his horse. If I hadn't that girl would have been killed. It's not his fault she wasn't. I didn't want her to ride that horse."

"I don't reckon hit's so much a matter about a hoss as hit is about a gal," remarked Bill Jackson sagely. "Ye'll hatter fight. Well then, seein' as hit's about a gal, knuckle an' skull, is that right?"

He cast a glance around this group of other fighting men of a border day.

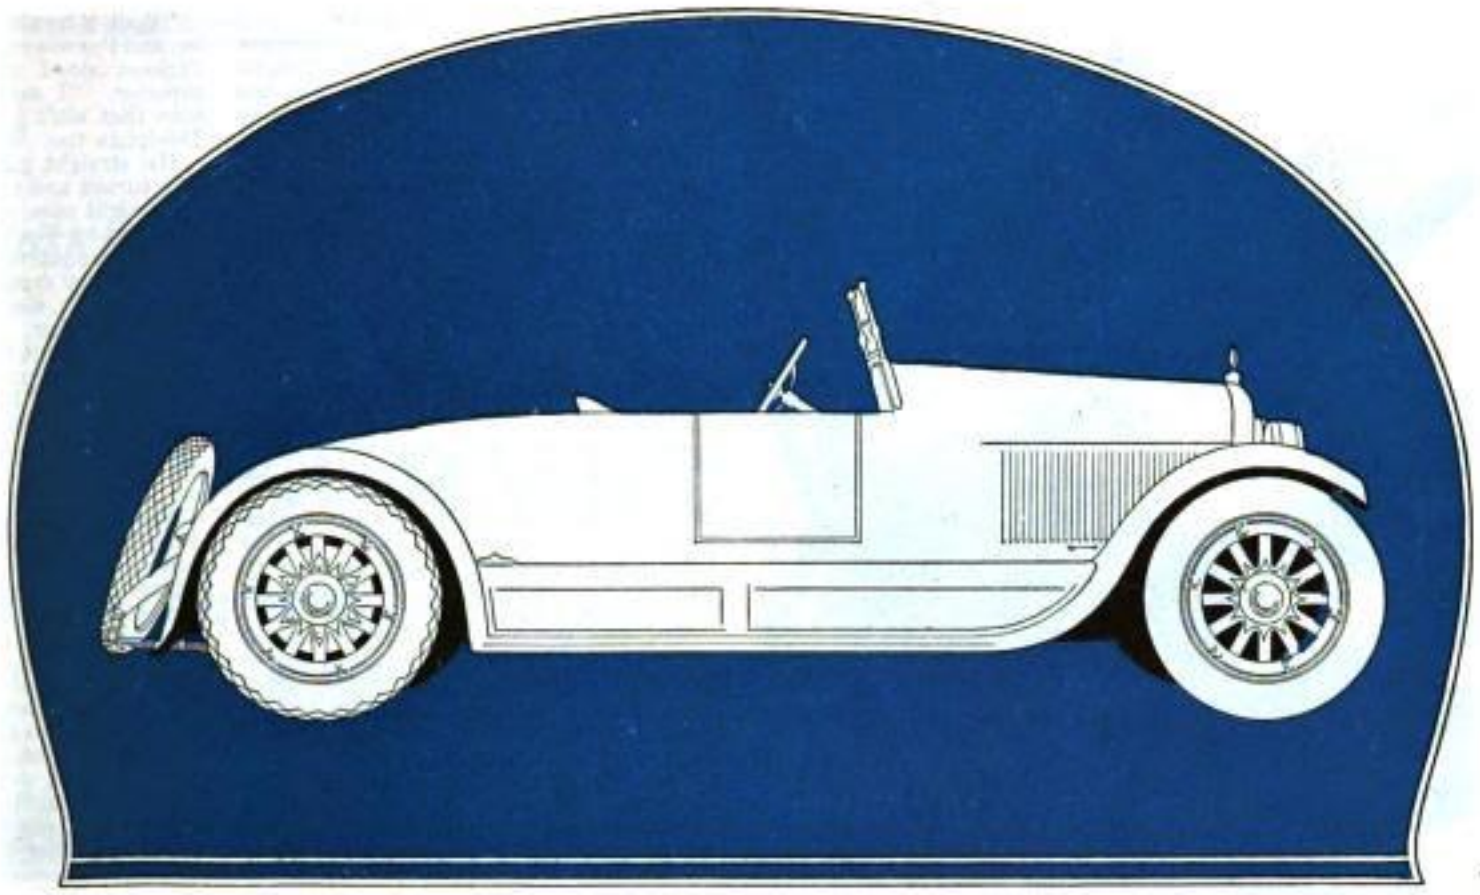
They nodded gravely, but with glittering eyes.

"Well then, gentlemen"—and now he stood free of Woodhull—"ye both give word ye'll make no break till we tell ye? I'll say, two-three days out?"



"Suits me," said Woodhull savagely. "I'll break his neck for him."

"Any time that suits the gentleman to break my neck will please me," said Will Banion indifferently. "Say when, friends. Just now I've got to look after my cows. It seems to me our wagon master might very well look after his wagons."



"That sounds!" commented Jackson. "That sounds! Sam, git on about yer business, er ye kain't travel in the Liberty train nohow! An' don't ye make no break, in the dark especial, fer we kin track ye anywheres. Ye'll fight fair fer once—an' ye'll fight!"

By now the group massed about these scenes had begun to relax, to spread. Women had Molly in hand as her eyes opened. Jed came up at a run with the mule team and the light wagon from the grove, and they got the girl into the seat

The New JORDAN Playboy

Here's a spirited companion for a wonderful girl and a wonderful boy.

It's a shame to call it a roadster, so full is this brawny, graceful thing with the vigor of boyhood and morning.

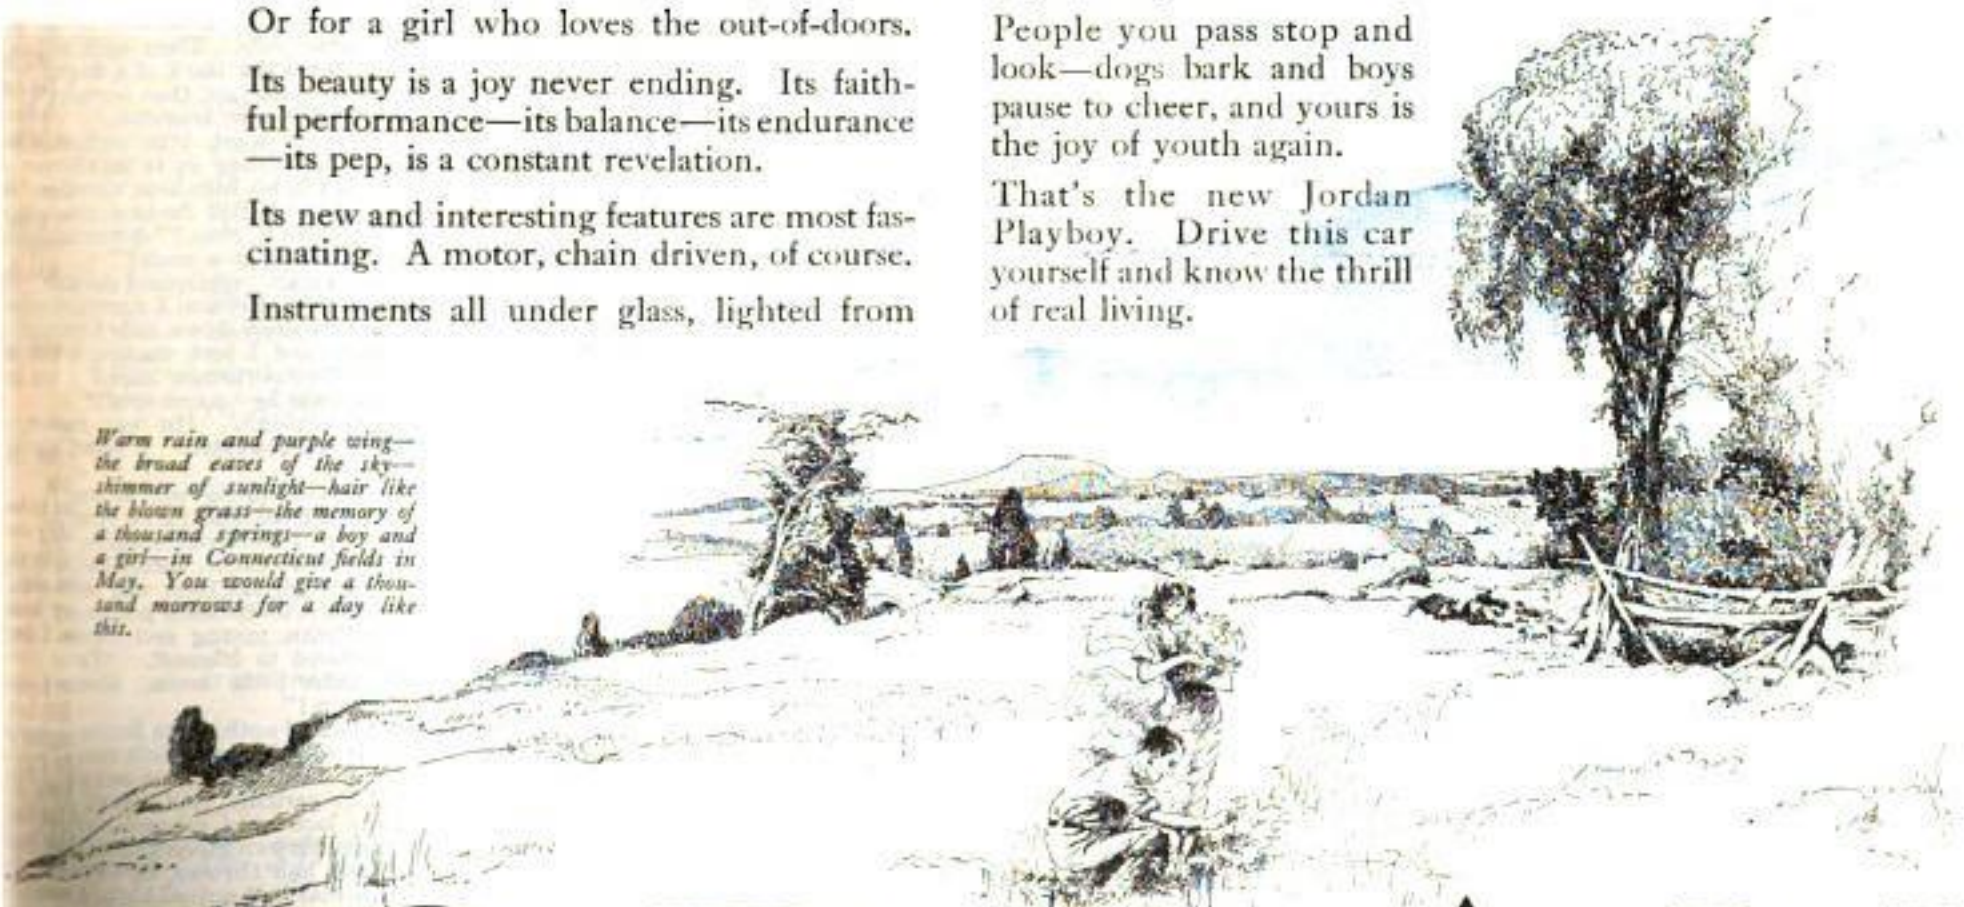
It carries two passengers—three if they're friendly—

It's a car for a man's man—that's certain.

Or for a girl who loves the out-of-doors.

Its beauty is a joy never ending. Its faithful performance—its balance—its endurance—its pep, is a constant revelation.

Its new and interesting features are most fascinating. A motor, chain driven, of course.



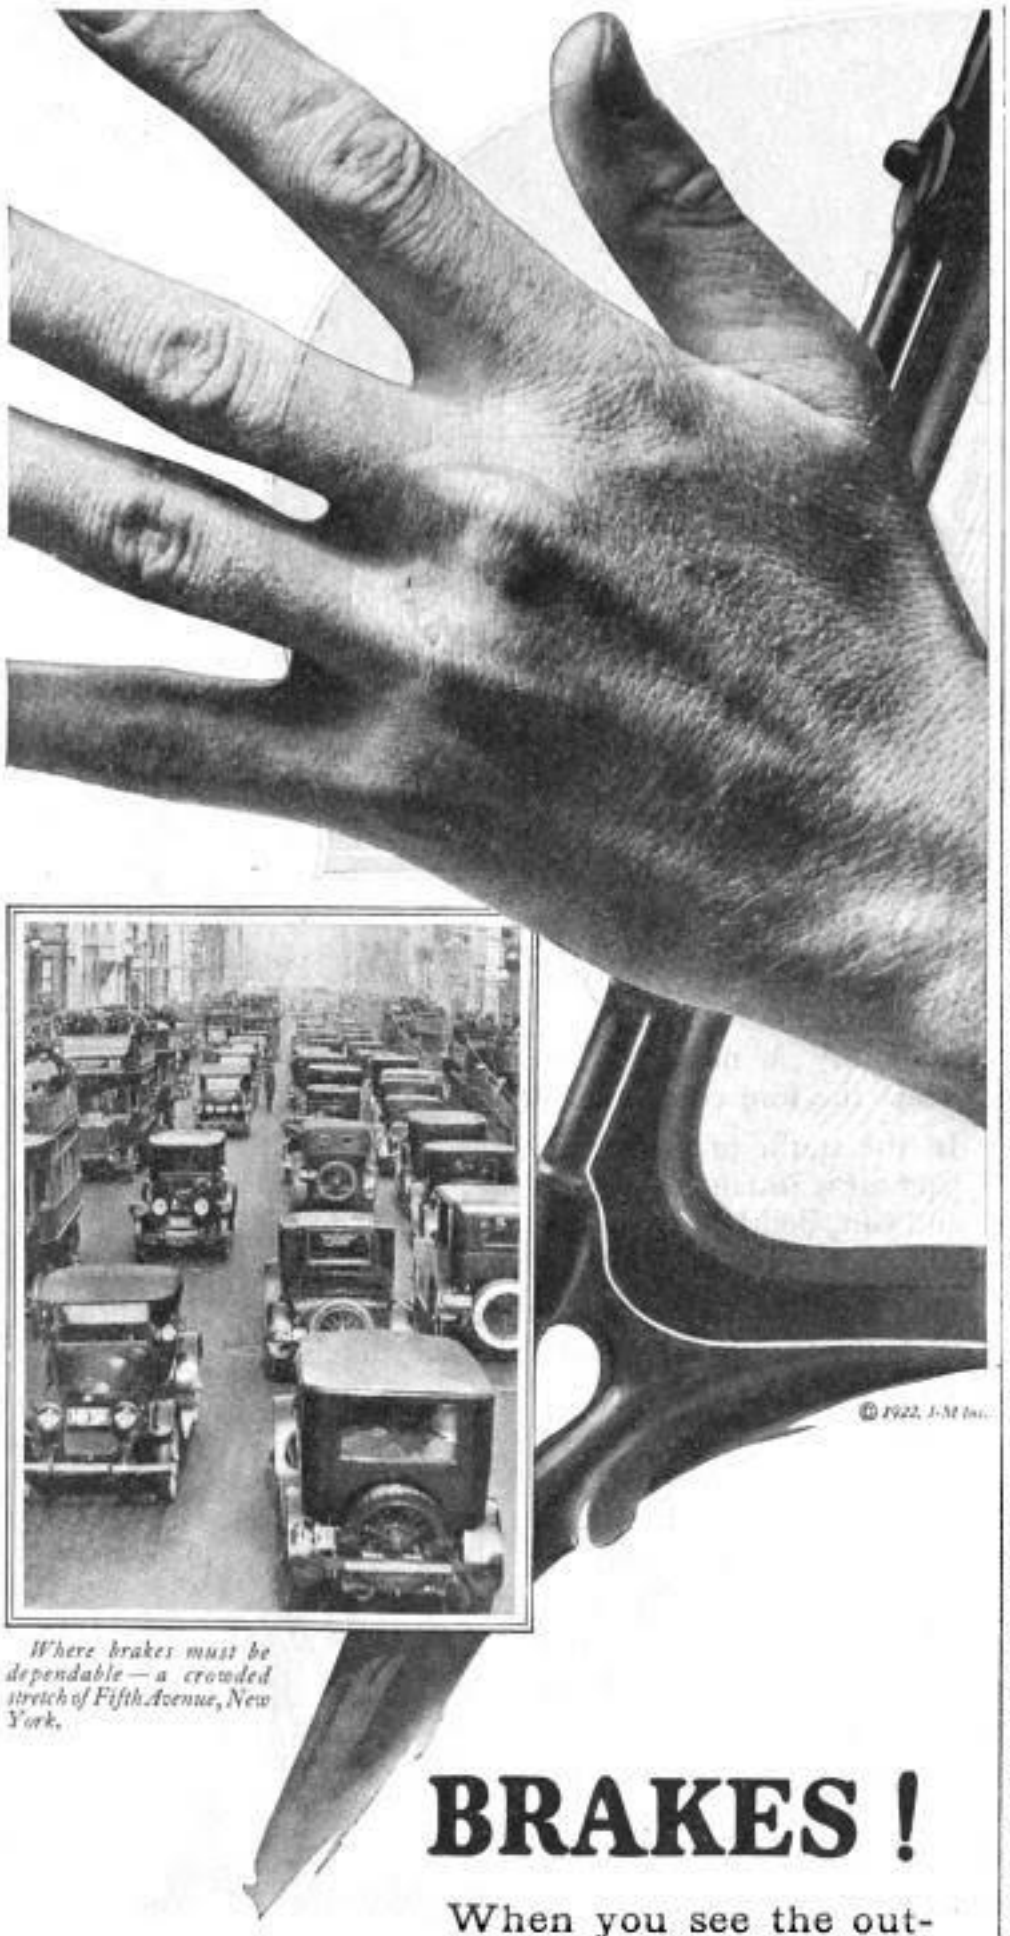
Instruments all under glass, lighted from within. A new cowl ventilator which keeps the fore compartment cool.

In the traffic press this light-weight, compact car is instant in its response. Step on it and you silently slip away from the crowded canyons of the street.

Out on the open road it revels along with the wandering wind and roars like a Caproni biplane.

People you pass stop and look—dogs bark and boys pause to cheer, and yours is the joy of youth again.

That's the new Jordan Playboy. Drive this car yourself and know the thrill of real living.



Warm rain and purple wing—the broad eaves of the sky—shimmer of sunlight—hair like the blown grass—the memory of a thousand springs—a boy and a girl—in Connecticut fields in May. You would give a thousand morrows for a day like this.

with him, neither of them fully cognizant of what had gone on in the group of tight-mouthed men who now broke apart and sauntered silently back, each to his own wagon.

VII

WITH the first thin line of pink the coyotes hanging on the flanks of the great encampment raised their immemorial salutation to the dawn. Their clamorings were stilled by a new and sterner voice—the notes of the bugle summoning sleepers of the last night to the duties of the first day. Down the line from watch to watch passed the plains command, "Catch up! Catch up!" It was morning of the jump-off.

Little fires began at the wagon messes or family bivouacs. Men, boys, barefooted girls went out into the dew-wet grass to round up the transport stock. A vast confusion, a medley of unskilled endeavor marked the hour. But after an hour's wait, adjusted to the situation, the next order passed down the line: "Roll out! Roll out!"

And now the march to Oregon was at last begun! The first dust cut by an ox hoof was set in motion by the whip crack of a barefooted boy in jeans who had no dream that he one day would rank high in the councils of his state, at the edge of an ocean which no prairie boy ever had envisioned.

The compass finger of the trail, leading out from the timber groves, pointed into a sea of green along the valley of the Kaw. The grass, not yet tall enough fully to ripple as it would a half month later, stood waving over the black-burned ground which the semicivilized Indians had left the fall before. Flowers dotted it, sometimes white like bits of old ivory on the vast rug of spindrift—the pink verbena, the wild indigo, the larkspur and the wild geranium—all woven into a wondrous spangled carpet. At times also appeared the shy buds of the sweet wild rose, loveliest flower of the prairie. Tall rosinweeds began to thrust up rankly, banks of sunflowers prepared to fling their yellow banners miles wide. The opulent, inviting land lay in a ceaseless succession of easy undulations, stretching away illimitably to far horizons, "in such exchanging pictures of grace and charm as raised the admiration of even these simple folk to a pitch bordering upon exaltation."

Here lay the West, barbaric, abounding, beautiful. Surely it could mean no harm to any man.

The men lacked experience in column travel, the animals were unruly. The train formation—clumsily trying to conform to the orders of Wingate to travel in four parallel columns—soon lost order. At times the wagons halted to re-form. The leaders galloped back and forth, exhorting, adjuring and restoring little by little a certain system. But they dealt with independent men. On ahead the landscape seemed so wholly free of danger that to most of these the road to the Far West offered no more than a pleasure jaunt. Wingate and his immediate aids were well worn when at midafternoon they halted, fifteen miles out from Westport.

"What in hell you pulling up so soon for?" demanded Sam Woodhull surlily, riding up from his own column, far at the rear, and accosting the train leader. "We can go five miles further, anyhow, and maybe ten. We'll never get across this way."

"This is the very way we will get across," rejoined Wingate. "While I'm captain I'll say when to start and stop. But I've been counting on you, Woodhull, to throw in with me and help get things shook down."

"Well, it looks to me you're purty brash as usual," commented another voice. Bill Jackson came and stood at the captain's side. He had not been far from Woodhull all day long. "Ye're a nacherl damned fool, Sam Woodhull," said he. "Who 'lected ye fer train captain, and when was it did? If ye don't like the way this train's run go on ahead and make a train o' yer own, ef that's way ye feel. Pull on out to-night. What ye say, cap?"

"I can't really keep any man from going back or going ahead," replied Wingate. "But I've been counting on Woodhull to hold those Liberty wagons together. Any plainsman knows that a little party takes big risks."

"Since when did you come a plainsman?" scoffed the malcontent, for once forgetting his policy of favor-currying with Wingate in his own surly discontent. He had not been able to speak to Molly all day.

"Well, if he ain't a plainsman yet he be, and I'm one right now, Sam Woodhu Jackson stood squarely in front of superior. "I say he's talking sense t man that ain't got no sense. I was v Doniphan too. We found ways, huh?'

His straight gaze outfronted the ot who turned and rode back. But that v night eight men, covertly instigated or couraged by Woodhull, their leader, c to the headquarters fire with a joint c plaint. They demanded places at the h of the column, else would mutiny and g ahead together. They said good m teams ought not to take the dust of o

"What do you say, men?" asked train captain of his aids helplessly. " in favor of letting them go front."

The others nodded silently, looking one another significantly. Already clic and factions were beginning.

Woodhull, however, had too much stake to risk any open friction with captain of the train. His own seat at officers' fire was dear to him, for it brou him close to the Wingate wagons, an sight—if nothing else—of Molly Wing That young lady did not speak to him day, but drew close the tilt of her c wagon early after the evening meal denied herself to all.

As for Banion, he was miles back, camp with his own wagons, which Wo hull had abandoned, and on duty t night with the cattle guard—a herdsm and not a leader of men now. He him was moody enough when he tied his c behind his saddle and rode his black ho out into the shadows. He had no kno edge of the fact that the old mount man, Jackson, wrapped in his blanket, t night instituted a solitary watch all his o

The hundreds of camp fires of the sc tered train, stretched out over five miles grove and glade at the end of the first disciplined day, lowered, glowed and fad They were one day out to Oregon, weary withal. Soon the individual encam ments were silent save for the champ cough of tethered animals, or the whin howl of coyotes, prowling in. At the M souri encampment, last of the train, that heading the great cattle drove, hardy frontier settlers, as was their wo soon followed the sun to rest.

The night wore, incredibly slow to t novice watch for the first time now draf under the prairie law. The sky was fa pink and the shadows lighter when s denly the dark was streaked by a flash fire and the silence broken by the cr of a border rifle. Then again and ag came the heavier bark of a dragoon rev ver, of the sort just then becoming kno along the Western marches.

The camp went into confusion. W Banion, just riding in to take his own l lated turn in his blankets, almost ran o the tall form of Bill Jackson, rifle in har

"What was it, man?" demanded Banio "You shooting at a mule?"

"No, a man," whispered the other. "I ran this way. Reckon I must have miss It's hard to draw down inter a hindsight the dark, and I jest chanced it with t pistol. He was runnin' hard."

"Who was he—some thief?"

"Like enough. He was crawlin' towards yore wagon. I halted him a he run."

"You don't know who he was?"

"No. I'll see his tracks, come day. on to bed. I'll set out a whiles, boy."

When dawn came, before he had brok his long vigil, Jackson was bending ov footmarks in the moister portions of the so

"Tall man, young and tracked clean he muttered to himself. "Fancy boot with rather little heels. Shame I do missed him!"

But he said nothing to Banion or anyo else. It was the twentieth time Bill Jac son, one of Sublette's men and a nephew one of his partners, had crossed the Plain and the lone hand pleased him best. H instituted his own government for the mo part, and had thrown in with this tra because that best suited his book, since th old pack trains of the fur trade were no no more. For himself, he planned settl ment in Eastern Oregon, a country he on had glimpsed in long-gone beaver days, dozen years ago. The Eastern settlemen had held him long enough, the army li had been too dull, even with Doniphan.

"I must be gittin' old," he muttered t himself as he turned to a breakfast fir "Missed—at seventy yard!"

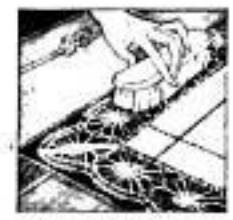
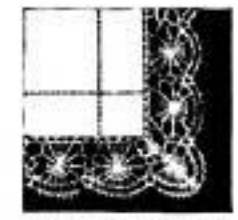
Here at last is a CURTAIN CLEANSING SERVICE



that conforms to a Woman's ideals



No shrinking, no stretching—every curtain dried to exactly its original size

Corners always square and shapely, so curtains hang correctly

Curtains gently patted down—no pin holes or hook marks to mar them

Edging and scallops finished smoothly, daintily and evenly

Curtains, soiled with the soot of winter, need not be a source of concern this spring, even for a moment. Through a new, saving service that now has been perfected, you can have them washed gently, dried precisely to measure, and daintily dressed up again without so much as a hook mark or pin hole to mar them.

Voile, Nottingham, Brussels, Irish Point, Marquisette, Marie Antoinette Appliqué, Brocaded Damask, Pongee—all respond smilingly to this better method and come back to you soft, filmy, and attractive as when first you put them up.

To make you acquainted with this service, laundryowners and dry cleaners everywhere invite you to send them your curtains the month of April 1 to 30 for a special demonstration. Watch your local newspapers for the introductory announcements.

A remarkably improved machine, called the "American" Curtain Dryer, which laundries and dry cleaning plants are installing, inspires this invitation.

Unlike the ordinary dryer, this new machine makes possible the handling of curtains without the use of a single hook or pin and their return exactly their original size, the corners square, every scallop in place, smooth, dainty, the edging intact, ready to hang.

Once you have had your curtains cleaned and finished this new way, you will prefer it always. It is the kind of service that conforms to a woman's ideals of what a curtain service should be.

You can now have curtains brightened up any time, but laundryowners and dry cleaners are making special preparations to serve you the month of April 1 to 30. Watch your local newspapers; watch the wagons and windows for the introductory offers.

April 1 to 30 is the time. Have your curtains ready.

MERTON OF THE MOVIES

(Continued from Page 28)

Here she overcame his last reluctance and induced him to enter. She followed and drove rapidly off.

It was only now that Baird let him into the very heart of the drama.

"You see," he told Merton, "you've watched these city folks; you've wanted city life for yourself, so in a moment of weakness you've gone up to town with this girl to have a look at the place, and it sort of took hold of you. In fact you hit up quite a pace for a while; but at last you go stale on it——"

"The blight of Broadway," suggested Merton, wondering if there could be a cabaret scene.

"Exactly," said Baird. "And you get to thinking of the poor old mother and little sister back here at home, working away to pay off the mortgage, and you decide to return. You get back on a stormy night; lots of snow and wind; you're pretty weak. We'll show you sort of fainting as you reach the door. You have no overcoat or hat, and your city suit is practically ruined. You get a great chance for some good acting here, especially after you get inside to face the folks. It'll be the strongest thing you've done so far."

It was indeed an opportunity for strong acting. He could see that. He stayed late with Baird and his staff one night and the prodigal's return to the door of the little home was shot in a blinding snowstorm. Baird warmly congratulated the mechanics who contrived the storm, and was highly enthusiastic over the acting of the hero. Through the wintry blast he staggered, half falling, to reach the door, where he collapsed. The light caught the agony on his pale face. He lay a moment, half fainting, then reached up a feeble hand to the knob of the door.

It was one of the annoyances incident to screen art that he could not go on in at that moment to finish his great scene. But this must be done back on the lot, and the scene could not be secured until the next day.

Once more he became the pitiful victim of a great city, crawling back to the home shelter on a wintry night. It was Christmas Eve, he now learned. He pushed open the door of the little home and staggered in to fall at the feet of his old mother. The sister ran to support him to the sofa. He was weak, emaciated, his face an agony of repentance, as he mutely pleaded forgiveness for his flight.

His old mother had risen, had seemed about to embrace him, but then had drawn herself sternly up and pointed commandingly to the door. The prodigal, anguished now at this repulse, fell weakly back upon the couch with a cry of despair. The little sister placed a pillow under his head and tried to plead with the mother. A long time the old lady remained obdurate, but at last she relented. Then she, too, came to fall upon her knees before the wreck who had returned to her.

Not many rehearsals were required for this scene, difficult though it was. Merton Gill had seized his opportunity. His study of agony expressions in the film course was later rewarded. The scene closed with the departure of the little sister. Resolutely showing the light of some fierce determination, she put on hat and wraps, spoke words of promise to the stricken mother and son and darted out into the night. The snow whirled in as she opened the door.

"Good work!" said Baird to Merton. "If you don't hear from that little bit then I'm an old me a Swede!"

Some later scenes were shot in the same cozy home, which seemed to bring the drama to a close. While the returned prodigal still lay on the couch, nursed by the forgiving mother, the sister returned in company with the New York society girl, who seemed aghast at the wreck of him she had once wooed. Slowly she approached the couch of the sufferer, tenderly she reached down to infold him. In some manner which Merton could not divine, the lovers had been reunited.

The New York girl was followed by her father—it would seem they had both come from the hotel—and the father, after giving an order for more of mother's grape juice, examined the son's patents. Two of them were redeemed over with delight, and at once paid the boy a huge roll of bills for a tenth interest in them.

Now came the grasping man who held the mortgage and who had counted upon driving the family into the streets this stormy Christmas Eve. He was overwhelmed with confusion when his money was paid from an ample hoard, and slunk shamefaced out into the night. It could be seen that Christmas Day would dawn bright and happy for the little group.

To Merton's eye there was but one discord in this finale. He had known that the cross-eyed man was playing the part of hotel clerk at the neighboring resort, but he had watched few scenes in which the poor fellow acted; and he surely had not known that this man was the little sister's future husband. It was with real dismay that he averted his gaze from the embrace that occurred between these two as the clerk entered the now happy home.

One other detail had puzzled him. This was the bundle to which he had clung as he blindly plunged through the storm. He had still clung fiercely to it after entering the little room, clasping it to his breast even as he sank at his mother's feet in physical exhaustion and mental anguish to implore her forgiveness. Later the bundle was placed beside him as he lay, pale and wan, on the couch. He supposed this bundle to contain one of his patents; a question to Baird proved him to be correct.

"Sure," said Baird, "that's one of your patents!"

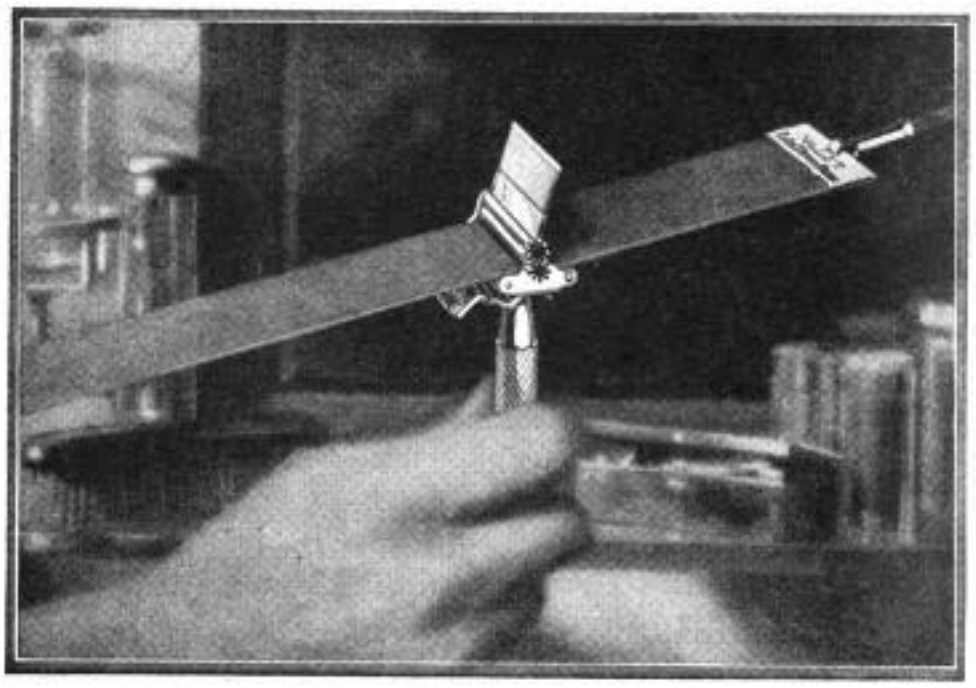
Yet he still wished the little sister had not been made to marry the cross-eyed hotel clerk.

And another detail lingered in his memory to bother him. The actress playing his mother was wont to smoke cigarettes when not engaged in acting. He had long known of it. But he now seemed to recall, in the touching last scene of reconciliation, that she had smoked one while the camera actually turned. He hoped this was not so. It would mean a retake, and Baird would be justly annoyed by the old mother's carelessness.

XVI

Of Sarah Nevada Montague

THEY were six long weeks doing the new piece. The weeks seemed long to Merton Gill because there were so many hours, even days, of enforced idleness. To pass an entire day, his face stiff with the make-up, without once confronting a camera in action seemed to him a waste of his own time and a waste of Baird's money. Yet this appeared to be one of the unavoidable penalties incurred by those who engaged in the art of the photo drama. Time was needed to create that world of painted shadows, so swift, so nicely consecutive when revealed, but so incoherent, so brokenly inconsequent, so meaningless in the recording.



How little an audience could suspect the vexatious delays ensuing between, say, a knock at a door and the admission of a visitor to a neat little home where a fond old mother was trying to pay off a mortgage with the help of her little ones. How could an audience divine that a wait of two hours had been caused because a polished city villain had forgotten his spats? Or that other long waits had been caused by other forgotten trifles, while an expensive company of artists lounged about in bored apathy, or smoked, gossiped, bantered?

Yet no one ever seemed to express concern about these waits. Rarely were their causes known, except by some frenzied assistant director, and he, after a little, would cease to be frenzied and fall to loafing with the others. Merton Gill's education in his chosen art was progressing. He came to loaf with the unconcern, the vacuous boredom, the practiced nonchalance of more seasoned artists.

Sometimes when exteriors were being taken the sky would overcloud and the sun be denied them for a day. The Montague girl would then ask Merton how he liked Sunny Cafeteria. Knowing this to be a jesting term that would stand for Sunny California, he never failed to laugh.

The girl kept rather closely by him during these periods of waiting. She seemed to show little interest in other members of the company, and her association with them, Merton noted, was marked by a certain restraint. With them she seemed no longer to be the girl of free ways and speech. She might occasionally join a group of the men who indulged in athletic sports on the grass before the little farmhouse—for the actors of Mr. Baird's company would all betray acrobatic tendencies

THE RAZOR THAT SHARPENS ITS OWN BLADES

A razor edge that "comes back" every morning in the week

DID you ever wish the edge of your razor blade could stage a "comeback"—and do it every morning in the week? You know how it is—the second shave with a blade begins to pull and scrape—the third and fourth are still worse. Yet it's too much bother to put in a new blade for every shave.

Here's a safety razor that sharpens its own blades on a straight leather strop. A smooth-as-silk shave, not once in a while, but *every morning*. And for a fraction of what you're now spending on blades month after month!

Ten seconds a morning is all you need. A few strokes on the strop—and the edge is keen as new. Quick, easy, convenient! The Valet AutoStrop Razor strops, shaves and cleans without removing the blade.

Save the good money you've been spending on blades. More than a solid year of smooth, clean shaves is *guaranteed* from every $1.00 package of blades. Ask your dealer to demonstrate the Valet AutoStrop Razor for you today.

Valet AutoStrop Razor

Silver plated razor, strop, year's supply of blades, in compact case $5.00

Strops and blades may also be bought separately.

Saves constant blade expense

in their idle moments—and he watched one day while the simple little country sister turned a series of handsprings and cart wheels that evoked sincere applause from the four New York villains who had been thus solacing their ennui.

But oftener she would sit with Merton on the back seat of one of the waiting automobiles. She not only kept herself rather aloof from other members of the company but she curiously seemed to bring it about that Merton himself should have little contact with them. Especially did she seem to hover between him and the company's feminine members. Among those impersonating guests at the hotel were several young women of rare beauty with whom he would have been not unwilling to fraternize in that easy comradeship which seemed to mark studio life. These were far more alluring than the New York society girl who wooed him and who had secured the part solely through Baird's sympathy for her family misfortunes.

They were richly arrayed and charmingly mannered in the scenes he watched, and moreover they not too subtly betrayed a pleasant consciousness of his existence. But the Montague girl noticeably monopolized him when a better acquaintance with the beauties might have come about. She rather brazenly seemed to be guarding him. She was always there.

This very apparent solicitude of hers left him feeling pleasantly important, despite the social contacts it deprived him of. He wondered if the Montague girl could be jealous, and cautiously one day, as they lolled in the motor car, he sounded her.

"Those girls in the hotel scenes—I suppose they're all nice girls of good family," he casually observed.

"Huh?" demanded Miss Montague, engaged with a pencil at the moment in editing her left eyebrow. "Oh, that bunch? Sure, they all come from good old Southern families—Virginia and Indiana and those places." She tightened her lips before the little mirror she held and renewed their scarlet. Then she spoke more seriously. "Sure, kid, those girls are all right enough. They work like dogs and do the best they can when they ain't got jobs. I'm strong for 'em. But then I'm a wise old trouper. I understand things. You don't. You're the real country wild rose of this piece. It's a good thing you got me to ride herd on you. You're too innocent to be turned loose on a comedy lot.

"Listen, boy"—she turned a sober face to him—"the straight lots are pretty fairly decent, but get this: A comedy lot is the toughest place this side of the bad one—any comedy lot."

"But this isn't a comedy lot. Mr. Baird isn't doing comedies any more, and these people all seem to be nice people. Of course some of the ladies smoke cigarettes——"

The girl had averted her face briefly, but now turned to him again.

"Of course that's so; Jeff is trying for the better things; but he's still using lots of his old people. They're all right for me, but not for you. You wouldn't last long if mother here didn't look out for you. I'm playing your dear little sister, but I'm playing your mother too. If it hadn't been for me this bunch would have taught you a lot of things you'd better learn some other way. Just for one thing, long before this you'd probably been hopping up your reindeers and driving around in a Chinese sleigh."

He tried to make something of this, but found the words meaningless. They merely suggested to him a snowy winter scene of Santa Claus and his innocent equipage. But he would intimate that he understood.

"Oh, I guess not," he said knowingly.

The girl appeared not to have heard this bit of pretense.

"On a comedy lot," she said, again becoming the oracle, "you can do murder if you wipe up the blood. Remember that."

He did not again refer even vaguely to the beautiful young women who came from fine old Southern homes. The Montague girl was too emphatic about them.

At other times during the long waits, perhaps while they ate lunch brought from the cafeteria, she would tell him of herself. His old troubling visions of his wonder woman, of Beulah Baxter the daring, had well-nigh faded; but now and then they would recur as if from long habit, and he would question the girl about her life as a double.

"Yeah, I could see that Baxter business was a blow to you, kid. You'd kind of worshiped her, hadn't you?"

"Well, I—yes, in a sort of way."

"Of course you did; it was very nic you." She reached over to pat his ha "Mother understands just how you watching the films back there in Go berry." He had quit trying to correct as to Gashwiler and Simsbury. She hit upon Gooseberry as a working compo of both names, and he had wearily com accept it. "And I know just how felt"—again she patted his hand—"t night when you found me doing her stu

"It did kind of upset me."

"Sure it would! But you ought to h known that all these people use dou when they can—men and women both, not only saves 'em work but even w they could do the stuff if they had to—that ain't so often—it saves 'em s broken bones and holding up a big pro tion two or three months. Fine busi that would be! So when you see a wom or a man either, that looks like they're ing something that someone else could you can bet someone else is doing it. W would you expect? Would you expe high-priced star to go out and break his

"And at that most of the doubles men, even for the women stars, like K Carson always carries one who used to circus acrobat. She couldn't hardly do of the things you see her doing, but w old Dan gets on her blond transforma and a few of her clothes he's her to the in a long shot, or even in mediums, i keeps his map covered.

"Yeah, most of the doublers have t men. I'll hand that to myself. I'm a the only girl that's been doing it, and th out with me hereafter, I guess, the w seem to be making good with Jeff. Ma after this I won't have to do stunts, ex of course some riding stuff, prob'ly, row of flips or something light. Anyth heavy comes up—me for a double of own." She glanced sidewise at her liste "Then you won't like me any more, kid, after you find out I'm using a doubl

He had listened attentively, absorbe her talk, and seemed startled by this foreseen finish. He turned anxious eye her. It occurred to him for the first that he did not wish the Montague gi do dangerous things any more.

"Say," he said quickly, amazed at own discovery, "I wish you'd quit d all those—stunts, do you call 'em?"

"Why?" she demanded.

There were those puzzling lights bac her eyes as he met them. He was confu

"Well, you might get hurt."

"Oh!"

"You might get killed sometime, an wouldn't make the least difference to m your using a double. I'd like you just same."

"I see; it wouldn't be the way it with Baxter when you found it out."

"No; you—you're different. I d want you to get killed," he added ra blankly. He was still amazed at this covery.

"All right, kid, I won't," she rep soothingly.

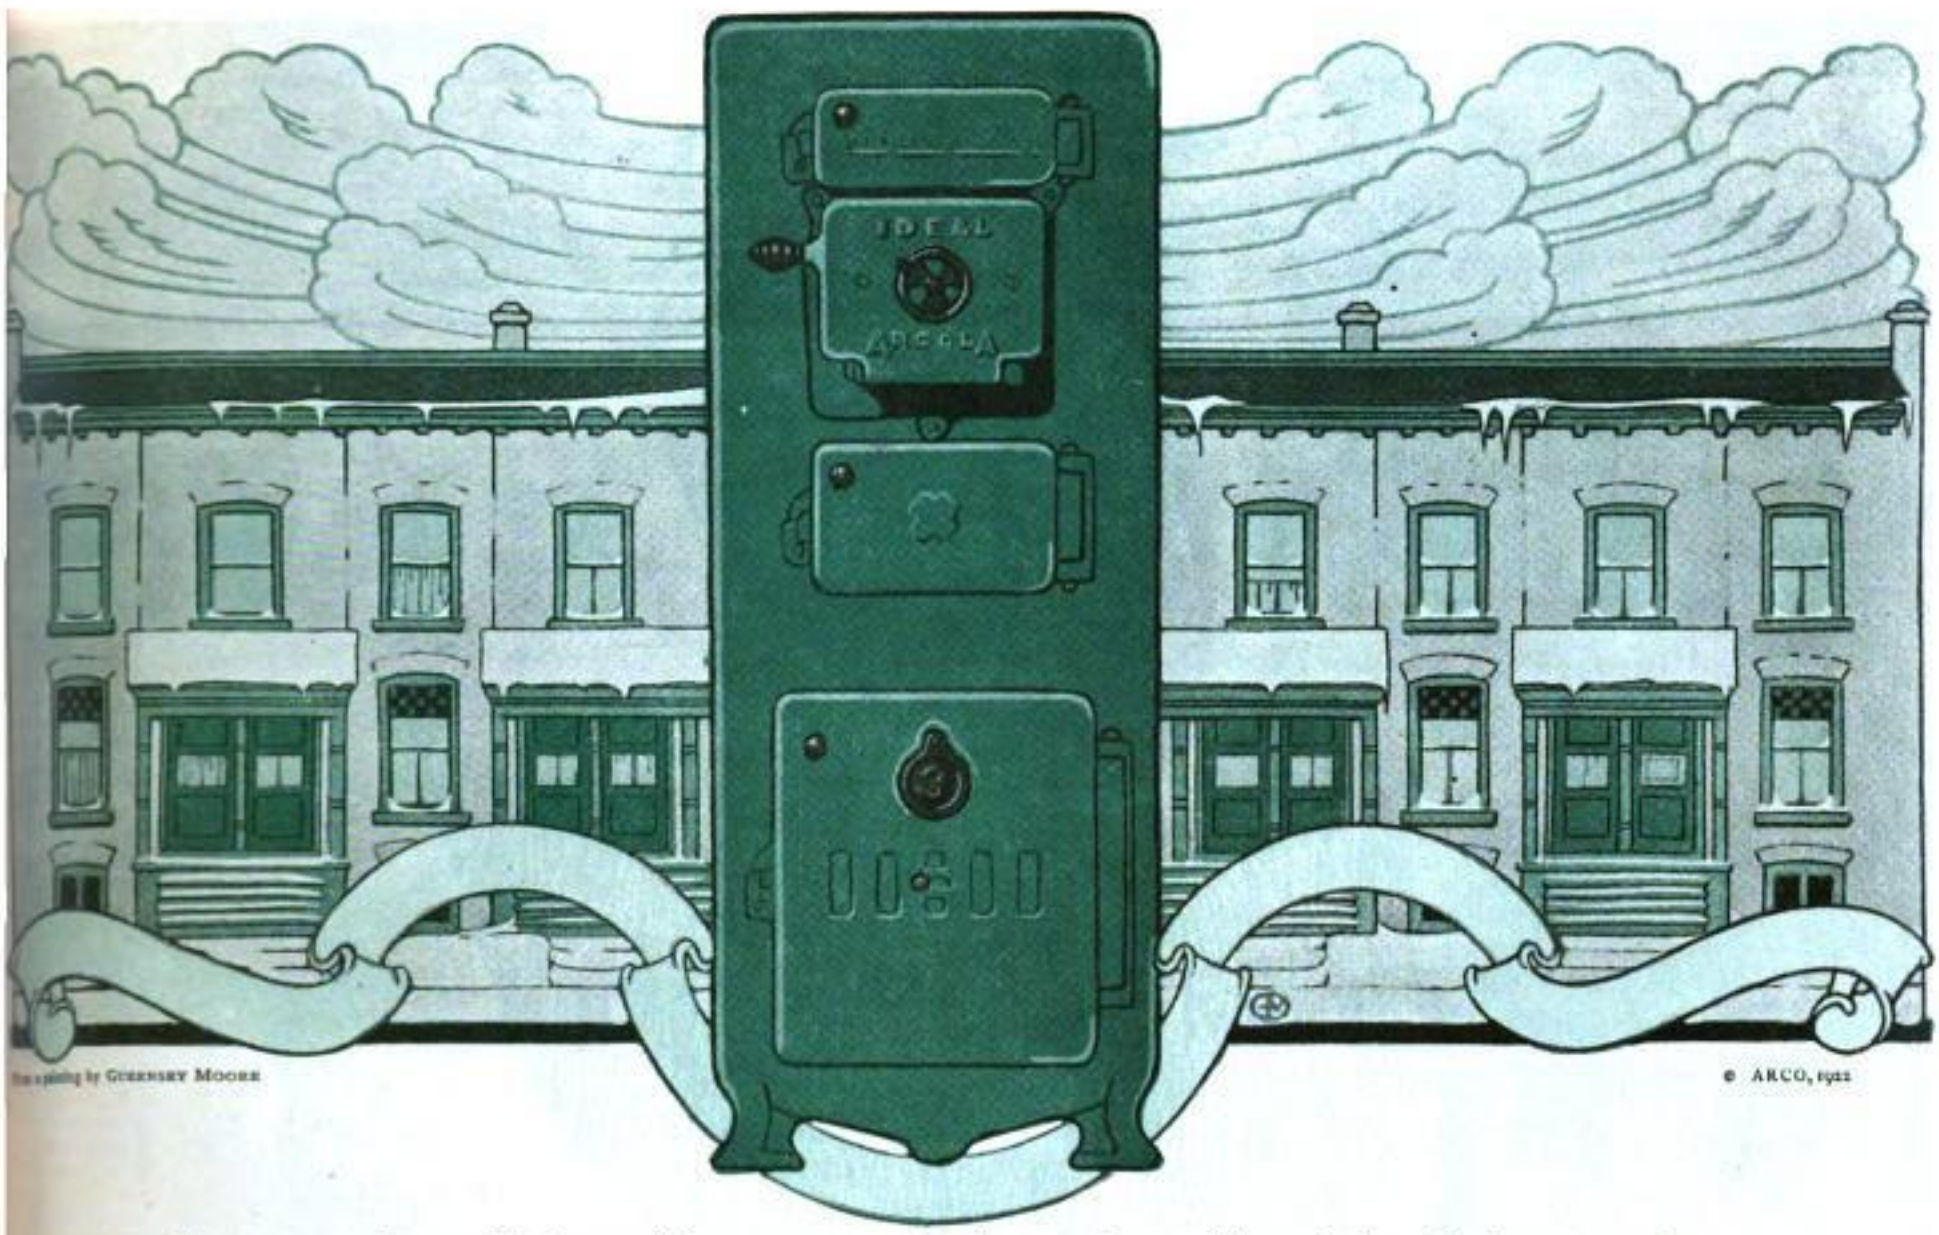
"I'll like you just as much," he a assured her, "no matter how many dou you have."

"Well, you'll be having doubles you sooner or later—and I'll like you too."

She reached over to his hand, but time she held it. He returned her st clasp. He had not liked to think of being mangled perhaps by a fall int quarry when the cable gave way—the camera men would probably keep turning!

"I've always been funny about m she presently spoke again, still gripping hand. "Lord knows I've seen enough o kinds, bad and good, but I've always kind of afraid even of the good ones. A one might not think it, but I guess I'm natural-born shy—man shy, anyway."

He glowed with a confession of his c



"You know, I'm that way too—girl I felt awful awkward when I had to kiss in the other piece. I never did really —

He floundered a moment, but was p ently blurting out the meager detail that early amour with Edwina May Pul He stopped his recital in a sudden p fear that the girl would make fun of He was immensely relieved when she me renewed the strength of the handclasp.

"I know. That's the way with me. course I can put over the acting stuff, e vamping, but I'm afraid of men off st Say, would you believe it, I ain't ever but one beau! That was Bert Stacy. I old Bert! He was lots older than me; ab

No one wanted to rent his flats until ARCOLA came; *then* he not only rented them all, but sold them at a profit

ARCOLA will add many times its cost to the value of your home

ASK any real estate man; ask any banker.

He will tell you that a house warmed with hot water *rents* for more and *sells* for more.

Here is one instance typical of many:

WILLIAM A. RUTLEDGE built a row of four family flats on Lincoln Avenue, St. Louis. They were an unsatisfactory investment. Then he put ARCOLA in each family's flat, connected with an American Radiator in each room.

"Since then I have had no trouble in renting at an advance that pays a good return on the investment," he writes. "I had tried to sell this property but could not find a buyer. But after installing the ARCOLAS and going through one winter, I found a buyer at an increased price. The tenants are delighted."

ARCOLA brings to the most modest home the same perfect hot-water warmth which the larger heating plants of this company give to mansions, cathedrals and famous buildings all over the world.

See ARCOLA in the store of your Plumber or Steamfitter. He will surprise you when he tells you how little it costs to install, with an American Radiator in every room. See him; and meanwhile

Send for this free ARCOLA Book

A postal card mailed to either address below will bring this finely illustrated book. It tells just why ARCOLA will add several times its cost to the value of your home, and how it pays for itself in the fuel it saves.

thirty, I guess. He was white all through. You always kind of remind me of him. Sort of a feckless dub he was, too; kind of honest and awkward—you know. He was the one got me doing stunts. He wasn't afraid of anything. Didn't know it was even in the dictionary. That old scout would go out night or day and break everything but his contract. I was twelve when I first knew him, and he had me doing twisters in no time. I caught onto the other stuff pretty good. I wasn't afraid, either, I'll say that for myself. First I was afraid to show him I was afraid, but pretty soon I wasn't afraid at all.

"We pulled off a lot of stuff for different people. And of course I got to be a big girl, and three years ago, when I was eighteen, Bert wanted us to be married, and I thought I might as well. He was the only one I hadn't been afraid of. So we got engaged. I was still kind of afraid to marry anyone, but being engaged was all right. I know we'd got along together, too, but then he got his with a motorcycle.

"Kind of funny. He'd do anything on that machine. He'd jump clean over an auto, and he'd leap a thirty-foot ditch and he was all set to pull a new one for Jeff Baird when it happened. Jeff was going to have him ride his motorcycle through a plate-glass window. The set was built and everything ready, and then the merry old sun don't shine for three days. Every morning Bert would go over to the lot and wait around in the fog. And this third day, when it got too late in the afternoon to shoot, even if the sun did show, he says to me, 'C'mon, hop up and let's take a ride down to the beach.' So I hop to the back seat and off we start, and on a ninety-foot paved boulevard what does Bert do but get in a jam? It was an ice wagon that finally bumped us over. I was only shook up and scraped here and there. But Bert was finished. That's the funny part. He'd get it on this boulevard, but back on the lot he'd have rode through that plate-glass window without a scratch. And just because the sun didn't shine that day I wasn't engaged any more. Bert was kind of like some old sea captain that comes back to shore after risking his life on the ocean in all kinds of storms and falls into a duck pond and gets drowned."

She sat a long time, staring out over the landscape, still holding his hand. Inside the fence before the farmhouse three of the New York villains were again engaged in athletic sports, but she seemed oblivious of these. At last she turned to him again with an illumining smile.

"But I was dead in love once before; that's how I know what you felt about Barrie. He was the preacher where we used to go to church. He was a good one. Pa copied a lot of his stuff that he uses to this day if he happens to get a preacher part. He was the loveliest thing. Not so young, not dark, with wonderful eyes and black hair, and his voice would go all through you. I had an awful case on him. I was twelve, and all week I used to think how I'd see him the next Sunday. Say, when I'd get there and he'd be working—doing pulpit stuff—he'd have me in kind of a trance.

"Sometimes after the pulpit scene he'd come down right into the audience and shake hands with people. I'd almost keel over if he'd notice me. I'd be afraid he would and afraid he wouldn't. If he said 'And how is the little lady this morning?' I wouldn't have a speck of voice to answer him. I'd just tremble all over. I used to dream I'd got a job workin' for him as extra, blacking his shoes or fetching his breakfast and things.

"It was the real thing all right. I used to try to pray the way he did—asking the Lord to let me do a character bit or something with him. He had me going all right. And you must 'a' been just that way about Barrie. Sure you were! When you found she was married and used a double and everything, it was like I'd found this preacher shooting hop or using a double in his pulpit stuff, or something."

She was still again, looking back upon this tremendous episode.

"Yes, that's about the way I felt," he told her.

Already his affair with Mrs. Rosenblatt seemed a thing of his childhood. He was wondering, rather, if the preacher could have been the perfect creature the girl was now picturing him. It would not have displeased him to learn that this refulgent being had actually used a double in his big scenes, or had been guilty of mere human behavior at odd moments. Probably, after all, he had been just a preacher.

"Uncle Sylvester used to want me to be a preacher," he said with apparent irrelevance, "even if he was his own worst enemy." He added presently, as the girl remained silent, "I always say my prayers at night."

He felt vaguely that this might raise him to the place of the other who had been adored. He was now wishing to be thought well of by this girl. She was aroused from her musing by his confession.

"You do? Now isn't that just like you! I'd have bet you did that. Well, keep on, son. It's good stuff, I guess."

Her serious mood seemed to have passed. She was presently exchanging tart repartee with the New York villains, who had perched in a row on the fence to be funny about that long continued holding of hands in the motor car. She was quite unembarrassed, however, as she dropped the hand with a final pat and vaulted to the ground over the side of the car.

"Get busy, there!" she ordered. "Where's your understander? Where's your top mounter?" She had become a circus ringmaster. "Three up and a roll for yours!" she commanded.

The three villains aligned themselves on the lawn. One climbed to the shoulders of the other and a third found footing on the second. They balanced there, presently to lean forward from the summit. The girl played upon an imaginary snare drum with a guttural, throaty imitation of its roll, culminating in the boom of a bass drum as the tower toppled to earth. Its units, completing their turn with somersaults, again stood in line, bowing and smirking their acknowledgments for imagined applause.

The girl, a moment later, was turning handsprings. Merton had never known that actors were so versatile. It was an astounding profession, he thought, remembering his own registration card that he had filled out at the Holden office. His age, height, weight, hair, eyes, and his chest and waist measures; these had been specified, and then he had been obliged to write the short "No" after ride, drive, swim, dance—to write "No" after "Ride?" even in the artistically photographed presence of Buck Benson on horseback!

Yet in spite of these disabilities he was now a successful actor at an enormous salary. Baird was already saying that he would soon have a contract for him to sign at a still larger figure. Seemingly it was a profession in which you could rise even if you were not able to turn handsprings, or were more or less terrified by horses and deep water and dance music.

And the Montague girl, who he now fervently hoped would not be killed while doubling for Mrs. Rosenblatt, was a puzzling creature. He thought his hand must still be warm from her infolding of it, even when work was resumed and he saw her, with sunbonnet pushed back, stand at the gate of the little farmhouse and behave in an utterly brazen manner toward one of the New York clubmen. She who had just confided to him that she was afraid of men was now practically daring an undoubted scoundrel to lure her up to the great city and make a lady of her. And she had been afraid of all but a clergyman and a stunt actor! He wondered interestedly if she were afraid of Merton Gill. She had seemed not to be.

On another day of long waits they ate their lunch from the cafeteria box on the steps of the little home and discussed stage names.

"I guess we better can that Clifford Armytage stuff," she told him as she seriously munched a sandwich. "We don't need it. That's out. Merton Gill is a lot better name." She had used "we" quite as if it were a community name.

"Well, if you think so ——" he began regretfully, for Clifford Armytage had seemed so superior to the indistinction of Merton Gill. Still, the girl was wise in her trade.

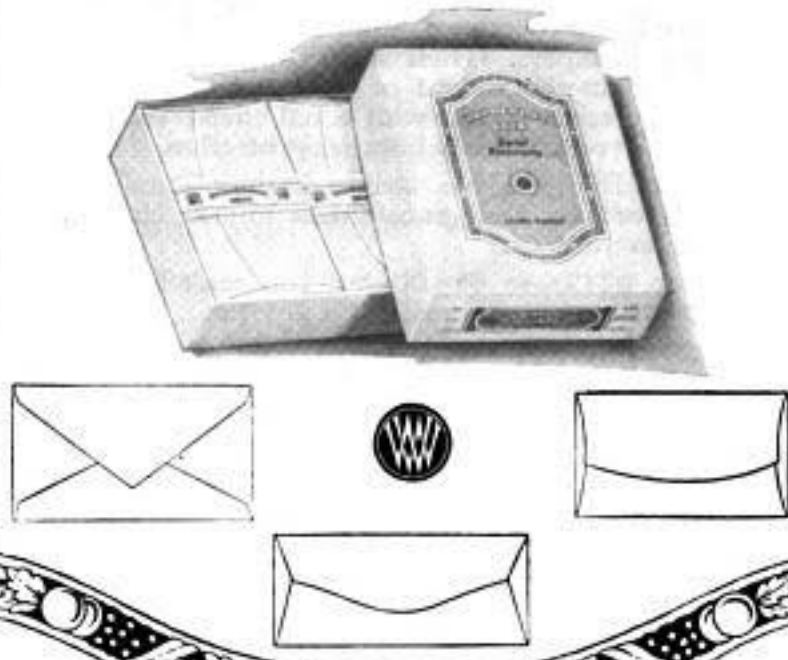
"Sure, it's a lot better," she went on. "That Clifford Armytage—say, it reminds me of just another such feckless dub as you are that acted with us one time when we all trouped in a rep show, playing East Lynne and such things. He was just as wise as you are, and when he joined out at Kansas City they gave him a whole book of the piece instead of just his sides. He was a quick study, at that, only he learned everybody's part as well as his own, and

The Letter You Might Have Written

Of course you thought of writing—you even thought of what you would say. And how your prompt little note of congratulation would have been appreciated. But you didn't write. People who haven't personal stationery nearly always "forget" to write. The ones who always remember to write have paper and envelopes always at hand.

HAMMERMILL BOND

Social Stationery



See what a choice you have from which to select something that will exactly express your taste. Three finishes—linen, bond, and ripple. Eight sizes and styles of envelopes, from square to long-narrow with novelty flap. Sheets cut to fit. See this stationery at drug stores, stationers, and department stores. The price is 35 to 75 cents. Hammermill Bond Social Stationery is also made up into attractive writing tablets in all sizes.

Be prepared for answering letters and announcements. Send ten cents (stamps or coin) and we will mail you several attractive styles of envelopes and paper.

that slowed him. They put him on in Waco, and the manager was laid up, so they told him that after the third act he was to go out and announce the bill for the next night, and he learned that speech too.

"He got on fine till the big scene in the third act. Then he went blooey because that was as far as he'd learned, so he just left the scene cold and walked down to the foots and bowed and said, 'Ladies and gentlemen, we thank you for your attendance here this evening, and to-morrow night we shall have the honor of presenting Lady Audley's Secret.'

"With that he gave a cold look to the actors back of him that were gasping like fish, and walked off. And he was like you in another way, because his real name was Eddie Duffy, and the lovely stage name he'd picked out was Clyde Maltravers."

"Well, Clifford Armytage is out then," Merton announced, feeling that he had now buried a part of his dead self in a grave where Beulah Baxter the wonder woman already lay interred. Still he was conscious of a certain relief. The stage name had been bothersome.

"It ain't as if you had a name like mine," the girl went on. "I simply had to have help."

He wondered what her own name was. He had never heard her called anything but the absurd and undignified Flips. She caught the question he had looked.

"Well, my honest-to-God name is Sarah Nevada Montague: Sarah for ma and Nevada for Reno, where ma had to stop off for me—she was out of the company two weeks—and if you ever tell a soul I'll have the law on you. That was a fine way to abuse a helpless baby, wasn't it?"

"But Sarah is all right. I like Sarah."

"Do you, kid?" She patted his hand. "All right then, but it's only for your personal use."

"Of course the Nevada"—he hesitated—"it does sound kind of like a geography lesson or something. But I think I'll call you Sarah—I mean when we're alone."

"Well, that's more than ma ever does, and you bet it'll never get into my press notices. But go ahead if you want to."

"I will, Sarah. It sounds more like a true woman than Flips."

"Bless the child's heart!" she murmured, and reached across the lunch box to pat his hand again.

"You're a great little patter, Sarah," he observed with one of his infrequent attempts at humor.

On still another day, while they idled between scenes, she talked to him about salaries and contracts, again with her important air of mothering him.

"After this picture," she told him, "Jeff was going to sew you up with a long-time contract, probably at a hundred and fifty per. But I've told him plain I won't stand for it. No five-year contract, and not any contract at that figure. Maybe three years at two hundred and fifty; I haven't decided yet. I'll wait and see"—she broke off to regard him with that old puzzling light far back in her eyes—"wait and see how you get over in these two pieces.

"But I know you'll go big, and so does Jeff. We've caught you in the rushes enough to know that. And Jeff's a good fellow, but naturally he'll get you for as little as he can. He knows all about money even if he don't keep Yom Kippur. So I'm watching over you, son—I'm your manager, see? And I've told him so, plain. He knows he'll have to give you just what you're worth. Of course he's entitled to consideration for digging you up and developing you, but a three-year contract will pay him out for that. Trust mother."

"I do," he told her. "I'd be helpless without you. It kind of scares me to think of getting all that money. I won't know what to do with it."

"I will. You always listen to me, and you won't be camping on the lot any more. And don't shoot dice with these roughnecks on the lot."

"I won't," he assured her. "I don't believe in gambling."

He wondered about Sarah's own salary, and was surprised to learn that it was now double his own. It was surprising, because her acting seemed not so important to the piece as his.

"It seems like a lot of money for what you have to do," he said.

"There," she smiled warmly, "didn't I always say you were a natural-born trouper? Well, it is a lot of money for me; but, you see, I've helped Jeff dope out both of these pieces. I'm not so bad at gags—I mean th kind of stuff he needs in these serio dramas. This big scene of yours, where yo go off to the city and come back a wreck o Christmas Eve—that's mine. I doped i out after the piece was started—after I' had a good look at the truck driver tha plays opposite you."

Truck driver? It appeared that Mis Montague was actually applying this ter to the New York society girl who in privat life was burdened with an ailing family He explained now that Mr. Baird had n considered her ideal for the part, but ha chosen her out of kindness. Again ther flickered far back in her eyes those ligh that baffled him. There was incredulity i her look, but she seemed to master it.

"But I think it was wonderful of you he continued, "to write that beautif scene. It's a strong scene, Sarah. I didn know you could write too. It's as good anything Tessie Kearns ever did, and she written a lot of strong scenes."

Miss Montague seemed to struggle wit some unidentified emotion. After a lon puzzling gaze she suddenly said, "Merto Gill, you come right here with all th make-up on and give mother a good h kiss!"

Astonishingly to himself, he did so in th full light of day and under the eyes of o of the New York villains who had been pr tending that he walked a tight rope acro the yard. After he had kissed the girl s seized him by both arms and shook him.

"I'd ought to have been using my ow face in that scene," she said. Then s patted his shoulder and told him that h was a good boy.

The pretending tight-rope walker ha paused to applaud.

"Your act's flopping, bo," said Mi Montague. "Work fast." Then she aga addressed the good boy. "Wait till you' watched that scene before you thank me, she said shortly.

"But it's a strong scene," he insisted.

"Yes," she agreed; "it's strong."

He told her of the other instance Baird's kindness of heart.

"You know, I was a little afraid of pla ing scenes with the cross-eyed man, b Mr. Baird said he was trying so hard to serious work, so I wouldn't have him di charged. But shouldn't you think he save up and have his eyes straightene Does he get a very small salary?"

The girl seemed again to be harassed conflicting emotions, but mastered them say, "I don't know exactly what it is, b I guess he draws down about twelve fifty week."

"Only twelve dollars and fifty cents week!"

"Twelve hundred and fifty," said th girl firmly.

"Twelve hundred and fifty dollars week!" This was monstrous, incredibl "But then, why in the world doesn't he ha his eyes ——"

Miss Montague drew him to her wi both her capable arms.

"My boy, my boy!" she murmured, a upon his painted forehead she imprinted kiss of deep reverence. "Run along a play," she ordered. "You're getting me nervous."

Forthwith she moved to the center of t yard where the tight-rope walker still e dangered his life above the heads of a va audience.

She joined him. She became a perform on the slack wire. With a parasol to b ance her, she ran to the center of an ima inary wire that swayed perilously, and s swung there, cunningly maintaining a pa carious balance. Then she sped back safety at the wire's end, threw down h parasol, caught the handkerchief thrown her by the first performer and dainti touched her face with it, breathing deep the while, and bowing.

He thought Sarah was a strange child "One minute one thing and the next mi ute something else."

XVII

Miss Montague Uses Her Own Fac

WORK on the piece dragged to an en In these latter days the earnest you leading man suffered spells of concern f his employer. He was afraid that M Baird, in his effort to struggle out of t slough of low comedy, was not going to wholly successful. He had begun to no that the actors employed for this purpo were not invariably serious even when t

You need never buy a new Battery Mr. Car Owner—if—the plates in your battery don't go wrong

Most battery trouble at the bottom is plate trouble. If the plates warp or buckle—if they have lost their active material, you buy a new battery.

For the *life* of a battery is in the plates. As long as they live, your battery lives.

PREST-O-PLATES For Long Life

That is why Prest-O-Lite, when it set out to make the automobile battery better, began with plates. Always a maker of a *better* plate, it turned its scientific skill and research to improving it, and produced Prest-O-Plate—the long-lasting plate.

Here is a battery plate as *different* from *ordinary* plates as *gold* is from *gilt*. It's made different, but its greatest difference is in its longer service.

Unusual hardness combined with a *peculiar porosity* gives it *unrivaled durability*.

This explains its *ready reserve power* in biting *zero weather*, and its great *non-buckling* strength that *resists overheating* in summer.

PREST-O-LITE Best All-Weather Battery

Under most extreme weather conditions Prest-O-Plates, with their non-buckling strength and reserve power, outlive ordinary plates.

This is why the Prest-O-Lite Battery outlives an ordinary battery and why it is the *best all-weather battery*.

Every other part is worthy of the Prest-O-Plate in material and workmanship.

That is why 87 manufacturers *specify* Prest-O-Lite as original equipment, and this list is growing.

PREST-O-LITE Double Guaranty

Remember that all Prest-O-Lite batteries are covered by the regular Prest-O-Lite guaranty, a definite obligation *plus* a spirit that says the *car owner must be pleased*.

And it is backed by the *oldest* service to motorists.

Drive around to the local Prest-O-Lite Service Station. You are sure to find the Prest-O-Lite representative a responsible man in your community

Service That Must Satisfy

No matter what make of battery you have, use Prest-O-Lite service. Friendly advice and expert attention will be given gladly.

Prest-O-Lite service will keep your old battery alive. You will not be told that you need a new battery until you do. This is an invariable Prest-O-Lite policy

THE PREST-O-LITE COMPANY, Inc
Carbide and Carbon Building
30 East 42nd Street, New York
Eighth and Brannan Streets
San Francisco, California
In Canada:
Prest-O-Lite Company of Canada, Ltd., Toronto

THE OLDEST SERVICE TO MOTORISTS

OUR 1922 PRICES

You can get a Prest-O-Lite Battery for popular makes of light cars at $19.90 (trade-in-price)—actually $9.70 less than in 1921, and $16.10 less, about half, than the 1920 price. Slightly higher on Pacific Coast and other distant points.

Similar reductions lower the price of every other Prest-O-Lite Battery. These are not special models; they are regular Prest-O-Lite Batteries.

(Continued from Page 78)

cameras turned, or, if serious, they seemed, perhaps from the earnestness of their striving for the worthwhile drama, to be a shade too serious. They were often, he felt, overemphatic in their methods. Still, they were, he was certain, good actors. One could always tell what they meant.

It was at these times that he especially wished he might be allowed to view the rushes. He not only wished to assure himself for Baird's sake that the piece would be acceptably serious, but he wished, with a polite seemly curiosity, to view his own acting on the screen. It occurred to him that he had been acting a long time without a glimpse of himself. But Baird had been singularly firm in this matter, and the Montague girl had sided with him. It was best, they said, for a beginning actor not to see himself at first. It might affect his method before this had crystallized; make him self-conscious, artificial.

He was obliged to believe that these well-wishers of his knew best. He must not trifle with a screen success that seemed assured. He tried to be content with this decision. But always the misgivings would return. He would not be really content until he had watched his own triumph. Soon this would be so securely his privilege that not even Baird could deny it, for the first piece in which he had worked was about to be shown. He looked forward to that.

It was toward the end of the picture that his intimacy with the Montague girl grew to a point where, returning late from location to the studio, they would dine together.

"Hurry and get ungressed, son," she would say; "you can take an actress out to dinner."

Sometimes they would patronize the cafeteria on the lot, but oftener, in a spirit of adventure, they would search out exotic restaurants. A picture might follow, after which by street car he would escort her to the Montague home in a remote flat region of palm-lined avenues sparsely set with new bungalows.

She would disquiet him at these times by insisting that she pay her share of the expense, and she proved to have no mean talent for petty finance, for she remembered every item down to the street-car fares. Even to Merton Gill she seemed very much a child, once she stepped from the domain of her trade. She would stare into shop windows wonderingly, and never failed to evince the most childish delight when they ventured to dine at an establishment other than a cafeteria.

At times when they waited for a car after these dissipations he suffered a not unpleasant alarm at sight of a large-worded advertisement along the back of a bench on which they would sit.

"You Furnish the Girl, We Furnish the House," screamed the bench to him above the name of an enterprising tradesman that came in time to bite itself deeply into his memory.

Of course it would be absurd, but stranger things, he thought, had happened. He wondered if the girl was as afraid of him as of other men. She seemed not to be, but you couldn't tell much about her. She had kissed him one day with a strange warmth of manner, but it had been quite publicly in the presence of other people. When he left her at her door now it was after the most sentimental of partings, perhaps a shake of her hard little hand, or perhaps only a "S'long—see you at the show shop!"

It was on one of these nights that she first invited him to dine with the Montague family.

"I tried last night to get you on the telephone," she explained, "but they kept giving me someone else, or maybe I called wrong. Ain't these six-figured Los Angeles telephone numbers the limit? When you call 306972 or something, it sounds like paging a box car. I was going to ask you over. Ma cooked a lovely mess of corned beef and cabbage. Anyway, you come eat with us to-morrow night, will you? She'll have something else cooked up that will stick to the merry old slats. You can come home with me when we get in from work."

So it was that on the following night he enjoyed a home evening with the Montagues. Mrs. Montague had, indeed, cooked up something else, and had done it well; while Mr. Montague offered at the sideboard a choice of amateur distillations and brews which he warmly recommended to the guest. While the guest timidly considered, having had but the slightest experience with intoxicants, it developed that the confidence placed in his product by the hospitable old craftsman was not shared by his daughter.

"Keep off it," she warned, and then to her father, "Say, listen, pa, have a heart! That boy's got to work to-morrow."

"So be it, my child," replied Mr. Montague with a visible stiffening of manner. "Sylvester Montague is not the man to urge strong drink upon the reluctant or the overcautious. I shall drink my *apéritif* alone."

"Go to it, old pippin!" rejoined his daughter as she vanished to the kitchen.

"Still, a little dash of liquor at this hour," continued the host suggestively when they were alone.

"Well"—Merton wished the girl had stayed—"perhaps just a few drops."

"Precisely, my boy, precisely. A mere dram."

He poured the mere dram and his guest drank. It was a colorless fiery stuff with an elusive taste of metal. Merton contrived an expression of pleasure under the searching glance of his host.

"Ah, I knew you would relish it! I fancy I could amaze you if I told you how recently it was made. Now here"—he grasped another bottle purposefully—"is something a full ten days older. It has developed quite a bouquet. Just a drop ——"

The guest graciously yet firmly waved a negation.

"Thanks," he said, "but I want to enjoy the last. It—it has so much flavor."

"It has; it has indeed! I'll not urge you, of course. Later you must see the simple mechanism by which I work these wonders. Alone, then, I drink to you."

Mr. Montague alone drank of two other fruits of his loom before the ladies appeared with dinner. He was clean-shaven now, and his fine face glowed with hospitality as he carved roast chickens. The talk was of the shop; of what Mr. Montague scornfully called grind shows when his daughter led it, and of the legitimate hall show when he regained the leadership. He believed that moving pictures had sounded the knell of true dramatic art, and said so in many ways.

He tried to imagine the sensations of Lawrence Barrett or Louis James could they behold Sylvester Montague, whom both these gentlemen had proclaimed to be no mean artist, enacting the rôle of a barroom rowdy five days on end by reclining upon a sawdust floor with his back supported by a spirits barrel. The suppositious comments of the two placed upon the motion-picture industry the black guilt of having degraded a sterling artist to the level of a peep-show mountebank. They were frankly disgusted at the spectacle, and their present spokesman thought it as well that they had not actually lived to witness it—even the happier phases of this so-called art in which a mere chit of a girl might earn a living wage by falling downstairs for a so-called star, or the he-doll whippersnapper—Merton Gill flinched in spite of himself—could name his own salary for merely possessing a dimpled chin. Further, an artist in the so-called art received his payment as if he had delivered groceries at one's back door.

"You, I believe"—the speaker addressed his guest—"are at present upon a pay roll; but there are others, your elders—possibly your betters, though I do not say that ——"

"You better not!" remarked his daughter, only to be ignored.

"—— others who must work a day and at the close of it receive a slip of paper emblazoned 'Talent Pay Check.' How more effectively could they cheapen the good word 'talent'? And at the foot of this slip you are made to sign, before receiving the pittance you have earned, a consent to the public exhibition, for the purpose of trade or advertising, of the pictures for which you may have posed. Could tradesmen descend to a lower level, I ask you?"

"I'll have one for twelve-fifty to-morrow night," said Mrs. Montague, not too dismally. "I got to do a duchess at a reception, and I hope my feet don't hurt me again."

"Cheer up, old dears! Pretty soon you can both pick your parts," chirped their daughter. "Jeff's going to give me a contract, and then you can loaf forever for all I care. Only I know you won't, and you know you won't. Both of you'd act for nothing if you couldn't do it for money. What's the use of pretending?"

"The chit may be right; she may be right," conceded Mr. Montague sadly.

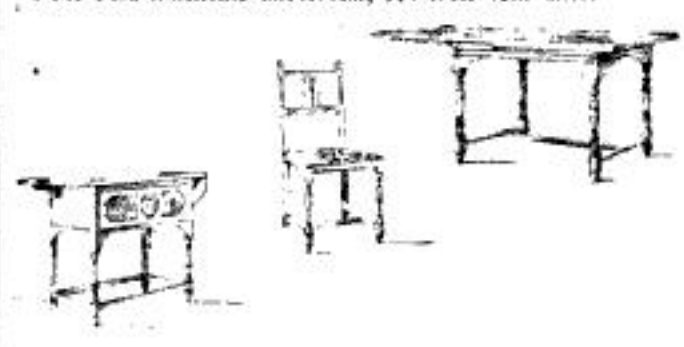
Later, while the ladies were again in the kitchen, Mr. Montague, after suggesting

BERKEY & GAY
Furniture

"The Winthrop"—A Demonstration Value

You never pay more for Berkey & Gay quality—often less—than for makes of unknown worth. As striking evidence of this, foremost furniture stores invite you to see this Puritan dining suite.

In it is reflected the spirit of the Mayflower. The sturdy honesty, the simplicity, the insistence upon genuine goodness that characterized the Puritan home.



Native oak, typical of the period, is the wood used—embellished with walnut and fancy ash burls. Mouldings, carvings, and turnings are softly fashioned by hand. Mellow coloring suggests generations of loving usage.

During April, "The Winthrop" is featured in a nation-wide quality demonstration. Its special value creates a buying opportunity of rare interest.

Our Brochures, describing "The Winthrop" and other Berkey & Gay Furniture, together with name of nearest dealer, sent on request.

BERKEY & GAY FURNITURE COMPANY

"Top o' the Morning" all day long!

WHAT of to-night, to-morrow night and all the nights to come? Will they find you fagged, nervous, irritable, out of sorts with everything? Or will the same brisk, cheerful freshness that started you on your strenuous day of business or housework or play still be yours? *The answer lies largely in your FEET!*

GROUND GRIPPER
WALKING SHOES
are the ORIGINAL Muscle-developing Health Shoes for Men, Women and Children

THEY are "energy savers"—leading to a contented day's-end *every day*. At every step they conform pliantly with the supple flexing of your feet. This revives stagnant circulation and keeps the delicate bones, muscles and nerve-centers strong, steady, self-reliant and uncomplaining;—a result made manifest throughout your body *from the ground up;*—restoring and maintaining natural poise and balance—encouraging enjoyment of the most and best each moment has to give.

Encourage Growing Feet.

Style, Comfort, True Wonderlions.

Real Shoes for Real Men.

No wizardry accomplishes this. Nothing artificial. Two things alone are involved. *First:*—the welcome restoration of a precious birthright, against the painful pilfering of which by shoes of stiff, unnatural design Nature is constantly sending protests in form of headaches, backaches, nervous exhaustion and worse. *Second:*—the patented principle of "Straight-inside-line," Flexible-Arch construction that provides *invigorating support* with this restful freedom. A principle perfected *only* in GROUND GRIPPERS;—*extensively imitated but never duplicated.*

You'll find only *intelligent* people wearing these famous shoes. Keen, clear-thinking, efficient people who appreciate Quality and *really know how to live* no matter in what walk of life they are. Also, you'll find these fortunate people in perfect tune with Fashion. Because the gracefully rounded toes, sensible heels and smart swing of GROUND GRIPPERS are the prevailing mode everywhere.

There are over sixty attractive, stylishly comfortable GROUND GRIPPER models from which you may now choose. Handsome boots, oxfords, pumps and sport models of varying type, in the finest of leathers and all wanted colors—for all the family.

GROUND GRIPPER SHOE COMPANY, INC., 141 Brookline St., East Lynn, Mass.
(Largest Exclusive Manufacturer of Health Shoes in the World.)

Exclusive Stores in Principal Cities. 2000 Agents Everywhere. If there isn't a "Ground Gripper" Shop in your locality, send us the name of your regular dealer. Refuse substitutes!

THE SPIRIT OF YOUTH IN YOUR FEET

Never have you known anything to compare with the complete HAPPINESS of "Ground Grippers." Write for our Style and Medical Booklets on Feet—FREE.

"Something in the nature of an after-dinner cordial," quaffed one for himself and followed it with the one he had poured out for a declining guest who still treasured the flavor of his one *apéritif*. He then led the way to the small parlor, where he placed in action on the phonograph a record said to contain the ravings of John McCullough in his last hours. He listened to this emotionally.

"That's the sort of technic," he said, "that the so-called silver screen has made but a memory."

Then, after lighting his pipe, he identified various framed photographs that enlivened the walls of the little room. Many of them were of himself at an earlier age.

"My dear mother-in-law," he said, pointing to another. "A sterling artist, and in her time an ornament of the speaking stage. I was on tour when her last days came. She idolized me, and passed away with my name on her lips. Her last request was that a photograph of me should be placed in her casket before it went to its final resting-place."

He paused, his emotion threatening to overcome him. Presently he brushed a hand across his eyes and continued: "I discovered later that they had picked out the most wretched of all my photographs—an atrocious thing I had supposed was destroyed. Can you imagine it?"

Apparently it was but the entrance of his daughter that saved him from an affecting collapse. His daughter removed the record of John McCullough's ravings, sniffed at it and put a fox trot in its place.

"He's got to learn to dance," she explained, laying hands upon the guest.

"Dancing—dancing!" murmured Mr. Montague, as if the very word recalled sad memories.

"You forget all about your feet," remarked the girl as they paused, swaying to the rhythm. "Remember the feet—they're important in a dance. Now!"

But it was hard to remember his feet, or, when he did recall them, to relate their movements even distantly to the music. When this had died despairingly the girl surveyed her pupil with friendly but doubting eyes.

"Say, pa, don't he remind you of someone? Remember that squirrel that joined out with us one time in the rep show and left East Lynne flat in the middle of the third act while he went down and announced the next night's play—the one that his name was Eddie Duffy and he called himself Clyde Maltravers?"

"In a way, in a way," agreed Mr. Montague dismally. "A certain lack of finish in the manner, perhaps."

"Remember how Charley Dickman, the manager, nearly murdered him for it in the wings? Not that Charley didn't have a right to. Well, this boy dances like Eddie Duffy would have danced."

"He was undeniably awkward and forgetful," said Mr. Montague. "Well do I recall a later night. We played Under the Gaslight. Charley feared to trust him with a part, so he kept the young man off stage to help with the train noise when the down express should dash across. But even in this humble station he proved inefficient. When the train came on he became confused, seized the coconut shells instead of the sandpaper, and our train that night entered to the sound of a galloping horse. The effect must have been puzzling to the audience. Indeed, many of them seemed to consider it ludicrous. Charley Dickman confided in me later. 'Syl, my boy,' says he, 'this bird Duffy has caused my first gray hairs.' It was little wonder that he persuaded young Duffy to abandon the drama. He was a clever dancer, but not meant for the higher planes of our art. Now our young friend here"—he pointed to the perspiring Merton Gill—"doesn't even seem able to master a simple dance step. I might say that he seems to out-Duffy Duffy, for Duffy could dance."

"He'll make the grade yet," replied his daughter grimly, and again the music sounded.

Merton Gill continued unconscious of his feet, or, remembering them, became deaf to the music. But the girl brightened with a sudden thought when next they rested.

"I got it!" she announced. "We'll have about two hundred feet of this for the next picture—you trying to dance just the way you been doing with me. If you don't close to a good hand I'll eat my next pay check."

The lessons ceased. She seemed no longer to think it desirable that her pupil should become proficient in the modern steps. was puzzled by her decision. Why sh one of Baird's serious plays need an a who forgot his feet in a dance?

There were more social evenings at Montague home. Twice the gathering enlarged by other members of the colony, a supper was served and p played for inconsiderable stakes. In game of chance the Montague girl pr to be conservative, not to say miserly, was made to suffer genuinely when Me Gill displayed a reckless spirit in the ting. That he amassed winnings of nin eight cents one night did not reassure She pointed out that he might easily lost this sum.

She was, indeed, being a mother to defenseless boy. It was after this bling session that she demanded to be just what he was doing with his sa His careless hazarding of poker chips caused her to be fearful of his ge money sense.

Merton Gill had, indeed, been reck He was now, he felt, actually one of Hollywood set. He wondered how T Kearns would regard his progress.

It was a gay life, Merton felt. An for the Montague girl's questions and w ings about his money, he would show He had, of course, discharged his deb her in the first two weeks of his work Baird. Now he would show her tha really thought of money. He would her a gift whose presentation should a certain great occasion. It should o on the eve of his screen début, and w fittingly testify his gratitude. For the after all, had made him what he was, the first piece was close to its prem Already he had seen advance notices i newspapers. The piece was called H on Fire, and in it, so the notices said comedy manager had at last realize ambition long nourished. He had something new and something big; thing done in a big way. The Mont girl would see that the leading man had done so much to insure the succe Baird's striving for the worthwhile d was not unforgetful of her favors and tinuous solicitude.

He thought first of a ring, but acros blank brick wall of the jewelry shop he elected to patronize was an enormous in white: The House of Lucky Wed Rings. This staring announcement alarmed him that he not only aband the plan for a ring—any sort of ring be misconstrued, he saw—but in an of caution chose another establishme so outspoken. If it kept wedding ri all it was decently reticent about and it did keep a profusion of other kets about which a possible recipient entertain no false notions. Wrist wat for example. No one could find subt hidden meanings in a wrist watch.

He chose a bauble that glittered pre on its black silk bracelet, and was shocked in the least when told by engaging salesman that its price w sum for which in the old days Gash had demanded a good ten weeks o life. Indeed, it seemed rather cheap to when he remembered the event it w celebrate. Still, it was a pleasing trifle did not look cheap.

"Do you warrant it to keep good tim he sternly demanded.

The salesman became diplomatic, an effect of genial man-to-man frank

"Well, I guess you and I both know women's bracelet watches are." He sm a superior masculine smile that drew customer within the informed brotherh "Now here, there's a platinum little t that costs seven hundred and fifty, this one you like will keep just as good as that one that costs six hundred n What could be fairer than that?"

"All right," said the customer, take it."

During the remaining formalities tending the purchase the salesman, serving that he dealt with a tolerant of the world, became even franker.

"Of course no one," he remarked p antly while couching the purchase chaste bed of white satin, "expects won bracelet watches to keep time—not the women."

"Want 'em for looks," said the custo

"You've hit it! You've hit it!" claimed the salesman delightedly, as if customer had expertly probed the hea a world-old mystery.

LINCOLN

MOTOR CARS

The Only Motor Cars Which Embody Lincoln Standards of Precision Manufacture

The things which give true greatness to the LINCOLN *are things not easily discerned by the casual observer, but they are things which become increasingly evident as time goes on.*

The eye alone cannot detect, for example, whether a certain part is accurate to the one-thousandth of an inch or only to the one-hundredth part, yet an error so slight as a half a thousandth, in some operation essentially so accurate, would determine whether that part be destined to early destruction or to many years' unfailing service. And that difference of a half a thousandth of an inch is equal only to a fifth the thickness of a hair.

In the LINCOLN there are more than 5,000 mechanical operations which are not permitted to deviate from a mean standard to exceed the one-thousandth of an inch; more than 1,200 operations in which that deviation is not permitted to exceed a half of one one-thousandth; and more than 300 in which it is not permitted to exceed the quarter of one one-thousandth. There are operations on eight parts in which even that fine limit is reduced.

It would be possible to produce an apparent counterpart of the LINCOLN car, like it in every detail so far as could be detected by the eye alone, and that counterpart could be marketed profitably at half the LINCOLN's selling figures.

But the seeming counterpart *would not* be a LINCOLN in its character, because the very elements which largely constitute that character would be lacking.

Differences in standards of precision largely determine differences in production costs.

LINCOLN standards of precision necessarily mean greater cost of manufacture, but the dollars so invested pay handsome dividends to the owner of the car.

These dividends express themselves in the more charming action of the LINCOLN, in the way it rides and drives, and guides and glides, and coasts and climbs; in the way it moves, and acts, and feels. They express themselves in its greater stamina and longer life, and in the more dependable, more constant and more consistent service enjoyed by LINCOLN owners.

DEAF?

The Personal Acousticon

Ask for
FREE PROOF
that You can Hear

the tiny voices of children
and the Sermon and Music of Church Services

Twenty years ago, we adopted the policy of urging everyone who is hard-of-hearing to test the Acousticon in the home or the office, amid familiar surroundings for ten days, with the privilege of returning it at the end of that period. This to be entirely at our expense with carrying charges paid, and requiring no deposit or other obligation.

This practice has continued without variation, because we realize that there are rare cases of deafness (perhaps two out of 100) which no artificial aid, no matter how efficient it may be, can possibly relieve. Hundreds of thousands have taken advantage of this offer to prove just what it would do for them personally, and the results have warranted a continuance of this practice.

Lawyers and physicians have testified that only with the Acousticon can they continue in their professions—

Prominent members of boards of directors frankly admit that it is essential to their participating properly in directors' meetings—

Mothers have written that without it they would have been unable to know that their children understood their motherly correction and advice; and would even have been deprived of the joy of hearing their little ones' voices.

Permit us to again urgently invite you or any of your friends who are hard-of-hearing to request

10 Days' FREE TRIAL
of the
1922 Acousticon

No Deposit—No Expense—No Obligation

In addition to the various types of portable Acousticons for personal use, the Church Acousticon has been quietly working its way to high favor in the churches of every denomination throughout the country, until it is now installed in over two thousand.

This equipment has enabled many to hear and participate in Church services for the first time in many years, to their gratification and to the individual church's profit.

Here, again, the same generous selling policy is practiced, for we furnish the equipment to any church anywhere in the United States for temporary installation and free trial for 4 weeks. Not a cent of expense is involved, except the nominal cost of having a local electrician place the parts and run the wires. Any electrical worker can do this simple work in a few hours.

One Pastor has written: "From the point of view of the deaf person, it is a godsend. We have many persons in this congregation who could not hear at all, but, with the Acousticon, they now hear perfectly and are delighted with it. Indeed, are so grateful for it that they have offered to bear the expense of it; but our Board has taken pleasure in furnishing it free."

Let No One
Convince You but Yourself

We honestly believe that the 1922 Acousticon is the most efficient hearing device obtainable; that our consistent and expert effort has succeeded in keeping it a little in advance of any in its field, and we intend that it shall continue to be so. If, however, you learn of another instrument which promises as good or better results, ask for the same free trial of it that we offer, and compare the two in your own home. We shall be very happy to have you choose the one which suits your individual needs best, and return the other. Let no one convince you but yourself.

Please remember, however, that the basic principles of the Acousticon, as well as its refinements, are fully protected by patents; so no matter what you have tried in the past, send for your free trial of the 1922 Acousticon today and learn, without cost, or obligation, whether it will best suit your particular needs.

L'ALOUETTE, OR SILKEN VENGEANCE

(Continued from Page 15)

he was saying, Mr. Kidder did not even yet notice the expression of dumb and dreadful agony on the face across the counter.

"We'll be off!" he cried lightly. "We'll be off!

"Good-by, Lulu,
We're off to Honolulu!"

quoted Mr. Kidder, inserting in his remark, as is often done by orators, a bit of favorite verse.

"Off! On our last trip! With our million! Off ——" he said, now looking up and observing for the first time the face of his companion.

"Ye'll not hove to wait for thot!" said a new, high and totally unexpected voice behind him. "Ye'll not hove to wait for yer million—to enjoy the pleasures of yer last and final trip!" said a slow, bitter and exceedingly Scotch voice. "Not ofter what I'll be writin' yer house this ofternoon!"

Turning sharply, Mr. Kidder now observed the easily irritated junior partner appearing from behind the corner of the hanging display of ladies' underwear at the counter's end, behind which he had apparently been concealed.

"Not ofter I've written to them—to my old friend, Mr. Laughlin—yer boss in yer sales department! Ye'll hove to wait no more when I write and explain to him yer full intentions. Yer full intentions!" continued Mr. Dundee, carrying on the burden of the conversation entirely alone. "Yer plans and specifications for yer last trip—and the gude 'twill no doubt do yer fir-r-rm.

"Yer conversations also," resumed Mr. Dundee, continuing to round out his theme and outlining his prospective letter to Mr. Kidder's superior more fully, "relating to yer employers. And yer observations on their customers—the retailers of this lond—what dogs and worse than dogs they are! And yer philanderin's with their employes also," he said, and stopped for breath while both his hearers preserved a stony silence.

"In beesiness hours! On Monday mornin'!" he continued for good measure. "'Twill be a lesson to ye—and all such cattle like ye! So now be off with ye!" he called to the still silent Mr. Kidder. "Be off with ye—you and yer Alouettes!

"And you, ye hussy," he said, now turning the flow of his irritation toward his assistant buyer. "Get to yer work—without more ado! Or ye'll follow ofter him!"

"This young lady ——" began Mr. Kidder.

"The least said the sooner mended," replied Mr. Dundee.

"This young lady had nothing whatever ——" attempted Mr. Kidder once again.

"The devil's a poor advocate for his clients!" said the junior partner.

Grasping the situation, with a look at Miss Smith's back, which was now turned to him, Mr. Kidder started slowly toward the door, the easily irritated partner observing him closely.

"Good-by to ye," he said with intense meaning. "And all hoppiness—on yer last trip!"

To these words Mr. Kidder made no reply, passing directly out of the entrance in silence. Nevertheless, all that day they were never absent from his mind.

It was a dark, melancholy, unsuccessful day. He returned early to the Grand Occidental Hotel, where he was stopping, and sank down into one of the strong chairs in the lobby.

"The last trip!" said Mr. Kidder, wiping his forehead.

His faculties were dulled, his speech was thick. His mind refused to recall the exact details of his conversation with Miss Luella B. Smith, which Mr. Dundee had overheard.

"The last trip!" repeated Mr. Kidder huskily, and resumed the contemplation of his conversation and his rehearsal of his dream—that fond, foolish, fatuous dream, that favorite fairy tale of so many to-day—of what would happen to their employers, customers and other business enemies if they only had a million dollars! He sat silent, staring, drumming upon his chair arm. Then suddenly he laughed a caustic, bitter laugh.

"I can fall back," he said with a gha mockery of mirth, "upon my million!"

Life had never seemed darker to than at this moment!

And now rising heavily from his c he asked the hotel clerk for his key.

"Certainly, sir," said the hotel cl "Certainly, Mr. Kidder. And here' letter for you, sir."

It was a letter redirected from his h address in New York; a business le evidently, with a typewritten addi Opening it and reading it Mr. Kidder g a sudden inarticulate cry, and aln dropped it from his fingers.

Raising it again, he read as follows:

Los Angeles, Calif.
October 28, 192

Mr. Justin Chatsworth Kidder,
108 —— Street,
New York, N. Y.

Dear Sir: It is our unpleasant duty t form you of the death of your uncle, Mr. J Chatsworth, which took place in this cit his apartments in the El Splendioso Hote the 26th of this month.

By his will, now in our possession, his p erty—which is estimated as somewhat in cess of a million dollars—passes to you as namesake and sole heir.

Will you kindly communicate with u your early convenience your wishes in matter?

Assuring you of our desire to serve you every facility at our command, we are,

Your obedient servants,
Spriggs & Pitkin, Att'ys at La

III

HOLDING this letter in his hand Kidder sat in his room in the Gr Occidental Hotel, staring at the wall, versing from time to time with the st radiator.

"It isn't true! I don't believe it!" said to it for the thousandth time. "Y all those others!"

Yet there it was in black and wi right in his own hands. "From his own torneys," said Mr. Kidder, rereading i

And now at last a new expression see to grow upon his face, replacing the so and happier confusion that had been the a harder, sterner, more confident look

"And if that's so," he said, and sat si thinking heavily, while the new expres grew continuously upon his face—look of confidence and power—"why do it now? Right now! Before I l town!" he reasoned half aloud.

He thought now, tensely, without ceas "No; that won't do. No!" he said sev times, shaking his head at the radiator.

But gradually his thinking seemed make progress. From time to time a sub cruel smile grew upon his lips; and s denly with an exclamation of delight sprang upon his feet.

"L'Alouette!" he cried, and laug aloud. "I'll show the world!" he cried the radiator in a tone of active and f cious gayety.

And now after a little further thou he took and opened a small memorand book from his vest pocket, walked ac the room and asked for a number on telephone.

Having secured it he asked the questi "Is Miss Smith there? Will you let speak to her?

"You know who this is, don't you?" inquired then in that low, confident secret tone so often used by young n experienced in talking with members of opposite sex over the telephone. "List how'd you come out with him?"

"Oh, all right, finally!" replied the vo of Miss Smith.

"I'm sure glad of that," responded Kidder.

"It wasn't what you'd call an easy exactly," said Miss Smith's voice, givin short outline of it.

"The old crook!" said Mr. Kidder at closing, in his low, sympathetic, alm crooning telephone voice. "I certainly sorry for starting it! Say, listen," he sa slightly changing the conversation. want to ask you a question—about y know-who! Look, is he always prowl around the store? Isn't he ever back th in his own office?"

"He is—certain times."

"Alone?"

When Your Furniture "Blooms"

The high polish of your piano and other fine furniture becomes cloudy very quickly. Varnish manufacturers call this "bloom." It makes new furniture look old and old furniture older. Worst of all, it indicates careless housekeeping.

How to remove this unsightly "bloom" is the ever present problem of all good housewives until they try

3-in-One *The High Quality Household Oil*

Used the right way, 3-in-One not only removes the "bloom" but restores the lustrous finish and preserves it. Even surface scratches disappear. Follow these directions carefully and your furniture will look almost as if it had just come from the factory:

Wring out a cloth in cold water and sprinkle with a few drops of 3-in-One. Go over a small surface at a time, rubbing with the grain of the wood. This removes "bloom," finger marks, grease and surface scratches. Polish with a dry cloth and see the bright new look return.

Use this same method for cleaning and polishing all woodwork; painted, varnished and hardwood floors; oilcloth and linoleum.

Seventy-nine uses for 3-in-One in the home—lubricating, cleaning, polishing and preventing rust—are illustrated and explained in the Dictionary which is packed with every bottle and sent with every sample.

FREE. Generous sample and Dictionary of Uses. Request both on a postal card, or use the coupon at the right.

3-in-One is sold at all stores in 1-oz., 3-oz. and 8-oz. bottles and in 3-oz. Handy Oil Cans.

WINCHESTER
TRADE MARK
TACKLE

1866 1922

ANNOUNCEMENT

Sportsmen will be glad to know that there is now a complete line of Winchester fishing tackle.

¶There are 140 styles and sizes of Winchester rods, including bamboo and steel fly rods, bait rods, and bait casting rods.

¶Winchester reels, including single, double and quadruple action, from the highest grade jeweled-bearing types to the simpler, less expensive ones, offer a complete range for all fresh water fishing.

¶A good assortment of spoon and plug baits, lines, sinkers, and other accessories, rounds out Winchester fishermen's equipment.

¶It is sufficient to say of the quality of these products that they bear the name "*Winchester*", and are made by the same organization which for half a century has studied and satisfied the requirements of sportsmen.

¶There are 4000 Winchester Stores in the United States which sell Winchester tackle and other new products. Look for this sign on the window: *The Winchester Store.*

¶Ask at *The Winchester Store* in your neighborhood for a pocket catalog on Winchester tackle.

WINCHESTER REPEATING ARMS CO., NEW HAVEN, CONN.

(continued from Page 84)

"He's alone there noontimes," said Miss Smith, "almost always—in there looking out for the fur department."

"The fur department?" repeated Mr. Kidder.

"Yes, when the girls in there are out for lunch he looks out for it. That's right out in front of his private office!"

"Way over there?" stated Mr. Kidder. "At one side? Back of that second show window?"

"That's right. Where they've got our underwear displayed," said Miss Smith, confirming him. "Why?"

"And you say he's there all alone noontimes?"

"He is, yes. Almost always; but why?"

"Oh, nothing."

"You aren't going to start anything rough?" asked the voice of Miss Smith a little anxiously. "You aren't going in there to beat him up or anything?"

"Oh, no. Nothing like that," replied Mr. Kidder.

"Because if you do ——"

"Oh, no," repeated Mr. Kidder, with a whimsical expression in his voice. "I'm just going to start a change in the dry-goods business."

"What change?" asked the voice of Miss Smith sharply.

"A great change. An innovation. A real mark-down sale! I'm going to start a new custom. I'm going to have a real mark-down sale with genuine reduced prices. I'm going to tell the truth for once in the show windows of this nation," said Mr. Kidder somewhat oratorically.

"Go on! Tell me!" she asked, struck perhaps by a certain grim tone underlying his apparently light words.

But with this partial explanation she found she must content herself. For now Mr. Kidder said good-by and finally hung up the telephone.

"There's one nice little girl. I'll do something for her some day!" said Mr. Kidder, brushing his hair and looking over his shoulder in the mirror.

Having done this he put on his hat and started below to the lobby of the hotel, where he stepped up briskly to ask a question of the night clerk.

"The night porter personally?" said the night clerk, pointing. "You'll find him in back there."

Following his direction, passing back behind the swinging door, Mr. Kidder found himself in the severe, battered and somewhat close-smelling hall that led from the alleyway to the service elevator, and in the presence of the night porter—a tall, heavy paunched man in overalls, with a pale complexion that gave the appearance of immense but unhealthy strength—of something abnormal that had grown to a great size under the electric lights.

"All right," said the night porter, examining the bill carefully before he placed it in his trousers pocket. "Shoot! What do you want?"

Mr. Kidder told him briefly in a low voice his mission.

"I know just the man for you," said the night porter, spitting to one side very pointedly. "For twenty-five bucks he'd sell his praying mother!"

"That's the kind," said Mr. Kidder, speaking for the first time aloud.

"He's been in the Heathcote Penitentiary six times."

"Is that right?" said Mr. Kidder with evident interest.

"Wait! He's probably out here in the alley right now," said the night porter. And going out, he whistled shrilly into the half darkness.

In a short time a large head and shoulders appeared above the raised platform upon which the busses discharged their trunks at the level of the floor on which Mr. Kidder and the night porter were standing. After a short conversation their owner clambered up with something of the action, Mr. Kidder felt, of a sea lion on its shelf in an aquarium.

He was a much larger man, Mr. Kidder noticed, than even the large, soft, unhealthy-fleshed night porter, but quite different.

"Now I'll leave you ginks together," said the night porter cordially, "to frame it up. But don't go too far. Don't let them indict you for murder!"

With this pleasantry he left them alone in the bare and battered service hall, and Mr. Kidder turned to impart his message, and looked full into the face of his possible agent, who had now removed his derby hat and stood watching him, his extremely short upper lip still withdrawn over his small widely spaced teeth, at his pleased appreciation of the night porter's parting jest.

He had one of the largest frames and without doubt the roundest head that Mr. Kidder had ever seen, and a hand like a small shovel.

"Sit down, chief," he said, pushing Mr. Kidder heartily with it upon the narrow oaken bench of the night porter before the service elevator. "Shoot it. What's on your chest?"

He had a small, round, somewhat bloodshot eye in his exceedingly round head, a moist, outstanding, shining under lip and a highly corrugated brow, conveying the appearance of doubtful, puzzled, but always ready ferocity.

On his breath Mr. Kidder noted undoubted evidences of one of the coarser types of alcoholic liquors.

"Go on, chief," he urged in a heartiness always bordering on a threat. "Set it out! What is it?"

"You're married—are you?" asked Mr. Kidder finally in a somewhat hesitant voice.

The strong and criminal friend of the night porter looked up at these words as if more than usually suspicious, and looked down when satisfied they were asked in entire good faith.

"In a kind of way I am!" he said. "Yes, I am," said the friend of the night porter, deciding to speak definitely at last. "What's the idea?"

"I'll tell you why I asked you," said Mr. Kidder.

And looking about he now related his proposal in low tones—the effort of patient, wary and always painful thought marking always deeper corrugations in the forehead across from him as he did so.

When Mr. Kidder had completed his speech his hearer was still silent, apparently still occupied with the slow grinding process of his thought.

"What is it?" asked Mr. Kidder finally.

"As far as I go," he answered slowly, like a man before a serious problem, "what the hell do I care?"

"Sure," said Mr. Kidder encouragingly.

"I'll take a chance with any man. Up to the chair!" said the exceedingly round-headed man proudly, staring far ahead, still thinking, with an almost audible crunching of the jaws.

"I got that," said Mr. Kidder, "the minute I saw you!"

"But I kind of hate to drag the old woman into this!" continued the friend of the night porter who had been so often in the penitentiary.

But finally Mr. Kidder fixed it up with him.

IV

STARING out the opened door of his private office Mr. Dundee, the easily irritated junior partner, gazed out upon the fur department, now, during the noon hour, empty even of its few remaining attendants, and thought with regret and irritation of the busy scenes that would have been going on there even at this time two, three or four years before.

As he watched, his eye suddenly grew bright and sharp and reminiscent at the sight of two heavy figures—male and female—wandering on cautiously and furtively into unfamiliar surroundings. It seemed at first impossible; but Mr. Dundee, staring anxiously, saw that it was true.

"What can I do for you, madam?" said Mr. Dundee, hurrying out of his office, rubbing his deferential hands.

"Is here where they keep the furs?" asked the extremely large woman, looking around.

"It is, madam, yes. Yes," said Mr. Dundee, with increasing amiability.

"The real good ones?" asked the giantess in the rusty cloth coat, looking at the groups of pendent garments on their hangers.

"The finest in this part of the country, ma'am," said the junior partner. "There's no collection west of ——"

"Bring them on then!" interrupted the round-headed giant with the corrugated forehead, speaking finally. "Let's have a look."

"Yes, sir. Yes, madam!" said the extremely affable junior partner with a gay alacrity. "Now what will it be? Something like this?"

"We want something good, y'understand!" said the giantess, examining it with worn and stubby fingers. "We got our money right here with us to pay for it!"

ALEMITE

Graphite Penetrating Oil

Your car will be squeakless if you apply Alemite Graphite Penetrating Oil at the following points of friction:

Springs

Fenders

Hood and hood catches

Body-bolts, doors

Floorboards and sills

Steering column

CAN you hear your car wearing out? Can you hear the repair bills coming? Every creak and squeak is the cry of wear and depreciation. Stop those unpleasant sounds now with Alemite Graphite Penetrating Oil. A few drops applied to the side of a spring work wonders. The oil bores in between the rusted leaves to the other side, coating them with life-giving graphite. When a bolt "freezes" or a nut sticks, Alemite Penetrating Oil loosens it quickly. Alemite Penetrating Oil dissolves rust and prevents its forming. It silences noisy hinges and creaking doors. You can buy a whole pint for $1, at any Alemite Dealer's.

Buffalo - Cleveland - Detroit - St. Louis

Keeping You Happy at Meal-Time

By E. M. STATLER—being one of a series of ads embodying instructions to Statler employees.

THE way you're served by your waiter and his helper (called a "bus boy") can make or mar your meal. The best of food, perfectly prepared, actually tastes better if it is properly served, by someone interested in the service, than it otherwise can.

That's why we are always emphasizing to our waiters that *our reputation is in their hands.* A waiter who is careless or forgetful or negligent or slovenly can take all the good taste out of the food he serves you, and most of the pleasure out of your meal. We won't have that kind of waiters.

In a first-class hotel you pay for first-class service, as well as for first-class food. You're entitled to it, and your waiter knows it. It is with those facts in mind that we issue to the waiters and bus boys in our hotels instructions like those you see in the columns below:

Instructions to Waiters and Bus Boys in the Statler-Operated Hotels

"THE waiter who has ability *to please people* has something that is valuable to us and to him.

"If you haven't that ability, or if you don't habitually make the most of it, you are not only earning less than a good waiter should, but you are, at the same time, hurting our reputation.

"When we say that our guests must be satisfied with the treatment they get in our dining rooms, as well as with the food they get, we mean that they must be *pleased.* If you can't please the person you are serving, get your captain on the job.

"We don't want anybody to leave one of our restaurants feeling that minor annoyances marred his meal; and that's the way you ought to feel. We want him to feel that he will *be glad to come back to us*—and you ought to want him to be glad to come back *to you.* See that he does.

"Remember that good service is never fussy, but is always interested and watchful and careful.

"Take care of the diner and the tip will take care of itself. You can't keep most people from tipping when they have had good and intelligent service; but people are learning to proportion their tips to the quality of service they get.

"No waiter can stay with us who does not thank our guests for whatever tips they give him. The best waiters say as cordial a thank-you for a small tip as for a large one—and they find it a good thing to keep on doing.

"You must follow the instructions in The Statler Service Codes to the letter. A business stands or falls by what its policies are, and how they are carried out; the Codes explain our policies fully.

"Courtesy to all guests, under all circumstances, is an obligation of yours and of everybody's who works in these hotels—and so is courtesy to your fellow-employees.

"Whatever has been your practice, in other places where you have worked, we have our own way of doing things and our own way of serving people. It will pay you to do things our way instead of some other way. Your detailed instructions about how to serve a meal, how to wait on a party, and so on, will give you many hints; study them."

E. M. Statler

A new Hotel Statler (1100 rooms, 1100 baths) is now building at Buffalo—to open in the spring of 1923; 500 more rooms will be added later.

Hotel Pennsylvania

Opp. Pennsylvania Terminal, New York. *The Largest Hotel in the Wor*

(Continued from Page 87)

"How much is that one?" asked the aconic giant close beside her.

"Four hundred dollars."

"Say, look—is that the best you've got t this dump?" asked the giant in tones of me suffering from an almost nauseating ense of anger and insult.

"Oh, no, sir. No, sir," said the junior artner with grateful humbleness.

It seemed almost too good to be true, his turning back to the happier, brighter ays in the fur trade.

"Go on. Get them out then. Drag hem out!" said the easily irritated giant o the busy, ingratiating, amiable junior artner. "Let's see the best. The best is hat we're after—see?"

"This way. This way, please," said the unior partner, calculating busily in his ind, with a happiness he had not felt efore in two years; and he led them over to the territory of the thousand-dollar oats—and upward—in the farther corner of the department.

The feet of the giants thudded heavily after him across the empty space.

"Now this," said Mr. Dundee, fingering at the large soft clinging garment—"this is a fine Alaska seal, for twelve—no, fifteen hundred dollars! Fifteen—yes!" said Mr. Dundee, looking at the secret script upon the tag again. "Fifteen hundred dollars."

"Is this the best they is in the whole place?" asked the giant, crowding on him from behind, with one large hand upon the manikin.

"The very best?" inquired the giantess, enveloping him on the other side.

"The very best, sir! Yes, madam!" said Mr. Dundee, looking up sharply into the almost savagely serious faces above him. "Except, of course, sable."

The faces of the giants, especially of the corrugated-browed male—stared down suspiciously and menacingly over him.

"The very best—except for sable! The very—blub!"

"The very—blub!" said Mr. Dundee, stopping suddenly, partially enveloped in the garment, with his mouth and the larger portion of his face below his eyes now entirely covered by the male giant's hand.

The female giant stepped aside with a look of inquiry at her mate.

"You can be going along now," he told her in answer. "We'll take care of this!"

And now turning his strained eyes Mr. Dundee, the junior partner, saw emerging from behind one of the circular exhibits of furs, where it had apparently been waiting, the little and elegantly dressed figure of Mr. Kidder.

He was apparently carrying some pasteboard placards which he had in his hand—and a long pole such as is used for rolling up rugs or carpets.

"You hold him there," he was saying to the giant, "till I get them ready. Give him a little more air if he needs it," he added thoughtfully. "He'll promise to keep still. Won't you?" he inquired of Mr. Dundee.

Mr. Dundee, the junior partner, promised with his bulging eyes.

It was but a few minutes afterwards that the casual strolling cigarette smokers and post-dowers of the noon hour observed with much attention two men arranging a new lay figure or manikin among those already standing in the display of ladies' underwear in the handsome second show window of M. W. Praether & Co.

They were evidently skilled men; they worked quickly and sharply; and in a comparatively short time they had completed the task of setting up and fastening the image to the rear of the window, and then of hanging by short strings about and upon it several large placards, for the time being turned with their backs toward the street.

The smaller and more elegantly dressed man, who evidently the one in charge—though his assistant, a man of unusual size and strength, was clearly most essential to him in the operation.

Arranging the new figure, which seemed to be enveloped in a large sealskin coat, in the exact center of the rear, setting to one side of the graceful and delicately clothed feminine figures in the foreground of the window, the smaller workman finally gave a signal to the larger, who whisked the enveloping fur coat from the new image, and both disappeared almost simultaneously from the window—leaving the new display in its center.

As they did this two of the noonday strollers of the gum-chewing sex stopped before the show window with an expression of distinct surprise upon their faces. For they now observed for the first time that the new and central figure had a singularly heavy mustache, which was partly covered by a white bandage extending around the back of the neck.

"My Gawd," said the larger and more triangular-headed one of the two. "Would you look at that!"

At her exclamation others stopped with similar outcries of interest.

This figure with the mustache and the bandage about its mouth, which appeared in the center of the group of other figures displaying ladies' underwear, bore on its chest, they now read, a placard marked in large letters L'Alouette, which was fastened apparently on a silken camisole of apricot shade.

This placard, however, they soon understood, could not be meant to be the name of the figure itself, for not only was there a sum marked under this title, making L'Alouette—$1.99; but underneath it, hanging about to the knees, a second placard, marked La Regina—$4.99, was fastened evidently to a handsome pair of knickerbockers of heavy navy-blue satin, while above a similar smaller placard, marked La Babette—$1.00, was apparently secured and swung from a small fluffy novelty of sky-blue tulle which ornamented the low neck—which in turn in the cut of its garment suggested evening dress. Bare arms and low black socks with mannish shoes and garters completed the costume.

"What's the idea, huh? What's the idea?" hurriedly asked a tall pasty-faced young man with a cigarette, of the larger of the first two observers—struggling meanwhile to hold his place in the gathering, jostling crowd.

"How would I know?" she replied to him, now resuming her gum-chewing again rather slowly.

And now, watching instead of questioning, both read half audibly with their lips the larger placards which appeared about the new figure—three in all.

That at the left announced simply—what all eyes had already seen: Undies of Distinction.

That at the right stated generously: Take this all home—for $7.98.

But the entire meaning of the three was not conveyed until the reading of the largest and most conspicuous of all the placards, displayed above the figure's head, which said: At last! The First in America!! A real genuine mark-down sale!!!

"Look!" said the larger, more triangular-haired blonde at the window, now clutching her companion's arm. "Its eyes are moving!"

Not only that, but now it was claimed by several that they heard it making low but inarticulate sounds—though this could not be certain in the general and increasing confusion.

But at this time—word no doubt having gone into the store—the door in the back of the window was seen to open and new figures came in—several figures of employes, who were at once seen to be busily engaged in releasing the lay figure from bonds with which it seemed to be lashed to a long, heavy pole and to the back of the window.

Almost immediately when this was completed the figure started leaping actively up and down.

"Where is he? Where are they?" exclaimed the recently released lay figure. And bursting into hot, flaming and incandescent blasphemy, regardless of appearances, it hopped sharply from the rear of the show window and darted down the aisles of the store like some mad wild thing entirely bereft of its senses. Those whom it sought were apparently not in sight, for it stopped now before the ladies'-underwear counter to shout out loudly at the smartly dressed attractive young woman behind it: "Where are they?"

"Where are they?" repeated Miss Luella B. Smith, shrinking back in alarm.

"Bring them out, ye hussy!"

"Bring out who?" she asked in reply.

"Yer confederates! Yer confederates!" exclaimed the easily irritated junior partner. "The ones that brought about this dashed diabolical outrage."

And now looking about he saw behind him a short fat figure, the figure of his senior partner, old M. W., the head of M. W. Praether & Co., whose mouth was apparently covered with his hand.

How We Are Increasing Our Sales — Because We Tried it FREE!

"IT'S *possible* for YOU to make *more* money this spring than ever before. Those concerns making the *most* money *right now* have jumped out of the old rut. They're doing something *different!* A *new* twist to your business—a new and better way of selling can mean *prosperity* instead of depression for you in 1922"—says Roger Babson.

Fred Mann, the famous North Dakota retailer, is proving that Babson is right. So is Charles Haines, the noted Kansas merchant. Likewise Mead-Johnson, Evansville manufacturers—and many others!

Needing business—wanting to cut expense, these progressive business men tried at *our* expense the Addressograph Way of *increasing sales.* Note opposite, their own statements of results. Why deny yourself equal prosperity? Real sales messages and latest price-lists to your *inactive* customers will regain their trade and offset competition. Attractive letters and circulars to your *logical prospects* will swell your sales. You can *prove* it at *our* expense! The *same* Addressograph prints *brief* messages and addresses them 10 times *faster* than hands. Errors impossible! FREE trial will convince you. Just mail coupon below.

Note These Startling Sales Results of These Firms who tried it FREE

1. "We did 20% more business in 1921 than in 1920 in spite of a 30% price decline. Addressograph-ed circulars and catalogs largely responsible. We are using direct advertising exclusively this year."
—THEODORE SAMUELS, Vice Pres., Samuels Shoe Co., St. Louis, Mo.

2. "How any merchant can afford to be without the Addressograph is beyond me. Ours is of inestimable value in covering our territory for 60 miles around with letters and sales notices."
—CHARLES HAINES, Merchant, Sabetha, Kas.

3. "We sold more merchandise in 1921 than the year before—over $500,000 in a 5,000 town. We did it by keeping a continual stream of Addressograph-ed letters and circulars going into the mails.
—FRED MANN, Pres., Mann's Dep't Store, Devil's Lake, North Dakota.

4. "We are doubling our Addressograph-ed advertising in 1922, because our 63% increase in sales in 1921 over 1920 is largely traceable to this form of sales effort."
—E. M. JOHNSON, Vice-Pres., Mead-Johnson Co., Evansville, Indiana.

"What are you blitherin' at?" inquired the junior partner hastily—with the emphasis on the "you."

"I wasn't blithering," said the senior partner evasively. "I was coughing."

"What are ye coughing at then?" asked the easily irritated junior partner.

And in absence of immediate answer he burst forth again in wild, frank, free, incandescent speech, in which the names of a great variety of persons and deities—including that of the senior partner—were freely and inextricably intermingled.

"And you too—you too—if ye want to know it!" he was saying, when the senior partner interrupted him.

"That will be about all for that," said the senior partner crisply. "Get dressed," he stated to him coldly, "and come up to the office. We can curse each other more comfortably there."

At about this time, laughing heartily, Mr. Kidder, leaving the edge of the reluctantly dispersing crowd, was walking home to his hotel by himself, having long ago dismissed his companion.

"I only wish I could do it all over the country. To every man I sold!" he was saying to himself. "What a boost—what a boost it would give the retail business of this country!"

But of course he saw this would be impossible, considering the quickness with which the news of this one experiment would no doubt reach his home office. So he now busied himself with the consideration of a strong and dignified letter of resignation to be sent in in time at least to reach his house simultaneously with the report of his last activity with one of their customers.

Still considering this, he passed upstairs to his own room.

The framing of his letter—to contain both the dignity and pep that he desired to give it—was a more difficult and laborious task than he at first realized; and when it was dinnertime he found it still uncompleted. Laying it aside finally, he proceeded downstairs. And now as he passed the hotel desk, looking back of it, he saw the fine diagonal line of a single letter in the box with his room number.

It was a letter, he saw when he received it, with the now familiar postmark of Los Angeles. Opening it with agitated hands he read as follows:

LOS ANGELES, CALIF.
October 29, 1921.

MR. JUSTIN CHATSWORTH KIDDER,
108 —— Street,
New York, N. Y.

Dear Sir: Owing to a regrettable error you were notified by letter yesterday, the 28th, of your inheritance of the fortune of Mr. Justin Chatsworth, deceased. This announcement, we greatly regret to say, was an error—a mistake originating in a confusion by a stenographer of the addresses of two persons with identical names—your own and one other.

The other Mr. Justin Chatsworth Kidder, who, it seems, was associated with your uncle in his soap business, is the recipient, it now appears, of his fortune; while the mention of your name is merely incidental, arising from the fact that the decedent took occasion to speak with reprobation of your changing of it.

These exactly identical names with their addresses being the only two which appeared in the document, you will readily appreciate how a mistake in this matter was possible—though most unfortunate.

Reiterating our regrets for this error, and trusting it has not inconvenienced you to any serious degree, we are,

Your obedient servants,
SPRIGGS & PITKIN, Attys. at Law.

▼

AT 3:30 O'CLOCK, after the couple in the room underneath had complained to the office the second time of his tramping around, Mr. Kidder finally went to bed, and falling, after some hour or so, into a heavy and exhausted sleep, did not wake until nine o'clock, when he was aroused with a start by the rattling of his telephone bell.

"This is M. W. Praether & Co. speaking—Mr. Praether's office!" said the voice on the telephone—a voice which Mr. Kidder thought at first to be that of Miss Smith.

"Yes-s-s," said Mr. Kidder's still heavy tongue.

"I'm speaking for Mr. Praether. Could you come and call on him at his office at 9:30?"

"I could—yes," said Mr. Kidder, now thoroughly awake.

"Very well, he will look for you," said the woman's voice at the phone, closing the conversation.

Mr. Kidder, still somewhat dazed, wondered, while hurriedly dressing, if it could have been Miss Smith who had been talking—or, as more likely, merely one of the stenographers with a clear, high, attractive soprano voice.

When he arrived at the office of Mr. Praether, the head of the firm, he thought that he heard again, from the anteroom, the sound of the voice and laughter of Miss Smith, together with that of the head of the firm—or old M. W., as he was more generally called—in the inner office. But this he believed later to be a mistake, for when he was taken in at last he found the latter alone and without any suggestion of laughter in his face—and the door on the farther side of his office firmly closed.

"Sit down," said old M. W. gruffly.

He was a short, heavy, smooth-faced old man, who looked usually like a good-humored toad with a bald head. But just now there was no humor apparent either in his little round eye or in his voice.

"Sit down," he said briefly to Mr. Kidder, who did so without unnecessary delay—waiting for the expected.

"I got you in here for a purpose!" said Mr. Praether, fixing his small but observant eye upon him steadily.

"Yes, sir," said Mr. Kidder, swallowing, and slightly lifting his shoulders.

"Our junior partner, Mr. Dundee, has this morning withdrawn from our firm," stated Mr. Praether now—and waited.

But Mr. Kidder said nothing—but remained motionless, silent and rooted to his chair.

"That being the case," continued the other, "we shall have to get out and look for buyers—several of them—for the various departments which he formerly handled."

And now Mr. Kidder's lips moved slowly but did not yet articulate.

"Men of enterprise and pep and initiative! Men who are willing to stand up and take the gaff for what they think—no matter who's against them!" continued Mr. Praether.

And now a slight murmur came from Mr. Kidder's lips.

"No matter who's against them," repeated Mr. Praether. "Up to and including myself! That if I go and make a fool of myself, will stand right up and fight against me—like undefeated wildcats! You understand?"

"Yes, sir," said Mr. Kidder's voice now rather sharply.

"Will you come with us? And try it?" inquired old M. W., looking him through and through with his little eyes, and named the departments he would give him, and also the figure of his salary—a very generous one, much larger than he had been getting.

"I certainly will!" replied Mr. Kidder quickly, with a slight moisture in his eye.

And they arranged the details.

"And now," said old M. W., rising and stretching out his old fat hand to shake hands with him, "if you'll go out into that next room—through that door there—you'll find your assistant—the head buyer for the ladies'-underwear department, Miss Smith. You know her, don't you?"

"I certainly do," said Mr. Kidder, stumbling into the next office, still partly dazed.

"Look," he said finally, when they alone and he was sure they couldn't be heard. "What happened?"

"He blew up, that's all! Finally!" Miss Smith.

"Dundee—you mean?" suggested Kidder, watching her, filling out her For she seemed almost as excited as h

"Yes," said Luella B. Smith; "Ill did always—with all the rest of us. this time it was old M. W. himself!"

"Oh," said Mr. Kidder, seeing the tion more intelligently and compr sively than before. "And then what?

"Then the old man sent for me."

"And what'd you tell him?" asked Kidder, watching her.

"I just told him the whole story—it was. How he picked on you and m everybody all the time."

"Yeah," said Mr. Kidder. "And about my thing?"

"I told him that, too, just the w was," said Luella B. Smith, with a flush of admiration on her face. "I him that he found one person finall couldn't pick on. He picked on one was too much for him."

"You didn't!" said Mr. Kidder, a su flush of color now appearing on his c

"I certainly did!" replied Miss Sm her decided manner.

"And what'd he do?"

"He laughed. He got to laughing," Luella B. Smith. "He loves to laugh than anything."

"He's one fine old man," said Mr. K enthusiastically.

"He is," affirmed Miss Smith. "F prince. I love to hear him laugh. But was another thing, too, in this!"

"What?" asked Mr. Kidder.

"He's wanted to get rid of tha grouch right along. But he couldn' hated to. And this thing did it for So incidentally it fixed you up all right him!"

Mr. Kidder said nothing for the mo

"You were lucky."

"I was—more ways than one," sai Kidder. And she looked at him, his was so kind of husky.

"What—what's the idea?" asked ella B. Smith, for he was trying to tal hand.

"You know what you did for me was asking.

"No. What?"

"You went to the front for me—I it! Or this wouldn't have happ said J. Chatsworth Kidder.

"Oh, forget it!" responded Miss

"Do you know what I think about he asked, crunching her hand more realized. "I think you are all to the

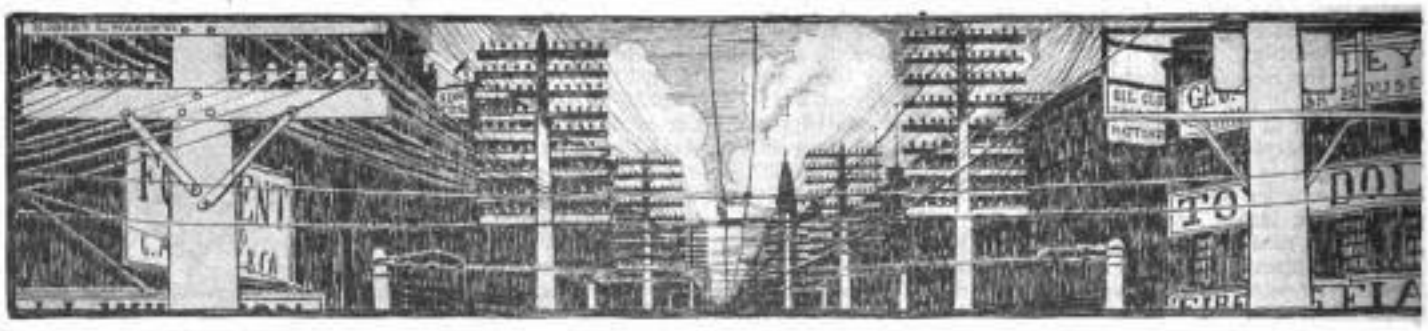
"Do you mean that — or are just ——" Miss Smith started saying a half serious, half mocking smile.

"I'll show you whether I mean it sponded Mr. Kidder.

"Not now!" she said, pulling her away.

"No. But just as soon as I prove make good on this job—anyhow!"

"Come on," said Miss Luella B. practically. "We've got to start doin



"Do you know what I think about insisted Mr. Kidder with sudden siveness. "I'd rather travel alongs you than have a million dollars! day!"

"Come on then," said the wom always more practical than the man. time we traveled!"

Side by side they went down toget start their plans for putting the l underwear department on the map.

"We'll celebrate—right at the s said Mr. Kidder. "We'll show the one regular mark-down sale. A real ine one! We'll make them buy."

"Sure! We'll have all the old m men," responded Miss Luella B. with a happy, laughing look, "in here b armfuls for their wives!"

Would You Build This Year If Costs Were Lower ?

THEN you can build. Go to your architect or contractor and ask him to submit an estimate for the type of home you have in mind.

Building costs ***are*** lower, and any good architect or contractor will give you the utmost benefit of his experience in securing good materials and sound construction at lowest prices. If you go to a good firm you will get value.

Take the matter of heating in which we are directly interested. You can save several hundred dollars on this one item—perhaps a thousand. The Mueller Convector makes this possible because of its simplicity and because its installation does not increase cost of building. Yet, it will give you comforts and conveniences that more complicated and costly systems can hardly furnish.

First, there is no need to have a complete basement under your home unless you want one. The Convector occupies a space about four feet square so that only a small basement will be needed. There are no pipes either in the basement or the rooms above. Here is your first big saving.

Then, it takes but one day to install the Convector, and the installation cost is rarely more than $25, usually less. The Convector itself costs from $50 to $1000 less than systems often used in homes of four to eighteen rooms.

You do not sacrifice either quality or comfort. We are only too glad to prove that in many ways the Convector is superior to other methods of heating. Heat is more even, ventilation is better, warmed air is healthfully moistened and you burn less fuel. The Convector is easily operated, lasts a lifetime and is more easily and quickly regulated to temperature change than any other type of heating system.

Even if cost is not a factor to you, we ask you to let us prove these statements. You are very apt to find that the Convector is by far the best system for your home regardless of price, and you can put the hundreds you save into a garage or furnishings.

Let us send you complete information about this remarkable system. Let us give you a free estimate on the complete cost of the size you will need, installed and GUARANTEED to heat all your home to your COMPLETE SATISFACTION. Let us send you, too, our book on HEAT, something everyone should read before they buy or build a home. No obligation. Just send request form below.

THE GOOD UNCLES

(Continued from Page 19)

because of my uncle that I am here. One might almost guess that the two of them staged acquaintance in Paradise and arranged this meeting for us. I wonder how your uncle likes my uncle!"

The youth grinned. He conceived he was getting the measure of his vis-à-vis—a rich and witty French gentleman, a nobleman perhaps—a count. He talked and listened readily throughout the meal, and when afterwards Maurice strolled forth from the inn door, cigar in mouth, to the rough road that dipped to the little harbor, his dinner companion made occasion to join him.

"I was going down to look at the sea," said Maurice. "That, and the wine when it is red, are the only things to look upon here. And there are times when it is superb."

They passed among the sullen-fronted stone cottages and so down to the little hard of stone revetment that sloped to the inward-surging tide. To each side of it, perhaps two hundred yards apart, a concrete arm of harbor wall ran seaward, uselessly, for no anchor could hold on that iron bottom in the great inward-running swell and sag of the seas. Maurice led the way out upon the eastern arm, and the rising wind lifted feathers of spray that stung their faces as they leaned against it.

"Well?" said Maurice as they came to a halt halfway along the wall.

"Eh?" The young fellow did not understand.

"Look, my friend!" Maurice waved his cigar at the seaward distances. "These are the waves that Britannia rules. What do you think of your subjects?"

It was something more than dusk by now. Below them, prisoned in their channel, the great black swells roared shorewards like gigantic bowlders cascading down a mountain side. They came out of the deepening night, and to east and west, outside the channel, there stretched away beyond eye range the white of tumbling breakers upon the coastwise rock barrier of Brittany.

"Shouldn't care to fall in just now," said the young man.

"Not want to meet your uncle?" laughed Maurice. "Now I, when I was twenty-five, I swam that for a bet. That is my one accomplishment—swimming! Don't you swim?"

"Well"—the youth hesitated—"I've swum, of course—a little. Swimming baths and the seaside—that kind of thing. But I'm not what you'd call a swimmer. I say, it's getting cold out here, isn't it?"

They turned and went back. Maurice made an early excuse and retired to his bedroom. He had reconnoitered his ground; Le Robain had justified his memories of it.

Not for an instant did he falter in his purpose. The thing was ordained to be done; remained only to stage it so that scandal should gain no foothold, so that Irma de Leyle should not be shocked and frightened. It was to be an accident; his luggage and his belongings would remain as they were; he would write to a friend in Paris making an appointment for that day week; he would leave his pocketbook with his money in a drawer of the dressing table. And the lad he had met at dinner should accompany him to the harbor and witness the stumble and the fall into the water. He could count, he thought, on him to run yelling for help; and meantime he, the strong swimmer, the practical companion of the waves, would strike seawards, away from the compulsions of life, to the final infinite mercy of the great waters.

And Irma would never know. At any rate she would never knit her golden brows in perplexity at M. Bertholet, the club secretary; M. Bertholet, the agent on commission for art dealers and merchants of antiques; or M. Bertholet, making the most of a charity salary in a sinecure.

The young Englishman enjoyed a day of sheer charm the following day. Maurice joined him at breakfast and took him for a walk, lunched with him and lounged with him throughout the afternoon. He had a feeling that he must pay in advance for the service he was about to exact, and he gave himself trouble to be utterly delightful. He incurred a smashing compliment.

"I didn't know Frenchmen were like you," said the boy as they sat in the pale afternoon sunshine in the inn garden. "I'm an Englishman, of course," he went on, "an' proud of it!" he added hastily; "but you do make me wonder how we ever won Waterloo."

Maurice raised his hat in salute, smiling. "You ought to be ambassador to France," he said lightly.

The evening came up squally, and when after dinner they set forth upon their stroll to the harbor they wore raincoats. Maurice, as usual, had his cigar. He was satisfied with himself; there had not been one tragic word to cite against him, not one heroic gesture.

"It should be a splendid sight to-night," he said. "Britannia's subjects in rebellion! Once, when I was here before, I saw a ship drive straight on the rocks under the windows of the village and melt—literally dissolve into her elements—while I watched. And of the bodies that came ashore, not a single one was recognizable. Ah, here we are."

They had rounded a row of cottages to the top of the hard, and the low thunder of the sea swelled at them as through a trumpet. There was a sliver of moon aloft with raveled cloud scud pouring across it, and the water came shooting to their feet up the slope.

"It's a rotten night to go out on that wall," shivered the boy.

"A glorious night, you mean," said Maurice. "But don't come if you don't feel like it. I shan't be long."

The boy said something inarticulate, but followed at his heels. But for the need of a witness for Irma's sake he would have spared him. He had come to the point when the thing must be done, and it was too late to tinker with his plans.

The great rollers bowling in along the channel lipped the edge of the wall, and once an ankle-deep swirl of water foamed across it. The spray drove like shot and the wind pulled and thrust like a wrestler. When they reached the point at which they had stood the previous evening Maurice had to shout to make himself heard.

"Not nervous, I hope?"

He caught but one word—"beastly"—of the reply as the wind whipped the sound from the lad's lips. He looked about him at that tremendous theater of vast forces and great voices in which he was to be an actor. The terrifying pomp of night and chaos were to be his. His resolution was perfect. Now was the time. He moved to step nearer the edge as though to peer intrepidly over. That was the instant chosen for accident by the freakish Fate that had brought the two uncle sons together at Le Robain.

As Maurice moved, the lad made to move after him, a hand outstretched to draw him back. The slightly cambered top of the wall was shiny as a half-tide rock, and when he shifted his feet he sat down with a stunning jolt. His feet shot forward and took Maurice at the back of the ankles, driving them from under him. Ere he knew what was happening he was overboard, and a great, smooth-bosomed, silver-crested roller reached up to his falling body, gathered him in as a dog catches a thrown biscuit, and sucked him down.

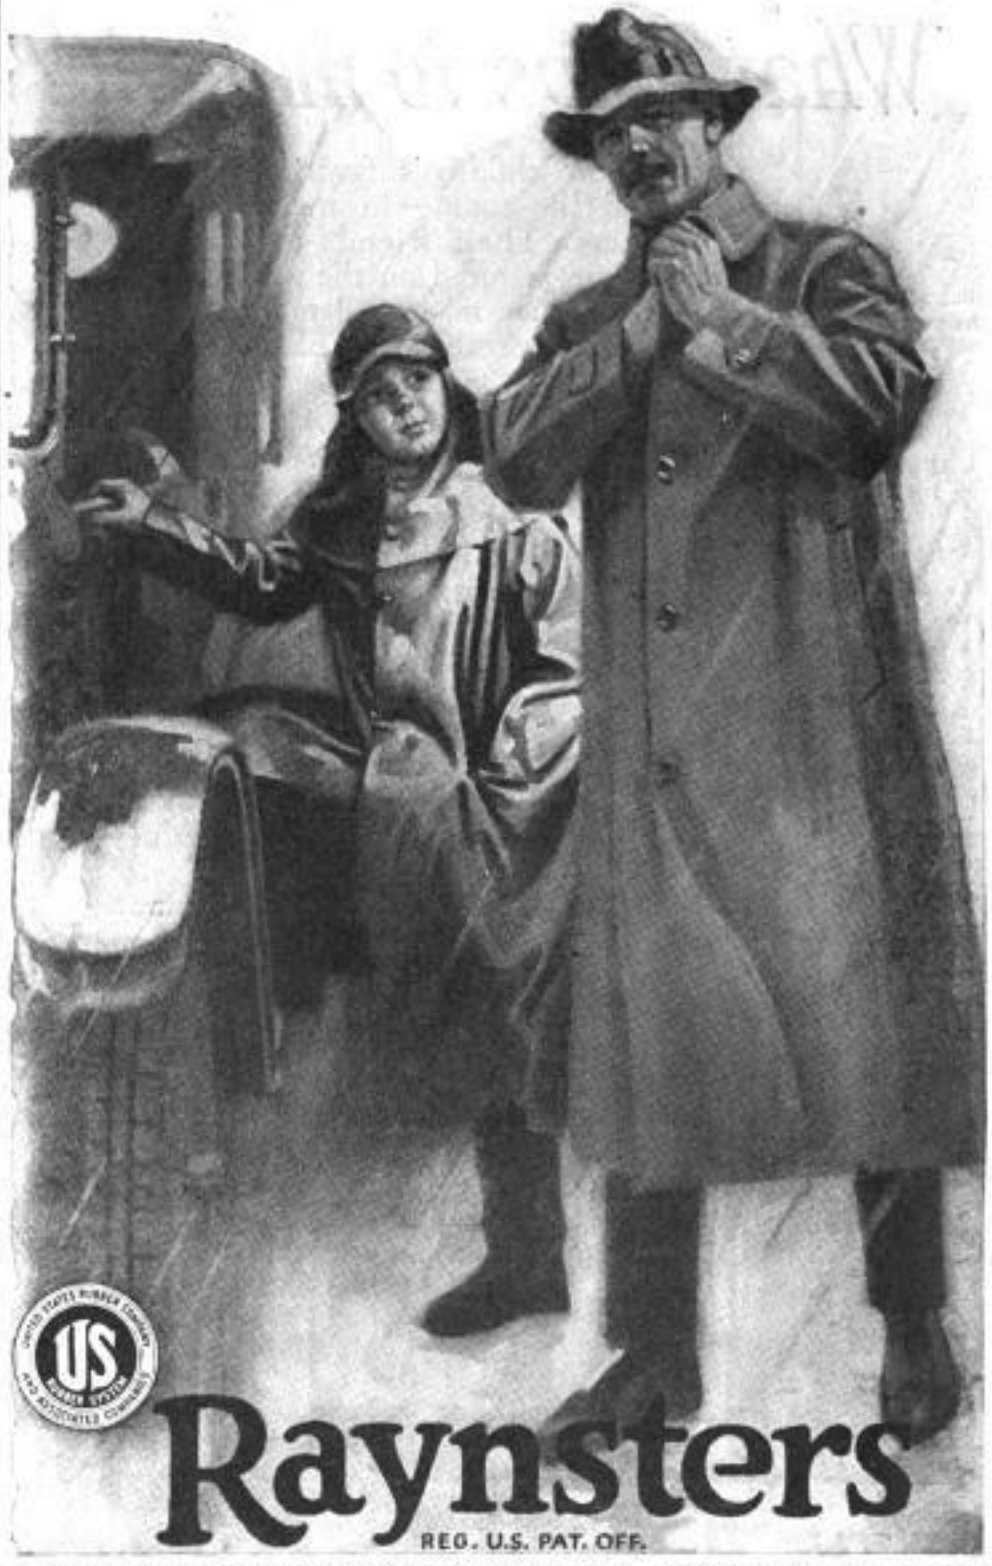
"It is done, then!" was his single thought as the water churned him under and shouted in his ears. He thought he touched the rocky bottom of the channel; mere instinct and unbreakable habit held his breath for him; and, raincoat and all, he shot upwards and found his face in the air on the reverse slope of a great wave. Over him was the side of the wall and he could see the edge of it against the sky.

He had, perhaps, five seconds in which to see that and the contorted figure that poised and swayed over him on the brink, with tossing arms of anguish and a something in all its attitude that suggested it was screaming. And in the last two of those five seconds it ceased to wave and sway; a hand came stiffly forward, pointing at his face. The boy had seen him. And ere the next wave gulfed him Maurice had a strange view of the figure on the wall as it gathered itself to the conventional posture of a diver, hands joined and arms outstretched, swayed forward and came plunging down to him.

He felt the other's body collide with his own, desperate hands clawed over, got a grip on his raincoat and tore a double handful of it away. Then it was borne off, and he was free to go his path again. He came once more to the surface, and saw, a few yards away, the floating face of the boy borne up from the depths, and hands that grasped at the air—his would-be rescuer.

Buying a raincoat is like buying a car—

A SHINY finish—comfortable cushions—these aren't enough when you buy a car. It's the *name*—and what the name stands for—that counts.



With your raincoat, the name is even more important, for looks are no guide at all to raincoat quality. Value here depends on two things—the quality of the rubber itself, and the way rubber and fabric are joined. These things are always hidden—and so a clever makeshift may *look* as well at first as the best raincoat ever made.

Back of every Raynster raincoat stands the oldest and largest rubber organization in the world. Every inch, every fibre of the fabric is sealed with layer on layer of finest rubber. Every seam is triple-reinforced to make the coat absolutely waterproof.

There are many different Raynster models, from rugged rubber surface types to smart tweeds and cashmeres with the rubber hidden inside. Special types for boys, too. Whether you want a raincoat for work, for motoring, or for business, there's a Raynster built especially for you.

Look for the Raynster label! If your dealer should be out of the exact Raynster you want he can get it in no time from the nearest of our many branches.

United States Rubber Company

A COMPLETE LINE OF RAINCOATS *A type for every need*

Playroom and children's barber shop in Bloomingdale's Department Store, New York City, showing a Blabon floor of inlaid linoleum (pattern No. 352).

Happy childhood! What helps to make it?

Indoors the children's favorite animals stalk around the room—in their wooden grotesqueness. Their friends of Mother Goose tales are pictured on the walls. And many playrooms are made still more attractive, as well as serviceable, with Blabon floors of Art Linoleum.

The beauty of their patterns lends its cheery note to playrooms everywhere, and to every room in the home.

Little feet can kick and scuff to their heart's content without doing any real harm; for Blabon floors are remarkably durable and they are safe, for they do not splinter. Their plain colors and inlaid patterns go through to the burlap back. It is impossible to wear them off while the linoleum lasts.

Blabon floors are sanitary. Easily kept clean by a light regular going over with a damp cloth. And because they are so durable they are economical.

For genuine linoleum look for the name Blabon. Write for illustrated booklet.

Blabon Rugs for the home. These genuine linoleum rugs have the rich colorings of fine woven rugs; but cost much less. They are sanitary, mothproof, durable. Ask your dealer for Blabon Rugs of genuine linoleum.

To make sure the dealer offers you genuine Blabon Linoleum insist upon seeing this label which appears on the face of all Blabon Art Linoleums.

Important Notice: Floor coverings (including rugs) made upon a felt paper base are not linoleum, and to describe, advertise or sell them as linoleum is a violation of the law. Felt paper floor coverings have a black interior which is easily detected upon examining the edge.

The George W. Blabon Company, Philadelphia
Established 71 years

BLABON ART Linoleums

Maurice could still think, and he swore. He could no more leave the lad than he could murder him in cold blood. He struck out and got the other by the collar just as another roller tumbled down upon them.

There was none to time or mark the stages of that struggle. There was nothing in favor of the two men in the water, no chance that offered itself, save the fact that each sea as it lifted them and then whelmed them bore them a little nearer the hard. The boy struggled feebly throughout; striving for the drowning man's deadly grapple; the high impulse that had nerved him to dive to the aid of Maurice had passed; twice Maurice had to let him go and recover him. The waters beat the reason from him; nothing remained but the will; he did not remember afterwards how men with life lines battled forth and dragged them to the stones of the slope. He recalled only lanterns and voices and rough hands that worked upon his wrists to loosen his grip on the boy, and then the sting of brandy in his throat and the birth pains of returning life.

It was when he lay in bed in the inn—dosed with the frightful French conception of that rare medicine, tea, and fortified with brandy—that the inwardness of the matter was plain to him. He sat up to give it voice.

"He has spoiled Le Robain for me! One cannot fall in twice. Confound him and his fool of an uncle!"

But his struggle—and the brandy perhaps—had numbed him. Serious thought must be for the morning. The innkeeper and his family and a delegation of neighbors, tiptoeing into his room, found him sleeping profoundly, inelegantly even, for he was snoring healthfully.

"*Un rude gaillard!*" was their verdict.

He awoke to a day of balm. The wind had gone down, and beyond the shadow of the house the road and the village bright with sunlight, while beyond, th sulked and chafed like a beast beate submission.

The innkeeper in person—a sea-s person, smelling of fish—was at his bed with his coffee. There were a couple of ters on the tray.

The innkeeper was avid to gossip question, to prescribe; but Maurice torn open the first of the letters.

"Presently, presently," he said im tiently; and as the host withdrew, baff he read:

MAURICE: I have thought. Come to I want you. Have I the right? IRM.

The second letter was never opened. I ten minutes later a tall figure in a silk dre ing gown entered the room of the other v tim of the night's adventure and found th hero sitting up against his pillows eati an egg.

"Well, my preserver!" greeted Maur cheerily, taking a seat on the foot of t bed.

"Don't!" The boy reddened passio ately. "I knocked you in, and you sav my life."

Maurice laughed.

"Bosh!" he said. "Thank our interfe ing old uncles for that. But I ought *to te* you that there is one thing I learned *fro* you last night."

The boy blushed again. "Don't rot! he said.

"Ah, but I did," said Maurice. "You se I knew you were no swimmer, and tha you were afraid of the water. But whe you dived all the same, I learned one thin of value."

"What?"

Maurice took him by the hand. " learned how it was that you English wo Waterloo!"

MR. LLOYD GEORGE, HIS CHARACTER AND CAREER

(Continued from Page 11)

Party were with him, and he knew that Sir Henry Campbell-Bannerman, the Liberal leader in the House of Commons, sympathized with the opposition to the war. He was denounced as a pro-Boer by the Daily Mail, recently established by Mr. Alfred Harmsworth, and on one occasion at Birmingham, Mr. Chamberlain's city, he with difficulty escaped in policeman's clothes from an infuriated jingo mob.

I remember hearing him call the Boers "the Liberal Forwards," nor can there be any doubt that their obstinate and prolonged resistance made our people sick of the war; and after its close, in 1902, Mr. Balfour's government began to go downhill. Mr. Joseph Chamberlain tried to divert the attention of the country from the bad trade and unemployment—which as usual followed war—by proposing tariff reform, on the plea that the trade depression was due not to the war but to free trade. There were still old folk who knew about the corn laws; and a policy which meant dearer food, dearer boots and dearer clothing did not appeal to the electors. So popular favor began to gather round Sir Henry Campbell-Bannerman, Mr. John Morley, Mr. Bryce, Mr. Lloyd George, and other Liberals who had made themselves conspicuous by opposition to the war.

At last, in the late autumn of 1905, Mr. Balfour resigned; and, to the bitter disappointment of the Liberal Imperialists, the king sent for Sir Henry Campbell-Bannerman. "C. B." after some difficulty formed a cabinet, with Mr. Lloyd George as president of the Board of Trade, and then appealed to the country, which returned the Liberals with an enormous majority over all other parties.

Mr. Lloyd George remained president of the Board of Trade—where he showed his interests principally in labor questions, such as pensions for the workmen—until the untimely death of Sir Henry Campbell-Bannerman in 1908. Mr. Asquith becoming Premier left the office of Chancellor of the Exchequer vacant, and the anti-Imperialist members of the cabinet insisted that it should be filled by Mr. Lloyd George, believing that his whole influence would be thrown against war and against the expansion of armaments.

At first Mr. Lloyd George fulfilled their expectations and made a strong fight—as I have reason to know, for I was in his confidence at the time—against the policy—1909—of laying down eight dreadnoughts; but finally he gave way on the understanding that large sums of money should be found at the same time for social purposes as well. This resulted in wh called the People's Budget. The fa went all over Europe.

I happened about that time to Madrid and met Mr. Canalej Spanish Prime Minister. He put a of questions to me about Mr. Lloyd George's budget. It was the one English question that interested him.

The People's Budget marked the highest point in Mr. Lloyd George's career as a political Radical and social reformer. I remember at the time publishing an article in which I said it ought to be called not "The People's Budget" but "The Armor-plate Budget," as the supertaxes were required to pay for the superdreadnoughts. It was, however, characteristic of Mr. Lloyd George's handling of public money, and of his conception of the duties of a chancellor of the exchequer, that he should think his controversy with his Liberal Imperialist colleagues in the cabinet—Asquith, Grey and Haldane—well settled by an agreement that the increase of expenditure on armaments should be balanced by an equivalent increase on pensions and other social reforms. To Mr. Lloyd George public thrift was an old-fashioned doctrine, as obsolete as mid-Victorian art. The idea of allowing money to fructify in the pockets of the people did not appeal to him. He preferred to tax and spend. It is only during the last year that the victories of antiwaste candidates over his own supporters at the elections have le him to adopt the cry of "Peace and Retrenchment." And this after ordering four Super Hoods and sending Mr. Balfour—a lifelong enthusiast for armaments—to represent Great Britain at the Washington conference.

Free trade, the third plank of the new Coalition Liberal platform, is as audacious as retrenchment, for it follows the passing of the key industries and Anti-Dumping Bill by which Mr. Lloyd George's government has obtained power to impose thousands of protective duties and to destroy

at system of free trade which gave Engd prosperity and Mr. Lloyd George lce.

The People's Budget contained several all land taxes modeled on the theories of ery George. Whether they were spelly intended to irritate the House of rds and to divert popular attention from ore serious burdens, I do not know. They rtainly served as a red rag to the country ers—or backwoodsmen and die-hards, Mr. Lloyd George called them—in the use of Lords, and so provoked the second mber that it made the grave mistake of owing out the budget. The Liberal vernment won two general elections thin a year—1910—and legislation limitg the Lords' veto was passed. For this umph Mr. Lloyd George secured a full are of credit. He became the principal ject of detestation among the leisured lasses and the idol of the North Country dicals. How anxious some of his olitical opponents were to compass his ath was manifested during the Marconi quiry. But in spite of appearances the ears 1910 to 1914 were a period of transion, which illustrates Mr. Lloyd George's nception of Liberalism. He does not ssociate the Liberal creed with any prinples or formulas. It is in his hands a apricious mixture of jingoism and socialism, he ingredients varying in amounts accordng to popular taste. So, as Radicalism became weaker after the death of Sir H. Campbell-Bannerman, and the grip of Imperialism on the Liberal party machine became stronger, Mr. Lloyd George began to appear in the new rôle of a chauvinist, though in July and August, 1914, he remained—with a majority of the cabinet—a neutrality man until the Germans invaded Belgium.

From that time until peace and economy came into fashion Mr. Lloyd George donned the panoply of war. At first it was a crusade for liberty, then a quest for the knock-out blow. After that utterance—which preceded by a few weeks the fall of Mr. Asquith—some of the Welsh Radicals began to murmur. David, they said, had changed parts with Goliath. This feeling has spread rapidly, and at least half the Chapel vote in Wales is said to be likely to be cast against Liberal Coalition candidates at the next election. Unless the Conservatives in Wales and Great Britain vote for Liberal Coalitionists, Mr. Lloyd George will have a mere handful of supporters in the next Parliament.

Barbed Satire

In the first two years of the war Mr. Lloyd George did not add to his reputation either as Chancellor of the Exchequer or as Munition Minister. His recruiting speeches, however, appealed to religious emotion, and he had a good deal to do with the passage of conscription. His advocacy of compulsion as a democratic measure aptly marks the difference between a Democrat who likes equality, even with slavery, and a Liberal who puts personal liberty first. It was on this issue that Sir John Simon left the cabinet early in 1916.

Of Mr. Lloyd George's conduct of the war after he became Prime Minister, at the end of 1916, I can't pretend to speak with any authority. And who shall decide where doctors—or military critics—disagree?

During the war Mr. Lee, a Tory M. P., presented the nation with a beautiful house known as Chequers, in Buckinghamshire, for the Premier's residence. He has since been rewarded with a peerage—he is now called Lord Lee of Fareham, and was a British delegate at Washington—and a seat in the cabinet as First Lord of the Admiralty. The explanation of these preferments may be sought perhaps in Mr. Lloyd George's belief that the war was won in Chequers. About eighteen months after the armistice a newspaper reporter visited Chequers. Mr. Lloyd George was there and took him round, winding up with a visit to "the room where the war was won." Thereafter a scoffer penned the following:

THE ROOM WHERE THE WAR WAS WON

"This is the room where the war was won."—*Mr. Lloyd George to a reporter at Chequers.*

The names of those who won the war
Are numerous and glorious—
A newspaper proprietor;
Statesmen, diplomatists galore—
Though not a single soldier, or
A sailor, was victorious.

But now a guide can show the room
In which the war was won;
At Chequers, where the distant boom
Of not a single gun
Disturbed the quiet by day or night
Of him whose genius won the fight.

Should incredulity presume
To doubt the story of the room,
Go, pilgrim, climb the marble stair,
And gaze upon the very chair
On which he sat, when from afar
There flashed the thought that won the war.

To-day, however, Mr. Lloyd George's friends are more anxious to show that he is capable of winning the peace and of reducing the burdens of war taxation. The question who won the war is no longer an issue at by-elections.

Mr. Lloyd George's friends, however, still insist that the war was won by Mr. Lloyd George's genius in perceiving the necessity for unity of command, and in insisting on the transfer to Marshal Foch of the supreme command of the Allied armies in the last year of the war. Others attribute this masterpiece of policy to Lord Milner. Mr. Lloyd George's critics, on the other hand, say that he prolonged the war, and very nearly lost it by transferring troops from the Western Front—which was vital—to the Asiatic Front, which was a secondary theater. Others again think that the war was won because the United States came in, or because Germany was exhausted and the German people were encouraged by President Wilson's speeches, and especially by his Fourteen Points, to revolt against their own government.

The Platform of 1918

In any case it is worth noting that Mr. Lloyd George, from the time when he became Prime Minister down to the armistice, never repeated his knock-out-blow formula. His speeches were liberal in tone as regarding the settlement, though his peace program was much less definite and much less specific than President Wilson's. He did, however, say that the Allies must treat the enemy very much better after they had vanquished them than the Germans had treated the French in 1871, or than the Germans treated the Russians at the peace of Brest-Litovsk. This, I quite believe, was Mr. Lloyd George's intention; but unfortunately after the armistice the electioneerer superseded the statesman. Instead of concentrating his energies on the task of making, with all possible speed, a good, reasonable and practicable peace, which would have enabled Europe to settle down, Mr. Lloyd George determined to follow a bad example set by Mr. Chamberlain, whom he seems to have taken as his model. After the British troops had occupied Pretoria and apparently won the Boer War, in 1900, Mr. Chamberlain insisted on an appeal to the country; and so there was a khaki election, which returned the Unionists to power with a thumping majority. The precedent and the temptation were too much for Mr. Lloyd George. He could not resist such an opportunity of securing a new lease of power by appealing for the votes of his countrymen as the man who won the war.

This general election—the coupon election—had fatal consequences, as anyone acquainted with the books of Mr. John Maynard Keynes and other writers who have described the peace of Versailles must be well aware.

At the time of the election campaign, in November, 1918, Mr. Lloyd George talked like a statesman; but as politics became hotter he fell more and more under the influence of the yellow press and of unscrupulous political agents. At last, just before election day, he adopted the simple program: "If you return me to power I will (1) hang the Kaiser after a fair trial in London; (2) make the Germans pay the whole cost of the war; (3) make Great Britain a place fit for heroes to live in."

The people were in a wild state of excitement, because the hideous nightmare of the war had just been removed. The average voter was not inclined to think, and a most disreputable Parliament—of "hard-faced men who had made money out of the war" and wanted titles—was elected in consequence. Most of the coupon candidates were stupid enough to believe or wicked enough to pretend that they regarded Mr. Lloyd George's program as not merely just but practicable. So Mr. Lloyd George swept the country and remained Prime Minister, with practically

Old English Wax

Given Away!

A can of Old English Wax will be given away with every Old English Waxer-Polisher. This new time- and labor-saving device both *applies* the wax and *polishes* the floor. It's a great improvement over any weighted brush, because with it you can *polish* just as well and *wax* the floor besides, as easily as running a carpet-sweeper. It lasts a lifetime. If your dealer can't supply you, take advantage of our short-time offer. Just mail the coupon below.

Easy as Running a Carpet-Sweeper!

The Old English Waxer-Polisher both applies the wax and polishes the floor

You can both wax and polish floors with the Old English Waxer-Polisher shown here. It's the new, easy way. A soft cloth will do, but the Waxer-Polisher is much easier and quicker. It saves wax, too.

Lifetime finish. Old English Wax brings out a soft, velvety lustre and enhances the natural beauty of the grain of the wood.

Once waxed, the finish lasts a lifetime and grows more beautiful with age. It will not show heel-marks and scratches. "Touch up" now and then the places most used—that's all you need to do. You needn't wait days to use the room; you can walk on a waxed floor at once.

Very inexpensive. There's more hard, high-grade, imported wax in Old English Wax, so it goes farther, lasts longer, and costs *about one-third* of most other finishes. It is the ideal floor finish for any home, however simple or magnificent.

Try just one can of Old English Wax. See for yourself the beauty it gives all your floors—whether they're unfinished hardwood or softwood, varnished or shellaced—as well as your woodwork and furniture.

Mail coupon for FREE Book

Into this book we've condensed expert advice based on our experience of more than a quarter of a century to help you in finishing your floors, woodwork, furniture, linoleum, etc.

Get Old English Products at your paint, hardware, drug, housefurnishing or department store. Or write us direct. At least mail the coupon for the free book.

the same cabinet but a new House of Commons. Perhaps he would have liked to forget and disregard the pledges he had given; but neither the new Parliament nor the yellow press would allow him to forget them, and for a long time he was dogged by his promises to hang the Kaiser and to make Germany repay the cost of the war.

After the election the fierce feeling of exultation and the bitter passions generated during the war began to subside. The political lava cooled, and Mr. Lloyd George's popularity waned. Fortunately for him there was plenty of employment for more than a year after the armistice. Nearly all the factories in Great Britain were working full time. Wise men shook their heads at the inflation and at the fictitious prosperity and the insane extravagance of the government.

But the wise are always in a small minority; so Mr. Lloyd George and his colleagues proceeded as merrily as if there were no war debt, and as if the war taxation did not matter.

But after a while trade declined and voices began to be raised in all parts of the country asking why the restrictions and regulations imposed under Dora during the war were not removed; why tens of millions of money were being wasted in a new war against Russian communism, and tens of millions more in fighting the Arabs in Mesopotamia and Palestine; why there was so much procrastination over the peace treaties; why coalition government continued; why political principles should not come out of cold storage, and why Mr. Lloyd George did not now revert to the party system.

He still called himself a Liberal. Why, then, did he sit in the cabinet with Conservative colleagues whom he had bitterly denounced throughout his political life, and by whom he had been as bitterly execrated in the recent Marconi affair? What good could come of a coalition government composed of men whose political principles were contrary and contradictory—Free Traders and Protectionists, Home Rulers and Unionists; men who supported temperance and men who were devoted to the liquor interests; militarists and antimilitarists; believers in a state church and disestablishers; land reformers and landlords? How could a cabinet so composed—a political mosaic under a political chameleon—maintain the ordinary standards of political honesty?

Winning the Peace

These biting criticisms came partly from the Labor Party and from the Independent Liberals—or Wee Frees—but also from old-fashioned Tories, who could not forget The People's Budget and the land campaign, the Marconi scandal and the radical speeches which had infuriated them in pre-war days.

The answer given by Mr. Lloyd George and his principal colleagues—Lord Curzon, Mr. Bonar Law, Lord Birkenhead, Mr. Austen Chamberlain, and others—was that the time had not yet come to revert to party strife, that the nation had not yet reaped the full fruits of victory. "We have won the war; we must now win the peace. Union is still necessary in order to solve the many problems which have been left behind by the war." Besides, they added, the old principles and battle cries, or slogans, which had divided the parties, were no longer applicable. The country was assured that any differences which arose in the cabinet on questions of policy did not follow the old party lines and that the cabinet was quite harmonious. It was known, for instance, that Mr. Lloyd George was opposed to Mr. Churchill's policy in Russia, and that other members of the cabinet were opposed to Mr. Lloyd George's policy of supporting the Greeks in their territorial demands upon Turkey. And it may, I think, be assumed that so far neither the Liberals in the cabinet nor the Conservatives in the cabinet have been much troubled by recollections of their old principles differences. They are reminded of the critics. It is noticed that Protect measures have been supported with quence, or at least with zeal, by L members of the cabinet like Mr. and Sir Alfred Mond, while Conserva like Lord Curzon, Lord Birkenhead Mr. Bonar Law have frequently made Liberal statements on such questio Ireland or Central Europe.

As to Ireland, the policy of rep against the Sinn Feiners was carried o a "Liberal" Minister, Sir Hamar G wood. And it is said that Lord Birken once the hottest of Unionists, has most to bring about peace with Irelar a basis amounting to practical inde ence.

Mr. Lloyd George's position is r precarious. No one thinks him very on his perch. For he is not the acce leader either of the Liberal or of the servative Party. He is faced with the popularity of the war, which at one made him a popular hero.

A Born Fighter

There is a general revolt against the den of taxation, which people connect the extravagance of Mr. Lloyd George. is by nature liberally and even lavis generous with other people's money. chief strength is the weakness of Asquith, Lord Robert Cecil, Lord Grey other possible alternatives. Mr. Asquit record on war, Dora, conscription, prot tion, and so on, is Mr. Lloyd Geor trump card.

I have already said that in the mou of his henchmen Mr. Lloyd George always known as "the man who won war." By more critical admirers he described as the artful dodger, the qui change artist, the spellbinder, or the Wel wizard. Bitter Tories, who have never f given him, call him the Welsh attorney, Marconi George, or the Limehouse dem gogue.

As a leader his best quality, or at a rate the quality which has served him be at critical moments in his career, is politi and parliamentary courage—not the stea persistent courage of the martyr or of man consistent to ideals, but a readiness fight or run risks.

He has not the bumptious audacity Mr. Winston Churchill, but he has far mo courage. It has been said that M Churchill has neither principles nor prej dices, but that Mr. Lloyd George h prejudices. Another difference betwee these two spellbinders is that Mr. Lloy George obtains most of his informatio by listening, while Mr. Churchill acquire his by reading. Mr. Lloyd George is an ex cellent and witty conversationalist. Mr Churchill is brilliant at monologue, like Macaulay, whose occasional flashes o silence were much relished. Mr. Churchil spends a great deal of time in painting pic tures and writing for the newspapers. Mr Lloyd George does neither. Politics and political talk are his business and his recreation. He is surrounded by news-paper proprietors and journalists; and it is only in his family circle or with old friends among the Welsh hills that he occasionally drops politics.

His tastes are simple, his pleasures are convivial, his wit is spontaneous and unartificial, if also, perhaps, unrefined. But a joke, as Bishop Stubbs once used to say, and as readers of Aristophanes may agree, is essentially vulgar.

As to the claim that he is as great as Pitt, the pilot who weathered the storm, because he won the war, we may, perhaps, admit it. Pitt did not weather the storm; and as the war would not have been won if it had not been prolonged Mr. Lloyd George has at least as good a chance with history as Pitt. And there are chapters and incidents in Mr. Lloyd George's life which will appeal to every class of political thinker.

Old Friends are Best—like Good Old Clothcraft Serge

YOU'D hardly believe a suit could wear so well—unless you have worn one yourself, or unless you know the peculiar points in Clothcraft manufacturing that make wear possible.

The serge, of course, you know. It is the same old faithful fabric of purest worsted yarns, woven in the simplest, strongest weave. It *must* wear like iron!

And Clothcraft makes up this wonderful cloth only in sensible models—the smart, sturdy sort of suit *men* like to wear. No gingerbread or jazz. Just common sense in clothes. This elimination of frills has naturally cut production costs.

So you may well understand

—why Clothcraft suits are good for several seasons without getting out of date.
—why Clothcraft has so many "repeat" wearers.

—and why a Clothcraft suit today returns you the most real suit value, dollar for dollar, that any suit can give.

All to Save You Dollars on Your Next Suit

HOW is such value possible at so low a price? The question would answer itself if only you were able to visit the Clothcraft Plant and see the evolution of fabric and findings into a finished Clothcraft suit.

In the first place, Clothcraft buys materials in such tremendous volume that there is a big saving right there.

Then, you will find that the Clothcraft suit is a triumph of manufacturing standardization and of ingenious short-cuts in production—the result of years of patient, painstaking development.

Here, for instance, you will see a little machine used in "felling" the sleeve linings at the armholes. This used to be a costly, hand-labor process, but this new machine sews from the inside, leaving a smoother seam outside, saving much time and expense.

Again, here's another bit of "humanized machinery" that saves. It is the zig-zag stitch machine which attaches the under collar to the coat—a task that used to call for highly-paid hand work.

As another example, the machine illustrated below overcasts the fly on the trousers and trims it in a single operation. Imagine what a saving there is here!

Add to these three, a score of other production short-cuts that all do their bit to save a few pennies here and there—so that by the time the suit is finished the saving amounts to dollars. And this saving is passed on to you—in the form of better value at lower cost.

Actual Swatches FREE!

You must see the new Clothcraft Serge Folder which we have just prepared. It includes actual swatches of Clothcraft Serge, so you can see and feel and judge the quality for yourself. The folder also contains other interesting information about men's suits; while the supply lasts a folder will be sent you free. Write today to

Those repairs won't be expensive

Beaver Board transforms a dingy interior into a beautiful, livable room.

Beaver Board makes it easy to put a comfortable room or two in the attic.

Substantial, business-like offices are quickly walled in with Beaver Board.

Half-finished garages are made complete by nailing Beaver Board to the beams.

NOT if you use genuine Beaver Board. The cost of Beaver Boarding is surprisingly low, yet the results are as permanent as they are good looking.

You can nail the big panels over old plaster or directly to joists and studding as easily as you would in finishing up new interiors. Either way you can count on a job that's eminently satisfactory. For Beaver Board walls and ceilings can't crack or fall.

Genuine Beaver Board is knotless, flawless manufactured lumber, made from the long, tough fibers of white spruce logs. Each panel is sized by our *patented Sealtite process*, which makes a perfect painting surface.

Nail up the panels, paint, if you care to decorate, add the finishing wood strips and the job is complete. It's quick, clean work, with little sawing and practically no waste. There's none of the muss or litter that goes along with ordinary repair work.

So, don't postpone needed repairs or remodeling work because you fear the trouble or expense. Your local carpenter or lumber dealer will gladly estimate the cost of the Beaver Boarding you want to do. See about it today.

Or, send our Builders' Service Department in Buffalo a rough sketch, giving dimensions, locating doors and windows and specifying the type of room, and our expert designers will prepare finished plans at no cost or obligation to you.

THE BEAVER BOARD COMPANIES

Administration Offices, Buffalo, N. Y.; Thorold, Ont., Canada; London, Eng.
District Sales Offices at New York, Atlanta, Buffalo, Chicago and Kansas City.

Above all, be sure you use genuine Beaver Board. Look for the Beaver Quality trade-mark on the back of each panel. It is there for your protection. Insist upon seeing it.

YOUR TOWN TO-MORROW

(Continued from Page 16)

up at docks on the river fronts. The logical thing was to provide easy communication between the river fronts, and so a system of many cross streets was laid out. Granddad could not foresee omnibuses developing into horse cars, horse cars into trolley and elevated, and the buggy and team of trotters into the automobile. So he did not provide enough great north-and-south avenues, the desperate need of New York to-day.

"Our family is land poor this generation," said an elderly New Yorker. "Father made plenty of money as a merchant, and tried to provide for us by investments in real estate. He had the utmost faith in the growth and future of the city. But he looked in the wrong direction. When we were children mother used to take us to Central Park by ferry, up the East River to Sixtieth Street, and then across on a horse car. Most of the travel was by ferry, on the rivers. Father could not see how the upper reaches of Manhattan Island could ever be brought within reasonable time and distance of the lower section. The town had to grow. He figured it would grow by ferry, reaching out to Long Island, so he invested most of his money over there. He did not foresee the elevated railroad, which made growth possible uptown—indeed, for two or three years after the Third Avenue L was opened people were afraid to ride on it. That is why I am a real-estate man; had he invested uptown I would be a millionaire!"

To-day we have better information than previous generations upon which to plan cities for the future. But we are not using it yet to good advantage. Here and there somebody with vision has begun remapping cities and highways, but the public in general has still to catch the idea. So we are dealing with city difficulties piecemeal. Instead of solving them in a broad way we are letting them hustle us. Traffic begins to tangle at a certain corner. We put a policeman at that corner to straighten traffic out.

The tangle spreads up and down as traffic grows. We put more policemen on more corners, then lift them into towers and organize control in units of five or ten blocks. Then slow traffic gets tangled up with fast traffic and we begin controlling pedestrians as well as vehicles.

In Detroit a system of synchronized control covering about six blocks at the most congested center was recently adopted, with a tower and system of lights giving traffic policemen at other corners uniform control signals. This straightened out the automobile traffic splendidly, but without control of people crossing the streets motor traffic was slowed down. So a system of bell signals for pedestrians had to be added. But in a year or two, at most, growth of both vehicular and pedestrian traffic at such points will outstrip the system, and until people realize that something entirely new in the way of city streets is needed, and provide for the needs of to-morrow, we shall continue struggling with the difficulty that is right on top of us, and not making much headway at that.

Injustice to the Motor

Straight thinking about the automobile comes pretty near being the keynote to the problem.

The word "pleasure" has cost the automobile industry many millions of dollars. At first, too expensive to be within reach of anybody but the rich, the automobile was used chiefly for recreation. Even when it came within the reach of the average family, carrying the farmer, the doctor, the salesman and rural postman about their work, the pleasure idea persisted. It is held responsible for Uncle Sam's war tax which puts automobiles in the same class as cosmetics. It keeps alive a certain thoughtless prejudice against the gasoline horses, and causes many a sermon to be preached against extravagance. Worst of all, the pleasure fallacy clouds the public opinion necessary in rearranging our cities, our highways and our lives to utilize the automobile as it really is.

"I am thinking about buying a touring car. What is the price of that one?" a stranger will ask to-morrow on Gasoline Row.

"Do you live in a rented house or an apartment?" the salesman will ask in turn.

"Apartment—but what has that got to do with it? What is the horse power of that car?"

"How much rent do you pay?" the salesman will persist.

"One hundred dollars a month. Is this a four or a six?"

"Have you ever thought of owning your own home?"

"I don't like that robin's-egg blue—it won't stand up to hard service. Can I get the same model in a darker color?"

"How many persons in your family?"

"Say!" the customer exclaims impatiently. "Am I giving you an income-tax statement or trying to buy an automobile?"

"You are trying to buy an automobile," is the reply, "and I am trying to determine whether you can afford this car."

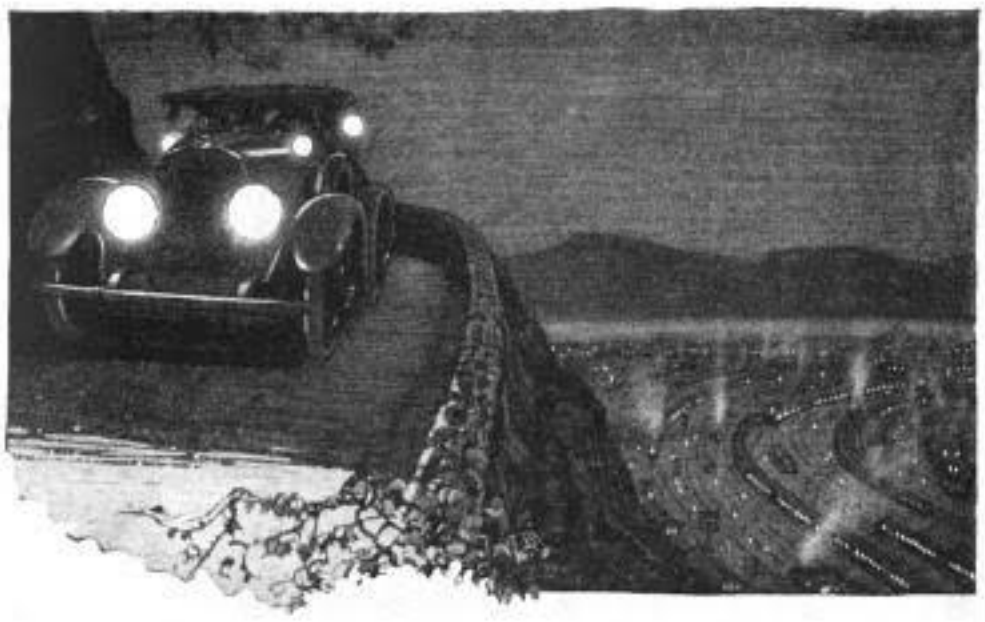
"Afford it! Do I look as though I didn't have the price? What is the price anyway?"

"One thousand and forty-five dollars, including freight, and you look worth that much to me. Sure, you can have this car in several colors. It is a four, and a good one. But we are not selling automobiles any more."

More Work Than Pleasure

"Do you mean to say that I can't get a car?"

"Certainly, we have got 'em right in stock and you can drive one home with you if you want to. But we want to fit you with transportation—not just sell you an automobile. There is a lot of mileage in this car—anywhere from twenty-five to one hundred thousand miles in the next five years. Maybe you have not thought of transportation as something you consume every day like food or fuel, but that is the way we look at it now. Some of the mileage in this car might offset your rent, cut your grocery bills, increase your earning capacity. All sorts of people come in, looking for automobiles, and we sell them five to ten years' supply of transportation. What they do with it is surprising. By talking about pleasure cars and thinking of joy rides we automobile fellows have got our merchandise in the same class as diamonds, perfumery and luxuries generally. But transportation is a necessity, and lately we have discovered the stable character of our merchandise and are trying to sell it for what it really is."



A post-card investigation by the National Automobile Chamber of Commerce, through a questionnaire card sent to automobile owners throughout ten representative states, disclosed facts astonishing even to the automobile men themselves. Names of motor owners were taken from the license lists of California, Iowa, Massachusetts, Minnesota, Nebraska, New York, Ohio, Texas, Virginia and Wyoming. The owner's occupation, annual mileage, amount of mileage used for business and for recreation, and the mileage used to supplement trolley, rail and other transportation—or as a substitute where these were lacking—were the points covered. Replies came in by the thousands. Farmers, doctors, salesmen, lawyers, contractors, real-estate and insurance men were found to be the best customers of the industry. According to these replies, 90 per cent of automobiles are used more or less for business travel; 60 per cent of mileage is business travel, and 78 per cent in the case of the farmer's automobile; 34 per cent of the mileage is a substitute for trolley and railroad, or travel where these are not available; 37 per cent of automobile owners reported that their cars improved their living conditions, and 50 per cent reported increased efficiency in business through the ownership of an automobile—in the case of the farmer, 68 per cent.

All sorts of interesting personal stories were scribbled on the margins of cards in addition to answers to the formal questions. One doctor would report that his car had made it possible to see four times as many patients, and another that it had made it possible for him to extend his practice into an adjoining district where there was no doctor at all. Salesmen said they not only visited three times as many customers but could also live at home instead of spending three-quarters of their time in trains and hotels. Business men work in cities, but live in the suburbs or own and operate a farm, while people in village and country

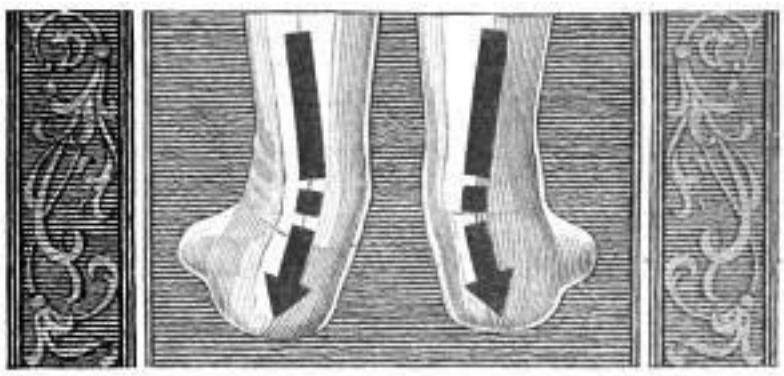
The Next Battery You Buy—

1700 Service Stations are ready to fulfill the Westinghouse Guarantee; or to render Westinghouse Attention for the battery now in your car. Get acquainted!



TO buy a Westinghouse is to give yourself the calm assurance of getting a battery as fine in quality, as dependable in performance and as long-lived as it is possible to build. To make sure that Westinghouse standards will never be assailed, Westinghouse Batteries are built "oversize"—as much as 25 per cent in common sizes. To justify your faith, and to prove the builders' confidence in their product, the Westinghouse factory gives what is probably the most liberal guarantee ever given by a battery manufacturer of national reputation.

One quality battery—the best Westinghouse can build!

Leaning ankles are dangerous

IF your ankles lean either inward or outward as you walk or stand, heed the warning, for you have *heel distortion* which may cause serious foot trouble.

A weakened heel bone, giving down under the weight of the body, forces other bones of the intricate foot structure out of place—foot weariness and pain are but signals of impending danger.

This condition can be corrected by placing in the shoe a pliable leather device so formed as to counteract the abnormal tendencies of your foot. By this Wizard Lightfoot System fallen arches, callouses, leaning heels and other foot troubles are successfully corrected without pain or discomfort. Relief is immediate.

The most progressive shoe dealers employ one or more experts who have studied the subject and know how to correct foot troubles by the Wizard Lightfoot System. Ask your dealer if he can provide you with this service. If not, phone Tel-U-Where Bureau or write us and we will tell you where you can get relief.

Wizard Lightfoot Co., 1763 Locust St., St. Louis, Mo.

are able, through the automobile, to do business in the city. Builders are able to supervise twice as many contracts, bankers get out among their depositors and become acquainted with their enterprises and needs. Ministers see their parishioners oftener, wage earners hold better jobs because able to travel by automobile, reduce their rent by living in the country, cut food costs and add to revenue by tilling a piece of land. Farmers cultivate increased acreage and sometimes two separate farms by using the automobile to get around, haul produce to market, eliminating teams and teamsters' wages, keep machinery going in busy seasons by quick motor trips for repair parts, and find markets for food products which would otherwise go to waste.

Another interesting side light upon the use of the automobile for work and business rather than recreation is shown in some figures recently gathered by a corporation that finances the distribution of automobiles. Inquiries among automobile dealers indicate that nearly half the automobiles sold in this country are paid for in installments, ranging from nine months to a year. Farmers lead all other purchasers in this respect, 48 per cent of new passenger cars bought by them being paid for in that way, 58 per cent of the used passenger cars, 60 per cent of the new motor trucks, and 57 per cent of used motor trucks.

Automobiles are commonly pictured in use for pleasure purposes—picnic parties, fishing, theater, social functions. It would be nearer their true uses if they were shown carrying the doctor, farmer, county agent, contractor and salesman about their work. As long as cars are pictured as toys rather than tools, automobile men can thank themselves for the damage the word "pleasure" does their industry.

The automobile is not the only influence in bringing about changes in our cities. Street-railway traffic is growing faster than population in most of our cities. New York's subway and elevated systems are now carrying one billion passengers yearly, and two hundred fifty million more commuters are carried to and from the suburbs. Transportation is so much an everyday necessity to city dwellers that the average family's trolley bill runs from seventy-five to a hundred dollars yearly. In the effort to build its way out of its traffic difficulties New York City is running subway and elevated lines out into cabbage patches that will ultimately be suburbs, and has a twenty-five-year rapid-transit building program with a capacity of five billion passengers yearly, the estimated needs of a city of nine million people.

Outgrown Surface Roads

There is nothing difficult in figuring the growth of either automobiles or rapid transit during the next five or ten years. That can be plotted in fairly accurate curves according to growth the past ten years. The chief difficulty is getting a conception of their bigness, and the far-reaching changes that must be made to prepare for them.

Mere streets become impossible for handling all the traffic there is to be. People begin to see that, and provide for the future along two general lines—first, sorting out the different kinds of traffic; and second, providing new channels for the different kinds. Street cars, automobiles, motor trucks, horse vehicles and pedestrians must be separated and given their own right-of-way where none can hamper or endanger the others. Already the disappearance of the surface street car has been predicted in New York City—it is going underground and overhead to such an extent that out of the two and a half billion odd passengers carried in and around the metropolis last year, less than one-third traveled in surface cars, with an actual decrease in the number of passengers in the most congested section, Manhattan.

But if every surface car in Manhattan disappeared to-morrow there would still be an almost intolerable congestion of automobiles and pedestrians. For this the solution in New York, and probably in a few other American cities, is to separate the automobiles, too, and get them overhead or underground. New York has made a beginning in both directions. A large proportion of its automobile traffic is now running up Fourth Avenue, climbing an incline to reach Park Avenue, around a concourse at Grand Central Station, and continuing up Park Avenue, which is almost exclusively given over to automobile traffic, though not elevated. And a beginning in t ground automobile travel has been by starting a vehicular tunnel be New York and New Jersey. This will four tubes on two levels and will be us automobiles, motor trucks and horse t

Two suggestions for straightening our growing traffic troubles in both th and the country have been persist advocated for some years by Mr. E Swetland, one of the automobile indu leading publishers.

First, an elevated road for autom which would lift them above other t and enable them to travel at their speeds. Such a highway in New York is needed from City Hall north thr Lafayette Street and Fourth Avenue, necting with Park Avenue. There wou ramps at frequent intervals by which mobiles could reach or leave the elev highway. Nothing but passenger auto biles would be allowed upon it, and could move at speeds of thirty mile hour or more. It would be a noiseless vated road, and could unquestionabl made lighter and more sightly than elevated roads upon which trains are The number of passengers by automob in New York City is constantly increas and problems of getting up and down to during the rush hours are becoming m and more acute, with an alarming incre in accidents. New York now has one au mobile to each eight families, Chicago to every seven families, St. Louis one three families, and Detroit is rapidly proaching the millennial state where ev family has its automobile, the present ra being one car for each 7.73 persons.

Plans for Detroit and Baltimor

The second suggestion is that speci automobile highways be built between c cities, so located that they do not pa through the important streets of towns an villages en route. Most towns now hav their own local traffic problems and dan gers, and to add intercity motor traffic t them is wrong—it amounts to the sam thing as running railroad trains throug their streets. These connecting highway will ultimately have to be provided to tak motor traffic around the outskirts of com munities and eliminate railroad and grad crossings. In many sections the traffic al ready points to double highways, separat ing traffic in each direction, or the moto truck from the automobile. Elevate roadways are now being discussed in Baltimore and Detroit. Elevated street crossings are already needed at the most congested points in many of our cities. None has as yet been planned, but the idea offers some interesting possibilities. Apart from the immediate speeding up of motor traffic by eliminating cross currents at congested corners and separating pedestrians from vehicles, such two-deck street crossings might double the number of desirable shop locations at points in cities where the greatest number of people pass and where shops are in greatest demand. Stores could be built underneath the elevated crossings, so that instead of eight blocks of desirable shops there would be sixteen.

In some cases automobile highways can be provided by widening thoroughfares and providing new ones at street level. Detroit has one of the most thorough plans in this direction. Years ago its city fathers laid out a great boulevard encircling the city, at a time when it ran through fields and undeveloped suburbs. They thought it would provide for all time, remembering that they had in mind only a speedway for the dog-cart and team of trotters. It does provide generously for present-day automobile travel, once reached. But streets in between this boulevard and the center of the city are a narrow crisscross maze through which travel is becoming ever more difficult and dangerous. So the new city plan calls for an inner ring of wide boulevards which will be cut through streets and buildings, while beyond the outer boulevard another ring can be laid down in the fields, and beyond that again still another when it is needed; once started, with foresight, the scheme can be endlessly progressive. Detroit is also planning to broaden some of the connecting thoroughfares and cut off the sharp corners at street crossings. These were all very well for horse and pedestrian travel, but the automobile demands curves instead of corners.

It was in Detroit that a study of street accidents disclosed the interesting fact that

-and after you have asked for RUBBERSET BRUSHES by name,
look for THIS trade mark~find it~ SPELL IT OUT!~

R-U-B-B-E-R-S-E-T

for in no other way can you ALWAYS BE SURE of getting the GENUINE RUBBERSET you asked for!

From the time we made THE WORLD'S FIRST BRUSH which could safely be used in any compound in which a bristle brush might properly be asked to serve, we have striven to put into every brush of our making THE BEST of quality in both materials and workmanship.

In honest pride in the proven superiorities of our process, we gave to our brushes, and imprinted upon each and every one of them, the trade name RUBBERSET, in witness that they were products of RUBBERSET COMPANY—true creations of the ideas and ideals which inspire our every operation.

Today, no brush is so widely asked for *by name* as RUBBERSET. But in this very protection lurks this peril to the unwary:—***Not every person who simply ASKS for a RUBBERSET brush, GETS IT!***

THAT YOUR PROTECTION MAY BE MADE COMPLETE, take to heart this simple warning:

Claims to duplication of our process are not uncommon. Confusing imitations of our trade name are frequently found.

SIMILARITY IS NOT IDENTITY! A brush may SEEM to be made somewhat like a RUBBERSET, ***yet NOT be as good a brush.*** It may even bear a trade name that LOOKS like RUBBERSET, and SOUNDS like RUBBERSET, ***but it will NOT be ours.***

ACCEPT ONLY THE GENUINE. Should you live in one of those rare places where RUBBERSETS are not obtainable, tell us, and we will gladly arrange to have your wants supplied.

I see 'em bumped every day

"Here's the place to pick 'em out—the wise ones and the other kind. Seems like some fellows never learn—always sliding and bumping and backing up; making everybody sore. Take it in heavy traffic, like I have here at this corner. You can spot the man who's got the good brakes. When I give 'em the signal he knows he can *Stop*—get me? . . . . silver edge Raybestos is the thing to use. Got a little bus myself, and I know . . . . If more people'd insist on Raybestos when the brakes are lined, I'd have less trouble on this job . . . . Cost more? Sure—but what's a few cents compared with safety and I'm here to keep folks from gettin' hurt."

This sign over the door of a garage or repair shop indicates not only the responsibility of the shop displaying it, but assures better brake service to the owner.

Raybestos may be a little higher in price, yet so much depends on the brakes that careful owners cheerfully pay the difference in order to be certain as to brake lining service and quality.

highest percentage of them occurred at dusk. Children especially were hurt most at that time. Playing in the streets, they ran out in the excitement of their games and were struck by automobilists to whom the dim light did not see them in time to turn or stop. This led to some interesting safety-first teaching in schools. Children were taught something about the protective coloring of animals—white fur against arctic snows and brown feathers in field and wood. Upon this was based the practical suggestion of wearing something white when playing in the streets in the evening, or even carrying a newspaper—measures which have decreased the number of such accidents.

But better street lighting, especially at corners, is the real solution, say those who have studied this question. The familiar arc light suspended over the center of a street crossing is not only inadequate but deceptive. It gives dangerous contrasts of glare and shadow. Approaching, the motorist's eye is first dazzled by glare, and then cut off by the top of his car. Several seconds are needed before the eye becomes adjusted to the change, while half as many seconds bring him to the danger point. In that brief interval a pedestrian might step from the curb and be practically invisible. This is but one lighting difficulty that endangers life in both city and country, and the remedy is more light at danger points, carefully diffused to show up everything without glare, shadow or fluctuation.

One of the problems touching the pocketbook of every person in our cities is to open up suburban areas that lack railroad and trolley transportation so that gasoline will relieve housing shortage. Building highways to the outskirts is not difficult, but trouble looms up at the other end of the line in the form of downtown traffic congestion. Mr. Subbubs builds a house ten miles from the city limits, and travels by motor. This is quite practicable for many of his employees. The ten or twelve miles from his house to the edge of the congested district is covered in twice as many minutes. Then it takes as much longer to creep through two miles of congested downtown streets to his factory or office. The cities of to-morrow will have to speed up that final two miles and probably provide parking facilities of some sort at their centers, so automobiles may be used by owners who drive their own. When that is done, slums will decrease in the cities, just as isolation is decreasing in the country through what the automobile men call the socializing influence of the gasoline horse.

Automobiles have been sold in the past largely on appearance, speed and similar pleasure appeals. When they are sold as transportation, and this socializing and equalizing influence has a chance to work, a certain mystery will be cleared up—that expressed in the familiar speculation, "How can Smith afford an automobile?"

Secondary Benefits

A moment ago we were listening to a Gasoline Row conversation between a prospective motor purchaser and an automobile salesman. Let that prospective purchaser be Smith, a bank cashier, salary five thousand dollars a year, living in a city apartment, paying one hundred dollars a month rent. He buys a car for one thousand dollars. For the first six months it is used chiefly for recreation. Then pleasure riding begins to pall, the novelty wears off—a familiar story. But Smith finds his car handy in getting about on business errands. Depositors nowadays seldom come into a bank themselves unless something unusual brings them, like the negotiation of a loan. Routine banking is done for them by employees. Smith knows a good many depositors within walking distance in the downtown section, but others out in the factory and shipping districts are largely names to him. Owning a car, he can often motor out to some factory or warehouse when an important business transaction comes up, instead of writing or telephoning. He begins to get acquainted, picks up information useful in passing on loans, secures new depositors through acquaintance, banking counsel, the offer of special service.

Smith's car makes him worth more to the bank, and before he has had it a year the bank responds with an increase in salary.

Furthermore, Smith finds that he can buy a suburban house twelve miles out for seventy-five hundred dollars, paying seventy-five dollars a month. This cuts his rent item twenty-five dollars monthly, and turns it into an investment. There is a further saving in trolley and railroad fares. The family garden cuts grocery bills. It probably costs him six hundred dollars a year to own an automobile—a liberal allowance for gasoline, tires, repairs, interest and depreciation. But half of that is saved directly in rent, his income has been increased, his family is living in a more healthful and congenial neighborhood. He is getting so much more out of life that the car is an asset, not a liability, and assuming that half his riding is chargeable to pleasure, it costs him less than one dollar a day.

When families are measured for gasoline transportation, using such dimensions as these—home-owning versus rent, increased working ability and earning power, better health, more recreation and the like—automobile ownership by people of moderate means is no mystery at all. Even for wage earners, with low-priced and used cars available, the automobile is not an extravagance. Cities reconstructed on the basis of an automobile for every family will make it possible to profit by the gasoline horse in just this way.

In the country far-reaching changes are also under way.

Motor-truck transportation was resorted to during the war to supplement our overloaded railroads. A committee of automobile men began planning routes for army motor trucks. They discovered that our country roads, even good ones, are still laid out pretty much on a buggy-distance basis, satisfactory enough a generation ago for the average trip of six to eight miles between farm and town, but entirely inadequate for intercity traffic by automobile and motor truck.

This was almost the first suggestion that we needed something better. Despite the widespread popular interest in good roads the public lacks a comprehensive picture of what is needed, and is thinking, appropriating and working piecemeal.

Highway Engineering

"The limiting factor in the use of the automobile is highways," says an engineer engaged in government investigations in this field. "Ask most people what they consider the limiting factor in highways, and they will say, 'Why, money!' But there is plenty of money for improving highways. We spend hundreds of millions every year. I'll tell you the real limiting factor: It is men trained to plan and build highways on a scale in keeping with the enormous growth which is coming in motor traffic. There is probably not a single engineer in the United States who could lay out a rational system of highways. Plenty of engineers can build good roads, but we lack creative designers of highway systems. Only three or four colleges in the United States have real highway-construction courses. One of our first tasks is to put highway engineering into the imagination of the young fellow going to college, as a career and as an intensely interesting new technical field."

The president of a big tire corporation recently donated one hundred and thirty thousand dollars to build an ideal mile of highway. Engineers were left to settle technical questions, such as materials, foundation, location, width, adaptability to present and future traffic. The question immediately arose, "What is the ideal highway?" Whereupon suggestions were invited from engineers all over the United States. In technicalities, opinion was naturally diversified; when it is built this ideal mile of highway may be a composite affair, with different sections built in different ways, combining an experiment station with a demonstration.

But on one point there seemed to be general agreement, with decided anxiety that it be not overlooked. This was the socializing influence of the ideal road upon people in the community where it was built. Benefit to folks living along improved highways, the engineers maintain, is as big a factor as benefit to people using the improved highway. That improved roads increase property values is an old story. People are sometimes astonished, however, when road improvements affect state of mind and raise psychological values. Change the dirt road past Peter Tumbledown's farm to macadam, concrete or even good gravel, and traffic increases. More people go past Peter Tumbledown's place. Peter himself goes to town oftener. When a picket fell out of his fence in the dirt-road days, probably he let it lie. But now he

fixes the fence, paints it, paints his house, cleans unsightly odds and ends out of the barnyard, and responds to the higher psychological valuation.

The most skillful technical planning for the improvement of our cities and intercity highways will not get very far unless it is backed by understanding and good will on the part of the public. So say the men who are awake to these new needs.

"Have they got a good plan?" asked one engineer of another who had just investigated the remapping work of a Middle Western city's planning commission.

"Yes, I think it's about as sound and far-reaching as any I've looked into."

"Have they got good public opinion? Are the people out there interested—well informed—behind the scheme?"

"They took care of that at the start by establishing an information bureau as soon as the engineers had results of public interest."

This is sound method. When engineers are set at work remapping cities and highways, getting ready to spend millions of dollars in widening thoroughfares, demolishing buildings, constructing subways and elevated highways, arrangements should be made for keeping the public informed. There are many unsolved tough technical notes in such projects. Even an art as old as road building still lacks whole series of experiments to show what really happens to thoroughly familiar materials under different traffic, climates and conditions. But the engineers will work these technical matters out. The job of putting the picture into the popular imagination is greater.

Very often the technical man himself gets only part of the picture. A certain Eastern city needs harbor improvements. The mayor appointed a commission to deal with this need. When the members first came together the city engineer exhibited a complete plan, showing docks, a big warehouse for freight, and ample railroad sidings to link up ship and shore transportation. He was something of a squarehead temperamentally, and seemed to regard his plan as final.

One member of the commission was an engineer with considerable experience in motor transportation.

"You have provided for expansion?" he suggested.

"Oh, certainly," said the city engineer. "When this warehouse is outgrown you can just duplicate it, adding another unit, and extend your sidings."

Looking Into the Future

"Within ten years," commented the transport engineer tactfully, "60 per cent of the water-borne freight of this city will be hauled to and from the harbor by motor truck. How about that?"

The city engineer hesitated a moment.

"Well, there is a road running down to the harbor," he said finally.

"How wide a road?"

Several newspaper men had come to report this first meeting of the harbor commission. They suddenly became attentive. So did the mayor, who flushed a little.

"Has that ordinance been passed yet, Charley?" he asked, turning to his secretary. "No? Well, when that goes through the harbor road will be forty feet wide."

The reporters made notes on this additional item of farsighted planning, and the proceedings switched to other matters.

When the session ended and the reporters had gone, however, the transport engineer asked the city engineer: "Wouldn't it be just as easy to make that road sixty feet wide?"

"I think we ought to make it eighty feet!" said the city engineer emphatically; he had got the bigness of the picture.

People have a way of thinking of permanence in connection with cities and highways. They are partial to monumental buildings and permanent streets and roads. Until the public gets a conception of our cities and highways as living, growing organisms, they are likely to be ten to twenty years behind traffic, housing and other elements of growth.

Cost is usually the first thing people think about—the man in the street wonders where all the money is coming from to pay for these new boulevards, elevated motor ways, trunk roads between cities. Given further information—not propaganda but real information—cost takes a secondary place in his thinking. For the benefits outweigh cost, and there are cases where such improvements more than pay their own way.

Buenos Aires probably gives on cheapest taxicab ride to be found any on earth, and also the most hair-ra Fares start at fifty centavos, nor about twenty-two cents, and that sum one almost any reasonable distance i business district. Taxicab chauffeurs like the wind through the narrow, one streets, and stop dead in a hand's br at each corner where another vehi crossing ahead of them. Exciteme great, but accidents seem to be few.

This skill grows out of the city i Buenos Aires was originally an old Sp checkerboard town with short blocks narrow streets. To get anywhere i automobile it is necessary to speed bet streets, and stop instantly at every street where the other fellow has the of way.

Opening the Checkerboard

Motor traffic soon made it necessar do something about congestion in Bu Aires, so first a broad boulevard was pla to connect the capitol and the preside palace. The government bought just en land to lay out the splendid Avenid Mayo, with the outcome that prop owners on either side reaped the benefi increased valuations—though there was course, a corresponding revenue to the in increased taxes. Profiting by this les the government planned a larger schem boulevards to open up the old Spa checkerboard. It laid out a diamond-sh system, with each corner ending in a pla cutting the old square blocks catty-corner making hundreds of flatiron lots and bri ing every part of the congested sect within a few blocks of a wide avenue. stead of condemning and purchasing j the width of land needed for this system "diagonales," as it is called, three times t width was condemned, the city demoli ing buildings and selling the improved la on either side at its higher value to pay the improvement.

Another interesting instance where su improvements are made to pay their w is found in the coming use of marine sign lights on country highways. Virtually amounts to putting lighthouses on the hig ways. Many thousands of unattend lighthouses are now in operation all ov the world, from the dangerous waters Alaska and Cape Horn to the steering ligh of the Panama Canal. The unattende lighthouse is illuminated with acetyler gas, a supply sufficient for one or two year being held in a tank, so that yearly visit for recharging keep the light going. Dan gerous crossings, curves and grades hav been marked on our highways ever sinc the automobile made it necessary. Some times the signs are put up by highwa officials, but more generally they are fi nanced and installed by automobile organi zations, or take the form of advertisement for automobile essentials. Country high ways are still inadequately marked. Signs are not uniform. They wear out. They ar not visible at night, their chief shortcoming. A marine signal for road purposes, burning nine months before it needs recharging, has now been developed. Many state governments are about to install them on a large scale, with standardization, and the idea has met with approval in many other states. However, there is a difficulty—the cost. Maintenance is cheap enough, but installation of two signals at one dangerous crossing calls for an investment of seven hundred dollars. This investment, it has been found, can be met by combining an advertising privilege with the signals, and within a few years they will undoubtedly be flashing everywhere along the route of the motor tourist, and will cost the community little or nothing.

But even though the direct cost of such improvements runs into millions of dollars, either in city or country, the indirect cost is nothing. For increased property valuations, with more revenue from taxes, take care of that. Real-estate values rise not only along the line of the modern motor way but far back in the adjoining streets and sections, and out at the edges of the city, where extensions are made possible. Your town to-morrow will pay the bill automatically out of taxes because the property that yields revenue will be more accessible, useful and profitable, and there will be a great deal more of it. And there is every incentive to make improvements now while the property to be condemned is more reasonable in value—postpone the job until to-morrow and the cost may be prohibitive.

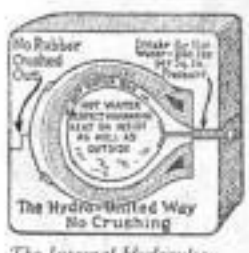
HYDRO-TORON TIRES

Two Reasons for Mileage Capacity

One Chemical—One Mechanical

The Test of 50% Greater Holding Power—the Toron chemical treatment of fabric makes this possible



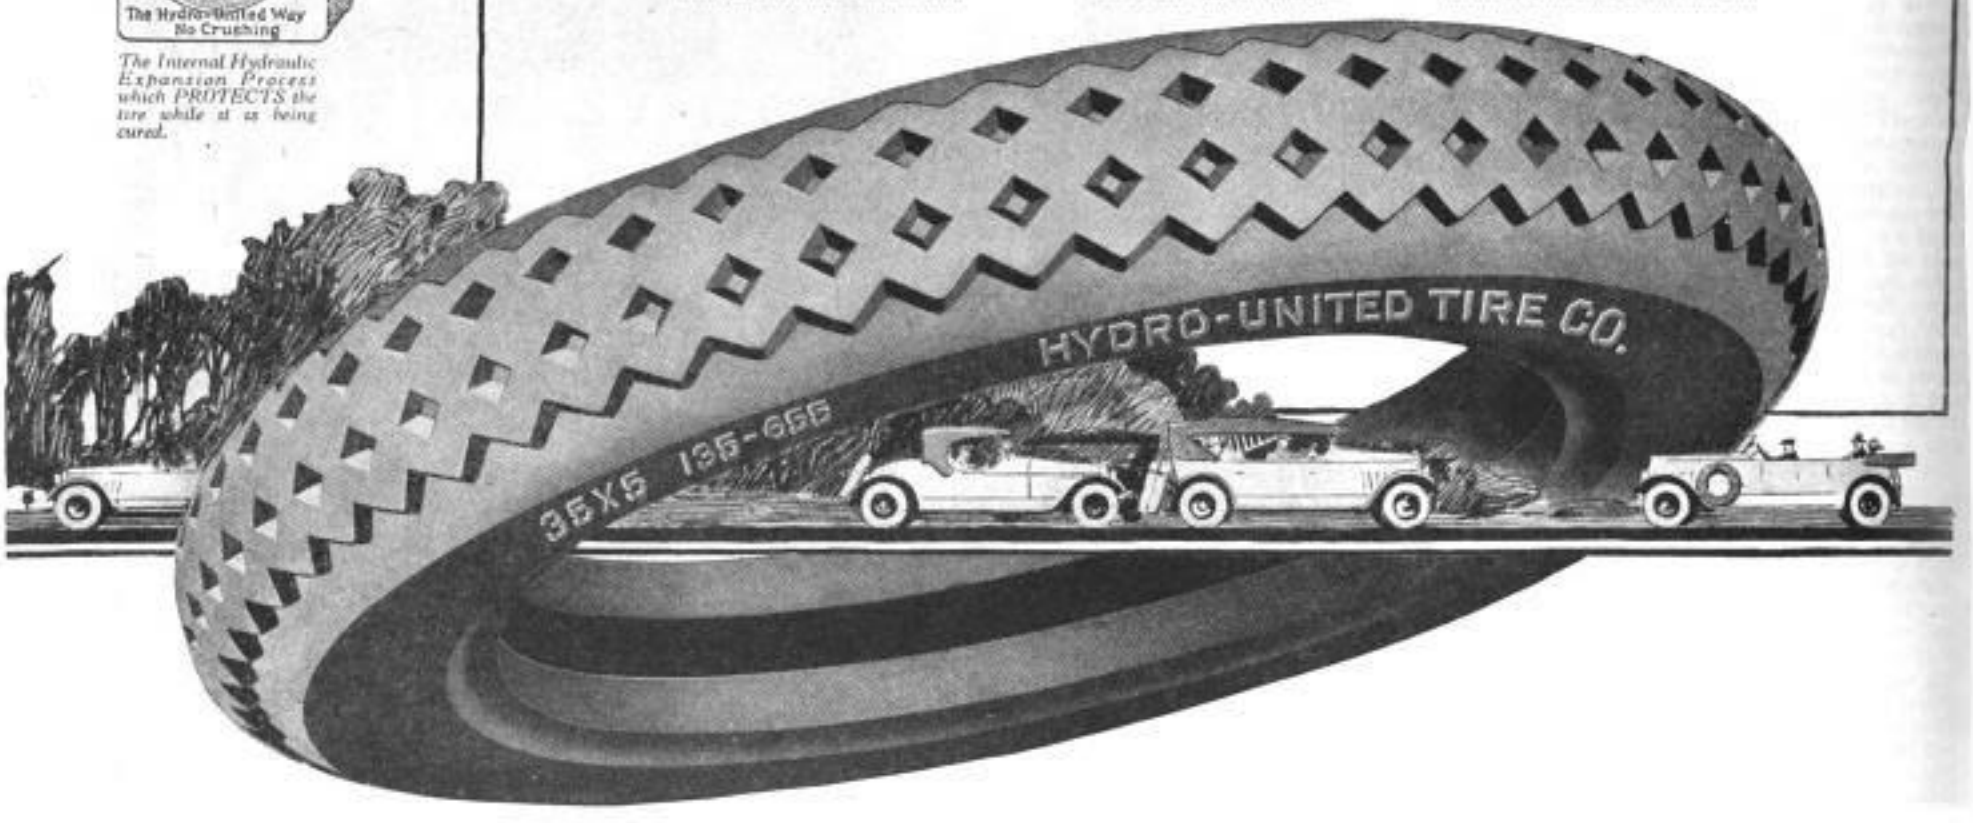
The Toron (no-rot) scientific chemical process of fabric treatment is a Hydro-Toron feature. This chemical treatment proofs the tire against moisture and oxidation, which *are common causes of tire complaints.* Toron (no-rot) fabric prolongs life and increases tensile strength 50%.

The mechanical process is that of curing by Internal Hydraulic Expansion with water heated to the proper degree for vulcanizing. This process practically eliminates unseen defects in tire construction which are the real causes of *Stone-Bruise, Rim-Cut and Blow-Out.*

The two processes combined make for you a better tire. A tire of greater mileage capacity. A tire that is unaffected by moisture or oxidation and as a result unseen deterioration does not take place. A tire that we can fearlessly guarantee for 10,000 miles against *Stone-Bruise, Rim-Cut and Blow-Out.*

Besides all these advantages, Hydro-Toron Tires are *as big as cords and cost less than cords.* Will you give Hydro-Toron Tires the opportunity to prove their worth to you as they have done for over 100,000 other car owners?

TIRE DEALERS: If you want to make more money and have a better business, write for our proposition.



The Internal Hydraulic Expansion Process which PROTECTS the tire while it is being cured.

HE AXIOM OF PETER BELL IVOR

(Continued from Page 10)

the door sent him up three flights to a r of attic rooms. The rear door opened his knock, and Mr. Peter Bell Ivor bade a enter.

The room was small, housing an old pine d, a bureau with a cracked mirror, an old hout washstand, a cupboard in which few dishes could be seen between the rtains of burlap, a shaky card table that peared to be on the point of collapsing der the weight of a dozen or more heavy lumes piled hit or miss about a heap of pers, and two cane-seated chairs. Two the walls were lined to the ceiling with oks on pine shelves. The single window ve a prospect of other back windows and sty fire escapes, all crowded with milk ttles, jars, boxes and bedding, clothes- es so close together that they seemed to terlace, and a gaunt old Chinese Ailan- is growing up somehow through the net- ork—that identical Tree of Heaven which, or its celestial fellow, the laundryman, orishes in back yards and dingy byways.

Young Mr. Case set down his painting ings by the door and advanced rather tly into the room, thrusting his hands to his pockets as he looked about him ith the frank curiosity of the young. An ld snapshot stuck in the mirror frame aught his eye, and bending over he made at the thin figure of Mr. Ivor standing be- re what appeared to be a Parisian café.

Then he cried aloud, "Why, say! There's he old Café d'Harcourt! But those girls ave such funny hats!"

"That picture was taken in 1896," re- narked Mr. Ivor in his drier tone. "I was tudying at the Sorbonne at that time. In 898 I went to Berlin; in '99 to Bonn. pril, 1896."

"I was born in the following June."

"Indeed?"

There was a pause; then Mr. Ivor re- narked with great dignity and not a little ld-worldly charm, "I have assumed that ou would join me at luncheon."

"Why, that's awfully nice! I ——" The flush left Case's cheek. "In all this excite- ment I'd sorta forgotten that I've only had a little toast and coffee since yesterday noon."

"Excellent! Just make yourself as com- fortable as you can."

And swiftly he went to work, setting out plates and cups on the bureau, putting coffee to drip in a two-story tin pot, pro- ducing eggs and milk from a small tin ice- box and making an omelet in a chafing dish.

The young man's gaze roved over the books that were crowded in on the shelves standing and crosswise. Many were in French, many others in German and Italian, some in what appeared to be Arabic, per- haps Sanskrit, and a great many in Latin and Greek. The Scandinavian tongues were represented, as well; and, he thought, the Russian. It was a polyglot collection indeed. Many of the works were of a philosophical nature, others philological and historical. But there was much human matter as well—the plays of Schnitzler, Hauptmann and Sudermann, a joyously fat illustrated Rabelais, the novels of Fritz Reuter, scattered works of Balzac, France, Sainte- Beuve, Racine, La Fontaine's Fables, Saint- Simon's Memoirs, Philippe de Comines; a number of fine editions of the Elizabethan dramatists, too, with Chaucer, and some queerly lettered volumes of manuscript—early Anglo-Saxon, perhaps. Prowling on, the Analects of Confucius, the Koran in parallel translation, works on Buddhism, on the Mongols, on Dravidian civilization; and a solid row of the German philosophers from Kant to Haeckel, that seemed fairly to be aimed out from their shelf like a bat- tery of big guns.

"If you think you're reading my mind from my bookshelves"—it was the deep voice at its most ironic—"I'm afraid you're far off the track. That isn't even an index to my beginnings. I've used libraries for thirty years. And now I study from the life. Will you come, please?"

Over omelet and coffee and bakery rolls Case made his report.

"It certainly worked out, Mr. Ivor."

"It had to work out."

"That head cop is my friend for life. He's got his copy. Came out pretty well. You see, I was so excited. He's trying to think up something he can do for me, I think. He wants one of his little girl. Hinted at it, but didn't quite like to ask outright."

"Might do no harm to do it for him."

"That's what I thought, as soon as I ——" He stopped.

"But where are the other pictures—his and mine?"

"Oh, the man from the Evening Earth has them." In his eagerness to eat and talk at once, he failed to observe the hint of a smile that hovered about Ivor's mouth. "He swore he wouldn't rub them. One of the cops helped us put them in a taxi with him. And, gee-whiz, but we had fun with the crowd! Once or twice there I thought they were going to trample me under. The cops were wonderful."

"So the Evening Earth has the story?"

"Oh, four or five other papers had men there, too, but the Earth man got the pic- tures. He was first. The others all snapped photographs. Then there was a fellow that says he sends letters to the out-of-town papers ——" At last he saw that hovering smile, and paused.

"Well," asked Ivor, smiling broadly now, "are you satisfied?"

"Why, of course. Yes, but ——"

"Whence the 'but'? You said you wanted to be known as a painter. I said we could do it by to-morrow. Here you are now, in all the evening papers, in the out-of- town correspondence, two pictures being reproduced to-day in the Evening Earth that hadn't been so much as thought of when we began talking this morning."

"I know, but ——"

"But what?"

"The plain truth is, it hasn't brought me a cent."

"Ah!"

"Wait, please! I mean, here I am, still broke, still indebted to you for my things, for my first meal, for ——"

"But that's all so simple!"

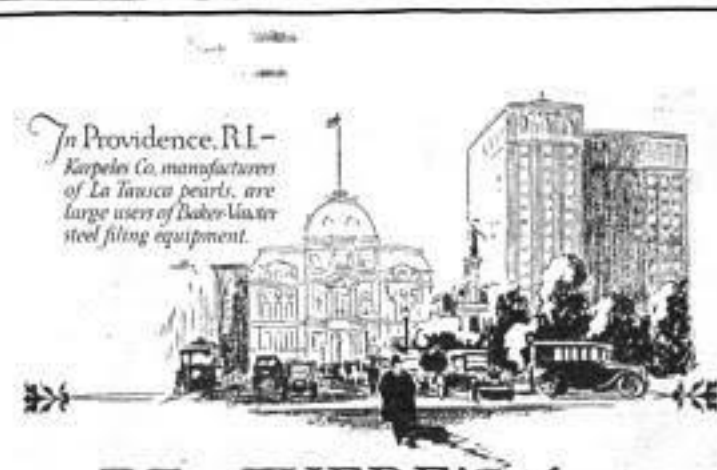
"I wish I could see how. It's true you've brought me this astonishing publicity, my name in the papers and all, but just how to turn that into an income that I could ——"

"Let me give you a little more of the omelet. And perhaps you can reach the coffee better yourself. Good! Now we are confusing things. It is quite true that being known as a painter may not mean imme- diate income. It's sure to result in orders or opportunities of some sort, but I grant that you might have to be patient. Though there are sure to be ways of getting help ——"

"Don't misunderstand me! It isn't that I ——"

"Please listen! I prefer to think with some sense of order. Suppose I accept your new position. Now, mind you, in so critical a situation as this we must be careful, above all, to limit our wants. That's where the most deserving persons go wrong—oh, so wrong! Wanting more than one thing at a time. Suppose we say that we were mis- taken. You merely misread your own want. It was not—not immediately—to be known as a painter. Not at all. It was to acquire capital enough to support you while you are building your name as a painter. In a word, what you really want is money."

"Oh, say now! I ——"



"Please! Leave it at that. Your want is money. Money now, money down. Very good! How shall we get money to-day? Presumably by going where it is. Doesn't that sound reasonable?"

"Why, yes, of course, but —— Oh, you're rushing me so completely off my legs that I ——"

"Excellent! My present impression is that you paint better and more rapidly when off your legs than when on them. Let's see—now where is the money? For- tunately I think we may be able to work this out without retracing any steps. Let's see. Do you happen to know where John C. Heming's office is?"

The young man gasped aloud. For Mr. Ivor, in this casual tone, had uttered the name of the most famous private banker in the world.

"It's in Wall Street, near the Stock Ex- change." Ivor was talking on, evenly. "I don't know much about that part of town. It doesn't interest me. But of course the simplest thing is to hop on the Subway and go down there. We'll find a telephone di- rectory somewhere and look up the correct address." William F. Case was staring; incredulous, faintly hopeful, bewildered. "Just wait while I get into another suit, if you don't mind. Bankers have quaint no- tions about the importance of clothing."

In Providence, R.I.—Kaepelen Co. manufacturers of La Tausca pearls, are large users of Baker-Vawter steel filing equipment.

WHERE'S that letter? You have often said that. There is a right filing system for your office. Let us tell you about it.

"Save your feet"

Prevent That "Broken Down" Feeling

Jung's Arch Braces are guaranteed to give instant relief to tired and aching feet. They sensibly correct fallen arches and foot strain. Dance or walk for miles—stand for hours—you just don't get tired. They relieve the extra strain due to the wearing of high heeled and stylish shoes.

Men, Women—Get Genuine Foot Comfort, $1

Avoid weak ankles. Prevent pain in the heel, instep, or ball of the foot. Such troubles, and even pain in the calf and knee, and callouses, are often caused by fallen arches and weakened conditions of the feet. No matter what supports or appliances you have used you should

Wear Jung's Arch Braces and Assist Nature

They aid the muscles between the small bones of the feet by gently holding these bones in position *instead of building a false support underneath*. Thus you can correct fallen arches and foot strain. Thousands testify that Jung's Arch Braces relieve tired and aching feet instantly. Chiropodists, physicians, and nearly half a million satisfied users recommend them as the most comfortable and corrective appliances obtainable.

Entirely Different from Other Foot Appliances

Made of special Superlastik—light and porous, yet firm and durable. No ungainly humps. No burdensome pads. No metal plates. Exact size for every foot. Price $1 per pair. (Canada $1.50.) Money back if not entirely satisfied. If your shoe dealer, surgical dealer, druggist or chiropodist can't supply you, order direct.

Write Today for Our Free Book

Contains! valuable information about the feet. Illustrated with X-Ray views. Tells how to relieve and prevent foot ills and get genuine foot comfort. Send for your copy today—no obligation involved.

21 Years of Knowing How

And promptly he changed into another and newer costume—of which the coat, inevitably, it seemed, was a black cutaway—that apparently completed his wardrobe. When he was fully buttoned in he still looked oddly unworldly, but neat.

"All right," he said cheerfully, "come along!" Adding, with an unexpected touch of boyishness—a boyishness that perhaps finally and completely explained Peter Bell Ivor—"New York is our oyster! We now proceed to open it! By the way, my boy, there is an element of basic truth in all the stories of romantic adventure. D'Artagnan had to have what he wanted. The world was Monte Cristo's. Yes, romance is true if only it go far enough!"

Young Mr. William F. Case, in a daze, went with him—easel, color box, umbrella and all.

VI

"I CAN'T tell you how much I appreciate all you're ——" Thus he began, shyly, when they were fairly seated in the Subway train.

"Not at all!" Mr. Ivor broke in. "Not at all! The experiment has a certain value for me. One should stop at nothing in arriving in actual practice at any confirmation of his general conclusions. I have already made certain notes covering the little experience of the morning. I shall make others covering that of this afternoon. As a result of my lifelong study of our so-called civilization I have concluded, as I have already intimated, that that civilization is as yet in a most rudimentary state; that the human race, indeed, cannot yet be regarded as civilized at all. The war strengthened this conclusion strongly. The newspapers add fresh confirmation every day. All my personal observation tends the same way—touching on the bitterness commonly observed in business competition, the prevalence of trickery and corruption in commerce, politics and government, the blind intolerance of religious reformers, prohibitionists, labor leaders, manufacturers, militarists, socialists, security holders, anarchists and bankers. For example, it is plainly grotesque that so essentially prosperous a nation as our own—probably the most prosperous in all known history—should have any unemployment or poverty whatsoever. Even the ants have solved that problem. And yet the publicly recorded views of this Mr. John C. Heming, whom we are now pressing into our personal service, opposing any really effective solution of the huge unemployment problem that unquestionably exists, border on the ferocious. It is really quite extraordinary. As nearly as I can read the subconscious thought behind the spoken word, he really would like to have most of the laboring class shot at sunrise. But as that raises the question of who would then do the work, and how—a question he can only beg—he is reduced to the usual vague phrases about the law of supply and demand as applied to the labor problem. And to defending the liberty of the individual and the sacred law of contract. *Clichés.* And, of course, to chatter about restoring confidence, and that sort of thing; meaning, naturally, confidence in his own group. It would be, of course, a great luxury to enjoy at one time the wealth and the confidence of all one's fellow citizens. Delightful! And then, naturally"—this was added in an absent-minded tone—"he believes in a certain amount of private charity. Naturally."

"It's like hearing a lecture," thought young Mr. Case, staring nervously out through the car window at the crowded local train they were at the moment overtaking and passing. A pretty girl in a red fox boa looked demurely at him through the windows. She nearly smiled, and for a moment his thoughts wandered romantically.

"You are doubtless asking yourself," Mr. Ivor resumed, "the precise application of these somewhat rambling observations to your own acutely personal problem. The fact is, I have reduced my general observations to an axiom: That any reasonably civilized individual should be able to use and mold this childlike world as he chooses. Study of the men who have succeeded in such efforts adds confirmation. Particularly such cheap adventurers as Napoleon, Julius Cæsar and Captain Kidd. Our truest student of the human creature to date was Mr. Barnum. The thing, indeed, to one who has not thoughtfully considered it, is astonishing. This afternoon, for example, it will only be necessary for you to bear in mind that bankers are fully as simple-minded as policemen. More so, indeed, because they have vastly points of contact with natural hum And you must also keep it in mind th want money. You offer a decent *qu quo*, your art, but you want money average young man would allow hin feel that he was doing something ext daring. Then he would open his m the thought that Mr. Heming's wants conflict with his own; and then he be lost. But you will remember tha Heming's wants are too primitive t cern you in the slightest degree. You concern yourself only with your own want of money. You will be good-hu but adamantine. You will be simpl rien, from Paris, who does precisely chooses, and does it in a likable wa you will readily see, it would not b lized to do it in a disagreeable way matter is not quite clear to me ye amount you should charge for your portraits. But I have thought tha hundred and fifty dollars each might good a guess at a price as any."

"Two hundred and fif——"

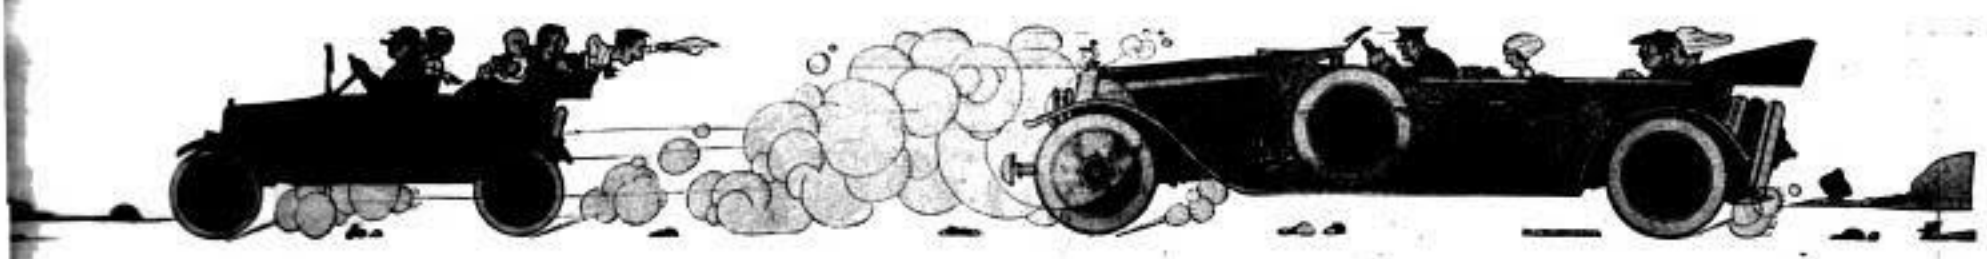
"Considering that you can do one hour. Remember you mustn't appear cheap, and you mustn't appear to wa do them. If these bankers see that *yo* smilingly pick up a thousand or *two* day they will be forced to respect They'll welcome you as to the manner l Their minds couldn't receive such a fa any other way—wouldn't know how

He found a cigar store within the sha of Trinity Church, and looked up the dress of John C. Heming & Co. It is ha likely that as much as once before wi three decades had anyone found it ne sary in that immediate region to look that particular address. Had anyone formed a few of the curb brokers who to number of several hundred crowded swirled over in Broad Street, tha scholarly looking man and an attrac young artist were at the moment doing thing it is reasonable to believe that Broad Street and some part of Wall Str would shortly have been loud in merrime For everybody in the world knew all ab John C. Heming. He was to New York the world what the Bank of England wa London and the world. It was through h and his strong-faced younger partners t great railway systems and the hugest of dustrial trusts and small nations and la nations were financed and refunded a mortgaged. Strings of dependent bar radiated in every direction from that i pressive office. Mr. Ivor was right; t money was there.

As they walked quietly down Wall Stre Mr. Ivor said, "It will be necessary for m to adapt my conduct in a measure to th crudely human plane. You will paint t doorman. There will surely be someo there, probably an old retainer of the com pany. Paint him. Purely because he inte ests you as a type. No one, you see, ca question the artist's choice of his subjec There he is supreme. For that work yo will accept no fee. It will be enough, think, to offer the man a photograph of th picture. And if other employes or officer should want such photographs, it would b better to give them freely. You can afford t be kind. And certainly you cannot affor to accept small sums. For any other wor that Mr. Heming or his associates may insist on your doing—and for whateve number you may have the time and th inclination to do—you will insist, of course on full payment. They would prefer it that way, and they must be humored. Above all, once we are in there, you must go your own way. Pay no attention to anything I may do."

"Wha-what are you going to do?" asked the younger man breathlessly, though his eyes were alight again and his color high. They stood before the massive stone building, while Wall Street surged, jostling, about them.

"I haven't the remotest idea," replied Mr. Ivor calmly. "Come. These bankers keep very comfortably early hours."



And he led the way up the stone steps into the massive building, pausing, however, on the top step to remark, by way of final admonition, "And just remember—they are children."

VII

MR. IVOR stood in respectful dignity by a desk that bore the name of one of Mr. Heming's partners, a name known wherever the power of American money was felt. Mr. Ivor was, indeed, probably

How the Oldest Oil Company Made the Newest Discovery about Fords

The most interesting announcement of recent years in the oil industry has been made by Wm. C. Robinson & Son Company—the oldest oil company in America.

It tells of the discovery of a new lubricating oil, which will not carbonize, and thus glaze the transmission brake band lining of Ford Cars, causing what is commonly called "chatter."

Lubrication engineers for years have recognized that the glazing of transmission linings has shortened the life of the linings, and by causing the car to jerk and jump has unnecessarily strained the entire mechanism.

Instant Welcome

The response that met this important announcement by a conservative old company was tremendous. Within a week the sales to dealers had risen to such a point that the Baltimore plant alone shipped nine solid car-loads of this one oil in a single day.

It has been tested and approved by 1615 authorized Ford dealers and reliable service stations.

One Ford agent in a town of 9,000 people purchased a solid car-load after a critical test of the oil.

Tested by Thousands

Every drop of this oil, to which the name of "F" Autoline was given, has been sold under the guarantee of this 90-year-old oil company, that it will assure perfectly smooth transmission and braking, or money will be refunded upon request.

At the time this was written, seventy solid car-loads had been shipped, and a total of $2.25 had been refunded.

Any Ford owner is invited to fill his crank case with "F" Autoline Oil from any responsible dealer, on the promise that his money will be immediately refunded by the dealer if his brake and transmission do not operate smoothly.

An Oil Romance

Many times before, oil men have sought the lubricant which would prevent the glazing of Ford bands. Some have attempted to market oil on this claim. It has remained, however, for the oldest company in the business to finally and successfully solve this problem. For your own protection, see that the oil you buy is drawn from a genuine Autoline container.

Robinson specializes in lubrication. The Company markets no gasoline. It has solved for the Navy, the Gloucester Fishing Fleet and the motor world some of the most baffling questions of lubrication.

"OO" Autoline is one of the few oils approved for use in Franklin cars in the "Franklin" owners' handbook. "F" Autoline merits like confidence. Every conceivable test was given this oil before it was added to the Autoline family.

For Standard Equipment

"F" Autoline Oil performs best when used with Standard Ford Equipment. It cannot work miracles by replacing worn-out bands or linings. It requires the same attention given to any other oil, and costs no more than ordinary grades of oil.

Write today for the full story of "F" Autoline Oil in our free booklet, "Keeping Out the Jerks".

To Dealers

"F" Autoline Oil is ***recommended*** *by every authorized Ford agent in Baltimore. Our salesmen cannot keep up with the news of "F" Autoline. Wire us today for the proposition in your territory. Prompt shipments assured from our nearest division warehouse.*

The kind you have always wanted

NEARLY everybody carries a knife—and nearly everybody apologizes for the knife he carries.

"I don't know whether you can find a blade that will cut." You hear it all the time.

Yet America has better steel today than it ever had. Better workmen. Finer and more exact tempering methods.

All it needed was for some one to *apply these resources* to pocket knives—rather than trying to meet some fancied price situation in the trade.

This Company came into the pocket knife business with the purpose of creating a positive standard of pocket knife *quality* and pocket knife *honesty*.

Its responsibility is to the *men* and *women* who are going to *use the knives*.

It brings to the task all the resources of metallurgy; all the equipment—*plus* the initiative, energy and ability that have made Remington one of the outstanding names of American industry.

Here are just a few of the Remington Pocket Knives.

There's a Remington Pocket Knife made to suit your every requirement. So if you don't see here the style you need—ask your hardware dealer for it.

He can get it for you from *Remington*. It will show you what a knife *can* be when made to a positive standard of quality.

(Continued from Page 110)

ne of very few adult residents of New ork to whom the name conveyed nothing hatever. He had passed the gray-haired orman with the special police badge simly by asking very kindly where he might ceive some advice in a certain matter, eaving the boyish, dutifully smiling artist pparently to wait near the door.

It would be inaccurate to picture Mr. Ivor as in anything but a state of marked nervous excitement. This inwardly. The outward man might have been that perfect anomaly, a college president who didn't want money. But he was sensitively aware that once again was he putting his axiom or theory roughly to the test. In a number of ways the test might go wrong. The boy might prove unequal to it, for one thing. And Mr. Ivor felt the scientist's aversion from inconclusive experimentation.

"Do you issue letters of credit?" he asked.

The partner studied him with the penetrating eye of the man who is subtly aware that he must be very penetrating indeed; then smiled indulgently.

"No," he replied, as indulgently. "No. Your own banker will do that for you."

But as he uttered the last two words penetration and indulgence together left his countenance, and for a brief moment he became so unprofessional as to exhibit downright surprise. He was staring directly past his caller toward the door.

Mr. Ivor turned, laughed softly and a thought impatiently, said under his breath, "Oh, good heavens!"

"What is it?" asked the partner rather sharply.

"Oh, it's only Durien. He's just back from Paris. He's incorrigible."

For already the easel was up, and the boy was squirting color gayly about his palette, while the doorman stood before him, stiffly endeavoring to look exactly as the doorman of the most important private bank in America ought to look.

The partner, as Mr. Ivor easily read him, was caught between suspicion, a strong sense of form and a wholly human curiosity. Furthermore, he wasn't sure what attitude he should assume toward that name—Durien. Was it a name he ought to know? Or were these men disguised reds? He was afraid of reds, and properly so, though somewhat confused as to just what degree of diabolical opposition to confidence made an otherwise white man red. On the other hand, he prided himself on his quick judgment of men; and certainly no simpler, honester soul ever wandered into a bank than the man before him. On still another hand, if we may assume so many, he fancied himself as a collector of old paintings. Safe old pictures, known by everyone to be good.

"Well," he remarked, "really! Of course we can hardly —— So that is young Durien! But what is he up to? Here?"

"He seems to be obsessed with the idea of gathering city types—quick portrait sketches. But he can't seem to realize that he's no longer in Paris. Why, this morning he set up his white umbrella in the middle of the Fifth Avenue traffic—at Forty-second Street!"

"You don't mean to say that the police allowed it?" The partner was trying to hide his interest behind a guarded manner, but without complete success.

Mr. Ivor laughed frankly, nodding. And there could be no question that the brown eyes behind the thick lenses met the carefully veiled gaze of the partner with a sense of equality. In a way, this was a relief to the partner. He met so few men who could look at him rather than up to him. A partnership in John C. Heming & Co. made one such a personage. The thing, even with its amazing perquisites, could be a burden at times. Humanly it was not altogether unpleasant to unbend a little.

"He got around that little difficulty"—thus Mr. Ivor—"by doing a portrait of the head policeman on the crossing. Made two of him within two hours, and gave him one. He owns Fifth Avenue now."

"Well, well!" observed the partner. Then, rising, he added, "Let's see what he's doing."

"If you don't mind—just a minute!" said Mr. Ivor, reverting to his supposed errand. "You'll understand my asking when I explain that I'm a scholar, and very seldom come into contact with these matters. Is it still necessary to have a passport to leave New York for Europe?"

"Oh, yes!" With which, and a courteous enough smile, the partner came out from behind his mahogany railing.

A newsboy entered at that moment, and moved rapidly from desk to desk, laying a newspaper on each.

With a brief "If I may," Mr. Ivor took up the paper, then laughed again. "Sure enough!" he said, and added, "The young devil!"

The partner looked down at the paper. There on the first page was a photograph of the white umbrella in the midst of the Fifth Avenue traffic; another of the smiling Durien, hat at a rakish angle, palette and brushes in hand; and a reproduction of the painting of Officer O'Hare.

The partner walked with dignity over to the door and stood behind the painter, observing the astonishing speed and firmness with which the color was mixed and applied. He even muttered approbation as the head began to model out. Two or three other impressive gentlemen appeared, whom he quietly motioned to stand close.

It was Mr. Ivor who broke in on this little scene.

"I'm sorry, Durien," he said, "but I really can't wait. If you're free, around five, look me up and have a cup of coffee." And he strode out.

The young man, startled, looked up, and for the first time became aware of the dignified group behind him.

"Oh!" he cried softly, engagingly. "I don't believe I —— Really, it's such a perfect head to paint that I ——" He caught himself and chuckled confidingly.

"It's all right," said our partner, turning with an air of proprietorship to the others—"very interesting! Go right ahead!"

VIII

"GEE-WHIZ!" said Durien, and giggled like a child at the end of a weary and wonderful Christmas. "Look!"

He closed the door, put down his things, and stood over the bed, turning his pockets inside out.

"Three portraits—seven hundred and fifty dollars! In cash! In good old rock-bottomed, copper-ribbed cash! Gee, but I'm a wreck!" And the happy artist flung himself on the bed, heedless of the bank notes littered there.

Mr. Ivor, with a slight contraction of the brows, lighted the alcohol stove and set the coffee machine over it.

"Three of the partners done to-day! Two more and old John C. himself to-morrow morning—there's another seven hundred and fifty. Gosh! Wow! Holy cats! Sorry to be late, Mr. Ivor, but —— Wow! And in the afternoon they're taking

MONARCH

TRADE MARK

Coffee Salesmen Wanted!

Reid, Murdoch & Co., internationally known as Coffee Importers and Food Manufacturers, announce—on their 70th anniversary—a further expansion in the opening of a new Eastern plant with headquarters in New York.

Splendid Opportunity for Retail Clerks

If you are one of the best retail grocers in your community and can advance no higher in your present position, this announcement offers an unusual chance to make a worth-while connection where you will enjoy a wide field of endeavor and a splendid opportunity for growth. We want capable, ambitious, energetic salesmen in the following cities:

Maine
Augusta, Bangor, Biddeford, Calais, Houlton, Lewiston, Portland

Vermont
Burlington, Brattleboro, Bennington, Montpelier, Rutland, St. Johnsbury

Rhode Island
Providence, Bristol, Pawtucket, Westerly

Connecticut
Bridgeport, Hartford, Middletown, Norwich, New Haven, Putnam, Waterbury, Windham

Massachusetts
Boston, Brockton, Fall River, Gloucester, Milford, Northampton, Salem, Springfield, Worcester

New Hamp.
Berlin, Concord, Dover, Keene, Laconia, Manchester, Nashua

New York
Auburn, Binghamton, Rochester, Schenectady, Utica, Syracuse, Jamestown, Elmira

New Jersey
Jersey City, Newark, Camden, Atlantic City, New Brunswick, Paterson, Phillipsburg, Trenton

New York
New York City, Albany

Pennsylvania
Bethlehem, Johnstown, Lancaster, Philadelphia, Reading, Williamsport, York

Delaware
Wilmington, Dover

Maryland
Annapolis, Baltimore, Cambridge, Hagerstown

Maryland
Cumberland, Frederick, Salisbury

Dist. of Col.
Washington

Virginia
Alexandria, Danville, Norfolk, Lynchburg, Richmond, Roanoke, Staunton, Petersburg, Charlottesville

No. Carolina
Asheville, Durham, Charlotte, Greensboro, New Bern, Raleigh, Wilmington, Winston-Salem

So. Carolina
Charleston, Columbia, Anderson, Greenville, Florence, Spartanburg, Sumter

A Good Line for Retailers—and Salesmen

MONARCH COFFEE

Over 2,000,000 lbs. sold by our Chicago House during December, 1921

MONARCH TOMATO CATSUP
MONARCH SALAD DRESSING
MONARCH BAKED BEANS
MONARCH SWEET PICKLES
MONARCH PINEAPPLE
MONARCH MILK

None Better At Any Price

Two hundred successful salesmen now travel out of our Chicago House. These men, our executives and department managers served an apprenticeship in retail grocery stores. We want 200 more like them in the East. Preference will be given to men with records of success in retail stores, and under 35 years of age. References required from present employer. Only applications made in person will be considered. If you are a "comer," looking forward to a future with great possibilities, come and see us. We start shipping from New York May 1st.

REID, MURDOCH & CO.

882 Third Avenue *(Bush Terminal)* **Brooklyn, N. Y.**

Would You Too Like Extra Money Every Month?

FOR the past two years Mr. Charles Morrill, a busy grocery salesman in an Iowa town, has had extra money every month for easy spare-time work.

And he is just one of scores of part-time subscription representatives of *The Saturday Evening Post*, *The Ladies' Home Journal* and *The Country Gentleman* who pleasantly and easily make their spare hours pay. *Today there is such a desirable, profitable part time (or, if you prefer, full time) position waiting for you!* You don't need experience to qualify for it: we will train you and equip you. We offer cash commissions and bonuses from the very start. The coupon below will bring full details, including our big free booklet descriptive of the plan. Send it in today.

----CLIP HERE IF YOU WANT MORE MONEY*----

The Curtis Publishing Company,
612 Independence Square, Philadelphia, Pennsylvania

Gentlemen: Please send me full details about your offer to subscription representatives. I assume no obligation in making this request.

WANTED!
Salaried Field Managers

CLEAN-CUT men with sales ability will be employed to build up our subscription force in assigned territory. Specialty salesmen, teachers or ministers with sales training, insurance salesmen, high-grade subscription representatives, circulation managers and assistants: Here may be your opportunity to make a permanent connection in a position paying expense allowances in addition to straight salary ranging from $35 to $100 weekly according to your ability.

Permanent Positions With a Future

ASSIGNMENTS must soon be made in the following territories: New England States; North Atlantic States; Central, Middle Western and Southwestern States—as far west as the Rockies. Traveling, preferably in your own car, within limited radius during the week will be essential. Surety bond will be required.

Send complete information in your own handwriting, stating age, education and business experience. Enclose best recent photograph. Give territorial preference. State fully what qualifications you possess to warrant your selection for a responsible position of this nature. Mail application at once to

me across to the Stock Exchange. Want me to do the members of a luncheon club. I told 'em I really couldn't go on forever with these little sketches, but they persuaded me. Gosh! Wow!"

Over the coffee he remarked, in more rational mood, "We've said nothing about a basis of division, Mr. Ivor. I don't know what. Anything you decide would of course suit me. If a straight fifty-fifty arrangement ——"

"My share," said his host with commanding authority, "is the ten dollars I loaned you this morning."

"But, good Lord ——"

"You will forgive me if I have to say that my interest in these experiments has been wholly scientific. My life would perhaps be happier if I could limit my wants to anything so simple as money. And you will forgive me for explaining that I shall be able to offer you little more of my time. I have expended a good deal of nervous energy to-day. There will be a small penalty to pay for that. You'll admit that what you might call my theory has stood the test we have put it to. Very good! If at any time you meet with new problems the solving of which would in some fresh way strengthen that theory, you will confer a favor by consulting me.

"For though I call it an axiom, because it seems such to my own thought, it will not meet with general scientific acceptance until it has been buttressed about with innumerable successful experiments, and"—his voice shook a little, like that of a man who has been under a severe strain—"and no failures."

The memory of him that lingered most prominently among the confused and exuberant thoughts of William F. Case, after he had settled himself in a taxicab and was rolling comfortably and, he felt, appropriately toward Delmonico's, was a picture of shabby loneliness—a gaunt, stooping figure in a doorway, with a background of the dingy little room and the books, and beyond the window the smoothly curving branches of the ailanthus tree and the littered, rusty fire escapes, saying, in a deep voice that pulsed with emotion, "You ask what my one great want can be. I will tell you. It is thought. The most difficult performance in the world—perhaps unattainable to all but two or three in as many centuries. Thought! The one thing, after all, that is not wanted. Certainly not in this lar jazz and the happy ending. God, the hi ending! Not in this land that is rule the prohibitionist and the bootlegger, pays its teachers less than its plumb that still tolerates that grotesque t called Congress! To this terrible loneli am I doomed, while a hundred million ple fox-trot past. But I shall not sta Let me get hungry enough and I shall k what to do—let hunger become a want I shall take as I choose, lawfully, laugh at their simplicity."

William F. Case pulled down one of folding seats and put his feet up, chuckled defensively, because the pict brought a sensation somewhat unsettl to his high mood. Queer old bird! Dou less a bit mad. Though he did check And that about bootlegging sure did hit nail on the head. Now, for instance, if e in his life, he should be allowed a cock and, say, a bottle of Nuits. Seven hund and fifty bucks, bones or simoleons! W And more to-morrow! He'd have to go it with a basket!

All you had to do was to go where money was!

It occurred to him that in his excitem he had forgotten to smoke. He took cigarette now from the gold case he b bought on the way uptown.

There was a pretty girl moving sinuou along the walk in what he thought of a snappy frock with summer furs. He grinne She didn't happen to look. Oh, we there'd be girls enough! Time enough f them after dinner. If only Juliette could wished over from the Boulevard Mon parnasse! Great little old town, New Yor Already he could feel it pulsing in his vein If only the crowd at Lavenue's could s him now!

Queer old bird! But —— The ta swung into Fifth Avenue. He could see th low structure that was Delmonico's. A ser sation akin to purring set in pleasantl somewhere between his stomach and hi throat. Oysters would be nice. And a soup and a bird—caviar, too—and a salad an a soufflé and coffee; and—oh, for a drink Perhaps—perhaps, if he whispered knowingly to the waiter and slipped him a tightly folded bank note, perhaps th waiter could tell him of a place.

For that was one of the five or six thing he wanted most.

THE style of shoe that you select is the consummation of perhaps weeks of drafting and planning by the Beacon staff of designers. A little higher toe on the one last, a trifle less curve here and a little more there; a few more stitches somewhere else; all of these details contribute to the authority of Beacon style.

Yet style is but one of the factors by which Beacon Shoes have attained their present place. Capable New England shoemen, possessing a rare skill that is both inherited and acquired, insure the quality from which public confidence is engendered.

We are as Proud of the Prices as we are of the Shoes

The 1922 Beacon prices are a comfort to all who have been seeking the good pre-war standards of price and quality. The 1922 Beacon variety is of especial interest. At the price that suits your purse you will find the last that fits your foot and the style that suits your taste.

A day's work in meat distribution

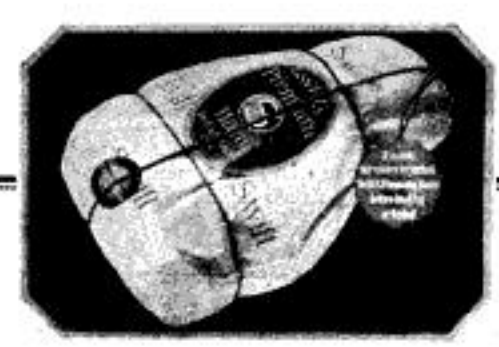
One day's shipments from our plants in Chicago, the largest live stock market, give some idea of the marketing service that we perform.

The map shows the widespread distribution of the 182 carloads that were shipped on this one day.

Most of these cars moved to eastern markets in the United States; but shipments were also destined for five foreign countries.

These cars carried not only meat, eggs, butter, and poultry, but some were loaded with soap, hides, fertilizer, and other packinghouse products.

Since the meat supply is so far from the principal consuming centers, and since fresh meat must be sold within a week or two, the work of distribution to distant markets must go on continuously. Otherwise people everywhere would not have a never-failing supply of lamb, beef, "Premium" Ham and Bacon, "Silverleaf" Brand Pure Lard, etc.



Ability to furnish this service in localities hundreds of miles from our plant, at minimum cost and profit, is our reason for existing.

Our profit over a period of ten years has averaged only about one quarter of a cent per pound—less than a nickel a week for the average family which buys only Swift meat.

BEAUTY • STRENGTH • POWER • COMFORT

THE NEW THREE PASSENGER HAYNES 55 COUPELET

The new Haynes 55 Coupelet is a smart, three-passenger, enclosed coach with a body design which is conservatively and artistically individual. In it the Haynes engineers and designers have once more pioneered the way.

Finished and appointed with all the luxury and tastefulness of the larger Haynes closed cars, and the utility characteristic of all Haynes cars, it especially meets the needs of the man or woman who requires a practical, serviceable enclosed car of medium price.

The riding qualities of the new Haynes 55 Coupelet are appreciably evident because of the perfect body balance. One fifty-two-inch seat trimmed in hand-buffed leather accommodates the three passengers and eliminates the staggered seat which has occasioned objections.

The smart carriage effect is enhanced by the triangular-shaped windows. Exterior cowl lights, a spacious luggage compartment, and other fully modern touches combine its completeness. Roof, cowl and windshield ventilation provide interior comfort in any weather.

An indirect dome light, the improved Haynes instrument board, with the "push-button starter," and other refinements add attractiveness to the interior.

Compact, light, with a 121-inch wheel base, sturdy chassis, equipped with the famous Haynes-built, light six motor, the Haynes 55 Coupelet appeals alike to the professional man and to the woman of social activities. The production of the new Haynes 55 Coupelet will be limited. We recommend that you make your reservation now at your nearest Haynes showroom.

BUCKET SHOPS AND HOW TO AVOID THEM

By Richard D. Wyckoff

CARTOON BY HERBERT JOHNSON

HOW the bucket shops first came to be known by that name financial history does not clearly show. The legend runs that the bucket shop dealt in small lots of grain; presumably traders who could not handle 5000 or 10,000 bushels of wheat or corn made a practice of dealing with what would now be known as odd-lot brokers, and for the want of a better term these brokers, who probably executed orders for 1000 bushels and up, or "by the bucket," were known as bucket shops.

The origin of the term is of small moment, but the bucket-shop situation has, for the time being, risen to great importance in the financial and economic life of the nation. When I first came into Wall Street, thirty-three years ago, the bucket shops were of an entirely different sort. Having taken the precaution to begin operations in short pants I had not so much to lose as some other people. My twenty-dollar-a-month salary would not permit me to engage in anything so reckless as a ten-share trade in a bucket shop. Lots of my fellow clerks, telephone boys, bookkeepers and others, were usually long or short of something in the way of stocks and took a keen interest in the flock of establishments centering in New Street, with a few of the more prominent on Broadway.

Bucket shops of '88 vintage, if you looked at them in one way, were schools of speculation where many of the leading traders of to-day cut their wisdom teeth, for there you could buy or sell, at the price last appearing on the quotation board, any stock on the list. The man behind the counter would take your twenty-dollar bill, make an entry on a big sheet, and you could close the trade out whenever you liked, at a profit or loss, without ceremony or explanation, and without urging on the part of the house. But if your two-dollar-per-share margin was wiped out by a decline of $1.75 in the price of the stock you had purchased—the other twenty-five cents per share covering commission—then a mere pencil line across the transaction on the sheet would end the matter.

This system had its advantages. You were not inveigled into dealing in large lots. You could choose your own stock, your own price and time for buying and selling; you could venture twenty dollars in the pursuit of an elusive fifty or hundred dollars, and if you could keep at it long enough you would begin to acquire some of the principles of successful speculation. Thus did a number of the biggest traders on the New York Stock Exchange get their start and establish themselves in a field where to-day the operations of a few of them combined frequently will run in excess of 100,000 shares in a single Stock Exchange session. The bucket shop of the old days was a product of the times. Trading in such places was on a plain gambling basis, for there were few means by which the trader might learn how trading and investing might be done intelligently and scientifically.

With such operations in most cases, 10,000 times fairer to the trader than the 1922-model bucket shop, things ran along that way for many years, punctuated by occasional failures. The chief tendency toward crookedness was displayed in the voluntary closing up of such houses whenever the money began to be paid out too rapidly. This is one early habit which bucket shops never have overcome; but as most of the people who dealt with them in former years ventured only small sums nobody in particular was injured.

THE OLD OAKEN BUCKET SHOP

Digitized by Google

About a dozen or fifteen years ago, however, the authorities began to get after the bucket shops, and for the time being most of them were put out of business. Then there began to appear what were known as partial-payment houses, most of which were not members of any exchange. They would buy for your account small amounts of stocks or bonds upon payment of a first installment and an agreement to pay a dozen or twenty more at regular monthly intervals. You remember that series in THE SATURDAY EVENING POST a few years ago, in which a former confidence man confessed that many of the crooks were moving into the partial-payment business? This, in the majority of cases, meant that they were opening bucket shops under the prevailing style; but this does not mean that all partial-payment houses are bucket shops. Bucketeers are very keen psychologists. Their success is based on a knowledge of weaknesses in human nature, and they always keep their ear to the ground.

Be it known that any bucket shop, whether traveling in plain clothes or under a disguise, is simply a place where you ostensibly buy or sell, or where you place orders to buy or sell stocks. The shop, which is supposed to execute your orders on some exchange, takes the position that if you lose money they make it, and vice versa.

This is the theory on which the bucket shop operates: That the public, which in most cases is simply guessing or gambling, will in the long run lose more than is made; hence the bucket shop will continue to do business so long as more money comes in than it is obliged to pay out. But if, as frequently happens, the public gets on the right side of the market and begins to pull down its profits, the bucket shop simply closes its doors and the newspapers say "Another brokerage house has failed."

Those who conduct bucket shops look upon your check when it comes in as their profit. Not being members of any exchange they are obliged to pay exchange members the regular commission on both the buying and the selling sides, so that there is no profit in the operation. They must, therefore, depend upon what their customers lose or what they swindle them out of in order to make any money at all; and as bucketeers are notoriously free spenders, both in the running of their businesses and in their own personal expenses, the money must come in pretty fast in order to keep them from failing. Many of them draw the money out and conceal it as it comes in, leaving only enough to pay expenses and make a showing. In some instances the orders may actually be executed, and then the shares you purchase are resold for the account of the house, which is practically the same as if they had not made the purchase at all. In other cases, as in former years, they make entries on a sheet or in a book. Then there are those who write the trades on their cuffs. Some of them don't wear cuffs.

Raids on Liberty Bond Owners

THE bucket shop is just as anxious to keep up to the prevailing style as any well-dressed woman. Fashions in the bucket-shop field are regulated by the laws on the Federal and state statute books, energy of the officials supposed to enforce them, also the regulations of the Stock Exchange and the activities of its police committee. But there is another more dominating factor—the psychology of the public. A year or two ago swarms of investors were attracted to the oil fields; hence every bucket shop and fly-by-night concern had its own oil promotions. During the war there were war babies of various sorts, midwifed to fit the public taste for that kind of "securities."

The partial-payment phase of the bucket shop reached its greatest popularity from about 1912 to 1919, which latter year marked the top of the boom. Growing out of it was a new form of bucket shop originating in the old-fashioned carpetbag game which the bunco steerer used to work when the farmer came to town. It seemed that the partial-payment field became overcrowded with crooks, many of whom were driven out of other states and into New York by the blue-sky laws intended for the protection of investors, for though there were certain of these laws on the New York statute books, they had never been anything but dead letters.

Two big factors contributed toward making the war period and the after situations up to 1919 the easiest picking the bucket shops ever had, for it was then that they completely abandoned the taking of the public's money with sugar tongs and went after it with steam shovels.

In order to accomplish this the most luxuriously furnished main offices and branches were opened, and advertising was conducted on a large scale. People who did not know the difference between a bucket shop and a legitimate house were misled by appearances; and as the New York Stock Exchange restricts the scope of the advertising done by its members, the bucket shops, being free to use any size and style of advertisements they liked, secured a very great advantage.

The public had all these billions of dollars which they had saved and put into Liberty Bonds. Coupons only came along about every so often, and represented a very small return, as the bucketeers pointed out to holders, saying, "Put this into Invisible Oil Company shares and you will make 20, 30 and 40 per cent on your money instead of the miserable few per cent you get on your government bonds." It was easy for the smooth-talking salesmen to induce people to convert their few Liberties into hundreds and thousands of shares of brightly engraved certificates representing oil and other "investments." Never before had the public possessed so much money all at once, and had it in such readily negotiable shape. Naturally when, for the first time, 15,000,000 new investors are added to the 5,000,000 somewhat experienced in the ownership and the handling of stocks and bonds, there are bound to be many among them who do not appreciate the relative values of this and that security. To all intents and purposes engraved certificates look very much alike, and behind the stock or bond is merely the mental picture painted by the one who is selling it.

In marketing Liberty Bonds, Uncle Sam adopted the partial-payment plan; also the method of going after security buyers in organized squads. The bucket-shop keepers and crooked stock promoters were quick to see the point. They also organized squads of security salesmen operating in nearly every state in the Union, highly trained, working on a liberal commission basis, keyed up by ginger talks and enthused by frequent conferences and conventions after the manner of any efficient and legitimate sales organization.

Bucket-Shop Plants and Methods

AS A SMOKE screen bucketeers began to offer in their advertisements and circulars high-class bonds and other securities on the partial-payment plan, thus giving the impression that they were investment-security dealers and thereby gaining the confidence of their victims. As soon as the latter paid for their securities the bonds or stocks were forwarded, and not long thereafter they were invited to put up these securities as collateral for the purchase of certain mining, oil or other stocks which were either being promoted by the bucket shop or the market for which was under their control. Sooner or later such stocks would be manipulated to a low price, the equity wiped out, and in many cases the stock disappeared from the list and had no market value.

About that time there began to develop another factor which has had much to do with the success of the 1922-model bucketeer—the use of the telephone not only for local but for very and many long-distance calls. Their salesmen frequently found difficulty in getting into the private office of a prospect. So the telephone, which is a demand draft upon everybody's attention, was called into use. Rows of telephones began to appear in the inner offices of the bucket shops. A group of young men were carefully trained in the telephone canvass. They would each take a telephone book, open it at random, start calling the first number they came to, and right on down the column, skipping no one. In an office in the building where a bucket shop formerly held forth there were, during the receiver's sale, about twenty of these telephone connections, obviously put there for no other purpose, each with space enough for one man to operate.

The bucket shop of the '80's and '90's generally was confined to one large room with a blackboard, a few rows of chairs, a partition, and a couple of windows behind which the order clerk and bookkeeper worked, and nothing much else; but the modern bucket shop has evolved into an establishment occupying the entire space in a whole building which it owns, employing hundreds of clerks, leasing thousands of miles of private telegraph wires, having branch offices in a dozen cities, mailing departments that issue 100,000 to 500,000 market letters per week, a corps of service men, statisticians, stenographers and typists, a battery of automatic typewriting machines, scores of telephones, a squad of traveling salesmen, a newspaper-publicity department, and other equipment, making them in some cases larger than the biggest legitimate brokerage houses that are represented on the New York Stock Exchange.

In principle it is a vast swindling organization, for it is designed to attract the public, then to extract its money.

Such concerns are the outgrowth of the investing and trading tendencies of the American people, stimulated to a high degree by playing on their cupidity.

The bucket-shop evil is sapping the purse of the American people to the extent of hundreds of millions of dollars every year. The liabilities in recent failures, amounting to $20,000,000, are but a flea bite to the amount which the thirty-odd concerns which have recently failed in New York had in their possession during the height of the recent boom, or at the low point of the decline of 1921.

These various forms of crooked dealings reached such a stage that if they had been permitted to grow and develop as they have during recent years they were likely seriously to injure the economic life of the nation. In November of last year I therefore decided to print the facts about the bucket-shop evil in my publication, and this exposure was immediately taken up by newspapers and other periodicals all over the country. Then began the run on the bucket shops which resulted in withdrawals of securities and cash at such a heavy rate that the bucketeers were in many cases forced to close their doors. As this is written failures are running from three to six a day. The small amount of assets in proportion to liabilities in many of these failures had a cumulative effect upon the public mind, and suspicion was aroused against many additional concerns; and rightly so, because the later failures have, if anything, been just as spectacular in proportion to their size, and more and more rotten conditions are being disclosed.

It is about time something was done about this situation. Something is being done, and something more is going to be done.

For the benefit of the uninitiated it might be well for me to point out the different kinds of houses that are doing business in securities, not only in New York but in Boston, Philadelphia, Chicago, and other large and small cities throughout the country.

New York Stock Exchange houses are those which through one or more of their partners hold memberships in the New York Stock Exchange. These memberships cost close to $90,000, are limited to 1100 in number, and require large financial resources in addition. *In order that a* firm may engage in the brokerage business on the New York Stock Exchange a capital of from $100,000 to many millions is required, according to the volume of the business. Ownership of a seat—it is only standing room—represents the right to do brokerage business on the primary security market of the United States, for most of the leading railroad, industrial, public-utility, mining, petroleum and other miscellaneous securities are dealt in there, and its markets are looked upon as the standard for this country.

The Consolidated Stock Exchange of New York is what is known as a secondary market. Dealings on that floor are in the same securities as those bought and sold on the New York Stock Exchange, and prices on the Consolidated floor are governed by those on the big Exchange. Originally this was a petroleum exchange. In the last century, during the early excitement of the trading in oil, certificates for that commodity were dealt in just like shares of stock, and any increase or decrease in the oil supply or demand was reflected in the market price of the certificates. When that kind of trading died out, or was deliberately killed, the Consolidated Exchange began to cater more to those who wished to deal in small lots of stocks, because in former years the New York Stock Exchange members rarely would take orders for less than 100 shares, except for outright purchase, and so a market in ten, twenty, thirty and fifty share lots began to grow up in the Consolidated Exchange. It was a very thin market, but the small trader was attracted on the ground that he could trade actively in fractional lots.

Odd-Lot Transactions

MEMBERSHIP on the Consolidated Exchange could, about twenty years ago, have been bought for a few hundred dollars, but in recent years the price has risen to several thousand dollars. Some of the reasons why may be inferred from the recent failures of many houses holding memberships on the Consolidated, many of whose assets in the final showdown proved to be a low percentage of the liabilities. In other words, they were bucket shops, and their Exchange memberships were used to disguise their real character.

The New York Curb Market is that which formerly constituted an interesting group of brokers who assembled from curb to curb in Broad Street, just below Exchange Place. Recently it became properly organized, and is now housed under its own roof just back of Trinity Church. When its trading was conducted in the street many bucket shops operated there; but with the reorganization of this exchange a considerable part, but not all, of this element has been eliminated.

Though partial-payment houses which are advertised as such are comparatively few among members of the New York Stock Exchange, nearly all members of that board execute orders in lots of less than 100 shares. It is estimated that the odd-lot transactions which do not appear on the tape and are therefore not included in the total trading reported in the newspapers would add 40 to 50 per cent to this total if they were recorded; that is, if 1,000,000 shares of round lots are dealt in in a single session it would indicate that the total transactions were between 1,400,000 and 1,500,000 shares.

One of the leading houses, which formerly made a specialty of the partial-payment plan, writes that their reason for abandoning advertising for such accounts was that there appeared to be no difference between a partial-payment account and one which was being carried on margin, both being subject to margin calls in the case of a decline in the market. To use their own expression, "We feel that the term Partial Payment has in many instances done more harm than good, encouraging promiscuous advertising by irresponsible brokers, whose only intention

TROUPING WITH ELLEN

"What's That?" He Snarled. "Who Asked You to Butt In? I'm Handling This. Did I Say She Was Fired?"

By Earl Derr Biggers

ILLUSTRATED BY C. D. WILLIAMS

THE curtain descended, blotting out from Andy Owen's tired gaze the terrace of Mrs. Mortimer Van Reypan's villa at Nice, and the row of mechanical smiles back of which lurked the chorus and principals of One Night in June. For a moment he waited while the finale echoed and died away in the far corners of the theater. Then he lifted his baton, his men took a deep breath, and in another instant they were off together on the ultimate effort to implant the song hit of the piece forever in the memory of Albany.

Andy swung round and faced the auditorium, where the matter of seats furnished active competition. The customers were moving slowly up the aisles, well pleased with their evening's diversion, forgetful for the moment of the February storm outside. Many of them, Andy noted, were humming the song hit. Pretty soft for the composer, thought Andy, computing royalties in his mind. His attention became absent-minded, casual. Then he saw a short, heavy figure in a fur coat, with a soft hat pulled low over his eyes, moving down the side aisle to the stage, and it was as though an electrical current had invaded him.

"On your toes, boys," he hissed. "The old man's in the house!" And even the composer would have been satisfied with their rendition of his song hit then.

On the other side of the curtain the stage crew were busily wrecking Mrs. Van Reypan's happy home and loading it on a truck that stood in the snow at the alley door. From the principals' dressing rooms came the flush of running water, and on the iron stairs that led below sounded the click of silver slippers as the Cinderellas of the chorus ascended, unhooking in the back as they ran.

Suddenly came the booming call of Mickleson, the director: "Everybody on stage! Chorus and principals, house!"

Like an arctic blast the summons swept the region of the wings, freezing them all where they stood. And as they hesitated, poised, tense, the same vision flashed through every mind! The old man! He had been in front! Only three nights ago, in Poughkeepsie, he had bid good-by to them at length, had assured them that he would not see them again until the following Monday, in Boston. But this was one of his ancient tricks, a part of his joyous game, creeping into the theater when no one suspected, making notes on the performance as he crouched in the shadows at the rear, then swooping down on them with the light of battle in his eye.

They straggled to the stage, the girls clutching their gowns at the back and shivering, the men in shirt sleeves, collarless. And there against the curtain stood the figure they dreaded to see, inscrutable in the shadow of his hat, warm in the embrace of his fine fur coat, and with a sheaf of notes clutched in his hand. Thirty years in the business, in love with it still; life offered him nothing now so glorious as moments like this, when he stood there and saw them tremble before him, stood secure in his power, looked into their eyes and saw fear and the reluctant respect of the weak for the strong.

"Everybody here, Mickleson?" he wanted to know.

"I th-think so, sir. Yes, Mr. Wellman, we're all here, sir. We didn't expect to see you, sir. Quite a surprise, ha, ha, ha." A ghastly attempt at mirth.

"First of all, Mickleson, I think the performance has sagged. Damnably. And we open in Boston—a metropolitan audience—Monday night. I humbly suggest that we meet at the theater in Boston to-morrow evening at eight—Sunday evening, that is. Agreeable?"

"Perfectly," said Mickleson. "I'm sorry you think we've let down. It seemed to me ——"

"I made a few notes," cut in the old man. "I've lost the order—but never mind." He selected one of his slips of paper—the black spot for somebody. "Miss Davis!"

"Yes, sir."

"Your first entrance—you speak too soon. I believe I mentioned that before."

"Oh—I'm sorry, sir. I counted ten."

"Huh! You're a fast counter. Count a million, if necessary, but in heaven's name give Jimmy time to get round that table. By the way, Jimmy, that suit of yours in Act Two. You're playing a young millionaire. Is the smart set going in for polished elbows on their dress coats? I don't get about much—I'm asking for information."

"Why, sir—you passed that suit at the dress rehearsal. It's brand new."

"Same suit you wore when you worked for me five years ago. I spotted it by that wrinkle under the left shoulder. No shabby millionaires in my company, if you please. Order a new outfit Monday morning!"

"Ye-yes, sir," said Jimmy. His face suddenly contorted over an unpleasant problem in mental arithmetic.

"Mr. Jamieson!"

The old man was warming to his work. Mr. Jamieson stepped forward, a wilted collar and a soiled white tie clutched in his nervous hand. He was the old man's pet aversion in the company.

"Well, I got it, and I got it good," he remarked afterwards philosophically.

Following Jamieson the others were called forward one by one, heard a few of their many blemishes listed, sank back humiliated and angry.

"Young ladies of the ensemble," said the old man at last. Sixteen faces of varying loveliness looked anxiously up into his. "Young ladies, I don't get the words of the opening chorus. Mickleson—how many times must I speak of this? I pay a clever young man real money to write words for this music—at least, I thought he was clever until he began to work for me." He cast a fishy eye about the stage; an author would have been a tasty titbit to finish off on, but none was in sight. "I pay for words, I say, and I don't hear them. We'll take that up again to-morrow night. What I want to say now is—there was one young woman ——"

His eye searched quickly among the sixteen faces and came to rest on the loveliest of them all, an oval face with

Digitized by Google

big wistful eyes under a careless mass of fluffy light-brown hair. He pointed one fat finger.

"You!" he said in a voice of doom.

She faced him bravely, but flushed a bit under her make-up.

"Miss Llewelyn," said the always helpful Mickleson.

"Miss Llewelyn," repeated the old man. "Oh, yes—I remember you now. Found you reading a novel by Conrad one day at rehearsal. Maybe your stage work is cutting in on your studies. Maybe that's why it annoys you so. Or perhaps the lines of the piece bore you."

"No, sir," said the girl, while Andy Owen, awaiting his turn in the rear row, stirred resentfully.

"Well, you looked bored to-night. And I pay you to smile—understand that. Damn it, when you're on my stage you smile."

"I'll remember, sir," she said, and made a courageous effort to carry out his order then and there.

"You'll remember it or get out! What's the matter with you girls nowadays? Thirty years I've been in this game ——"

His business manager appeared at that moment with news of great portent—a statement of the night's receipts. He and the old man retired a bit from the crowd and engaged in an animated conversation. Time passed, the blast from the open door into the alley came sharper than ever, the girls shivered in their light evening gowns, the old man drew his fur coat closer about his chubby person.

"Say—is he going to keep us here all night?" The Llewelyn girl turned anxiously to the tall, willowy blonde who stood near her. "I got a train to catch at twelve. I telegraphed ma I was coming."

"A lot he cares about that," said the blonde.

"Mr. Mickleson," the girl whispered, "I got a train at twelve. Couldn't I go now?"

"No, no, no!" cried Mickleson, horrified. "He hasn't dismissed us. Don't move."

It was an argument now between the old man and his aid—the gestures indicated that. It was always an argument after the introductory remarks. The minutes dragged by. "Say, Andy," whispered the Llewelyn girl, "what time you got?" He showed her his watch; half past eleven. "Gee!" she said; "and I telegraphed ma I was coming."

"You watch your step, Ellen," said Andy. "He's sore at you anyhow."

She looked toward the old man, stood staring at his broad back, warmly protected from the breeze, and a sudden intense bitterness against him came into her heart. Was she his chattel, his slave, she asked herself, repeating a line from a picture she had recently seen. No one was watching her, her step strayed into the wings, softly she climbed the iron stairs, gaining speed as she went. In another moment she was in the deserted dressing room, hastily removing the make-up, donning a little dress of blue serge, lacing up her high patent leathers, struggling into her near-seal coat.

The old man finally subdued his opponent and turned again to his notes. "Just one thing more—Mr. Jamieson. How do you pronounce the word 'exchequer'?"

"Why—er—it's exchequer, isn't it? On the first syllable. Or am I wrong?"

"On the second when I went to school," replied the old man. "But things change—of course." He had an uneasy feeling about that Llewelyn girl; somehow he hadn't humiliated her enough. She annoyed him with her youth and her vitality, her superior manner as she looked him in the eye. "Perhaps our young student can tell us," he sneered. "Our highbrow chorus girl. Miss Llewelyn." He sought for her, amazed. "Where's Miss Llewelyn?"

"She had a train to catch," said the terrified Mickleson. "She must have beat it."

"Did you tell her she could go?"

"Oh, no, sir—I wouldn't dream of doing that. Not without your permission."

"You mean to tell me she deliberately walked away? Mickleson, where is the discipline in this company?" With no effort at all he was working himself into a fury. One of the least of his creatures had flouted his authority, one of his little pawns had rolled off the board. "Get this girl! Bring her here! Get her, I tell you!"

She walked on the stage at that moment, a straw suitcase in her hand, a saucy little hat of crimson on her head, an air about her that was fuel to the old man's flame.

"I Was Born in a Street Like This," Ellen Said Suddenly. "My Folks Still Live There"

"Calling me?" she asked. "I'm sorry I had to run away, but I'd promised to spend a few hours at home. My mother's expecting me. What was it you wanted?"

The old man stood staring down into her calm eyes, and they further infuriated him. His lips moved, but no words came; he was too enraged to speak. At that moment Mickleson came forward; his nerves on edge, his judgment lost, he thought it was up to him to assert his authority then and there. It was an unfortunate inspiration so far as he was concerned, but it saved Ellen Llewelyn her job.

"You're fired!" cried Mickleson. "You're out. Walking off like that without our permission."

The old man found his voice then, and on the instant he transferred his anger to poor Mickleson. He was like that; no one ever knew which way he would spring.

"What's that?" he snarled. "Who asked you to butt in? I'm handling this. Did I say she was fired? You—you lazy hound—I'm sick of you. No authority over them."

"But I thought ——" cried Mickleson, appalled.

"Never! That's a lie! You never thought." He turned to the company. "You're dismissed, ladies and gentlemen. You can go. You, too, my dear young lady. I excuse you. You've had no one here to teach you—no one to make you understand that when I call a company onto the stage nobody leaves until I say so. It's not your fault, Miss Llewelyn. Go home to your mother, but remember this—the call to-morrow night is for eight o'clock, and one minute late means your job. Now, Mickleson, I'll talk to you. Where the hell did you learn your business?"

He was at Mickleson's throat, but the company stop to hear; they scattered gratefully to the wing Llewelyn, triumphant, hurried toward the stage d

"Oh, Lil," she called to one of the girls, "get a t two at the Occidental. If the piece gets over we'll apartment. So long. See you later."

"Get wise to Ellen's new coat," said a languid sh "Meow! Meow!"

"We all know you're a cat, dearie," Lil remind "Why advertise it?"

"Thanks, Lil," Ellen said, overhearing, and fled i alley. Close at her heels came Andy Owen, pulling h coat over the evening clothes that were compulsory conductor of the orchestra, even on the road.

"Give me the bag," he said. "You've got sixte utes. It's some race."

"Don't you bother, Andy," she tol

"It's no bother. Think I want to hang back there till the old man's red eye lig me and he jumps? Say—why you w room with Lily again?"

"Why not?"

"Well, you know what happened last She's the laziest thing ever. *Lying in b* you getting the breakfast and waiting hand and foot. Want that all over agai

"Sure I do," said Ellen. "*Lil's* all Andy. Besides—she's had a good educ She can talk like a lady when she wants learned a lot from her."

"Oh, I see. Well, you're too deep for m Reading highbrow books, *and all that* st thought at first you was bluffing; just try grab somebody with it."

"You thought wrong, Andy."

"Yes, I guess I did. You really mean it, you? But what are you *aiming for*, anyh

Her voice seemed far away in the storm don't know," she said. "I—I guess *I'm* ambitious, Andy. I want to get somew To be somebody—anybody—anybody while. That ain't—isn't *any crime*."

"Of course not," Andy answered. "I stirrings, too, sometimes. I'd like to wr real good song—catchy, you know—make of money. But this highbrow stuff—boo what the hell does talk matter? Grammar all that?"

They were at the foot of Albany's famous now, and the wind was no longer so bitter Before them loomed the big station. They in—five minutes to spare.

"Got your ticket?" Andy asked.

"Sure," she nodded. "I came down bought it before the matinée. I guess train's ready."

They stood together beside the track, in a little grou snow-flecked travelers. Ellen's heart sank.

"Oh, Andy—I'm ashamed of myself," she wailed. " I don't want to go."

"Why not?"

"It always gives me the willies. I forget how drear is, and then I go back—and remember. When I little—all those years."

"Nonsense!" said Andy. "It's home, ain't it? See in Boston to-morrow night. Whatever you do, don't late."

The train roared up. "So long," Ellen said. "It awful good of you—coming down through this storm hope your feet didn't get wet. So long, Andy."

He helped her aboard. She turned on the platform caught a glimpse of his round earnest face smiling up at through the storm.

The train jolted out of Albany, stopped again in Tr and then began its journey into the even more wintry Be shires. The day coach was cold and smelly, noisy with snores of those who slept. Her short skirt and silk stoc ings seemed to invite the blast, so she doubled her feet under her on the green plush seat.

A good-looking young brakeman, caught by the cha of the face beneath the very red hat—the sole dashi item of her costume—paused in the aisle by her side. glanced at her ticket.

"North Readfield," he ventured. "Live there?"

"Oh, no," she said. "Fifth Avenue, if you're ever New York."

"I'm in North Readfield a good deal," he told he "I'd be pleased to meet you."

"So would I—if anybody ever introduced us."

"Wow! Well, it's a bad night."

"It sure is—for you."

He went on down the aisle and left her to her thought North Readfield again—that tawdry town amid the beaut of the hills. River Street. Ma would be waiting up. Poo ma. She really ought to come home oftener, for ma's sak

She dozed off. The next thing she knew, the fresh brake man was shaking her. "Come out of it," he said. "We' pulling into Fifth Avenue. North Readfield, I mean."

Digitized by Google

She sat up, glanced at the cheap little watch on her wrist. A quarter of two. "Oh, thanks," she said.

He picked up the straw suitcase and led the way to the door. "I didn't mean no harm, what I said," he told her. "A guy gets lonesome—you know."

"Sure," she smiled. "Anybody would get lonesome way up here. That's all right."

"Maybe I could come and see you, then?"

"No—can't be done. I'm moving on at noon to-morrow—I mean to-day. I got to get to Boston. I'm in a musical show."

"Gee!" he cried. "An actress!"

"Thanks," laughed Ellen. "Not many'd say so."

She stepped off into the snow. A faint light flickered in the window of the little brick station. At the far end of the platform she saw what looked like a taxi. She went down to inquire.

"Sorry—I was waiting for somebody," explained the driver.

He alighted from his car, a great muffled figure. "I ain't a taxi. Say—nobody else got off, did they?"

"I didn't see anybody."

"That's fine. Get a man out in the middle of the night—but never mind. I'll give you a lift. Where you going?"

"It ain't far," she said. "Number 13 River Street."

"Hop in," he directed.

He went up front and began to crank. She heard the response of the engine and her heart thrilled gratefully.

They began to climb a hill between two rows of shabby little business blocks—Main Street, North Readfield. Ellen peered eagerly through the snow, saw the lights of an all-night lunch room, located the music store where she had started on her grand career. Main Street's business activities stopped abruptly, and they crossed an iron bridge over a frozen river. Then on past the mills, black and dreary, the mills where North Readfield toiled from dark to dark.

Ellen's companion said nothing; evidently at two in the morning his vitality ran low. He turned sharply into River Street and slowed down, for the car found the going rough.

On either side were mean little houses, their porches sagging, their paint a memory; houses that seemed dissolute and proud of it.

"Say—every place is the same," he announced. "I guess you'll have to point out 13."

Her spirits lower than ever, Ellen stared hopelessly about. "I—I don't know as I can," she said. "I ain't been here for two years myself." Then she saw a light in a window on ahead. "That might be ma," she added.

He slowed down as they came abreast of the light. The door of the house opened and a dumpy little woman stood there, staring at them.

"It's ma," said Ellen Llewelyn. "She waited up." She searched in her purse, found a soiled dollar bill. "Here—I wish you'd take this."

"Nothing doing," he laughed. "I ain't in the business. Good night."

He was gone before she could thank him. She turned and ran toward the woman on the porch. In another second she had cast the straw suitcase down on the snowy steps, and she and ma were in each other's arms.

"Ellen! Ellen! Two years you been away. I ain't seen you fer two years."

"There, there, ma," sobbed the girl. "What you crying about anyhow?"

"Come in, Ellen. It's terrible cold, ain't it?" They went into the house—into the parlor, so called. "What a pretty coat," the older woman said. "You better keep it on. It ain't any too warm here."

"Well, ma, you got my telegram, didn't you?"

"It come this afternoon. I wanted the rest should wait up fer you, but—well, you know how they are."

"That's all right, ma. You're the one I want to see."

"And I want to see you, Ellen. You been away too long. Don't do it again."

"No, ma. I won't."

"It's cold in here, ain't it, Ellen? I didn't dare put no more coal on the fire. They's only about a bushel basket in the cellar, to last over Sunday."

"Why don't you get some more?"

"Oh, well—what you been doing, Ellen? Tell me about yourself."

"I suppose the coal man's shut down on us?"

"Yes; and the butcher, he's hounding us. Oh, Ellen—I didn't mean to start in on my troubles before you was hardly through the door."

She drew her woolen wrapper closer about her plump figure, and the round little face under the wisps of gray hair looked suddenly tragic.

"Things get harder all the time," she said.

"I send you all I can, ma," Ellen told her. "It takes nearly all I make, traveling round."

"I know—you're a good girl, Ellen. But your pa—seems like he gets worse. I thought maybe this here prohibition would make things easier, but he gets it somewhere, and he pays ten times what he used to. Awful stuff too—it'll kill him yet."

"What if it does?" said the girl bitterly.

"Ellen—you mustn't talk that way."

"How about Dave? Can't he help?"

"He's—he's wild, Ellen. Loafing half the time. I'm worried about him. And Mabel—out to all hours at the movies—thinking about nothin' but fellows and clothes. I wish you'd talk to her, Ellen. I'm worried about her too." She put her arms about the slim figure of her daughter. "You're all I got, Ellen," she said. "You're what I lean on—in my mind. Thinkin' about you—it keeps me goin'."

"Now, now, ma—you're cryin' again."

"'Scuse me, Ellen. It ain't no way to welcome you home, is it? But I been settin' here since pa went to bed at eight, an' things got preyin' on my mind. There—I'm all right now. I wanted your pa should sleep down here, so you could sleep with me—but he wouldn't. So I fixed you up a sort of bed in this old chair."

"That'll be fine, ma. It's nearly morning anyhow."

"To-morrow night I'll make one of 'em give up fer you," the woman said, and Ellen turned away her face. How could she tell her mother she must go on at noon? Oh, well, that could wait till the morning, the brighter morning. She began to unlace her shoes.

"Silk stockings?" her mother said. "In winter! You'll catch your death."

"I haven't yet," the girl laughed. "I'm all right, ma. Don't you fret about me. I'll just take off my shoes and my dress, and slip on my old kimono."

Her mother came forward and helped with the fastenings of the blue serge. "Land sakes, Ellen!" she cried as it fell to the floor. "Is that all you got on underneath? You'll be in your grave first thing you know."

"Wake up, ma. You're a million years behind the times. This is what they're all wearing in the city."

"It's hard to believe. Kind of pretty, though. Silk, too, ain't they?"

"If they ain't I been stung." She took a flimsy dressing gown from her suitcase and put it on. "Now, ma, you run off to bed. And in the morning we'll have one grand visit."

"I got to tuck you in an' explain this bed I fixed. It'll be all right if you don't move round much." She waited while Ellen arranged her hair. "Seems like you're prettier than ever, Ellen," she said. "Get prettier all the time. I got you to be proud of, whatever else I got."

"You got grandfather too," said Ellen suddenly.

She pointed to a rather hideous crayon portrait that hung over a battered sofa. Old David Evans had long since passed on, but still he smiled down rather grimly on the most ambitious of his descendants. A scholar, David Evans, who had risen from the collieries to be pastor of a dissenting chapel in the old days in Wales.

TRAVELER'S REPOSE

By Joseph Hergesheimer

ILLUSTRATED BY W. H. D. KOERNER

THE thought, curious and unexpected, which had come to Jalan Heronbar lingered in his mind; it was this—that the mountains, the county, of Greenstream were very pretty. They were, more than that, filled with peace; and the name of the village on the West Virginia border he so often passed came into his memory, Traveler's Repose. The words repeated themselves, and seemed, of their sound, to fill him with a sense of rest. He was sitting, alone as usual now, at evening, in the narrow portico of his house. Before him a rocky pasture descended to a road set against deep spruce woods; but at his left, past the corner of the dwelling, there was a valley blue with distance, and mountain on mountain, range on range, beyond. It was, in addition to everything else, June; the day had been hot but the dusk was cool, fragrant, a gradual decrease of light and an increasing of the peace, the prettiness, he had discovered.

The unexpectedness of this lay in the fact that the mountains had been familiar to him since birth; they were his mountains, Greenstream was his county; and only now, at thirty-four, had he grown conscious of it all. The reason for it, he decided, was the three years during the war he had spent on the level sandiness of New Jersey. Throughout the fighting Jalan had, at home, instructed men in the driving of army trucks. A hard fate for him, for a Heronbar. The trace of a smile was perceptible on his thin lips. Well, that was over, and he was in Greenstream again—he had been back three years—impressed with the quiet and beauty of his surroundings.

It seemed to him to be a place apart from all the tumultuous rest of the world, the last, probably, where peace was an actuality. The mountain ranges completely closed it in, there were no railways, and the roads, for automobiles, no more than fair. All at once he wished that there were no roads communicating with the places outside. This was even stranger than his new sense of beauty, and he examined it with a slow thoughtfulness. What did he mean? That really was clear enough: he wanted to keep Greenstream separate from the bitterness and struggle almost everywhere tearing men from happy and good lives. It looked as though he were getting religion, and the shadowy smile returned to his lips. A Heronbar religious! They would laugh at him in the store; but in fairness to that humorous company he was obliged to admit that they would have laughed at him, but not now. The war, even such service as he had accomplished, had changed that. The Heronbars of the past were dead; he was the last of man, woman or child alive; and the old fear and hatred of his family had died, its place in the county taken by an attitude of pride toward a local and heroic legend.

A place of peace, a refuge, green and fruitful in the summer, white and immaculate in winter. It wasn't needful to go out of that section of country for a living; many men living within twenty miles of him had never been forty miles from home. The women, Jalan told himself, could still spin, and though the hunting was largely ruined the valley had many herds of cattle, grazing and grains. He went over this possibility minutely, thinking of it as a fantastic scheme for the passing of an idle hour; but the aspect of fantasy receded. A land without fighting.

That he had come to detest. The Heronbars had lived by it; yes, and by murder. The gun play of a raid on the distilling apparatus quietly occupying the Heronbar parlor alone had resulted in the death of his father rather than of any one or two or three of the revenue force. That had happened eleven years ago. Jalan had been away, over the state line; his brother had escaped from a window, to be killed the following month on a freight train; and their mother and a great-aunt, Christia, did not long survive the general disaster. Jalan, solitary in the house, except for the period of his service, variously occupied in the blue grass or higher woods, had dwelt upon the violent aspects of his early life, turning them over and over; with the result that before he had gone to his remote participation in the war he had been doubtful of it. He hadn't been wholly a part of the pleasure with which the county had seen him, a Heronbar, depart to uphold their prestige of contentiousness.

She Came Slowly On Alone, Over the Rugged Path, Through the Broken Gate

When he had come back from the mon onous smallness of his participation, fr grinding officialism and discontent and hi jealousies, his inclination had settled int hard, a hard but sil opposition. In a way t he couldn't understa sonorous tags of the N Testament, the pea commanding utteran of Christ, came back i his consciousness, lac with a passionate real and force. When y looked at it, Jalan Her bar thought, *it* was wro to go out and kill peop to smash them with ston and *bullets* or rot the with gases. People we blind, that was *it*, or *i* sane. No one could g around that sentence the *Bible against* killin It seemed to him th from a *practical* stan point the Bible might l a good book to follo Yet the *influence* of i memory on him was n practical; it was more li a regimental band play ing in the distance, fa away but coming neare It stirred him; his hatre of war, of all trouble an misunderstanding, stirre him.

Jalan Heronbar wante to show the world ho hellishly wrong hatre and envy and malice were how they destroyed life made happiness impos sible. He couldn't hop to do that, of course; but here about him, in Green stream? The valley had slipped from view, but th western mountains, against a fading yellow radiance, were still evident, darkly green; the bell of Jalan's cow sounded and then stopped, sounded and stopped, lower down. A little breeze, audible through the spruce trees before he felt it on his face, sprang up; it was aromatic from the bark freshly stripped for the tannery on South Fork.

Here, for a hundred miles or so, quietude, reason, happiness might, with a small attention, be possible. What, in the pursuit of his fantastic idea, was necessary? Almost nothing, with the exception of a single enforcement.

The people of Greenstream seldom went out into the world and back; they either stayed in their homes or went away without returning. Some of the young attended schools out of the county; that would be discouraged—Jalan didn't see a prolonged schooling as a necessity—but what was absolutely imperative was to keep the world away. That was it! The treachery and evilly destructive passions everywhere else raging must be barred from Greenstream.

This, with its suggestion of force, of tyranny even, had a look of disagreeing with the main direction of his peacefulness; yet, he decided, it was unavoidable. Something would be lost—what was loosely called progress—but that couldn't be helped. Infinitely more would be made secure. The local interests were simple; after long years of prohibition political jealousies had mostly expired; politics itself had become less and less important. Indeed what occurred to his speculative mind was that politics might be reanimated; it might be brought back to its old sectional state, to the condition he had heard of from very old men, when it was a government of localities isolated from

Digitized by Google

me another and self-dependent, self-reliant. Washington lately had grown vague and unsatisfactory, far away; while Greenstream was near, immediate and lovely.

He had sat so long, lost in his project, that if he intended to see Emeline he'd have to go at once, without supper. He did most certainly want to see her; and he went into the empty, dark house to his room by the kitchen. Jalan had tried a bed in the kitchen and, though it was convenient, on his return from the army he had moved. One of the surprising things that had occurred to him was a developed preference for an utmost neatness. It was as if the care he had always lavished on his guns had been extended to include everything which concerned him. The array of pans, dishes and cooking utensils on a dresser was in a rigid and immaculate order; the frying pan had its exact place, and if it were disarranged Jalan was uncomfortable until it was correctly disposed. The knives and forks must be laid in an unvarying manner, the brush broom leaning at its own angle in a corner. This habit of exactitude had grown upon him. He derided it, tried to break it, but a feeling stronger than his will—if, for example, he had carelessly dropped his clothes on a chair—dragged him out of bed to put everything straight.

Jalan Heronbar scrubbed his face with soapsuds strong of lye, he wet and brushed his hair and put on a shirt with a collar, a necktie and a fresh-shined pair of shoes. Then he walked through the kitchen to the space in back of the house. It was like a ridge leading directly away, with the ground falling steeply on either side. The Heronbar house was on a ridge; everywhere about it, except for the road and spruce forest, the land dropped into bottoms with rocky streams and close trees; there was a circling horizon broken with mountains and rifts, with small isolated patches of grazing, some in the valleys and some against the peaks; but with no other signs of humanity.

The sweep of mountains was almost hidden; evening was advancing more rapidly, but Jalan was infinitely swifter. He drove a battered but entirely sound automobile with a long knowledge and ruthless skill through the rocks of his front pasture; and turning to the right on the road he went boldly up a long turning ascent and, over the divide, went down like a silently falling bowlder.

At sharp bends, the outside unguarded and overhanging hundreds of feet of tree tops and sharp rocks, he kept so close to the exposed edge that the wheels sent small showers of stones into space. Jalan met—as usual, he thought—a car on the worst turn of all, at the worst moment. It was coming up as determinedly as he was fleeing down; but, already far out, there was no need for him to swing dangerously across the road; in an instant, after the crash of minor opposed sounds, he was again alone.

In a valley broader, more cultivated than any visible from his fields he passed the store, waving vaguely to a familiar group of men and boys gathered on the worn benches of the porch, and then he turned again. He drove through a dark, perpetually damp wood and came out at the gate to Emeline Graham's father's place. There was a ford to cross, the gate to open, and he followed a rude track about a gentle rise to the fence which separated the house with its flowers and cut grass from the grazing.

The family, he knew, would be on the portico, facing the road over which he had just come; they would have seen him, heard him closing the gate and he was expected. Jalan walked, therefore, about the house without the formality of an announcement at the proper door. This in itself was notable; simply for the fact that he was a Heronbar striding securely through the property of Elias Graham. The Grahams had always been as admirable and successful, as highly placed, as the Heronbars were doubtful. Not many years past Jalan would not have been allowed to come inside Elias' fences; if he had tried, except under the most formal and recognized conditions, a death would have resulted. The Heronbars had been, in reality, outlawed from the community of Greenstream. Now, however, he was walking freely over their yard, sure of an acceptable welcome. By this time it was certain as well that they knew he was coming for Emeline.

Jalan found them as he had expected: Elias, a small man in shirt sleeves and eminently serviceable suspenders, smoking a highly varnished brier pipe; his wife resting in a capacious chair after the labor of supper; Ellery, their son, a vigorous and mature boy, silent as usual; and Emeline. She smiled her greeting from a step and a porch column, and added nothing to the impetus Jalan's coming had given to the conversation. She had on a white dress, he saw, there was some pink ribbon at her waist and on her hair; and she looked as young as—as anybody.

She wasn't really so young as that. Emeline was thirty; but it was that, he thought, which so moved his heart. In Greenstream girls and women were only ornamental when they were very young, no more than fifteen or sixteen, and then only in the hours between their duties in the house and dairy. They married at once, after a few dances, a short courtship, and retired definitely to an existence of utility. That was, nearly all of them did. Somehow Emeline seemed to escape the general fate. She had not married at the time considered appropriate; and as a result of that she served at the dinner table; she was never seated until her father and Ellery and any visitors had all they could possibly desire.

A great part of her time was spent in the kitchen in the preserving and canning and curing seasons; and she was a great deal alone with the linen and cleaning and incidental nursing.

Yet Jalan insisted almost defiantly to himself, she was as young as any. She had a kind of gentle niceness, a delicate glow in her cheeks and eyes, for which he tirelessly watched. Her subjection to her father was whole-hearted; she accepted her position without even being aware of it; and still she had a humor, a quaint understanding and private independence, at which Jalan happily marveled. He knew that she was glad to see him this evening, that she always had a welcome for him; and he was conscious of what this might, probably did, mean. They would get married. There was no hurry; he felt that she knew of his understanding; some day this summer they would speak of it, and he would go to Elias Graham.

There would now be no serious difficulty there—a Heronbar marrying a Graham—for the reason that Elias, sound beneath a contradictory temper, realized that he, Jalan, would take care of Emeline; he would be a good husband. *(Continued on Page 89)*

Men Listened to Him When They Were Not Busy, Through the Late Summer Evenings. He Was Regarded as a Kind of Preacher

THE AVERAGE WOMAN

By Dorothy DeJagers

ILLUSTRATED BY CHARLES D. MITCHELL

"BY JOVE, Beevee, did you know that in America women buy 48 per cent of all drug supplies, 48 per cent of all hardware and house furnishings, 96 per cent of all dry goods, and even eleven per cent of men's clothing?"

Allan Cabot Straun, of the Elkins Advertising Agency, dramatically offered these facts to Bert Voigt, the copy chief.

Beevee looked up.

"'Pears like they've turned merchandising into a female order house," was his comment; but the casual tone, curiously enough, suggested that the clipping would never change his destiny to any extent.

But not so with Straun. Upon him the effect was startling. He was, you see, the statistician of the Elkins agency. When it was necessary, for instance, to know the per capita consumption of mustache cups in Athens, Georgia, or the possible mileage of chariot wheels in Athens, Greece, he could plot an ogive curve on paper in less time than it takes the lady in the advertisement to pour boiling water over her dining table.

Now the statistical mind is usually grounded on an expertness in putting two and two together; and this reminder that the feminine sex controls so much of the purchasing power struck him as a staggeringly suggestive situation. For if one could get the keynote—or shall we say the Ellen Keynote?—to her psychology, chart her reactions and diagram her motivations, wouldn't one have a great secret of successful advertising? An answer, too, to some inexplicable advertising failures? It seemed so; yet Straun's difficulty was that he knew very little about women, his mother having died in his infancy, and subsequent relations with girls having been unquestionably sketchy. This was largely due to a shyness rather hard to explain, since he was an uncommonly attractive young man.

In the first place, handsome. Clear reddish-brown eyes focused behind horn-rimmed goggles in the keen gaze of one who looks concrete facts in the face; above, a broad brow suggesting a capacious storage house for a catalogued intelligence, and notched near the left temple by a cowlick that spattered reddish-brown hair like a sticky finger. Nice hands and a good chin, and a general impression of well-ordered habits, well-organized activities and well-governed instincts—a life, in short, run by schedule, not subject to change without notice.

Yet perhaps this suggests an exemplary character rather than an attractive personality; so in repudiation Mr. Voigt is paged.

"Straun?" Beevee would have said. "Now, le's-see! First of all, he stands for class—what the English lady novelists would call 'thoughtfully valeted'—and his manners all match. But he's a nice kid. And principles! Say, that lad's as square as that dern little notebook he carries, and as white as his linen."

Which proves it's still possible to be admirable and yet likable. Certainly you would have credited him with a popularity rich in opportunities for understanding the gentler sex. But the fact remains that women were not merely an unknown quantity but a master mystery, as complicated to him as the trade-mark laws. How, then, was he to identify the average woman? Even after an intensive research into his memory his accumulated conceptions resulted merely thus in his notebook:

THE AVERAGE WOMAN

(a) Adds postscripts to her letters.
(b) Uses hairpin for repair work.
(c) Is afraid of mice.

And immediately, of course, he saw the inadequacy of this test. Other universals must be found, but how? Aha! The world's authorities on woman! Surely, in the multiple estimates enumerated by Apuleius through Havelock Ellis, Shaw and Weininger must be some common denominator for the colonel's lady and Judy O'Grady. Yet so diverse are the opinions of the sons of Adam about the daughters of Eve that it took a month to find the unanimity to permit this entry:

(a) The average woman is illogical.
(b) The average woman is emotional rather than cerebral.
(c) The average woman is interested in concrete rather than abstract.
(d) The average woman is intrigued by personalities rather than principles.
(e) The average woman has a good memory, accuracy in details.
(f) The average woman thinks inductively.

This, you see, looked pretty comprehensive; the next step was to find some lady manifesting these symptoms, then make a thorough study of her inferential and preferential peculiarities. But finding her—that was the real problem. The analyst's social and business contacts with the opposite sex were too casual and incoherent to permit any speedy identification. Moreover, the conventions naturally tabooed any direct methods—at least for Straun! Had it been Beevee he would have halted some promising prospect with "Tell me frankly, girlie, are you an illogical she-person with a good memory who thinks inductively about personalities in an emotional way?"

"See Here! This Young Lady Tells Me Youse Been Taggin' Her Around All Afternoon. Now, We're Making a Clean-up of Mashers in This Here Burg, and ——"

But you can't do this when you're one of th Boston Strauns. So it began to look as if the ec nomic world would have to roll along without an psychological disclosure of the average Eve. Then, one da in February he and Beevee went to New Jersey on bus ness. After a conference with their client, the statist, eag to make a few notes, retired to a hotel, promising to meet th copy chief at four. The writin room looked deserted when h entered, and not until he ha seated himself at one of thos two-passenger desks did h become aware of another cor respondent across. Withou particular notice, however, h drew out the inevitable note book and set to work. Then suddenly a point overlooke during the conference speede him, forgetful of his papers to the phone just outside; an it was on his return that h classified his neighbor as a young woman.

Now what he should have noted was a Pucklike prettiness of a smartly gowned flapper who could have posed for any magazine cover and doubled the circulation of the periodical and that of its most anæmic male readers.

At least he should have recognized in her the sallest principles of good advertising, for she was certainly a young thing constructed to attract favorable attention, to develop interest and perhaps induce action.

Yet registering nothing of this he stared musingly across the peacock feather in her terra-cotta hat, lost in thought about dealer demand and consumer consumption.

Then, suddenly, his interest was flagged. The young woman having ostensibly finished her letter inclosed it in an envelope, then withdrew it for a hasty addendum. Aha! A postscript! Tensely Straun leaned forward. Next he saw her pick up a music roll and, after a frowning struggle with a perverse lock, extract a wire hairpin! Another frown; then a sigh of relief as the flap flew open. By this time Straun was staring with compelling expectancy; yet when she rose and sauntered to a piano in the corner the dictates of a Boston breeding deflected his gaze to his notebook. Almost immediately he turned at her squeal, "A mouse!" and found her on the piano stool, two tiny suède terra-cotta boots lifted in a two-foot clearance of terra firma.

Ordinarily, of course, he would have sprung to the defense of helpless womanhood; but this disturbing phenomenon in the law of probabilities had reduced him to helplessness for the moment. To find, you see, a subject reacting to the average-woman test within the course of five minutes could but prove that the gods of chance occasionally slipped something over on Sir Francis Galton. A blow, of course, to a statistician; yet he rallied sufficiently to hurry after the terra-cotta figure that suddenly skipped out the door.

Almost mechanically he followed the peacock feather through winding avenues to a department store. Here he hesitated. It took the urge of scientific curiosity to push him across this no man's land, but finally he entered and pursued his quarry back to where a gilt sign—Adjuster—identified an elderly warty gentleman behind a mahogany railing. There was, fortunately, a masculine counter just across, and so the purchase of a cravat enabled our analyst to cover the transaction behind the rail.

It seemed that the girl had purchased a pair of silk stockings, which proved, she bubbled, "the cowardly kind that make a hit on you and then run." She had worn

but five minutes, too. Critically the adjuster exam-
them and nodded in justice to her complaint. Would
ave an exchange? No. A refund, please. Very well.
ntain pen got in action but was suddenly halted by
r sixty-five? But the stockings sell now for four
y-five!"
s the other admitted, but reminded madam that the
base price had been but four sixty-five.
ut if they're worth four eighty-five at the time of
n, then of course four eighty-five is my refund."
the necktie counter a young man, reminded that the
ge woman is illogical, smiled exultantly, but the
r one, obviously less intrigued by feminine traits,
ed as she went on: "When did the price increase?"
, after his curt "February first!" came a triumphant
"Ah! It was on January thirtieth, at half past two,
the run appeared."
hereupon the analyst, reminded that the average
an has a good memory, accuracy in details, per-
ed himself another smile.
f course, in the end she had to accept the purchase
, and as she turned from the refund desk it was with
a sonorous sigh that Straun echoed it. Poor little
g! Despite the terra-cotta ensemble suggesting Paris
ls, that twenty cents doubtless meant much to her.
ce, fancy his surprise to see her drop a two-dollar bill
he basket of an old news woman near the entrance.
the accompanying smile of compassion this time re-
ed that the average woman is emotional rather than
ional, and surprise ceded to positive awe! And when,
ck later on, her rejection of
d Cross solicitation corrobo-
d the average woman's interest
personalities rather than prin-
s, Straun knew that he had
ther—the composite feminine
ate consumer, a
h of whom would
olutionize in-
try
t how to arrange
such a course of
dy. Another mad-
ing problem! For
w blocks he strug-
d with it so des-
rately that only
gely did he notice
average woman
denly dart to the
e policeman at the
rest crossing. A
ment's colloquy,
d a gritty voice
shed him:
"See here! This
ung lady tells me
ne been taggin' her
round all afternoon.
w, we're making a
kup of mashers
this here burg,
d——"
"Mashers!" Straun's voice quiv-
ed in well-bred rage. "This is an outrage! I am Allan Straun, of New York, and——"
"Ain't nothin' in
y full life if you're
k Straw, of New-
rt. This here mash-
has got to stop!"
Instinctively
Straun turned to the
l, who stood aloof,
t a half smile on her
lips checked his ap-
al. Then, panic-
ricken, he saw a
rowd knotting
round them, and a
ld impulse of flight
uddenly propelled
m into the nearest
doorway. Instanta-
eously, however, a
ly hand plucked
m back into the
ce.
"Thought you'd
ut it, eh? Youse
me with me!"
There seemed nothing else to do, so off the
y started.
Straun and the officer walked a few feet
ead of the impious peacock feather.

"Nobler Lives Than Yours, My Good Man, Have Felt the Effects of My Fatal Charm"

It seems hardly necessary to describe the humiliation of a young man whose gentility had never been questioned by the lifted eyebrows of Mrs. Grundy, let alone the arm of the law. The poor dear's indignation became something enveloping and suffocating. He would sue the city for twenty-five thousand. No! Nothing less than fifty thousand could compensate for such mental anguish. As for the New Jersey Delilah who had so Samsonized him—well, Schopenhauer was right. Women! Bah! Creatures of triviality and roguery whose vanity permitted naught save a personal interpretation of all experience. And this silly thing had thought his pursuit motivated by admiration! Well, she'd soon find out!

By this time they had reached the courthouse, and in Room 203, after the girl's disappearance into an ante room, the culprit was led before the judge, an oldish gentleman of jocular rotundities. With suppressed emotion Straun gave his real name and business, and an acknowledgment that he had followed the defendant from the hotel to the point of interference.

Why? Ah, that was simple! Because—because—— Suddenly he faltered.

After all, was the explanation plausible to any save the merchandising mind? Moreover, he saw its comedy temptations for the reportorial pen. Manhattan Masher in Search of Average Woman, Pursues New Jersey Nymph. He heard the office guffaws and the inevitable kidding which would laugh all the dignity out of future researches. No, he could not explain; so instead he demanded, with what he considered razor-edged irony, "So it's against the law to walk behind a young woman when you have made no possible overtures to her?"

"Not exactly criminal, but unlucky, when the lady in the case happens to be wearing a peacock feather." The judge and the defendant twinkled at each other before the former's query: "Have you ever been arrested before?"

"Certainly not!"—with indignation.

"Well, then, because this is your first offense and because you don't look like a typical masher"—ignoring Straun's glare—"I'll resort to an unusual experiment. This young woman"—smiling over at the disturbing influence in the terra-cotta suit, now present—"is one of our most public-spirited citizens, and I shall parole you to her. You will report to her once a week for three months, swearing on your word of honor as a gentleman, and—ahem—an advertising man, to a blameless interval."

At this fantastic procedure Straun could not repress an ironic smile; but his limited knowledge of the ways of Blackstone sobered him. No doubt the entrance of women into politics expressed itself in just such topsy-turvied judicature. And ah! Ah! Wasn't it, after all, the functionings of a Providence kindly disposed toward statisticians? Of course! He would work himself into the shallow creature's good graces; then coolly and scientifically turn her into copy!

"Very well!" His voice vibrated with the exultation of an industrial revolutionist, and his hand trembled in eagerness as he signed some idiotic paper and accepted the card of instructions from Miss Theodora Whipple.

Thus it happened that the following Friday evening Allan Straun was conducted by a liveried servant into a warmly tinted living room in a most impressive New Jersey home. Here a fire flung lozenges of light over Jacobean carvings, gleaming enamels, bronzes and tapestries. It was not in the least like that interior advertised over the comforting slogan Terms to Suit; instead, a place of rich harmonies and rare discriminations, the best possible expression of the acquisitive instinct, and obviously financed by an affluence beyond the dreams of bootleggers.

Then in a moment his probation officer entered.

"Ah, Mr. Straun! How nice of you to call," she actually had the nerve to say, and as he took the indicated chair he glowered forbiddingly.

Then in the conversational trivialia that ensued, as she restlessly flashed from divan to piano bench, he tried to formulate some comprehensive impression of her. Her eyes, he was forced to admit, were unusual; elongated, richly lashed ones that glowed vividly, startlingly blue, in a small olive-tinted face of intense expressiveness, reflective to every thought and emotion. And, by Jove, what a tiny little thing she was! Indeed, as she jumped to the arm of a chair, swinging her improbable feet, she looked like a child. A spoiled child. For behind her informal spontaneities, her self-assured naturalness, Straun divined a background of uncritical indulgence. If You Don't See What You Want, Ask For It! had patently ever been her slogan, and life had always been served with the label Satisfaction Guaranteed.

"Well, and how have your sidewalk manners been this week?" she discarded a discussion of the weather to ask.

"Oh"—a flush seeped up to Straun's cowlick—"you don't really think I was trying to flirt with you?"

"And why not? Nobler lives than yours, my good man, have felt the effects of my fatal charm."

"That may be," he acceded courteously, "but——" A gesture of futility dismissed his defense; then with a sigh: "I see it's impossible to convince you I'm not a—a masher."

"Oh, I admit you don't look like a moral leper." She, too, sighed, possibly at the deplorable deceptiveness of an honest face. "To glance at you one would say you were a sensible, serious-minded young man, the sort who belongs to the civic-purity league and a building-and-loan association."

Now Straun did belong to a building-and-loan association; not very reprehensible, you will concede. Yet strangely enough, Straun was as floridly unstrung as if he'd been accused of defaulting with the B. L. A.'s funds when she went on: "In other words, you look like a person with the fear of God and the police in his heart."

Then down she slipped into the chair,

The Nemesis of the Scree

Parents are Careless; But I Certainly Do Not Believe the More Respectable Producers are Going to Antagonize Crippsville

By Katharine Fullerton Gerould

ILLUSTRATION BY DOUGLAS RYAN

NEMESIS, who became in later days the goddess of proportion, was, from the first, preoccupied with the just distribution of luck. When she assumed the task of retribution it was for immoderate good fortune. The moving-picture kings need not have expected to have it all their own way forever, for the whole human spectacle bears witness that Nemesis is no more quiescent now than she was when the Greek mind invented her. The success of moving pictures has been phenomenal—to use a cheap word; in an incredibly small number of years they have got a strangle hold on all but the remotest human communities. Now in certain interesting and amusing ways Nemesis is beginning to show her hand.

I speak necessarily as a rank outsider. But no one who reads the newspapers can be unaware that forces are gathering which are inimical to motion-picture production and to public interest, as far as the public interest is concerned with the film. And public interest—even if not yours or mine—is so much concerned with the film that the censorship question does affect us all. You or I may not depend on the movies for amusement, but we cannot be unaware of our fellow townsmen who do. Censorship has never affected the spoken drama in America very much; which gives an edge to the voice of the motion-picture producer who complains that he is censored far beyond the requirements of Broadway. But I wonder if the motion-picture producer has perceived the real cream of the jest—namely, that he is being threatened with censorship only because he has had such a howling success. Nemesis, in other words.

Main Street and the Movies

THERE would be no sense in state censorship of the spoken drama in Nevada; no point in the good ladies of Crippsville, Alabama—I invent the name—getting together to decide whether or not they should permit a traveling troupe to present Ghosts or Mrs. Warren's Profession in the Crippsville Music Hall. Presumably the citizens of Nevada, and certainly the good ladies of Crippsville, realize that neither Ghosts nor Mrs. Warren's Profession concerns them practically.

They must find other outlets for the reforming instinct. But those who have willed—and brought it about—that Crippsville, Alabama, shall be provided with daily movies must expect the ladies of Crippsville to have an opinion. Doubtless at first they thought that Crippsville would be content to pay its modest entrance fee and do its little part to fill their coffers. They reckoned without human nature—or Nemesis.

Anyhow, the censorship question is very much with us. Hardly a day passes that some minister of the gospel or some public-spirited layman is not quoted in the newspapers to the effect that motion pictures should be strictly censored, that uncensored films are deleterious to public morals, that the children of the land are menaced, and so on. The motion-picture magnates point in vain to the plays and the books that get by without incurring formal protest. For the audiences of even the most popular play are restricted in numbers; the readers of even the most popular book also. Neither the spoken drama nor literature reaches the millions that are reached by any successful film. Therefore the film is everybody's business. It penetrates the whole fabric of American life. As its sponsors have always wished it to do.

Now the question concerning censorship is a question that for reasonable beings is always answered in just one way: There ought not to be a censorship. Laws exist already to take care of any spectacle that menaces public morals. Public opinion itself will take care of anything seriously shocking, for no manager can afford to shock seriously the community from which he makes his living. Put it—if you like to think of New York as peculiarly corrupt—that a play may get by on Broadway that would be howled down elsewhere. The New York manager may have to think only of New York, but the motion-picture producer has to think of Crippsville. The big metropolitan palaces may charge you two dollars and a half or three dollars to see a superfilm, but the producer cannot get back the price of his million-dollar production from the clientele of those palaces. He gets it back, in the last analysis, from Crippsville; in quarters and half dollars, not in bank notes. By and large, the people who spend two or three dollars to see a show do not spend it to see a motion picture. The producer must have his ear to the ground; but he must lean it to the pavings of Main Street, not to the asphalt of Fifth Avenue.

It can be contended that the output of the studios is curiously fluid, and hard to put one's finger on; that by the time enlightened public opinion has caused an objectionable film to be withdrawn in one town the same film has already corrupted the audiences of a thousand less enlightened centers; that you may perhaps count on the ladies of Crippsville, Alabama, to keep Crippsville, Alabama, safe, but that there are Crippsvilles in forty-seven other states, and that perhaps the ladies of those other towns cannot be counted on. Nothing, according to that argument, will serve but official censorship.

The answer to that argument is not an impassioned defense of the morals of all Crippsvilles; the answer is the mere statement that never in history has censorship worked properly. Censorship, as practiced in modern societies, serves neither morals nor art. Censors are never—even when they are not appointed for obscure political reasons—fit for their job. No one who is fit for the job is ever willing to be a The things that get by absurd as the things th held up, and vice versa. sorship, properly manag mands an immense store of knowledge, long experi literature and art, extremely wise judgment, entire prejudice, and a profound acquaintance with huma chology. In all these gifts professional reformers are notoriously lacking. This is not the place to enter discussion of the reforming instinct; but it might b in passing that, more than most contemporary typ reformers cry out to be psychoanalyzed.

Everybody's Business

MUST we then, doing without censors, allow ou dren to be corrupted? is the next query to be suppose. The real answer to that is, of course, that s are no more the place for children than the theater is the for them, or than the files of the average newspaper if you will pardon the locution—the place for them. people who talk censorship would, instead, talk ordi to the effect that no child should be allowed to e moving-picture theater unless accompanied by a res ble adult, or even ordinances to the effect that ch should be barred from all movies not especially constr for them, there would be more point in it. But I do that would be to the taste of the producers, any more to the taste of the censorship addicts. It would offen former because they want the whole family at the m and it would offend the latter because they are n much out to protect the children as desirous of seeing own opinions prevail over the parents' opinion—in over everyone's opinion.

Being a parent myself I incline to believe that ev stupid parent has usually a keener sense of what will co his child than any board of censors likely to be constit in any state. Parents are careless; but if they were r shocked I fancy you could count on them, were they t selves present, to take their children out. It may be, a that I have too much faith in producers; but I certain not believe that the more respectable ones are goin antagonize Crippsville if they can help it. The advo of censorship have, obviously, a low opinion of our zenry, and think that the average man or woman ca be trusted to turn down an immoral show.

Still, you are not going to silence easily any cry th based, whether rightly or wrongly, on the welfare of children. The movie magnates wanted the whole fa to go to the movies; they have got the whole family th and they are paying for their success. Someone was sur kick up a row because, as we have said, with the w family there the movies became everybody's business, a matter of public interest. If the reformers have n

THE GULF IMPOSSIBLE

By E. DAVENPORT

DECORATION BY JAMES H. CRANK

A GREAT gulf has formed between the country and the town, a gulf so wide and so deep as effectually to separate the two, and it must er be filled up or bridged over before anything a final revival of business is possible. Unless this one soon the farmer will be forced back into the self-cing system of pioneer days, city investments will be d largely unprofitable, and a considerable proportion he town will go hungry from lack of employment.

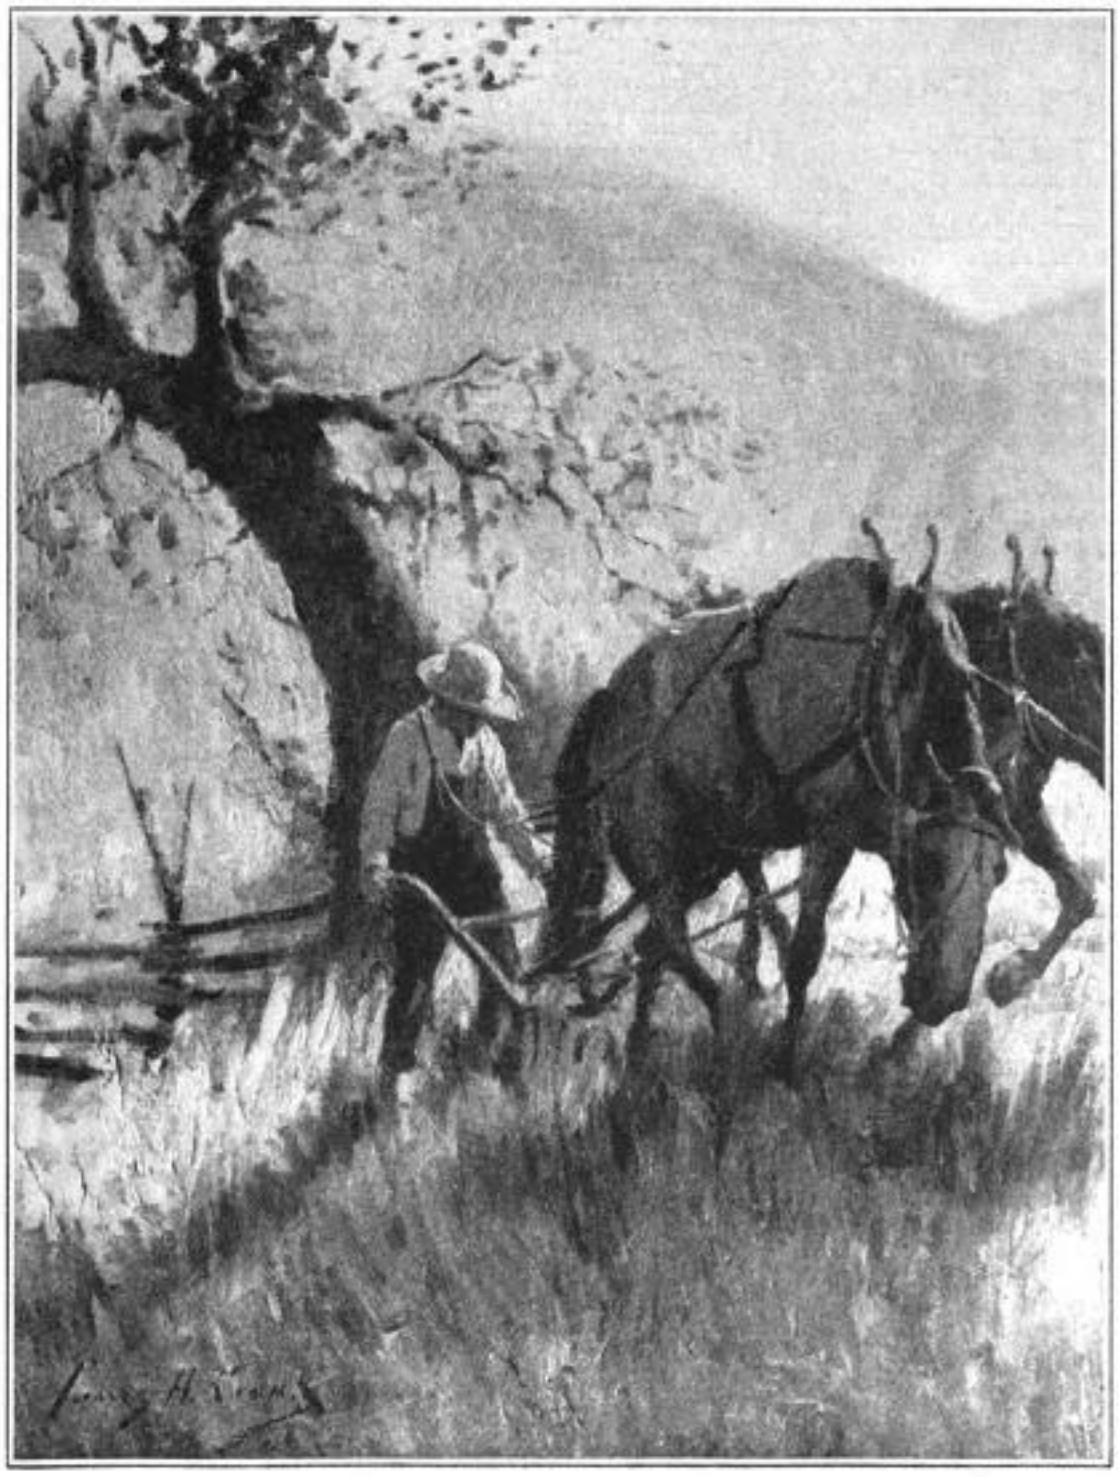
r nearly two years now exceedingly low prices have d for farm products, while for a portion of the time standard commodities as wool and hides have had no rket value whatever. On the other hand, every possible uence has been exerted to maintain city prices at war els, and with so much success that no reasonable ratio r exists between what the farmer has to sell and what, der normal conditions, he would expect to buy. In the antime taxes have greatly increased and, taken all in , the farmer is out of the markets except for barest ssities.

All this is bad enough for the farmer, but when operating full force it will be infinitely worse for the city. The mer has already suffered the most of his share of the fficulty, but the city has yet to feel the consequences of s impossible situation. We have closed our eyes to the fectly obvious long enough, and the time has come to p predicting that in spite of these discrepancies pros-rity is just around the corner. Instead, it is the business thoughtful men everywhere to address themselves to e task of devising means of doing business on the level. for it is economically im-ible to maintain widely fferent price levels, one for e country and another for e town, and still expect at the two will continue to business with each other, owing, as we all do, that henever business ceases to profitable it will die out. he farmer has been deflated y natural causes following a eat war. The rest of the orld must sooner or later ccept the inevitable with he best grace possible, and he sooner it comes to this onclusion the better for verybody—unless, indeed, e wish to repeat the experi-ent of Russia in trying on a tional scale to get some-; for nothing.

In Kind

LET the thoughtful non-farmer consider the actual facts in the case and their necessary meaning. A few days ago a cartoon ap-peared, depicting a set of bal-ances with a pair of shoes in one pan and thirty-three bushels of corn in the other, with Uncle Sam and the farmer looking on, scratching their heads. The story told is literally true to-day, and the meaning of it is evident when we remember that it took an average acre of ground to grow the corn, that an acre of ground is a little over two hundred feet square, and that the average farm consists of a hundred and sixty such acres, each supposed to be worth around one hundred and fifty dollars.

There are less than two pounds of leather in these shoes, and the stock of hides from which they were made was a drug on the slaughter-house market last year at ten cents a pound. This means that this standard commodity was worth nothing on the farm. A dead animal is not worth skinning to-day on any farm in America; yet it will take the full year's produce of an acre of land to buy a pair of shoes of corresponding grade; that is to say, while shoes differ in price, so do lands in yielding power, but it will take the full produce of an acre of three-hundred-dollar land to buy a really good pair of shoes or boots.



Woolen bed blankets retail at fifteen to eighteen dollars the pair, though made up when wool had no established market price. Even had it enjoyed a normal price the discrepancy is wide when six pounds of wool is held at eighteen dollars with no processing beyond spinning and weaving—no cutting, no making up, no lining, no buttons, no buttonholes, no trimming—just plain weave going straight from the loom to the consumer. How did the acorn become the oak so quickly?

We do not weigh watches and compare their cost with sheet brass and plain pig iron, nor do we compare directly the fashionable costume with the value of raw silk in the cocoon. But we are inclined to weigh up blankets and make some such comparison, taking as a basis the fleece that has been a year in growing upon the back of a live animal needing constant care, and that was shorn and shipped at large outlay of actual cash.

The commonest kind of rugs are costing five to ten dollars a yard, or two and three times what they cost when wool was worth raising. A very ordinary bedroom rug four and a half by six and a half, bought of a reliable local dealer this year, cost two acres of corn. It is not even a good rug, and the cheaper ones are hardly worth accepting as gifts. That is what leads the farmer to live on bare floors these days, and the effect of it will be felt as a backwater all the way back to the looms, the stock investments and the pay envelopes.

It takes ten acres of wheat to buy a comfortable bed with its outfit of linen and coverings on common springs, and with no period furniture or unusual fitting, at that. Of course it can be done cheaper, and perforce is done cheaper, but the effects will be felt in good time all along the line.

Whether we like it or not, these are the comparisons which the farmer is making and is forced to make when determining a basis on which he can do business with the town; what he can afford to buy and what he must get along without; how far, in other words, he can play the game according to the present rules. And in this it must not be forgotten that the farmer constitutes a full third of our population, and a good buying third, at that, when conditions are favorable.

Wages In Terms of Produce

THE farmer must do all this because his income is limited by what he can produce upon his land and what he can get for it in the open markets of the world. He has no way, fortunately, whereby he can force the world to buy at his prices, whatever may be said to the contrary and however temporarily successful others may seem to be in this attempt to secure special advantage and thereby get something for nothing.

It now takes a full acre of oats to pay for one day's work of a mechanic, and even so he often refuses to work at all without a helper. The farmer must buy his land, fence it, drain it, plow, sow, cultivate, reap, pay taxes and run risk of season—all against the workman with bare hands, contributing neither to capital, tools nor taxes, and, even so, pay him the full product of an acre of oats, fertility thrown in, for one day's work in building the farmer's houses, barns or machinery. It requires a half acre of the best American land when put to growing either one of our two most expensive crops—corn and wheat—crops that cannot be raised for more than one year out of three without expensive fertilization, to pay for fewer hours of actual service than the farmer has bestowed upon the cultivation of the land alone and after disregarding seed, implements, fertilizer, interest and taxes.

Even this does not tell the whole story as between the country and the town. The average farm consists of almost exactly one hundred and sixty acres, with some twenty acres of nontillable land. This means that the mechanic with his bare hands can get, at current rates, the entire produce of the average farm for about a hundred and seventy-five days' work a year. The facts stand substantially as follows:

	ACRES	DAYS' LABOR
Wheat	35	70
Corn	35	70
Oats	35	35
Clover	35	..
Pasture	20	..
	160	175

This makes no accounting for the clover, because it will all be consumed by the

ILLUSTRATED CLARK F

There Was a Tight Silence. The Barrel of the Gun Leveled, Wavered, Dropped. Mackenzie Wagged His Head Approvingly

EXCEPT for a slight lift of his lower eyelids there was no change in the placid countenance of Sheriff Dan Mackenzie when Deputy Sim Cole stopped the little tin car before the jail steps. The sheriff's shirt-sleeved elbows continued to rest comfortably on his knees. A thin, hurrying wisp of smoke rose from the charred bowl of his pipe, the only sign of activity he presented. He observed that the radiator of the car steamed fretfully after the engine ceased to throb. Somehow it reminded him of Sim himself, bustling up the path behind a reluctant, shuffling negro. Mackenzie's eye shifted to the black face.

"What you been up to, Dill? Never thought we'd see you here."

Cole answered abruptly, while the numbed wits of his captive manifestly groped for speech.

"Running a still down on Macklin's Branch," he explained. "Caught him working up a fresh lot of mash."

Mackenzie continued to regard the prisoner.

"What'd you want to go and do that for, Dill? Right after court day too. Now we got to keep the jail open till next term."

Cole urged the man up the steps past the sheriff.

"Go on, there!"

Mackenzie got deliberately to his feet and followed them in toward the door of the cell room at the end of the short, narrow corridor. He unlocked it and swung it inward. The prisoner hung back, awed by the formidable bars of the cages lining the wall about the central space which held the sheet-iron stove. Cole thrust him forward impatiently and he stumbled.

"You ain' goin' lock me in one o' them, Mist' Cole?"

Mackenzie answered.

"Reckon we can leave you have the whole jail a spell, Dill." He unlocked one of the cells as he spoke. "You can lay down on the bunk in here when you want to."

Cole made a faint sound in his throat, an impatient noise.

"Better lock him up, sheriff, or he'll dig out on us."

Mackenzie shook his head.

"Guess he'll be safe till we need him, Sim." He turned to the negro. "You'll like it in here, Dill, soon's you get used to it." He straightened and ran a proprietary eye about the room. "It's a right pretty jail, inside."

Again Cole made the impatient, wordless sound. The sheriff gestured toward the door and followed him past it. As he closed it after him with a twitch of his wrist one of the hinges whined softly. He stopped short and unlocked it, moving it gently back and forth till he located the noise. While Cole stood by he fetched an oil can and dealt faithfully with the squeak.

"Take a heap of pains on the old wreck, sheriff." Cole chuckled thinly. "Give her a good push and she'd fall down on us."

"Getting old," conceded Mackenzie gently, "but it's a right pretty jail yet, Sim." He straightened slowly, a hand at the small of his back. "Ain't had a break out of it."

Cole shrugged.

"Good reason why! Ain't had anybody inside exceptin' bootleggin' niggers." His tone changed. "Like to sign up for this job, sheriff? Got time to cash my voucher this evening if we hurry." He grinned as he produced the printed forms. "Good thing they don't quit this still running on us."

Mackenzie adjusted steel-rimmed spectacles and laboriously inscribed the documents. He watched the deputy's brisk departure toward the dingy courthouse up the road, and again the lower lids of his eyes lifted a little behind the lenses. He glanced at the little car and shook his head as he turned away. Times were changing, even in Tyre, and Sheriff Mackenzie confronted a queer inability to change with them.

He walked around the jail, inspecting it dubiously, seeing it for the moment with Sim Cole's alien eye—the dismal sag of the roof line, where the foundation had settled; the jagged profile of the corner, where crumbled bricks left gaps like missing teeth. Playing out, he thought, playing out like Hewitt County itself, now that the timber was gone. Not much like the spick new jail up in Cray, where they were up-to-date enough for bond issues. Cole was always talking about Cray County.

"Reckon if he was to see a man get his head cut off down our way he'd claim he'd seen it done prettier up in Cray County," said Mackenzie to the jail wall. He felt himself frowning, and went back inside.

Jail always frightened a negro at first. He talked a while to Dill Coomber through the barred door, and gave him a hand of tobacco and some matches. Dill wasn't a bad negro. Still running had never seemed exactly criminal to Sheriff Mackenzie, and since he'd had Sim Cole for deputy there had been times when the outlander's eager assiduity had seemed closer to illegality than the forbidden traffic itself. Cole was briskly businesslike about it, calculating his fees in advance and collecting them promptly, bragging at the store on court days over the list of his cases. Mackenzie knew that Sim had his eye on his place—was making ready to oppose him one of these days. He saw Dill fed before he went to his own supper at the hotel, where Sim held forth contentedly concerning the chase and capture. He felt a slight in the tone, as if Sim meant to reflect on his chief in these boastings. Instead of sitting a while on the hotel porch after the meal he went back to the jail at once. Through a broken pane he could hear a cheerfully melancholy chant:

Ain' got no wuk to
do-o-o-o;
Ain' got no place to
go-o-o-o ——

It soothed him. He was glad that Dill was getting used to it so quickly. Some of these country negroes took jail pretty hard at first.

"Dill, How Far Do You Reckon You Could Travel Before Daylight?" "As Far as They Is, Sheriff. Suh! All I Needs Is Room!"

He sat on t[illegible] steps, smoki[illegible] listening whi[illegible] evening thic[illegible] and turned [illegible] He and Cole [illegible] in the living [illegible] ters in the front o[illegible] building, saving them[illegible] rent and sparing[illegible] county a jailer's wag[illegible] keep.

When he heard [illegible] coming the sheriff pock[illegible] his pipe and went in[illegible] He discovered *tha*[illegible] didn't want to liste[illegible] Sim to-night. Bu[illegible] couldn't help *hearing* [illegible] deputy's final speech t[illegible] Breck, who'd walked[illegible] with him.

"It's all right's long's nothing brea[illegible] anybody c'n be sheriff when there's no [illegible] iffin' to do. But it takes a whole man [illegible] it takes anybody at all. Up in Cray Cou[illegible] now ——"

Mackenzie went back to put out the lamp in the c[illegible] dor. One of these days—queer, how a fellow got to fe[illegible] like the jail was home.

II

THERE was almost a crowd about the pine-board h[illegible] by the time Cole's steaming flivver pulled through [illegible] sandy ruts of the lane. Mackenzie knew the faces—po[illegible] from the little farms in the bottoms between the st[illegible] ridges, drawn away from their work by the excitem[illegible] They greeted him with nods as he climbed out, and he[illegible] that their eyes moved at once to Cole, as if the dep[illegible] were in command. He went into the house, where a k[illegible] of women surrounded Letty Macrimmon. The talk stop[illegible] instantly. He felt as if the motion of their eyes urged [illegible] toward the closed door of the bedroom.

Letty stood up. He saw that she was taking it hard, [illegible] way women of her hill breed were apt to—in a silence straight lips and bitter eyes; eyes which seemed to already looking at another death—the death that pe[illegible] He fumbled for speech and found none. That stony k[illegible] silenced his commiserations in advance. He knew wh[illegible] Letty wanted him to say. But it was Sim Cole who s[illegible] it, entering heavy-footed behind him.

"We'll get 'em, Mrs. Macrimmon."

Mackenzie saw her face tighten queerly. She was thinking about Joe, lying beyond that door, but about t[illegible] men who had killed him. He nodded. Letty had co[illegible] down from the hills. Up there they didn't throw agro[illegible] over their heads and cry. She told the story no[illegible] speaking in a flat voice, as if it were a tale of oth[illegible] people. It was to Cole that she told it, ignori[illegible] Mackenzie. He could listen, letting the wor[illegible] lift the pictures before him instead of asking sha[illegible] questions when the narrative strayed.

It was almost as if he had seen and heard it a[illegible] himself—the yelp of the hounds under the hous[illegible] the creak of wheels in the sand, Jo[illegible] at the door in his nightshirt cha[illegible] lenging the men out there in th[illegible] dark and getting no answer. H[illegible] could hear the sleepy whimper [illegible] the children and Letty's hard voic[illegible] stilling them while Joe dressed, th[illegible] persistent clamor of th[illegible] hounds under the floor[illegible]

"Joe was holding ou[illegible] for a better price," sai[illegible] Letty in that even, flinty[illegible] tone. "He carried [illegible] little down to the ware[illegible] house at Randall and[illegible] they give him a dolla[illegible] sixty average on it. We[illegible] made pretty tobacco this[illegible] year—the buyers bid[illegible] high for it. Joe, he aimed to hold the most[illegible] of it a spell longer though, and it looks like[illegible] folks talked some. We made a pretty[illegible] crop—they was twelve hundred pounds on[illegible] the floor."

Digitized by Google

Cole cut in with a curt question, but Mackenzie seemed to see that heap of gold-colored leaf under the moistened blankets in the barn, the toil it had cost Joe and his wife and the children to get it out of the sandy soil, the nights of tending fires in the curing barn, the days of grading and tying and the one year he could remember when growers could stand back in the warehouses and watch the buyers fight for the crop, fight for it with prices that seemed incredible.

Of course it wouldn't have been that way if most farmers hadn't failed to make a crop. It was only because there wasn't enough to go round that the buyers had had to drop their friendly scheme of standing together and scramble desperately for what they could get. He had heard envious talk of Joe Macrimmon's luck himself. Two thousand dollars, maybe, for a single year's work! Like picking up money in the road! Generally a little grower was lucky if he brought home enough from the warehouse to settle with the store and pay for his guano.

"We never figured anybody'd take and steal it."

Mackenzie nodded. They'd got used to thinking that tobacco wasn't valuable enough to steal. Only this year ——

"They was three wagons out by the barn when Joe went out—I could see the men loading up. It wasn't right dark. I wanted Joe should take his gun, but he run out. I got the gun and went after him. Somebody sung out we should git back in the house and keep quiet, but Joe he kep' a-running straight for 'em and two-three of 'em shot. I seen him drop and started to shoot, but the gun took and jammed on me and they ketched me when I went to run. Took and tied me up and finished loading. When they was gone I sung out and little Joe he come and turned me loose. Joe was dead by then."

Mackenzie wondered why he kept seeing it all, the stabs of the gun flashes, the dim figures against the log barn, the little boy creeping out in the dark to untie the bound woman. Cole was tending to business instead of dreaming.

"Know any of them, Mrs. Macrimmon?"

"I'd know the one't tied me up if I see 'em again. They was all hill folks—I knowed by their talk—and I heard the splash when they forded the branch too. The tracks is there right now."

"They'd ought to be a long ways back in the hills by now," said Cole. "If we'd known sooner we might've caught up with 'em in the car."

"Not on that road." She shook her head. "Ain't no car could go up there through the fords. I got word down to town quick's I could."

"We'll go after 'em anyway," announced Cole. "There's enough here for a posse, and we can follow the wagon tracks, I reckon."

Without waiting for the sheriff's consent he stepped to the door and announced the plan to the men grouped at the step. The sheriff, following, read approval in the sun-bitten faces. Four or five rifles leaned against the wall—they had come expecting this, some of them. He wondered at himself for a queer reluctance. Ten or fifteen years ago he would have sworn them in and led them on such a chase with a joyous excitement and no regrets. Now suddenly he discovered that he had changed, that he held back from the prospect.

Going up into those hills across the county line meant a fight. The mountain men wouldn't wait to be ferreted out of hiding before they showed their teeth. And Mackenzie guessed fairly accurately at the identity of the thieves who had killed Macrimmon—the Rayfield boys must have been in the gang, along with Sid McKane and the rest.

It was the first time they'd chosen to come down on this side of their hills—the mining towns on the other flank offered better sport as a rule—but he knew them by evil repute. They'd expect pursuit and arrange for it—an ambush where the posse wouldn't have a chance.

It was strange that he should stop to think about that. In the old timber days he'd have been in the saddle long before now, with the thud of the hoofs behind him in his ears. And now he stood in the doorway and thought of empty saddles, thought of bringing back a few dead men to the cabins in the cool hollows. It was bad enough to have one young widow with a pair of children to support. Of course he could pick boys who hadn't families to think about, but there was something worse in the thought of bringing back those young bodies to sandy graves behind Bethesda Church than in the prospect of killing grown men and fathers.

"How many fetched guns?" Cole was asking.

"I Got the Gun and Went After Him. Somebody Sung Out We Should Git Back in the House, But Joe He Kep' A-running Straight for 'em and Two-Three of 'em Shot"

There was a stir in the group as men moved toward the weapons at the wall. Mackenzie heard his voice, like the voice of a stranger, checking the movement.

"I ain't ready for a posse yet a while, Sim. You and me better look into this first. We're paid for it. Time enough to ask for help when we need it."

Cole half turned, incredulous, very faintly apprehensive. "You aim to go up there alone, sheriff?"

"You and me—if anybody goes. It's our job, ain't it?"

"Plumb foolishness—the two of us! We'd a heap better stay right here without we take enough ——"

"I'm going out to the barn," said Mackenzie. "They was bound to leave tracks. We got to do a sight more than just ketch some men, Sim. We got to prove they done it."

He moved away, followed irresolutely by the others. The loose earth about the barn had been trodden by too many feet that morning to hold out any chance of identifying the prints. Mackenzie went inside, where planks had been laid on the earth as a makeshift floor for Joe Macrimmon's stored leaf. They were bare now except for a few scattered hands which had fallen from the sticks as the thieves had lifted these to their wagons. A few strips of sacking, stitched together to make a covering, lay on the ground; a piece of an old cotton blanket, torn across, still felt damp to the sheriff's fingers as he lifted it.

"Guess they carried the rest of the blankets with 'em," he said aloud. "Somebody in that crowd must know a little about keeping tobacco in good order."

He felt a doubt in the silence which answered him. They'd begun to wonder; Sim Cole's scheme agreed with their ideas about a sheriff's duty. He didn't blame them; it was only since he'd seen Letty Macrimmon's face just now that he'd felt differently himself. He picked up one of the fallen hands—a bundle of long golden leaves wrapped stems together by another, drawn tight and smooth about them, forming a convenient handle. It was pretty tobacco, and Joe knew how to grade and tie too. No wonder the buyers had bid his piles to record figures if they were all like this.

Mechanically he fingered the texture of the leaves, lifted them to his nose, smoothed them again.

"Reckon that's all we can do here, Sim." He spoke slowly. If they got the notion that Dan Mackenzie was afraid to lead them up into the hill paths—he hesitated. "Sort of like to keep a few hands of this myself," he said aloud. "Running low down to the jail."

He gathered the scattered remnants of the raid into the scrap of blanket as he spoke, still conscious of an appraising silence about him.

"All right, Sim. We might's well get started."

He stopped at the house to pay Letty for the tobacco he carried. She took the money silently.

"You going after 'em, sheriff?'

Sim Cole gave the question the force of a challenge. Mackenzie turned away without answering. He heard a muttering behind him as he walked to the car, carrying his bundle awkwardly before him. They'd talk. He guessed that Sim Cole would help them. He felt the justice of their tacit reproach. He couldn't expect them to understand that his queer unwillingness to strike into the hills was on their account and not his own. It occurred to him suddenly that he must be getting old—too old for his job. A sheriff oughtn't to be deterred in his duty by such considerations. He was turning soft—afraid of spilling blood. Sim Cole ——

Cole started the engine and climbed to the driver's seat over the edge of the car. At the fork he threw out the clutch and yelled, above the clatter of the racing motor, "Which way?"

Mackenzie jerked his hand in the direction of the county seat. He saw Cole's jaw tighten and his lips lift faintly at their corners.

"I thought you wasn't aiming to go up there after 'em."

Mackenzie said nothing. But the lower lids of his eyes rose until they nearly hid his pupils and his face became more placid. They were in sight of the courthouse when he spoke gently:

"Sim, you ain't satisfied with how I'm handling this case. Figure you could do it better, maybe."

Cole shrugged, keeping his eyes on the road.

"Heard some talk't you was fixing to run against me this primary." He waited for another shrug. "Just wanted to say't they won't be no hard feeling if you do. I been sheriff a right good while. Most times it ain't a bad job for an old man, Sim—not in a quiet county like Hewitt anyways. Maybe I'm wrong. If you figure you

Winter Life in the Czar's Capita

By Princess Cantacuzène, Countess Spéransky, née Grant

LOVE of St. Petersburg was in my heart always. After the first six months of my married life I felt thoroughly at home in the beautiful city, and from that time on each season drew me closer to it and gave me a completer understanding of its individuality.

While our boy was still too small for serious lessons we lingered in the country through the late weeks of our autumn season. Then, with years, the time came for school or tutors for our little folks. I returned to the capital by the middle of September with them after this while my husband made his hunting trips with his chief, the Grand Duke Nicholas. Everyone complained of the northern autumn climate, said it was gray, damp and cold. But though I was led to fear the dullness of the sky, and the supposed lonesome life of a deserted town, I was soon consoled by my experience, and the charm of our city in its quiet moods appealed to me exceedingly. Once the house and the children were settled I was free to look about and choose my own occupations, as at no other time of the year I could. Even the settling of the household and the laying out of the children's programs offered no great trouble; for there were devoted servants and capable governesses perfectly trained, who had for years managed these things and who were keen to make a success of their various duties.

A Russian Skyscraper's Fate

WITH such effective aid it was easy to settle down to a comfortable routine in a frame prepared beforehand to receive us. I had only to put a few things, which were my treasures, into their glass cases, to add a touch here and there, changing about the books and small souvenirs on tables, filling jars with fragrant flowers or placing our furnishings where they could give most comfort. This done and the house functioning, there were always a few days of delightful shopping, which the children enjoyed vastly and which gave me, as well as large friendly audiences which gathered about us in the shops, great pleasure. When we came from the country my youngsters were as brown as berries, and had rosy cheeks and deep clear eyes which attracted everyone at once. Great talkers, they were, however, well mannered and showing good breeding, holding themselves very straight and moving gracefully. They were interested in everybody and everything, and of course asked innumerable questions, which the managers of various shops seemed delighted to answer.

St. Petersburg shops before the war were admirable as to the merchandise they contained, but were in aspect semi-Oriental, semi-feudal—altogether homelike, patriarchal and attractive. One chatted over the wares and the children's fittings with owners and employes in most cordial sympathy, everyone giving valuable advice and assistance to favorite clients. Even old nurse and Chippy the dog came on these expeditions and completed our tribal aspect. Americans shopping would have been dismayed by the uncomfortable lack of space and our waste of time, but Russians liked their country's ways and got a great deal out of even the smallest of their duties in business of this kind.

They didn't much care to be modernized. After I had been married some years an American company came and built a small-sized skyscraper on St. Petersburg's main street. About ten stories high it was, and constructed in the best office-building style, with low ceilings and as many rooms fitted in as cubic space would allow. Everything was hygienic, there were express elevators, rubber carpets, mosaic floors and steam heaters. The Russians watched this building rise, looked at the granite blocks of which it was built, then gazed on the mellow-tinted stucco façades which surrounded the grim monster of stone and steel, and they shrugged their shoulders. With the intention of granting impartial justice to this modern invader they waited to see it finished before passing judgment on the new idea it represented. Feudal Russia had patience and time to give a verdict slowly. So when the puzzling edifice was ready and its doors open, the populace of the town came within and gazed. They sniffed the rubbery fragrance, tried the lifts up and down. They looked down upon the world from the highest altitudes, and then said, and repeated with emphasis, "It is ugly." Neither color nor shape nor proportions pleased, and as the building had no beauty nor even harmonious charm it was condemned once and for all, and was left largely to the use of foreigners.

The Charm of the Tea Hour

ONCE the children's lessons began they were tied down to their duties and could give me their companionship only a short time each day. I generally had six or eight weeks then of comparative solitude, before my husband returned from his hunting expeditions. The quiet of the capital all through the autumn was very attractive. St. Petersburg offered many possibilities of theaters or opera, where I could always go with one or another of my friends among the diplomats or Russians.

Also Christmas gifts must be bought and packed, and I took time to read as well as to prepare my dresses for the season. Best of all habits in those days was the sociable hour when people one liked gathered about a tea table, to chat and warm themselves. Nowhere have I found such stimulating and interesting groups to sit with. The talk drifted about, touching a great variety of subjects, gay or serious, by turn. The men's wit or eloquence was scintillating; the women were always responsive, clever, warm-hearted. Time flew as all sorts of things of more or less importance going on in the world were passed in review and commented on—politics, religion, the latest books, our own experiences or theories. A light and gentle touch the Russian had in discussion, a certain childish, primitive simplicity of attitude, with rich variety of mood. Never small, or cynical, or bitter, never afraid, they took our American point of view on many matters, and somewhat of the American ways, I thought. The Russians loved Kipling, Mark Twain, and a number of other authors who typify our taste. Because they had more time to live and to enjoy, they learned much of the poetry of Russia by heart, and conversation was frequently interspersed with quotations from the best of foreign and national literature. I very much enjoyed myself and in the genial atmosphere everyone seemed to bloom.

One discovered suddenly that the autumn had slipped into a frightfully cold winter, with deep snow covering the city in a beautiful white garb, over which gay little sleighs moved rapidly. These were as typical of Russia as was their background—low and deep, with no backs to their seats, so one must sit straight after holding to the fat driver's belt for lack of a better means to steadiness. The vast padded dimensions of one's coachman, seated on a narrow bench slightly raised but very close in front of his employer, protected one from the wind and the fine powdered

Digitized by Google

which covered both sleigh and man. So much was tter a part of one's furnishings and comfort that to ft behind was hung a small carriage clock, where it be seen with ease. It was the last degree of smartness. xtreme smallness of the sleigh and the huge propor- of the driver made for an extreme elegance, and all turned in envy as we sped up the quay.

fast trotter made the sport exciting and the little uts dashed about at breakneck speed, even around rs. At crossings, always the driver gave a deep shout rning, and the pedestrians scattered like leaves before rind. This in spite of the fact that there invariably ed to be a dozen or more youngsters about, who were r carrying long flat baskets of provisions balanced on heads or were dragging bundles and baskets on tiny . The latter were never properly under control as they d along at the end of a long rope behind their small rs. Though all these impedimenta made the streets ult to navigate, the coachmen were admirably adroit drong, and everyone was used to crowds and seeming s, and had developed alertness of both eye and ear.

The Season of Merrymaking

MEHOW the disorder was only apparent. It gave us the Oriental note I found in so many Russian habits, made the streets of St. Petersburg and Moscow first ire to those of Cairo in their crowd psychology. I ed our cities for their noisy disputes, which didn't rt in reality, and for the optimism, gayety, excitement childish confusion, which never led to accidents, it ted, nor even to discomfort. The furs and velvets on sleigh robes, which to be smart must hang luxuriously n over the sleighs with heavy tassels trailing in the w, the nets which draped our horses and trailed also, tering passengers and drivers from the hard snow ked up by rapid steeds, the reds and blues and greens of rse, velvets and nets, the harness studded with tiny lliant dots of metal nailheads, the beauty of the high- ying fast horses, the rich and brilliant plumes of hats pretty heads—all helped the picture.

Suddenly frantic signals came from the police to clear r way down the street's center, and then as officers ame rigid in salute, a par- ularlysplendid sleigh swept ng with horses, nets and ackman all perfection. ding the robes in place, er stood on a small plat- m built on the rear of the ipage a most magnificent ecimen of manhood. Some t feet three in height, with ll white beard worn patri- chal fashion, dressed in a ossack uniform of sapphire lue and gold, with knives d cartridges on belt and best which glistened in the un, proud of himself was his fine Cossack. Proud of is personal care and devoted ervice given for years to the lainty charming woman with he gentle eyes and smile, the old fellow was. She sat wrapped in sables, with a dy in waiting at her side, alking gayly as she bent to ight and left, bowing to her ubjects. The populace un- overed,saluted,curtsied,and ooked after the picturesque ortège with pleased, affec- ionate eyes. The Empress Mother was greatly admired by the citizens of her capital. Once someone said to her, after her return from a trip broad, that St. Petersburg was happy to see Her Majesty again.

She answered with enthu- siasm, "Indeed I'm glad to see St. Petersburg. I love it all. The streets and buildings and the crowds; even the tram- cars and their noise are at- ractive to me, and I miss them when I go away."

The Empress Mother al- ways moved about a great deal among the people, visited hospitals and schools, drove to her daughters' homes, and was often a flashing note of color in the afternoon pageant along the quays or on the Nevskii.

Sometimes I felt as if all this was a fairy tale with its background of sparkling ice and its beautiful buildings, with the soft northern lighting of clear sun and blue sky, the bright colors and intensity of life. A wonderful flower of civilization, this capital of the Czars, lost among the snows, showing to the onlooker the best the brains and luxury of Russia could supply. Along the river's north bank the great constructive work of empire stood typified by the bourse, the university, the museums and the academy of fine arts which stood there. Along the southern quay the vast palace's façades lay in a glorious row, and the frozen river spread between, asleep in winter garb—covered with a network of roads. Over these men skated, pushing passengers in chairs, or drove in quaint native droshkies, or even were carried back and forth in modern tramcars, whose rails were laid each year across the ice. From late November until the end of March they carried human freight in perfect safety. Here and there an ice palace stood, with a gay skating rink beside it, and bands played where ice hills drew the crowds of merrymakers. Farther out on the river there were companies of soldiers moving along with extraordinary cleverness on skis, while in some quiet spot was an ice quarry, from which great crystal blocks like aquamarine jewels were being cut, loaded on sleds, one or two blocks to each load, and dragged by sturdy native horses, with icicles clinging to their heads and bodies, up the steep embankments and to the ice venders of the town.

Far beyond all this stretched Russia, of which this capital city was but so small a part. The great plains and woods were full of mystery still, of legend and of poetry, with a silent people, millions of their kind, waiting there to express themselves when the time should strike for them to speak. Great mass of Russia dormant still, but strong.

Cathedral of Saint Isaac, St. Petersburg, the Largest Church in Russia

The Nevskii Prospekt, Principal Street of Old St. Petersburg

Inside the palaces the capital's society led an immensely pleasant life. It began each year with the first ceremony at the court on St. Nicholas' Day—the sixth of December by the Orthodox calendar. On this feast of his patron saint the Emperor received the officials of his court, and the imperial family gathered as a rule about him. Honors and nominations were bestowed on various subjects, and decorations offered. Altogether it was one of the most typical of Russian feasts.

Then came the Christmas season, an informal time when children claimed their dues, whether they were imperial children or those of the peasant class. Parents gave themselves up to the joys of shopping and of gay tree parties, where all the members of each family were brought together, as if it were still the era of old tribal customs. Old and young came to these parties, and I knew of none more enjoyable in old Russia's calendar than were these immense reunions. In our own connection, for instance, between December twenty-fourth and January first, we went in full array—my husband and I, three children, the governess and nurse—to a tree at the Dowager Princess', to one at my brother-in-law's, another at my sister-in-law's, and one each at the houses of two or three distant relations. In our own turn they all came to us, twenty or thirty strong, and as we had each received some small gift on the other trees so each of our guests found on ours a present addressed to him or her. The Christmas special foods and the hot chocolate and champagne were served out to us parents while the young people danced and played about or were given simpler refreshments, always with their tutors and governesses to direct and superintend them, while a lot of nurses supervised the games and feeding of baby guests.

Tree-Trimming Parties

WE ALWAYS had one particularly pretty party. On the evening preceding our Christmas celebration twelve or fifteen of our intimate friends were asked in to an informal dinner, and afterwards they helped us trim our tree. The gay nonsense talked at that party made one young again, and the work accomplished was wonderful. Russian temperament and taste responded to such a call. Someone was appointed as the head decorator, the others worked under his superintendence with immense enthusiasm. Great quantities of pretty trimmings had been laid out on many trays and tables, and really charming results were produced amidst jokes and laughter. One year the effect was all in white and silver, another year it was all red and silver, and once it was all gold, but generally the multicolored ornaments went on

BIG GAME

By MARYSE RUTLED(
ILLUSTRATED BY JAMES M. PRES

Strange How She Felt, Sad With a Kind of Yearning, and Yet Happy With Hal Anchored There Beside Her

HAL never said a thing that morning, and yet he must have had it all planned. An hour after he left the hotel these expensive new trunks and a valise were delivered with a note from him telling her to pack and be ready when he came back in the afternoon.

Ready for what, she would like to know! He had gone away, she remembered now, in a suspiciously jaunty mood. She had imagined him conducting their latest friend, Mr. Billings, of Billings Cracker Company, on a sociable tour among the Paris bars. She had even considered meeting them at the Chatham for a cocktail. Only the thought of Mrs. Billings, who was absurdly old-fashioned, deterred her. No use in antagonizing Mrs. Billings.

And then these new trunks had been plumped down on her. She might as well pack. Nothing could be worse than this hotel. But how she hated trunks! They were the symbol of her life; of being bumped and jostled around in foreign lands—up in the world, down in the world. Never knowing.

These trunks had an insolent look. They were overlarge, black and sleek, marked too conspicuously in red with Hal's crest. People asked indiscreet questions about crests. Of course Hal was a Brassington-Welsh. Years ago—was it only ten?—she had thought that a magnificent name. Anita Moffett, from Stamford—Anita Brassington-Welsh.

The sight of her luncheon tray on the ink-spotted tablecloth made her sick. Nothing so loathsome as dead eggs congealed in their glue, and violet stains of *vin ordinaire* on a coarse mussed napkin. Ring for the maid? No bell in the room. What could you expect for ten francs a day? The Billingses paid four hundred francs for their suite in the Hotel St. James. Could the Billingses have found out anything? The familiar fear crept prickling from head to knees. Fool she was, to worry. Bad for the little lines that webbed her eyes; bad for the disciplined curve of her lips. Besides, she could never care again in quite the same way since that time in Florence when Mrs. Lucas, her mother's friend, had found out.

She didn't want to think of it. But as she turned from the glossy new trunks she caught sight of the battered old trunk and valise huddled in a corner of the room. Their smudged labels looked at her knowingly. Oh, those labels! Records of lean days, of prosperous days; of ugly moments at frontiers; of ticklish interviews with English consuls during the war. Florence. There it was—Pension dell'-Arno, a smeared pinkish-and-black label, torn at the edge where she had tried to pull it off.

Hal had behaved himself since then, or very nearly so. He had picked up little things here and there, of course. One had to live somehow. But he had kept clear of men like Crawford. She shivered when she thought of Crawford. Oh, Crawford had laid his trap well to catch Hal and that beast of a Monte, selling fake stuff from the Palazzo Monteficchio. If Crawford hadn't fallen in love with Edith Lucas, and if Edith and Mrs. Lucas hadn't pleaded with him to let Hal off, Hal would have been done for. Put in prison, perhaps. She thought of that at night, and often in her dreams she heard Mrs. Lucas' kind, distressed voice, "Anita, you must come home with us. You must come home to your dear mother before it's too late." How nearly she had gone back; back to Stamford, to the wooden house with the porch and maple tree; to her mother, who all these years had believed her happy; to the neighbors, who would have pitied her. And what would have become of Hal?

Better not think of it. Better pack. She went to and fro with small, anxious steps, a plump, greenish-gold little woman in a blue quilted wrapper pinned up with safety pins to prevent it from touching the dusty parquet floor. Chilled air oozed through the leaky windows. The fireplace was boarded up and papered over with the same pink as the walls—a pink which at times reminded her unpleasantly of her complexion.

Against this surface of wilted brightness the furniture hunched itself with a false cozy air—a scroll-topped wardrobe, a brass bed, a nicked white washstand. You were meant to feel at home here. Reckless young Beaux Arts men who feared neither colds nor rheumatism nor gestible food, gave to the place what she supposed student atmosphere. Mrs. Billings thought it so in ing and romantic to live around the corner from the Arts. Cheap, in any case.

Hal never could have bought her those new clothes with the money he had won at the races, if he had paying expensive hotel bills.

Well, she owned a few decent things now. Not enou fill the trunks, though. Wherever had he got the mon buy such luggage? Had she forgotten anything? Her evening gown of black chiffon trimmed with sequins. took it from the wardrobe. Not so seductive in the s gray light of a Paris November. Look at that now—see hanging on by a thread. She had been careless la hadn't kept her things up.

Now the valise. There wasn't very much to go i Hal's spotted dressing gown—he hardly ever bo things for himself; his whisky bottle standing on washstand; the hairbrushes. She should have washed hairbrushes, but with the amount of hot water one g the mornings, washing anything but one's face and h seemed an extravagance.

She slipped on her black serge suit with the embroid pockets. Her neck was too short for these fashionable collars. The loose box effect of the jacket suited though. The great point was to move and act as if were thin. Of course she might go through a few exer in the mornings, but bending and twisting about must bad for the liver. It made her dizzy when she tried.

The bells of Saint Germain rang tarnished silver note one, two, three. She went to the window. Everything dank and gray. Sweating pores of the city exuded a that drained the color of passers-by. Not like the soft grance of Italy, where flowers melted in the air and th was song everywhere. Well, she had hated that sweetn Sounds here were harsh, melancholy. She listened to squawking of horns, the rumble of motor busses pound down the narrow Rue Bonaparte. Why didn't Hal co

People dribbled past the bluish house fronts: A motor th a bored lady leaning back on upholstered cushions; delivery wagon; a tall man stepping importantly, not il; a boy with a basket; two taxis. At last here he was. sout time.

One taxi was empty; Hal sat in the other, military of milder, very pleased with himself, as she could tell by e angle of his hat. No bad news then. That second taxi st be for the trunks. The coolness of Hal taking for anted ——

He looked up and waved. She ran to the door, opened it. e heard him heavy on the stairs, briskly marching up e hall.

"I thought you were never coming, Hal. What are ——"

He bent to kiss her. He smelt of gin, cologne and cigars. e had been with Billings then. He had also been to the rber, and he had bought himself a pair of pearl-gray oves to match his fedora.

"Everything ready? Good old girl. Haven't time to plain. It's a surprise."

He was going to be mysterious. She knew that deep tone his, a breastwork against attack behind which he rutted, red and hearty. She looked at him severely as, ith a bright show of energy, he laid his hat, stick and loves on the table next to the gruesome luncheon tray, nd strode businesslike toward the trunks. Very much ngaged, he was, in admiring his crest.

"But, Hal, why are we leaving Paris? Have the Billngses asked us anywhere?"

She might have thought of that before. A motor trip, erhaps, through Nice, Cannes, Monte Carlo. White ashes, mimosa, the blue of Southern seas.

No, the Billingses hadn't invited them anywhere. In act, they weren't leaving Paris. Now was she satisfied? He prowled around the trunks, fussing with the locks.

"Not leaving Paris? Hal, you'd better tell me."

"Look here, Nita, I haven't time. You leave it all to me." He was fumbling now in the lower compartment of the wardrobe trunk, where, wrapped in Daily Mails, were her slippers, his pumps, a heavy pair of boots.

"Hal, what are you doing?"

It was just like him to upset everything. Good gracious, those taxis waiting! Where was her hat? Hal flung a smoldering cigarette stub on the floor. She picked it up, pressed it down with her thumb on the edge of the egg plate. Another stub wilted in a pool of water on the washstand.

She stood before the mirror. If he wouldn't tell her, why, he wouldn't. Powder her nose, anyway. You couldn't see a thing in this light. Her lips were chapped. She ran a finger over them, flecked off dried particles of skin; drew a bold red wing, leaning forward, her elbow steadied on the washstand shelf. How much should they give the *bonne?* Five francs was plenty.

"Hal, leave five francs for the maid on the tray, will you?"

Her toque needed brushing, and she had packed the brushes. Black velvet showed every speck of dust. Never mind; drape her veil over it. You could do anything with lace veils. If only she knew where they were going! These surprises of Hal's!

Such a noise! She whirled around. He was hammering the brass trimmings of the trunk with one of his heavy boots, which he had unpacked.

"Are you crazy?" She flew to seize his arm.

"Let go, Nita. I know what I'm doing." He peered down at her, flushed and determined. "They're too damn new. I'm breaking them in."

"Breaking them ——"

She stared at him. He stood there, brandishing his shoe in mid-air, his mouth pouting under the bristle of his mustache. It was too absurd! She began to laugh. He joined in as if relieved at her manner of taking it, but while he roared and rumbled over his own performance he banged away like a man with a purpose. He had some idea in his head, and he wasn't going to tell her.

"That's enough now." She spoke sharply. If he was up to anything queer she would refuse to go through with it. She told him so.

He protested with a virtuous, offended air. Everything was all right; posi-tively all right. Didn't she trust him?

"I wish to heaven I could!" No use losing her temper.

The trunks were ready. He went to the window, called to the chauffeurs.

Well, she should be accustomed by now to these sudden shifts. Funny about hotel rooms, how they cast off privacies and took on others. A change of linen and towels, a superficial sweeping and airing, and they were ready for the next strangers. A few stray hairpins on the table, a slice of green soap drowning in a soap bowl, an empty bottle of Hal's hair tonic, dead cigarette stubs, a rusty pen with which only yesterday she had written her monthly cheerful letter to her mother; the discarded old trunk and valise—just cast-off stuff. And that was all to tell of their passage.

The chauffeurs, reeking of sour wine, creaked in. Hal called from the hall, "Coming, Nita?"

She pulled the veil loosely over her face. "Yes, I'm coming."

II

THE Major and Mrs. Brassington-Welsh on the Champs Elysées, looking as if they spent their lives riding up the great highways of the world at the fashionable hour. It was all very well to start out this way at the glamorous hour before twilight, when Paris lay soft under haze, and the bridges, the reddening chestnut trees, the statues and gardens were blended in gray and rose. But where would they be that night? She asked Hal once more. He wagged his head with a cunning, triumphant look.

The Rond Point. Everyone was going to tea somewhere. People in beautiful motors, people on foot; smart young women with police dogs, dapper old men with red rosettes in their buttonholes. Ease and pleasure in the air. She relaxed dreamily. What did it matter where they went as they rolled on and on? Polished shop windows, polished motors for sale. She thought of huge shaggy chrysanthemums, of a wood fire, of silver teapots.

Hal sprawled beside her, stroking his mustache with a gray-gloved hand and staring ahead at the Arc de Triomphe, which straddled the sunset.

Claridge's Hotel—the Carlton—swing around a corner. These French chauffeurs were the most reckless!

Here and there lights flowered like pale jonquils. A black hairy man stood on the Avenue Marceau holding a cluster of red and green balloons. Paris swam in a rosy mist. You only had to let yourself go.

"By the way, old girl, got any money?" He said it casually, as if it didn't matter whether she had or not.

"Have you?"

But she fumbled in her purse. A hundred-franc note, some of those new brass coins that looked like gold, a wilted fifty-centime bill mended with a strip of stamp paper.

He peered over her shoulder. "Lend me the hundred."

Lend it to him? A quaint way of putting it. He took it, cocked his hat more boldly over a slightly bloodshot eye and shifted to a brisker pose.

A MAN OF PRINCIPL

By Perceval Gibbon

ILLUSTRATION BY H. J. MOWAT

AT THE head of his table in his official house the governor of the prison had his back to the wide window, but young Mr. Ducane, of the Home Office, seated opposite to him, could see past him the sunlight upon a lawn cropped like a convict's head, upon trees and bushes grim rather than trim in their discipline of form and spacing, upon all that felon-tilled garden which was like a tide of jail life trespassing upon the shores of freedom.

"Jolly quarters you've got here," he remarked as the corpse-faced manservant filled his glass.

The governor nodded carelessly. He was a gray, spare man who had come to the prison service after a career in the army.

Only the governor's other guest, the black-bearded chaplain, looked up oddly at Mr. Ducane's choice of an adjective.

"I don't remember the case we have been speaking about," he said thoughtfully, unwilling to let the talk stray. "I know the man, of course. I suppose he will receive some compensation from the government?"

"Well, yes," said Mr. Ducane. "That has been decided upon. Though, really, it is not easy to see what other verdict and sentence were possible upon the evidence. Witnesses to the murder, recovery and identification of the body—everything complete! Only the Home Secretary's aversion to the death penalty brought about the reprieve. Nowadays the man would certainly be hanged."

"And then there would be a murder," murmured the chaplain.

Colonel Dane, the governor, spoke unexpectedly in his tired, faded voice.

"Ought to be hanged anyhow," he said. "Dangerous brute. Twelve years and two floggings haven't tamed him. It's like setting a man-eating tiger at liberty."

The chaplain frowned. "Twelve years and two floggings," he repeated. "Do you know that the only words I have been able to get out of him since I have been here—the only phrase I have heard him utter—are: 'I never done it; I never done it!' And to think that, through a death sentence, twelve years and two floggings, it was true all the time!" He turned to Mr. Ducane. "You have been reading up the case?" he suggested.

The livid butler had set their coffeecups at their elbows. Mr. Ducane completed the lighting of his cigar, pushed his chair back and crossed his well-clad legs. He was a neat blond young man with a monocle and a little pet of a mustache; his accent was Oxford; and already the mask of the bureaucrat, of him who has authority without power, was hardening on his face.

"Yes," he answered. "That duty—er—devolved upon me. It appeared that this man Hacker and his victim—ah! his supposed victim—Smee, had been partners in a smuggling venture. Opium, you know, for sale to the Chinese in Limehouse and thereabouts! Both men were sailors from time to time, river thieves at intervals, and well known to the police. Thorough bad lots, in short. Well, they disagreed as to the division of the spoils in their last transaction and Hacker conceived that his partner was cheating him of a sum of twelve pounds. There were many quarrels and many violent scenes; Smee had been going in fear of his life for days when the final encounter came; and he turned around one evening at a touch on the shoulder to find Hacker standing over him.

"It was their voices and the noise of the struggle that brought witnesses swarming about them. It was an obscene place, a festering alley end giving on a derelict wharf; there had been other murders there. Both men had knives; they grappled and hacked in that infected gloom before a delighted audience. Hacker was roaring and Smee was mostly screaming. The end came when he uttered one special scream—'like a woman 'avin' 'er throat cut,' said one witness—and tore loose. The alley before him was blocked; he turned and fled out on the wharf, with Hacker at his heels. The spectators followed; they saw the final collision, Hacker's murderous thrust—the *coup de grâce*—saw Smee vanish over the wharf edge and heard the splash of his body striking the water. Thirty seconds later the police were on them and was arrested red-handed—literally red-hande weeks later the body turned up."

The chaplain pursed his lips. "Three week identification was still possible?"

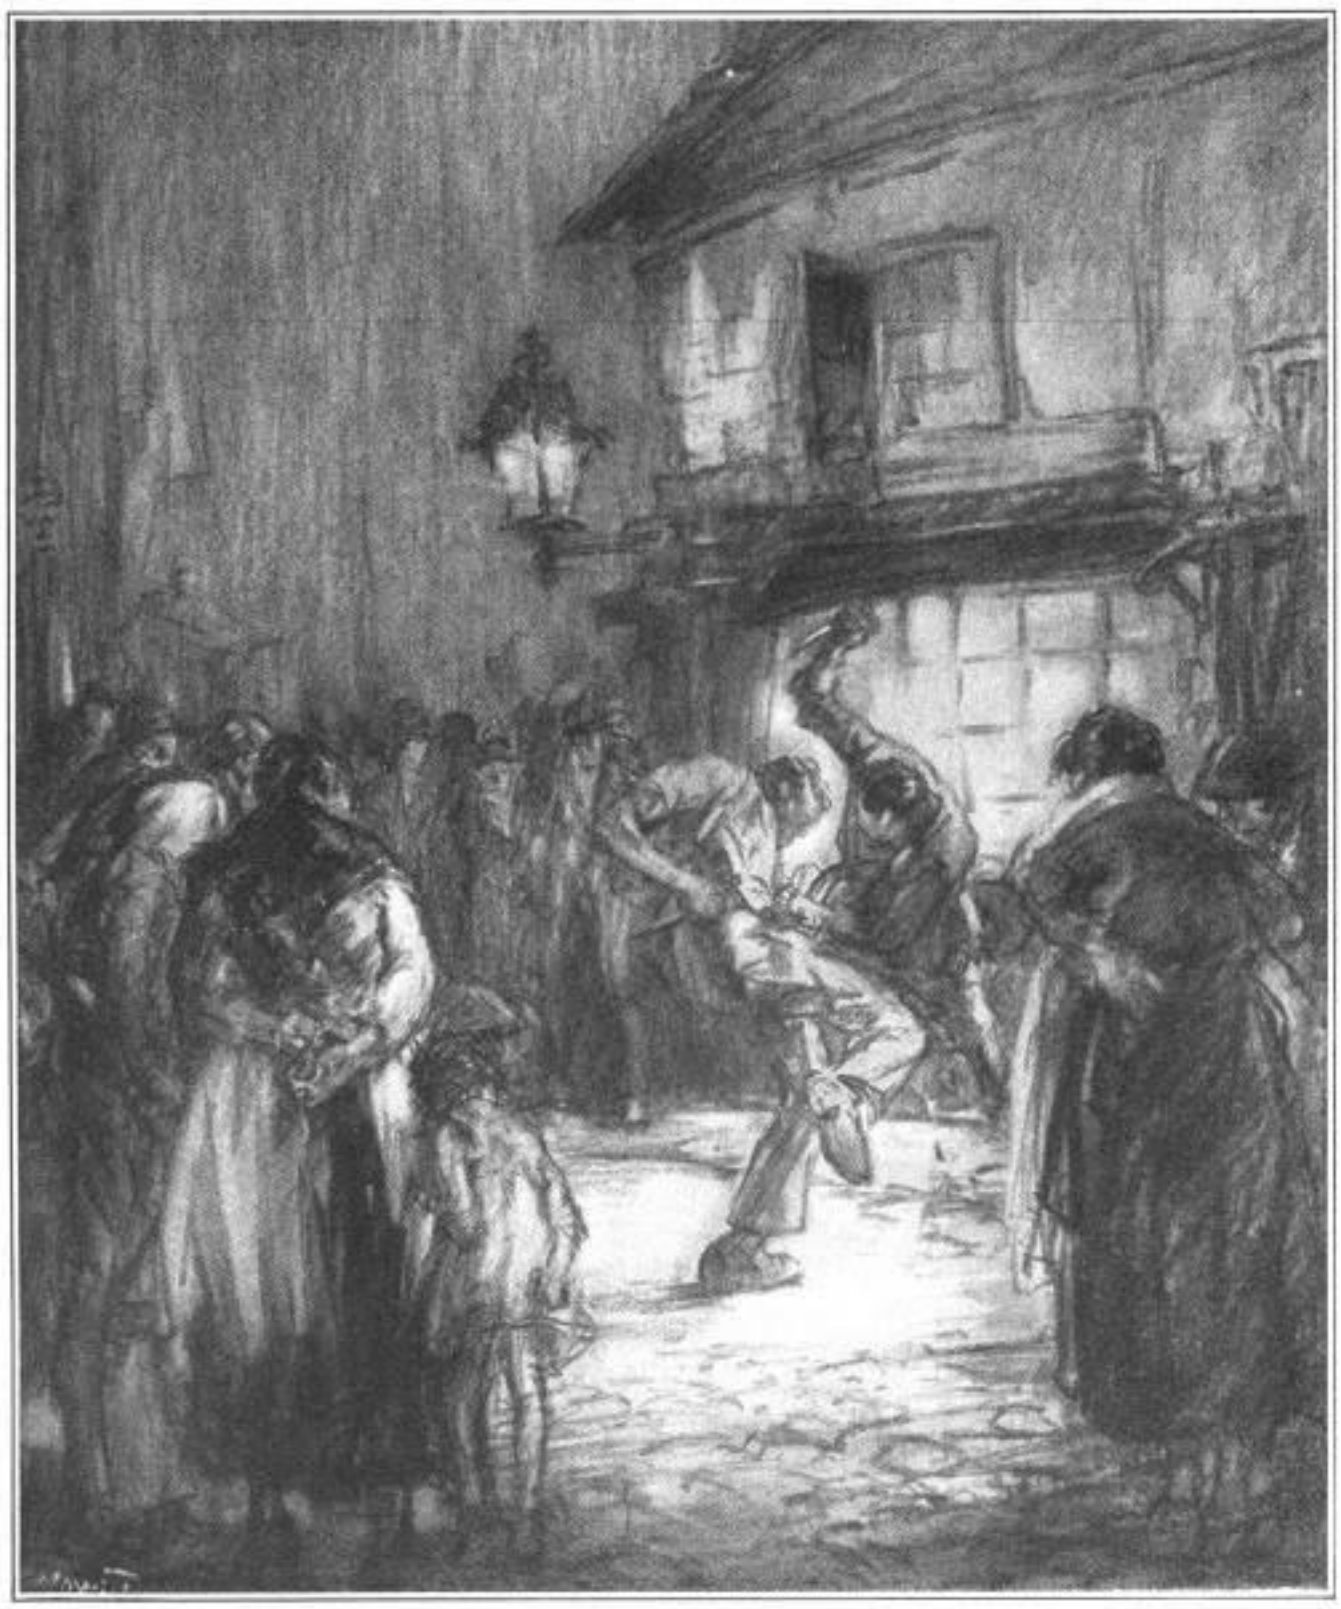
Mr. Ducane nodded. "Oh, quite," he replied. er—in regard to features, and so forth, of cours Hacker himself had marked it pretty clearly, do know! At any rate, plenty of people did iden Hacker's own story was that his last blow had miss that Smee had stepped too far back and fallen. believed that, of course."

"Except Hacker," suggested the chaplain.

Mr. Ducane smiled politely. "Except, of Hacker," he agreed. "He was sentenced to death, you know, his sentence was afterwards commuted t servitude for life. And now, twelve years *afterwar* totally unlamented Smee turns up, alive, health modestly prosperous, with an account of himself tha the most searching investigation.

"He makes it clear that that last stab of Hacke miss, that he did step back and tumble *overboard* that once there he wisely paddled his way ashore und wharf and made himself scarce. Next day he stowe self away on an outward-bound ship; he had actual known of Hacker's arrest and his own supposed deat only returned to this country to claim some *small in* ance—a house and shop, I believe, which have come t by the death and tacy of a relation. I his discovery an ploitation by *som* porter, the royal p for Hacker and co sation from the go ment. And there have it! It must s incredible, but things do happen, see!"

The gover quenched his cigari dregs of his coffee.



"No business to pen," he said. "(pensation? What For a murderous as on a warder? For attempts to escape? endless watchfuln and care on the pa everybody around l You send us wild be to be tamed and l safe; then you rel 'em and make 'e present of cash. W I've ordered his iron be taken off; you can him in my office wh ever you like."

"I'm ready when are, colonel," agreed Ducane.

"I'll come, too, if don't mind," said chaplain. "I want hear whether he'll something other than never done it.' Shall go, then?"

They passed togeth through the house ward the series of lock and bolted doors th communicated with t great prison. All t dwelling was handso in the colonel's ow formal and soldier style. Upon the wal were the heads and hor of beasts which he h hunted down and ex cuted, and trophies shields and spears, th spoils of little wars an of little peoples tame and cured of freedom Thence through iron plated portals the

THE COVERED WAGON

VIII

By Emerson Hough

ILLUSTRATED BY W. H. D. KOERNER

THERE were more than two thousand souls in the great caravan which reached over miles of springy turf and fat creek lands. There ere more than a thousand children, more than a ndred babes in arms, more an fifty marriageable maids ursued by avid swains. There ere bold souls and weak, strong ams and weak, heavy loads nd light loads, neighbor groups nd coteries of kindred blood or indred spirits.

The rank and file had reasons ough for shifting. There were score of Helens driving agons—reasons in plenty for he futility of all attempts to nforce an arbitrary rule of march. Human equations, human elements would shake themselves down into place, willy-nilly. The great caravan therefore was scantily less than a rabble for the first three or four days out. The four columns were abandoned the first half day. The loosely knit organization rolled on in a broken-crested wave, ten, fifteen, twenty miles a day, the horse-and-mule men now at the front. Far to the rear, heading only the ow column, came the lank men of Liberty, trudging alongside their swaying ox teams, with many a monotonous "Gee-whoa-haw! Git along thar, ye Buck an' Star!" So soon they passed the fork where the road to Oregon left the trail to Santa Fé, topped the divide that held them back from the greater valley of the Kaw.

Noon of the fifth day brought them to the swollen flood of the latter stream, at the crossing known as Papin's Ferry. Here the semicivilized Indians and traders had a single rude ferry-boat, a scow operated in part by setting poles, in part by the power of the stream against a cable. The noncommittal Indians would give no counsel as to fording. They had ferry hire to gain. Word passed that there were other fords a few miles higher up. A general indecision existed, and now the train began to pile up on the south bank of the river.

Late in the afternoon the scout, Jackson, came riding back to the herd where Banion was at work, jerking up his horse in no pleased frame of mind. "Will," said he, "leave the boys ride now an' come on up ahead. We need ye."

"What's up?" demanded Banion. "Anything worse?"

"Yes. The old fool's had a row over the ferryboat. He'd take two weeks to git us all over that way, anyhow. He's declared for fordin' the hull outfit, lock, stock an' barrel. To save a few dollars, he's a goin' to lose a lot o' loads an' drownd a lot o' women an' babies—that's what he's goin' to do. Some o' us called a halt and stood out fer a council. We want you to come on up.

"Woodhull's there," he added. "He sides with the old man, o' course. He rid on the same seat with that gal all day till now. Lord knows what he done or said. Ain't hit nigh about time now, major?"

"It's nigh about time," said Will Banion quietly.

They rode side by side, past more than a mile of the covered wagons, now almost end to end, the columns continually closing up. At the bank of the river, at the ferry head, they found a group of fifty men. The ranks opened as Banion and Jackson approached, but Banion made no attempt to join a council to which he had not been bidden.

A half dozen civilized Indians of the Kaws, owners or operators of the ferry, sat in a stolid line across the head of the scow at its landing stage, looking neither to the right nor the left and awaiting the white men's pleasure. Banion rode down to them.

"How deep?" he asked.

Taking the Direction of the Cattle Herd, She Drove From Camp a Mile or Two

They understood but would not answer. "Out of the way!" he cried, and rode straight at them. They scattered. He spurred his horse, the black Spaniard, over the stage and on the deck of the scow, drove him its full length, snorting; set the spurs hard at the farther end and plunged deliberately off into the swift, muddy stream.

The horse sank out of sight below the roily surface. They saw the rider go down to his armpits; saw him swing off saddle, upstream. The gallant horse headed for the center of the heavy current, but his master soon turned him downstream and inshore.

A hundred yards down they landed on a bar and scrambled up the bank.

Banion rode to the circle and sat dripping. He had brought not speech but action, not theory but facts, and he had not spoken a word.

His eyes covered the council rapidly, resting on the figure of Sam Woodhull, squatting on his heels. As though to answer the challenge of his gaze, the latter rose.

"Gentlemen," said he, "I'm not, myself, governed by any mere spirit of bravado. It's swimming water, yes—any fool knows that, outside of yon one. What I do say is that we can't afford to waste time here fooling with that boat. We've got to swim it. I agree with you, Wingate. This river's been forded by the trains for years, and I don't see as we need be any more chicken-hearted than those others that went through last year and earlier. This is the old fur-trader crossing; the Mormons crossed here, and so can we."

Silence met his words. The older men looked at the swollen stream, turned to the horseman who had proved it. "What does Major Banion say?" spoke up a voice.

"Nothing!" was Banion's reply. "I'm not in your council, am I?"

"You are, as much as any man here," spoke up Caleb Price, and Hall and Kelsey added yea to that. "Get down. Come in."

Banion threw his rein to Jackson and stepped into the ring, bowing to Jesse Wingate, who sat as presiding officer.

"Of course we want to hear what Mr. Banion has to say," said he. "He's proved part of the question right now. I've always heard it's fording, part way, at Papin's Ferry. It don't look it now."

"The river's high, Mr. Wingate," said Banion. "If you ask me, I'd rather ferry than ford. I'd send the women and children over by this boat. We can make some more out of the wagon boxes. If they leak we can cover them with hides. The sawmill at the mission has some lumber. Let's knock together another boat or two. I'd rather be safe than sorry, gentlemen; and believe me, she's heavy water yonder."

"I've never seed the Kaw so full," asserted Jackson, "an' I've crossed her twenty times in spring flood. Do what ye like, you-all—ole Missoury's goin' to take her slow an' keerful."

"Half of you Liberty men are a bunch of damned cowards!" sneered Woodhull.

There was silence. An icy voice broke it.

"I take it, that means me?" said Will Banion.

"It does mean you, if you want to take it that way," rejoined his enemy. "I don't believe in one or two timid men holding up a whole train."

"Never mind about holding up the train—we're not stopping any man from crossing right now. What I have in mind now is to ask you, do you classify me as a coward just because I counsel prudence here?"

"You're the one is holding back."

"Answer me! Do you call that to me?"

"I do answer you, and I do call it to you then!" flared Woodhull.

"I tell you, you're a liar, and you know it, Sam Woodhull! And if it pleases your friends and mine, I'd like to have the order now made on unfinished business."

Not all present knew what this meant, for only a few knew of the affair at the rendezvous, the Missourians having held their counsel in the broken and extended train, where men might travel for days and not meet. But Woodhull knew, and sprang to his feet, hand on revolver. Banion's hand was likewise employed at his wet saddle holster, to which he sprang, and perhaps then one man would have been killed but for Bill Jackson.

"Make one move an' I drop ye!" he called to Woodhull. "Ye've give yer promise."

"All right then, I'll keep it," growled Woodhull.

"Ye'd better! Now listen! Do ye see that tall cottonwood tree a half mile down—the one with the flat umbreller top, like a cypress? Ye kin? Well, in half a hour be thar with three o' yore friends, no more. I'll be thar with my man an' three o' his, no more, an' I'll be one o' them three. I allow our meanin' is to see hit fa'r. An' I allow that what has been unfinished business ain't goin' to be unfinished come sundown.

"Does this suit ye, Will?"

Banion Sprang to His Wet Saddle Holster

"It's our promise. Officers didn't usually fight that way, but you said it must be so, and we both agreed. I agree now."

"You other folks all stay back," said Bill Jackson grimly. "This here is a little matter that us Missourians is goin' to settle in our own way and in our own camp. It ain't none o' you-uns' business. It's plenty o' ours."

Men started to their feet over all the river front. The Indians rose, walked down the bank covertly.

"Fight!"

The word passed quickly. It was a day of personal encounters. This was an assemblage in large part of fighting men. But some sense of decency led the partisans to hurry away, out of sight and hearing of the womenfolk.

The bell-top cottonwood stood in a little space which had been a dueling ground for thirty years. The grass was firm and even for a distance of fifty yards in any direction, and the light at that hour favored neither man.

For Banion, who was prompt, Jackson brought with him two men. One of them was a planter by the name of Dillon, the other none less than stout Caleb Price, one of Wingate's chosen captains.

"I'll not see this made a thing of politics," said he. "I'm Northern, but I like the way that young man has acted. He hasn't had a fair deal from the officers of this train. He's going to have a fair deal now."

"We allow he will," said Dillon grimly.

He was fully armed, and so were all the seconds. For Woodhull showed the Kentuckian, Kelsey, young Jed Wingate—the latter by Woodhull's own urgent request—and the other train captain, Hall. So in its way the personal quarrel of these two hotheads did in a way involve the entire train.

"Strip yore man," commanded the tall mountaineer. "We're ready. It's go till one hollers enough; fa'r stand up, heel an' toe, no buttin' er gougin'. Fust man ter break them rules gits shot. Is that yore understandin', gentlemen?"

"How we get it, yes," assented Kelsey.

"See you enforce hit then, fer we're a-goin' to," concluded Jackson.

He stepped back. From the opposite sides the two antagonists stepped forward. There was no ring, there was no timekeeper, no single umpire. There were no rounds, no duration set. It was man to man, for cause the most ancient and most bitter of all causes—sex.

IX

BETWEEN the two stalwart men who fronted one another, stripped to trousers and shoes, there was not so much to choose. Woodhull perhaps had the better of it by a few pounds in weight, and forsooth looked less slouchy out of his clothes than in them. His was the long and sinewy type of muscle. He was in hard condition.

Banion, two years younger than his rival, himself was round and slender, thin of flank, a trace squarer and fuller of shoulder. His arms showed easily rippling bands of muscles, his body was hard in the natural vigor of youth and life in the open air. His eye was fixed all the time on his opponent. He did not speak or turn aside, but walked on in.

There were no preliminaries, there was no delay. In a flash the Saxon ordeal of combat was joined. The two fighters met in a rush.

At the center of the fighting space they hung, body to body, in a whirling mêlée. Neither had much skill in real boxing, and such fashion of fight was unknown in that region, the offensive being the main thing and defense remaining incidental. The thud of fist on face, the discoloration that rose under the savage blows, the blood that oozed and scattered, proved that the fighting blood of both these mad creatures was up, so that they felt no pain, even as they knew no fear.

In their first fly, as witnesses would have termed it, there was no advantage to either, and both came out well marked. In the combat of the time and place there were no rules, no periods, no resting times. Once they were dispatched to it, the fight was the affair of the fighters, with no more than a very limited number of restrictions as to fouls.

They met and broke, bloody, gasping, once, twice, a dozen times. Banion was fighting slowly, carefully.

"I'll make it free, if you dare!" panted Woodhull at length.

They broke apart once more by mutual need of breath. He meant he would bar nothing; he would go back to the days of Boone and Kenton and Girty, when hair, eye, any part of the body was fair aim.

"You can't dare me!" rejoined Will Banion. "It's as my seconds say."

Young Jed Wingate, suddenly pale, stood by and raised no protest. Kelsey's face was stony calm. The small eye of Hall narrowed, but he too held to the etiquette of noninterference in this matter of man and man, though what had passed here was a deadly thing. Mutilation, death might now ensue, and not mere defeat. But they all waited for the other side.

"Air ye game, Will?" demanded Jackson at length.

"I don't fear him, anyway he comes," replied Will Banion. "I don't like it, but all of this was forced on me."

"The hell it was!" exclaimed Kelsey. "I heard ye call my man a liar."

"An' he called my man a coward!" cut in Jackson.

"He is a coward," sneered Woodhull, panting, "or he'd not flicker now. He's afraid I'll take his eye out, damn him!"

Will Banion turned to his friends.

"Are we gentlemen at all?" said he. "Shall we go back a hundred years?"

"If your man's afraid we claim the fight!" exclai Kelsey. "Breast yore bird!"

"So be it then!" said Will Banion. "Don't mind Jackson! I don't fear him and I think I can beat h It's free! I bar nothing, nor can he! Get back!"

Woodhull rushed first in the next assault, confiden his skill in rough-and-tumble. He felt at his throat horizontal arm of his enemy. He caught away the w in his own hand, but sustained a heavy blow at the of his head. The defense of his adversary angered hin blind rage. He forgot everything but contact, rush closed and caught his antagonist in the brawny grip of arms. The battle at once resolved itself into the wrest and battering match of the frontier. And it was f Each might kill or maim if so he could.

The wrestling grips of the frontiersmen were few primitive, efficient when applied by masters; and schoolboy but studied all the holds as matter of religi in a time when physical prowess was the most admira quality a man might have.

Each fighter tried the forward jerk and *trip* wh sometimes would do with an opponent not much skille but this primer work got results for neither. *Banio* evaded and swung into a hip lock, so swift that Woo hull left the ground. But his instinct gave him h with one hand at his enemy's collar. He spread *wide* feet and cast his weight aside, so that he came standi after all. He well knew that a man must keep his *fe* Woe to him who fell when it all was free! His own ripos was a snakelike glide close into his antagonist's arms, swift thrust of his leg between the other's—the *grapevi* which sometimes served if done swiftly.

It was done swiftly, but it did not serve. The oth spread his legs, leaned against him, and in a flash ca back in the dreaded crotch lock of the frontier, which son men boasted no one could escape at their hands. *Woo* hull was flung fair, but he broke wide and rose and rush back and joined again, grappling; so that they stood on more body to body, panting, red, savage as any animal The seconds all were on their feet, scarce breathing.

They pushed in sheer test, and ea found the other's stark strength. Y Banion's breath still came even, h eye betokened no anxiety of the issu Both were bloody now, clothing an all. Then in a flash the scales turn against the challeng *à l'outrance*.

Banion caught h antagonist by th wrist, and swift as flash stooped, turnin his own back an drawing the arm of hi

ye in the dark, Will. Ye'd orto
hev put out'n both his two
eyes!"

"Make One Move an' I Drop Ye!" He Called to Woodhull. "Ye've Give Yer Promise"

A sudden sound made them all turn. Came crackling of down brush, the scream of a woman's voice. At the side of the great tree stood a figure that had no right there. They turned, mute.

It was Molly Wingate who faced them all now, turning from one bloody, naked figure to the other. She saw Sam Woodhull standing, his hands still at his face; caught some sense out of Jackson's words, overheard as she came into the clearing.

"You!" she blazed at Will Banion. "You'd put out a man's eyes! You brute!"

X

MOLLY WINGATE looked from one to the other of the group of silent, shamefaced men. Puzzled, she turned again to the victor in the savage combat.

"You!"

Will Banion caught up his clothing, turned away.

"You are right!" said he. "I have been a brute! Good-by!"

An instant later Molly found herself alone with the exception of her brother.

"You, Jed, what was this?" she demanded.

Jed took a deep and heartfelt chew of plug.

"Well, it was a little argument between them two," he said finally. "Like enough a little jealousy, like, you know—over place in the train, or something. This here was for men. You'd no business here."

"But it was a shame!"

"I reckon so."

"Who started this?"

"Both of them. All we was here for was to see fair. Men got to fight sometimes."

"But not like animals, not worse than savages!"

"Well, it was right savage, some of the time, sis."

"They said—about eyes—oh!"

The girl shivered, her hands at her own eyes.

"Yes, they called it free. Anybody else, Sam Woodhull'd be sorry enough right now. T'other man throwed him clean and had him down, but he let him up. He didn't never hurt Sam's eyes, only pinched his head a little. He had a right, but didn't. It had to be settled and it was settled, fair and more'n fair, by him."

"But, Jed"—the eternal female now—"then, which one really whipped?"

"Will Banion did, ain't I told you? You insulted him, and he's gone. Having come in here where you wasn't no ways wanted, I reckon the best thing you can do is to go back to your own wagon and stay there. What with riding horses you hadn't ought, and seeing fights when you don't know a damned thing about nothing, I reckon you've made trouble about enough. Come on!"

"Price," said Bill Jackson to the grave and silent man who walked with him toward the wagon train beyond the dueling ground, "this settles hit. Us Missoury wagons won't go on under no sech man as Sam Woodhull. We didn't no ways eleck him—he was app'inted. Mostly, elected is better'n app'inted. An' I seen afore now, no man can hold his place on the trail unless'n he's fitten. We'll eleck Will Banion our cap'n, an' you fellers kin go to hell. What us fellers started out to do was to go to Oregon."

"But that'll mean the train's split!"

"Shore hit will! Hit is split right now. But thar's enough o' the Liberty wagons to go through without no help. We kin whip all the rest o' this train, give we need ter, let alone a few Injuns now an' then.

"To-night," he concluded, "we'll head up the river, an' leave you fellers the boat an' all o' Papin's Ferry to git acrost the way you want. Thar hain't no manner o' man, outfit, river er redskin that Ole Missoury kain't lick, take 'em as they come, them to name the holts an' the rules. We done showed you-all that. We're goin' to show you some more. So good-by." He held out his hand. "Ye helped see f'ar, an' ye're a f'ar man, an' we'll miss ye. Ef ye git in need o' help come to us. Ole Missoury won't need no help."

"Well, Woodhull's one of you Missourians," remarked Price.

"Yes, but he ain't bred true. Major Banion is. It was me that made him fight knuckle an' skull an' not with weepons. He didn't want ter, but I had a reason. I'm content an' sooth jest the way she lies. Ef Will never sees the gal agin she ain't wuth the seein'.

"Ye'll find Col. William Banion at the head o' his own train. He's fitten, an' he's fout an' proved hit."

XI

MOLLY WINGATE knelt by her cooking fire the following morning, her husband meantime awaiting the morning meal impatiently. All along the medley of crowded wagons rose confused sounds of activity at a hundred similar firesides.

"Where's Little Molly?" demanded Wingate. "We got to be up and coming."

"Her and Jed is off after the cattle. Well, you heard the news last night. You've got to get someone else to run the herd. If each family drives its own loose stock everything'll be all mixed up. The Liberty outfit pulled on by at dawn. Well, anyways they left us the sawmill and the boat.

"Sam Woodhull, he's anxious to get on ahead of the Missourians," she added. "He says he'll take the boat anyhow, and not pay them Kaws any such hold-up price like they ask."

"All I got to say is, I wish we were across," grumbled Wingate, stooping to the bacon spider.

"Huh! So do I—me and my bureau and my hens. Yes, after you've fussed around a while you men'll maybe come to the same conclusion your head cow guard had; you'll be making more boats and doing less swimming. I'm sorry he quit us."

"It's the girl," said her husband sententiously.

"Yes. But"—smiling grimly—"one furse don't make a parting."

"She's same as promised Sam Woodhull, Molly, and you know that."

"Before he got whipped by Colonel Banion."

"Colonel! Fine business for an officer! Woodhull told me he tripped and this other man was on top of him and nigh gouged out his two eyes. And he told me other things too. Banion's a traitor, to split the train. We can spare all such."

"Can we?" rejoined his wife. "I sort of thought ——"

"Never mind what you thought. He's one of the unruly, servigerous sort; can't take orders, and a trouble maker always. We'll show that outfit. I've ordered three

MERTON OF THE MOVIE

XVIII

By Harry Leon Wilson

ILLUSTRATED BY HENRY RALEIGH

HE HAD now but to await his great moment. The final scenes of the new piece were shot. Again he was resting between pictures. As the date for showing the first piece drew near he was puzzled to notice that both Baird and the Montague girl curiously avoided any mention of it. Several times he referred to it in their presence, but they seemed resolutely deaf to his "Well, I see the big show opens Monday night."

He wondered if there could be some recondite bit of screen etiquette which he was infringing. Actors were superstitious, he knew. Perhaps it boded bad luck to talk of a forthcoming production. Baird and the girl not only ignored his references to Hearts on Fire but they left Baird looking curiously secretive and the Montague girl looking curiously frightened. It perplexed him. Once he was smitten with a quick fear that his own work in this serious drama had not met the expectations of the manager.

However, in this he must be wrong, for Baird not only continued cordial but, as the girl had prophesied, he urged upon his new actor the signing of a long-time contract. The Montague girl had insisted upon being present at this interview, after forbidding Merton to put his name to any contract of which she did not approve.

"I told Jeff right out that I was protecting you," she said. "He understands he's got to be reasonable."

It appeared, as they sat about Baird's desk in the Buckeye office, that she had been right. Baird submitted rather gracefully, after but slight demur, to the terms which Miss Montague imposed in behalf of her protégé. Under her approving eye Merton Gill affixed his name to a contract by which Baird was to pay him a salary of two hundred and fifty dollars a week for three years.

It seemed an incredible sum. As he blotted his signature he was conscious of a sudden pity for the manager. The Montague girl had been hard—hard as nails, he thought—and Baird, a victim to his own good nature, would probably lose a great deal of money. He resolved never to press his advantage over a man who had been caught in a weak moment.

"I just want to say, Mr. Baird," he began, "that you needn't be afraid I'll hold you to this paper if you find it's too much money to pay me. I wouldn't have taken it at all if it hadn't been for her." He pointed an almost accusing finger at the girl.

Baird grinned; the girl patted his hand. Even at these grave moments she was still a patter.

"That's all right, son," she said soothingly. "Jeff's got all the best of it, and Jeff knows it, too, don't you, Jeff?"

"Well," Baird considered, "if his work keeps up I'm not getting any the worst of it."

"You said it! You know very well what birds will be looking for this boy next week, and what money they'll have in their mitts."

"Maybe," said Baird.

"Well, you got the best of it, and you deserve to have. I ain't ever denied that, have I? You've earned the best of it the way you've handled him. All I'm here for, I didn't want you to have too much the best of it, see? I think I treated you well."

"You're all right, Flips."

"Well, everything's jake then?"

"Didn't You People Know That I Knew What I Could Do and What I Couldn't Do?"

"Everything's jake with me."

"All right! And about his work keeping up—trust your old friend and well-wisher. And say, Jeff"—her eyes gleamed reminiscently—"you ain't caught him dancing yet. Well, just wait, that's all."

"We'll put on a fox trot in the next picture that will sure hog the footage."

As this dialogue progressed Merton had felt more and more like a child in the presence of grave and knowing elders. They had seemed to forget him, to forget that the amazing contract just signed bore his name. He thought the Montague girl was taking a great deal upon herself. Her face, he noted, when she had stated terms to Baird, was the face she wore when risking a small bet at poker on a winning hand. She seemed old indeed. But he knew how he was going to make her feel younger. In his pocket was a gift of rare beauty, even if you couldn't safely run railway trains by it. And pretty things instantly made a child of her.

Baird shook hands with him warmly at parting.

"It'll be a week yet before we start on the new piece. Have a good time. Oh, yes, and drop around some time next week if there's any little thing you want to talk over—or maybe don't understand."

He wondered if this were a veiled reference to the piece about to be shown. Certainly nothing more definite was said about it. Yet it was a thing that must be of momentous interest to the manager, and the manager must know that it would be thrilling to the actor.

He left with the Montague girl, who had become suddenly grave and quiet. But outside the Holden lot, with one of those quick transitions he had so often remarked in her, she brightened with a desperate sort of gayety.

"I'll tell you what!" she exclaimed. straight downtown—it'll be six by the cl there—and have the best dinner that m buy; lobster and chicken and vanilla i and chocolate e everything, right restaurant—none tray stuff—and I pay for it all by You got a right that contract. r tried to determine whether she were serious or jest- You never could tell about this girl. Whatever it it made him uneasy. Outside, he wished to take her e in a taxicab, but she would not hear to this.

We'll use the town car, Gaston," she announced with a of her old manner as she waved to an oncoming t car.

uring the long ride that followed she was silent but ess, tapping her foot, shifting in her seat, darting her about. The one thing she did steadily was to clutch rm.

uring the walk from the car to the Montague house twice indulged in her little dance step, even as she g to the arm; but each time she seemed to think better and resumed a steady pace, her head down. The e was dark.

Without speaking, she unlocked the door and drew into the little parlor.

Stand right on that spot," she ordered with a final of his shoulder, and made her way to the dining room oor, where she turned on a single light that faintly ined the room in which he waited. She came back to removed the small cloth hat, tossed it to a chair and ed him silently.

The light from the other room shone across her eyes and ealed them to him shadowy and mysterious. Her face s set in some ominous control. At last she looked away m him and began in a strained voice: "If anything ppens to me ——"

He thought it time to end this nonsense. She might feverish, but it could be nothing so serious as she was imating. He clutched the gift.

"Sarah," he said lightly, "I got a little something for u—see what I mean?"

He thrust the package into her weakly yielding hands. e studied it in the dusk, turning it over and over. Then th no word to him she took it to the dining room, where der the light she opened it. He heard a smothered clamation that seemed more of dismay than the delight expected, though he saw that she was holding the atch against her wrist. She came back to the dusk of the oor, beginning on the way one of her little skipping dance steps, which she quickly suppressed. She was replacing the watch on its splendid couch of satin and closing the box.

"I never saw such a man!" she exclaimed with an irritation that he felt to be artificial. "After all you've been through I should think you'd have learned the value of money. Anyway, it's too beautiful for me. And anyway, I couldn't take it—not to-night, anyway. And anyway ——"

Her voice had acquired a huskiness in this speech that now left her incoherent, and the light revealed a wetness in her eyes. She dabbed at them with a handkerchief.

"Of course you can take it to-night," he said in masterful tones, "after all you've done for me."

"Now you listen!" she began. "You don't know all I've done for you. You don't know me at all. Suppose something came out about me that you didn't think I'd 'a' been guilty of. You can't ever tell about people in this business. You don't know me at all—not one little bit. I might 'a' done lots of things that would turn you against me. I tell you you got to wait and find out about things. I haven't the nerve to tell you, but you'll find out soon enough ——"

The expert in photo plays suffered a sudden illumination. This was a scene he could identify; a scene in which the woman trembled upon the verge of revealing to the man certain sinister details of her past, spurred thereto by a scoundrel who blackmailed her. Undoubtedly, from her words, he saw her panic-stricken by the threatened exposure of some dreadful complication in her own past. Certainly she was suffering.

"And I don't care if this fever does carry me off," she went on. "I know you could never feel the same toward me after you found out ——"

Again she was dabbing at her eyes, this time with the sleeve of her jacket. A suffering woman stood before him. She who had always shown herself so competent to meet trouble with laughing looks was being overthrown by this nameless horror. Suddenly he knew that to him it didn't matter so very much what crime she had been guilty of.

"I don't care what you've done," he said, his own voice husky. She continued to weep. He felt himself grow hot.

"Listen here, kid"—he now spoke with more than a touch of the bully in his tone—"stop this nonsense. You—you come here and give me a good big kiss—see what I mean?"

She looked up at him from wet eyes, and amazingly through her agony she grinned.

"You win!" she said, and came to him.

He was now the masterful one. He took her protectingly in his arms. He kissed her, but with no trace of the Parmalee technic. His screen experience might never have been. It was more like the dead days of Edwina May Pulver.

"Now you stop it," he soothed—"all this nonsense!" His cheek was against hers and his arms still held her. "What do I care what you've done in your past—what do I care? And listen here, kid"—there was again the note of the bully in his voice—"don't you ever do any more of those stunts—see what I mean? None of that falling off street cars or houses or anything. Do you hear?"

He felt that he was being masterful indeed. He had swept her off her feet. Probably now she would weep violently and sob out her confession. But a moment later he was reflecting, as he had so many times before reflected, that you never could tell about the girl. In his embrace she had become astoundingly calm. That emotional crisis threatening to beat down all her reserves had suddenly passed. She reached up and almost meditatively pushed back the hair from his forehead, regarding him with eyes that were still shadowed but dry. Then she gave him a quick little hug and danced away. It was no time for dancing, he thought.

"Now you sit down," she ordered. She was almost gay again, yet with a nervous, desperate gayety that would at moments die to a brooding solemnity. "And listen," she began when he had seated himself in bewilderment at her sudden change of mood. "You'll be off to your old motion picture to-morrow night, and I'll be here sick in bed ——"

"I won't go if you don't want me to," he put in quickly.

"That's no good; you'd have to go sometime. The quicker the better, I guess. I'll go myself sometime, if

Loans and Reparations

AMERICANS who are inclined to become impatient with the differences between the British and the French in the settlement of reparations would do well to analyze the divergent viewpoints displayed as these two peoples gaze upon the disorganized world. The British point of view is that of the trader, the French that of a *rentier*. Great Britain has manufactured a great deal for foreign markets, many of her families have drawn income from foreign investments. But the foreign markets of her manufacturers and the distant investments of her families revolved about and were associated with trade. France also had many investments abroad. But French foreign investments represented home savings sent abroad, while British foreign investments were rather earnings made abroad. The French peasant placed savings in the hands of bankers who loaned it in foreign fields. British families sent sons to undertake enterprises in the most distant parts of the world. The Britisher led his money overseas into all lands; the Frenchman never followed his. Therefore the Britisher is able to visualize business conditions in foreign countries, the Frenchman not. The one understands the processes of international economics, the other knows only the results in net income. This explains why the French find it so hard to understand the difficulties of Germany in payment of reparations, the British comprehend it more easily.

Men learn more from experience than by precept. The year 1921 brought hard facts home to the inhabitants of the United Kingdom. Manufacturing has been greatly depressed, mining disorganized, trade at low level, shipping unprofitable, unemployment widespread, and destitution profound. To every man, woman and child these were the visible signs of the reaction of conditions in the world upon affairs at home. France had no such experiences in 1921. She had a good wheat crop, coal became plentiful, tourists flocked with gold dollars, the areas of devastation were being rapidly restored, and unemployment was of negligible proportions. Little has happened, outside of higher taxes and unbalanced budgets, to indicate to the French the conditions in the world at large. The insularism of France, in the economic sense, has afforded her protection. Great Britain has the experience, France has the precept. Naturally the French lag in understanding.

And the people of the United States? We have been spared most of the experiences of Great Britain; and no outside voice has been able to enjoin the precept on us. We shall have to learn that the European problem of reparation is of the same kind as the question of payment of interallied indebtedness. Analyses of German production and trade indicate that she cannot pay the amounts exacted in the ultimatum of London. The same kind of analysis will indicate that France and Italy cannot pay their obligations to Great Britain and the United States within the time set in the refunding act. Funding negotiations must now be under way, and Americans must become prepared to understand the factors involved. And primarily we must learn to apply the same economic criteria to the two kinds of debts—loans and reparations.

Government Price-Fixing Again

A BILL now before the Committee on Agriculture of the Senate would, if enacted, reëstablish minimum prices on basic agricultural products. Number One hard wheat would carry the price of one and a half dollars a bushel; and Number Two corn, eighty-five cents a bushel at Chicago; unwashed wool, fifty-five cents a pound at Boston or St. Louis; and middling cotton, eighteen cents a pound at New Orleans.

Canada has decontrolled prices, Australia has no announced provision to continue control after the marketing of the present crop, Argentina has abolished control. One by one the countries of Europe are setting trade free. By the time the crops of grain and cotton and clip of wool to which the prices of the bill would be applicable are on the market, these products will probably be free in trade and price everywhere in the world. At the moment when the world will have cast off the shackles of governmentally fixed prices we are to reassume them. And we were to have less government in business!

Waving aside all considerations as to the effects of such a law upon producers and consumers in this country, what would be thought of it in Europe? Is it a measure in the direction of amity and peace? It would be regarded as nothing else than an attempted hold-up of disorganized Europe, an exploitation. Possibly if we led the way all surplus-producing countries would join the world corner in necessaries. It is idle to say this would not be directed at the foreign trade. Would we make this assurance effective by agreeing to sell our surplus at the world price? Of all the causes of war, outside of crazy monarchists, fanatic nationalists and demeaning politicians, discriminating trade restrictions have been the most baneful. Do we want to start a trade war with the world?

Moonshine

THE following extract is a good example of the prevailing ignorance regarding actual conditions on the farm. It appeared recently in the financial columns of one of our most widely read cosmopolitan papers:

> Low prices for agricultural products have brought about also a great reduction in the cost of production, an achievement which will eventually increase the farmer's profits beyond even those of the extravagant wartime days.

It would be difficult indeed to frame an expression further from the facts. Except for farm wages, which have dropped slightly in recent weeks, nothing has yet happened that has brought about "a great reduction in the cost of production" of farm commodities, except such forced economies as will necessarily reduce the yield. But the world in general is not interested in reduced food supply—quite the contrary. This is one hard fact, whereas the vision seen by this optimistic prophet of "eventually increasing the farmer's profits beyond even those of the extravagant wartime days" is not only mere moonshine but the most dangerous branch of sophistry withal.

The Farmer and the Partridge

PEOPLE whose occupation is other than farming might as well realize now, for they will have to do so later, that the farmer is actively resentful of the fact that he has been so much more completely deflated than other elements in the national process of wealth production. The products which he has to sell have gone the limit on the downward plunge; but there are other prices and profits, wa salaries and wages, which he feels are artificially h

Relief for the farmer would come in a measure if the structure of prices and wages could be more even thoroughly shaken down. But fundamentally there be a greater demand for his produce. That in turn d upon export trade and international finance, both of involve numerous complicated questions and the problem of world recovery. Organization on the p the farmer might help to remove these obstacles, bu is no short cut back to Eden.

Specifically, organization accomplishes next to n when it consists of the citizen's reliance upon the vaguely to do something for him which can best complished by himself. The comparative failure of pa istic state experiments in North Dakota, when cont with the success of coöperative self-help on the p agricultural producers on the Pacific Coast, is a striking object lesson than is contained in all the bo speeches ever written on economics.

A family of partridges had been living all summe field of grain, until one day a little partridge said mother, "I heard the farmer tell his son and the har mow this field to-day. Hadn't we better *move?*"

"Oh, no, not yet, I guess," said the old partridge.

A few days later the little partridge again warn mother that it had overheard the farmer tell his h to mow the field. But the old bird was still *indiffe* Finally one day the little partridge told its moth having heard the farmer say, "I'm going to mow *the* to-day myself."

"That's quite a different matter," said the *mo* "We will move at once."

A Foolish Indictment

FAIR PLAY has never been a universal character of the attacks upon the prevailing standards of spoken drama and of the daily press. A curious yet exa ingly popular indictment against both is that they h been commercialized, and the word is mouthed as implied something shameful or unclean. Now there i inherent reason why we should not display ordinary c mon sense in dealing with the common things of life; yet no one can escape the conclusion that in a g proportion of cases the habitual uplifters, though o men of honest convictions and high cultivation, are so lacking in this saving grace.

No man with the smallest capacity for clear think really believes that either stage or press has been sudde or even recently commercialized. Will Shakspere's Gl Theater was a business proposition. It represented invested capital of a gifted actor-manager who made yield the best return he was able. The early newspap were established either as avowed money-making ent prises or as organs for shaping political opinion. In th essentials they are to-day what they were centuries a with the difference that time has given the press a livelier sense of public obligation than at first existed.

The production of plays and the publication of new papers are two of the most hazardous enterprises in whi capital is commonly employed. At bottom both are eith legitimate undertakings entitled to returns proportion to the risks assumed or they are vicious corrupters morals that ought to be ruthlessly suppressed for the co mon good. To charge contemptuously that they a commercialized is merely to make faces at them.

There are, to be sure, supersensitive souls whose who natures revolt and whose nostrils quiver as if beset by a evil odor at the mere mention of commercialism; but the are not they who do the world's work. Men of broade contacts with life know that anything useful or desirabl whether it is a telephone or a talking machine, is mos successfully commercialized when it is exploited by men o high character and ability who are fully alive to thei unwritten obligations to their customers and to the publ as a whole. Both stage and press have their shortcomings but they will never be raised to higher ethical levels by mere reiteration of the silly charge that producers and pub lishers are not in business for their health.

Common Honesty of Speech

WHAT BUSINESS NEEDS AND IS GETTING

By Albert W. Atwood

ILLUSTRATED BY RAY ROHN

T THIS time, when schemes for the reorganization and revolution of industry find such ready acceptance, it may not be amiss to e for a moment to see whether such a simple e as truthtelling is coming to play any substantial part siness. About ten years ago a little group of men began small way to insist that statements made in advertiseits should conform to the unadorned standards of truth. n this has grown a movement not only of national ortance but one whose activities are quietly and unobively permeating the entire business life of the country. he men in this movement have little interest in theories abstractions. They start from the assumption that iness has only two arms or branches—production and rketing; and that by far the greatest percentage of rketing is done through the power of advertising. It is sales force through which American industry distribs its products, and unless advertising be truthful the ole industrial structure rests upon a shaky foundation. There are some people who dislike and object to all vertising, but that is very much like objecting to banks, tomobiles and railroads, or even to steam and elecity. Advertising has become the common salesman of business, whether one likes it or not. It does more than l goods. It is the representative and voice of business, ilding, creating and retaining public confidence in busiss institutions or destructively tearing it down.

The Basis of Confidence

NSTITUTIONS stand or fall largely according to whether people believe in them. Belief, or confidence, turn depends upon whether performance squares with romise, with the statements made, with the spoken and rinted word. Business is always judged by its worst art, no matter how small the percentage may be. Those who are in closest touch with the subject say that not more than 5 per cent of business men lie about their goods or misrepresent and exaggerate their value; and that not more than 3 per cent do so intentionally. But even this small proportion can rot the foundations of the business structure and poison public trust in its soundness.

It is upon this simple elementary bit of economic philosophy that the movement for truth in advertising, or for better business—to mention the two names under which it goes—has been built. It takes no learning of the schools to understand the principle involved. There is nothing complicated or controversial at stake, no weighing of pros and cons. It is not a subject for debate, for argument or research. Most subjects have two sides, but the desirability of truthtelling is, I think, quite generally admitted to be an exception.

"Not only has the public a right to demand that business concerns tell the truth," says one of the organizers of the movement, "but the advertiser has a right to demand that his advertising be believed. What man, after he had purchased a home in a restricted residence neighborhood, would not yell loudly at the depreciation in the value of his property if some fellow purchased a parcel of land near him for an undesirable purpose?

"Then why in the name of common sense do business men whose success depends entirely on what the public thinks of them accept as advertising neighbors in any publication, some indecent piece of medical copy, some lying piece of financial copy or any other kind of improper copy that casts a shadow over every word they say about their own legitimate business? Advertising is a salesman which all business men use. Why then should decent men be preyed upon? If one misuses it the others suffer. It is as if two competitors hired a salesman in common and one bribed him to injure the other's business."

Immediately following the annual convention of the Associated Advertising Clubs in 1911 a National Vigilance Committee was appointed to put into effect a declaration of principles which the convention had adopted. The essence of this declaration read as follows: "We believe in truth, the corner stone of all honorable and successful business. . . . We believe there should be no double standard of morality involving buyer and seller."

Naturally the mere appointment of a committee did not at once or automatically make all business truthful. The activities of the committee met with considerable opposition and the first effect upon the business world could hardly be described as startling or revolutionary. Indeed it scarcely created a ripple. The workers did not know their rights or privileges, had but meager financial support, and no one knew whether they were big enough to undertake a movement involving such tremendous business power and direct it constructively. But the activities of the committee have grown and developed, until now it coöperates with thirty local better-business bureaus or commissions in cities throughout the country, and is considering the extension of its work to England, South America and Australia.

All Price Tags, Labels and Other Identifying Marks are Removed, and a Number of Different Local Authorities are Asked for Their Opinion of its Value

Correction of Abuses

TENS, probably scores, of thousands of cases of the misuse or abuse of advertising have been handled by the committee or the local bureaus or the two in coöperation. Though a few of these cases have been of sensational character the majority have been petty in themselves, almost hairsplitting at times. But the cumulative effect upon the business life of many communities of the sum total of cases settled has been very great. The barometer of business ethics has slowly risen, for naturally the moral influence of the mopping-up process gradually spreads.

From the experience of thousands of cases standards of practice are gradually emerging. Offhand it might seem as if the application of truth standards to the marketing of goods might be a work of extraordinary difficulty. But thousands of cases are found to fall into a few classifications, and thus it becomes possible to build up fairly simple methods of procedure.

Naturally then the question arises of how well fitted are the local bureaus and the national committee to combat these evils. In form at least each better-business bureau is an offshoot of a local advertising club or association, just as the National Vigilance Committee is a part of the Associated Advertising Clubs. The bureaus are not expected to take cognizance of industrial and commercial abuses that involve no question of advertising. Thus neither the national committee nor a local bureau is or can be expected to express an opinion upon the value or worth of investments. But opinions are constantly expressed to the contributing members, to the newspapers and to the public at large regarding the legitimacy or illegitimacy of the advertising by means of which stocks and other securities are sold. The fact is, of course, that very little in the way of merchandise or stocks in corporations can pass from seller to buyer without some form of advertising, and the possibility of exaggeration, misrepresentation and fraud.

But though nominally and technically connected with the local advertising clubs, the better-business bureaus or commissions really represent

WIMMIN IS WIMMIN

By Clarence Budington Kelland

ILLUSTRATED BY ARTHUR WILLIAM BROWN

CHECKERBERRY was in a twitter. A state of affairs had presented itself with which the town was in no wise equipped to cope. It could only gasp and waggle its heads and ask if the' wa'n't no law to pervent sich goin's-on. It was all on account of that short-haired wife of the young Peters fellow who had bought the sawmill.

Undoubtedly Veronica had been and done it! She was appearing daily in the sight of all Checkerberry clad in knickerbockers and high laced shoes!

"Selectmen ought to take some notice, seems as though," said Mr. Breece to Mr. Horning.

"Them pants of hern hain't but one step away from tights," said Mr. Horning, pursing his thin lips.

"Brazen, I call it," said Mr. Breece.

"Um—mebby the Ladies' Aid could do suthin—kind of fetch pressure to bear."

Mr. Breece shook his head.

"'Tain't a think to be discussed with wimmin. Wouldn't want to mention it even to my wife."

"I figger the preacher could kind of take it up in a discourse, mebby, without givin' the ladies offense."

"Once," said Mr. Breece reminiscently, "I was to Boston, and a feller took me to a the-ayter. Sich a spectacle I never see! More'n fifty-sixty young girls 'thout enough clothes onto 'em to dress a chiny doll! I sat there, Horning, a-feelin' all the time like a surprise party'd come and ketched me takin' a bath."

"Er—dressed like her?"

"Wuss—wuss!"

"How, wuss?" said Mr. Horning, drawing closer and presenting his best ear.

"Horning," said Breece, assuming his most impressive deaconly manner, "that there was a apisode in my life I hain't goin' to drag out into the light of day fer no man. Every feller sows some wild oats."

"There she goes!" said Horning, and both gentlemen suspended conversation to stare at Veronica's trim figure as she tripped lithely down the road toward the mill lot where building operations were progressing.

She was very slight and young and graceful, a picture of lovely youth to warm the coldest heart. Besides being extremely sensible wear for a young woman whose activities included the duties of a building inspector and a timber cruiser, her knickerbockers were undoubtedly becoming. She wore them unconsciously. If she realized any portion of the excitement they were arousing in Checkerberry she was indifferent to it. Veronica had a way of deciding what was best and then of proceeding to do it regardless.

"If I had a daughter," said Mr. Horning, "I calc'late I'd send her away or suthin."

"I'll venture," said Breece, "the's some law that makes her liable to arrest."

Veronica did not even notice Breece and Horning as she passed; her mind was very much occupied. First, there were the alterations being made in the sawmill to fit it for the manufacture of woodenware products; second, there was the matter of purchasing timber, and lastly was the question of a home. Veronica was distinctly tired of living in the hotel.

"I want a house with rooms in it," she told Ted. "I want closets and floors and ceilings. I want to eat where I can't hear traveling men brag. Another month in this hotel and I'll bust."

"Go get you a house," Ted said promptly.

"Timber comes first," she said.

"We're all set for timber. There are Wilcox's holdings. He'll sell to the company or give us a stumpage contract."

"Fine—for insurance," she said. "But his town is fourteen miles away. You said it would cost seven or eight thousand dollars to build a log-hauler road to it. It's a long haul. If we could pick up a piece of timber not over five miles away it would save half the cost of the road, and probably more than half the hauling cost. What we save would be more than enough to buy my house."

"I've looked pretty thoroughly," Ted said, "and I don't know of an available piece of timber as close as that."

"But there's unavailable timber," she said.

"What good is unavailable timber?"

"Lesson One in the Timber Buyer's Correspondence Course: If a piece of timber is unavailable there's a reason." She waggled a finger at him. "Catch the reason, skin it, hang its pelt on the fence. The timber then becomes available and the clouds roll by."

"You've got your mind set on that ten-thousand-acre tract of the old maid."

"Known locally," said Veronica, "as the Old Maid Tract. 'Why?' my husband asks with bated breath. Two reasons: It is virgin timber and it is owned by the most pron virgin in the state."

"And will keep on being by her until she gets to b gin angel."

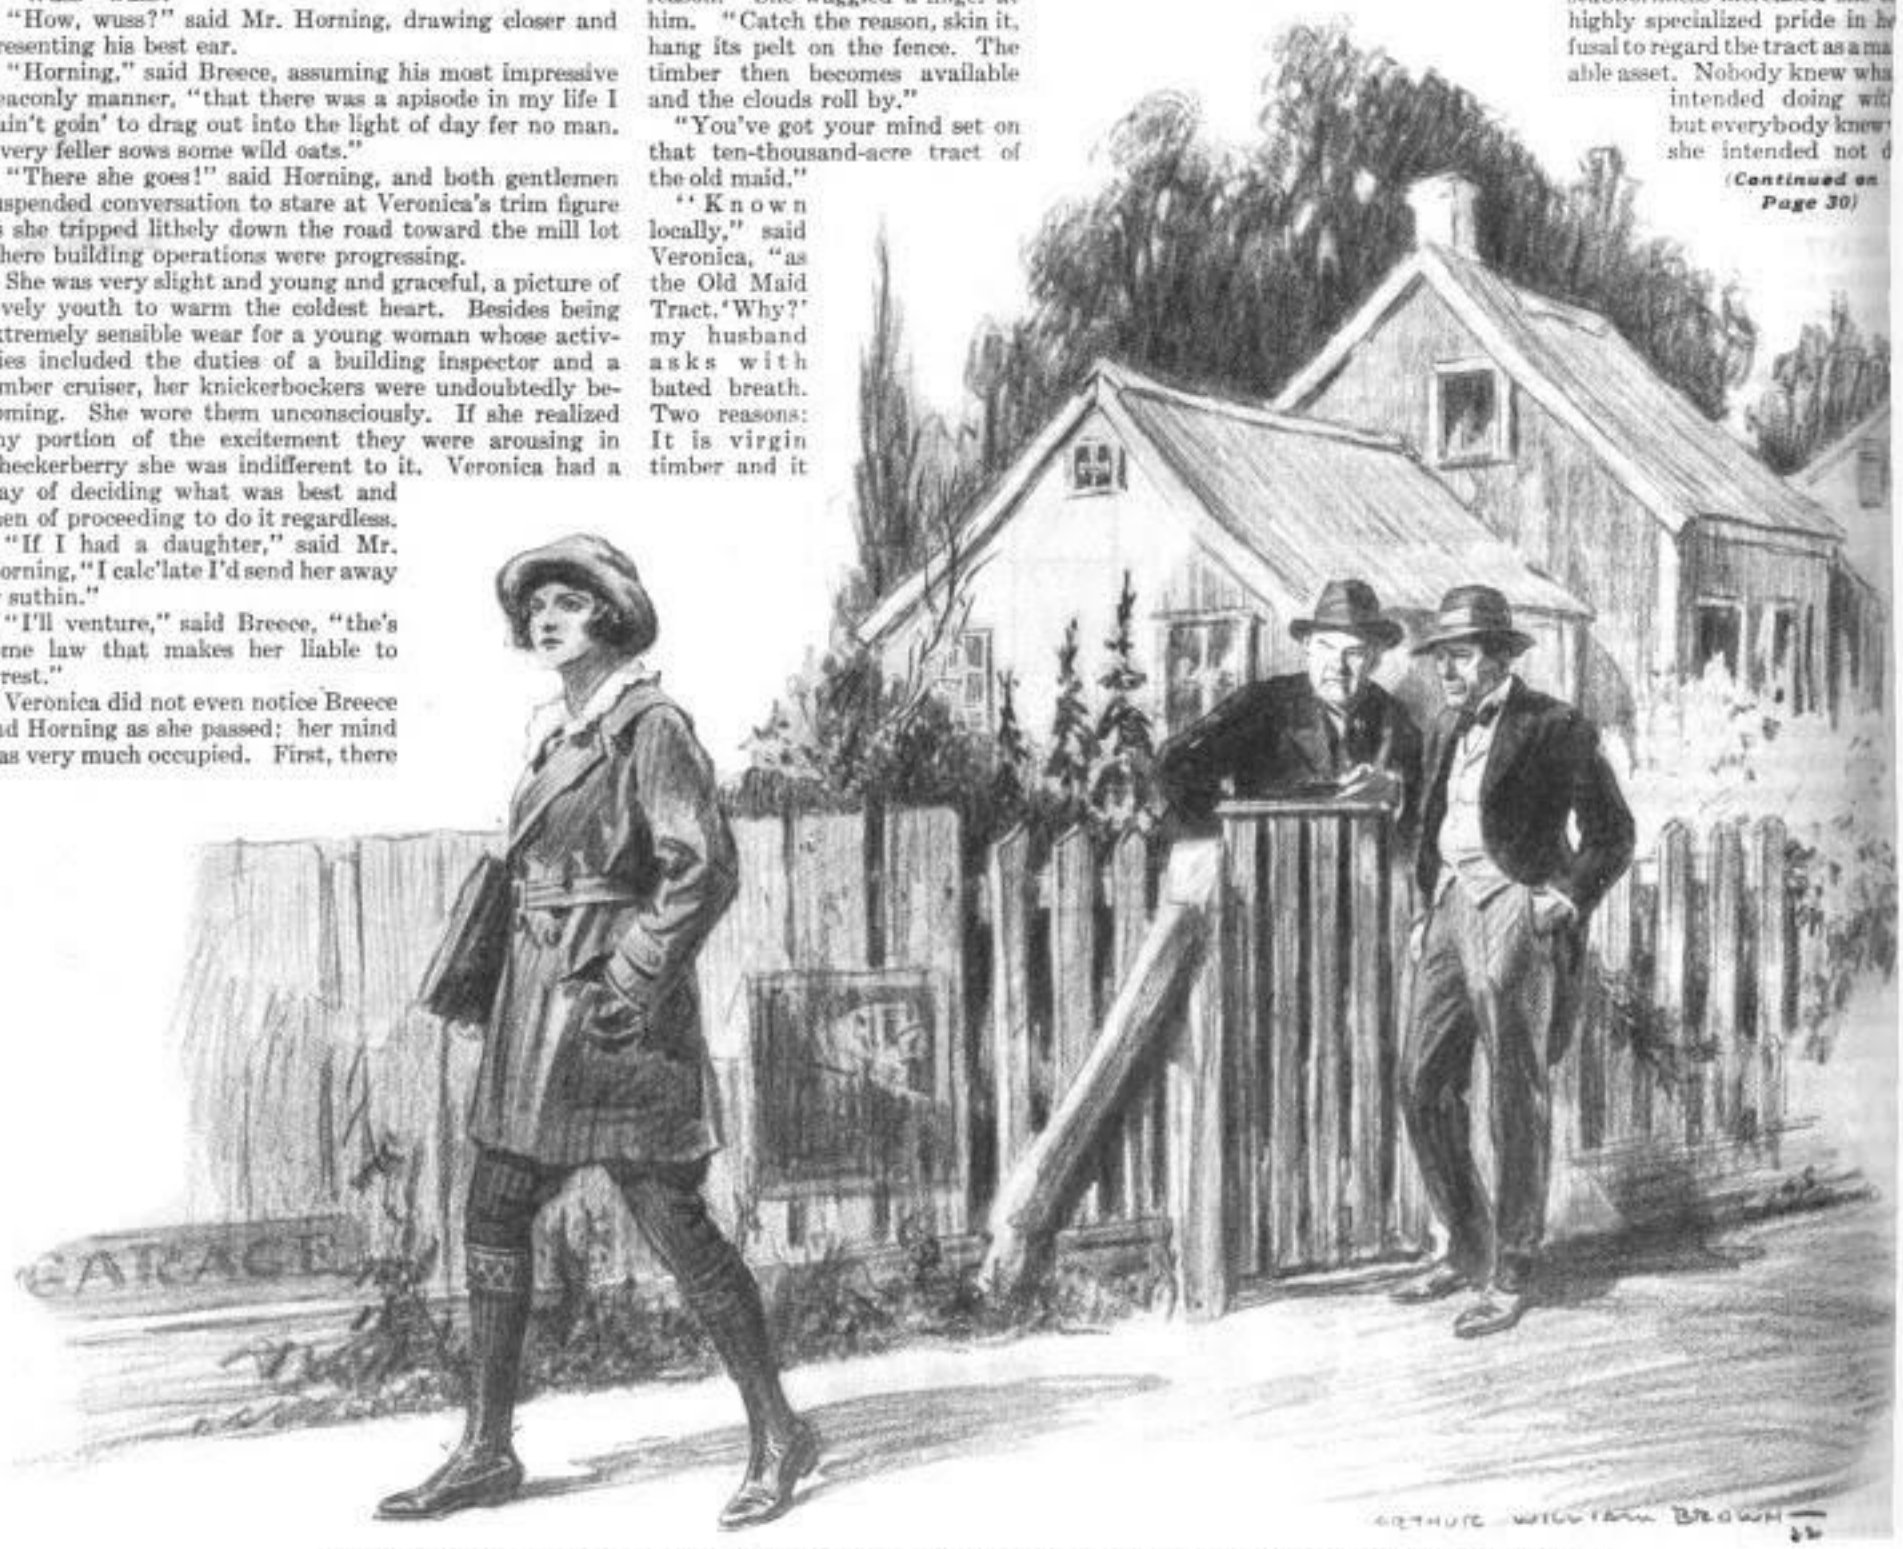
"Mebby, mebby," said Veronica, imitating the of the vicinage. "That was so until I got to wanti

"If you can grab that tract, honey, I'll buy you a jingus with a diamond in it to hang around your ne

"Mean it?"

"You bet!"

"And I may go ahead?"



"Full speed, with the brakes tied back."

"Start building your road," she said, and went sit on a pile of spruce eight-by-eights to think it ov

The Old Maid Tract, so called, was a piece of t covering some ten thousand acres, an oasis in that chopped desert. No lumberman's ax had ever fe tree, no saw had ever sung its song through all the l and breadth of it. It was splendid timber—pine, s hemlock, beech, birch and maple. Only five miles town, bordering a stream so that the soft wood co driven to the mill, and so close that the hardwood, could not be driven, was most accessible by road. I but one drawback: It was owned by a maiden lady n Miss Bede Stiffler, reputed to despise a masculine w and Miss Bede Stiffler refused steadfastly to bargain remise, release, alien or convey any right, title or in therein to anybody whomsoever.

Owning that piece of timber was a sort of hobby Miss Stiffler. She was famous for it, and as her years stubbornness increased she to highly specialized pride in h fusal to regard the tract as a ma able asset. Nobody knew wha intended doing wit but everybody knew she intended not d

Here's Nature's prescription for every description
Of "fever" that comes in the Spring.
To fill you with vim, make you frisky and trim,
This Vegetable Soup is the thing!

Enjoy them all in this delicious Vegetable Soup!

In every tempting plateful of this soup you get the iron of the green vegetables, the beneficial salts, the strength-giving cereals and the invigorating meat broth that your appetite relishes and your system needs. Nature's own spring tonic—healthful and delightful.

Choice white potatoes, Jersey "sweets," Chantenay carrots, tender yellow turnips—all daintily diced. Luscious tomatoes, chopped Dutch cabbage. Country Gentleman corn, baby lima beans, small peas, selected barley, alphabet macaroni—all blended with a rich broth made from fine beef, flavored with fresh herbs and tasty seasoning. Almost a whole meal—and what a good one!

How to improve your appetite

Eat good soup at least once every day. Have it piping hot. You will notice in a short time that you are more hungry and that all your food tastes better. The hot soup causes the digestive fluids to flow freely. Your appetite is increased and your digestion is better.

with it. Veronica had been made acquainted with no less than six historic instances in which Miss Stiffler had emphasized her refusal to sell by chasing the potential purchaser off the premises with a horsewhip. It may therefore be surmised that Veronica's project was one presenting obstacles.

If Veronica ever let grass grow under her feet it was when the market was good for hay. Miss Bede Stiffler, she found, lived on a little farm about a mile beyond the outskirts of Checkerberry, and directly after dinner Veronica walked out in that direction. She had not the least idea what sort of person she was to encounter, for it had not seemed advisable to make any but the most discreet inquiries. Her notion, gathered from various sources, was that Miss Stiffler was a typical old maid, doubtless tall, flat-chested, thin-haired. One usually thinks of spinsters so, and discovers the reality to be quite otherwise. It was decidedly otherwise in this instance.

When Veronica came to the rural mail box with the name Stiffler stenciled upon its lid she paused and looked over the fence with some apprehension. She saw a neat white farmhouse, well-kept outbuildings of modest size, and a man chopping wood. The man wore leather boots, overalls and a derby hat which seemed to have participated in a railroad disaster. He swung his ax with extraordinary skill, and grunted each time the bit encountered the block. Veronica opened the gate and stepped in. At the click of the latch the chopper turned and glowered.

"I wonder," said Veronica, "if I could have a drink of water."

The chopper rested his ax on the ground and stared, turning his head first one way and then the other. Then he spoke in a hoarse voice which sounded like a whisper amplified to the sixth power.

"Danged if you hain't a girl!" he said.

"I've always been considered to be," said Veronica.

"By golly, you 'n' me is the only sensible women in this dog-gone town! Come in and set while I make a drawin' of tea. What say your name was?"

Veronica told her.

"And your name is Stiffler, is it not? I saw it on the mail box."

"Bede Stiffler's my name and old maid is my station. Ruther set in the kitchen." She put a teapot on the stove and reached down a grimy clay pipe from a shelf. "Smoke?"

"I've never even smoked cigarettes."

"Huh! Sh'd hope not!" She removed her derby and displayed a shingled head, over which she passed her palm with manifest pleasure. "How'd ye come to take to pants?"

"I found them easier to work in."

"You're the play actress that's married to the feller that bought the mill."

"Only I'm not an actress. I'm a business woman. Used to be a stenographer."

"Huh! Might 'a' knowed it was gabble. Beats hell how folks gas in this wooden country! Say, them kind of pants of yourn look a sight handier'n these floppy overalls. Where d'ye git 'em?"

Veronica told her.

"Um —— If I was to draw a map of my legs d'ye figger I could git some built for me?"

"I'd be glad to attend to it for you."

"Now that's right clever of you. . . . How's the mill comin' along?"

"First-rate. We'll be turning over in another sixty days."

"Heard how you bamboozled Breece and Danby and them. Bet that was your doin'. Men hain't a ghost of a chancet when wimmin git to work."

"My husband ——" began Veronica, but Miss Stiffler interrupted her.

"Aw, sure! Ye hain't been married long enough to find out your husband's nothin' but human. But I know. Can't fool me. You're the brains of the firm. Plain as the nose on my face."

It was clear Miss Stiffler had no vanity, for the nose upon her face was extremely distinct. She regarded Veronica shrewdly for a moment.

"Walk way out here jest fer a drink of water?" she asked.

Miss Stiffler Looked in the Glass. She Stretched Her Muscular Neck Forward With the Gesture of a Bellicose Chicken

"I was just taking a walk."

"Uh-huh. Folks as busy as you be gen'ally wastes time takin' walks. Jest start in by pertendin' I got as many brains as you have, and we'll git to be right friendly—mebby."

"I'm sure you have more brains than I."

"I'm not. But I got enough to look out for Number One—you kin bet your bottom dollar on that. No, you come traipsin' out here to kind of look around and see what chance there was of gittin' holt of my timber. Can't fool me. And if 'twa'n't for them pants of yourn you'd 'a' went away quicker'n you come."

"Well?" said Veronica, smiling.

"I won't sell, by cracky! That's flat!"

"Not at your own price?"

"Money won't buy it. Got to be a hobby with me. Don't need money, and I kind of like to irritate folks by hangin' on. Guess I hain't lost nothin' by it. Timber's goin' up every year."

"But ——"

"Money hain't no good to me. Jest kind of let your eyes rove over me. See anythin' about me money could improve? Couldn't be done, by gosh! I'm built for doin' jest what I'm doin', and nothin' else. Kin ye imagine me wearin' one of them short-at-both-end dresses and a string of pearls and ridin' about in one of them expensive cars with a feller to drive it? I can't. Nope, I got all I want, and what I got is what I'm entitled to."

"You could travel."

"Travel, fiddlesticks! If I went traipsin' around the world the populations thereof would turn out to watch me like I was a circus perade. Guess I know what I look like!"

"I'll bet you don't," said Veronica. "Right now I' out and chop that pile of wood for you if you've a mirr the house you can see yourself in."

"Mirror? Whoo! There's my mirror!" Miss Sti pointed to a framed piece of glass some six inches sq which leaned negligently against the wall. It was crac and a fair portion of the what-d'ye-call-it on the back peeled off. When one looked in it he saw a reflectio thoroughly waved and corrugated that a powerful im nation was required to detect any human likeness. hain't looked in that since las' Christmas," said M Stiffler.

"H'm," said Veronica. "I don't care a pin whethe get your timber or not, but it's my plain duty to teach y how to have some fun. I'll bet you never had any fun."

"I've chased as many as seven men offn this place w a shotgun," said Miss Stiffler.

"And you don't know what comfort is," said Veroni "Comfort the lazy ma god," said M Stiffler su cinctly.

Veronic arose.

"I'm *muc* obliged for t tea—and for n shooing me awa with a gun," sh said.

"Come ag'in, said Miss Stiffle heartily.

"Oh, may I I'd love to. I'm lonesome here The women i town don't seem to like me."

"No, they wouldn't," said Miss Stiffler.

"And a girl likes to have some woman she can be friends with." Veronica managed to look very young and pitiful.

"Them Ladies' Aid wimmin don't set much store by me," Miss Stiffler remarked dryly.

"They hold agin pants and pipes. You and me seems to agree on pants, and mebby I kin convert ye to the rest. Seems like I'd take pleasure in a mite of comp'ny once in a while. You jest run out to visit whenever you feel like it."

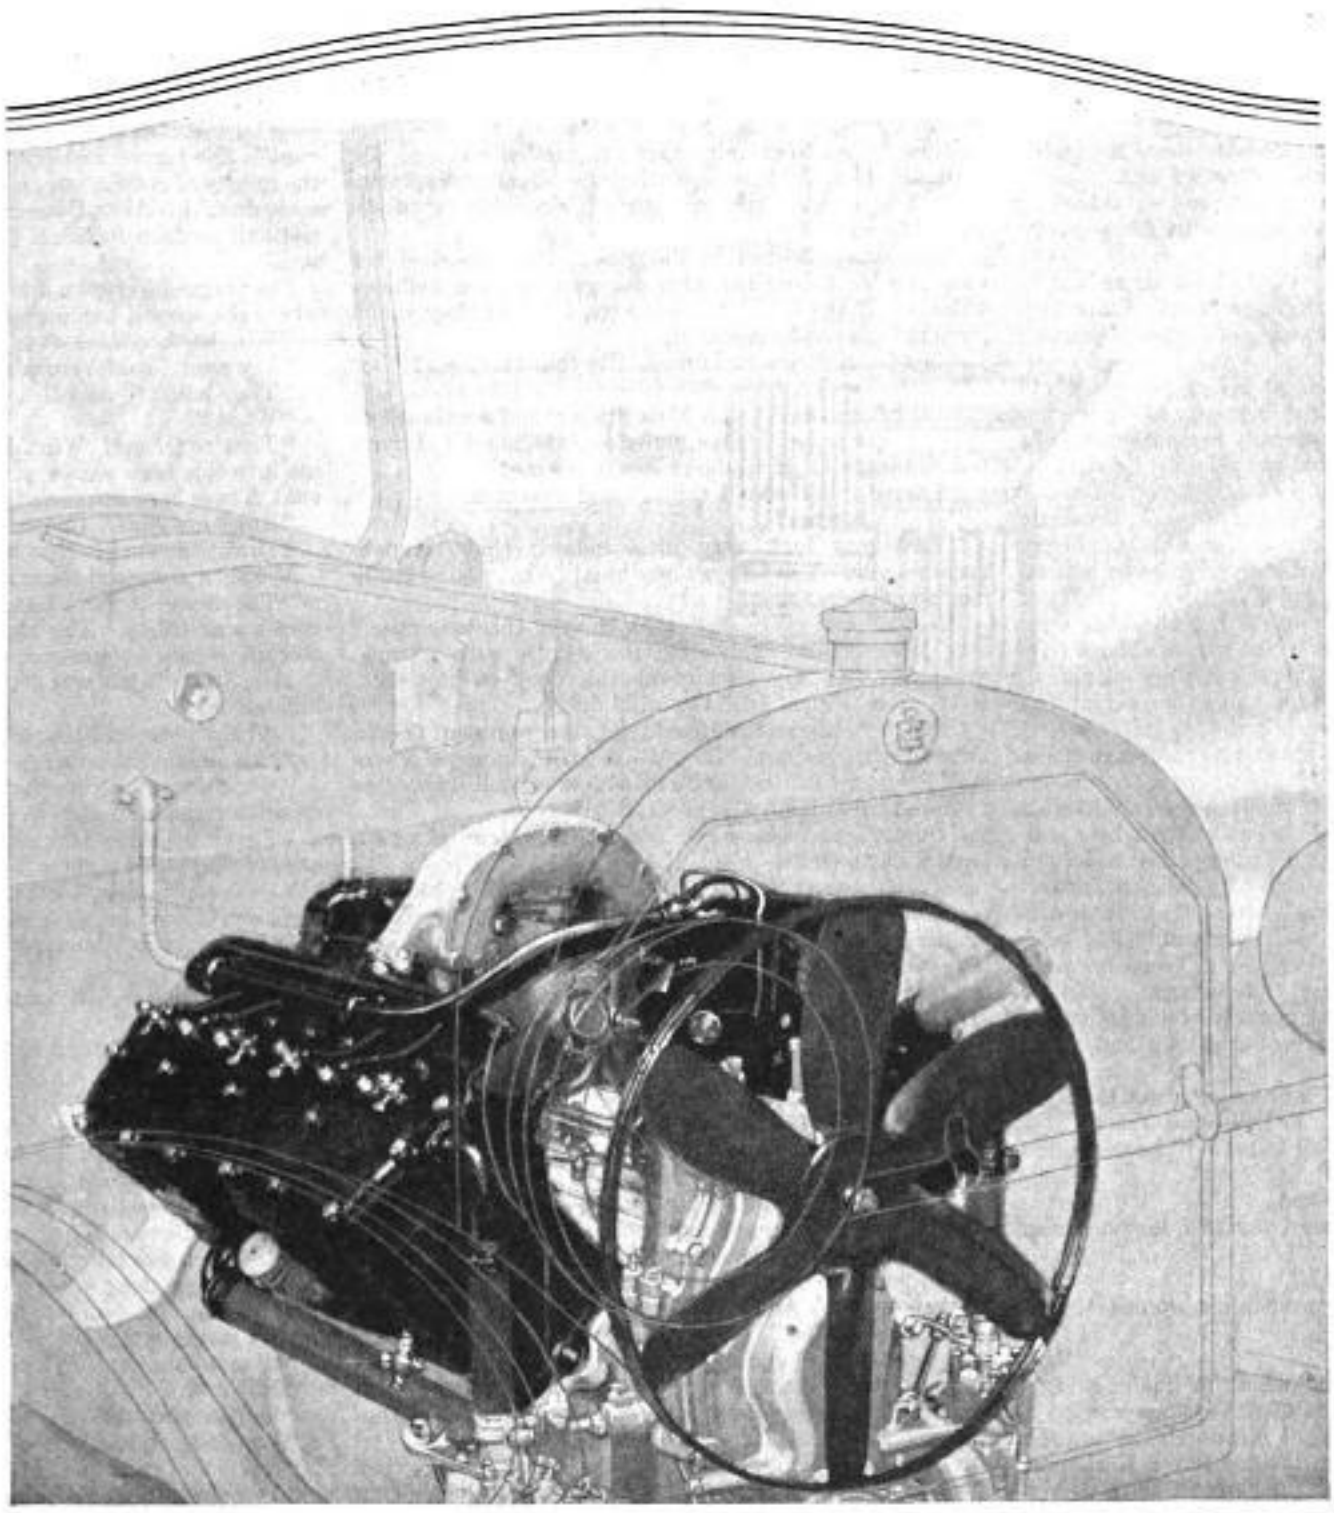
"Thank you and—thank you," Veronica said.

She walked back to the village more rapidly than she had strolled away from it. Nor did she go to the mill, but climbed the stairs to her room and wrote no less than three letters, putting a great deal of time and thought on each one. These she posted.

Four days later a large packing box arrived by express, and a couple of smaller pasteboard containers by parcel post. The pasteboard boxes she took to her room. The large wooden box was set on the station platform. In the morning Veronica hired a light wagon, and loading the box upon it drove from Checkerberry in the direction of Bede Stiffler's farm. She did not wear her knickerbockers to-day, but a most becoming tailored suit, and her pet hat and her most enticing footgear. But then Veronica had a knack of looking desirable in whatever she wore.

Miss Stiffler was repairing the henhouse. Veronica waved to her and jumped down from the wagon.

"I've come way out to ask a favor," she said.



"So long's it ain't to marry your uncle that's left a widower, I calc'late I kin manage it," said Miss Stiffler heartily.

"No, I just want you to take care of something for me. You see, Ted and I haven't a house, and no place to put things. This is a wedding present, and I'd hate to have it get broken. Besides, it would be bad luck. It's a cheval glass."

"Sounds kind of underhanded. What's one of them?"

"A mirror. I wonder if you've a room where I can stand it for a while." (Continued on Page 32)

THE STANDARD OF THE WORLD

Eight years ago, Cadillac introduced America's first eight-cylinder automobile power plant, the V-Type Cadillac Engine.

It achieved an immediate and a brilliant success, later enhanced by distinguished service with the American Expeditionary Forces in France.

Not only Cadillac owners, but practically all motorists praise its superb power flow and its consummate quietness of operation.

They refer in glowing terms to its dependability, emphasizing that it functions with a constancy and a certitude that suggest infallible performance.

But the great and the cardinal triumph of the Cadillac engine is that it *perpetuates* this service; it *continues* running surely and serenely throughout its long life.

The motoring public admires this eight-cylinder power plant, not only as a Cadillac achievement, but as the splendid evidence of American supremacy in multi-cylinder construction.

In it, they see typified the qualities that cause the Cadillac car to be regarded as the Standard of the World.

"To be sure. Put it any place. Lots of room. Fetch it right in."

It was a heavy box, but Veronica and Miss Stiffler carried it to the door.

"Oh, let's take the box off. I want to see it—and it won't clutter things up so much," Veronica said.

Miss Stiffler performed the carpentry and stood looking disdainfully at the long glass suspended between its supports.

"Now whatever does a body want of a glass as long as that? Ye kin see the hull of ye in it, can't ye? I'll be dog-goned! Hain't it bad enough to see jest a piece of yourself at a time?"

Nevertheless Miss Stiffler stood before the glass and regarded herself. She spread her hands and wiggled her fingers to prove to herself it was really her reflection. She removed her derby and regarded her shingled head.

"Um —— I'm about as enticin' as I figgered I was," she said. "Set while I draw ye a cup of tea." Presently she poured the tea. "It was them feet of mine caught my eye," she said. "Don't remember ever to have noticed 'em before. They're ample—ample."

"It's the boots," said Veronica. "I don't think your feet are really larger than mine." She became Machiavellian. "Let's measure them. Where's a piece of paper? I'll take off my shoe and outline my foot with a pencil, and you do the same. You'll see then."

"Kind of a childish game," said Miss Stiffler, but she did not refuse.

When Veronica returned to the village she carried with her a map of Miss Stiffler's foot—which had been one object of her visit. She was not a young person to hasten matters unduly or to arouse suspicion by lavishing attentions. Therefore it was a full week before she visited Miss Stiffler again. Since her first visit no mention had been made of timber—nor would there be if Veronica could steer the conversation away from that subject.

Her husband joked her about her undertaking, but she told him nothing of her progress, or if she had made progress—except once.

"If I were you," she said, "I'd be seeing about the right of way for your hauler road to the Old Maid Tract."

"You don't mean you're going to get it!" he said.

She shrugged her shoulders.

"What does she say?" he asked.

"Says she won't sell for money, marbles, love or tunes on a piano," said Veronica.

"Then why the right of way?"

"Because," said Veronica, "women are women—but a clay pipe is only a smoke."

"That's Kipling, isn't it?"

"It's good sound business judgment," Veronica said.

On her next visit to Miss Stiffler, Veronica carried a number of packages and a weight of apprehension. She hitched her horse and went in, looking like a Christmas Day postman.

"Screechin' bobcats!" exclaimed Miss Stiffler at sight of her. "What's them? Why didn't ye fetch a dray?"

"I seem always to be asking favors," said Veronica.

"I got a garret. Store 'em up there. It's dry."

"I don't want to store these. I—well, the truth is, I want to make a present to an aunt of mine, and I want to be sure."

"Sure of what—that she's got room in her house for it?"

"No—that there's room in the present for my aunt. It's a dress and shoes and a hat and things. She—she's just about your size. I'd say you and she were almost twins."

Miss Bede Stiffler eyed Veronica a moment, then waggled her masculine head.

"Dunno's I see clean through you," she said dubiously.

"I just want you to try them on. I know they'll fit her, with minor alterations, if they fit you."

"Gewgaws!" said Miss Stiffler scornfully.

"It's just a try-on. Won't take but a minute. Oh, please!"

"Well, seein' 's it's you. But I hain't had on a corset since the year of the Pan-American in Buffalo. Calc'late I kin hold my breath long enough to git through with it."

"Please put on everything. I'll wait. I've shoes and stockings—a complete outfit."

Bede stamped into her bedroom, her whole figure reflecting the scorn she felt toward women who decked themselves in finery to the neglect of woodpiles and clay pipes. From the room issued snorts and exclamations and words not usually found in the vocabulary of a spinster of fifty years.

"Say," she said finally, "if you want to git me buckled up in this consarned harness you got to git your foot in the middle of my back and haul on the surcingle."

Presently, with the help of Veronica, Miss Stiffler emerged. The alteration in her appearance was so amazing as to make one suspect the day of miracles had returned or that one of those unbelievable metamorphoses gravely narrated by Montaigne had taken place. Her girth had been diminished by a corset; her feet had been reduced to their lowest common denominator by well-made shoes. The skirts alone destroyed Miss Bede Stiffler, abolished her, and substituted quite another person. The hat, one cunningly constructed to conceal her lack of hair, made the disguise perfect. Veronica's eyes gleamed as she led Miss Stiffler to the center of the room and pretended to examine her with meticulous eye. By gradual and skillful maneuvering she placed the spinster before the cheval glass and turned her suddenly so she faced her reflection.

Miss Stiffler looked in the glass. She stretched her muscular neck forward with the gesture of a bellicose chicken. If she had possessed neck feathers they would have ruffled—and she stared.

"My Gawd!" she exclaimed. "Is that there me?"

"Of course."

"I'll be jiggered!" said Miss Stiffler, and continued to stare. "For heaven's sake, pull down the blinds! I don't feel respectable. If anybody was to see me!"

"They'd think what I think," said Veronica.

"Which is what?"

"That you look very nice, indeed; that lavender becomes you. You haven't any idea! Why, you're really handsome!"

"Not till somebody slices off a hunk of this here nose," said Miss Stiffler, indicating the feature with a broad forefinger, "to say nothin' of the wart on my chin. Here—lemme git it off. I'm stifflin'."

"Oh, if the Ladies' Aid could only see you now! You'd knock their eyes out! They'd die with jealousy! There isn't a woman in Checkerberry who is as well dressed as you are at this minute—the cats!"

"Dunno's that gets me much het up. Here, gimme a hand with these here hitchin' dinguses."

At that instant Veronica Peters did something she had never done before in her healthy career. She fainted. She did it very well, indeed, and frightened Miss Stiffler almost into fits. Miss Stiffler was not accustomed to women who fainted. Presently Veronica recovered enough to speak.

"Oh, help me to the carriage! You'll have to drive me home."

"You lay right where you be."

"The air will revive me. Please! I want to be in my own room. Oh, I'm afraid I'm going again!"

"Not in this house, you hain't!" said Miss Stiffler, and she lifted Veronica in her brawny arms and carried her out to the buggy, depositing her on the seat with a bump. "You drive for home, young woman!"

"I—can't. You'll have to drive."

"Me! Drive into Checkerberry in this here regalia! Not much, Mary Ann! Folks 'ud think I was cockalorum of some new lodge."

Veronica closed her eyes and slumped gently over on the seat. Miss Stiffler uttered a good stout damn and scrambled over the wheel. She jerked the reins from behind the whip socket and shouted at the horse.

"I b'lieve in bein' neighborly," she said savagely, "but this comes clost to askin' the corpse for the loan of its casket!"

On the road Veronica was able to collect her senses enough to open her eyes and to gaze slyly at her companion's set, forbidding expression. As they entered town the girl had to bite her lip to hold back her laughter as she observed how Miss Stiffler tried to hide under her hat.

They came to a stop in front of the hotel, and fortune perched on the banners of Veronica Peters, for at that very instant Mrs. Danby and Mrs. Alton turned the corner. Veronica allowed Miss Stiffler to help her alight. Once her feet were on the sidewalk, she seemed to recover with astounding suddenness. She spoke to the passing ladies.

"Good afternoon, Mrs. Alton. How do you do, Mrs. Danby?"

They paused, curiosity-driven.

"I'm sure you know Miss Stiffler. Of course you do."

The women stared, paralyzed by astonishment.

"Bede Stiffler!" gasped Mrs. Alton.

"Whatever—wherever—merciful heavens!" breathed Mrs. Danby.

"Yes, it's me, b'gosh!" said Miss Stiffler belligerently. "Take a look! Don't be backward—take two! Goin' to a masquerade dance, I be. I'm s'posed to represent a dum fool. Bet I'll take the prize!"

"Why—why"—Mrs. Danby was so flabbergasted she was for once at a loss for words—"why, you look stylish!"

"Why not, I'd like to know?" Miss Stiffler said savagely. "If I got to be a fool like the rest of you wimmin I'm goin' to be a better fool. Style, huh! What d'ye know about style? If I git my dander up I'll show ye style with a capital H!"

Mrs. Alton, always afraid of Miss Stiffler, spoke with endeavor to placate.

"Really, you look lovely, Bede."

"Lovely! To think I'd come to a day when a body would dast say sich a word to my face!"

"I didn't think it was possible," said Mrs. Danby acidly.

"Didn't, eh? Possible! Say, you cat, the' hain't nothin' you kin do that I can't multiply by seven with my hands tied behind my back! Kind of look down on Bede Stiffler, don't ye? 'Cause she's independent o and wears her own pants! Sich as you look down on me! Why, I got brains where you got grease spots! muscles where you hain't even got tallow! Go long your business 'fore I get peevish and smack ye both a one!" She turned suddenly to Veronica. "Now lo the mess you got me into, consarn ye! Come under some'eres. I feel like I was caught takin' a bath. Wou feel half so darn foolish if I was. I got suthin to s you."

She dragged Veronica into the hotel and up to her r where she shoved her ungently on the bed.

"Who be these here duds fer?" she demanded.

"My aunt," said Veronica.

"They hain't!" said Bede Stiffler.

"What?"

"They're fer me! What'd they cost? Quick! You me into this here pickle, and by golly you'll help gi out! These here trappin's is mine! What 'd they co

"But—my aunt. I promised ——"

"Drat your aunt! How much?"

Veronica answered reluctantly.

"The dress—it was a hundred and twenty dollars. corset was thirty. The shoes were eighteen-fifty. stockings—silk—were seven-fifty. The hat was *forty-fi*

Miss Stiffler's jaw was dropping by inches, and her e bulging out.

"What?" she said hoarsely.

"Just simple little things—inexpensive," said Veroni

"Why, dog-gone you, the' hain't a woman *in this to* spends a hunderd dollars in four years for all her clothes

"That's why they look as they look—and why you l now so they're all jealous."

"I got the money, b'gosh, even if 'twas bein' saved bury me. I'm goin' straight to the bank after it."

She stamped to the door, where she turned to glare Veronica.

"The hell of it is," she said, "that now I've got to up a let my hair grow!"

That evening after supper Veronica said to her husba "Ted, you're a cruel husband. You're always forbiddi me to do things."

"Now what milk bucket have I kicked over?"

"My Boston trip. Here I want to run down to the cit and you, jealous of my youth and beauty and inexperien refuse to allow me to go alone—and you're too busy to go.

"Yes, yes, go on," applauded Ted.

"And then you tell me I can go—if I can get some old woman to go along when you know I don't know an older woman. It's an outright refusal. If I'd known th kind of man you are before I married you!"

"It's too late now. When did I do this refusing?"

"Just now."

"And I mean it?"

"You were almost harsh."

"Unlovely brute, ain't I?"

"You ain't," said Veronica, "and much obliged to you, sir. How about that right of way?"

"I'm moving. But I can't do anything definite and keep it under cover."

"Then don't do anything—till you get the supplemental report of your correspondent. Replying to your letter of even date, I have the pleasure to say—and so forth."

"How long will you be in Boston?" Ted asked with anxiety. "I can't spare you long."

"If you break a honeymoon into enough pieces, with long spaces between, it covers more married life," said Veronica.

She waited two full days before she visited Miss Stiffler again. This time she walked, so she would have more time to perfect her appearance. All the way out she rubbed her eyes, and every now and then she tweaked her nose. It was painful but effective. When she opened the white-washed gate she looked as if she had been crying for hours. It was most realistic—even more so because her nose hurt so she was able to shed real tears.

It was not without trepidation she entered the yard, and it was with positive fear she saw Miss Stiffler at the wood-pile—reverted to pants, derby hat and double-bitted ax.

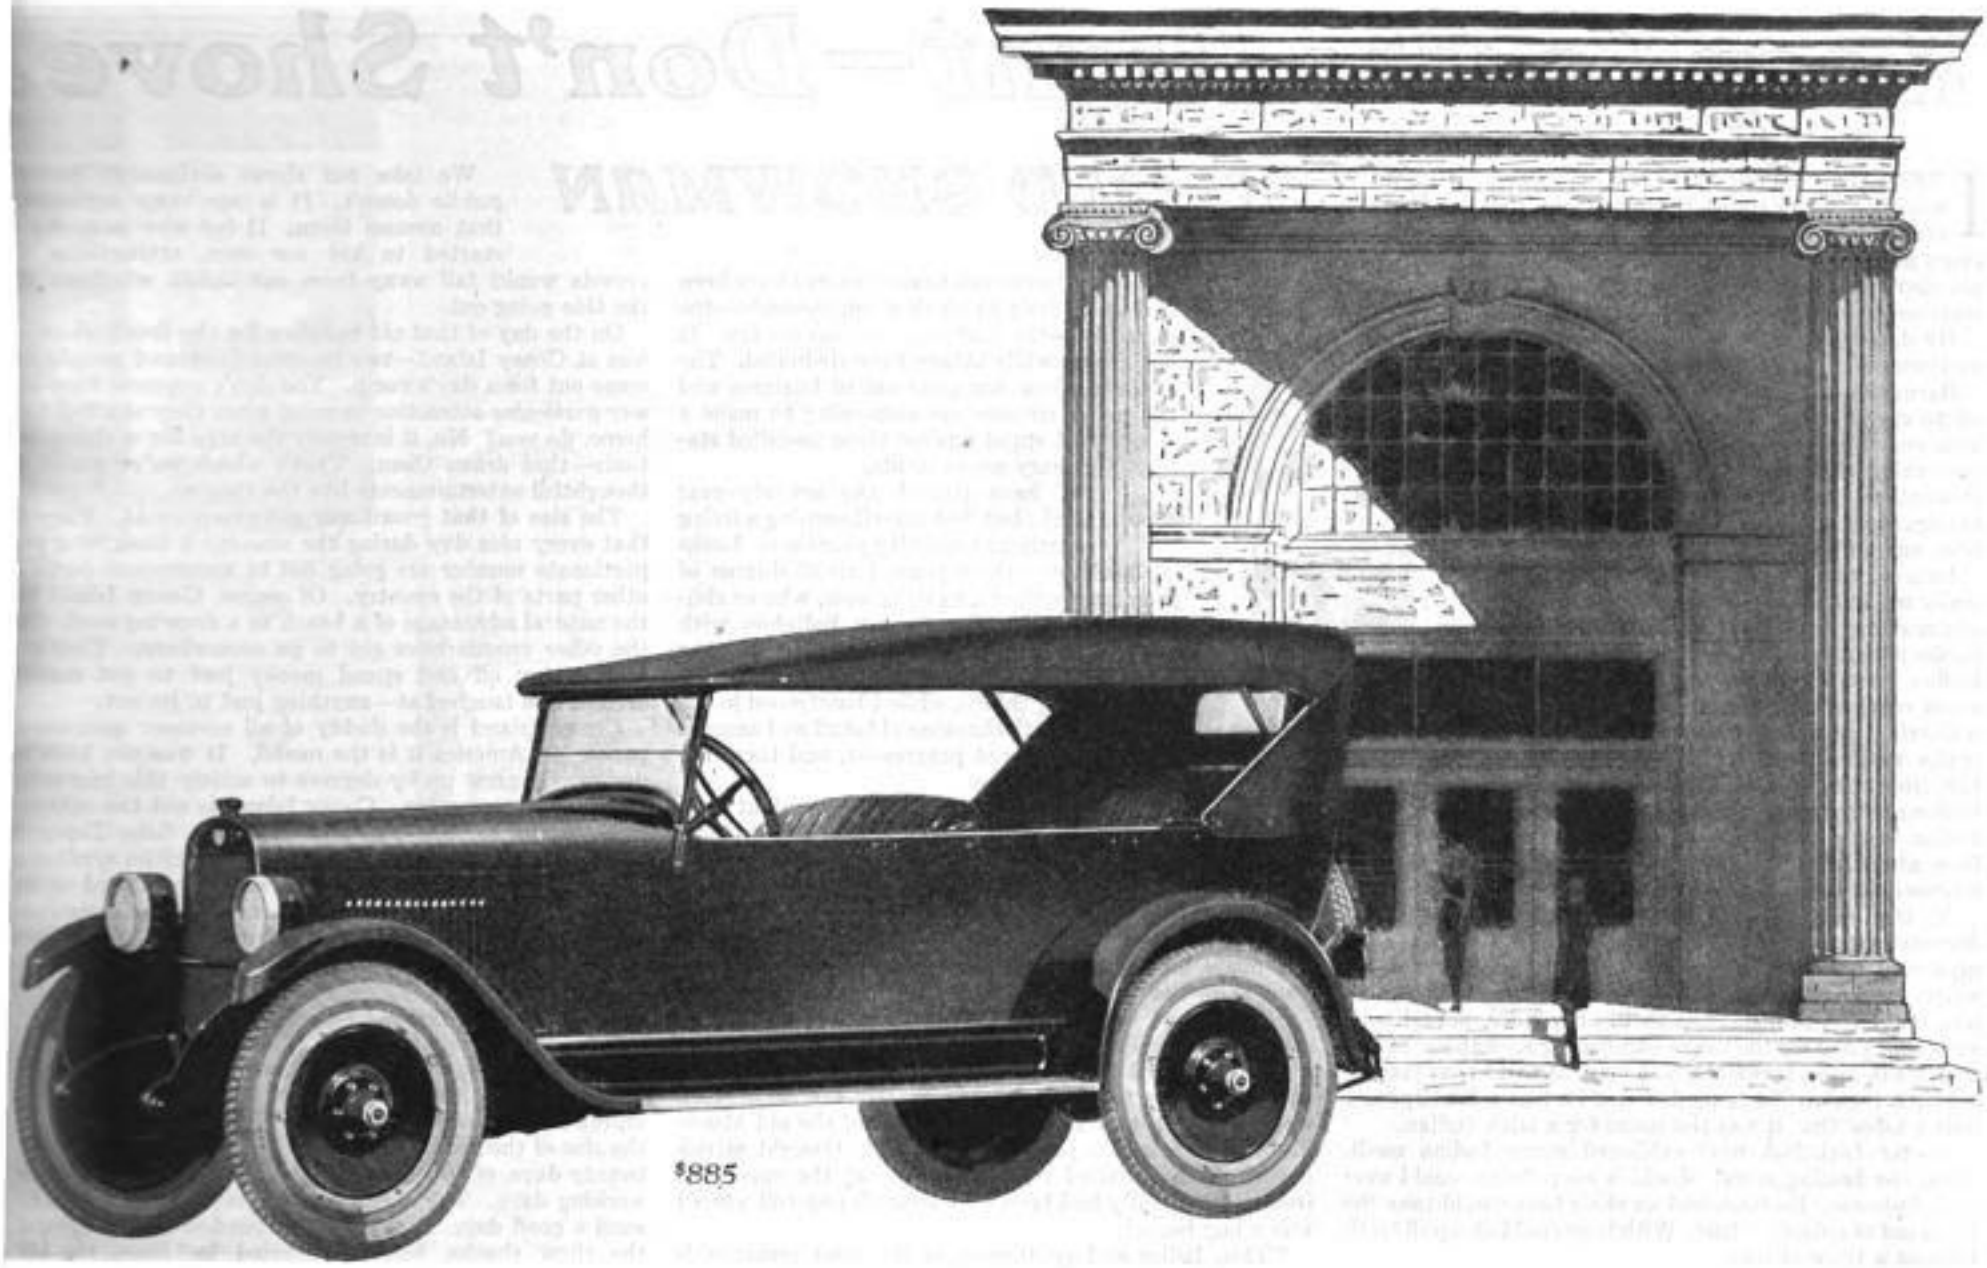
"I—I hope you're not angry with me," she said in a timid voice.

Miss Stiffler turned and glared.

"Angry? Huh! I could skin ye alive!" She regarded Veronica's eyes and nose, and scowled. "What ails ye anyhow, all sniffled up? Who's been doin' what to ye?"

"My h-h-husband," said Veronica with a stifled sob.

"Drat the men! Wimmin will marry 'em, spite of all experience teaches. What's he been up to—beatin' ye?"



"He won't let me go to Boston. And I've got to go to Boston, because there are things I want to do in Boston, and I can't do them anywhere else, and there's no reason why I can't go to Boston if I want to, only he says ——"

"Huh! A body'd think he'd throwed you out of house and home!"

"It—it's the principle of it," said Veronica. "That he should have the right to refuse to let me do things! I'd like to show him! But I can't. If—if there was only some

Keep to the Right—Don't Shove

By AN OLD SHOWMAN

I RECKON I am one of the few living men who personally heard Barnum make the statement that there is a sucker born every minute. Knowing old P. T. as I did, I am also one of the few who will dispute that statement.

He doted on pulling snappy lines for advertisements, regardless of the meaning.

Barnum described people who take a day off to spend a dollar or so for some foolish amusement as suckers. They are no such thing. They are the wise guys of this nation. And if they were suckers his figures are wrong. There is more than one born every minute.

I am old enough to show you what a sucker really is. It has been sixty-five years since I squirmed my towhead through a crowd in the public square out in Missouri to see my first Indian medicine show. A long-haired man stood on the back of a fancy-painted wagon delivering an impressive lecture and doing tricks with a ball. He was called Doctor Lightfoot. By his side stood a Kickapoo Indian made up exactly like the one cigar-store Indian in our town that we kids shied away from after dark. To me that redskin brave represented everything brave and daring.

At the end of the big talk the doctor demonstrated the stolidity of the Indian, his mystic power over pain, by driving a hatpin through his wrist. It was a long time before I knew that was a trick pin, but I can still feel the thrill of wonder, actual worship, that I had for the brave unflinching Kickapoo. In less than six months, incidentally, I was slapped in the jaw for asking a regular Cheyenne brave if he was a Kickapoo. I didn't know that it was the name for a trick Indian.

Doctor Lightfoot next exhibited many Indian medicines, the healing secret of which no paleface could ever hope to know. He even had an elixir that would take the kinks out of a darky's hair. With it he could also pull teeth without a trace of pain.

"Who in this crowd has an aching tooth?" he inquired. "We will remove it without a touch of pain, free of charge. Have we a patient?"

The other kids knew that I had been fooling with a loose tooth at school the day before. They all looked in my direction. I could feel the burning eyes of the showman focused on my freckled face. Nervously I lifted my hand to my jaw.

"Ah!" he exclaimed. "Here is a lad who has suffered and who has the courage of faith. He will suffer no more. Step right up, young man, that this assemblage may look upon you and learn."

A Hero With a Toothache

I WAS in the public eye and it gave me a shaky thrill. I felt myself slipping into fame. When the Kickapoo took me by the arm I was resigned to martyrdom. No boy in my town had enjoyed the distinction of being lifted into a wagon by a real live wild Indian.

"Are there others?" inquired the good doctor, twirling the bottle while I twisted at my pants leg. There were no others.

With trembling fingers I indicated the tooth. Quickly he swabbed my gum with some ill-smelling stuff, talking all the while. Inserting a thumb and finger in my mouth, equally ill smelling, he clamped down on the tooth and gave it a yank just as the Kickapoo began beating his tomtom. My cry could not be heard.

Of course it hurt! But do you think I would stand in the presence of that crowd and that Indian and say so? Never!

I felt quite a hero. The boys looked at me in open envy a little later when Doctor Lightfoot placed me on a seat of honor in the wagon and started a parade around the square, throwing out pennies to scrambling boys, white and black. This was the life for me. I would be a medicine showman.

From the Indian I learned that the doctor needed a lively boy. That night I packed up my little duds and ran away from home, joining the doctor at the next town. The folks found me and brought me back home. But I didn't stay long. I had been stung with show virus.

A week later I ran away from home again, beat my way to St. Louis and joined on with a circus. It was not unusual in those days for circus people to pick up boy tramps and work them.

As a hypnotic subject for the side-show ballyhoo—the boy who gets rigid—I was admitted to the élite circle. For sixty years I have remained a regular. I have been employed in every branch of the show business, except the theater. For the last twenty years I have been tied up entirely in outdoor amusements—the park idea—the real show notion to-day. It has grown while others have dwindled. The medicine show has gone out of business and the many circuses are combining to make a last stand against these so-called stationary amusements.

I have passed the seventy-year mark, but find myself earning a living exactly as I did fifty years ago. Looking back over these years I recall dozens of prominent citizens, wealthy now, who as children stood listening to my ballyhoo with mouths open. They still come, but in the meantime they go right ahead building the nation, doing things, while I have stood in the same place with the same old stuff and amused them. I have not progressed, and there are scores just like me.

Who are the suckers? Barnum might have meant there is a baby born every minute to go in the show business. Still, there is some satisfaction for an old fellow to know that he has carried water to refresh the real workmen, even if he hasn't done much of the nation's building.

I made an opening—ballyhoo lecture outside—for a freak show not so long ago.

"This way! This way! Keep to the right—don't shove!" the barkers began as I finished.

As the crowd followed me past the ticket sellers it occurred to me that I had made exactly the same spiel, word for word, that I had used in front of the old Musée in 1874, and it was just as good. This thought struck deeper when I halted my assemblage at the cage of a freak who actually had been on Barnum's pay roll when I was a boy barker.

"This, ladies and gentlemen, is the most remarkable creature that has puzzled science for a half century," I opened up—it was the same old spiel. "Whether he be man or beast our most learned scholars have been unable to agree. He seems to understand and will respond to the name of Zit—naturally, a contraction of the oft-repeated expression 'what is it?' This puzzling, science-defying creature was discovered," and so on.

Old Zit stood up. The aged darky, wearing his brown hairy suit, his queer, cone-shaped head topped with a small tuft of gray hair, had gone through this for fifty years. The crowd looked at him for a few moments, thrilled—at least satisfied—and moved on to the next stand. Zit barked the required number of guttural snarls and grunts, resumed his seat and regarded the crowd philosophically. As the procession moved on I stopped and spoke to the old fellow about the way things were breaking, and so on. We have known each other since boyhood.

"They are wearin' them skirts too short," observed this science-defying creature, thoughtfully regarding some passing women. "It's hurtin' the show business, all right."

He spied two old women just then viewing him through the bars of his cage and suddenly emitted a frightful "G-r-r-r-zang-o-oop!"

"Think so?" I inquired when the women had gone and the snarl had subsided.

"Sure," he said. "From now on one of them dancin'-girl leg shows won't draw a dime. I wouldn't put 'nother nickel in one."

He was right too. Tights and the women's-form exhibits are the deadest things in the show business. It's no longer a show. People won't even lift their eyebrows at a live silhouette of Venus. The shimmy killed the hoochy-koochy a long time ago.

The point I am getting at is that the procession is always moving along past folks like me and Zit. It gets bigger and bigger all the time, but the only change is in the style of dress. That's the only change that is ever necessary in the shows. The fundamental principles have never changed one iota. The old Indian medicine show in a new dress would knock 'em dead to-day. I am going to try out Punch and Judy in short skirts next season. The pleasure-seeking public doesn't want to think and doesn't intend to.

We take our shows seriously, bu public doesn't. It is our very serio that amuses them. If for one mome started to kid our own attractions crowds would fall away from our ticket windows the tide going out.

On the day of that old ballyhoo for the freak sho was at Coney Island—two hundred thousand people come out for a day's romp. You don't suppose they any particular attraction in mind when they started home, do you? No, it is merely the urge for a chang tonic—that draws them. That's where we've got thoughtful entertainments like the theater.

The size of that crowd was not exceptional. The that every nice day during the season. I imagine a portionate number are going out to amusement *park* other parts of the country. Of course, Coney Island the natural advantage of a beach as a drawing card. the other crowds have got to go somewhere. They take a day off and spend money just to get mau around and laughed at—anything just to be out.

Coney Island is the daddy of all summer amusem parks. In America it is the model. It was not built design. It grew up by degrees to satisfy *this increas* demand for recreation. Coney Island is not the outco of a scheme for real-estate speculation. Like Topsy, simply growed up, and looks it. In other cities syndicat have financed amusement parks, street fairs, and so o copied after Coney, but few of them have the *same* ca free, hodgepodge flavor as the daddy. Still, they answ the purpose, and most of them pay dividends.

Coney Island Facts and Figures

EVERYBODY runs his own show at Coney Island, an devil take the hindmost. There is no head. Nobod knows what it earns in profits. The weather alone decid the size of the crowd. The season runs one hundred an twenty days, of which one hundred are considered regula working days. The average crowd is two hundred thou sand a good day. That can be depended on. At present the show shacks, brightly painted buildings, the lig lighted inclosures, eating places, games, bathhouses and what not represent an investment of ten million dollars.

A business man rubbed his eyes the other night when I told him that very few of these gaudy buildings were covered by fire insurance. Ten million dollars could be wiped out in a single night at Coney. But nobody seems to care and they all take a chance. They have to. We dickered with a company last winter, and the rate they demanded for fire protection was 15 per cent of the gross receipts. That, of course, was prohibitive.

I mention these figures just to give you an idea of the extent of one of the country's biggest industries, if it can be called an industry. The more I see of these crowds in search of foolishness the more I look upon it as a public utility. I am not good at statistics, because I don't like them. If you are interested, though, just go out to the amusement park near your town, figure it up and you'll get a pretty good general idea.

One thing that will strike a business man is what a big contributor the amusement park is to the nation's revenue. You pay one cent every time you enter a side show.

Right now I am working for a syndicate that controls a group of shows in a separate inclosure at Coney Island. Last season we paid in war tax a little over one hundred thousand dollars—that is, we turned it over; the public paid it. And we are not a tenth of Coney Island!

This, too, is in addition to the property taxes and license fees that go to the city and state of New York.

We have figured that on the average every man, woman and child who comes out for a day spends one dollar—two hundred thousand dollars a day.

To save my life I don't know where that money goes. Very few showmen get rich. I guess all that money just gets stirred up and circulates around so that everybody thinks he is having a good time.

It is the sentimental side of the show business that gets me. I have lived my life in it; have known and loved its people. I guess I will die in it. I make my one hundred dollars a week as ballyhoo lecturer in summer and manage to get along by earning about half that much in winter. Good spielers are hard to get and always in demand.

GOLD SEAL CONGOLEUM GUARANTEE
SATISFACTION GUARANTEED OR YOUR MONEY BACK
REMOVE SEAL WITH DAMP CLOTH

Always Look for this Gold Seal

On every two yards of genuine *Gold-Seal* Congoleum Floor-Covering you will find a paper Gold Seal. It pledges "Satisfaction Guaranteed or Your Money Back," and is your protection against inferior imitations. Remember the seal is printed in green on a gold background.

Gold-Seal Congoleum By-the-Yard Pattern No. 812.

Gold-Seal Congoleum By-the-Yard Pattern No. 1564.

It's easy to keep this kitchen floor spotless—

NO small part of the charm of this cheerful kitchen is the attractive floor of *Gold-Seal* Congoleum. This floor-covering possesses the same long-wearing, flat-lying qualities that have made our *Gold-Seal* Art-Rugs so popular with the women of America.

Liquids and grease cannot penetrate the smooth, firm surface—a light going over with a damp mop makes it spotless and sanitary in a twinkling. Water will not affect it.

Gold-Seal Congoleum needs no fastening—it "hugs" the floor tight with never a curled-up edge or turned-up corner.

It offers the one solution to the national demand for beautiful, sanitary floors that are low in cost and easy to clean. Its low price and long wearing qualities make it particularly practical wherever the entire floor must be covered.

Gold-Seal Congoleum By-the-Yard costs only 75c a square yard, in either the 2-yard or 3-yard width.

Owing to high freight rates, price west of the Mississippi and in Canada is slightly higher than that quoted.

THE TIRE-BUYER'S INNING

Wherever you are, on highway or boulevard, look for this signature of the All-Weather Tread

These are the days toward which the thoughtful tire-buyer has been looking with longing eyes.

The money he invests now in Goodyear Tires commands a greater value than at any previous time.

Dollar for dollar it buys more mileage, greater freedom from trouble, surer economy and deeper tire satisfaction than ever before.

The foremost reason for this is the important improvements made in Goodyear Tires themselves.

Today Goodyear Tires embody the same high grade long staple cotton, the same fine quality of rubber, the same efficient All-Weather Tread, the same exclusive features of construction, as always.

But their design has been improved, their manufacture bettered, their inspection made more exacting.

They are larger, heavier, stronger tires—and more durable.

They surpass in quality and serviceability even those fine Goodyears you have known.

Despite all this, you can now buy these better tires at the lowest prices in our history—at prices lower, even, than before the war.

In this matter of price Goodyear Tires have gone "back to normalcy"—and well beyond.

A glance at the figures below will show you that this **is the Goodyear user's inning, and no mistake.**

More people ride on Goodyear Tires than on any other kind.

30 x 3½ Cross Rib Fabric	$10.95	32 x 4 All-Weather Tread Cord	$32.40
30 x 3½ All-Weather Tread Fabric	$14.75	33 x 4 All-Weather Tread Cord	$33.90
30 x 3½ All-Weather Tread Cord	$18.00	33 x 4½ All-Weather Tread Cord	$42.85
32 x 3½ All-Weather Tread Cord	$25.50	34 x 4½ All-Weather Tread Cord	$44.90
		35 x 5 All-Weather Tread Cord	$56.75

Manufacturer's tax extra

Goodyear Heavy Tourist Tubes are especially thick, sturdy and long-lived. They come packed in a heavy, waterproof bag. Their new prices are also remarkably low

(Continued from Page 34)

I first knew Coney Island when a young man in years ut old and hardened in experience. I was nearly forty efore I became a real part of it. Coney Island, you know, as not always filled with shows, games, rides and general urrah stuff. Originally it was just a place where the poor eople went for surf bathing. There is no finer natural each in the world.

The feature of Coney Island in those early days was the many froth joints, dance halls and bathhouses. There ere no shows. A froth joint was a beer saloon that sold he bathers large mugs containing more froth than beer. Naturally it was a pretty tough place. These froth joints, y the way, were responsible for the bad name Coney had a the old days. It required little capital to n one, but a fellow had to be pretty andy with his fists. All a man needed was o pick out a plot of sand. On this he would nock together a shack made mostly of driftwood and other stuff that beach combers could pick up. He then paid a license f thirty dollars and was ready to begin business.

As the number of froth joints increased the keepers added hot-dog stands as an attraction. Gradually other eating places were started with a more diversified menu. To this day, though, the hot dog with a roll and mustard is the trade-mark of Coney Island. To go there without eating frankfurters is no trip.

The success of these early ventures naturally suggested amusements of a more innocent nature—something for the children. The first was a merry-go-round. We called them flying jennies at first. Fifty years ago riders were grabbing for the brass ring just as they do to-day.

Incidentally, show people have never been able to beat the flying jenny for a regular staple source of income. Very recently some fellow has improved on the old merry-go-round, or carrousel, as he calls it, by a mechanism which makes the painted horses actually race. It is quite a hit. The four rows of horses start even, but a rotary action in the works causes some to go faster than the others. This cannot be governed by the operator, and there is no way of determining the winner in advance. Even grown-ups ride for hours on this device to bet on their favorite mounts.

This new kind of merry-go-round hasn't got around very far yet, but it will. Up in Canada, where I first saw one, it was a knock-out.

In the '70's our circus had been closed on account of a lawsuit and we were laying off in New York. Several of the freaks and a few of the fancy acts went with me out to Coney Island for a lark. The hot dog and the froth were the appeal.

Near one of the bathhouses we noticed a mitt joint. It seemed to be doing a flourishing business. A mitt joint, in case you are not familiar with show talk, is a fortune teller's tent where palms are read. Circuses always carried a mitt joint. It is sure-fire stuff. And a funny thing about those palm readers is that most of them are sincere in the belief that they can actually tell fortunes. Of course, they have to ring in some fake stuff for the ballyhoo, but they'd get mighty sore if told they were faking on the palms.

Our palm woman gave the high sign to this mitt woman. She told us that business was wonderful. That gave me a notion. Why not get together all our freaks and open up for the summer? We had the layout, painted canvases for the outside flash and everything. The license fee was small in those days.

When Ballyhoo Had Some Zip

WE DECIDED on a freak show because it is almost failure-proof. It is the staple line of the trade. Other attractions come and go, but a real freak show is just as good to-day as it was when Barnum cleaned up with one in his old museum. I am spieling for one now. The freaks are practically the same; the line of stuff I am talking to the public is exactly the same as I used in 1870; and the crowd is bigger. The main change that old Zit has noticed, as I have shown, is in the dress styles of the spectators.

We opened up as a coöperative concern, each freak contributing so much to cover the overhead. It was a go from the jump. Later, temperament developed among my freaks and I got possession of the whole show, paying them salaries.

Believe me, I could make a good opening in those days. I had a ballyhoo with some zip to it. In these days show people lose a lot of the old drawing stuff by trying to be too quiet—refined, or whatever they call it.

I was armed with a buggy whip and walked up and down a raised platform, back of which huge canvases were stretched, depicting in vivid colors the snakes in the jungle, the lion tamer with arm torn half off, the two-headed boy, the living skeleton, the fat woman, the dwarfs and the wild man of Borneo tearing a tiger apart. I would deliver an impressive ballyhoo in front of each startling canvas, slapping it continuously with my buggy whip. That attracted people from a distance. At the finish I would give the last canvas a couple of whacks that made it crack like pistol shots.

"That's the way she looks, gents!" I'd cry. "You'll find them on the inside just as they are represented on the canvas! Step right up and the gentlemanly usher will escort you to points of vantage!"

Now I claim that was—and is—good stuff. The buggy whip was particularly effective.

We also had an ostrich in that show. As twilight approached one night I discovered a very effective line and used it for years. "Remember, remember, ladies and gentlemen, the cool of the evening is the time to see the ostrich and mark his many pecu-li-ar-ities!"

Just why that should get 'em I don't know, but it did. The line seemed to strike their bump of humor, or something. I used to hear boys mimicking me as they went out. I'd put all that stuff back in to-day if I was not working for a salary and they didn't have such crazy notions about this so-called refined business. The old-fashioned ballyhoo is the thing.

I might have made a lot of money out of that freak show, but a company of big showmen bought the property for a syndicate attraction. Due to a love affair my people became disloyal and the new outfit engaged most of my attractions right from under my nose.

The palm reader became engaged to the wild man from Borneo. They decided to marry and settle down right there, because it seemed like home. Following this disaffection, it being very hot, the fat woman decided she would prefer not to move. The upshot of it was the whole outfit quit me. Every time I have got hold of a little show of my own something like that happened. I am too old to try it again.

With the building of show places Coney Island grew up like a mushroom. The idea of group attractions that could have a permanent location spread all over the country. Performers were delighted at the possibility of not having to travel. This departure from the old circus idea kept growing until it reached a commanding height at the Chicago World's Fair. There people saw for the first time the Ferris wheel, the shoot-the-chutes and scores of riding games. The scenic railway came a little later, I believe. None of those things, you see, were possible with a traveling show. Also the idea established a definite place for amusement seekers to go instead of waiting for something to come along. They quickly formed the habit.

The Chicago World's Fair, the enormous success of the Midway, as the street was called, had a tremendous effect on the show business throughout the country. It was really a revolution. On a small scale the Midway was copied at state and county fairs. Then came the street fair. And I want to tell you those street fairs were a mighty irritating thorn in the side of the circus business too. It never has fully recovered.

Our circus ran into several of these street fairs and carnivals down South and suffered heavily in the competition, particularly the side show. Those carnival people got onto the trick of running a street fair for a week or two for the benefit of some local charity—on percentage. In that way they escaped the heavy licenses. There was no such escape for the circus. We were soaked good and plenty. In one little town in Tennessee, I think it was, they charged us five hundred dollars a day license. We simply couldn't buck the competition. We had to learn the dates of these carnivals and arrange our routes so as to duck them.

I still wanted to have a show of my own, so I decided the chance was in getting together a street-fair outfit. That surely was the coming business. I liked that idea of the charity concerns not only paying the licenses but getting out and working for the show. It seemed easy pickings.

The circus season finally ended, and with the aid of some rebellious side-show performers and freaks we got together an outfit. We did well at first, but as usual I had lost the show in two seasons for one reason and another. But we did a lot of things in those two years that they are doing in all regulated parks to-day. Among other things we discovered the real possibilities in Bosco, the snake eater. You know—he eats 'em alive!

There has never been a better single attraction than that. He was just as good as the Kickapoo Indian in the old medicine-show outfits. Just why people will flock around a pit to see a dirty, wild-looking darky bite the heads off garter snakes I have never been able to figure out. But they did and they do. The morbidity in human beings is a hard thing to understand. In my travels abroad I have noted with interest that where there is a leper hospital it is one of the main attractions to tourists. People seem to get fascinated with the sight of these poor unfortunates and go there day after day. This morbidity, undoubtedly, is what makes the freak show a steady drawing attraction.

I have been berated by some people for making a living out of exhibiting the misfortunes of the poor freaks. It does seem a hard thing, but when I see the happiness and contentment of these people I feel that I am doing right. It enables them to earn a living and be independent. Many of them own their own homes and farms. If they were not exhibited they would be a public charge—a nuisance. Most of them could not earn a living. There are times, though, when I feel a deep compassion for them in having to display their deformities for money. I would like to have somebody solve this thing for me—put me right.

I got on to Bosco in an unexpected way. Snake eaters, by the way, are always named Bosco. I was sitting in one of our street-fair ticket wagons one day when a negro man came up and asked to see me. He wanted a job.

"I kin bite the heads off'n garter snakes, boss," he explained, "an' I kin bite 'em off better'n that fellow I seen at the other carnival what calls hisself Bosco."

I was interested. We needed a couple of attractions to fill out the show. The upshot of it was I engaged this new Bosco for two dollars a day and his eats. He thought that a lot of money. So did I—for an experiment.

Bosco—He Eats 'Em Alive!

WE PAINTED our Bosco up with daubs of tar, lampblack and a little red here and there. We then got him a wig with tangled hair, the ends sticking out like a mop. Bosco's costume was made up of two old cloth sacks, one with holes for the arms and the other for the legs. A snakeskin belt tied the loose ends around his waist. A heavy iron cuff was fastened around his right ankle, to which we attached a heavy clanking chain. The other end we fastened to a post driven in the floor of the pit. When we got through Bosco was a terrible sight. You can tell the world he looked ferocious!

We advertised for garter snakes, offering free admission to every boy who came with one, any size. It was down South in the spring and in three days we had more snakes than we could use.

Now don't think that was a fake. Bosco actually bit the heads off those little snakes right in the presence of morbid people who crowded around at ten cents to see him do it. At intervals Bosco would go wild, tug at his chains, throw handfuls of straw and dirt in the air and then snap a snake's head off to vent his rage.

The very first day Bosco did fifteen dollars. After we had installed a good spieler—ballyhoo barker—he could be depended upon to draw twenty dollars a day.

For ten years no street fair or carnival was complete without a Bosco. Next to him as a staple article was the man who would get hypnotized and be buried alive for six days. People were permitted to peep down a square hole at him for five cents week days and ten cents on Saturdays and Sundays. The good people of those little cities seemed to enjoy that immensely. At every performance some would inquire if a buried subject ever failed to come to at the end of his six days. There were many ways of faking an exit for the subject during off hours, but I knew one man, a firm believer in hypnosis, actually to go through with it.

Beginning with our early experiments in the street fairs and the big group syndicates at Coney Island, the summer amusement park attractions—now a distinct branch of the show business—gradually divided themselves into four distinct classes. They are so divided to-day—freak shows, games and rides, animal acts and spectacles.

Under the general heading of freak shows we include such familiar things as East Indian fakirs, sleight of hand, feats of strength, and so on. They even include such attractions as the baby incubator and the glass blowers.

The games and rides take in everything from Japanese ball rolling to the Ferris wheel, the scenic railway and the merry-go-round. Shooting galleries, pony riding and cane ringing also come under this head.

Spectacles take in all outside shows like the outdoor circus, balloon ascensions, high divers and other things that are put on free to ballyhoo the crowd inside. I say free, but there are always special seats that can be had in case one is tired. One is generally tired.

People as a rule don't like free things. They think there is a trick in it, and there usually is. They come out to spend their money and they are going to do it. Not even a showman can stand in their way.

During the war the Government erected a battleship in one of the public squares in New York made of wood and canvas. It was an exact replica of a man-o'-war, even to interior fittings. The idea, of course, was to encourage enlistments in the Navy. After the armistice this battleship was presented to one of the big Coney Island companies, provided they would pay for its removal. It was accepted, but that man-o'-war turned out to be an expensive present. It cost thirty thousand dollars to cut it up

Ask Your Banker—

"How Can I Protect the Checks I Carry in My Pocket?"

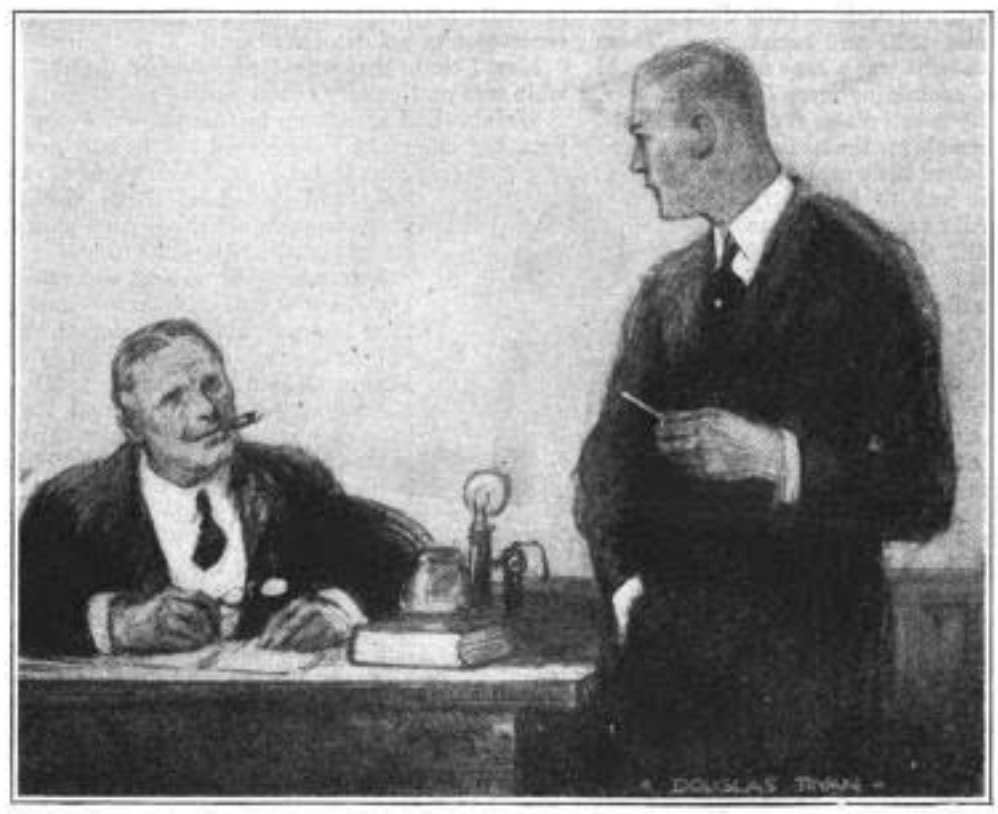
Tell him, "I can't carry a protective machine in my pocket with my check book. What happens if one of my checks is 'raised' (fraudulently altered to read an amount larger than originally written)?"

If your banker provides you with Super-Safety Insured Checks he will answer, "You don't need to carry a protective device. You are positively protected against loss by **Insurance.**"

He will give you a vest-pocket certificate of insurance for $1000, protecting you against loss through fraudulent alteration of checks.

If your banker cannot accommodate you with this ***positive protection,*** write us for the name of one in your locality who will be glad to do so.

$1,000.00 of check insurance against fraudulent alterations, issued without charge, covers each user against loss.



SUPER-SAFETY **Insured** BANK-CHECKS

EVERYBODY'S BUSINESS

By FLOYD W. PARSONS

Office Short Cuts

THE other day I ran across a regular office—one that might properly be called a next year's model. A look round revealed that though the methods and equipment were extremely practical the place might be viewed, so far as offices go, as a prophecy of to-morrow. Labor-saving equipment alone in this office has reduced the personnel more than one-half.

The new manager, who revolutionized this particular business in less than two years, started out with a full recognition of the fact that office workers cannot be handled in precisely the same manner as factory employes. Bearing this in mind he commenced his work by selling his efficiency methods to the office workers in advance of their formal adoption. The campaign of education was designed to show the office force that better jobs and higher wages result from the increased use of automatic devices. His directors were made to understand that in most cases it is downright foolishness to quibble over the first cost of any machine that will save human labor. He further explained that before another decade has passed machines will be used to do all the laborious work in offices, just as they now do in shops.

The first move of the manager on taking hold was to eliminate the overlapping of jobs. In doing this he secured from each employe a list of that person's duties. Study was then given to these reports, and changes were made so that now no two people do the same thing or even parts of the same thing, provided that particular job can be handled more effectively and economically as a unit task. Two or three times each day there was a rush period when a number of office boys were kept quite busy. During other hours of the day there were fewer errands to be done, and the boys were not busy. Department heads were asked to submit lists of small jobs that the boys might do, and as a result of this inquiry the different departments were relieved of numerous small tasks and the value of the errand boys was increased.

An effort was made to save materials as well as time. Wastebaskets were banished from all departments where they were not absolutely necessary. As a result there is less waste of paper, and a reduction in the losses of valuable letters and data which heretofore had been swept from desks accidentally. All letterheads and carbon sheets spoiled in typing, instead of being thrown away are kept for inspection by the head of the stenographic department. To further economy it is required that short letterheads—half sheets—be used for brief letters. Unless there is some good reason for not doing so the rule is to use the back of each incoming letter for the carbon copy of the reply. This conserves time in filing, and saves second sheets as well. Carbon paper is protected from exposure to the air, and rubber bands are kept away from light. All inkwells are covered at night to prevent evaporation, and holders for pencils are used so that short lengths of pencil may be utilized. This of course lengthens the life of each pencil.

Immediate attention was given to the elimination of eyestrain and fatigue from inadequate office illumination. Since clerks and typists use their eyes continuously for close work the lighting should be diffused, so that all shadows are eliminated. This result can be obtained only by a system of indirect lighting, in which the light sources are hidden, the illumination being obtained by means of secondary reflection from the ceiling. Measurements showed that previous to the change in lighting, the office force worked with less than three foot-candles of illumination. The present intensity of light is fourteen foot-candles, and yet there is no glare or condition of overlighting. Under the old system there was a multiplicity of unsightly droplights, the cost of wiring was high, and there was additional expense for wiring each time the position of a desk was shifted. Now the whole office, which occupies nearly half a city block, is uniformly lighted. There is practically no breakage of lamps and the new plan permits the use of larger lamps, which are more efficient than the smaller sizes. The ceilings were painted a pure white, and the surface was given a flat or mat finish, the walls were made a soft pale-olive green with a slightly yellow cast. The upper part of the wall was of a lighter tint than the lower portion.

While working conditions and mechanical equipment were being given close attention the human element problem was also studied. Each worker's position was made definite and his goal visible. Instead of depending on the possibility of periodical salary increases to stimulate productive effort the new manager established a policy of having frequent heart-to-heart talks with all department heads, and requiring them to do the same thing with their subordinates. It is a company rule that each letter and office memorandum shall be signed by an executive personally—not rubber-stamped. Personal notes from the boss are generally appreciated by those under him. Such a plan stimulates goodwill and has a value that pays many times over for the time and effort involved. It is also the policy of the management to pay real money to employes for suggestions that can be utilized to save the company time, labor or material. Whenever a suggestion is accepted and put into practice an announcement to that effect is posted on the bulletin board, the amount of the award is given, and the name of the employe stated. A brief description of the new plan or device is also included. This encourages other employes to go and do likewise.

The manager believes in working according to a schedule, and has set an example for his coworkers by adopting a plan by which definite jobs must be attended to at regular intervals. He keeps a different card for every job, and each card contains the essential facts and figures relating to that particular w The cards kept in a tic and a cert number cards—usu one for each hour of the da come up for tention e morning. All desks in the o are arrange that the w passes i straight line f inception to c pletion. All ty writers a equipped wit small device computer whi records the nu ber of strok made by the t pists. The co pensation of t operators is d termined by t quantity an quality of the work. Intercom municating tel phones save t time of employe in running fro desk to desk from one depar ment to anothe Roller stools reduce the effort and fatig of filing clerks when placing letters in low drawers. Each desk is supplied with a tra which is especially designed for insertion the desk drawer. This tray has ten compart ments, which are useful for classifying suc articles as pencils, clips, erasers and pins The company requires employes to us fountain pens because of the time saved.

Every employe who has a desk is re quired to keep correspondence of all kind out of sight. It is a rule of the company that each man shall start with a clean desk every morning. On each desk is a book fil with twelve compartments, all plainly labeled. The first mail is always disposed of before the next one is touched. One compartment or pocket holds incoming mail. Other pockets are labeled To be Signed, Ready for Dictation, Urgent Matters, Matters Pending, Conference Matters, and so on.

Here are a number of other ideas I picked up in my visit to this model office: A loose-leaf system is usually far superior to all plans entailing the use of bound books. With the former scheme fresh accounts or new data can be added quickly, and old records can be easily removed and transferred to a binder. With the use of machines in posting and doing other office work the loose-leaf system is actually a necessity. It also effects a material saving in paper for in using a bound book it is never possible to tell precisely how much space should be allowed for any particular account or series of entries. The cost of envelopes for handling interdepartmental communications which demand privacy is eliminated by supplying employes with pads of the various forms that are used for sealed messages. Each sheet or form has one edge gummed, and in addition there are dotted lines to show how the form is to be folded, so that the gummed end can be sealed and the form will become its own envelope. In order to avoid the embarrassment and delays caused through sending out letters with illegible signatures it is advisable to have the stenographer typewrite the name of the dictator in full, and later the handwritten signature is added. It is a good plan to change the color of the ink in the stamp pads each year. This will save time and prevent recent letters from being placed in old files.

Much trouble is caused by mistakes that occur through oral orders. One solution for the problem is to have the person who receives the oral order write it down immediately upon triplicate blanks. The original is sent to the person issuing the order, the first carbon is sent to the files, and the second carbon is retained by the recipient

PEERLESS

All that the name implies

APRIL 1922

The certainty of performance, the long and uninterrupted service for which the Peerless is particularly noted, tell the buyer of today what he most wants to know—the value that is built into the car.

Such things foretell what he will be getting from his car a year, or five years, after he buys.

They imply not only the lasting satisfaction which the Peerless owner enjoys, but they also attest profound engineering and manufacturing skill, and shop practices which assure the quality to make a motor car investment worth while.

When a car embodies unusual engineering achievement; when it is the product of economical manufacturing; when it yields the unbroken service which Peerless owners prize so highly, can more conclusive evidence of value be supplied?

Yet, to find an approximation of the qualities which give the Peerless its high standing among fine automobiles, it is necessary to seek cars in a higher price-range.

The buying public today appreciates these things—how keenly, is affirmed by the growing new interest in the Peerless, and the feeling that, under Mr. Collins' direction, still better and greater things are to be expected from it.

THEODORE F. MacMANUS

Seven Passenger Touring Car, $2790; Four Passenger Roadster, $2790; Four Passenger Coupé, $3500; Five Passenger Sedan, $3650; Seven Passenger Sedan, $3790; Seven Passenger Sedan-Limousine, $4060; F. O. B. Cleveland

The Peerless Motor Car Company has been acquired and is being operated by R. H. Collins and his associates

SLIPOVA

CLOTHES for CHILDREN

Pretty Creepers for Active Tots

No wonder Mothers of small, lively children like "SLIPOVA Creepers". They are so neat—so pretty—so free from frills.

The Creepers, like all "SLIPOVA Clothes for Children," are made of standard fabrics. They wear well and wash perfectly—fast colors. They have double seams where greater strength is necessary. There's no skimping of cloth or finish.

When you recognize the sturdy quality of these "SLIPOVA Clothes for Children" you'll find it hard to realize that most of them sell for not over $1.

THE "SLIPOVA" LABEL IS PROOF OF UNUSUAL QUALITY AND LOWER PRICE.

If your dealer doesn't carry them, write to Dept. D,

McCawley & Co., Inc.
M. W. S. Bldg.
Baltimore, Md.
Sales Office
253 Church St., New York City

Look for the label.

(Continued from Page 38)

of the order. It often happens that orders from outside are acknowledged in such a way that the company must accept them even when the credit department on investigation recommends that goods shall not be shipped. Trouble on this score is avoided by saying: "Thanks for your order of June thirtieth. It has been given attention and notice of acceptance will follow in due course." Another scheme that sometimes saves trouble is that of keeping envelopes twenty-four hours. Frequently letters come in with the name of the town or state written illegibly or not given at all. Often there are legal reasons why a company would like to know the day or hour a letter was mailed. Though these cases do not occur often they are usually of much importance when they do happen. In adopting such a plan it is well to go a step further and stamp on the envelope the hour and minute at which it is received.

In practically all large offices a material saving results from the centralization of all stenographic work. This avoids waste of typists' time, for each operator can be transferred immediately from one job to another. Stock work of minor importance can always be kept on hand for typists to do in slack hours. It is also possible in this scheme to furnish any officer or employe a high-grade typist for work that entails experience and care. It is further true that with a centralized department the work is of higher grade, for the output is supervised and errors corrected by the head of the department. In such a plan wages and advancement can be more nearly based on individual merit. When the typists of a company are distributed through the various departments there are generally wide variations in wage recommendations, and as a result dissatisfaction arises. In such a plan a typist of only mediocre ability, working for a liberal boss, is likely to receive a higher compensation than a more proficient worker serving an official who is less generous.

In this office the automatic devices are the last word in mechanical ingenuity. One machine classifies a long mailing list and picks out the cards according to the buying powers of the individuals, sex, territory, quantity and quality of purchases, and so on. Two typewriters used in transcribing tabulations are equipped with a traveling indicator which shows by its position when the typist omits a letter or figure. All the typing machines have rubber roller grips attached to the roller knobs. This protects the typists' fingers and diverts the strain from the finger tips. An electric letter opener makes it possible for one person to do the work formerly done by five. It is not unusual for the machine to open five hundred letters a minute. Another appliance feeds envelopes into typing machines with such speed that the average typist using the device is able to increase her production five hundred envelopes a day. The mechanism takes out the addressed envelope and places the one to be addressed in the proper position for the first stroke of the keys.

Even the reference books in the company's library are held by book rests equipped with automatic attachments which turn on electric lights when the books are opened. Closing a book cuts off the current.

The credit department looked more like a well-ordered machine shop than a clerical office. In the past, when hand methods were employed, a typist or bookkeeper did well to head five hundred statements in an eight-hour day. Now one addressing machine will easily head a thousand statements in fifty minutes, and the work is done without error. Getting statements into the hands of customers on the first of the month instead of several days later effects a real saving by speeding up the settlement of accounts. A calculating machine adds, subtracts, multiplies and divides. First it totals the orders; then it proves the extensions and additions on the typed bills; next it adds the sales and distributes them by ledgers, by departments, by lines and by salesmen; and finally it proves the postings on accounts-receivable ledgers, adds and balances the accounts debit and credit, strikes the individual balances and takes off trial balances. A check-writing machine protects the company against changes in the amount of a check or changes in the name of the payee. The manufacturer of the device issues a policy insuring the user against fraud. A typing machine that handles orders and bills by the hundred, making eight or more copies of each sheet, has an attachment that automatically places the carbons between the sheets.

Said the manager: "By using these automatic devices in our office we are able to reduce to a simple mechanical process all figure work known to pencil and pad. This conserves the brain power of our business for important constructive work which requires thoughtful analysis. Nothing kills ambition more quickly than the never-ending routine of mental drudgery in an old-fashioned office."

Financing a Business

TWO celebrated doctors of business finance were discussing their recent experiences in prescribing remedial treatments for sick corporations. They were agreed that much of our present industrial trouble has resulted from both manufacturers and retailers giving first attention to finance rather than to production and merchandising. Some of the observations of these experts will doubtless interest and benefit many executives who are searching for ways out of present business difficulties.

All managers of factories and store owners must determine first of all whether they are going to be manufacturers and merchants or bankers and speculators. The only difference between the manager of a bank and the manager of a manufacturing concern that extends credit over long periods is that the manufacturer lends goods instead of money. It is perfectly proper for a company operating factories to decide on a policy of extending long credits, but it is necessary for the management of such a concern to understand fully that it is going into the banking business and that as a consequence the company must organize its finances accordingly. The banking phases of a business must never be confused with the production operations.

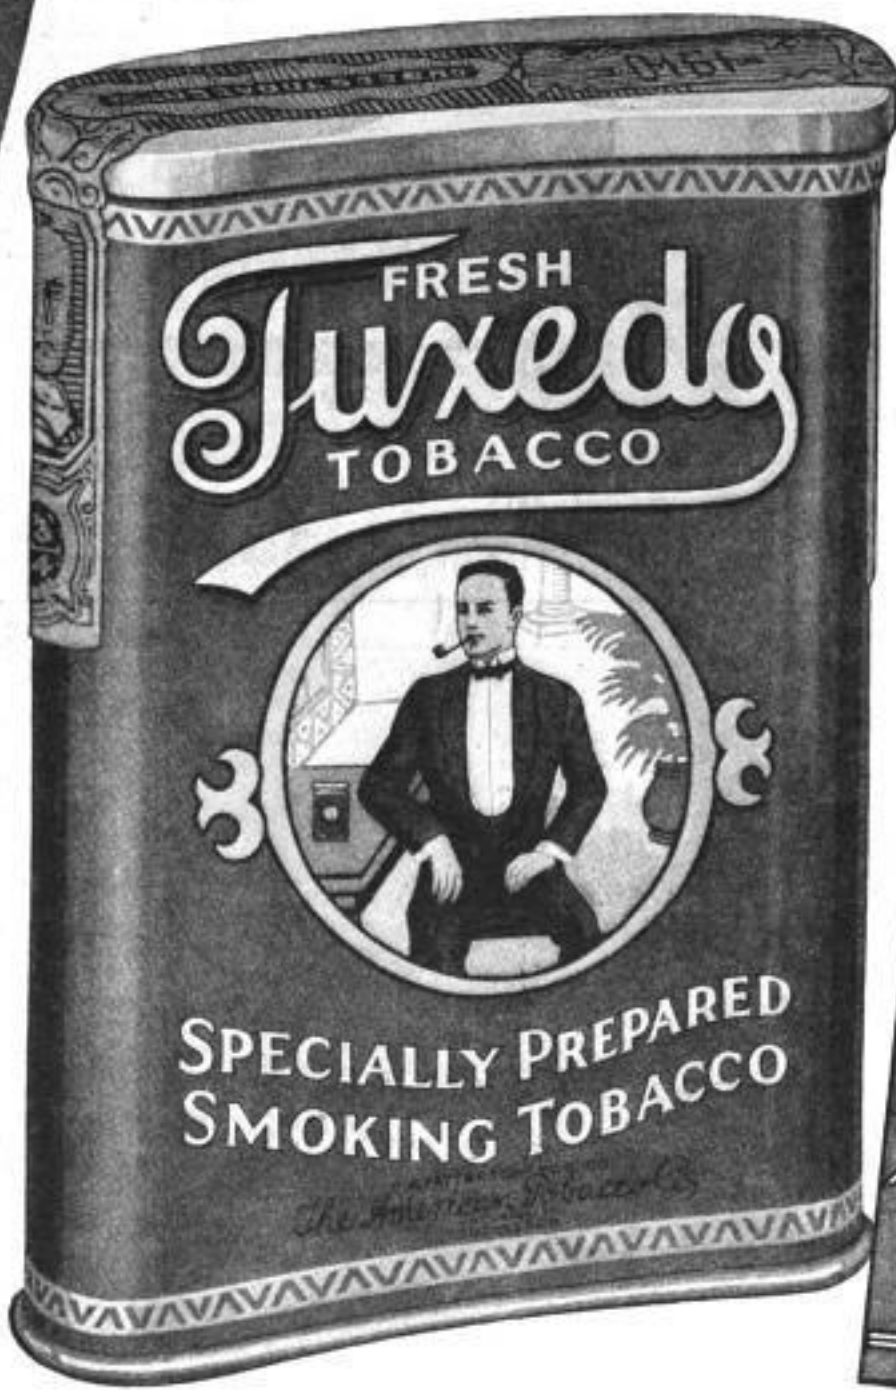
In recent years hundreds of manufacturing companies became imbued with the idea that the speculative side of manufacturing was more profitable than the fabricating and selling ends of the business. Many executives staked the futures of their companies on their ability to purchase raw materials at low prices and later sell these materials in the form of finished articles at high prices. A large percentage of these executives gave very little attention to the conversion processes in the factory, and much attention to guessing the course of raw-material prices. This plan worked all right in a rising market, but it left many companies with heavy inventories when the market turned. Unfortunately most of the business speculators refused to take their losses early in the decline, and this foolish action caused the extension of loans in many cases to the breaking point.

The business depression of 1921 has taught many old lessons and added some new ones. It is unwise to try to maintain prices by curtailing production. Such a plan only further depresses raw-material prices and makes it harder for the manufacturer to get out whole. A large inventory is looked upon as an evidence of speculation when the tide turns unfavorably and prices recede. It should be looked upon in precisely the same way, and regarded with just as little favor, when prices are rising. When an executive accumulates large supplies of raw materials or other goods and makes money in the operation, he is said to be farsighted. But the fact remains that whether he makes money or loses money he is a speculator all the same. A profitable outcome to guessing markets is pleasant, but it does not add to the virtue of a dangerous business practice. Business speculation is all right when it goes by that name, but it is all wrong when it is called manufacturing. It is as difficult for a business man who speculates in raw materials to keep his head in a time of serious emergency as it it for the speculator in the stock market. However, in the case of the latter, usually he alone suffers, while in the case of the manufacturer his mistakes in guessing often bring misery to a whole community.

The present time is a period when business men should give more attention to production methods in mine, mill and factory, and devote less thought to banking departments of their compa Skill in manufacturing and merchand is much more to be desired to-day skill in borrowing money. The idea money produces goods is an age-old fall The truth is that goods produce money goes without saying that finance in busi is important, but the time is coming w the ability to apply effective and econ cal production methods in the operatic a business will be a far greater asset manager than ability to devise way raise an ever-increasing supply of cap The efficient manager must know the di ence between fixed capital and worl capital. He must know that though often necessary to borrow money to fin operations it is unwise and dangerou borrow to meet depletion of fixed cap

Many companies that are in trouble require more scientific management ra than more money. The best way to crease costs and increase production is adopt better methods for routing work handling labor. One big company recen was pulled off the rocks of failure by t efficient work of a committee of systen tizers known as a planning board. rearrangement of the machinery in the co pany's various plants brought a saving 20 per cent in production costs, while t dismissal of superfluous executives who h been kept busy getting out of one anothe way caused a further saving of nearly per cent in overhead expenses. A rece analysis by a world-famous firm of stati ticians showed that far more busine failures are caused by incompetence tha by lack of capital. Sound estimates costs were shown to be the foundation successful business.

Every business man should understan that gains and losses in business mov largely in cycles. Many failures resul from executives foolishly assuming tha their companies' success has been du wholly to the efficiency of their manage ment, whereas, in fact, they have bee carried forward by an expanding cycle Two men may have equal ability and ye one may start in business at the commence ment of a period of inflation and grow rich while the other may go into business at the start of a time of contraction and fail. The only sound plan is to work with the idea that large profits during a cycle of expansion will be at least partly counterbalanced by large losses during a subsequent time of depression. Wise managers prepare for lean years by building up an adequate reserve. Never estimate gains as complete and solid before the end of a cycle.



Every business man should prepare a budget and strictly adhere to the program formulated. There is no other way to control plant and equipment expenditures properly. The small business man should not overlook the fact that bank credit can often be obtained through the use of a life-insurance policy. When the individual's name is good such a policy made out to a bank to cover the amount of money borrowed may prove a deciding factor in consummating a loan. Reports prepared for bankers should not be greatly condensed, but on the other hand should contain all important details. In negotiating a loan it is advisable to prepare and present to the banker an estimated future balance sheet with the current balance sheet. The corporation's future position is of as much interest to the lending bank as is the present position of the borrower. Some concerns now assume that money for advertising is expended to purchase goodwill, and since the courts have declared goodwill to be property it follows that advertising expense is an asset and may be used as a foundation for credit.

In the cases of many corporations to-day the need of money is only a symptom, while the basic ailment is faulty management. Though it is desirable that business executives should be familiar with fundamental financial principles it is more necessary that they should clearly understand the relation of increased turnover to increased profit. Wide margins of profit invite competition. It is better to turn the capital of a company three times a year, each time making 7 per cent profit on sales, than to turn the capital only once and make 21 per cent on the single turnover. What most American firms need at present is not more money but a better sales effort. An improvement in selling methods means an increase in turnover and a resulting reduction in production costs and overhead charges.

MEN who understand the distinction between authentic style and temporary fads buy Stetsons.

Not only because a Stetson looks so well, but because it looks well so long.

There is a smartness about this Stetson stiff hat that becomes almost every man either for business or semi-formal wear. You will find this model and others at your Stetson hatter's.

Spring and warm sunshine—and a Stetson soft hat like the one shown here. Fine blocking, absolute style and Stetson quality pay you a real dividend on your investment.

STETSON HATS

STYLED FOR YOUNG MEN

THE POETS' CORNER

After Drought

ACROSS the hills I saw them come
To save the famished grain,
A regiment too long delayed—
The ragged hosts of rain.

Their bayonets were slanting now
Against the darkened sky;
I heard the thunder's cannonade
When the blue ranks marched by.

They stormed into the valley. Hark!
That sound of silver feet!
The land cried for deliverance,
And, oh, the rain was sweet!

They swept through dusty highways, far
Beyond the wide, parched plain;
And everyone leaned out to greet
The tattered hosts of rain.

—Charles Hanson Towne.

Summer in England

IN ENGLAND, in summer, the sky is very blue,
And the grass grows greener than anywhere I know.
The low thatched roofs, elm and oak and yew
Shine in the sun, and the crimson roses blow.
Oh, summertime in England, with soft days, and rains,
And English girls and English lads in fragrant Surrey lanes!

I rode down to Winchester. The hills were at peace,
And I saw rivers winding, like ribbons, far away;
I saw the rich grain and the haymows increase,
And the green hedges glisten through the long, slow day.
Oh, summertime in England, with the sad war over—
How wonderful the Canterbury bells and the clover!

The old walls spoke to me; the old homes said,
"It's beautiful in England with the mad war done!"
But I thought as I passed them, oh, I thought of the dead,
Of boys who would not see again this radiant sun.
For summertime in England is glorious and good,
And the hollyhocks laugh, and the poppy in its hood.

Is it lovelier now, I wonder? Are the gardens more fair? . . .
A girl looks up at the sky as I pass;
And I know she is thinking of somebody there,
Who loved rolling meadows and thick English grass.
Oh, summertime in England—my eyes are very dim—
Summertime for her again, but nevermore for him! —Charles Hanson Towne.

In the Garden

I KNOW a sunny garden
That overlooks the sea,
Hedged all around with hollyhocks
And pinks for company;
And pale nuns' roses one may weave
In wreaths for memory.

No dial's in the garden;
The sunny hours go,
And only wild bees' humming,
When April winds are low,
Makes count of all the minutes
It takes sweet blooms to blow.

There's one dear path that loiters
Where beds of asters keep
Perpetual troth with daisies,
And slim petunias weep
Because the grim snapdragons
Have haled them from their sleep.

A path where night moths whitely,
Against the blur of showers,
Go fluttering through the twilight
Like lost souls of the flowers;
And fireflies dance their revels
All through the mist-hung hours.

The path we found and followed
That unforgotten June,
When microphylla roses
Were whitening 'neath the moon,
And, palpitant with passion,
The lilies lay aswoon.

With white stars sown like snowflakes
Across the wide skies blue,
And every flower breathing
Of youth and loving too,
What wild wind leaped from heaven
To sadden me and you?

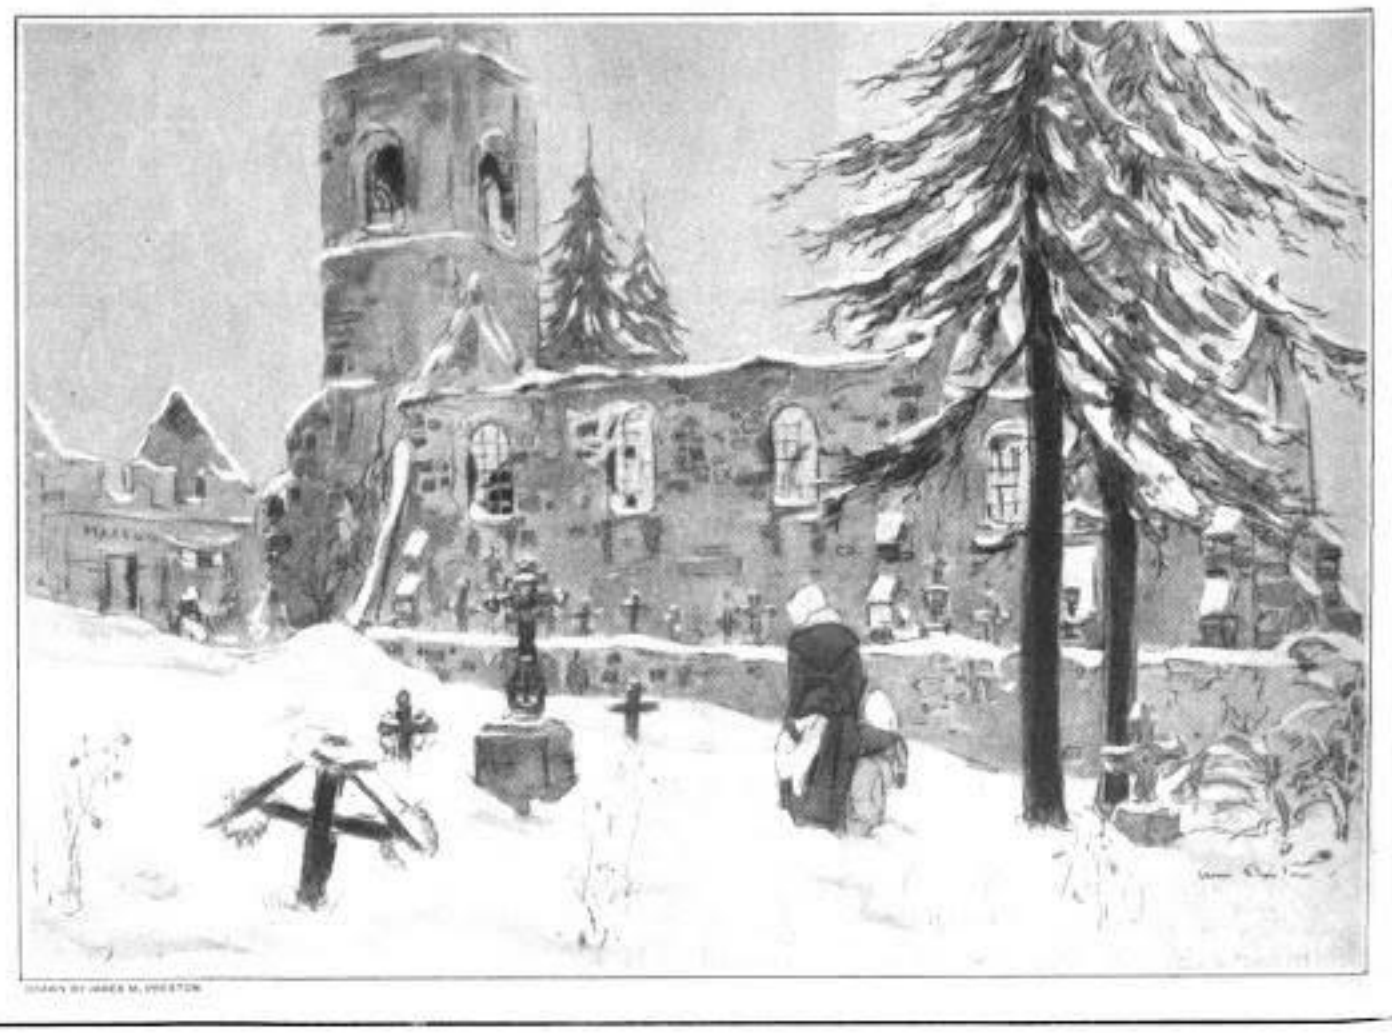
For never by the borders,
Where roses dream and die,
Shall you and I go wandering
Beneath a twilight sky,
Like ghosts from out some lovely year
Too sweet for memory.

And never in the garden
Shall we two walk again,
In sad or sunny weather,
In sunshine or in rain,
To gather rue for broken hearts
Or rosemary for pain.

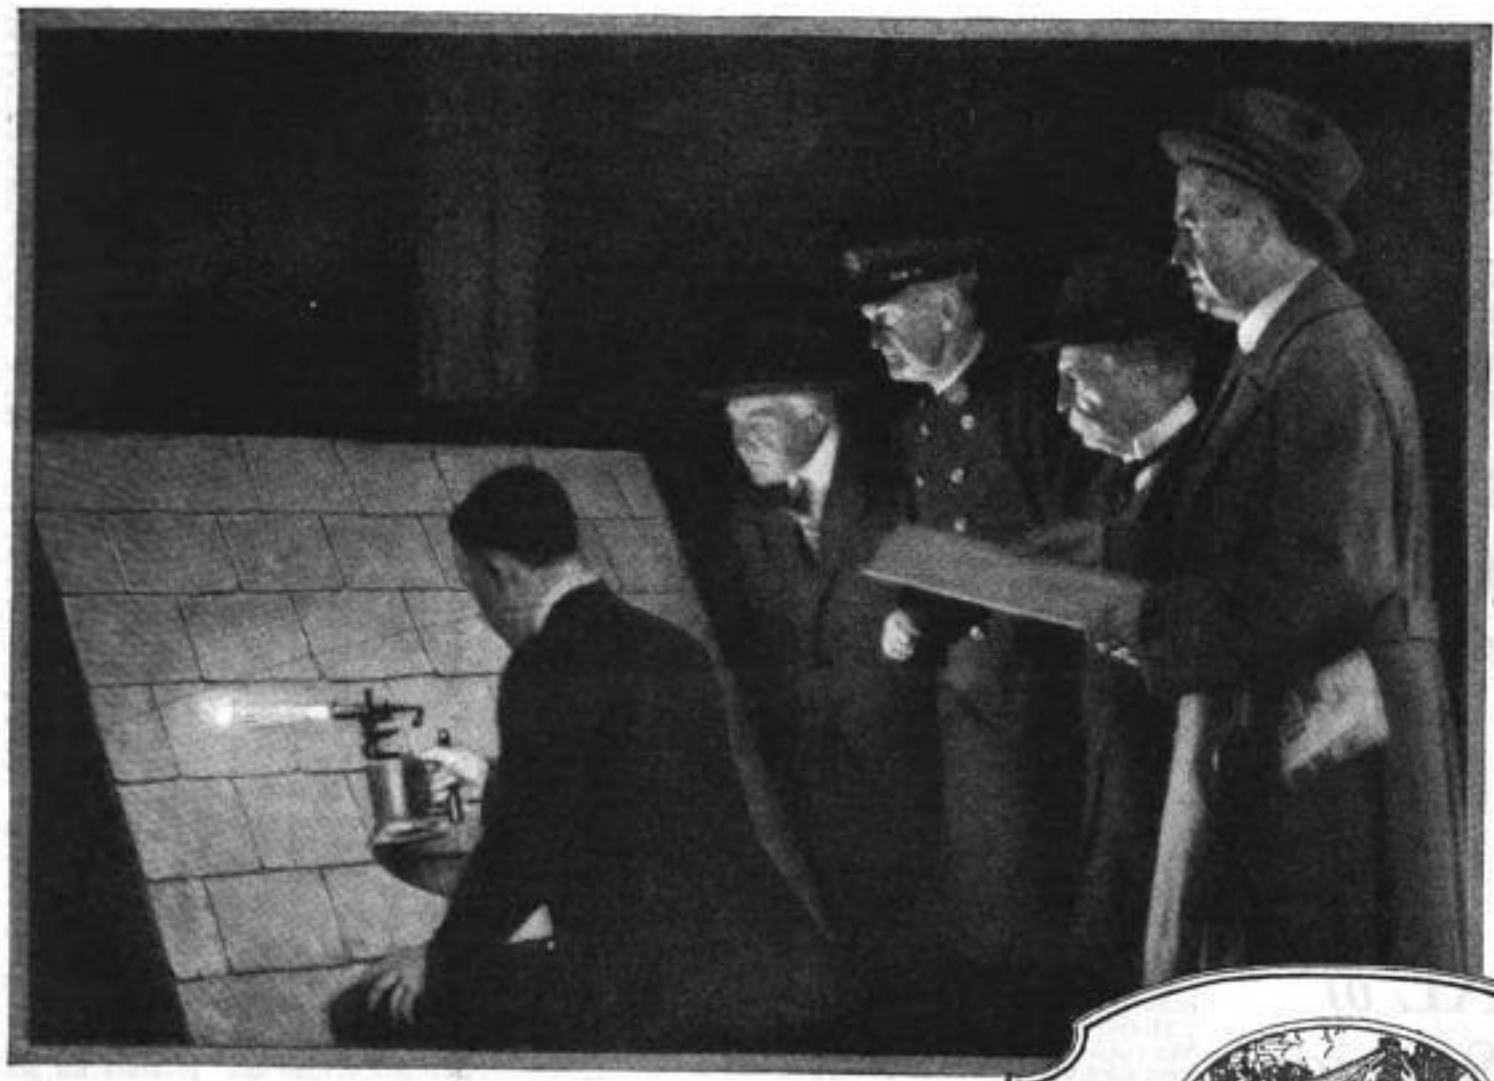
—Mary Lanier Magruder.

Ballade of Old Ladies

GRANDMA'S gone on a jamboree,
All dressed up like twenty-one;
Her skirts are just below her knee,
Her beauty is that neatly done
It almost fools her daughter's son.
With face so fixed she dare not smile,
She's wide awake and full of fun—
Old Ladies have gone out of style.



In other epochs Miss Ann Tique
Had on the shelf been laid away,
Too lone, neglected, prim and meek
To do a thing except crochet.
She leads the Younger Set to-day,
And leads it just about a mile.
She's daring, debonair and gay—
Old Ladies have gone out of style.



The dodo and the matron old,
The dinosaur and ancient maid,
Men's eyes shall nevermore behold;
Their memory begins to fade.
All women now are in one grade,
Employ the same sartorial guile,
Are young and youthfully arrayed—
Old Ladies have gone out of style.

L'envoi

Sweet sixty, Prince, and sweet sixteen
Affect one fashion and one wile,
And the same way to perk and preen—
Old Ladies have gone out of style.

—Thomas Lomax Hunter.

Ask— your fire-chief your building inspector your conscience

Do you dare to be without an Asbestos Roof?

EVEN if you must think about price, it has small bearing on this question. Asbestos Roofing is not expensive. For instance, Johns-Manville Flexstone Asbestos Shingles (slate-surfaced), which are designed for the average home, cost but a quarter-cent more per shingle than the ordinary rag-felt composition shingles.

And what do you get for this extra quarter-cent?

A fire-chief will tell you that you get fire-safety—a virtue that is common to all Johns-Manville Asbestos Roofings, either in shingle or roll form. Thousands of doubters on this point have been convinced by the famous Johns-Manville blow-torch test and by the fact that these roofings are given highest ratings by Underwriters' Laboratories, Inc.

A building inspector will tell you that you get permanence, for Asbestos is not only fire-proof, as we all know, but, as not so many of us know, it is also rot-proof. So that an Asbestos Roofing never needs painting or refinishing or any protective measures as do roofings of less enduring organic materials.

Finally, if you let your conscience decide, it will surely agree that you cannot give less than the protection of Asbestos to your home or to any structure on which your welfare or prosperity depend. So, on all counts, fire protection, permanence, low up-keep cost, you find Johns-Manville Asbestos the logical choice.

There is a Johns-Manville Asbestos Roofing, either in shingle or roll form, for every type of building. (See chart on right.) In every case the cost is low when you consider the protection provided.

JOHNS-MANVILLE Inc.
Madison Avenue at 41st Street, New York City

BUCKET SHOPS AND HOW TO AVOID THEM

(Continued from Page 4)

nowadays is to relieve the public of their money. Such houses expect that sometime before the expiration of the payment the stock bought by the client will have so declined in the market price that it can be purchased at a profit to the broker.

"In the event that this is not true, their practice is to induce the client to purchase additional stock on partial payments, using the stock paid for as collateral, in the hope that before these payments are completed either or both may be covered at a profit."

Nevertheless, there are a number of important New York Stock Exchange firms which do a very substantial and legitimate business in fractional lots of stock—less than 100 shares—on the partial-payment plan, and nothing in what is stated herein should be taken as contrary to that assertion. It is therefore not necessary for anyone who wishes to deal in odd lots to go elsewhere than to members of the New York Stock Exchange. That institution, by the way, has promised to give more consideration to those who deal in small lots.

Then there are what are known as correspondents, consisting of brokerage firms operating in other cities, connected with New York houses by private wire. These concerns stand on their own responsibility, but from reading their signs one would think that they were controlled or backed by the houses whom they claim to be their New York correspondents. Last night I met a broker from a town in New York State who was a creditor to the extent of $60,000 on the books of a Consolidated house which recently failed.

His clients in the home town had perfect confidence in him, and he had sufficient confidence in the New York broker to leave all that equity there; but when the New York house failed he did not see how he could do anything but make an assignment. This shows that in dealing with an out-of-town broker who is not a member of any exchange there is a double risk—that of his failure, and that of the failure of the main house.

Investment Through Banks

Branch offices of New York Stock Exchange or Consolidated Exchange houses carry the responsibility of the main organizations.

There are many advantages in dealing directly with a New York Stock Exchange house or its branch office; or with a member of the Chicago, Boston, Philadelphia, Detroit or other Stock Exchange; or you can have your securities purchased and sold by your own bank, trust company or banking house. Small investors and those who are not thoroughly familiar with the Wall Street ropes should have no hesitation in employing their banking institutions for this purpose. Any bank or trust company with whom you deal will be glad to purchase sound stocks and bonds, either outright or with the understanding that you are to pay part at the time of purchase and more at certain intervals later on. Though this does not duplicate the partial-payment plan it amounts to the same thing. Furthermore, your bank is always glad to see you making investment purchases and thus strengthening your financial resources. It helps your credit and there is a strong element of safety about it, which certainly is absent when dealing with bucketeers. Your bank will also take care of the certificates for you, make sure they are in proper form, collect the dividends and credit your account; and when you decide to sell you have only to give the bank written instructions to that effect and the proceeds will be credited to your account. Owing to these many advantages the number of security buyers who are dealing through their banking institutions and banking houses is increasing steadily.

To the inexperienced section of the public nearly all brokerage houses look alike. It is a fact peculiar to the business that one cannot judge by appearances, either of the office, the sign, the size or style of the equipment; for the bucket shop, in attempting to conceal its real character, disguises itself as a legitimate house. In some cases these outfits have begun business on just about enough capital to furnish an office and do some advertising. The money that they have thereafter gathered in, although it belongs to their clients, is considered as the capital or the bank roll of the house. Recently an attempt was made by a crook who called an investor by telephone to urge her to buy a certain security. He said that if she would give him the order he would send a boy around for the check. She grew a little suspicious, and, tracing the call, found that it came from a public telephone booth; that the so-called broker was not only unknown but had no office!

A bucket shop may have a great deal in cash and securities in the bank and in the safe-deposit box, but that does not make it solvent. The test is: How would it liquidate? It has been positively demonstrated in the failures of late—which occurred mostly after clients forced the houses continually to pay out—that generally there is not enough to go around in the final showdown. Take the case of one firm which recently failed with liabilities of $1,500,000. The petition stated that assets amounted to $150,000, but the attorney for the firm says that this is a gross underestimate, and that they will probably amount to $500,000; but even at that, there is a firm which had $1,000,000 of the public's money which it was apparently unable to pay.

Or the case of another house, which failed for $4,000,000. Its so-called assets, largely stocks owned by customers, were absorbed in salaries, which alone exceeded $1,000,000 a year, and other expenses which brought the total up to around $2,000,000. Much of it was gambled away in the grain market. Testimony before the special commissioner in this case developed the fact that the business had been robbed from the inside. "Salaries of the highest amounts were paid, expense bills of tremendously large figures were sent in and O.K'd." The man who had charge of the salaries and expenses received $12,000 a year himself, yet had nothing to say about the running of the business. Funds which were sent in by customers in payment of stocks that were never delivered were used up in expenses.

Large amounts were withdrawn from the firm before it failed.

Is it not amazing that in this enlightened age our banking institutions should be held under close supervision by the state and Federal authorities, while any Tom, Dick or Harry is permitted to come down to Wall Street, open an office, and handle millions of the public's money—in cases much more than some of the banks? Brokerage concerns of both legitimate and illegitimate character are really fiduciaries—that is, they occupy positions of trust. Their money is not in the public's hands, but the public's money is in their hands. Therefore not only Stock Exchange but state and Federal supervision should be in actual control of their operations.

The Desire to Take a Chance

No legitimate house should fail because all its clients withdraw their cash, stocks and bonds; its capital should be intact, with deductions for any operating loss which it might have sustained, or plus any profits which might have accrued. The wide discrepancy between assets and liabilities in recent failures has proved beyond a doubt that these houses were either previously insolvent or had drawn out money and concealed it so that they would not have to pay out what they had acquired in recent years of prosperity.

It is a common impression in Wall Street that the public consists of every person except the one who is reading the item or listening to a conversation in which the public is referred to. The fact is that everyone who deals in securities, whether for investment or for trading profits, forms a grain in that great mass known as the American investment public.

Although among the few there is considerable thirst for investment knowledge, the vast majority of the public is still in the Dark Ages in this respect. Many letters that I receive show that the writers look upon the buying and selling of stocks as more or less of a gambling operation. They write, "The very wealthy people can buy bonds, but with our limited resources"—anywhere from $1000 to $50,000—"we feel more like taking a chance on something." And it is this desire to take a chance which leads so many of them into the hands of the bucketeers.

Investment involves the placing of mo solely for income. Speculation requ the use of intelligent foresight for the pose of making a profit from market flu ations. On the other hand, gambling is employment of funds without the us intelligent foresight. That is the attit of most people when they enter the mar

Having no intimate knowledge of business of investment or speculation even of gambling in stocks, the public tends its large furry ear, as Elbert Hubb would say, to the first suggestion wh comes to it sounding plausible. Give a public oodles of money as it has had ing the past few years, then turn a gan crooks loose on it, and one can rea imagine what havoc will result.

The average trader is governed by emotions—cupidity and fear. His de for gain leads him to take chances, and fear of loss induces him to venture just small an amount as he can up to the ti when he begins to make some money in t market. Then he unbelts; his cupidi knows no bounds. He neglects his fi business or profession in order to deve his time to the market. Although one the first principles in successful speculati is the limiting of losses and letting profi run, he generally reverses this rule, taki small profits and letting his losses ru pinning a hope on the latter in full con dence that though these trades are runnir against him the price will recover and h will get out at a profit eventually.

Juggling Penny Stocks

The bucketeer takes full advantage these very human tendencies. He ap proaches his prospect with the offer t carry a large line of stocks on a small mar gin. Some months before the failure of former member of a New York Consol dated Exchange house, an employe of the firm called one of my men and offered t buy 1000 shares of stock selling at some thing under twenty dollars per share on margin of $400. The prospect of carrying such a large line on such a small amount o money would appeal to many people wh did not know their business, but in thi case all the solicitor got out of it was a cheerful grin. What he wanted to do wa to make a book entry of the proposed transaction and then, when the stock de clined three-eighths of a dollar per share cross it out and pocket the $400. If after that trade was made he could induce the intended client to deposit more money he would eventually have procured for him self, by some of the ways which I will describe, the balance as well as the original deposit. He would have followed the well-known confidence-man method of building up an account, and then, in the parlance of the bucket shops, send it to the cleaner's—a process which I will also describe.

The public likes to buy a whole lot of shares—a big block—of low-priced stocks dealt in on the Curb at cents per share, because it is figured that in case of a rise the percentage of profit will be very large; but as most stocks selling below a dollar per share are worth very little, and as the majority of these issues are juggled around by one or more bucket shops so that such buyers eventually will be wiped out, one can readily understand how the public, in dealing in the penny stocks, plays into the hands of these pirates. Take a man who buys 1000 shares of such stock at sixty cents, on the recommendation found in a market letter which has been sent to 500,000 other customers or prospects, and out of which emanate orders for 50,000 shares of that cheap sixty-cent stock. When these orders are received the stock, which may have been one of the firm's own worthless promotions, is run up to seventy-five cents, and all or most of the orders are filled at that figure, the price being more or less fictitious. After this is done the price of the stock is worked down to sixty cents or fifty cents, and all those who are carrying it are promptly called for margin. If their original purchases were made at seventy-five cents, and the stock is now at the half-dollar mark, that is a shrinkage of 33⅓ per cent, or about the amount which is required as margin by houses that carry such "securities."

But the business of the bucket shops is only partially in these low-priced Curb

THE TWIN-SIX

What is it in the Packard Twin-Six that has aroused in its owners an allegiance that any other car seems powerless to disturb?

The fundamental cause is of course the unchanging excellence of Twin-Six performance, but there are many other reasons than this.

If you will think a moment you will realize that you have never seen a Twin-Six body that was anything but tight and sound and plumb.

You will recall, again, that almost never have you seen a dilapidated Twin-Six fender, nor a Packard wheel but ran staunchly and true.

Twin-Sixes that have years of service and tens of thousands of miles behind them still hold the deep lustre of their enamel and paint.

Their doors "chuck" solidly shut; their controls work smoothly and softly; every item of equipment serves and looks as when new.

The rugged structure of the car—the great frame and the stout axles—remains rigid, silent and secure, seemingly immune even to abuse.

Such qualities as these in the Twin-Six underlie its increasing popularity, and continually reinforce the leadership this fine car enjoys.

stocks. Big plays for the public's money are made in New York Stock Exchange securities, and most of the so-called big fellows among the bucketeers—that is, those who do not bother with small fry—will not look at an account which contains an equity of less than $5000. That they consider as worth going after. You perhaps are a business man, a lawyer or a doctor in a city or town within a day's train ride of New York. You occasionally deal in stocks, but do not claim to be an expert. You have a leaning toward it, however, and when in your daily paper you note an attractive-looking ad in which E. M. Fillem & Co. offer to send you a Special Analysis of Bethlehem Steel showing some of its possibilities, you promptly spend a two-cent stamp and thereby let yourself in for a lot of trouble. You do not know Fillem & Co., never heard of them, but the advertisement looks good and the stock is one that appeals to you. You have read a great deal about Mr. Schwab, and you feel that if they paint the picture in the right colors you could be persuaded to become one of his business partners by purchasing some shares of Bethlehem.

Before twenty-four hours have passed you receive a telegram from Fillem & Co.: "Trying to get you long-distance phone. Call New York operator. Very important." Simultaneously, perhaps, you are informed by the telephone operator that New York is calling. You judge from this that it must be important or they would not spend $4.30 for a few minutes' conversation with you. Getting into connection you find a suave young man at the other end of the phone, with a sincere and hasty desire to be of service to you. His firm has received your request for a circular on Bethlehem Steel, and they are sending it. "There is no hurry about the Bethlehem Steel—it is in an excellent position and will undoubtedly rise," but what he called you up about was something that would not wait. In fact—and here he grows very confidential—his firm has an order to accumulate 50,000 shares of Studebaker, and he called you in order to give you an opportunity to get aboard before the fireworks start. Unfortunately there was some delay in his getting the phone connection, and in order to make sure that you were not omitted he has bought 200 Studebaker for you at 98. It is now selling at 99, so that without your having put up a cent thus far he has made an actual profit for you. If you will just forward a small amount of margin—nothing like the amount probably required by your local brokers—he will see that the stock is carried for you.

A Look Into the Kitchen

You forward a check for $1000, which, he says, will carry 200 shares, and the next day he calls you up again and says that Studebaker is getting along wonderfully; that they are picking up the stock and expect it will sell at $125 a share in short order. Have you any more money which might be used in making this wonderful clean-up? You have. You send $3000 more and buy another 400 shares. Perhaps one or two more telephone calls may be used to ascertain whether you have any more available money for margin. If not, the final call contains a very offhand request—oh, very offhand! In fact, he just happened to remember it before he hung up. The P. S. is this: "By the way, I expect they will rush Studebaker up very fast tomorrow afternoon, and if you want me to close that out at what I have reason to believe will be the highest price of the day, just drop me a line authorizing the firm to accept orders from me for your account and will attend to that little matter for you. Then I will send you a fat check and you will be thousands of dollars to the good."

You write the letter authorizing him to do the trick. In a day or two you find that not only has your Studebaker been closed out at the lowest price of the day's session, but that you have been put long of 1000 Mexican Petroleum at $125, and sold out at $120. You did not realize that in giving him such a letter you practically placed in his hands a power of attorney to act for you—gave him authority to trade for your account and risk at his own discretion—made it possible for him to send you to the cleaner's. For the transactions which result in the wiping out of the margin you have sent him, and leave you $1000 in debt, are duly recorded on purchase and sales slips with the name of the buyer and the seller in each case, except that if you were able to go behind the scenes you would find that the vital trades which resulted in such large and swift losses were fictitious transactions, and the broker with whom these trades were made did not actually buy from or sell to your broker this unfortunate Mexican Petroleum, but he was merely paid a fee of fifty cents or one dollar per hundred shares for permitting his name to be used in this fraudulent trade.

How Your Goose is Cooked

I realize that in thus taking the public into the kitchen and showing them how some of their meals are cooked I am spoiling their appetite for certain dishes. That is just what I hope to do. And I shall exert further efforts along this line until by one means or another I assist in inducing the American people to use common sense in their security-market transactions.

I feel sure that you, reader, would not intrust $5000 to a stranger who rushed up to your office or your home and on one excuse or another tried to induce you to let him have the money in order that he might buy any other kind of goods, commodity or piece of property for your account and risk. You would not do this with anyone but perhaps one of your most intimate friends. As for mere acquaintances, you would never consider such an action for a moment. Why, then, should you put your good American dollars into hands that go with a voice over the telephone—a man whom you have never seen, working for a firm that you do not know and never heard of until you saw their advertisement?

Legitimate stock-brokerage houses do not go to such extremes, do not excitedly urge you to open an account or to put your money in their hands; they do not solicit and would not accept discretionary authority from you, for they realize that it is not only a questionable practice but if persisted in would lead to expulsion from the New York Stock Exchange if they were represented thereon.

You cannot butt into the inner circles of Wall Street by long-distance telephone. But this is only one means of interesting you. There is the subtle correspondence, with its suggestions that you buy this or that. There are the telegrams which come along at frequent intervals, urging you to make your first venture. And last, but not least, there is the traveling salesman, who just happened to be out this way and dropped in to make your personal acquaintance. He also is a very smooth-talking gentleman, knows all about the market, tells you what a fine house he is working for, names some of the big transactions they have had, assures you that their operations are for some of the greatest financiers and that their confidential relations with eminent houses are of the very best. Personal acquaintance goes a long way; you feel that if the house is anything like its representative you would like to deal there, and perhaps you permit salesman to carry away with him a c for your first deposit.

Why not take the same precautio you do in your general business tra tions? If you are a manufacturer and are selling a line of goods to a house fo first time you have your credit men them up. You procure commercial-ag reports, you request your bank to inq of its New York correspondent, you the buyer for numerous trade refere and you otherwise satisfy yourself th you sell him the goods you will eventu get your money. When it comes to dea in stocks, why throw all these conserva business methods to the winds? The nothing peculiar about a brokerage h which entitles it to more confidence than would give to a commercial organizati

You are venturing in a business of wh you know little or nothing. Would you that in manufacturing or merchandisi Is it not better to venture in timidly first, with very small amounts of mo that you can afford to lose? Should *not* same set of brains that guides you to s cess in your own field be employed for y protection and profit in the field of *finan* I believe that it should, and that is my ject in showing how the bucketeers of W are able to part you from your *money*; you owe it to yourself to learn somethi about brokers and securities before you in. It is a business in which *the riche* most powerful, most influential, as well the shrewdest among the real financiers not find it so easy to make *and to ke* money; hence your success depends u upon what someone tells you or claims to able to tell you about the business, but, in every other field of endeavor, it depen upon the knowledge which you seek, ma your own and turn to your own purpos

Symptoms of Bucketeering

Investment information is available fro the best channels; it is invaluable to you your present business or profession. It especially necessary to you in your lat years, during which such a large percentag of Americans find themselves in a depen ent position. In other words, financial in dependence is something that can be studie and finally attained by any man intelligen enough to make a living elsewhere; bu my word of warning is that in his pursui of this form of knowledge he should not b guided by the pseudophilanthropists know in Wall Street as bucketeers.

I have shown in the foregoing some of th ways in which bucket shops may be iden tified and avoided: By the

1. Frantic efforts to secure your busi ness, regardless of expense.
2. Munchausen-like stories which they tell you in order to induce you to trade.
3. Small amount of money which they require in comparison with that exacted by legitimate New York Stock Exchange houses.
4. Corporations with which they are identified and whose stocks they are trying to sell you.
5. Representations that they have previously bought for you a lot of stock which already shows a profit.
6. Their request for authority to trade for your account.
7. Inducing you to deposit your present holdings in order to purchase additional stock.
8. Representations that the firm is operating for pools or insiders.

There are a number of other earmarks of the bucket shop, which I will endeavor to explain in another article; also, what remedies I have proposed for the present situation, and what steps the stock exchanges, the state and Federal authorities are taking toward its elimination.

Use PLATE Glass ©

For Every Kind of Motor Car Use

For the windshield and windows in your motor car no other kind of glass can take the place of plate glass. It gives clarity of vision that nothing else can equal. For it never deceives the eye or the wheel-hands.

For every car, large or small, open or closed, plate glass means certainty and safety in driving, beauty of appearance, and the firm knowledge that you are seeing things as they are and never distorted by waves and swirls that distort the view.

People cover their dining-tables with plate glass protection because plate glass is smooth, level, sag-free. For the same reasons, you need it for replacements when accidents break the glass in your motor car.

Sense and Nonsense

The Strong Silent Man

TALL, heavily built, with deep-set eyes, a prominent jaw, and slow but deliberate of speech. There you have the typical strong silent man, to look at.

The impressions he makes on you are subtle. You can tell he has an iron will and a relentless determination to get what he wants in spite of every obstacle in his way. Note the tightly compressed lips. He is a born fighter. It is in his bearing. But he would give up his life for his friend, without even telling his wife about it beforehand. He would be as steady as a rock in a crisis.

The great strength of the strong silent man is his weakness; he has an enormous respect for women, and a heart that melts at the sight of a weeping child.

Before you are aware of it you are weaving a story round him. He is obviously a devoted son; but it is possible that until he has learned to understand his wife or, rather, she has learned to understand him, he would make an overbearing husband. Consider the beetling brows.

But there is a pathetic wistfulness about the strong silent man. He will marry late and, until then, lead a lonely life, in spite of his many friends. His greatest wish is to spend the winter evenings sitting by the anthracite stove, watching his wife darn his socks. He makes enormous holes in them. But it is some time before he finds a fitting partner, and so this wish is destined to remain unfulfilled until he is approaching middle age. And if he should make a mistake and find himself darning her stockings instead—that is to say, if he should marry a stronger and more talkative woman —— But, of course, he never makes mistakes.

That is the story you will weave round the strong silent man. But you will discover if you get to know him better that things are not wholly what they seem. The silence that has so intrigued your imagination is only one of his many moods. At times he unbends. When that happens he not only talks but jabbers.

You immediately lose the illusion of his mental strength, and though he appears physically strong he never takes any exercise. Losing also that illusion, you readjust your ideas, and begin to find that he is both clumsy and stupid. You had endowed him with qualities he doesn't possess.

He is neither strong nor silent. He is a big stiff!

Fishing à la Grand Cañon

AT THE Grand Cañon in Arizona it ever been the custom of the Harvey Company to employ an official professional romancer whose duty it hang about and stuff the visiting Eas tourist with weird wild yarns to match weird wild surroundings. For years principal entertainer was an ancient tleman with long white whiskers wi fictions were almost as majestic awe-inspiring as the cañon itself. La another aspirant has turned up in the son of a venerable retired prospector, he is giving the incumbent a close race first honors.

The newcomer has a natural sense drama. He knows how to invest his cr tions with effective byplay and bits of lo color. First he murmurs, "Excuse, pleas then he squirts a stream of tobacco ju into space, repeats his apology, tugs at t ends of his long drooping mustache, gi the cowboy hitch to his belt and is *ready* unfold a dream tale.

Here is a quaint bit of folklore which unloaded the other day upon a guileless group of visitors from the Atlantic Se board. One of the party asked him whet there was any fishing in the *turbid, yell* Colorado River, which they could s foaming over its rapids a sheer mile belo them at the bottom of the cañon.

"Oh, yes," he said. "But I 'low I' about the only man in Arizony who knov how to ketch them fish. Them fish is p culiar, same as everything else in this pa of Arizony. One curious thing abo them fish is that they always swim bac wards."

"Why do they do that?" inquired one the audience.

"To keep the mud from gittin' in the eyes. But it's easy enough to ketch 'em you know how. Them fish is all plum crazy over eatin' tobacco; so when I ai to go fishin' I take a club and a ten-cen plug of eatin' tobacco and I go down to th bottom of the cañon and I pick me out nice shoal place where I can see the fish s they come swimmin' upstream tail first then I take my pocket knife and I cut th plug up into little pieces, and I wade ou a ways and spread the bait on the wate 'The fishes grab it and go down to the bot tom and start chewin'. Purty soon they get to hankerin' to spit. Not even a fis can spit under water, so when they com up to the top to spit I haul off with my club and hit 'em over the heads."

WIMMIN IS WIMMIN

(Continued from Page 32)

woman going I could go along, and he couldn't say a word. He'd think I was looked after."

"Um —— Serve him right. Boston, eh? Hain't never been to Boston. Dunno anybody that has. Long ways off. Some woman, eh? These husbands is hell on bossin' their wives. Like to give one of 'em his come-uppance."

"You—you don't mean you'll go to Boston with me!"

"What's that? What's that? Who in tunket said anythin' about me goin' to Boston, eh?"

"But you—I thought that was what you meant. And you didn't, and I'm disappointed."

"If you beller," said Miss Stiffler harshly, "I'll smack ye! Sure's thunder, I'll up and smack ye good! And why shouldn't I go to Boston if I want to? Tell me that! Got a right in Boston, I calc'late. No reason in the world fer goin', savin' and exceptin' teachin' your husband a lesson. When'll we go?"

"To-morrow," said Veronica promptly. "I'll—I'll pay all your expenses."

"Like the mischief you will! Now I've dug into that burial fund, I might's well git to the bottom of it. You come into the house."

In the little parlor Veronica saw the cheval glass draped in old newspapers. Quite evidently it had worried Miss Stiffler, and she had abated the menace of it. The glass was completely hidden.

"S'pose I'll have to wear that dog-gone dress," she said. "Hate to! Wear and tear! To git tempted into sich foolishness jest by spite! Couldn't afford sich clothes ac more'n a rabbit kin afford a monkey's tail."

"But you're rich," said Veronica. "You can afford anything you want."

"Who? Me? Rich, nothin'! Keeps me poor payin' taxes. If I see five hundred dollars a year, free and clear, I'm doin' mighty well."

The next evening at seven o'clock Veronica and the revised and expurgated Miss Stiffler took the sleeper to Boston. When they arrived Veronica took her companion in a taxi to the most ornate and expensive hotel the city afforded and secured adjoining rooms which blared with luxury. Miss Stiffler was somewhat oppressed and silent.

"If you want anything," Veronica said, "just ring that bell. They'll bring you anything in the world you ask for."

"Honest? And the's hot water ready to run all the time. And them men will fetch my meals up and feed 'em to me if I want 'em? Oh, my gosh! Hain't it silly? Me bein' waited on that hain't never had a hand lifted fer me in my life! Ree-dic'lous, I call it!"

Veronica wanted Miss Stiffler to sally forth with her to see the sights, but Miss Stiffler had other views.

"I'm payin' seven dollars a day for this here room, and, b'jing, I calc'late to git my money's wuth! Mebby this afternoon I'll go out and jam around, but this mornin' I hain't goin' to stir. I'm a-goin to be waited on."

She was as good as her word. When Veronica returned at twelve o'clock she discovered from a grinning bell boy who

PAIGE

THE MOST BEAUTIFUL CAR IN AMERICA

Why You Can Buy a Paige for '1465

Since the introduction of the New Series 6-44 Touring Car at the reduced price of $1465 we have been frequently asked: "How is it possible to manufacture a five-passenger six cylinder car of such superb quality at such a low figure?"

There is but one answer: Automotive experience and manufacturing and financial resources. The New Series model represents the accumulated experience of Paige engineers to date. It is their last word in terms of modern designing and economical production.

Consequently this car, with its 50-horsepower engine and its 119-inch wheelbase, is a highly refined and perfected product from the workshop of men who have spent years in the development of high grade six cylinder cars at the lowest possible price.

The same reason—experience combined with resources—makes the 6-44 of today at $1465 a vastly better car than the 6-44 at its original price of $1965. It is logically the popular favorite because never before has it been possible to buy so much luxurious and economical motoring for so little money.

New 6-44 owners throughout the country are proving these statements to their own satisfaction in daily service. In the hands of these owners the car is giving practical demonstrations of its rare performing abilities and sound, sturdy constitution.

When speed and power are demanded they have them at instant command, while acceleration from 5 to 25 miles an hour in 9 seconds flat gives them the mastery of every traffic complication. Is it to be wondered, therefore, that the 6-44 at $1465 is one of the fastest selling light sixes on the market today?

ZAY-TEK
REG. U.S. PAT. OFF.
ALMOND BAR

Crisp, Meaty Almonds and the Zay-Tek Blend of Chocolate

The same luscious chocolate you get in the big red tubes of Zay-Tek Eatmors is used in Zay-Tek Almond Bars.

It's the chocolate blended to suit the American taste.

Zay-Tek Almond Bars are smooth as velvet and full of crisp, meaty almonds, selected for their rich flavor. Days of mixing the blended chocolate give it that delicious, creamy quality that distinguishes all Zay-Tek Chocolate Products.

You have to taste a Zay-Tek Almond Bar to realize how good this combination of blended chocolate and fine almonds really is.

Try one today. Ask for a Zay-Tek Almond Bar at the nearest candy counter. Its appetizing goodness will delight you.

PENNSYLVANIA CHOCOLATE COMPANY

Pittsburgh, Penna., U. S. A.

(Continued from Page 48)

was just leaving the room that Miss Stiffler's bell had been constantly noisy all the morning. She had been availing herself of service. A procession of boys had been ascending to learn that she wanted ice water and pots of tea and a clay pipe and a bag of gumdrops and a paper, and items of varying character and difficulty. Her imagination was near the point of exhaustion. She was dispatching the current bell boy for a box of twelve-gauge shotgun shells. When these came her orgy of service would be at an end for utter inability to think of anything else to send for.

"I sort of like it," she said. "Dunno but what livin' like this part of the time would be kind of distractin'."

"Why not do it?" said Veronica. And then quickly, "We are going to a matinée this afternoon and to the theater to-night."

"There hain't nothin' I won't give one whirl to," said Miss Stiffler.

For the first time Miss Stiffler saw the inside of a playhouse, nor was she in the least shocked by the costumes of the show girls. She was hugely amused, and entertained quite two rows of the audience by her audible remarks and hearty laughter.

Next morning Veronica took her shopping.

"I've got to buy a few little things," she said, and went for them to the most exclusive and expensive store in the city.

"You might as well amuse yourself looking at some dresses while I pick out what I want," she said; and before Miss Stiffler knew what was happening she was in the hands of two expert psychologists, hired at reasonable salaries to exercise their mesmeric powers upon the women of the vicinage. A woman in such a department is as helpless as a rabbit in a constrictor's cage. Miss Stiffler was to discover she belonged to the sisterhood.

"I don't want to buy a dum thing," she said. "I'm jest amusin' myself."

"Certainly, certainly," said the blond hypnotist; "and now suppose you slip this on and see how it looks."

"You're wastin' time," said Miss Stiffler; but the hypnosis was at work, and she allowed herself to be hooked into the gown. Afterward she allowed herself to be incased in a suit, and other gowns and suits until she was quite bewildered and altogether under the power of the hypnotists. Veronica remained absent.

"This suit," explained the lady psychologist, "is of course imported. There is not another in America."

"You mean it wouldn't be possible for one of the Ladies' Aid to match it?"

"Utterly impossible. In this suit you can be confident of being the best dressed woman in your town"—and so on and so forth and in addition.

"I'd kind of like to show them cats a thing or two," Miss Stiffler kept repeating to herself. And then Veronica appeared.

"What? Selected nothing yet? Here, let me help you! This gray suit, now—it's wonderful. Yes, you'd better take that."

"How much?" demanded Miss Stiffler, but her question was promptly submerged and drowned.

"And this afternoon dress. You simply can't get along without that."

Miss Stiffler sat limp under the hypnotic eyes. She felt the impending calamity, but was powerless to avert it. Whither was she drifting? And how much was the drift going to cost? And how ever would she pay for it?

She was adroitly wafted to the lingerie department and to the millinery department and to the hosiery department and to the shoe department.

"But I got a pair of shoes," she protested.

"If you're going to show the Ladies' Aid you'll need at least half a dozen pairs."

"My Gawd!" said Miss Stiffler breathlessly.

It was dusk when they emerged from the store. Miss Stiffler had no idea what she had purchased, or for how much she was liable in dollars and cents. On the contrary! She was dazed and dazzled. Something had awakened in her. What was this thing that arose inside and demanded and urged her on to such idiocy? She did not know, but she knew she could not escape from it. She rather fancied she was going crazy.

The next day or so never did return to her distinctly. Veronica adroitly showed her the kingdoms of the earth and the comforts and pleasures to be obtained therein; and with the skill of a master she pointed out constantly how they might be obtainable by Miss Stiffler.

"Why," she said, "with an income of, say, ten thousand a year, a single woman like yourself can live like a queen in a fi story!"

"Ten thousand what a year? Dolla Whoo!"

"You could have a room in an apartm hotel and all the service you want stay as long as you liked. Think how t would sound to the Ladies' Aid when came home! 'Bede Stiffler lives in one those hotels in Boston, and never has lift her hand.' That's what they'd s And they'd say, 'Look at her clothes a everything! And she owns her own au mobile!' Why, they'd go crazy w jealousy!"

"Huh!"

"But the best of it would be *the r* pleasure and comfort you would get out life. You're entitled to be happy and to waited on, and not to have *to chop yo* own wood and ——"

"Would I have to smoke cigarettes?"

"Of course not!"

Miss Stiffler sighed. "Never could fet myself to do it," she said.

Then her purchases arrived with t bills attached, and she knew an hour panic. They came to a total that bowl her over. It was more money than sh handled in a year.

"Now I've been and done it!" she sai "All comes of gettin' into bad comp'ny." She eyed Veronica coldly. "This here your doin's. Not but what I done *my par* I was darn fool enough to be bamboozle into it. Huh! Ten thousand a yea Um ——"

She went into her room and slammed th door. Veronica sat down on the bed, pal tired, quivering with anxiety, for she kne well the crucial moment had arrived. A hour passed—two hours. Then Miss Stif fler burst open the door and stamped to point just before Veronica.

"Blame you," she said, "you got m into this here mess, and you got to git m out! You got me all het up to buy thes dum fool riggin's and to git myself waite on, and hot baths and silk shimmies an sich. Now what ye goin' to do about it I agree with ye. I'm entitled to as good a the next, and I've worked my share, an I'm entitled to be worked fer. But how'l I git it? Say!"

"Why ——" Veronica began, and paused afraid to make a false move.

"I'll tell ye how I'm a-goin' to git it," said Miss Stiffler. "I'm goin' to sell that dratted timber of mine and be rich. By gosh, I'm a-goin' to have as good's they got the rest of my life! And you got to help me out. You got to find somebody to buy it off of me."

"I—I'll try," said Veronica. "I'll wire my husband right away. He'll know some way to do it. What is it—what is it worth?"

"My father paid eighty-six cents an acre for it, and he said that was a darn good price them days. I hain't no idee what it'll fetch now. You find out, and if I think you guessed right I'll sell. Alton offered me fifteen dollars an acre."

"It's worth more than that," said Veronica.

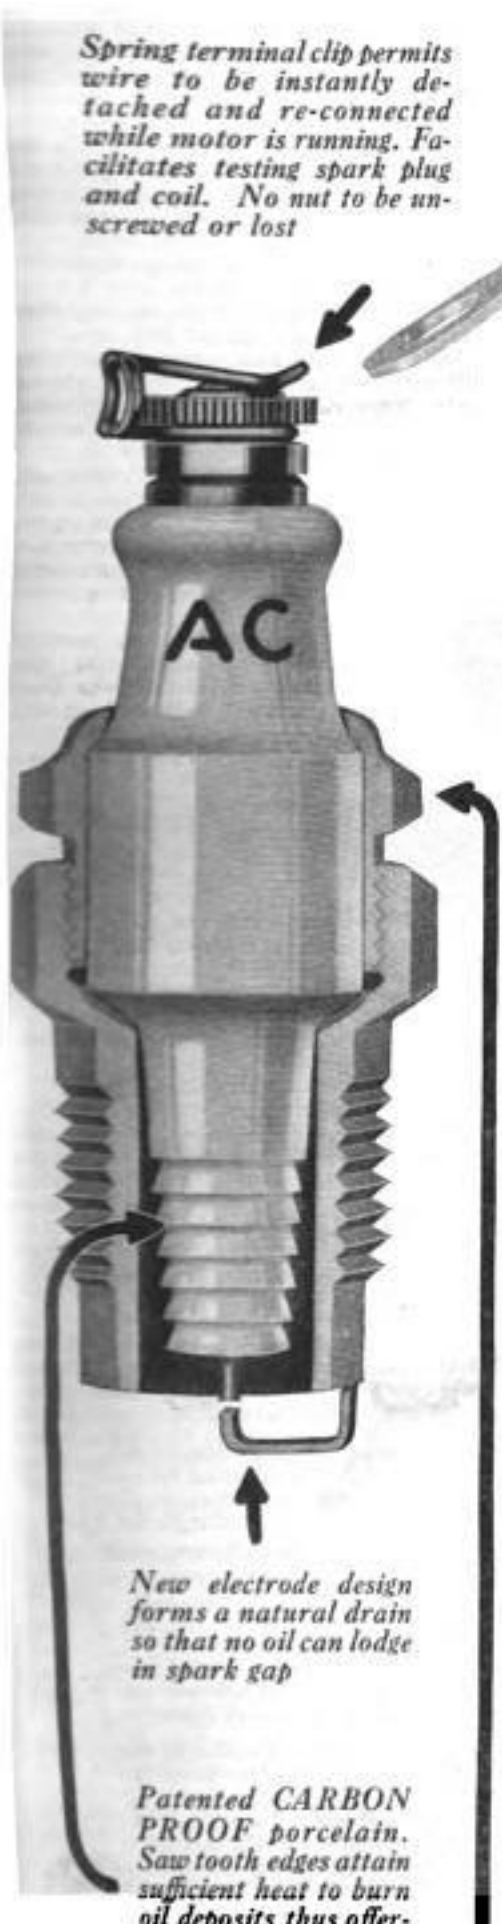
"You bet your bottom dollar it is! It's virgin. Tell ye what! A thousand dollars a month 'ud be about right—wouldn't it?—to live on good. That's 6 per cent on two hunderd thousand dollars. Git me that and I'll sell."

"I'll wire," said Veronica.

The wire was answered, and she showed the yellow slip to Miss Stiffler:

Offer accepted. Allow Miss Stiffler to draw whatever she needs to bind the bargain.

Bede Stiffler regarded the telegram with eyes which had grown shrewd. She turned from it to Veronica and peered at her.



"Um —— Young woman, you done it, didn't ye? You come it over me. Seen you could do it from the start."

"I did want the timber awfully badly," said Veronica; "but, honestly, I wanted you to get something out of life too. I did! I couldn't bear to see you living that way when you could just as well ——"

"—— live like a stuffed peacock. Um! Where you was wiser'n most, my dear, was in wearin' them little knee pants of yourn. It give you understandin'. You knowed all the time that it didn't matter a darn what she had on, but that a woman was always a woman. Wimmin is wimmin. Oh, my gosh, but hain't wimmin wimmin!"

Why Ford Owners Should Use This Special Spark Plug

Spring terminal clip permits wire to be instantly detached and re-connected while motor is running. Facilitates testing spark plug and coil. No nut to be unscrewed or lost

New electrode design forms a natural drain so that no oil can lodge in spark gap

Patented CARBON PROOF porcelain. Saw tooth edges attain sufficient heat to burn oil deposits thus offering effective resistance to carbon

Unscrew this bushing and plug comes apart. Only one gasket used. Notice compact porcelain to withstand hard service

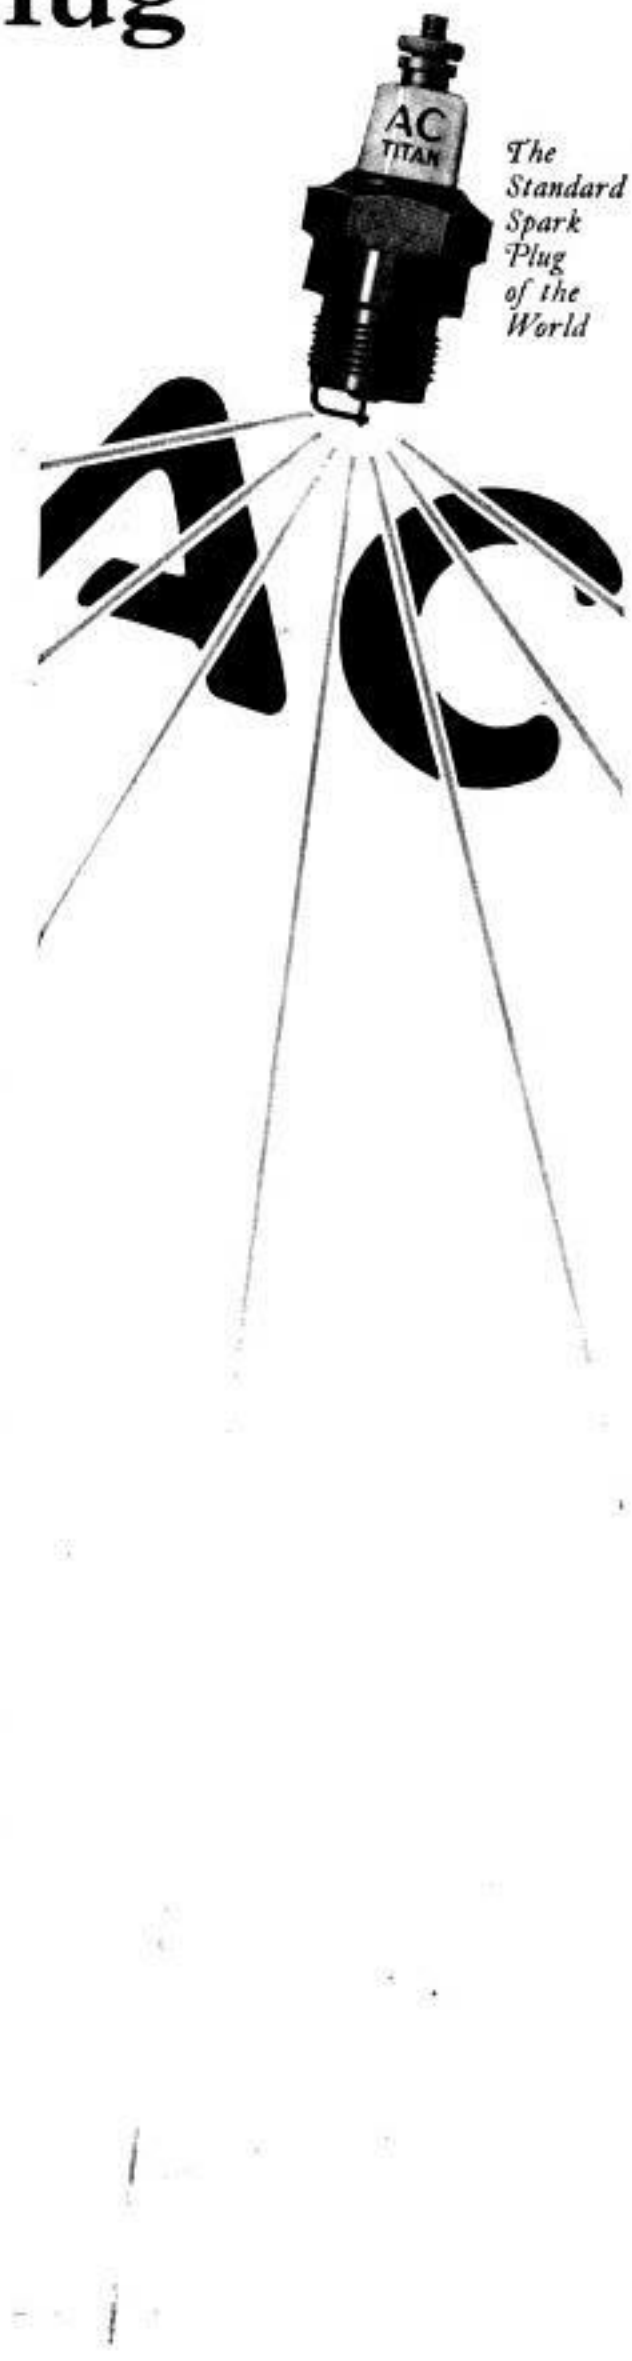
Most engine trouble comes from worn-out or incorrectly designed spark plugs.

If your car starts hard, *don't run the battery down;* if it misses and splutters, *don't blame all the trouble on the carburetor and piston rings.*

Probably all you need is a set of the new special AC 1075 Spark Plugs for Fords.

Every Ford owner knows the faults of ordinary spark plugs, and AC 1075 is specially designed to put an end to all the old annoyances.

AC 1075 for Fords was designed by the same experts who have designed and made for years the AC Plugs used by most builders of costly cars.



Put a complete set of these plugs in your Ford engine and see how much the performance will be improved.

If your Ford dealer will not supply you, you can obtain these plugs from any other good dealer.

No matter what car you drive, your engine is handicapped by old, worn-out or incorrectly designed plugs. There is an AC Spark Plug specially designed for your car. Buy spark plugs by name. Ask for and be sure you get AC's.

AC Spark Plug Company, FLINT, *Michigan*

U. S. Pat. No. 1,110,227, April 14, 1914. U. S. Pat. No. 1,216,139, Feb. 13, 1917. Other Patents Pending

Old French Canada Montreal, the largest inland port in the world, with its historic Chateau Ramezay and alluring side trips.

Quebec, the "Gibraltar of America," with its Citadel, its Plains of Abraham and memories of Wolfe and Montcalm, with its old-world French quaintness and charm, and palatial Chateau Frontenac.

The voyage down the river—the broad highway traveled by La Salle, Cartier and Champlain, pioneering adventurers from the old world—with the beauties of primeval forest and rocky cliffs on either hand, the shores dotted with thriving hamlets and busy towns.

Then the broad expanse of the Gulf of St. Lawrence, past Anticosti, the Magdalens, Cape Breton Island and Newfoundland to the open sea.

A Fresh-Water, Salt-Water Journey An "inland voyage" followed by four glorious days on the Atlantic. A fresh-water, salt-water journey on board one of the large finely appointed "Empress" liners from Quebec to Cherbourg, Southampton and Hamburg.

"Empress of Scotland" The *"Empress of France"* will be joined this spring by the new *"Empress of Scotland,"* the largest liner on the St. Lawrence route.

This new queen of the Canadian service is a magnificent oil-burning vessel of 25,037 gross tons with every appointment for the comfort of the traveler. Twelve public rooms, including regally decorated ballroom, music-room, smoking-rooms, and palm garden.

All the "Empress" trans-Atlantic liners have large well-ventilated staterooms, and service and cuisine to satisfy the most experienced travelers.

Everything Canadian Pacific standard—none better.

One-Class Service The Canadian Pacific also offers a splendid one-class service between Montreal and Quebec and Liverpool, Glasgow, Southampton and Antwerp.

Bridging Two Oceans—Linking Four Continents The Canadian Pacific is the world's greatest transportation system. With 19,600 miles of railway it reaches practically every part of Canada and many parts of the United States. Its trans-Atlantic and trans-Pacific steamship services link America with Europe, Asia, the Orient and Australia.

KEEP TO THE RIGHT—DON'T SHOVE!

(Continued from Page 37)

sections, transport it to the island by steamboat, rebuild it and repaint it. But it was an imposing-looking attraction.

As an unusual sop to the pleasure seekers admission was absolutely free. To the astonishment of the owners the battleship was a complete flivver. Nobody would go in it. Finally it occurred to one of the managers that the fault was in the free admission. This proved to be correct.

He put in a few stuffed animals, some naval souvenirs, a couple of automatic pianos and two dandy lecturers. The admission fee was raised at eleven cents, including war tax, and they packed the ship. They are packing it every day now.

The attractions that I have classified are not engaged by the season at a fixed sum. Each show is an individual unit, usually working with others to make up a group. These groups or syndicates have become necessary, due to the inability of a single attraction to find a location all its own. A man with what he thinks a good attraction applies to a park of established reputation for space. He either pays a lump sum for rental or works on percentage. The man who runs his attraction on a percentage basis is called a concessionaire. The man who pays a fixed amount and gets all that he can make is a privilegee. It is pretty hard to get a concession unless you have a show known to be sure-fire. The chance-takers are privilegees.

These privilegees sometimes clean up, very much to the discomfiture of the syndicate-park manager. It is very hard for an experienced showman to tell what will go and what will not. He is very cagy about taking chances. It is a thing nobody can figure out.

A young fellow came to our office one day with what he claimed was a sure clean-up.

"It's a game of blowing up balloons," he said, at which the manager gave me a look out of the corner of his eye. We both thought him another nut.

"It's sure-fire," he insisted. "Didn't you ever see the excitement and suspense in a kid's face when he is blowing up a toy balloon, the thrill he gets for fear it will burst?"

"I'm afraid there's nothing ——"

"Oh, don't say that!" insisted the young man. "It's a winner. I've got a wireless apparatus that spits and sputters for the ballyhoo. Then I have a flat scene like an aviation field. On this I have a dozen or more toy balloons deflated and lying on the miniature field."

"Say, my boy, I'm awful busy. Now——"

"No, wait! In front where the spectator stands I have twelve small wheels like steering wheels—one for each balloon. By turning these wheels air is pumped into the balloons and they gradually inflate. But if you turn the wheel too fast the pump won't work. If it is turned too slow you don't get the air in fast enough."

Fun With the Pig Slide

"Well, what's the answer?" the manager impatiently demanded.

"Why, a couple of friends pay ten cents each for a wheel. They start pumping up the balloons. The one that bursts his balloon first wins. To a triple winner we give prizes."

The fellow was almost chased out of the office. The next spring he was back again with his pet idea. The manager finally agreed to give him a location for the season for twenty-five hundred dollars cash. He planked it right down. It turned out to be one of the best-paying games in the park. I have seen men and women stand there and spend as much as five dollars just for the thrill of bursting the little balloon. There is always a nervous scream of excitement from the girls as it pops.

The first day this young man took in one hundred and ninety dollars.

This year he will be a concessionaire—if he wants to be.

Another fellow came along one day with what he described as a pig slide. He also went away disappointed. But he wouldn't give up. He is now making good money. The pig slide is a ball-throwing game. When a thrower hits the bull's-eye in a curtain a little pig is released from a cage above, and with feet spread out, jumps on a slide just like those you have for the children. At the end of the slide the little squealer flips in the air and lights on a mattress. He then runs like the dickens to get back under the curtain.

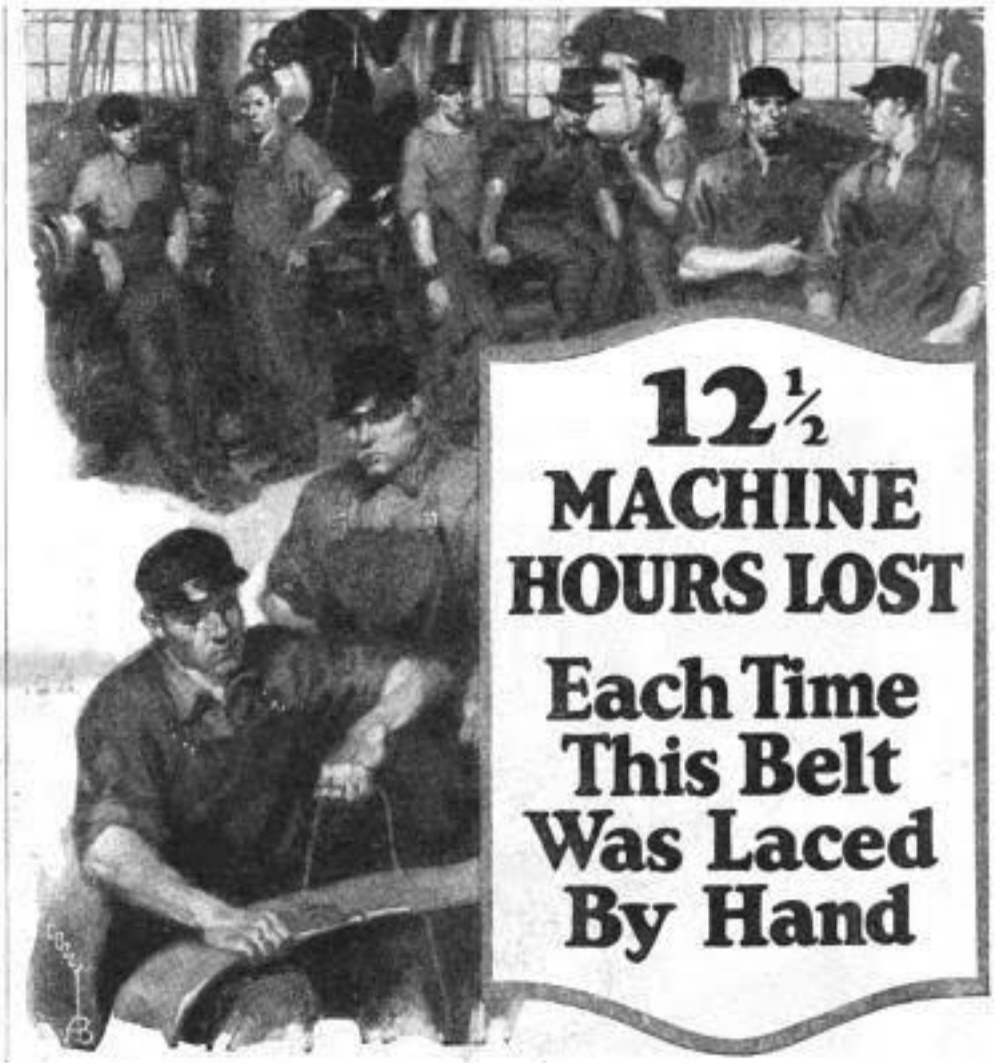
We didn't believe this at first. But we were quickly convinced. That man is a pig trainer by trade. He knows the way a pig thinks and he says a pig never loses a notion once he gets it. The funny thing about this game is that the little pigs love to take the slide. It is the cute way they do it that delights children and old folks alike. There are twelve pigs in a row of small cages on a platform above the curtain. They actually squeal for the chance of sliding.

The Society for Prevention of Cruelty to Animals thought this was a violation and called at the pig slide one morning. They got there during rehearsal. The man was training new pigs. By a funny kink in a pig's brain he just naturally has to have his slide. During the off hours they were sliding voluntarily. The inventor of the idea showed the committee how he trained them. As the pigs run back under the curtain they are allowed a pull at the nipple of a nursing bottle. They soon know that to get milk they must take a slide. Once they have been trained—it takes about ten days—the nursing bottle is discarded.

The committee not only approved the game but stayed there for an hour to watch the little porkers' acts like small boys. It really is fascinating.

The man invented this combination animal act and ball-throwing game at Venice, California. He tells me he trains as many as a thousand pigs a season.

Popular Stand-bys



You never can tell who is a nut and who isn't. I suppose at first they thought the man who invented the scenic railway crazy. I know we thought the inventor of the Ferris wheel a bug. Those things are no longer novel. They are staple. In fact all riding games are good, sound stuff. Sometimes they get too dangerous and have to be closed for fear of damage suits. The public will always take a chance. It has been necessary for some companies to take out liability insurance on these thrilling rides to keep from going broke. The rate is very high. My scenic-railway neighbor paid eighty cents on the hundred dollars last year for protection against damage suits. A few years ago one concern at Coney had to face one hundred and forty-eight damage suits as a result of accidents—had to go out of business. But the games are pretty safe now.

The patronage at the riding games increases every year. An old scenic railway that has been running twelve years paid a bigger profit last season than it did at the beginning. The trick in making money at the rough games such as the human roulette wheel, the slide, witching waves, cave of the winds, and so on, is to make part of the spectators entertain the others. Many people go in to watch the customers more than the games.

One fellow thought up the brilliant idea of giving each girl a domino clown suit to keep from ruining her clothes on the more daring devices for fun. They could pull these on right over their dresses and then take all the rough chances they wished. It was a popular move. The place was crowded to see the show. I've seen girls there from all walks of life. Members of New York's smart set are not at all unusual, acting as clowns.

This idea, in addition to working as a drawing card, developed an unexpected source of profit. A deposit of fifty cents was required for the clown dresses, though no charge was made for their use. Eighty per cent of the revelers drop their dominos right where they take them off and won't bother about going back for the fifty-cent deposit.

Now that's what I call pretty good show business. The customers pay for admission for each individual game and then pay an additional fifty cents for the privilege of acting as entertainers for the rest of the spectators.

In a Michigan factory (send for the name) where 25 machines are driven from a single shaft, a broken belt means 25 idle machines. Lacing the belt by hand took 30 minutes and wasted 12½ hours. Now the Clipper method saves 10 of these 12½ hours.

Today one man and a twenty-five-dollar Clipper machine, instead of four millwrights, take care of the 1600 belts in this plant—light and heavy duty and high speed belts of leather and composition from 2" to 12" wide. Due to the speed of the Clipper method and the superior strength and longer life of the Clipper joint, the company's books show a *clear saving of $2500 a year over* the obsolete way of hand lacing.

Based on a large number of belts, this total figure is exceptional. Yet our files contain equally convincing reports on the experience of hundreds of Clipper users, large and small. Authentic data have been gathered from busy officials to convince executives that maintenance costs *will come down* wherever the Clipper is used. A letter or postcard will bring them to you without cost.

The new and lovely Hostess design

A NEW achievement in silver design is the exquisite Wallace "Hostess." So distinctive, so graceful, so irreproachably correct is this pattern that it promises to become the most fashionable service of the year.

Because this design is the embodiment of gracious beauty and refinement, because it so truly translates the spirit of hospitality into silverplate, it is called the "Hostess." And it is so well made by Wallace silver craftsmen that it is guaranteed without time limit.

When the Wallace Company recently found it possible to reduce its prices, this beautiful new design, as well as the ever-popular Athena and Alamo patterns, was included in the revision. The following prices are now in effect:

Teaspoons	that were	$ 8.50	a doz.	are now	$ 6.50
Dessert Spoons	" "	15.50	"	"	"	12.00
Dessert Forks	" "	15.50	"	"	"	12.00
Dinner Forks	" "	17.00	"	"	"	13.00
Butter Spreaders	" "	13.00	"	"	"	10.00
Salad Forks	" "	15.50	"	"	"	11.50
Cold Meat Forks	" "	2.25	each	"	"	1.75
Berry Spoons	" "	3.50	"	"	"	2.75
Gravy Ladles	" "	3.00	"	"	"	2.25

The "Hostess" comes in both flatware and hollowware, so that complete dinner and tea services may be obtained. It offers innumerable suggestions for gifts.

The Wallace Hostess Book tells by attractive pictures and text just what every hostess wants to know about correct table settings. Sent postpaid for 50 cents. Address: Hostess Department, Box No. 14

Hostess

1835 R. WALLACE

R. WALLACE & SONS MFG. CO.
Wallingford — Connecticut
SILVERSMITHS FOUNDED 1835

Though there is really little that is new in principle, we get many novel improvements on old ideas. For instance, they have recently revived interest in the Ferris wheel by a new trick. They have just erected one in Coney Island that not only goes round but takes dips. That came about in a funny way. A small delicatessen dealer in New York had been working for years on the old perpetual-motion gag. He thought he had found it in a Ferris-wheel model. He showed it to a greengrocer and the man got so interested that he sold out his store to go into the enterprise. All the money was sunk of course.

The inventor had an idea that by using an eccentric axle, a sort of cam shaft, he could cause a sharp dip when the wheel reached the apex of its revolution. This dip, he believed, would give the big wheel fresh impetus and cause it to keep going around.

"That's not perpetual motion," a scientist told him. "But that dip is quite a trick if helped along with engine power. It ought to give a thrill."

The inventor was discouraged at first, but the groceryman saw a fighting chance to get his money back. He made a canvass of all the storekeepers that he knew. His appeal was so strong that little investors kicked in from five hundred to a thousand dollars apiece until a company had been formed with a capital of one hundred thousand dollars.

Fixing the Damage

After two years of dickering and disappointments the delicatessen company, as the gang calls it, got a location and erected their wheel. It was passed by the board of inspection. You should have been there to see the first test! The little stockholders went crazy with delight when they saw the swings dip down and up again and then revolve evenly when the big wheel reached a certain point in its revolution. The eccentric axle had done the trick.

The delicatessen man will not go down in history as discoverer of perpetual motion; but he has his patents, and the little grocers and delicatessen dealers are going to get their money back—and more.

There is not the slightest danger in that wheel, and young people seem to like it. In fact I have never known of a Ferris-wheel accident.

Prohibition has saved many a show from going broke. I may have notions of my own about the principle of prohibition as a law, but I've got to admit that it is the biggest thing that has happened for the show business since I joined that medicine show out in Missouri. It was the drinking and carousing that made Coney Island a tough place. We are free from that now. The crowds have increased noticeably and are much easier to handle. The better class of people come out now without the old fear of running into rowdyism. Accidents are so rare that we don't even figure on them in most of the shows.

On account of my age I am frequently called in to settle some dispute between a showman and a patron. In the old drinking days I arbitrated many funny squabbles.

I'll never forget a drunk who practically wrecked a Jap's ball-rolling outfit—you know, the kind where wooden balls are rolled into little holes that are numbered, the prizes depending upon the largest number of points. I firmly believe my presence prevented that Jap from committing murder. His place, as usual, was decorated with an expensive array of hanging china plates, tea sets, idols, chandeliers, and so on.

The drunk had just come in from a whirl at the African dodger, where baseballs are thrown at a darky's head sticking through a hole. He bought a dozen balls from the Jap. Thinking it the same kind of game, he began throwing the wooden balls at the painted plates, teapots, dolls or anything that was suspended over the rolling board. You can imagine how near that Jap came to having apoplexy and how far the disaster had gone before the drunk could get the idea into his head that he was not having a whale of a time at the best game he'd seen all day. As arbitrator I fixed the damage at three hundred dollars, the drunk agreeing to pay half cash. He gave a note for the balance.

The people who have suffered as a result of prohibition are the motion-picture halls where admission was free but patrons sat at little tables eating sandwiches or hot dogs and drinking beer while the picture ran. The profit of course was in the sales. These halls are too dark and gloomy for a number of people to sit there and d soda pop. They had rather be outsid

Though I am only seventy-five, I noticed of late that the younger show don't look upon me as if I was one of t They are beginning to regard me as a of patriarch, and I can feel it—keenly These newly hatched promoters call hard-boiled, because they say I am alw sniffing at their creative ideas. Believe I've got a right to sniff.

What do you think of a syndicate telling me the other night how he swelled the profits by conceiving the of grouping his shows so that a couldn't get away from one without sp ing money at the other, even though he paid a general admission for all?

"We pulled the trick," he said prou "by putting in special reserved seats attractions that they were supposed to free. They could see 'em all right, bu was a tough job. They fell for the e dime every crack."

Now that was certainly good for a s It is exactly the idea on which *Barn* made his old place a success in the '7 I worked for him then as a clown. He hi me, he said, because my comedy was cl and I didn't ring in so many saloon vertisements.

In the old days, you know, clowns us to come on saying, "I've just come fr Casey's around the corner, where I got t best drink of whisky that ever ran down gullet. When I see whisky like that I wi I was a giraffe. It would taste good *fo* half hour," or something like that. P didn't like that kind of stuff.

A Floating Circus

Barnum had decided to put in a co tinuous show, as he called it. On the t floor was a freak outfit. The crowd, havi paid general admission for 'everything twenty-five cents—would be herded to t circus on the next floor down. They cou see it through a crack and they could al see plenty of reserved seats for anoth quarter. At the theater below it was th same thing, and so on. Before getting o they had been nicked for a two-dollar not

Now don't you think I was entitled to sniff at this bright young man?

Then they come to me once in a whil and tell me about some stupendous ente prise that has been planned and attemp to astonish me with the way they will tak a chance on spending big money. It make me laugh. Why, showmen are pikers i this day and time, comparatively speaking

In 1859 and 1860, as a small boy, I worked for a gigantic floating circus on th Mississippi River. What do you know about that? A company was organized and built an enormous barge with a regular arena, reserved seats, gallery and everything. It had a seating capacity of three thousand. It was called the Floating Palace and represented an investment of over four million dollars. That was some money in those days. I guess the boys would think it quite a chunk to-day.

In that circus boat we manufactured our own gas for lighting purposes. We also installed the first calliope in the world. The idea of the calliope came from putting a few flourishes on the steamboat whistle, which always notified people that the circus boat was coming.

We had our regular advance agents advertising the circus just as they do to-day. We made regular stops at the landings and gave an old-fashioned two-ring show with all the trimmings. To show you that we knew something in those days, we had a clown who got in a big tub and floated around in the water drawn by eight swans in ribbon harness. From this tub the clown would give the ballyhoo to draw the crowd down to the water's edge and we would herd them on board.

That show was a tremendous success, and, I believe, would pay to-day if somebody had nerve enough to tackle it. Have they?

The floating circus was put out of business by the Civil War. We had landed at New Orleans, our last stop, when war was declared. The authorities immediately seized our boat and ordered us all out of the country. The circus boat was taken across the river and turned into a hospital. None of your smart young fellows has been game enough to revive it.

Now if you think me an old hard-boil with nothing to back up my sniffs just put that in your pipe and smoke it.

PRATT & LAMBERT
VARNISH PRODUCTS

Painted by Anita Parkhurst. Copyright 1922, P & L.

HAVE you an old table or some other cherished piece in your garret? Making it new with "61" Floor Varnish, Mahogany or Walnut, is not only a gladsome task, but also a worth while economy.

The time proven wearing qualities of "61" Floor Varnish on floors are even excelled when "61" is used on furniture and other woodwork. It possesses a *combined* wear resistance and water resistance in every-day service, which can never be demonstrated by varnish tricks and stunts.

Let no overzealous claims for some varnishes dissuade you from making a comparative *time* test of "61" Floor Varnish. The beautiful, transparent "61" colors stain and varnish with one stroke of the brush. They flow on smoothly, without streaks, laps or brush marks.

Pratt & Lambert Varnish Products are used by painters, specified by architects and sold by paint and hardware dealers everywhere.

Guarantee: If any Pratt & Lambert Varnish Product fails to give satisfaction, you may have your money back.

"'a thing of beauty' . . . most modern range"

That a range may be "a thing of beauty" as well as of utility is demonstrated by this modern achievement in range design. Its smooth surface of porcelain is easily kept immaculate. Compact and well proportioned, it occupies small space. And the grace and beauty of its appearance are reflected in its exceptional efficiency in cooking and baking.

It is "The Range of Simplicity and Thrift," famous for its Simplicity, Economy, Beauty and Compactness. See insert number two—a mere twist of the wrist changes completely from Coal or Wood to Gas. No parts to take out; no dampers to operate. Automatic. Insert number one shows Washable, Sanitary, Univit Porcelain finish, made in Peacock Blue or Pearl Grey; durable, unbreakable. Insert number three shows Pastry Oven. The equipment includes Baking and Roasting Oven, Pastry Oven, Broiler, Warming Closet, Self-Starter for Gas, Gas Kindler for Coal.

Keeps kitchen cool in summer, warm in winter. Economical, wastes no fuel. No worry about Gas Shortage. At all good dealers in plain, nickel or porcelain finish—cash or terms. Dealer's name and illustrated booklet on request.

THE GULF IMPOSSIBLE

(Continued from Page 13)

necessary animals of the farm, with no grain left for the teams. When this is the showing on the average farm, with nothing for fertilizer, upkeep, taxes and interest on the investment, it is high time for everybody to begin to ask what is really meant when the leaders of organized labor boast that they will surrender none of the advantages that were gained during the time when the country was in distress of war and was crowded to the wall for its very existence.

Under these conditions a mechanic with nothing invested and no risk can lie still half the time and make the full gross income of the average farmer operating a two-man farm, not to mention the vast mass that lie below the average and that must yet make a living for themselves and families if half our land is not to be deserted.

A miners' strike is threatened now because, according to the public press, the "average miner" gets "only $7.50 a day for a hundred and eighty-two days in the year." Yet this is $165 more than the renter's half of the average farm of a hundred and sixty acres, even if every acre were in wheat or corn, which is impossible; and the renter must provide teams and tools and extra labor, for a hundred and sixty acres is more than a one-man farm. On top of this difference, the miner gets his coal and light cheaper than does the farmer, and carries no risk whatever in the business.

The farmer's troubles began suddenly in May, 1920—almost two years ago—when prices of farm products dropped out of sight almost overnight, and he lost in a twinkling more money than it would take to pay the much-talked-of soldiers' bonus. He was suddenly confronted with world conditions following the Great War, with no protection against low prices save inflation of the currency, which no sane farmer would advocate with Europe's example before his eyes, and against which, fortunately, our financiers stood as a stone wall.

In the meantime everybody talked about the need of lowered price levels, but at the same time did everything possible to maintain high prices in his own particular field, with the result that in most lines there was for many months no perceptible change, and in some commodities the prices actually increased under the irresistible pressure from below.

This combination forced the farmer out of the retail markets except for the barest necessities, and the country called it a buyers' strike. There was no general buyers' strike, for then, and even until now, most of the people who have money or can get it are buying everything that is loose at both ends.

The Buyers' Strike

But the farmer was effectually out of the markets. He could not buy a self-binder and give half an acre of wheat for every day's work of the mechanic that made it, so he made the old one do a while longer. He could not carry oats enough on his back to buy a new necktie, so he tied his bandanna around his neck and went ahead. He could not burn dead animals without skinning and still pay ten to fourteen dollars a pair for shoes or twenty for boots, so he nailed on taps and went without. He could not buy rugs and furniture at prohibitive prices for the young married people, so he divided the household supply with them, and both got along. He could not buy fur coats for his family at ten to twenty acres of corn apiece—only laborers could afford these luxuries—so he turned up his collar and whipped his hands around his shoulders to keep them warm. With thirty-five-cent corn he could not pay the five dollars and board demanded by huskers, so he hogged down the crop and gave grain to starving Europe.

The American farmer is a good liver and progressive when he can afford it, but he is a past master also in the gentle art of getting along when hard conditions come his way. So like other people, he proceeded to dig in; and without analyzing what had happened, the people of the town called it a buyers' strike, without stopping to realize that one-third of the buying power of the country had been suddenly and effectually paralyzed.

No wonder the city thought that all the world had gone on strike when the farmers shook their heads and stayed at home. The little towns met it directly and understood it, but the large cities a thousand miles away have hardly yet begun to comprehend that a sizable corner stone has been pulled out of the very foundation of their business, for the effect is spreading to enterprise of every kind, even to that farthest remote from actual farming.

Following close upon the so-called buyers' strike came the somewhat wholesale discharge of employes and the sudden realization that we had a national problem of unemployment on our hands. The public in alarm called a country-wide conference and labor leaders cudgeled their brains for devices to make every available job support as many laborers as possible. Bills were even drawn taxing the land for the relief of unemployment.

It did not seem to occur to most people to connect this problem of unemployment with the gulf that had formed between the country and the town; and yet how could we expect to lose a third of our best customers for manufactured goods without the results being felt not only in reduced profits in business but in unemployment as well? The stream of goods quickly dams up when a third of the buyers stay at home, and manufacturers must shut down production or go bankrupt. Hence the unemployment; and it is just about in proportion to the ratio at which the farmer has been forced out of the markets.

Leveling Down Inevitable

Back of every farmer, or beside him, is a laborer making tools, machinery, clothing, building materials, furniture, automobiles and what not for the farmer and his family. As long as the farmer can buy these things the laborer will have a job, for the farmer is a good buyer. But when price levels become such that the farmer quits buying, then that particular laborer is out of a job, and he must either go hungry or else compete with other laborers in making goods for people other than farmers, and thereby force others out of their jobs or else force that portion of the public which is still in the markets to support two men for one job.

And that is what has happened now. Hence the large proportion of unemployment and the still larger proportion of overmanned industries that hang upon the neck of struggling prosperity like dead weights upon the feet of a drowning man. And this condition will continue until this gulf between the country and the town is in some way closed up.

It requires no argument to show that an immediate object to be attained is to get the farmer back into our markets, for neither the manufacturer, the tradesman nor the city laborer can afford to lose, for any considerable time, this third of their patronage.

The one absolute condition is uniformity of price levels and the total abandonment of the idea of advantage. Advantage means that the under dog must ultimately give up. This is strategy in war, but it is suicide in business.

Either the price of farm commodities must rise or else the value of manufactured goods and the cost of labor and transportation must come down, for the connection must in some way be made if healthy business is to be reëstablished.

With European conditions what they are, with thousands of American laborers out of employment, and with nearly every standard job overmanned until capitalized enterprise is loaded to the gunwales, it is only a fool or a knave who would talk about anything like a significant rise in the prices of farmers' commodities. The only solution is in leveling down, not in ignoring the situation by mere talk about leveling up. We have walked on stilts long enough. Now we must walk on solid ground and give over that age-old game of trying to get something for nothing.

The world lives upon goods, not upon money. Our civilization rests upon adequate food, upon sufficient clothing, upon comfortable shelter and upon fuel to heat our homes and drive the machinery of manufacture and transportation.

The farmer has produced the food in abundance, and it goes at whatever price

Here's a Dollar ... use it for FYRAC *Spark* PLUGS

We have arranged with Fyrac dealers to present you with a certificate worth $1 on the purchase of a set of Fyrac Spark Plugs for your car.

To get best results from *any* motor, we have always recommended that Fyrac be used in every cylinder. We make this offer to introduce Fyrac, in sets, to *you*.

You wouldn't match six men in a race, and weight down four or five with iron. Why handicap your motor by using ordinary one-point plugs in four or five of the cylinders? Your motor should run *uniformly* in *every* cylinder to get best results!

When you buy Fyrac, you are buying a big new idea in spark plug performance—One Inch Firing Surface. Instead of a *single* spark, Fyrac produces a *volume* of hot, fat sparks along its entire Inch of firing surface, igniting *all* the fuel vapor and giving each explosion its maximum power.

You will get new smoothness, new pep, new power and more miles per gallon when you use Fyrac in every cylinder! Go to the nearest Fyrac dealer. Ask him to demonstrate One Inch Firing Surface.

Ask him, too, to show you our certificate worth $1 on the purchase of a set of Fyracs.

$1

In Canada $1.25

the buyer is willing to pay, in full accord with the fundamental economic laws of trade.

But in the face of these conditions capital in many branches is seeking an assurance of profit regardless of what enterprise can pay. This is notably true in railroading, and the guaranteed income of railroad capitalists was no small element in putting the farmer where he is to-day.

Besides all this—and what is of even greater importance in the long run—those who make our clothing, those who build our houses, those who dig our coal and those who man our distribution systems—are all possessed of the fiction that high wages and short hours can be forced upon the world and in some way the consequences be avoided.

The result is that clothing is too costly for even those who made it out of wool that does not repay the farmer the cost of production. We are largely homeless because the builders refuse to work for a wage that either capital or the farmer can pay or to do enough in a day so that they themselves can buy the results of their own labor.

The consequence is that rents are prohibitive and families are homeless, while the building trade is practically destroyed and mechanics are haunting the streets for odd jobs at unskilled labor. Our mines are double manned, and miners are asking the Government to save them from starvation at the very time when the cost of coal has closed many factories and thrown other laborers out of employment, while a general strike is threatened among the miners to force a continuance of present conditions.

In short, the little that we do accomplish is at the expense of fearful inroads upon the capital of the country. In the meantime the farmer is driven more and more out of the markets and more and more back upon his own resources, tending to make permanent what ought to be merely a temporary condition in the early stages of reconstruction.

Much is said just now about the revival in agricultural business, due to the fact that wheat went up four or five cents a bushel the other day, and lambs a cent or two. Both settled back immediately, and are seesawing up and down. The real revival, so far as there is any, comes from the fact that sanity has replaced insanity in thousands of minds, and the well-to farmers are buying machinery and l stock cheap of their own neighbors who being forced out of business—in o words, making money off those of t own kind who by force of circumstances liquidating from farmers to floaters selling out for what they can get.

The other element of stability lies in fact that thinking farmers have given hope and expectation that sanity will p vade the ranks of organized labor u the economic fallacy of force in busin is further demonstrated. And they h settled down to the policy of doing the b they can under the circumstances u their partners in business are willing to p duce in tangible goods, or render in hon service, the full equivalent of what th are getting from the farm. Until th there will be no real revival in busine because not until then will all idea of a vantage be abandoned. Advantage mea not production of wealth but transfer fr one to another.

The farmer cannot prevent the adv tage that is against him now, but he c largely prevent its operation, and that what he is forced to do by remaining large out of the markets until price levels w permit him to reënter on a business basis.

Labor will have to abandon its progra of force to compel high wages and unde production, capital will have to give ov the principle of guaranteed income at wha ever cost, and both must abandon the n device of passing it on to the consumer, f the farmer has largely slipped from und this impending avalanche and is gettin upon solid business ground, such as it i and more and more the ultimate consum is the capitalist and the laborer.

Both these warring elements, capit and labor, will have to get upon a soun economic basis before they can again d healthy business with the farmer. He ha dug in until these warring factors hav settled their quarrels, or if not settled the have agreed to do business upon a scal which he can meet and upon which he ca live. Both capital and labor must produc more for the outlay before they reach equa efficiency with the farmer, and not unt then can the producer of our foodstuff reënter the general markets of the countr or business substantially revive.

TROUPING WITH ELLEN

(Continued from Page 7)

"Poor grandfather!" said the mother. "Lucky he didn't live to see me now. But I wish he could have seen you, Ellen. Indeed I do."

"Say, he'd be pleased. Me in the chorus!" Ellen laughed.

"He'd be pleased to know you wasn't satisfied with—this." The older woman made an aimless gesture about the shabby little room. "Well, are you ready? Crawl in, and I'll pin the covers round you." Her red chapped hands busied themselves over her favorite child. "It's good to have you home, Ellen," she said, and kissed her. Then she blew out the oil lamp. "Good night, Ellen. I'll tell them they ain't to wake you early in the morning."

"But, ma ——" Ellen began. Now, in the dark, she thought she had courage enough to mention the briefness of her stay. But she hadn't. "I want to get up early," she ended lamely.

"We'll see about that," her mother replied. The stairs creaked beneath her heavy, tired tread.

For a few moments Ellen Llewelyn lay awake. The sound of hoarse masculine snoring drifted down from the floor above and echoed through the tiny house. A soft white light from the snowbound outdoors came in through the one window and revealed to her again the poverty of the room where she lay.

It was always a shock, this coming home, this realization of the surroundings from which she had escaped: Main Street and the music store; the mills, whence came the few soiled dollars on Saturday; River Street; this house; her family. It made all her ambitions seem so impossible of achievement, all her efforts to learn from Lil and others and from books, to make something of herself, appear so hopeless. What was the use?

No, no! She clenched her fists beneath the worn bedclothes. She would learn, she would go on, she would be somebody in the end! Here in this tiny room she took the oath anew. A clock in the kitchen struck three. The sound of snoring grew fainter and fainter still. She fell asleep.

From his place over the tattered sofa the pastor of the dissenting chapel looked down on her approvingly. He was nothing but a crayon portrait purchased from a fresh young agent on the installment plan—but he managed it.

II

WHEN Ellen opened her eyes her mother was bending over her and the little room was bright with sunshine.

"I didn't like to wake you, dearie," the older woman said. "But it's nine o'clock, an' Dave an' your pa want to read their papers in here. They been walkin' the kitchen floor like caged animals."

"Nine o'clock!" Ellen sat up quickly. "Ma, you hadn't ought to let me —— Wow!"

"What's the matter, Ellen?"

"My neck. Stiff as a board."

"There! You wasn't comfortable here. I knew you wouldn't be."

"Why, yes I was, ma. Slept like a top. Only I guess I didn't arrange my neck like I ought to have before I dropped off." She stood up in her lacy negligée, an incongruously lovely figure for 13 River Street. "Nice an' warm here now."

"I was in an' fixed the stove at half past seven. You never heard me. Oh—here's your pa an' the children."

Evan Llewelyn, a stocky, slouching man with a thick black beard, came in. After him came Dave, collarless, clasping a Sunday paper under his arm. Then Mabel, flashy, overdressed in her cheap finery, determined to show her sister that she, too, was a woman of the world.

"Well, Ellen," said her father. He kissed her, then stood staring at her with his dull, expressionless eyes. "How are you?"

"I'm fine, pa. How are you?"

"I ain't so good."

THE INDEX TO YOUR STANDARDS OF LIVING

THERE is one room in every home which is the key to the real standards of living of that household.

The furnishings in the rest of your home reflect, from necessity, the limitations of your income.

But whether this one room in question reflects your sense of refinement, your ideals of hygiene and sanitation, is a matter, not of money, but of pride.

For you can have a bathroom as finely equipped as those you have admired in hotels of the first class or in attractive homes, at a cost within the reach of the most modest purse.

Most people have a mistaken idea of what a fine bathroom costs. An attractive, modern Kohler bathroom such as that pictured above costs a surprisingly low sum.

There is a Kohler plumber near you who will be glad to give you an estimate of the cost of replacing your old plumbing fixtures with glistening, snow-white Kohler Enameled Plumbing Ware. Call on him now! He can give you much useful information.

You have always known of Kohler Ware—bathtubs, lavatories, kitchen sinks—as beautiful and durable. You know Kohler Ware is used in the world's finest hotels and in countless thousands of homes and apartments. You, too, can enjoy their beauty.

Send for interesting, free booklet illustrating modern bathroom, kitchen and laundry fixtures. It will give you many valuable ideas. Write today.

KOHLER

Every piece of Kohler Plumbing Ware is exclusively distinguished for (1) the snowy whiteness of its durable enamel (2) the uniformity of this whiteness in every fixture (3) the name "Kohler" in dainty blue letters inconspicuously but permanently fused into the enamel for your protection

(Continued from Page 58)

"Hello, kid," said Dave with an airy kiss. "The pride of the family. Say, folks, get next to the lingerie."

"Still the cut-up," smiled Ellen. "Hello, Mabel. You're looking great."

"Thanks," said Mabel. Her envious, hostile eyes took in every detail of her sister's costume.

Dave drew a slender cane-seated rocking-chair up to the window and drew forth the sporting section of the Boston paper. He took out a cheap cigar and lighted it. Evidently, as far as the welcome was concerned, he had done his bit.

"Say—where do I dress?" Ellen wanted to know.

"You go right up to my room," her mother said. "It's pretty cold, but I got lots of hot water fer you. When you finish come down to the kitchen an' I'll give you a bite of breakfast. You'll need it—dinner ain't till one."

"One?" said Dave through the smoke of his cigar. "Why the hell do we have to wait till one? I'm hungry now. Oh, I see—New York manners. Ain't we the swells to-day?"

Ellen turned unhappily to her mother. "Ma, I got bad news for you. When I sent that wire I thought I could stay till Monday. But the old man—the boss—popped up in Albany last night, and he called a rehearsal in Boston to-night. So I—I—got to leave here at ten past twelve."

"At ten past twelve?" Her mother's tone was tragic. She sank into a chair. "Oh, Ellen—an' you away so long."

"Say, that's a good joke on ma," Dave laughed. "She was flying round wild last night after your telegram come. Gettin' ready for Sunday dinner—nothing she had for us was good enough. She had to comb the town for the lady from New York. Dug up money we didn't know she had and bought a chicken. Nothing too good for Ellen. An' now you're going before noon."

Ellen glanced at her mother's face, then quickly away again.

"A damn good joke," Dave insisted. "Give us some more of the white meat, ma."

"Shut up, can't you?" Ellen cried in a tone she had not used since her last visit home. "Where's my pocketbook?" She found it on the table, took out a time-table. "Wait a minute, ma. Yes; there's another train at 2:30—gets to Boston at 7:40. It's a close call, but I'll risk it. I'll stay to dinner, ma."

"That's nice, Ellen," her mother said. "I ain't got anything special, but I like to have you here. You go right upstairs; I'll bring up the hot water. Dave, you might carry her suitcase."

"That's all right, ma. It ain't heavy."

She went up to the cold bedroom where her parents slept.

A double bed, a washstand with bowl and pitcher, a horrible chromo on the wall—nothing more. Her mother came panting after her with a teakettle of boiling water. She filled the basin.

"There's more if you want it," she said. "I'll go an' get your breakfast ready."

Alone in the room Ellen stared about her. She went to the window, gazed out at the dreary back yards, the grimy sheds and outhouses, the row of neighbors' shacks beyond.

Three ragged children were making a snow man, and a memory of her own childhood flashed back to her. Without knowing why, she sat on the edge of the bed and cried, but noiselessly, keeping a cautious eye on the door.

Finally she rose, bathed her face and hands, put on the little blue serge dress. It was smart; it had an air—and only sixteen dollars at a sale on Fifth Avenue. Her spirits revived. She opened her pocketbook, counted out the amount of her fare to Boston, put aside a few dollars besides. "I can borrow some from Lil," she thought. The balance, fourteen dollars, she put in her stocking.

In the kitchen ma had an orange, some oatmeal, coffee. Mabel came in and sat at the table with her while ma busied herself with the chicken and rattled the drafts of the stove.

"How's everything, Mabel?" Ellen asked.

"How would it be?" Mabel wanted to know. "In the mill eight hours a day. A fine life, I'll tell the world."

"Ma says you have a good time—fellows, picture shows."

"She told you that, did she? She's always beefing. Wants me to come home here every night an' read the Bible, I s'pose. I guess after the day I got to go through I'm entitled to a little pleasure."

"A little—sure," said Ellen. "But every night—all the time ——"

"You got a nerve!" cried Mabel hotly. "I notice you didn't stay here an' work in no mill. No; you got out. You went to New York. You didn't stick in this hole like I got to. You went where you could have a good time, dancing on the stage, an' seeing the world, an' meeting lots of swell fellows. An' you come home once every two years for fifteen minutes an' try to tell me what I should do."

"I'm not telling you, Mabel," Ellen said. "Hush up."

"When I get ready," answered Mabel. The bitter envy in her heart urged her on: "It ain't fair. You got everything an' I got nothing. Nice clothes, a fur coat; an' I'm punching a time clock."

"Now, now, Mabel," her mother said, patting her shoulder. "I guess Ellen has to work fer what she gets. I guess it ain't so easy sometimes."

"You said it, ma. I'm sorry if you ain't satisfied, Mabel. I'd do something about it if I could."

Mabel stalked into the parlor.

"It ain't no use, Ellen," her mother said. "She won't listen. Don't you spoil your stay trying to do anything here. I'll get along."

Ellen reached into her stocking and produced the fourteen dollars. "Here, ma. You need coal an' things. Don't let any of them know you got it."

"Can you spare all this, Ellen? It will come in handy. I got to keep a little hid or we'd go on the rocks."

"If this show's a hit maybe I can send a little more. I'll try."

"Don't you stint yourself, Ellen. What you earn belongs to you first of all."

She left her mother and went into the parlor. It had been two years since they had seen her, but the three of them read on oblivious. She stood looking for a moment at her father, frowning above the news.

There was a rumor that he had been a handsome man in his youth, which had been spent in coal mines. Handsome but ineffectual, a drifter, satisfied with failure. Her ugly childhood, her unhappy memories—here was the guilty party, Ellen thought; the one responsible. Shiftless. How she hated shiftlessness! If only he had cared enough to fight!

She passed through the room, went upstairs and prepared the straw suitcase for a quick get-away. Already her heart was heavy with dread of the parting from her mother. She returned to the kitchen and spent the remainder of the morning there, helping with the dinner, setting the table—which stood in the center of the room—studying the mysteries of cooking. Her mother's spirits rose, they became merry over an ancient jest, their laughter rang so loudly that the readers in the other room stirred uneasily over the type, like sleepers dimly conscious of a world awake.

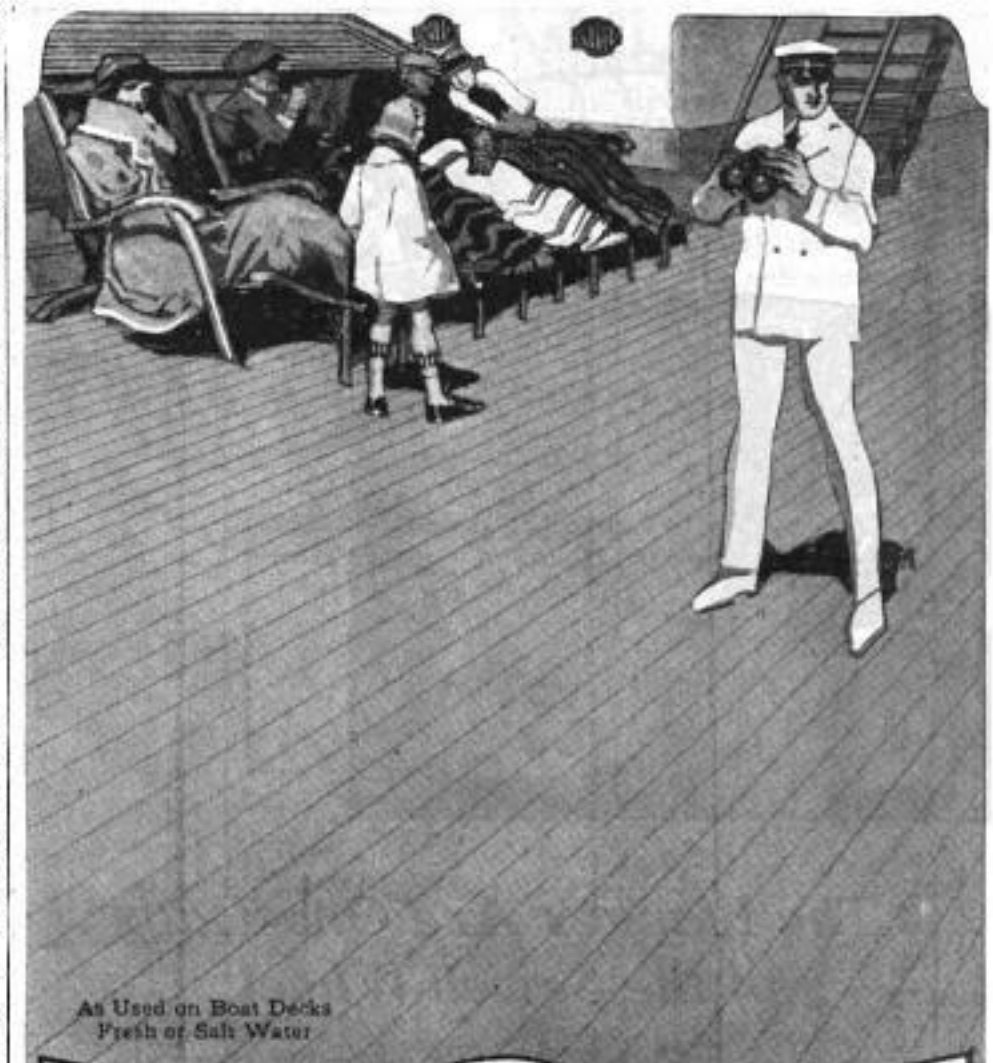
When they sat down to the table Ellen could have wept again, her mother's efforts at a bit of style were so pitiful, so heart-rending. Butter plates, for example. Dave waxed merry over the butter plates, pretended he didn't know what they were for, protested he would have to leave the table if things got any more elegant. He didn't leave, however; he stayed on, the most industrious diner there.

Ellen's wrist watch kept her alive to the hour without any painful show of interest, and at five minutes past two she suddenly broke in on a long story of her mother's.

"Well, ma, I hate to eat and run."

Her mother's stricken face appalled her. "Is it time, Ellen?"

"I'm afraid so. You know how it is with us wolking wimmin." She sought to be light and airy. If only her mother would follow the lead!



"Pa, you an' Dave go to the station with her." Ma was on her feet, all energy. "I'll stay here an' do these dishes. Now, Ellen, do take care of yourself. Where's her coat? Mabel, get Ellen's coat."

There was a great bustle, Dave and pa seeking their overcoats, Mabel running up with Ellen's belongings. Out of the corner of her eye she saw that ma was bearing up well.

"Now, Ellen—you're not to stay away so long again."

"No, ma, I promise."

Pa and Dave on the porch, waiting somnolently after their gorging—and then

As Used on Boat Decks Fresh or Salt Water

KOVERFLOR

TRADE MARK

Resists the Weather and the Wear

KOVERFLOR—the protective covering in liquid form—stands the hard conditions decks, etc., are subjected to as admirably as on floors. It dries quickly, forming a tile-like surface, resistant to weather, water, oil, lime, alkalis, etc. Frequent washings and rough usage do not injure it.

KOVERFLOR is extensively used on wood or cement floors of homes, clubs, garages, theatres, etc. Applied over cement, it prevents dusting and unsightly efflorescence. As a *protective agent*, KOVERFLOR is now saving millions of dollars in preventing deterioration of floors of all descriptions.

Use KOVERFLOR for floors of wood or cement, inside or outside.

KOVERFLOR comes in attractive colors. Its cost per square foot applied is small. Ask your paint or hardware dealer for KOVERFLOR—or send us his name and address and receive the KOVERFLOR Sample Book.

The Flanges Are One-Half of the Sewell Wheel

Experienced motor truck owners now demand protection for their trucks against road vibrations—the direct cause of expense, delays and trouble. Each year thousands of these same experienced owners demand the Sewell protection—"The resiliency built in the wheel."

In the Sewell Wheel these owners have found not only the desired protection, but permanent protection. This permanent resiliency is only made possible with the Sewell flange principle, used in 80,000 Sewell Wheels adopted 14 years ago.

This exclusive flange construction, together with its application, is responsible for one-half the efficiency in Sewell Wheels. It permits the use of a soft rubber cushion, and keeps it soft for years of service.

Write us, or one of our 125 distributors for descriptive matter on the flange type of Sewell Wheels for motor trucks.

The Sewell Cushion Wheel Company
Detroit, U. S. A.

This is the 14th Year of Sewell Wheels

Sewell Cushion Wheels

The Resiliency is Built in the Wheel.

ma limp in her slender arms, sobbing, sobbing. "Ellen—don't forget me—come home—come home."

"Yes, ma. I got to rush—miss the train. Good-by, ma dear." She pushed her mother away almost rudely and was out on the porch, then back for another kiss. Then out again, her cheeks wet, her eyes dim.

"Look out fer that last step—the board's rotted away," pa warned.

She never saw the step, but passed it by a flying leap and was out on the sidewalk hurrying after Dave and pa, and waving her hand to the dumpy little figure on the porch. Then the corner was turned, and ma lost to sight.

"Pa—you ought to make it easier for her," she said, catching up.

"What kin I do?" he wanted to know.

They hurried on, her tears drying in the sunshine.

At the station she learned that the train was fifteen minutes late, and her heart sank. Her job seemed so very important to her now. Pa took to pacing the platform, and Dave tried to borrow five dollars. She told Dave a few things for his own good, and he assumed a sullen injured air. She was relieved when the train came in, and leaped aboard as though it awaited only her presence to start on a mad dash for Boston.

"Good-by, pa. Good-by, Dave. Take good care of ma."

More than five hours of torture followed. Every stop drove her mad; her eyes scarcely left her watch. She saw the old man again: "The call is for eight, and one minute late means your job." And the train was losing—losing. She never should have chanced it—but there was ma's face.

Suppose she were fired—in Boston, in midwinter, three dollars in her purse? And with ma needing her help.

The train pulled into Huntington Avenue Station at ten minutes past eight, and she knew that all was over. The old man never failed to keep his promise in a matter of this sort. She debated whether she should go to the theater at all; it could only mean a humiliating scene. Still—there was just a chance—the old man might drop dead in a fit of apoplexy before he could pronounce her doom.

She squandered one of her precious dollars on a taxi, and by 8:20 she had reached the alley leading to the stage door of the theater. As she jumped out and seized her suitcase a stocky little figure loomed up in her path.

"Andy! What's happened?"

"For God's sake, Ellen, get in there on the stage! It ain't dress—go on just as you are. I'll give you five minutes."

"What do you mean—you'll give me five minutes?"

"I knew you wasn't here, so I haven't showed up myself yet. They can't start without me. The old man's out front calling my ancestors some pretty rotten names, but he's forgot all about you. He'll never know you was late."

"Oh, Andy—you darling!"

"Thanks. Five minutes."

"Three will do."

She dashed down the alley and through the stage door, throwing her suitcase into a corner. Another instant and she strolled lazily on the stage and took her place for the opening chorus.

"Where you been?" demanded the harassed Mickleson.

"Standing round waiting," she smiled. "Why don't we start? It's nearly 8:30."

From out in the dark auditorium came the shrill cry of the old man: "You fell asleep? The hell you say! Do I pay you to sleep? Eight o'clock, I said, and eight o'clock I meant. Look at that watch! Look at it, I say!"

"Yes, sir—I'm very sorry. It won't happen again," came Andy's reply. Good musical directors are scarce, and he knew it. He climbed into the orchestra pit and lifted his baton. "All right, boys," he smiled. "Let's go."

The boys smiled back and put a great deal of spirit into the first bars of the opening chorus. It was a pleasure to drown out the remarks the old man still felt called upon to make.

III

"ALL right," said the old man at last. The time was 1:30. For five terrible hours he had kept them at it, stopping them, denouncing them, starting them off, stopping them again. But now his own remarkable vitality was exhausted; he was willing to call it a rehearsal. "All right. I'm satisfied. I guess we're ready to open in a real town. You're dismissed."

Ellen Llewelyn sank down on a property chair. "Gee," she said, "I'm all in. Out last night until three ——"

"You better get to bed," Lil advised. "I got a room at the Occidental for the two of us. I've a date for supper myself if my friend hasn't beat it."

Ellen rose, and they went to the stage door. She took up her suitcase. Out in the alley a prosperous-looking young man in a fur coat came suddenly to life.

"Great Scott, Lil!" he said. "Thought you were never coming."

"Blame it on the old man," Lil told him. "Simon Legree, we work for. Say, Jack, you're a good sport. I never dreamed you'd wait. Oh—want to introduce my friend, Ellen Llewelyn."

"Nice name," said the young man. "Nice girl, too—I can see that, even in the dark. How are you?"

"Dead and buried," sighed Ellen. "The same to you, and many of them."

"Join us for supper?" he inquired, with no enthusiasm.

"Sure," she said—"any other time. Not this evening—this morning, I mean. Little old hay for mine."

"Ellen's done up," Lil explained. "Well, dearie, you run along. I'll be with you in no time. Ta, ta."

Lil and her friend disappeared into the calm dark of the alley. As Ellen turned toward her hotel the inevitable Andy fell into step beside her.

"Come again on the suitcase," he ordered. "Say, kid—you must be tired." The lights of an all-night lunch *room*—according to the sign, Dan's place—fell across their path. "Want to call on Dan for a cup of coffee?" Andy inquired.

"Thanks. Not to-night. I had a sandwich on the train."

"Have a good visit with the folks?"

"Pretty short. But it was fine to see ma again. Say, Andy—I don't know how I can ever thank you."

"Thank me for what?"

"You know well enough. Not showing up yourself till I came—risking your job."

"But you did thank me, Ellen. You thanked me plenty."

"When was that?"

"When you said that about my being—a darling. Was that on the level, kid?"

"You know it was."

They were at the door of her hotel. He put a hand on her arm. "Then it was the best news I ever heard, Ellen. I guess you know all right how I feel."

"Oh, Andy—I'm so tired. I'll have to say good night now."

"Sure—I understand." They went into the lobby, and he handed the suitcase over to a sleepy bell boy. "Well, pleasant dreams!"

She got her key, and as the smelly little elevator ascended she caught one final glimpse of his honest, adoring face. He loved her, she knew, and one of these days he would blurt it out. She must be prepared.

Sleepily, as she undressed, she thought him over. How different he was from many of the men she met round the show shop. He was decent, he pursued none of the girls with the idea of double-crossing them in the end. On the level, Andy; steady, dependable, always there when she needed him. But ——

Ah, that was it—but. So far as she could see he had absolutely no intention of ever being more than he was to-day. He dreamed at times of writing a popular song, but that was only a dream. He would never get round to it, he was too easy-going, too contented, too—yes, even too lazy.

She saw herself his wife, a tiny flat in Harlem, theatrical papers on the table. Sunday afternoon, a walk on the drive, a stop at a delicatessen to get the supper, some of the gang in, Andy with his collar off, dealing the cards. Working and flush, a good fellow while he had it; then, occasionally, bad times, no job, not a penny saved; worry and recriminations. The years passing, Andy getting fat and dull, standing still right where he had always been, waving his baton frantically, perhaps, but standing still while the great world went on.

"Not for mine," she said firmly as she crawled into bed.

Her decision taken she wasted no further time in thought. She slept, and Lil, tiptoeing in an hour later, was suddenly amused at her own caution.

Teeth That Shine

Note how many you see today

Have you noted how many pretty teeth you meet with nowadays?

Millions of people are combating film—the film that keeps teeth dingy. Those whiter, cleaner, safer teeth show the benefit they get.

We urge you to learn how they do it, and try the method yourself for ten days.

Film destroys beauty

A viscous film forms on your teeth. You can feel it with your tongue. It clings to teeth, gets between the teeth, and stays.

That film absorbs stains, making the teeth look dingy. It often forms the basis of thin, discolored coats. Tartar is based on film.

When that film is left, it clouds the teeth. Some teeth are badly stained. The thin film coat becomes unsightly, not the teeth themselves.

Film is also the cause of most tooth troubles. It holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay. Millions of germs breed in it. And they, with tartar, are the chief cause of many troubles, local and internal.

Now we combat it

Tooth troubles have been constantly increasing. So dental science has for years sought ways to fight that film.

Two ways have now been found. Able authorities have proved their efficiency. Leading dentists nearly all the world over are urging their daily use.

A new-day tooth paste has been created to comply with all modern requirements. The name is Pepsodent. These two effective film combatants are now embodied in it.

Two other benefits

Pepsodent brings, with every use, two other great effects. It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth which may otherwise cling and form acids.

It multiplies the alkalinity of the saliva. That is to neutralize mouth acids, the cause of tooth decay.

These are Nature's great tooth-protecting agents. Every use of Pepsodent gives them many-fold effect. Thus it creates all-important benefits which are now considered essential. To millions of homes it has introduced a new era in teeth cleaning.

Ask Us Now

for this delightful test

This offers a 10-Day Tube of Pepsodent. Send the coupon for it. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear. Note the refreshing taste that follows.

A book we send explains each new effect. So you will see that new protection comes, as well as new delights.

If you are careful enough to brush teeth, learn how to clean them better.

Quick, visible effects

The Pepsodent effects are quick and conspicuous. No user can doubt its benefits. What you see and feel will very soon convince you.

Film is combated. Starch deposits are attacked. The teeth are highly polished. The mouth is left in alkaline condition.

Learn these results, then let your family enjoy them. Children need them too. This is the way to safer teeth.

Let this test show you what clean teeth mean, and you will always want them.

So that *you* can ride on good roads

Thousands of men in our country have chosen as a life-work this endless job—to make rough roads smooth for you and me. It's an idealistic job, but very real and practical, full of hard work and obstacles to be overcome.

We are glad to be able to help in this work. We make culverts of "Armco" Ingot Iron—the rust-resisting iron. The men who make bad roads good know that "Armco" Ingot Iron culverts endure.

They know, too, that when they put an "Armco" Ingot Iron culvert under a road it is there to stay and will not need digging out again every year or two to repair it and cost the people—that is, you and me—a lot of money for "upkeep." The men who built the Dixie Highway know. These two "Armco" culverts, which were installed thirteen years ago, have seen three roadbeds come and go in great floods. What a tribute to permanency in culvert construction!

Roadmakers, contractors, taxpayers, town and city authorities, everybody interested in good roads, should know about "Armco" Ingot Iron culverts—should do whatever they can, when culverts must be used, to see that they are of "Armco" Ingot Iron—the rust-resisting iron.

For culvert information of any kind, write to the Armco Culvert and Flume Manufacturers Ass'n, Chicago, Ill.

(Continued from Page 62)

"Cannon wouldn't wake her," said Lil, nd threw her shoes noisily across the room.

It was noon on Monday when Ellen woke, twenty again, and ready for life. he saw two slim white arms stretched rom Lil's bed toward the grimy ceiling, nd heard the last gasp of a yawn.

"Here we are again," she called.

"Oh, how I hate to get up in the morng," sang Lil. "Especially in winter—and n Boston. Ugh! Sometimes, dearie, I ish I'd turned gay and joined the Palm Beach crowd."

"No, you don't," said Ellen.

"Well, it's a dog's life, this is. Say, oney, put down that window and turn n the heat. Atta girl!"

Ellen knew from experience that this hivery task was up to her; Lil would lie here all day rather than face it. So she arried out instructions. Then, in her ressing gown, she sat on the edge of Lil's ed.

"Seemed merry and bright—that guy in the fur coat," she ventured.

"Jack Prentice? Dearie, he's a prince. Not many of them would wait until two . m. just for the privilege of feeding a poor working girl. But he's a gentleman, Jack s. A Harvard graduate, dearie, with a nice little bond business all his own."

"Honest?" said Ellen, wide eyed.

"Well, he's kept out of jail at any rate," Lil smiled. She had listened to this joke over four hundred times in a show, and had pretty well got the hang of it. "And I'm for him—I'm for him strong."

They went to Dan's place for lunch. The proprietor himself was behind the desk. An old friend, he greeted them effusively.

"How's the show?" he wanted to know.

"They liked us in Albany," Lil told him.

"Don't mean a thing," Dan replied. "Well, I'll be there to look you over. Got two on the aisle, front row. I hope you're good." He rather fancied himself in the rôle of dramatic critic, and indeed his opinions were much more eagerly sought by show people than were those of the newspaper reviewers.

After lunch Ellen took a brisk stroll through the Public Gardens. She went alone, the very idea being repulsive to Lil. After that she tried a picture show. It was six o'clock when she returned to the hotel. Lil was waiting, dressed like something in a fashion magazine.

"Hurry up, honey!" she cried. "Get into your best. Jack just phoned—we're invited to dinner. He's on the way, and he's bringing a friend—a sort of a highbrow, he said."

"A highbrow?" asked Ellen.

"Yes—somebody he picked up at the club. Get that, dearie—he belongs to a club. Come on—take off your coat—I'll do your hair. I want you to look your best. This guy may be a live one, even if his forehead does bulge. We'll look him over anyhow. You never can tell. Hurry, Ellen."

"What—what'll I wear?" said Ellen.

Whatever she wore she looked remarkably sweet and youthful when she and Lil emerged from the elevator twenty minutes later. Jack Prentice came forward to greet them, all pep and ginger, for he belonged to that school of business men. With him was a tall, rather languid young man. His face was thin and aristocratic, his hair blond, his blue eyes kindly.

"Girls," cried Mr. Prentice, "meet my friend, Tony Winterslip. Anthony Winterslip, no other. The pride of Back Bay, venturing out into the world, taking a little nip at the flask of life."

Mr. Winterslip appeared somewhat embarrassed at this form of introduction. He smiled in a friendly way, and shook hands.

"Happy to meet you, I'm sure," he said.

"Be gentle with him, girls," went on the irrepressible Prentice. "It isn't often he escapes from the monastery. This is a big adventure for his unaccustomed feet. Smooth his path."

The adventuring one cast an annoyed look at his noisy friend, and they all left the hotel for the narrow sidewalk of Boylston Street. Lil and Jack went on ahead and Ellen fell in beside the tall blond youth.

"It's—it's good of you to bother," was all she could think of to say.

"Why—it isn't any bother," he answered in a surprised tone.

There was in his voice that faint suggestion of a lisp which may be caught issuing from the lips of Boston's best. He did seem rather wonderful, and Ellen looked up at him in awe. Her awe would have been increased a thousandfold had she been more familiar with Boston and the magic name of Winterslip. Winterslip feet had been among the first to tread these winding streets. Winterslip brains had helped to make their town the hub of the universe. Great statesmen, great clergymen, great educators hung in profusion on the branches of that family tree. For more than a century Winterslip aunts had looked coldly on the world from behind purple panes on Beacon Street.

To-day the Winterslip family had sort of tapered down to Tony. He was the end of it all, the ultimate Winterslip. He lived in the reflected splendor of the past, a quiet, rather bookish young man. Haughty and distant most people thought him. The daughters of the elect, walking of an afternoon along the promenade at the rear of the dignified homes on Beacon Street, would see him out in the middle of the Charles, rowing along determinedly in his single shell. And when they met him later at a dance it seemed that half the chilly river was still between them. That was Tony.

He had allowed Jack Prentice to drag him forth on this adventure, but already it seemed silly and futile to him. However, he was not the sort to let little Ellen Llewelyn see that. He cast about in his mind for some remark that would come within the narrow limits of her comprehension.

"It's rather a pleasant night—for February," he said.

"It's a fine night," Ellen agreed. No argument there.

In the brightly lighted dining room of the best hotel Lil and Jack carried things along at a merry pace, with occasional help from Ellen. Tony Winterslip said little. He had the detached air that the king may have shown toward the beggar maid—early in their acquaintance.

"Wake up!" said Jack Prentice as the dinner was drawing toward a close. "Show a little life, Tony. You're out among 'em, boy! You know, if it wasn't for me"—he turned to the girls—"he'd be sitting in the club library this minute reading some dog-goned book. At it all the time. Bad for the eyes, I say."

"He and Ellen'd make a good pair," Lil laughed. "Can't pry her loose when she gets hold of a book. I trail along with you, Jack. What's the use of it, I want to know. You can read books when you're eighty."

Tony Winterslip was looking at Ellen with a new interest. "You like to read?" he inquired.

She blushed. "Why—yes—I'm sort of fond of it. They all make fun of me, but you can learn a lot that way."

"What do you read?"

"Anything I can get. I've read most of Conrad. I was interested in him because once he didn't even know how to speak English—and the first thing anybody knew, he was writing it fine. And—and Masefield—I think he's great. And I've tried Wells."

Jack Prentice threw up his hands. "Ye gods!" he cried. "Listen to the child. Your affinity, Tony, that's what she is."

"So it seems," laughed Tony, and blushed.

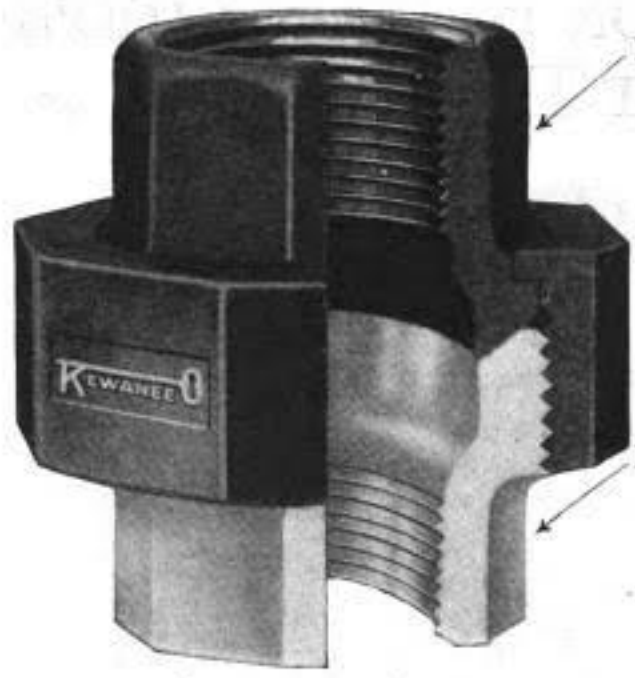
When he dared he raised his eyes and looked again into Ellen's face. Was she telling the truth, he wondered. He rather suspected she was not; it seemed a ruse to gain his interest. Poor Ellen, most of them thought that.

But on the way to the theater he resolved to find out. "Where do you get these books you read?" he asked.

"It's not so easy," she told him. "I join a circulating library when I'm a long time in a town. But they don't have the kind I like best—and those cost a lot."

"What kind do you like?"

"Biographies—when I can get them. I like to read about real people—not just characters somebody has thought up. I like to find out how they made good, and how they did things—and all."



They turned into the alley. "I'm rather fond of biography myself," said Tony Winterslip. "And I happen to have quite a library. I wonder if you'd care to have me bring you some of my books?"

"I sure would. I'd take good care of them."

"All right," he smiled. "It's a promise. I'll drop round some night with an armful."

They paused at the stage door. A stocky figure came abreast of them and passed inside unnoticed.

The new Walworth Kewanee Union

Consulting, Heating and Power Engineers:—

Let us send you a demonstration of the new Walworth Kewanee Union, made of forged steel and forged manganese bronze.

You will grasp the revolutionary principle of this union the moment you handle it. That's why we want to send you one.

It makes an absolutely tight joint, the harder steel "ball" forcing into the softer bronze "thread." The new construction makes it suitable for higher pressures and temperatures. No leak is possible, even when piping is out of line. There are no inserted seats to get loose. It never goes to the junk pile. Its high-grade metals give service indefinitely.

Where an ordinary union corrodes and has to be chiseled off, time is wasted and both union and pipe may be ruined. This can never happen with a Walworth Kewanee Union. Because of the bronze to iron threads, it can easily be disconnected with a wrench and used again and again.

An underwater test with compressed air is given to every Walworth Kewanee Union. This test (which would reveal the slight leaks that escape the usual steam or water tests) proves every union to be tight before use. Its construction warrants its recommendation to withstand 250 lbs. working pressure of steam and all temperatures up to 600 degrees F. (in sizes 2" and below).

We make Kewanee Unions for various requirements—Extra Heavy, Hydraulic, etc. The Kewanee bronze to iron ball joint principle is also applied to Union Elbows, Tees, Boiler Fittings. Write for descriptive folder.

BUTTON BUTTON WHO'S GOT THE BUTTON?

YOU remember the game. The one who had it was "It".

Men and boys everywhere this Spring are playing the game a new way. Men are walking into their favorite haberdasher's everywhere and saying one word—Hatchway. Boys are saying to their mothers, "That's the suit for me." Nobody wants to be caught with a button. It's a time-losing game.

See these garments at your favorite dealer's today. He can get them for you, if we have as yet been unable to supply him, or if he is temporarily sold out. It has been a big job to keep dealers stocked up this Spring, but if you have any difficulty in getting just what you want, we will be glad to see that you are supplied, delivery free anywhere in the United States. In ordering, please state sizes and numbers of garments required enclosing remittance to our mill at Albany. Send for free catalog illustrating complete line of Hatchway No-Button Union Suits and Hatch One Button Union Suits photographed on live models.

Men's Nainsook Suits, $1, $1.50, $2, $3, $5.
(The $5 garment is all silk)

Boys' Nainsook Suits, $1, $1.25.

Men's Knitted Suits, $1.50, $2, $3, $3.50.

Boys' Knitted Suits, $1, $1.25.

The HATCHWAY
NO-BUTTON
UNION SUIT

has not a button, front or back. Step into the legs, slip your arms through the arm holes and you're in. Vice versa and you're out in less time than it takes to tell about it. Comfort that conforms to the lines of your figure. Absolute body freedom and freedom from all annoyance, trouble and inconvenience of lost buttons, torn buttonholes and repair bothers.

FULD & HATCH KNITTING CO.

York Knitting Mills, Ltd., Toronto, Canada, Licensed Manufacturers of these lines for Canada

"That'll be great," Ellen told him. "Good-by—the whistle's blowing. I—I certainly had a dandy time."

"So did I," Tony Winterslip answered. "Good-by." He and Prentice walked away down the alley. "Gad," said Mr. Winterslip suddenly, "that little girl's a wonder."

"A new type to me," responded Prentice. "A reader. Pretty as the devil though. You noticed that, didn't you?"

"Yes—I noticed that," said Tony Winterslip.

Ellen and Lil ran gayly up the iron stairs. It may have been the climb, but Ellen's heart was beating wildly. In the dressing room of the leading man, where he had the privilege of a hook, Mr. Andy Owen was hanging up his overcoat. He bent low before a mirror lined with telegrams, slicked his hair, straightened his white tie.

"Never even saw me," he informed his reflection in the glass.

One Night in June appeared to meet Boston's intellectual needs exceptionally well, and when the old man lined them up on the stage after the performance he was in a mood of kindly affability that was a revelation to those who had never worked for him before. His sheaf of notes was surprisingly thin, and he let them go with the intimation that they would play the season out in Boston, reserving Broadway for the fall.

Ellen was, as usual, the first of the girls ready for the street, and when she came down the stairs Andy was waiting for her. His serious face was sadly out of tune with the joyous atmosphere back stage on the first night of a hit.

"Don't stop for Lil," he urged. "Come over to Dan's place. I want to talk to you."

Dan, his red face glowing with smiles, greeted them as they came in. "You got a knock-out," he said. "You're in for a run. I enjoyed every minute of it."

"Oh, well—wait for the papers," said Andy glumly.

"Papers, hell!" answered Dan, offended. "I say you're over. That's enough, ain't it?"

Andy led the way to a table in the farthest corner and handed over a rather soiled little bill of fare. "What'll you have?" he inquired.

"Oh—just a ham sandwich and a glass of milk," Ellen told him. "That'll be enough for me."

"Yeah—I should think it would. Had a good dinner, didn't you?"

"What if I did? It's no affair of yours."

"It ain't, hey? Well, suppose I make it my affair?"

"Here's the waiter, Andy. Gee, you're cross to-night."

Andy gave the order and remained silent until the waiter moved away. "Who was your tall friend in the overcoat?" he demanded then.

"Name was Winterslip," smiled Ellen brightly. "Nice fellow too. I always did like tall men, Andy. And as for the overcoat, what do you expect in weather like this—a Palm Beach suit?"

"Don't try to kid me."

"And don't you try to call me. What strings you got on me, I'd like to know—sitting there and taking that tone."

Andy bowed his head. "I know," he said; "I'm all wrong. Excuse me, Ellen. But—but—I'm pretty easy-going—but somehow, seeing you with that guy sort of got my goat. For a minute I was wild enough to kill."

"You still act pretty wild to me," she answered, but she regarded him with a new interest.

He leaned closer. "Look here, Ellen, I just been drifting along, but now I'm going to put all my cards on the table. I guess you know how I feel. I'm crazy about you—ever since you walked into Bryant Hall for rehearsals last December —— Let me finish. I ain't one of these four-flushers. I'm offering to marry you."

"Offering? Say, that's fine!"

"Begging, Ellen. That's what I should have said. Nobody's got any claim on me. I send my mother twenty a week, but outside of that I'm free. I ain't much on talk, and I don't read your books and never can, but I make fair money and I'll take good care of you. And I'm—I'm wild about you—honest I am. I don't know how to say it pretty, but I mean it, kid."

The soiled apron of the waiter suddenly appeared beside them. Quick service was Dan's boast. Their simple choice of viands came between them on the table. The waiter ambled off.

"Andy—I said ham—and that p simp has brought cheese. Never mind I'll eat it."

"Oh, damn your sandwich! Excuse n Ellen—but I'm waiting. What you got say? Will you have me, Ellen?

She looked across into his kindly, earn face and saw in his eyes a fire she had nev suspected. A thrill, not unpleasant, ran and down her spine.

"Will you take me?" he pleaded.

"No, Andy," she said gently.

"Why not? Oh—I suppose the lin busy. If you think that tall guy ——"

"Don't be silly, Andy! I never saw h before to-night."

"Oh, well," said Andy bitterly, "I mig have known. I'm all right just to ha round and carry your grip, but that's Good old Andy—the bonehead. I ca talk like a school-teacher."

"Nonsense, Andy. Talk doesn't matt It's—it's more than talk—there's *som* thing wrong with you."

"What's wrong with me?" he demande fiercely.

"You're satisfied. That's the whol story. You're satisfied with this."

"Why not? I'm making good *money* Oh, I know—you want to marry the Presi dent, or somebody. God knows what you' aiming at. Nobody who troupes *with* yo can move fast enough to suit you. Alway going on—to what? Tell me that."

Ellen nibbled thoughtfully at *her* sand wich. "That day you began to rehears us—in New York," she said, "you playe over for us the beginning of a waltz. And little snatch of a fox trot. Things you' started—but never finished. Why don' you finish them, Andy?"

"Oh—I'm busy. I've got a lot to at tend to."

"I'll say you have. You got to leave me in a few minutes and play pinochle with the gang for about five hours. Then, when you get up to-morrow around noon, there'll be the morning paper to read. By the time you get that attended to the evening paper'll be out. Then a nap, then dinner, then the show—and then the gang again. Andy, you're getting nowhere."

"I don't see it. I'm making enough to live on. The way I look at it is, maybe sometime I'll get round to composing, maybe not. For the present, musical directors ain't any too plentiful, and I'm pretty sure of work. I should worry."

"Yes, Andy—you should."

"You make me tired." He drank audibly from his coffee cup. "This is all a bluff anyhow. If you cared anything about me you'd take me, and that would be that. Oh, I'm not blind. You met a rich fellow to-night, and now your head's going round. Anything can happen. Why stop for little old Andy when there's a sea full of bigger fish?"

"Andy—that's not fair."

"Well, you've made a fool of me—the first girl who could say that, if it's any pleasure to you. But I'm through. I'll never ask you again."

He choked on his ham and eggs. Ellen sat for a long moment staring at him with a strange light in her eyes. "Got a pencil, Andy?" she asked suddenly.

No musical director is ever without a pencil, and he handed his over without a word. Ellen picked up Dan's bill of fare, a tattered, stained bit of paper that had lived through a hard day. Without looking at Andy she began to scribble hastily on the back. She finished and folded the paper.

"I wish I had an envelope," she smiled. Andy maintained a dignified silence, but he was still Old Dependable. He produced an envelope with the name of an Albany hotel in the corner. Ellen put the folded bill of fare inside and sealed the flap. Then she inscribed her own name on the outside and handed back the pencil.

"Finished, Andy?" she asked. He gathered up the checks and followed her to the desk.

"Dan, I want to leave this with you," Ellen said. She passed over the envelope. "Just put it in a safe place until I call for it. It's—it's a bet."

"Sure," said Dan. "I'll do that. Many's the stakes I held in the old days when my cash register stood up against the long mirror. But times is changed." He sighed. "High stakes, Ellen?" he asked.

"Seem high to me," she told him.

She and Andy went out into the alley. They walked slowly along. Andy's pride was hurt, his heart heavy. Dozens of things he might say to her flashed through

Empires Perish, But Lead Pipe Lasts

THIS piece of lead pipe had been buried in the ground nearly 1900 years when it was dug up by workmen excavating for a sub-cellar in Rome.

Vespasian was emperor when this pipe was made—the inscription tells that. When Vespasian laid water-pipes of lead in the streets of Rome, he followed the example of Julius Cæsar, who sent plumbers with his legions into barbarian lands. Lead pipe laid by these Roman invaders has been dug from English soil.

❦ ❦ ❦

For centuries lead's non-corrosive qualities have made it the favored metal for water-pipes. Lead gutters, pipe-heads and leader pipes have been used for hundreds of years to carry off the rain from the roofs of buildings. Such lead work is often very beautiful and ornamental.

Often you see a steel skeleton, a bridge, a roof, a railing that has been painted a flaming orange-red. This brilliant coat is red-lead, an oxide of lead. "Save the surface and you save all" is an imperative maxim where exposed metal surfaces are concerned, and red-lead is the most reliable protection against rust that has yet been discovered.

You are surrounded by lead, in your home and on your travels. There is lead in the rubber heels of your shoes, in the tires of your automobile, in the bearings of the machinery that makes things for your use or transports you from place to place.

❦ ❦ ❦

Civilization has found hundreds of uses for lead and its products, and of them all the use of white-lead in paint is undoubtedly the most important.

Paint is used to decorate and preserve almost everything that is built or made, and the principal factor in good paint is white-lead—made by corroding pure metallic lead and mixing it with linseed oil.

Most painters simply add more linseed oil to the white-lead, in order to make the paint they use. Paint manufacturers use white-lead, in varying quantities, in the paint they make. The quality of any paint is largely dependent on the amount of white-lead it contains, for it is the white-lead that gives to good paint its durability.

"Save the surface and you save all" means that paint prevents decay and ruin. The highest *protective* power is found in those paints which contain the most white-lead.

National Lead Company makes white-lead of the highest quality, and sells it, mixed with pure linseed oil, under the name and trademark of

Dutch Boy White-Lead

Write our nearest branch office, Department A, for a free copy of our "Wonder Book of Lead," which interestingly describes the hundred-and-one ways in which lead enters into the daily life of everyone.

(Continued from Page 66)

is mind, but no word passed his lips. At he door of her hotel, however, he spoke. "Well, good night, Ellen," he said. "I'm orry you think I'm no good."

"Andy—I never said that."

"I guess you meant it though. I can ake a hint. Good-by!"

"Oh, Andy," she said with a little sob in er throat.

In her room she asked herself if she had one the right thing. Poor Andy. There eren't many so fine as he. Perhaps —— but suddenly through her mind flashed a icture of the house in North Readfield, f Evan Llewelyn, slouching through life, hiftless, devoid of ambition, beaten before e began. "Not for mine," she thought gain. And after she had turned off the ight and lay in bed she seemed to see in nother flash the crayon portrait of the lissenting pastor. Nothing could stop him. le went on.

The Tuesday papers happily confirmed Dan's judgment on One Night in June, and hen the girls went to lunch next day they aw a long line of customers at the box ffice of the theater. Thus encouraged they pent the afternoon locating a furnished partment. They found what they wanted n Beacon Hill, and arranged to move in next day. Here they could prepare many of their meals themselves—or rather, Ellen could—and thus save precious dollars.

On Tuesday night after the show Andy Owen was nowhere to be seen. Lil had found another long-lost friend ready and willing to buy. Ellen went alone across the Common and ate a forlorn little supper in the apartment. Andy upstage? It made life seem sort of dreary.

All through the Wednesday matinée she tried to catch his eye, but failed. By night, however, his easy good-nature had returned, and after the show he was waiting for her just inside the stage door.

"Hello," he said. "Found an apartment yet?"

"Sure. Moved yesterday," she told him. "Where you been, Andy? I missed you."

"Did you—honest? Well—I been sort of busy. Come on over to Dan's place."

The door opened, and Anthony Winterslip stepped inside. He had a number of books under his arm, and he stood blinking about him with the air of a lost soul.

"I beg your pardon," he said. "I'm looking —— Oh, there you are! Gad, what luck."

"Hello," said Ellen. "You didn't forget. About the books, I mean."

"No, indeed—why should I? I say, can't we go out for a bit of supper?"

"Sure," said Ellen. "I'm all ready. Well, Andy, see you later."

The door slammed in Andy's face and he was left there, his anger slowly rising. He was a mild man by nature and the thoughts of homicide that surged into his heart alarmed him. Jimmy Gray, the juvenile, ran blithely down the stairs.

"Hello, Andy," he said. "The bunch is coming round to my place for a poker session. Always room for one more, old dear."

"Oh, go to the devil!" Andy cried, and rushed into the alley. He stalked savagely toward his hotel. "Gad, what luck," he said through his teeth, in a sickeningly affected manner. "I say, can't we go somewhere for a bit of supper?" So that was the kind of creature Ellen fell for.

He walked along, the sour grapes bitter in his mouth. A knowledge of his own limitations weighed him down. What had he to offer? This new fellow of Ellen's was a gentleman, prosperous and cultivated—refined, as Andy put it. Why shouldn't Ellen prefer him to Andy Owen, the demon pinochle player, the graduate of Tin Pan Alley?

He entered the doorway of his hotel and walked briskly up to the desk. "Say, listen," he began, "I'm going to rent a piano and have it moved into my room to-morrow. No objection, I suppose?"

"Why, no, I guess not," said the clerk. "In the case of an old patron of the house like you, Andy. Only you can't play it at any late hours. Not after the theater."

"Mornings," explained Andy. "That's when I want to use it."

"Mornings?" repeated the clerk. He laughed loudly. "Say, I never knew you to be up mornings."

"I never have been," said Andy grimly, "but I'm going to try it."

Anthony Winterslip's air of boredom was nowhere in evidence as he leaned across the table and smiled into Ellen's violet eyes.

"These two volumes," he said, "will tell you all about Charles Dilke—he was an English statesman, a remarkable man. They're thrilling as a novel. And I brought you this Life of Queen Victoria—and the Recollections of the Empress Eugénie."

"That's fine," answered Ellen, her eyes sparkling. "I love to read about royalties, and all that kind."

"You do?"

"Sure. It's like I told you—I don't read books just to pass the time. I want to find out how things are done by people who know. So that if my chance ever comes ——"

"You're ambitious, aren't you?" he asked.

"Of course. Aren't you? Say—what do you do for a living, anyhow?"

He laughed. "Well, it isn't necessary to do very much. I'm a lawyer, in a sort of way—I manage our estate, and a few others. But the truth is, my ancestors worked so hard that there's nothing much left for me to do."

"Oh—I see. You got nowhere to go. You're there. But me—I got the whole distance still to travel."

"I envy you," he said.

"I don't see it," she sighed.

"Why, it's as somebody said—I forget the exact words, but the idea was, the fun is not so much in arriving as in making the journey."

"Uh-huh—I bet he'd arrived when he said it." She was silent for a moment, pondering this new point of view. "I guess your people were pretty famous round Boston," she said presently.

"So it seems. Some of them made laws, and some founded schools, and some preached sermons. My great-grandfather was a bishop."

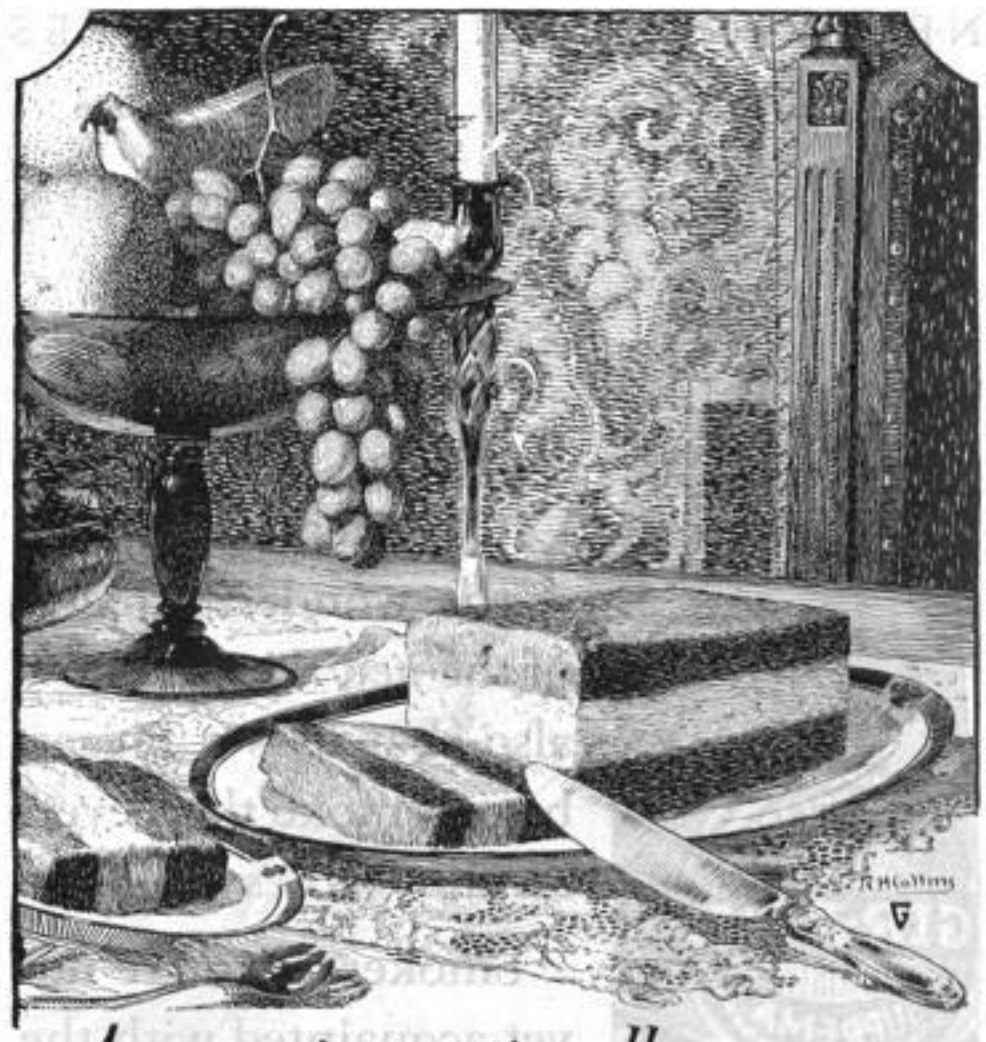
"Honest? My grandfather too—he was a minister. Only that was in Wales. He was a miner to start with, but that didn't stop him—he read and studied. We got his picture in the parlor at home. Everybody loved him, ma says. Just before he died he was moved to another—parish, I guess you call it—and when the people he used to preach to heard he was dead they walked five miles over a rough road on a bitter cold day, and five miles back, carrying him home to his own churchyard. You wouldn't catch people in this country doing that."

"No, I should say not." He smiled at her kindly. "He must have been a fine man, that grandfather of yours." Blood will tell, he reflected, looking into her sweetly serious face. "And he sort of explains you, doesn't he? I mean your desire to go on—to strike out for something better."

"I guess he does," she answered. "If anything explains me. All I know is I ain't—I'm not satisfied—I never have been. I'm only trouping now, but I'm moving on. And I mean to keep moving."

"That's fine," said Tony Winterslip. "You stick to that. And wherever you see a hand stretched out to help you—you take it, won't you?" He leaned across the table. "My hand is there," he said.

Ellen lowered her eyes. "You got nice hands," she said softly.



IV

FIVE weeks passed, five Saturday nights with a good gross reported by the box office and the old man correspondingly happy.

Ellen Llewelyn was happy, too, for never before had her education made such rapid strides. Evidently Tony Winterslip had been in earnest about that hand, stretched out to help, and he was proving it almost daily.

When the weather was fine he took her in his car about the surrounding countryside, where it seemed every other house had a history and a tablet of bronze to recall it. On stormy days there was the Museum of Art or Symphony Hall, and there was also Tony to talk on painting or sculpture or music—good human talk, lighted always by his rather bashful humor.

Once he took her across the bridge to Cambridge, and walked with her through the grounds of the university where Winterslips had studied or taught for a couple of centuries. He pointed out a few of his clubs, and the windows of the room where he had lived his senior year. He introduced to her several handsome boys with flapping arctics, led her into a drug store for a soda, and greeted the clerk as one beloved from whom he had long been separated. Ellen, through wide eyes, looked out on a world as new as Mars. At rare intervals there

Announcing nationally

Orange-CRUSH

Reg. U.S. Pat. Off.

ice cream, ices and sherbets

Here is a real piece of appetite news:

Delicious ice cream, ices and sherbets flavored with genuine Ward's Orange-Crush—also the companion flavors, Lemon-Crush and Lime-Crush—are now being made in nearly every principal city and town in the United States and Canada by one exclusively licensed ice cream manufacturer.

These are the same flavors, especially prepared for frozen products, which have made the drinks, Orange-Crush, Lemon-Crush and Lime-Crush, the largest selling citrus-flavored beverages in the world.

In some places special bricks of varying combinations will be featured. In other places, the "Crush" flavored ice cream, ices and sherbets will be obtainable in bulk. Watch for signs and local newspaper announcements in your community.

Although this is the first national announcement, frozen products made with these flavors have been sold in an ever-increasing number of places during the past three years. Perhaps you are already acquainted with them. If not, you have a treat in store for you.

The same first-quality ingredients used in preparing the "Crush" drinks are used in the "Crush" ice cream flavors. Fruit oils and juices from oranges, lemons or limes are delicately compounded by the exclusive Ward Process with U. S. certified food color and cane sugar. Purity is scrupulously guarded.

Serve and enjoy these differently flavored ice creams, ices and sherbets frequently this year. Ask any retail ice cream dealer for them. Write us for the name of the licensed ice cream manufacturer nearest you. Send for free booklet, "How Orange-Crush Is Made."

Ice Cream Manufacturers: Write for information about exclusive rights.

flashed through her mind a vision of 13 River Street, of the grimy sullen procession filing past to the mills at dawn.

Each night, on the stage, she played her little part, took the requisite number of steps, smiled her best smile, though her mind was elsewhere. There was a man named Andy—Andy Owen, the full name—a man she had once known well, but he was a stranger now.

Eight times a week she saw him there in the pit, his baton raised, his round kindly face aglow with enthusiasm for his job. No sign passed between them. When they met in the wings he said hello, she answered; that was all. There was much gossip back stage of the rich boy Ellen had captured, but no one ever heard a comment from Andy Owen.

On a Saturday night early in April, Ellen and Tony Winterslip were walking home to her apartment after the show. For a long time the streets and sidewalks of the town had been covered with packed dry snow, and Ellen had ventured down to the theater at noon in a pair of flimsy pumps. Since then, however, a sudden warm turn had come in the weather, and now they sloshed along through an ocean of Boston's celebrated vernal slush. Ellen should never have dared that journey, but she was still too much in awe of Tony to protest, and as for him, he was too grand and lofty ever to notice anyone's footgear.

"It's great, isn't it?" he asked. "I mean, this warm night, and the stars, and all. I tell you, Ellen, spring is on the way."

"I guess it is," she agreed. "I love it too. Always makes me feel so full of pep—energy, I mean. Seems like there's nothing so big I couldn't do it. Don't you feel that way, Tony?"

"You bet I do. I've hardly missed a day on the river this winter, and it's kept me in fine trim—but I'm getting tired of it. Not long now, though—tennis out at Longwood, and golf."

"But—that wasn't what I meant." She hesitated; it had been a matter long on her mind, but she was timid about mentioning it. "Don't you feel you'd like to get out and—and accomplish something, Tony? Something big—have everybody talking about you?"

"Heaven forbid!" he laughed. "Sounds scandalous. Not in my line at all."

"But, Tony—you know so much—such a fine education. Are you getting anywhere? I don't want to be rude ——"

"I see what you mean. Success, eh? No, Ellen, the idea doesn't appeal. Not in this crude, bromidic country."

"The country suits me all right," she said warmly.

"Of course—of course. But what I mean—oh, well, you'd hardly understand. To get out, mingle with the mob—no, thanks; the rewards aren't worth it, really. Not over here. Now, in Paris—or almost anywhere abroad ——"

He went on to expound his viewpoint. Ellen listened, deep in thought. This was a new side to Tony.

At the door he took her hand: "Good night, Ellen. Look here—you're shivering. Are you cold?" He glanced down at her feet. "Oh, by gad—you're soaked. I never noticed. I say, I am a fool. I'm frightfully sorry."

"'S all right," Ellen assured him. "I don't mind."

"You hurry upstairs and get into a hot bath," he said. "I'm afraid you've caught cold—and it's all my fault. Good night."

"G-g-good night," she answered.

He left her and walked down Beacon Hill, thinking about her. It was a tough job, for, as always, he didn't know what to think. Never before had he been interested in a girl. But he was interested in this one—decidedly. Her ambitious mind groping always to find the best, her eager feet restless to climb, her slim figure and delicate lovely face. She was a wonder, and he liked her immensely. But should he go further—he, a Winterslip? Her background was impossible, her possibilities infinite. He weighed things, pro and con. This side and that. Granted—but on the other hand —— He belonged to an old New England family, and he was a lawyer. Can that sort ever reach a decision on anything?

The hot bath availed little, and Ellen's teeth were chattering when she crept between the cold sheets. When Lil came in a moment later she was so weary she pretended to be asleep. She slept little that night, however, and in the morning her body was a furnace and her head pounding.

For a week she was too ill to see anyone save Lil and the trained nurse who miraculously appeared from the dim distance of the other room. Too ill to worry about her job, her salary, ma, her responsibilities. Which was just as well, for when the news of her came to the old man he called and counted her out.

"Sick, eh? That means rehearse understudy and send to New York for new girl. Well, the new girl stays. When Llewelyn gets better tell her for me she's out. Damn it, they've got no consideration for me—none at all. A pretty penny it'll cost me—railroad fare and all."

"Yes, sir," said Mickleson. He thought of the old man's millions, and smiled.

At the end of a week Ellen began to get better—and to worry. "See here, Lil," she whispered, "what's the idea of the nurse? I can't afford ——"

"Don't fret," said Lil. "The nurse came with a card on her—Anthony Winterslip's compliments."

"Oh—I can't take her! I mean, I don't want him to ——"

"Tush, my child! You have taken him. Don't you worry—get well. If you ask me that lad is wild about you, and he means business. You're lucky, honey, *and I'm* glad of it, but jealous as sin. Seems I just can't meet a man who has the word 'marry' in his bright lexicon. I thought maybe Jack Prentice—but let that pass."

In the bare sitting room beyond, Ellen heard from time to time the kindly voice of her little world—Mickleson, panting from the stairs, the shrill laugh of one of the girls. "Kin I smoke in here. Say, it won't hurt her, will it?" Andy—Andy Owen. "Just put 'em in a vase by her bed—never mind who sent 'em." And the smooth new tones of Tony Winterslip: "How is she to-day? You know, I'm all broken up over this. It's my fault, really."

On the third Sunday the nurse announced that she could see one or two of her friends, and Andy Owen was the first to call. He entered the bedroom bearing a florist's box, and his anxious eyes sought Ellen's face. As he stood looking down at her his expression brought a lump into her throat.

"Hello, Ellen."

"Hello, Andy. I been sick."

"I'll say you have. You're better now though, ain't you?"

"Lots, Andy."

"Say—that's the best news since the armistice. Here"—he stood the box of flowers against a table—"I brought these."

"I see you did. I saw all the others you brought too. What's the idea, Andy? Got a greenhouse somewhere?"

"Quit your kidding. Say, Ellen—I got great news for you. The old man nearly passed out."

"What do you mean—he nearly died?"

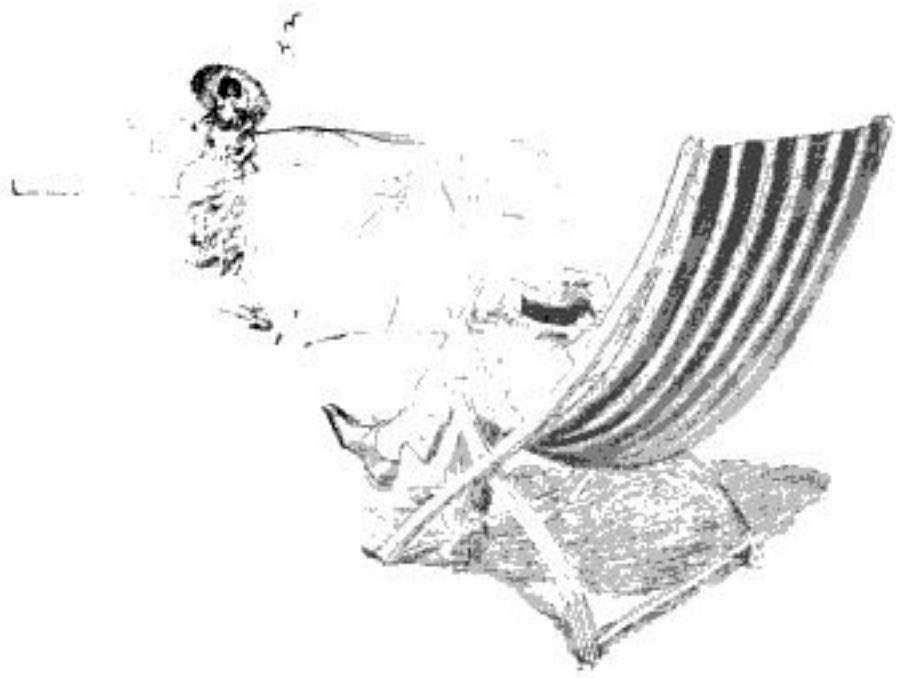
"Yeah—you ain't the only one that's been sick. Happened a week ago—I saw the whole thing. Those thin-legged chairs—you know, the ones the old man bought special—well, a stage hand dropped one of 'em and broke it. The old man saw him. He started for him like a wolf hound—you know ——"

"I know," said Ellen.

"I looked to see murder. But when the old man got up to this fellow his face went all gray and he pitched forward on the stage. We carried him into a dressing room and sent for a doctor, and after a while they took him to his hotel. Heart went back on him, the doctor said. Must have been right at the golden gates, where he could hear the angels sing."

"Too bad," Ellen said.

"Too bad, nothing! It's the best thing that ever happened in the history of show business. It's changed his whole character. I guess he got to thinking—anyhow, he's so sweet and gentle since he come back he's breaking everybody's heart. Though there's plenty that say they wish the thing had struck him in his cradle." Ellen laughed. "But the reason I'm telling you all this," Andy continued—"I guess you didn't know he canned you when he heard you was sick?"



"He did!" she cried, her face clouding.

"Wait a minute. When he showed up the other day after this spell I figured it was time to reopen the whole case. So I said to him: 'How about Miss Llewelyn? She's been pretty sick.' And he says: 'Too bad. I'm sorry for anybody that's sick.' He took hold of my arm and led me to the box office. Jenkins was sitting there. 'Mike,' says the old man, 'just give Andy Llewelyn's

THE STUDIED EFFECT OF UNCONCERN

The raiment of a gentleman, like the frame of a rare painting, is rather to be sensed than seen. The beauty of each lies in absolute self-effacement. The less the frame is observed, the greater is the work of the master. The less a gentleman's clothes attract attention, the greater is the tribute to his fine discrimination.

A gentleman seeks habiliments that excite no comment. He strives to give the appearance of having given no thought to appearance. His vestments are planned to merge into the background of his personality.

So one remarks *him*—not the lapel of his dress. And yet, should one scrutinize that unobtrusive lapel, he would find it well-turned and of exquisite fabric. Careful carelessness is the subtlety of this art. It's a rare art to drape clothes that serve gentlemen as perfectly as does the frame of a masterpiece. Yet Hirsh, Wickwire Clothes have had this distinction for a score of years. Naturally they appeal especially to the man who is so sure of his appearance as to be quite nonchalant about it.

Hirsh, Wickwire Clothes are ready-to-wear—conservative, gentlemanly garments. But in price, they vie with ordinarily-good clothes. Your inquiry will bring you the information where you may purchase these clothes for gentlemen.

salary for the time she's been out. And, Andy, you tell her the place is open to her whenever she comes back, and in the meantime pay as usual.' I'll just put it here on the table, Ellen. Better not handle it yourself—germs on it."

"Oh, Andy—that just shows! There's good in everybody. Even the old man."

"Looks that way. But I'm glad you don't have to nearly kill most of 'em to bring it out."

"I'm certainly grateful to you, Andy. Seems like your kindnesses to me—they just grow and multiply."

"Why—I didn't do anything, kid. I just showed him his duty and he done it."

"Andy—you're a darling."

"Don't say that, Ellen," he pleaded. "Unless—unless you ——"

From the room beyond came the voice of Anthony Winterslip: "Hello—you promised I might see her. Just a moment, surely. That's great!" He came into the bedroom. "Ellen, child, you're better. Splendid!"

"Sure," said Ellen weakly. "I'm all right. Just pretending to be sick. Like to be waited on. Oh—excuse me. Mr. Winterslip, shake hands with Mr. Owen."

Mr. Winterslip graciously complied with this simple request. They exchanged greetings. He turned again to Ellen. "They wouldn't let me see you before. I hope everything's been all right."

"About that nurse ——" Ellen began in a whisper.

"What about her?" asked Tony, humorously whispering too. "Isn't she a good one?"

"Sure. But I can't let you ——"

"Now, look here," said Tony out loud; "who was to blame for this hard luck? Who walked you home in slippers through a mushy night? I did. I've cursed myself for it a thousand times."

"It wasn't your fault," Ellen told him. "I ought to have known better."

"It was my fault," he insisted. "And in the circumstances, anything I can do for you—well, I mean to do it. And I'd like to see anyone stop me. Which reminds me ——" He called the nurse, who came and stood in the doorway. "How soon can Miss Llewelyn be moved?" he asked.

The woman considered. "Well, that would depend on where you wanted to move her."

"Precisely." He turned to Ellen. "I've thought it over, and this isn't the best place in the world for you while you're convalescing. So I talked to mother and she wants you to come and see us. I'd take her out in a closed car," he added to the nurse.

"Oh, in that case I should say about Wednesday," the woman told him.

"Oh, no, Tony, I can't," said Ellen. "I'm going back to work this week. Andy just told me my job's waiting."

"Nonsense! You're not able. You spend this week with us. We've got a big place over in Brookline—give you a room where the sun comes in all day—a great room with an open fire and all the books you can read. Country air. That's what you need. Don't you think so, Mr.—er—Mr. ——"

"Owen," said Andy. He stood up, bravely smiling. "You're right, Mr.—ah, er—you're quite right. The country's a fine place—I've always said so." He turned to Ellen. "It's a great idea," he said. "You go—like he wants you to. It's the best thing you can do."

"Well—just for a few days," Ellen agreed.

♦

ELLEN sat at Tony's side in the big limousine. Outside, the immaculate apartment houses of sedate Brookline were flashing by.

"Oh, Tony—I oughtn't to have come!"

"Nonsense! Why not?"

"Well, for one thing—I haven't got the clothes."

"Rot! You're an invalid, Ellen. You can dress that part all right. Besides, we don't think about clothes out at our shack. It's the people inside them."

She smiled at him sideways from under the crimson hat. How kind he was. He stepped on the gas, the apartments gave way to open country, where fine houses stood in groves of bare, gaunt trees. They turned in between two great stone posts. Up a neat drive bordered by white birches the car sped, and came to a stop before a beautiful colonial doorway that had been pictured in all the architectural magazines of the country.

"Here we are," cried Tony gayly. "Out you get."

A butler opened the door, took Ellen's suitcase. "Just a minute," Tony told her. "Mother!" he called. "Oh, mother—where are you?" He went through a door at the right.

Ellen summoned all her assurance as she stood in the big white hall that ran through the house and opened on a terrace at the rear. Tony's mother must not guess that she had never been in a home like this before. Nor must the butler, who stood there with the straw suitcase held like a hand grenade at his side.

Tony reappeared with his mother, a tall, smiling, gracious lady, young for her years. "This is Ellen," he said.

The woman held out her hand and gazed with interest at the curious guest whom the impetuous Tony had forced upon her. "How are you, my dear?" she asked. "I hope you're feeling stronger."

"I feel fine, thanks," Ellen answered. "But I—I'm afraid I'm making a lot of trouble. I didn't want to bother you."

"Not at all. Tony feels responsible for your illness, you know. It's really very kind of you to come; it shows you forgive him, and takes a great load off his mind."

"Oh," said Ellen, and looked at Tony's mother in awe.

How unerringly she said just the right thing, and how easily. Tony's mother smiled at her in kindly fashion. She was really a very fine woman, calm, serene, prepared for whatever the fates might send. Never in his life had she refused Tony anything, and there had been no inclination to be shocked at his rather quaint request that she open her doors to Ellen Llewelyn—a chorus girl. Ten years before the thing would have been impossible. But the world had changed, and Tony's mother remained young enough to change with it. Besides, she was rather curious to meet this girl who had caught Tony's fancy.

"We hope you'll stay with us until you're quite well enough to go back to your—your position," she said. "Wharton will show you to your room, and I'll send someone up to help you"—her eye fell on the suitcase, and the word "unpack" was instantly abandoned—"to help you in any way you wish."

Wharton led the way upstairs and left Ellen alone in her room. The bright glory of it took her breath away. She stood taking it all in—the gray paneled walls, the curtains of taffeta striped in mauve and ashes of roses, the old-rose brocade on the furniture, the soft taupe rug. Through four great windows the late afternoon sun came flooding in. A fire was blazing in the grate and—yes—there were shelves filled with expensive-looking books.

She sat down, a little weak, a little breathless. This was what she had been aiming for ever since she could remember, this was the room of her dreams. Always before it had been shadowy and unreal, but from this moment on it would be clear to the last detail.

"I'm glad I came," she thought.

She went to a window. There was a terrace at the rear, with steps that led down to a pool and, beyond, a miniature forest of glorious trees. Suddenly it seemed that she stood in her mother's room at 13 River Street, looked out on dreary shacks, on ragged children playing in the snow. She turned back to the room, half expecting stained wall paper, the blue-and-red chromo, a cracked pitcher and bowl. She gave a little gasp.

"It's real!" she said.

A maid knocked, but Ellen sent her away. Beyond an open door gleamed a white bath. She unpacked her bag, put on the little afternoon dress that must serve also for the evening. What next? She sat for a time before the fire. She wondered if she should go downstairs alone, or whether she must wait for someone to come and lead her. Her old assurance began to come back, an intense curiosity seized her; she went into the hall, down the stairs.

Dusk was falling as she came into a huge drawing-room, a grand stage setting upon which her timid entrance seemed to make no impression. A little old woman with snow-white hair under a lace cap was sitting before the fire. She rose when she saw Ellen.

"Hello, my dear," she said. "I'm glad to see you. Come over here and sit down."

Ellen joined her before the fire.

"Tony's grandmother," explained the old lady. She had a thin, eager face and black eyes that twinkled humorously.

"Yes—you're quite right—I'm frightfully old. Should have passed on long ago, but I hung on. Don't know why, I'm sure. No use whatever, except as a sort of link from the age that is past to the age that is waiting before. But there—you're not a Harvard man, are you?"

"No—of course not," smiled Ellen, somewhat mystified.

"Don't mind me. Weird sense of humor, but the best I've got. Hear you've been ill—well, this is a splendid place to recuperate. Nothing ever happens. Dull as sin. A backwater, my child. Life goes roaring by, somewhere beyond. We get the echoes after it has passed. Reminds me. Wharton"—she turned to the servant who was drawing the curtains—"has my Transcript come?"

"Not yet, madam," he answered.

"Echo's late to-night," the old lady explained to Ellen. She saw that the girl's eyes were on a portrait above the fireplace. "Ah, yes—can't very well escape him, can you? The bishop. Dead these sixty years, but still they bend the knee before him—these Winterslips."

"Why—aren't you a Winterslip?" Ellen asked, surprised.

"Bless you, no! I'm a Brooks. *Married* into this family fifty years ago, but I've kept my own identity, thank heaven. Wasn't much to keep, but I hung *on*. *Well*, my dear—we're quite stirred up over your coming. An actress, I hear?"

"Why, yes—I ——"

"Make your own living. No man's creature. Is that so?"

"It sure—it certainly is."

"Good for you. Often wish I'd struck out for myself when I was young. Have more to look back on now. Wouldn't have done though. Scandalous in those days. Well, times have changed, and I'm glad *of* it." She patted Ellen's knee. "Hope you'll stay for a time," she said. "Try and endure us. We're dull—dull as dishwater. Hearts of gold, however." The servant came in and handed her a neatly folded newspaper. "Ah, at last!" she cried. "Here's the echo. All nicely modulated, attuned to my delicate ear. Now, where are my glasses—I had them when you came in."

Ellen rescued them from a corner of the sofa. "Thanks," said Tony's grandmother. "I don't really need them; they've been forced on me. Want to make me look old, these people do. But if any of them should tell you I can't read a word without them, they lie, my dear." She spread out her paper. "Just make yourself at home, Ellen. I know your name, you see. Just pretend you live here."

"My home's—quite different from this." Ellen smiled.

"Ah, yes—more exciting, I expect. Well, some folks are born lucky. Fair and warmer. That's good. Revolution in Central America. I'm glad to know things are changing somewhere. It keeps me going."

Ellen turned to a table on which were books and magazines—dark brown magazines devoid of illustrations, and pale, slender radical weeklies. She selected one of the latter. In various parts of the quiet room lamps were glowing beneath shades of orange-gold taffeta, great chairs waited invitingly under each. Just fancy—more than one place where a person could read! She made her choice, and was soon deep in the rather startling discovery that America was crass and uncivilized. It was a strange place to find this out, here in this peaceful, cultivated room.

Tony came in presently. "Everything all right?" he wanted to know. "Did you meet grandmother?"

"Yes, I met her," Ellen smiled. "I think she's wonderful."

"Don't let her fool you," Tony laughed. "She's a profane, discontented old woman, no fit company for the innocent and young."

The old lady put down her paper and winked at Ellen. "Poor Tony," she said. "Got the Winterslip disposition. Can't help himself." She resumed her reading.

"Tony," Ellen said, "I think your mother's fine. So—so kind. And this house—it's lovely, and so homelike too."

"You see that you get well then. But not too fast. We mustn't let you go too soon. Must we, mother?" he added as Mrs. Winterslip came in.

"Not too soon," she answered with her kindly smile.

Dinner proved a marvel of calm precision, with Wharton in his glory. Ellen was

This is a cross-section of an ordinary chocolate, showing how thin the chocolate coating can be made in order to keep down the cost of making.

This is a cross-section of a Johnston chocolate, showing the full, thick, rich chocolate coating which is characteristic of all Johnston chocolates.

She prefers Johnston's

—his gift compliments her good taste and proves his own good judgment

A GIRL admires a young man for inferring that the Johnston candy is her favorite—the gift is not only a subtle tribute to her good taste, but the evidence of his own. It suggests that only the finest is worthy to be offered at her shrine. It shows that he knows the best—which is equally important.

Chocolates differ greatly. Johnston's are noted for the extra *thick*, rich chocolate coating. This coating costs more than the center. Hence makers are tempted to thin it.

We make our own chocolate. Thus we control its quality. We use only the finest of the 110 grades of cocoa bean, from which chocolate is made. Every process gets the utmost in time and care. The longer chocolate is whipped, the better it becomes. Ours is worked four times as long as the average. This multiplies costs by four. But that is the price of perfection. A Johnston chocolate must be the finest that can be made.

To insure purity and exquisite flavor, we make our own syrups. Also our cream fondant—the inside of chocolate creams. We use nothing but the rarest Cuban cane sugar—finer than ordinary table sugar. We accept only whole nuts and fruits—never culls or broken nut meats. Thus we are sure of luscious fruit centers. Hence our nut centers are full-flavored and tasty.

We buy nothing already made up. We make everything ourselves. All our chocolates are dipped and packed in rooms where the air is washed.

For over 73 years we have been making fine candy. Many of our most famous recipes are nearly that old. In all this time we have never compromised on quality.

Now we ask you to try Johnston's for yourself, should you not already know them. Once you have tasted Johnston's, no others will satisfy. Note our introductory offer.

JOHNSTON'S
Milwaukee

Let her choose the kinds she likes best

The Johnston Choice Box contains 22 kinds of candies. It also contains a booklet showing how these 22 kinds are assorted in 6 other favorite Johnston boxes. Each piece in the Choice Box is plainly identified by name. Give her the Johnston Choice Box and let her select her favorite combinations. At good stores everywhere. If any dealer can't supply you, send us the coupon.

This is not a pound box, but a special introductory assortment—22 kinds—of our finest chocolates and other confections.

The VALUE of TIME

for instance, in making good smoking tobacco

FOLKS, Time can be either a good servant or a hard master, dependin' on its use.

THERE'S tobacco, for instance. You can't crowd Nature when the tobacco's growin' an' you can't rush Time when the tobacco's agein'.

SO WE take that good ole Burley that ripened slowly in the Kentucky sun and we store it in wooden hogsheads for *two years*. Time makes it mild an' sweet as *nothing else* can.

PUTTIN' quick-sand in the hour-glass won't shorten the day's work, an' quick methods won't mellow tobacco. Stick to Velvet, the aged in the wood pipe tobacco.

Velvet Joe.

nning to enjoy herself. The grand-her chatted brightly, and her talk, as n told Lil afterwards, was as good as a r.

fter dinner they had coffee in the ring-room, and more talk, and then y at the piano. Then everybody took a c and chose a lamp and a chair.

ace, perfect peace. A log fell in the lace, sending up a shower of sparks. rton appeared at once, the log was red to its proper position, the servant shed as noiselessly as he had come. A phone bell rang somewhere in the dis-e, but was immediately silenced.

ddenly Ellen stirred restlessly, her d strayed from her book. Out in the a great clock chimed the hour of eight. thoughts wandered to the theater; she the girls straggling in, demanding their l, climbing the iron stairs. She was in dressing room, heard the babel of voices. n, down in the wings, the last notes of overture beyond the curtain, Mickleson ading with them to get on—get on. She t back to her book.

t nine o'clock Ellen rose and said good ht. Grandmother Winterslip thrust a volume into her hands. "Study it," urged. "Teaches you how to play uet. I need a partner. Want a battle r and then—got to have it. Keeps me ng."

Ellen promised and went to her wonder-room. A single lamp with a rose-and-ave shade glowed by the head of her l, the covers were turned back invitingly. e had never dreamed that life could flow smoothly.

When she awoke in the morning it was wing on with never a ripple. A maid lled down at her and announced that her th was ready. The breakfast table stood a flood of sunshine, everyone smiled and s pleasant. Tony ran off to his office, the eventful day began.

With Tony's mother Ellen made no prog-s toward intimacy, but by noon she and r grandmother were old friends. They yed piquet together, went for a drive ter lunch. Another evening, cut from the me pattern as the one before, and then nother day.

On Sunday morning Ellen went to the lephone and called Andy's number. A epy voice responded.

"Hello, Andy. Did I wake you?" she ked.

"Ellen—is that you? Say—how are ou, kid? How are they using you?"

"Why, fine, Andy. I can't complain."

"That's good. Getting better?"

"I'm all right, Andy. How's the show? What's the news?"

"Everything's lovely. Sold out Monday ight—how's that for a hit? Of course we ll miss you."

"Do you, Andy? What I called up to ay—I wish you'd tell Mickleson to expect ne back next Thursday night."

"Thursday—say, that's great! Are you trong enough, Ellen?"

"Me? I could troupe to Frisco. One-night stands."

"That's the talk! We'll have a party fter the show. What say?"

"I'm for it. Give my love to Lil and all he gang. Thursday night, Andy."

"Red letters on the calendar, kid. Red ire at the stage door. Gee, I'll be glad to ee you."

With the date of her departure fixed she elt better. Three more days slipped by, lays just like the others, calm, uneventful. On Wednesday morning she announced the late of her departure. Her hostess re-eived the news philosophically, but Tony nd his grandmother were loud in their pro-ests. Ellen, however, was firm.

"The old man—I mean, our producer—he's paying my salary right along. It wouldn't be fair not to go back just as soon as I can."

On Thursday morning Ellen and the grandmother gathered round the piquet table for a final battle. The old lady seemed unusually thoughtful. Suddenly, in the midst of a hand, she spoke:

"Sorry you must leave. Have a good time?"

"Wonderful," said Ellen.

"Yes, I suppose you did. We all enjoy a change. Me, I'd like a week in the chorus—kicking up my heels, smoking cigarettes." She laughed. "But I was right, wasn't I? Dull here. Dull as dish-water."

"Well, everything is sort of peaceful and easy," Ellen admitted.

"Exactly. I've been wondering—how would you like it as a steady diet? Quite a bridge between your life and this—chilly trip across—like walking to Cambridge in March. Still, you could make it, land safely, rosy cheeks. You're that sort. But what would you find when you landed? Stagnation. This." She waved a thin old hand about the quiet room. "Great race once, the Winterslips. I'm a Brooks myself, but I say it—wonderful men. Even the bishop, stuffy old bore, but—what did you call it?—pep. Sort of petered out now. Tony—lovely boy—last of the giants, and a pretty poor imitation. Only half alive."

"I think he's—he's very nice," said Ellen.

"Good word for him—nice. Colorless and ineffective. He'll end like his Uncle Charlie. Charlie flits about—Santa Barbara, Palm Beach, the Riviera, the White Mountains—like a fly on a hot griddle, always going somewhere, hunting something, doesn't know what. There's more in life than comfort, pretty chairs, soft carpets. There's knowing where you're going—and moving on."

"I guess you're right," Ellen said.

"I know I'm right. Think it over. Stagnation. You couldn't stand it. You're not that kind. See it in your eye. Well, what are you waiting for? It's your play."

At five o'clock that afternoon Ellen said good-by and Tony drove her back to the city in his little racing car, with her feet resting on the straw suitcase. The April air brought color to her cheeks and made her lovelier than he had ever seen her before; the warmth of her shoulder against his thrilled him as few Winterslips had been thrilled to date. A reckless mood came upon him.

"They're mighty fond of you—mother and grandmother both," he said. "But no wonder. Who wouldn't be?"

He turned and looked at her. April was urging him on. Ellen's heart stood still; she was no prophet, but she knew what was coming. They were in a shabby street back of a big factory, a street where the houses were all the same, unpainted, sagging, sad parodies of home.

"I was born in a street like this," Ellen said suddenly. "My folks still live there." A tired woman was leaning on a gate, watching two children sprawling in the gutter. "That baby, playing in the mud," the girl went on, "that might have been me, fifteen years ago."

A shiver passed down Tony Winterslip's fastidious spine. After all, there was time yet, time to consider, time to weigh. Early environment—he read books about it—it counted a lot. His whole life—he mustn't forget that.

Poor Tony. Cautious by inheritance, by training. One of those lost souls who see all sides.

"Glad to get back to work?" he inquired.

"I've had a wonderful time." Ellen smiled at him pityingly. "But I'll be pretty glad to get back."

When he stopped his racer before the door of the apartment Ellen reached into her pocketbook and took out a roll of bills. "Tony—I want you to take this."

"Nonsense. What is it?"

"It's the money you paid the nurse. I had Lil find out how much it was."

"Couldn't think of it, Ellen."

"But I owe you for—so many things. I'd rather there was no money in it, Tony."

"Rot!" He leaped out and carried her suitcase into the hall. "I'll leave you here, Ellen."

"Tony—please take it!"

"Don't be silly, Ellen."

"I wish you would. I guess you know, Tony—how I feel. You've been so kind."

"Nothing at all," Tony said. "I'll call you up in a day or two."

The door banged behind him.

She went upstairs. The apartment was deserted—a note from Lil pinned to a portière. "Welcome home, honey. See you at the theater."

She smiled happily, sat down at the little desk, took pen and paper. "Dear Tony," she wrote. The note finished, she folded the money carefully, put it inside, borrowed one of Lil's stamps. Then she went quickly downstairs, the fat letter in her hand.

The dressing room was ablaze with lights, the girls were screeching round her. "Hello, duchess—you back to the old life? What's the good word with the four hundred?" Lil, greatly excited, was hooking her in the back. From somewhere outside came the booming voice of Mickleson:

"Girls—for God's sake! Where are you?"

They clattered down the iron stairs and on the stage. Ellen took her old position for the rise of the curtain. Out front the last stirring notes of the overture resounded like a battle song. She shook her skirts, made sure of the pins in her hat—smiled. She mustn't forget to smile. The curtain rose on a clatter of seats, ushers racing down the aisles, expectant faces. Out there in the dark a new audience, a new adventure. Life was whirling on. The line of girls swung gayly down to the lights.

And there in the pit, Andy with the baton in his hand, smiling up at her again.

VI

SHE sat opposite Andy in the bright dining room of the hotel most favored for parties. They had a good table near the orchestra. Her cheeks were flushed with the joy of coming back to her little world, her dear world, the theater. In her ears rang a buzz of giddy talk, the tinkle of silver and china, the melodious lilt of a fox trot. Movement, color, excitement—what would life be without these things? Stagnation.

She saw the old man coming down the red carpet, escorted by obsequious waiters. He paused beside her. "Hello, Llewelyn. Glad to see you back. Don't leave us again." He passed on to his favorite table in a corner.

"What did I tell you?" Andy laughed. "Little Sunshine—that's what we call him now."

"Oh, Andy," she answered. "Everybody's been kind! I'm so happy—getting back."

"Honest, Ellen? Happier than you was out there in the country?"

"I'll tell the world I am!"

"That's the talk. Say, what happened out there, anyhow?"

"Not a dog-goned thing, Andy. Not one."

"Well, of course—it was the country. But what did you do with yourself?"

"I read, Andy. Take it from me, I've been through enough books to last me twenty years. I don't want to read about life any more—I want to live it."

"You've come to the right shop then, Ellen. The theater. Always something doing in our business."

"Ain't it the truth?" she laughed.

The minutes passed, and she told herself it was the happiest night of her life. How comfortable to be with Andy, someone who talked her language, someone who knew her world. She gazed at him serenely across the white tablecloth. His face was shining with pleasure and excitement. Really Andy wasn't bad-looking, not bad-looking at all.

"You never told me what you been doing, Andy," she said presently. "While I was sick—and before. All these weeks."

"Me? Oh—I've got nothing to report, Ellen. You summed me up once, and you was right, I guess. Just drifting along. Cards all night, sleep all day. That's me."

She smiled at him. "Andy, you're a bad boy," she said.

There was tenderness in her smile, and affection. The orchestra was playing a waltz now, a sweet old-fashioned waltz that suggested love, moonlight, crinoline. Her eyes blurred as she looked at Andy. Dear Andy—all the kind deeds he had done for her—what was this talk of his getting busy, making good? Was she a slave driver or a woman?

Life with Andy—she considered it. Why, it would be wonderful—color, excitement, thrills. A cheerful little flat in Harlem, shows opening and closing, rehearsals, first nights, failures and successes. Jolly parties, Andy with his collar off, dealing the cards. Hard times now and then, but you got to expect that in the show business. And Andy's good-nature, she knew, would never fail her.

She leaned across the table. The music was swelling to a gentle climax; it seemed to pull at her very heartstrings. "Say, listen, Andy—if you still want me—I'm willing."

She framed the sentence in her mind. She spoke: "Say, listen, Andy ——"

"What's that they're playing?" Andy cut in. "A new one on me."

"Me too," she answered. "But isn't it beautiful, Andy?"

"Honest—do you think so?" he cried.

Warn-O-Meter

The Warning Light Seen Day and Night

IF YOU are an experienced driver there's no need to tell you of the disastrous effects of engine overheating. You know how quickly it results in loss of power and pick-up.

Keep your car out of the shop. Avoid overheating. Don't depend upon steam from the radiator to warn you. Steam may pass unnoticed, especially at night. You can't possibly overlook the Warn-O-Meter's bright red warning light.

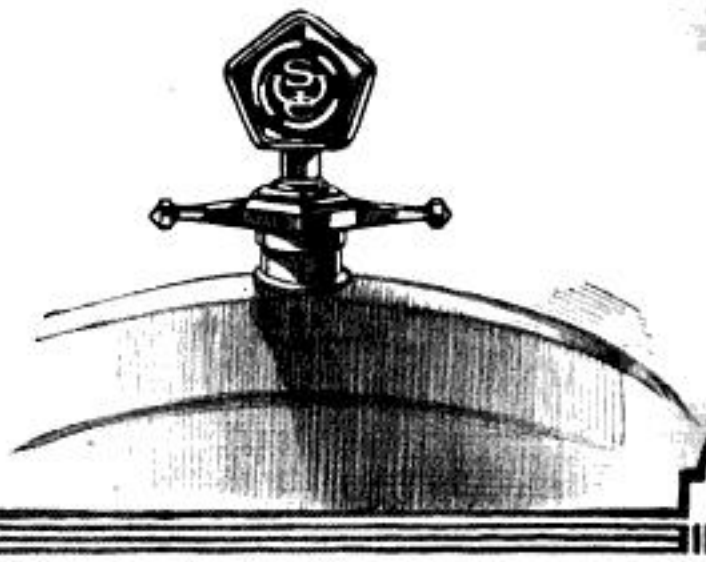
At a normal motor temperature a green light appears in the Warn-O-Meter. Should the motor begin to overheat the green changes to pink and then to a brilliant red, unless necessary precautions are taken. The Warn-O-Meter takes the motor's temperature from the motor itself. Not from the water in the radiator.

A beautiful addition to the car. The glowing light, atop radiator or fender, attracts admiring attention. In the non-indicating side may be placed a special insignia, car name-plate, monogram, lodge emblem or trade-mark illuminated by the light within the instrument.

* * *

Particularly good looking is the Warn-O-Meter mounted on a Stewart Hinged Radiator Cap as pictured below. The hinged top eliminates unscrewing the cap to fill radiator. Can be secured on radiator so that neither cap nor Warn-O-Meter can work loose nor be stolen.

The DeLuxe Model, in beautiful all-nickel finish, sells at $12.50, complete.



The Standard Model, in black enamel and nickel finish, is $10.00.

The Model for Ford Cars, similar in design and identical in workmanship to the Standard Model, is $10.00.

The Pentagon Hinged Radiator Cap, in all-nickel finish, is priced at $6.00.

Specify make and model of car when ordering.

(Continued from Page 75)

A huge figure towered above them. Ellen looked up into the face of the old man, furious, contorted, terrible with anger.

"Damn it, Andy!" he cried. "What does this mean? I buy your music, I pay you good money—and I hear it bandied about where any fool can steal it. It's an outrage, and you're to blame! I hold you responsible."

"You better cool off," Andy remarked gently. "The last time I saw you this way was just before we called the doctor."

The old man sank into a chair and mopped his damp forehead. "You're right," he admitted. "I must cut that out. I must be calm. I am. But, Andy—my boy—this is dangerous."

"They won't play it again," Andy explained. "I'll get it from them in a minute. It was just this once—I arranged it as a surprise for Ellen. You don't mind that."

"Oh, very well." The old man's hard features softened. "You're taking a chance, but I suppose you figure it's worth it. I wanted to speak to you, Andy. Barton's libretto came to-day—it's great stuff—only don't tell him I said so. I wired him maybe we could make it do, with fixing. You and I better get together to-morrow and fit your numbers in. I've got a New York theater for Labor Day, and I want to open about the middle of August."

"Andy!" cried Ellen. "What's he talking about?"

"Why—don't you know?" The old man stared at her. "Hasn't he told you? Our young friend Andy is a rising young composer. Yes, my dear—he's coming. Of course his stuff's pretty crude yet," he added cautiously, "but it shows promise." He stood up. "Be sure and get your script back, Andy," he advised. "I wouldn't trust that leader. He worked for me once." He went back to his table.

"Andy—is this what you've been up to?" Ellen's eyes were shining.

"How did you like that waltz, kid? You said it was beautiful. Do you think so—honest?"

"Oh, Andy," she answered brokenly. "It just—it just seemed to get me."

"That's good. It's a little thing I've had in my head five years or more."

Ellen's lips trembled. For a moment she could not speak. She stared at him—at the head that had carried that lovely melody for five years. She thought of Tony Wintership, sitting at the Symphony, discoursing on the history of music. Educated, polished, a gentleman, unable if his life depended on it to write a single bar of Andy's waltz or anything else that was beautiful and new.

"And you're doing a show for the old man, Andy?" Ellen said.

"I sure am, kid. You see, something somebody said—it might have been you—got me thinking. So I had a piano moved into my room, and I started in on it—mornings. I worked out a lot of stuff I'd been puzzling over for years. Then I went to the old man—it was just after his bad spell—and he pretended the stuff was rotten, but he was in an awful hurry to sign me up for a show."

"I always told you, Andy. I guess after this you'll listen to me."

"You bet I will."

"All my dreams for you, Andy—they're coming true. You're going to be a big man in the show shop. Won't you have exciting times—first nights with you in the pit, directing your own score. Then you'll go over to London, and do a revue there. Then maybe on to Paris ——"

"To Czecho-Slovakia if you say so," cried Andy. "Only—only, do I have to go alone, Ellen?"

All his soul was in that question. She looked into his eyes, considering. If only she had told him that she was ready to take him before the news of his success came along, take him as he was! But now—it was too late now. She had never been so fond of him as she was to-night, but wouldn't he think her mercenary and calculating if she told him so? Not at the moment, of course. But some day, somewhere, the thought would come to him.

"Pay the check, Andy," she said, "and let's go along."

Poor Andy! "Oh, I see," he said. "Well, Ellen, I've made a good fight, but I couldn't compete, I guess. I'm not in his class—I don't trail with his kind at all. I—I wish you happiness, kid. All the luck in the world."

"Andy—please—hurry," she said.

While he was waiting for his change the orchestra leader came up with the script of his waltz. "It's great stuff, Andy!" he said. "Congratulations. If anybody asks me I'll say you've got the goods."

"Thanks," answered Andy grimly. He put the script in his pocket. "It doesn't matter now," he added.

They were out in the street. "Cheer up, Andy," Ellen said.

"Everything I wrote—it was for you," he told her.

"I'm proud of that, Andy. And you'll write even bigger stuff."

"Maybe. I don't know."

At a corner she took him by the arm. "We're not going home just yet," she said. "I want to drop in at Dan's place first."

"Dan's place? Great Scott, Ellen! You still hungry?"

"It looks that way, doesn't it?" she answered.

Dan was on duty. "Say, listen, Dan," Ellen began. "Some time ago I left an envelope with you. A bet. My name was on it."

"Sure," he said. "Here you are."

"Much obliged, Dan. Come on, Andy." She led the dazed Andy back into the alley, and halted him in the light that streamed from Dan's window. She handed him the envelope. "It's for you," she said. "Open it."

He took out the soiled bit of paper. "Dan's Place. Bill of Fare. February 21," he read. "Grape fruit ——"

"On the other side," Ellen explained.

"Oh, I remember now." He turned it over. "Dear Andy: I'm making a bet with myself. I'm betting if I get you good and mad you'll wake up and deliver. Oh, Andy, don't disappoint me, because I'm terribly fond of you, and I'm afraid I'll have to take you whether you land or not."

He thrust the paper into his pocket and turned to her. "Ellen!" he cried. "Ellen!"

"Now you know, Andy."

"Ellen, darling. And just when I thought I'd lost you!"

"Not a chance," she told him. "I wouldn't get mixed up with that bunch, Andy. Why, they haven't stirred since the bishop died, and that was sixty years ago. But you and me—you and I, Andy—we're going on."

Sunset on the Columbia River, Oregon

"Comfort at every point —from neck to knee"

"WHY didn't somebody make an athletic union suit like Topkis long ago? It has everything I've been hunting for years!

"Look at the long, wide legs! You can walk all day in Topkis without ever feeling a pinch or a pull. Hangs loose from your shoulders, scarcely touching your body. Big, roomy armholes. Crotch never gapes or binds.

"Fits exactly right—no bagginess; no clumsy belt. The man who designed Topkis knew something about the human body.

"And listen—Topkis lets your skin breathe. Keeps you full of pep. No stuffy feeling.

"Quality? Value? Feel that fabric. Look at the workmanship. Seams firmly stitched; buttons put on to stay. Where could you get anything like it for a dollar except in Topkis?"

Only the best nainsook and other high-grade fabrics are used in Topkis Athletic Underwear. Pre-shrunk—full size guaranteed. But get *your* size—38 if your coat is a 38, and so on.

No good dealer will ask more than a dollar for the Topkis Men's Union Suit — although many will tell you it's *worth* more.

Men's Union Suits, $1.00.

Men's Shirts and Drawers, 75c per garment. 75c for Boys' Union Suits, Girls' Bloomer Union Suits, and Children's Waist Union Suits.

Non-Porous Cooking Utensils — Beautiful—Healthful

Just as the whiteness of ermine is emphasized by the rich black tips—just as striking beauty is brought out in a pale gown touched off with dark velvet—so the blue-grey of Nesco Royal Granite Enameled Ware enhances the beauty of the white kitchen.

On a white range, on the white porcelain top of the work table; at the marble-white sink; in the white cabinet—beautiful blue-grey mottled Nesco Royal Ware harmonizes handsomely. It breaks the monotony of all-white. It decorates and gives character to the white kitchen.

Nesco Royal Ware fits admirably in the color scheme of any kitchen. It always harmonizes.

◇ ◇ ◇

Besides the attractive appearance of the glossy, mottled blue-grey surface, Nesco Royal Ware has beauty of design. Each utensil is artistically fashioned, of strong, durable, lasting materials.

The base of Nesco Royal Ware is of pressed steel—heavy, shapely—on the surface of which pure melted granite—the hardest of rock—is flowed and baked into the very pores.

The Nesco grey granite gives to the ware a hard, porcelain-like surface, consequently very durable and long lasting. It is smooth and even, free from pin-holes. Each utensil is carefully inspected.

Saves All Food Values and Flavors

Because Nesco Royal Ware is non-porous and non-absorbent; because of its flint-hard, glassy surface, contact of food with metal is absolutely prevented. All food elements, especially the precious, health-giving mineral properties, are retained. None are lost through absorption.

Nesco Royal Ware does not discolor. Food particles cannot penetrate and lodge in the granite surface. Therefore, odors of foods never cling to the utensil. Tedious scouring or special boiling out are unnecessary.

◇ ◇ ◇

Nesco Royal Ware is food-acid-proof. There is no possible chance of chemicalization which impairs the flavors of foods. That is why Nesco Royal Ware should be used in the cooking and canning of fruits.

For the sake of the health of the family the wise housewife and good cook selects Nesco Royal Ware. It enables her to prepare better-cooked, better-flavored dishes with all food values retained. Heat is conducted through the heavy steel base evenly and quickly.

Irresistible To The Economical Housewife

The housewife is at once impressed with the economy of Nesco Royal Ware when she buys it and notices how reasonably it is priced. After that, for years she has daily proof of the economy of the ware—it is so durable. Grandmothers have passed on pieces of this ware to their granddaughters. Age and daily service are not evidenced by dents and discoloration.

Economy of Nesco Royal Ware is also measured by time saved in dishwashing. In a year it amounts to many hours. Only water and mild soap are needed. No need of expensive cleaners, no polishing, no special boiling out to cleanse. Elimination of these irritating and disagreeable methods helps to keep the housewife's hands smooth, white and lovely and her good spirits unruffled.

Free Recipe Book

Utensils for every purpose may be obtained in Nesco Royal Ware. Hotels, hospitals, grocers, meat dealers,—all find equipment in this line. For the home, and special uses in the home, there are Nesco Royal Ware utensils in all shapes and sizes.

An attractive descriptive folder and a handy recipe book will be sent upon request. Address: National Enameling & Stamping Co., Inc., Advertising Dept., Sec. D, Milwaukee, Wis.

Magnified section of Nesco Rockweave Wick. (1) brass wires; (2) asbestos cord.

Used Every Day for Months — Still Gives a Perfect Blue Flame

It is not unusual for a Nesco Rockweave Wick to give months of unvarying service. Housewives have learned to expect this dependable service from it whether it is new or months old. With the Nesco Perfect Burner, this durable wick produces a perfect blue flame close under the utensil. It gives an odorless, smokeless heat best suited for all cooking. It is ready to be lighted at a moment's notice without pre-heating or generating.

The Nesco Perfect Oil Cook Stove has gained favor as much with the city as the country housewife because of its beauty, convenience and low operating cost. As a summertime cook stove it has been particularly appreciated. You will want to own a Nesco Perfect Oil Cook Stove and it is priced so that anyone can afford it. See this stove at progressive hardware, house furnishing or department stores. There you will find the Nesco Royal Granite Enameled Ware which has been used by housewives for over forty years. Also, the Nesco Perfect Oil Heater and the Nesco Perfect Water Heater.

COMMON HONESTY OF SPEECH

(Continued from Page 27)

ıe entire business interest of the commu-ity. Their boards of directors are chosen om four main groups—the leading retail ores, the industries, the banking and nancial community, and the newspapers. heir power to handle cases depends upon :e wide extent of their ramifications and ffiliations, and upon the willingness of con-erns in many branches of business to con-ribute not only money but information and ssistance.

At first sight it is a curious and striking act that these organizations, which in heir origin and even now in their tech-ical connections represent only the idea nd force of advertising, are able to do for usiness what business cannot do for itself. Obviously advertising is only one part of usiness, and yet these offshoots of the dvertising clubs have been able to rush n where the most powerful organizations f producers have feared to tread.

If a jeweler is misrepresenting is goods, if he says that a watch as twenty-three jewels when in-estigation proves that most of hem are red paste or celluloid and ot bearings for movable parts, it ight seem as if the local retail or jewelers' association or the state or national jewelers' association hould get after him. If a man who calls himself a dentist says that all dental work is rendered entirely painless by him, when of course such a thing is impossible, why does not the dental asso-ciation of the county or state run him out?

The trade and profes-sional associations do in numerous instances drive out the more obvious frauds and fakers. But there is plenty of room for outside organizations like the better-business bureaus, for a reason which is simple if not al-together obvious to the reader who has never had to give the subject thought. If one concern criticizes another in the same line of busi-ness, or even if the charge is brought by an association, it is so easy to insinuate that jealousy is the actuating motive.

"Of course the state jewelers' associa-tion is against me," says the man who is selling fake watches, "because they know I am selling better goods than their mem-bers are, for less money."

In the same way the painless dentist argues that the dental association is com-posed of members who are jealous of his skill. He insinuates that they are high priced, old line and hidebound. A similar argument is made by the crooked stock promoter who is criticized by legitimate brokers. There is nothing he likes better than criticism from such a source, for it enables him to point to the Wall Street inter-ests, who he says are trying to destroy him. He poses as the under dog who is being attacked by the big fellow.

Methods Employed

Of course the faker's argument is largely bunk, but it serves his purpose. He always capitalizes the attempt of legitimate busi-ness to make him compete fairly. He is always looking for a chance to quarrel with legitimate business, and is dignified by its attention.

A remarkable illustration of this general principle is afforded by a case of the pro-moter who sent a representative to a small but legitimate broker and induced the broker to make a statement criticizing the promoter's financial reports. He then wrote a letter to the broker demanding a retraction, but the letter was written merely to build up correspondence upon which to base sensational advertising.

This little trick really gave the pro-moter his start, for then he was able to come out with a glaring piece headed Wall Street is After Me. It happened that the broker who criticized him lived in the Middle West, but it would have made no difference if he had lived in Portland, Maine, or San Diego, California; he would have served the purpose just as well, and would have been labeled Wall Street.

The promoter was later given a jail sen-tence, but not until after he had sold nearly ten million dollars of practically worthless stock to nearly seventy thousand innocent persons. For he sensed the preju-dice that exists against Wall Street and cleverly realized that he could make a strong appeal with the unthinking investor by connecting up in his advertising any man operating in the financial field, with Wall Street. He was able to get right down to the dear public with a false but very telling appeal, substantially like this:

Now you may wonder why Wall Street is after me. I will tell you. For years down in Wall Street they have had a little inner circle, and when any great genius came out of the West with a money-making idea this little inner circle financed him by putting in a few hun-dred dollars each, and from this investment they realized millions. I, however, knowing that you had a few hundred dollars to invest, preferred to go to you in financing my com-pany, and to give you the opportunity to make the millions. I did this for the very selfish rea-son that you would not only be able to finance my company but that your interest would con-tinue perpetually and aid and assist me in selling cars in your territory when the company gets to production.

For that reason Wall Street is after me, but I have observed that boys do not throw sticks into empty apple trees, and I am complimented that Wall Street sees the future of this business as clearly as I see it. Now I have their secret and I am organizing a company which will rival and perhaps drive them out of business, and the only thing they are sore about is that I know you have got one hundred dollars and I am going to give you the chance to put it in and get rich, and they want it themselves.

Then of course he told how one hundred dollars originally invested in the Standard Oil Company or the Ford Motor Company is now worth several hundred thousand dollars, and how in his company the dear public instead of Wall Street would make the fortunes.

Now, the National Vigilance Committee and the local better-business bureaus do not represent any one branch of business, whether brokers, bankers, jewelers or den-tists. They represent advertising, the com-mon instrument of all business. Therefore they cannot be accused of jealousy or of a competitive motive. Their sole interest is advertising, and they are in the closest possible touch with its every form and branch, some forty in all—newspapers, magazines, posters, programs, moving pic-tures, direct mail and the like. No other organizations can so effectively detect advertising misuse and abuse. They can take a broad viewpoint, disinterested as far as any single industry is concerned, which is difficult for the faker to capital-ize to his own benefit.

The question may be asked why any-thing like a serious diversion from truth in advertising statements should not re-ceive the attention of the legal authorities, local district attorneys, state and Federal commissions, and the like. But the work of such public authorities is mostly legal, whereas the bulk of the cases handled by the National Vigilance Committee and the better-business bureaus is disposed of through means of educational propaganda, suggestion and moral suasion.

There are three sep-arate methods em-ployed to bring about honesty of statement. The first is suggestion, the second is public-ity, and the third is prosecution. The last is rarely resorted to.

Out of two thousand five hundred cases handled in one city, only eight required prose-cution.

If the Millionaire's Wife Wears a Sealskin Coat, the Working Girl Wants an Article That Looks Much the Same

It is remarkable what suggestion, if tact-fully employed and coupled with general educational work, will accomplish. It ap-plies to the business man who is legitimate, who is building for the future and who realizes the value of a good name. If some-thing wrong is found in his business he is usually glad to be told about it and tries to prevent its recurrence. The local bureau calls his attention to the misstatement, saying that it is sure he desires to coöperate in the bureau's efforts to make the city's advertising as truthful as possible.

A newly organized automobile-tire firm adopted a trade name very similar to that of a house of long standing. The business judgment of the concern was appealed to, and it agreed to abandon the trade name of its old competitor in the interests of fairness. It is often found that where one concern encroaches upon the trade name of another it is sufficient to point out that the goodwill of both competitors will be jeopardized. Thousands of cases of this sort are settled yearly, and where the erring concern readily complies with suggestions no publicity results and the file is closed.

Publicity is almost as deadly as prosecu-tion. Thousands of copies of a bulletin sent to newspapers throughout the country for publication is a dose that rarely re-quires repetition. Publicity is applied mostly to business men who are overclever, who want to be considered as honorable as the best, but who attempt to put some-thing over every time they get a chance.

"There is but one thing to do with this type of man when we have definitely es-tablished his policy," says Richard H. Lee, director counsel of the national committee, "and that is to tell other business men of his methods."

Some time ago the National Vigilance Committee on request took up the matter of determining to whom credit should be given for first manufacturing a product which is now in common use and of ex-ceedingly great importance. It had been hoped by the committee to adjust the con-troversy between two competing concerns without any publicity.

But while the investigation was still on it learned that both concerns contemplated running advertisements, each claiming that the committee had decided for its claims. Both companies were called upon to ex-plain, and both promised not to run the advertising.

Cases for Prosecution

One of the companies kept its promise, while the other not only broke its word but used the truth emblem of the committee, which no private concern is ever permitted under any circumstances to employ. Where-upon the committee issued a statement to the newspapers reviewing all the circum-stances, mentioning both companies by name and containing this scathing denun-ciation:

"The committee is forced to take the attitude that the X Company or its repre-sentatives, as the case may be, in publish-ing these advertisements, have been guilty of a breach of faith and a violation of confidence. They have sought to capitalize their relations with this committee in spite of their agreement not to do so, and have flaunted the copyrighted emblem of the association at the head of their copy in the face of an express prohibition and in bold indiffer-ence to ordinary standards of ethics."

Prosecution is used only when the committee or local bureaus are certain they are dealing with an absolutely illegitimate inter-est, "with the fellow who has no intention of making an honest profit on an honest product, who cares nothing about the building of goodwill, who has no interest in other individuals connected with his industry, who, if he were not engaged in misusing advertis-ing, would probably be picking pockets, burglarizing banks or scuttling ships. The sooner he is removed from business gener-ally the better it is for everyone concerned. His livelihood con-sists of defrauding the public, and of course he has no business future."

"Two men are picked up on the street, drunk," says Mr. Lee. "They go to the same police station in the same wagon and occupy similar cells. But one is an amateur and the other is a professional. The first is sufficiently punished by being shamed, by the reflection which is cast upon him-self, his family and his friends. But there is only one thing to consider in the pro-fessional's case, the protection of society. You cannot appeal to his sense of fairness or honor. All you can do is to lock him up as long as possible."

Of course there are always persons who fear the disturbing and possibly destructive effects upon business in general of any vig-orous attack upon commercial dishonesty. It might as well be said that a city which is infested with burglars should simply un-lock the doors of every house and invite the thieves to help themselves. It cer-tainly cannot be proved that confidence in business has been injured by the truth-in-advertising movement. Lengthy and de-tailed bulletins were issued by the national committee, describing the two biggest frauds in the sale of automobile stocks—one of them probably the biggest financial fraud in the history of the country—and these bulletins did not in the least influence the sale of legitimate motor stocks. Indeed, though the two frauds in question were put a stop to, largely by this publicity and by the efforts of the committee, I am very much afraid they have not prevented the sale of other dubious motor stocks.

When the first of the bulletins was issued brokers and promoters of legitimate motor stocks were much disturbed. They said it would destroy confidence in all motor stocks, but the committee decided that it was solely a question of method. On the Sunday pre-ceding the publication of the bulletin the

TEXACO GASOLINE
THE *VOLATILE* GAS

Volatility is the readiness with which gasoline gives up its power

BEFORE 1902 The Texas Company did not exist. In but 20 years the public demand for Texaco Products has built a business of immense size.*

This widespread demand is so insistent as to compel a continuous and rapid increase in production and distribution. The public shows its appreciation of *distinctive, uniform quality* in an unmistakable way.

This great demand for Texaco Products is final proof that the soundest scientific practice in the refining of petroleum, pays. Every Texaco Product is made upon this important principle.

Texaco Gasoline is a good example. More power and readier, was the universal wish. Texaco Gasoline gives it, through high and uniform volatility.

Texaco Motor Oil is another instance: the Oil famed for its heavy body and its refinement to a *clear, pale* color.

That Texaco Gasoline is the *same* wher-**ever you fill your tank, is a vital point of** its popularity. Touring in New England in summer, or beneath Florida palms in winter, visiting America's wonder-scenes such as the Grand Canyon, or the Rockies, or Niagara, or the thousands of less known places of unsung beauty, you find that the trail leads to the Texaco Red Star.

At these filling stations you always find Texaco Gasoline and Texaco Motor Oil, and the satisfaction of improved operation and upkeep.

*In the last ten years the consumption of Texaco Gasoline has increased from 160,000 to over 1,000,000 gallons a day.

leading newspapers of the country carried fifty thousand dollars of advertising of the worthless motor stock, but the Sunday following the receipt of the bulletin no legitimate newspaper would accept its copy. Finally the promoters were brought to trial and sent to prison, but reputable motor stocks continued to sell as usual.

The vast majority of all cases handled by the national committee or the local bureaus, however, have to do with misrepresentation of merchandise. Complaints come from both consumers and competitors, and the bureaus make independent investigations on their own account. In several cities a regular shopping service is maintained, detailed reports being made to the bureau and to the heads of the stores, not only concerning the price and quality of merchandise but as to the personal appearance, cleanliness, knowledge, courtesy and attentiveness of the salespeople. Often the bureaus manage to cause a shake-up between the head of a firm, who formulates its policy, and the subordinates, who do not always carry it into effect as constructively as they might.

Everything depends upon the enthusiasm, experience and judgment of the paid secretary or manager. Most of these are men under thirty-five. About half are lawyers, and among the rest are men who have had advertising, newspaper or merchandising experience.

They can accomplish little, however, unless they are willing to coöperate with other business organizations and with the local authorities. In some cases this cooperation has been carried to a point where the secretaries have been appointed special representatives of the state corporation or blue-sky commissions or of the local attorneys' offices. Though local methods differ in detail the more common procedure is sufficiently standardized, especially perhaps in regard to women's and men's clothing, shoes, furniture, musical instruments and certain other classes of articles, to be described briefly.

If it is suspected that there has been misrepresentation in the advertising of a lot of suits, one is purchased for cash by a buyer who of course is unknown to the store. All price tags, labels and other identifying marks are removed, and a number of different local authorities are asked for their opinion of its value. Care is taken that these experts are not told the price at which the suit was advertised.

Common Deceptions

If the average price arrived at shows a material discrepancy from the value as represented, executives of the store are at once interviewed. They usually accept the findings without demur. But if they object, the suit is sent to a bureau in a neighboring city for similar study. Frequently articles are subjected to chemical analysis to determine the percentage of wool.

So many forms of misstatement and deception are employed that it is almost impossible to classify, much less describe, them all in the space of an article. A minor but common form of deception consists in exaggerating the number of articles on sale. A store advertised tires at five dollars below the regular price. The statement was found to be perfectly true, but only one size was available. Here is another very common misleading statement: "$60 coats for $25." Investigation proves that in a given lot two or three coats of the higher value are selling at twenty-five dollars, but that the great majority are worth twenty-five dollars and no more.

The bureaus have frequently warned merchants against the practice of advertising small lots as if they applied to the general run of goods. The public has a right, it is held, to believe that all sizes in any given article where sizes are involved are obtainable unless the contrary is distinctly and unequivocally stated.

Another minor but common form of deception is the misleading use of cuts or illustrations. An advertisement should show on its face whether the accompanying illustration is intended to picture the specific goods advertised or merely the general class to which they belong. Thus pictures of children's wagons in advertisements sometimes look large enough for big boys, but when parents come to buy they find the wagons are too small for any except little tots.

The better-business bureaus have taken up many cases of the failure of furniture and musical instruments to conform illustrations. A library table is adverti at thirty-five dollars, and a cut is show a table which upon inquiry is found to standard article selling at one hundred twenty-five dollars. Merchants someti use standardized illustrations furnis them by manufacturers, regardless of w they have in stock, and discrepancies o occur in this way.

Another minor abuse which the bure constantly are fighting is the effort unscrupulous merchants to convey the pression that they have somehow eli nated wholesalers and are therefore sel goods at lower cost than their competit Such phrases as "retail clothing at wh sale prices" and "direct from factory you" are opposed as constituting un competition. Such phrases convey the pression not only that the wholesaler been done away with but that even re expenses themselves are eliminated. T of course is absurd as long as the goods being sold out of a retail store.

The bureaus have even taken except to the statement of a clothing manuf turer who advertised "no retail profit," the ground that as long as the manuf turer maintained retail stores and salesm his expenses would not admit of much lo prices than the prevailing level.

Extravagant Claims

A milk company advertised, "We o our herds, thus insuring purest prod costing no more." But it changed its a vertising when the local bureau discover that the company produced only eig hundred gallons of milk a day and s four thousand.

The element of unfair competition volved in the use of superlatives and clai which cannot be sustained requires co stant attention: "I sell more made-t measure garments than all other tailors the city combined, and I buy and sell mo woolens than all the tailors in the city "Largest assortment in the city." "T store in the city twice the size doing much business." "This article is the bi gest seller on earth and has no compe tion." "Largest auto-parts house in t Middle West." "Save half on your cloth bills. It is a fact." "Our book on accoun ing at $2 is worth more than any high college course up to $150." "If any sto in the city can duplicate our work shoes $3.95 at less than $6 and $7 a pair, brin them back and get your money." "We pa the highest prices for used articles"—wh three or four other dealers advertise th same way.

The better-business bureaus have com pelled merchants to discontinue the use these and many similar statements, for th simple reason that they are either untru or cannot be proved. In the case of th shoes it was found that the same make wa on sale in other stores in the same city fo about three dollars, and a much better sho could be found in other stores for six an seven dollars. A store that advertise "greatest values in the Northwest" wa asked to discontinue the statement, on th ground that the determination of valu rests with the general public rather tha with the advertiser himself. A dealer wh advertised "$200,000 of shoes to be sold a once" was found to have only sixty pairs

A man who claimed to have the larges shoe store in the city, when questioned as t whether he referred to the area covered variety or amount of stock carried, volum of business or number of salespeople, ha no answer. One concern advertised "ten thousand overcoats just arrived from our own tailoring establishments," but it was found to be only one of twelve stores shar ing in a single factory's production. Even such words as "best" and "finest" are often objected to on the ground that they unfairly injure other merchants.

There seems to be literally no limit to the variety and ingenuity of tricky statements. "Liberty Bonds cashed" was the announcement made by one store. "If you find that you must use your Liberty Bond we will pay you $51 in cash for your $50 bond. Don't let scalpers get it away from you for a song, don't lose on it at all. Make on it by coming to us."

Investigation proved that a purchase of twenty-five dollars or more in goods was necessary before Liberty Bonds would be accepted—a perfectly fair arrangement, but not mentioned in the advertisement. In the same way a music store offered to sell

Standing Invitation to Delightful Breakfasts

DO you know how good corn flakes can really be? There is a treat ready whenever you decide to "learn the Jersey Difference."

Great structures are devoted to producing the favorite corn flake of millions and *new* buildings are growing out of the appetizing goodness which is the particular appeal of Jersey Corn Flakes.

It's mighty satisfying to find nothing but large, wholesome flakes, appealingly flavored, so uniformly good and so crisp in milk — reason enough for their growing popularity.

Jersey Corn Flakes stand alone, inviting you to many delightful breakfasts — and most satisfying betwixt-meal lunches.

Your Grocer can supply you.

"I am your grocer, and I'm going to tell you about the Jersey Difference. Watch for me in this and other leading national periodicals and newspapers."

Grocers Will Read This

WE believe the story of Jersey Corn Flakes deserves telling in a big way,—so this is the beginning of a big, generous series of announcements in magazines and newspapers which will acquaint the public with what they always want to know, the name and quality of a better corn flake.

Over one hundred thousand grocers sell and recommend Jersey Corn Flakes. Their numbers and sales multiply as folks *taste* "the Jersey Difference."

The sooner you have Jersey Corn Flakes on your shelves the sooner you will be able to profit from the appeal of this extra-delightful, ready-to-eat food. Jerseys are irresistible, the flavor entrancing and the economy pleasing. Delectable goodness rules the quality of each flake.

Why not stock Jersey Corn Flakes today?—your jobber has them. You can then say "Yes, we have Jersey Corn Flakes," instead of "Sorry but we'll have some in next week."

"Learn the JERSEY Difference!"

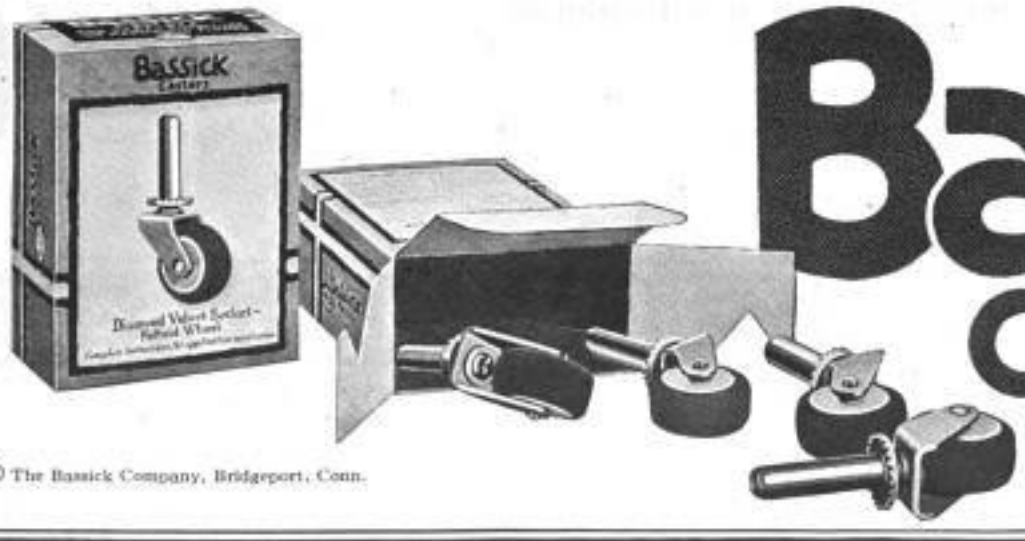
This is the
"Neglected Inch"
—the inch between the
furniture and the floor



What is the Penalty for Neglecting that Inch?

YOUR divan weighs approximately one hundred and fifty pounds. Without casters or on the wrong kind of casters, your efforts to move it must be doubled. When casters refuse to swivel, but drag broadside across the floor, no wonder the end of a house-cleaning day finds tired muscles and wrenched and aching back—results of needless over-work and over-exertion—the penalty of the Neglected Inch.

And your furniture undergoes the same strain as your muscles. Your wasted strength, when the casters stick, pushes the top of the divan away from the legs, loosening screws, bolts and joinings. Rickety and wobbly furniture—also the penalty of the Neglected Inch.

Now is a good time to check the number of "Neglected Inches" in your home. And when you have found the many places where casters are needed, go to your dealer, tell him in detail about the furniture—whether it is light, medium or heavy in weight—and about the floor or floor covering on which it stands. He can give you or get you just the right Bassick Casters to meet any service conditions—casters which swivel and roll easy and freely—which eliminate the "Neglected Inch" from your home.

To save your energy as well as to protect your furniture and floors, hold a caster inspection day. In the future, whenever you buy furniture, look to the casters and make sure they bear the name, "Bassick."

(Continued from Page 82)

he best grade of talking machines without penny down, but failed to mention the act that a certain amount of records had o be bought in the store and paid for in ash. One man advertised his establishment as being "The Main Store," a rather musing statement in view of the fact that was the only one he had.

Fake fire sales, "sample" stores, the old elling-out game, and so-called army and avy stores, a large part of whose stock ever had any connection with either anch of the service—all receive constant ttention from the bureaus.

It is very common for men who are aught in untruths to argue that their advertising is basically or technically true. A store advertised "Best brooms made, Saturday only, at 65c." It was found that the concern manufacturing these brooms makes several other better qualities, but the merchant put up a defense that he meant the brooms were the best that could be bought for sixty-five cents. His intentions may have been of the best, but the statement was capable of misinterpretation. The real question of course is what the public thinks an advertisement means, and the better-business bureaus work for advertising that is incapable of being misunderstood.

Nearly all the bureaus have fought the gyp or residential dealer. A professional dealer advertises in the newspapers from a residential address to create the impression that he or she is selling out personal effects because of illness, misfortune or the necessity of moving away. Gyp dealers concentrate on musical instruments and furniture, but occasionally they handle furs. Often goods are sold by these gyp dealers at much higher prices than in legitimate stores, although the purchasers are led to expect the greatest of bargains. A typical case is that of an old man in the Northwest who bought a cow from what he supposed to be a farmer on the representation that it would give five gallons of milk a day. But it gave only five quarts, and the pretended farmer proved of course to be a professional dealer in the poorest grade of cattle. A regular loan company advertised "Why don't you borrow money from me? Private party." When confronted with the obvious falsity of the words "private party" the president of the company could think of no excuse except that he did not investigate his clients at their places of employment. His explanation did not go.

One of the more serious forms of commercial misrepresentation has to do with the sale of seconds, or used articles. On account of the large number of rebuilt or reconstructed tire concerns which have sprung up all over the country—many of them without financial responsibility or good reputation—the vigilance committee has issued a special bulletin, entitled Earmarks of Deception in the Advertising of Cut-Rate Automobile Tires.

Substitutes Sold as Genuine

There is of course no objection to reconstructed tires as such. The makers of these casings serve a need and promote a saving of material that otherwise would go to waste. But unfortunately much of the advertising of this class of goods has conveyed the impression, to the sorrow of innocent purchasers, that the tires are a great bargain. Such expressions as "Tire bargains. 65 per cent off. Standard makes" are played up, and the word "reconstructed" or "reconstruction" is printed in very small type. A tire that is offered for 40 to 75 per cent less than usual is naturally as a rule worth no more than the cut price asked for it.

But perhaps the most serious and baffling evil which the truth-in-advertising movement has to contend with is the use of misleading trade names. The attempt to create an impression in the mind of the casual reader that substitutes and imitations of well-known expensive articles are the real, the genuine thing, is so common that only those who have given the subject close attention realize what a cancerous growth this has become in our industrial and commercial body. I do not think it is possible to exaggerate the extent to which far too large a section of American business merely trades upon, cheaply imitates and unfairly capitalizes the work of other business men.

Substitutes and imitations have important and valuable uses, and add to the comfort and well-being of millions. Often they represent the most brilliant conceptions of inventive genius. But that is no reason for giving them dishonest and deceptive names. I am no authority on fur and for all I know dyed rabbit may be as warm and beautiful as seal, but that is no reason for calling it French seal or Parisian seal or any other kind of seal. It is rabbit, not seal.

It may be possible even to manufacture a fabric out of wool or cotton or even from fiber waste which looks and feels like seal and wears as well. All hail to the inventive genius that devises such an article, but all scorn for the unoriginal, timid and servile mind that can think of no name for it except to combine a geographical name with the word "seal," when the fabric in question is totally unrelated to either!

There are hundreds, perhaps thousands, of substitutes, composition, fiber and synthetic articles of tremendous usefulness, but if they continue to multiply and continue to parade stupidly as something which they are not, they will threaten the ethical basis of our institutions. It is impossible here to mention all these articles, but probably the worst sufferer by the general practice which I have in mind is wool. Now there can be no doubt about the usefulness of cotton. It is probably of more benefit to the human race than either wool or silk or perhaps than the two combined. Why then in common decency and honesty must it be made so constantly to parade as wool?

In many cases the better-business bureaus have had goods that were advertised as wool subjected to chemical analysis, only to disclose the presence of a very small percentage of wool and a large percentage of cotton. In all such cases the advertiser is urged to change his copy to read "wool and cotton mixed" or "three-quarters cotton and one-quarter wool."

Deceptive Trade Names

It is unfortunate also that trade terms have not developed differently and more originally for what are commonly known as artificial silks. Of course silk is made only from the cocoon of the silkworm, and it is a thousand pities that the marvelous products of cotton and various fibers, pulps and other substances which are given a gloss and sheen to make them look like silk can not universally receive suitable, descriptive and distinctive names which place them squarely on their own merits. Nor is it any tribute to American business genius to connect some geographical name with the word "linen" as a trade name for an ordinary line of cotton goods.

Leather also suffers severely at the hands of its imitators. Leather is the skin of an animal, tanned or dressed, and it cannot by any stretch of imagination consist of a composition or manufactured fabric. In many cities the better-business bureaus have objected to the advertisement of moleskin leather or muleskin leather. This material, so the bureaus insist, should be referred to as moleskin fabric; not as leather.

In the same way objection has constantly been made to the combination with fanciful or geographic names such as "French" and "Parisian" of the old, familiar terms, ivory, shell, amber, jade and coral, in the advertising of composition products known as pyroxylin plastic goods. If the word "ivory" is used, truth requires a qualifying adjective like "composition."

When it comes to furs there seems no limit to the use of fanciful names. The fur of common animals, such as rabbits, dogs, goats and muskrats, goes by more resplendent names, such as sealine, Baltic seal, French seal, Australian seal and the like.

The National Vigilance Committee has been investigating several useful and wholesome artificial food compositions which are made as substitutes for highly popular natural products which are growing increasingly scarce. The committee takes the position that these substitutes are so useful and important that no business advantage is to be gained and much ethical advantage lost by exaggerating their similarity to the natural product.

Of course the public itself is partly, indeed largely, to blame for the widespread use of misleading trade names. People like to buy things that look better than they can afford or have any right to expect at the price. If the millionaire's wife wears a sealskin coat that costs several thousand dollars the working girl wants an article that looks much the same at a small fraction of the price. So she is given rabbit's

WINCHESTER
TRADE MARK
SKATES

BOYS

WE want you to own a pair of Winchester skates. They are good skates designed for speed, action and hard service.

¶ The frame is supported by a bridge girder that strengthens and stiffens the whole skate. The ball-bearing rolls are light-running and especially hardened to give long wear on asphalt and concrete. We have had all sorts of boys skating continuously for days on these skates over rough pavements to test them out thoroughly before offering them to you. We believe they are right, and want you to own a pair.

¶ There are 4000 stores in the United States which sell Winchester Skates and the other new products. Look for this sign on the window: *"The Winchester Store."*

Booth's
CHOCOLATES
Made For
Candy Lovers

Booth's True Blue Chocolates: A selection of the very choicest chocolates made by the Booth Candy Makers; every piece proven "True Blue." 20 ounces of Love-Food.

EVEN if we deserved it, we couldn't expect everyone to buy Booth's Chocolates; yet for 27 years we have been striving to make the Finest Chocolates, with the strictest attention to every detail. During these years a favorable public opinion has been created by the quality of the Chocolates.

Just buy a box of Booth's Chocolates. Why? Well, one reason is we use in our Chocolates fresh cream received daily from the Booth Dairy Farms.

If you like that Rich Milk Chocolate, buy a box of Booth's Butter Chocolates. They have met with approval everywhere. If you prefer the Good Old Dark Smooth Vanilla Chocolate, sit down by a box of Booth's Esther Chocolates, the box with the Rose Design, and enjoy real quality.

Booth's Billy Package meets the present-day demand for a popular-priced assortment of fine chocolates at a dollar a pound.

Our many other packages, beautiful in design, contain assortments of the most delicious flavors and combinations. Look for the name, Booth's Chocolates.

If unable to obtain Booth's Chocolates from your dealer, send his name and address and we will supply you by mail, upon receipt of the following prices: True Blue Chocolates, 20 oz., $2.00; Butter Chocolates, 1 lb., $1.50; Esther Chocolates, 1 lb., $1.25; Billy Chocolates, 1 lb., $1.00. Other sizes in proportion.

***Good Dealers:* Write today for information regarding our special agency proposition.**

Wilfrid I. Booth, Elmira, New York.

skin, and to satisfy her pride and vanity the dealer calls it Australian seal. In other words the public is just as dishonest with itself as any class of dealers is with it.

The retailer says that goods are misbranded when they come to him, and that the elimination of deceptive names should be reached at its source. But on the other hand the retailer can strictly state the truth in his own advertising. The fact is that trade names can be made to conform with trade facts only by the combined efforts of the manufacturer and retailer.

Unless they combine to do it the first thing they know Congress will pass some "truth in fabric" law which will compel the stamping on all manufactured articles of the exact nature of the materials. Manufacturers have fought such legislation, but it will certainly come unless the abuse of trade names is discontinued. Already, however, a number of misleading names have been abandoned or properly qualified by makers, importers, jobbers and retailers, owing partly to the activities of the truth-in-advertising workers.

Comparative Prices

Unceasing effort is made also to induce new concerns to adopt distinctive names, labels, trade-marks and slogans, rather than merely imitate those of older and more successful competitors. The point is constantly made by the truth-in-advertising workers that it takes brains to market goods in an original way, and that even to tell the truth interestingly requires brains. "Why not show that you have some brains?" is the way they put it.

From the point of view of local merchandising the misuse of comparative price advertising and the abuse involved in comparative value advertising also call for unceasing attention. Unlike the use of substitutes and imitations, this practice involves only the retail merchant, but it is so common and so widely employed by business men of good standing that improvement is very difficult to secure.

Few women shoppers really understand just what is involved in comparative prices and values, and therefore misleading impressions are easily conveyed. "Skirts $10, former price $25." Now this statement may be true, but in a sense quite different from what the reader supposes. The facts probably are that the skirt did actually sell at twenty-five dollars a year ago, a little later for, say, twenty dollars; and still later for fifteen dollars. Now it is offered for ten dollars.

There is no objection to mentioning former prices if—and this if is very important—the date of the former prices is mentioned. If the skirt sold for twenty-five dollars a few weeks ago instead of a year ago, and is now selling at ten dollars it is probably a tremendous bargain. But because it sold at twenty-five dollars a year ago it may not be a bargain at ten dollars at all now, because of changing price levels and changing styles. In other words it is a question whether the merchant is justified in using the prices at which articles sold six months or a year ago if there have been intervening reductions. In the case cited, if the advertisement had read, "Skirts $10, former price $15," it would have been truthful in the strictest sense.

But the possibilities of misstatement and deception are much greater when merchants deal with values rather than with prices. A fur dealer was convicted a few years ago on the charge of advertising a one hundred and twenty-five dollar seal coat for thirty dollars, when its actual value was found to be precisely thirty dollars.

In this case the court said: "A coat with a valuation of thirty dollars was never manufactured to retail at one hundred and twenty-five dollars. The people, through the legislature, struck out against persons who victimize them through such commercial frauds as this."

Naturally, reputable merchants do not make such representations, and few cases that involve the use of comparative values are ever raw enough to take into court. But the evil is none the less great. "Suits $35, $50 values." What does this mean? The suit may have had a value of fifty dollars six months or a year ago, and may be wholly out of style to-day. Is it fair then to say that the article has a value of fifty dollars now?

A number of the better-business bureaus have attempted to enforce a rule that comparative values in advertising should be based on the price at which the same article is being sold in three or more other stores in the same city at the same time. They take the position that a representation of value or worth which is other than the current value is deceptive on its face. If in the case cited it is found that three or four other stores in the same city are selling the same suit for about thirty-five dollars, then the position is taken that by no stretch of imagination can it be described as a fifty-dollar value. Of course if the merchant had said "Suits $35, were considered to be worth $50 last spring when this model which is now out of style was all the rage," there could be no possible objection.

A number of stores have greatly modified the comparative feature in their advertising. Numbers of them no longer mention former prices or values, except to say "Reduced," "Under the normal," "Better quality than usually offered at this price," and other reasonable statements of similar character. Many merchants feel that comparisons are necessary to stimulate business, but on the other hand the store which advertises that a suit which is selling at thirty-five dollars to-day was priced or valued at fifty dollars six months or a year ago is more likely to be suspected of having profiteered in the first place than the one which avoids such comparisons.

Perhaps the most striking accomplishment of a number of the bureaus has been to induce merchants to correct or retract misstatements publicly.

In Toledo six large stores have agreed to publish corrections of any error called to their attention by the local bureau, the corrections to occupy a certain definite space in specified type in their newspaper advertising. Some of these corrections have been trivial, but in the opinion of the Toledo bureau each one tends to strengthen the confidence of the reading public in the honesty of business.

Published Corrections

One of the other bureaus has taken a strong stand against published corrections. This bureau makes the statement:

"If the practice were carried far enough it would, we believe, ruin consumer confidence in advertising. There is a human element in producing copy, and consequently it is impossible entirely to avoid errors or false statements. They are in most cases made by mistake. We, therefore, believe this system is absolutely opposed to the purpose of our work, and if it was not, it would be impossible to operate it practically by any commission in the country."

It is admitted of course that the policy of inducing reputable concerns to publish retractions is in its experimental stage. Personally, speaking as a mere man, leaving if possible all forms of shopping to my wife, a public retraction would increase my confidence in a store immensely, especially if my previous dealings with it had been satisfactory. "Why, here is an honest store," I should say. "They have the courage of their convictions. If they are willing to admit they are wrong now and then they must be pretty decent most of the time."

The psychology of the thing could be determined fully only by interviewing hundreds, perhaps thousands, of shoppers. But the reaction of the first woman whom I questioned on the subject was suggestive. She is a housewife, the mistress of a large family, and has had plenty of shopping experience.

"Of course it would increase my confidence to see a published correction," she said in reply to my question; "but, there very few women believe the advertising stores anyway. What difference does a correction make? If I go into a store and see waists selling at $1.98 with a big sign over them showing the figure $4.98 crossed out, I turn to my mother or whoever else is with me and say with a laugh, 'Of course these are not $4.98 waists; they are too sleazy for that. But they are worth $1.98 and I think I will buy a couple of them.'

"There are a few stores," she added, "which tell the truth. The sales at X's are real sales; and do you know why it is that I buy so many clothes for the children at Z's? It is because they advertise in large type, 'Three-quarters cotton and one quarter wool.'"

"My goodness, woman!" I exclaimed. "It is just this lack of belief and confidence in the bulk of advertising which you so cynically acknowledge, that this movement I am writing about is trying to combat. It is the deception of this very system by which you are obliged to discount what you read that they are trying to abolish. Even if the articles you buy are worth what you pay for them it is just as deceitful in principle, if not in degree, for the merchant to claim that they are worth more."

"Oh, if that is the case," she concluded, "then I should think that a published retraction would be an excellent thing as a matter of course."

Leaders in the Movement

Not only do the workers in this movement believe that they are constructively helping honest business by relieving it from unfair competition that it cannot meet, but reputable concerns are often protected from unreasonable customers as well. Through typographical errors in newspaper advertising, goods are not infrequently offered at absurdly low prices, and the local bureaus undertake in these cases to persuade customers to withdraw their demands for such goods.

Perhaps the most active leaders in the truth-in-advertising movement have been Merle Sidener, an advertising man in Indianapolis, who was formerly chairman of the national committee and whose devoted voluntary efforts did so much to get the movement under way, and Richard H. Lee, formerly a lawyer in Cleveland and until recently the director counsel of the committee, and the man to whose fearlessness the country owes the elimination of many of its worst financial frauds. Actively associated with these two have been H. J. Kenner, who lately succeeded Mr. Lee as director, and W. P. Green.

Rapid and widespread as the growth of the movement has been, there are still a few large cities which have successfully escaped. Philadelphia has recently organized, Boston is organizing, and it is expected that New York will shortly follow. But there are a few other large cities in which the movement is badly needed, and also unlikely to develop in the immediate future because of the character of the newspapers. There are papers which seem to have no sense of responsibility to the public, and, unlike the leading papers of the country, regard themselves as nothing but billboards. It is impossible to operate or even organize a better-business bureau unless the majority of the newspapers in a city are fairly clean and willing to coöperate with the forces of decency.

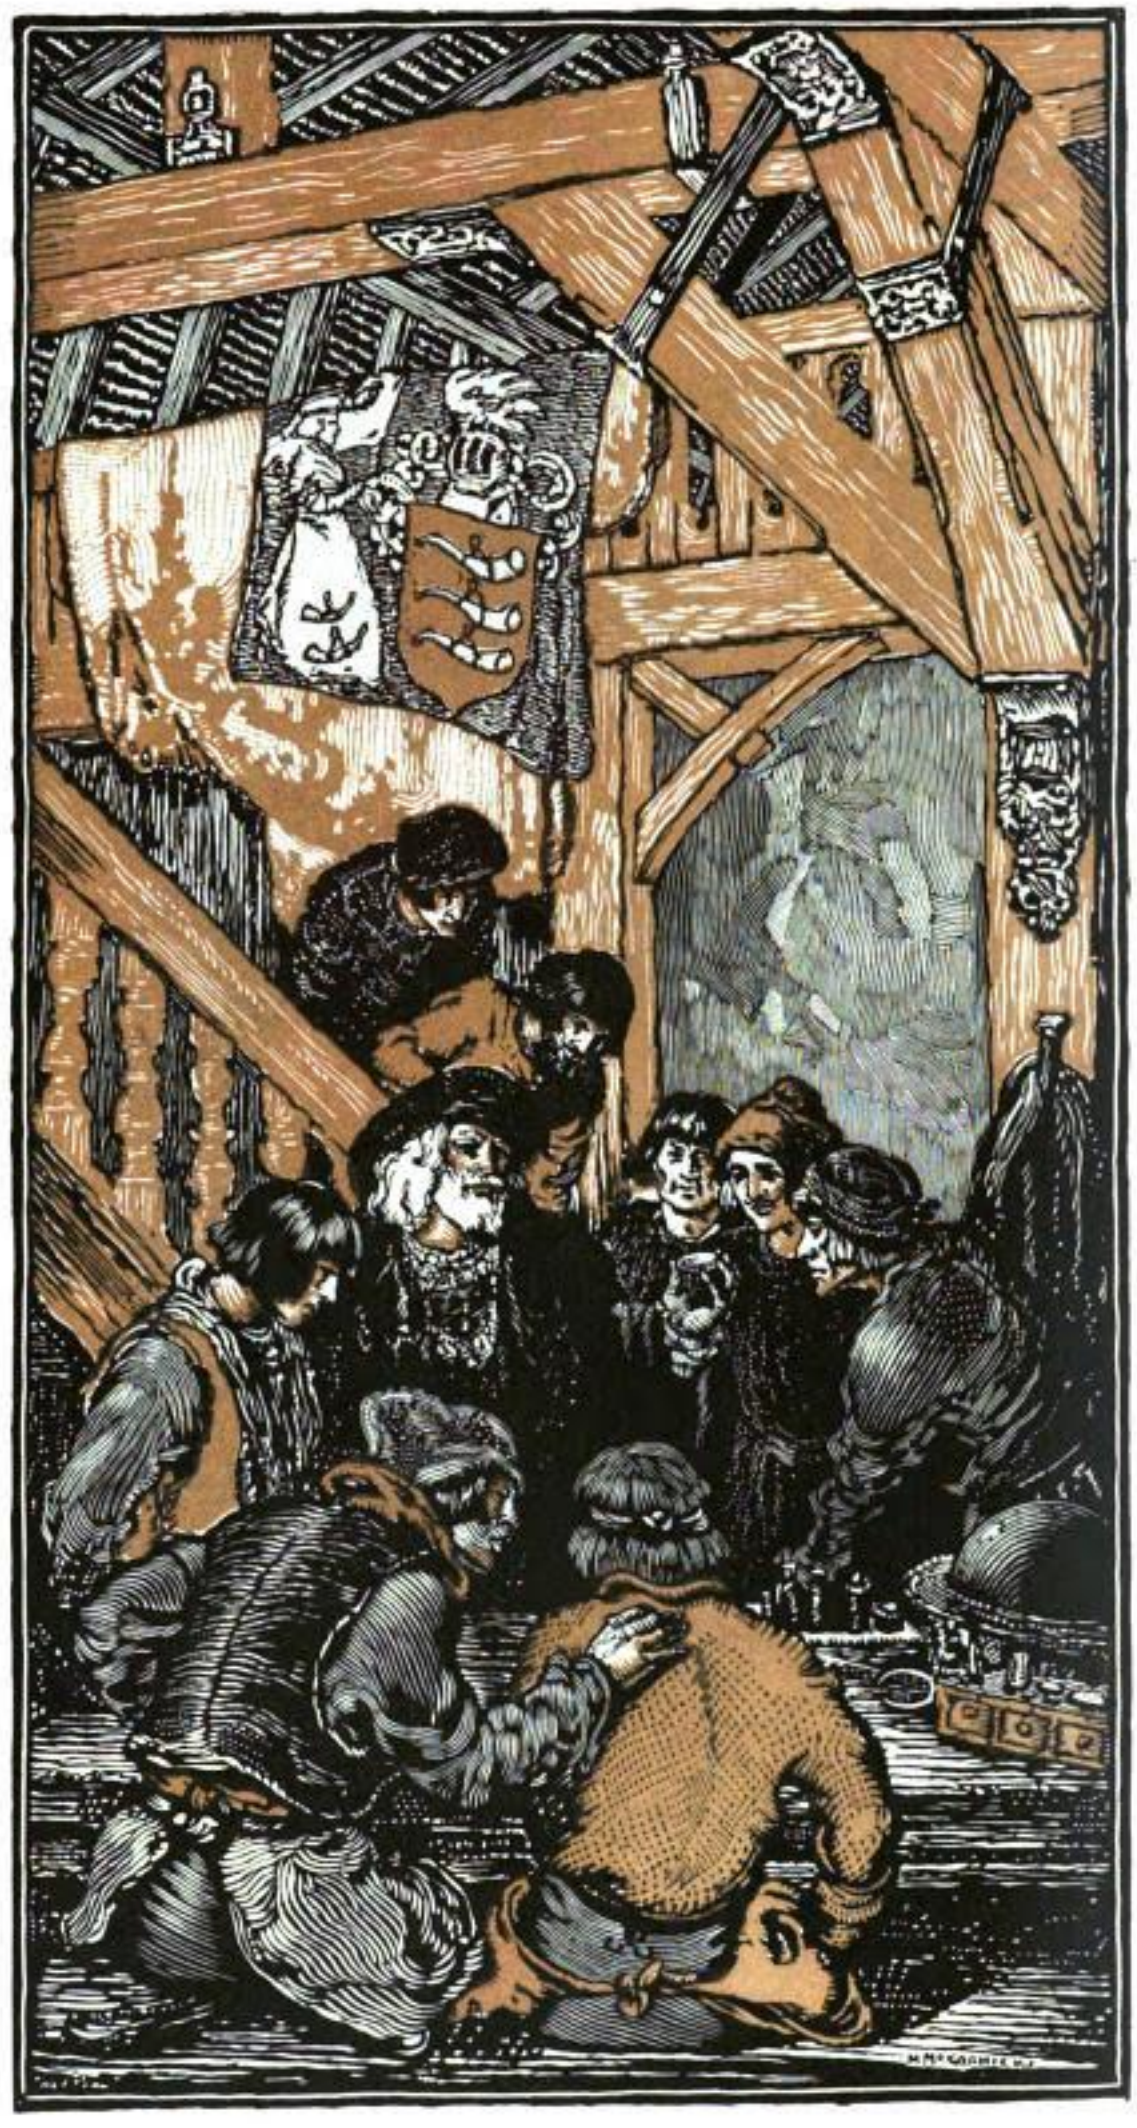
THE SPIRIT THAT LENDS GENIUS TO THE TOUCH OF A GUILDSMAN'S HAND

PERHAPS you have seen in the museums of Europe or America, or pictured in some old book, fine examples which still exist of the work of the ancient Guild of Watchmakers. Scattered in tiny hamlets in the mountainous districts of Switzerland, without machines to aid them, these men produced watches so fine that their fame spread throughout all Europe and lasted even until today.

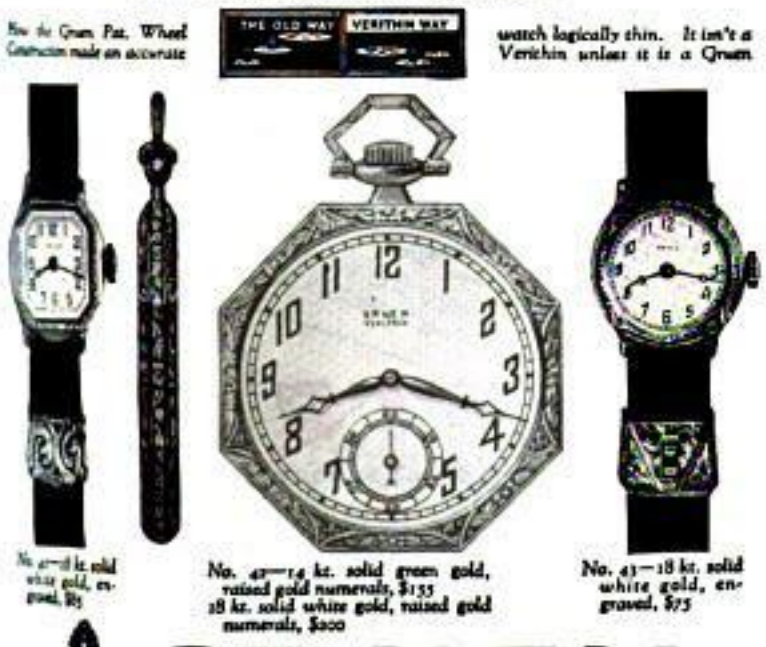
Something more than skill and a lifetime of experience enabled these old guildsmen to win for their work the admiration of the world.

Dominating their thoughts, guiding their hands as they worked, was the Guild Spirit. Under that spirit no man thought of his work as a task but as an art. No man was driven. No man thought to give less than the best that was in him, for the honor of himself and of the Guild.

Under that spirit the guildsman's hand took on the touch of genius.



In the Gruen Guild of Watchmakers that spirit lives again today, and under it descendants of these medieval masters labor through unhurried hours to produce these modern masterpieces of the watchmaker's art.



To this, more than to anything else, we attribute that prestige which Gruen Watches now enjoy, for it would seem that there lies deep in every man, no matter what his work, a knowledge that every really fine thing he ever did was done in that spirit, and that he naturally accords, therefore, to Gruen Watches a degree of excellence which has set them quite apart.

You may see Gruen Watches at the best jewelry stores in each community, to which their sale is confined. Look for the Gruen Service Emblem displayed by all Chartered Agencies.

Prices: $25 to $750; with diamonds from $100 to $6,000

PATTON'S Sun-Proof PAINT

REG. U.S. PAT. OFF.

Keeps Down Up-keep

EVERY brush stroke, not only transforms appearance but adds immediately to property value, and a scientific standardized paint like Patton's Sun-Proof paint prevents property depreciation. The life of property is unlimited if kept paint-protected.

Patton's Sun-Proof grips into the surface and seals it with a tough, elastic, moisture-proof, protective film which is enduring against extremes of climate. It is most economical because it covers greatest square footage per gallon, and protects your property against weather-wear for greatest number of years.

Sold everywhere by quality dealers and used by exacting painters and decorators.

Write for "Proof" booklet.

TRAVELER'S REPOSE

(Continued from Page 9)

In the fall he was to become part owner of the garage, built of concrete, in Greenstream Village; he would probably move in from the place beyond the mountain; and Emeline and he would be the most devoted of couples. He was obliged to add, though, it was miraculous that she could care for him; she was so gentle, quiet and yet firm, and delicate. Her hands in spite of their labors were slight, with thin fingers; flushed with heat in the kitchen, she was still not untidy, with hair orderly and soft, her enveloping apron crisply blue. She didn't seem strong; once, thrilling him with the delight of her confidence, she had confessed a headache to him. But the facts contradicted any weakness. Her voice was always low, with a little laugh that was at once appreciative and half inattentive. There was so much, it seemed to say, for her to attend to, to make right.

Mrs. Graham alternated with her husband in a conversation to which Jalan contributed little; his thoughts were divided between Emeline and his project of peace. Elias Graham, as though conscious of the latter, had something to say about progress—he was very contented with the vigorous spirit lately exhibited by the county. A number of the sick, who in the old days would undoubtedly have died under local treatment, had been sent to the hospital beyond the mountains at Stenton. Jalan suggested a hospital at home, but Elias didn't think it could be supported. What was the use, he argued, of an expense so largely unnecessary? Local pride, Jalan told him. Local fiddlesticks! Elias Graham did not enjoy contradiction; and it seemed to Jalan that Emeline made him a signal of caution.

"Progress," Elias repeated.

But Jalan had fallen into a silent contemplation of Emeline. She was like the shy fragrance of a flowery bank in spring, like the mountain streams, pure and clear and cool, and not easily found. She possessed exactly what he wanted the county to preserve and express.

Driving back he was obsessed by the possibilities of a place of rest held against all the uproar of the world. At first it had appeared selfish; but he began to see that the fame of Greenstream would go over the whole world; the world would be influenced, leavened by it. People would come to find out how such a haven had been made, and they'd go away full of emulation and hope.

Any aspect of the fantastic had vanished: it seemed concrete, imminent, now; he must bring it about. Inattentive to the road, the lurching clatter of the automobile, Jalan Heronbar found himself praying desperately, passionately, for the bounty of tranquillity, of a Garden of the Lord.

After this he was serious but happy; all the emptiness of his life was filled; or, rather, he saw that but for Emeline his life had been empty; and now it was that no more. He wondered if this were a call, and decided that beyond question it was. A call to him, Jalan Heronbar. What a dispensation of mercy!

He was happy, permeated by an inner glow, but grave rather than gay. The greatness of the inspiration that had enveloped him forbade lightness. He had never, though, been exactly light; wicked, but not the other. Neither was his undertaking, with which there could be no compromise, no half measures, easy. The attitude of Elias Graham showed him that. He'd have to go out into the mountains and lonely valleys, to the single cabins and straggling settlements on swift streams, and—and preach peace for Greenstream. Jalan was certain that in the end he could fire others with his determination. It would be like a sermon, a kind of Sermon on the Mount, and he would be a preacher.

When he began the following day at the store he spoke tentatively, and the gathering, waiting for the West Virginia mail, listened to him or not, as they felt inclined.

"Ever since I got back," he began, "I've been looking around as if it all was new here, as if I had never seen it before, and it's—it's beautiful. We get used to it. Forget. And we oughtn't to. Greenstream's made for a quiet and peaceful life; we have everything we want ——"

At this he was interrupted by a concerted demand of who had. Someone turned to the storekeeper and said that since they were living in a Paradise, could Peterton, please, sir, give him a pair of good shoes.

It was evident that Peterton couldn't; but it was suggested that Jalan intended to. Ask Jalan, the direction was offered. Jalan gazed around with a troubled brow. No one, it appeared, accepted what he said seriously.

"I mean it," he proclaimed in a resonant voice; "we have got to bring good will about and make this land a retreat from wickedness. Some of you didn't see what I did, and my experience was only a part, a little part, of what went on. I tell you the world is full of hatred and envy and malice; no one is filled or satisfied; it's like a quicksand sucking men down to death. But here we can stand firm, we have rock; we can put evil outside the ranges. Why it won't take any trouble at all, and it will change hardly anything. What we have to do is only to keep together, to be fair with each other, to be patient and tell the truth. That's all," he added wistfully. "If we'd just think a little it would be easy. Like putting up a barn in the old days—everyone helping."

This idea, a number agreed, was good; they were older men. The younger were no more than amused; and, but in a pleasant spirit, they begged Jalan to set up again the still in his parlor—like the old days, they echoed him.

"Can't you see what it must bring you?" he went on. "Can't you tell what honesty—yes, Christianity—would mean? No more bad blood nor killings; we'd keep that away from us; we wouldn't let any in. We'd let almost nothing in. Why should we when we have so much ourselves? We have fruit and cattle and corn and water, wood for fires; we've a printing press. What do we need from the world like it is? Nothing."

Jalan Heronbar stopped, looked at the men before him. One was ordering coffee at the counter; another getting his mail; two were leaving. It would be hard, but he'd do it, bring them in spite of themselves the blessings in his heart. The West Virginia mail was approaching and he was deserted; no one but the storekeeper, with the locked government sack, returned.

"Jalan," he called, "stop a minute. That scheme of yours, it sounds right good. I can see that you've studied it out." Jalan Heronbar turned back eagerly. "If there's anything to be done I'll help you with it. We could get up a campaign—Greenstream for Greenstream! I'll tell you confidential that since the automobiles have run into Stenton, them and the mail-order houses, my business here ain't what it was, not by a big meadow.

"See here"—his hand was on Jalan's shoulder—"as I understand it, you want to hold everybody here at home. Well, if you can influence them, if I see it on my books, I'll allow you—in trade—five per cent."

Jalan was so charged with fervor, with the excitement of having announced his supreme purpose, that at first he missed the storekeeper's intention. When it grew clear to him his face was grim. A bitterly angry resentment confused his brain; but he held it in subjection. Jalan conquered his resentment.

"I don't aim to make out of it," he explained temperately. "It's different from that. It came over me suddenly, sitting on the porch last night, the evening and the mountains were so pretty." The word didn't satisfy him. "So grand," he substituted. "And I thought maybe people here could be like that."

The other was puzzled almost to the point of irritation. "If you're just against improvement," he commented, "why, I can't be with you on that. Let me give you a little advice: go soft with Elias Graham or you'll make a muss of it with Emeline. Elias is great on improving the county. Why, it's him, to some extent, through his brother, North, who's bringing a moving-picture company right here to make a mountain story and show the world Greenstream scenery. He's been keeping it quiet, afraid it would come to nothing, but I hear it's fixed for soon as possible."

Jalan gave that but little thought; he was too much absorbed in his undertaking to be concerned by the fact—he saw it as remote—of a moving-picture company. His intensity, his conviction, increased daily; he devoted himself entirely to it. The county to its farthest limits grew familiar with his insistent hope. Usually he was met with humor; Heronbar's Paradise became a phrase attached to his tireless efforts. Often he was argued with, contradicted; a mess of practical detail was produced to show the folly of his scheme. A few people, long past youth, and a preacher or two agreed with him. He stopped men on the steep roads, on foot, in automobiles, on horses or droving cattle. To them all he proclaimed the peace to be settled on them.

At the Grahams', however, he had so far said nothing. The storekeeper's warning, Jalan recognized, was sound. And Elias had not yet opened the subject of Jalan's project. June had become July, and July was half gone when, sitting through the evening on the Graham porch, Jalan Heronbar was aware that Elias was about to speak. He caught a quick, fluttering glance of warning from Emeline, a supplication for him to be quiet, as her father deliberately laid aside his pipe.

"What's this, Jalan," he demanded; "what's all this I hear about your trying to pen up the county?"

Jalan explained.

"Nonsense!" Elias asserted; his brown cheeks already darker with opposition. "You want to choke down progress, that's what it amounts to. How can you keep the world, as you say, out? Who wants to? Nobody, I reckon, with any property worth considering, with interests. We want enlightenment and education and improvement. Why they tell me you want the women to go back spinning; you want us to have only homespun and such. You don't take the young folks into consideration. I'd like to see you get Ellery, here, into clothes his mother made for him."

"There isn't any enlightenment to be got from the world," Jalan said; "it's only to be found in your heart, in a quiet heart like the mountains around us. And what does the education come to? Dissatisfaction and doubt. Nobody believes anything any more, nobody has anything to tie to that won't corrupt and crumble in their hands. Or, perhaps, they have parts, little bits, of so much that they have nothing right."

"Stuff!" Elias Graham interrupted.

"And this improvement," the other continued; "what good is it against what it costs? Isn't content, happiness, better? You asked me why I rode up on a horse this evening. Well, it's better riding a horse than driving the way I did, from here to there and nothing between. You can't see anything in an automobile, you can't think slow enough or fully."

"Then there won't be any automobiles in this—this Heronbar's Paradise," Elias snorted angrily. "You're a plumb fool, that's what. I always said—I told Emeline over and over—you lived alone too much. It's the Heronbar blood in you flowing back upstream. I like you, Jalan; and I'm speaking for your good. That's not right—Emeline likes you and I'm

the appalling cost of power waste-

The Fulton Diesel meets the pressing need today for lower power cost. A perfected stationary engine using low-grade fuel oil in internal combustion.

Its operation requires about one-third of the fuel that must be burned under boilers to furnish corresponding power. It consumes fuel only when in use, and in proportion to its load. One engineer runs it. All troublesome, costly problems and hazards connected with coal supply disappear—strikes, delivery, storage, deterioration and handling. No investment in boilers, stacks, condensers and other auxiliary steam plant equipment is called for.

Not since Robert Fulton applied steam power to water transport has there been so important a development in stationary power production as the Fulton Diesel. It embodies the experience of 70 years of successful engine building. Ten years have been concentrated on developing the Fulton Diesel to its present high state of mechanical excellence. Tested under varying and exacting conditions of service, the Fulton Diesel has proved to be the most efficient and economical stationary engine known to the world today.

Note how ate sweeps the surface, besides cleaning through the rug

We have added

Super-suction to the Beating brush

The vacuum cleaner sensation of 1922

Leading cleaners are of two types. One class relies on good suction alone, the other uses a beating brush.

But we have always felt that the ideal-type cleaner should have *both* strong suction and a beating brush! Strong suction to take up the surface dust and to make the attachments for cleaning and dusting everything in the house really efficient and tremendously worth while; Beating brush for instantly sweeping up clinging threads, hair, lint, and fuzz—and for shaking loose all deeply imbedded particles of cutting grit that are so destructive to the life of fine rugs. So we worked to this end.

Our efforts were rewarded by a gale of 219 cubic feet of air per minute! which not only cleans through the rug from the bottom, but also air-sweeps the surface, because the carpet is prevented from sealing the nozzle. And besides this double air-cleaning action, we had the beating brush. We had merged the advantages of other cleaners in one amazing machine with multiplied cleaning power. So now you can have double efficiency in this marvelous cleaner, guaranteed throughout.

Hamilton Beach with suction alone

Same machine with the Beating Brush

Hamilton Beach Vacuum Sweeper

We believe you will be satisfied with no other, once you see the Hamilton Beach. It is a shining servant that is doubly thorough, though doubly swift. From corded bumper to handle tip, every detail points to lastingness and quality. No desired feature has been overlooked. Yet you can obtain its 30 superiorities for less than comparable cleaners cost. It is unrivalled value for the money. Dealers are glad to demonstrate it in your home free and to name convenient terms. Write us for FREE FOLDER and the name of nearest dealer. Ask any questions! Absolutely no obligation. Write TODAY for full facts.

speaking for her. I'll admit to you that often when you were coming here I wished you'd break your neck on the mountain. That ain't Christian but it's natural. I managed to get over that, though; I was almost agreeable to you when this came up.

"I waited, thinking you'd come back to your senses, but you haven't, and I'll get finished with what's in my mind. Why"—he became so exasperated that he stuttered, his face grew crimson—"what'll happen to the garage, tell me that—what?" He paused, but for the moment Jalan made no reply. "I sort of thought the county was playing a joke on you, but it's not; things are worse than I heard; you are a joke."

Jalan rose; but he faced Emeline and not her father.

"Emeline," he addressed her gravely, "you have heard what I said and how your father answered. It seems to me you know how we both feel. I didn't think it would come in this way; I hoped it would be happier, but I don't see a choice. I've got to go on until Greenstream understands, till it agrees with me—for itself. I was happy enough before, reckoning about you; it's for the others, Emeline, you must believe that. Well, will you join with me? Will you marry me, Emeline?"

She smiled confidently at him, and was rising from the step when Elias Graham thrust himself violently between them.

"I'll answer for her!" he almost shouted. "I'll tell you about that. She won't! Do you think I'll have my daughter, Emeline Graham, living in rags in a backwoods cabin with the last crazy member of the Heronbar family? Do you? Not while Ellery and me are alive. I was against you at the first and I'm stronger against everything about you now."

"Will you, Emeline?" Jalan said again.

"No!" Elias shouted.

"Emeline," Jalan Heronbar said again.

Elias Graham suddenly lost all trace of his excitement, his eyes were narrowed, his gaze was hard and level. "I told you last and for all time." His voice was thin.

"Mr. Graham," Jalan protested, confused, "I can't fight with you. There was to be no more fighting here, nor misunderstanding; that mustn't be. Not ever again."

"You can dodge it," Graham replied curtly.

"It isn't right for you to answer in Emeline's place," Jalan protested. "You oughtn't to hold her in like that. She must have a chance to speak out. I won't take it from you."

Elias stepped back. "Tell him, Emeline," he said briefly.

She gazed at her father, and, meeting no assurance there, half raised her arms to her mother, sitting still and cowed in the gloom.

"Tell him, Emeline," the cold, sharp voice repeated.

Then Emeline advanced a step toward Jalan. She moved forward but then she stopped, her eyes widely opened and dark against the pallor of her face.

"Jalan," she said, "Jalan."

Whatever her resolution of speech, of action, had been, it failed. The silence that possessed her was alive with suffering, with an inner wrenching agony and struggle.

"Don't worry, Emeline," Jalan said presently, slowly sounding the words one by one. "Emeline, don't worry. I know how it is, how it has always been—and good-by."

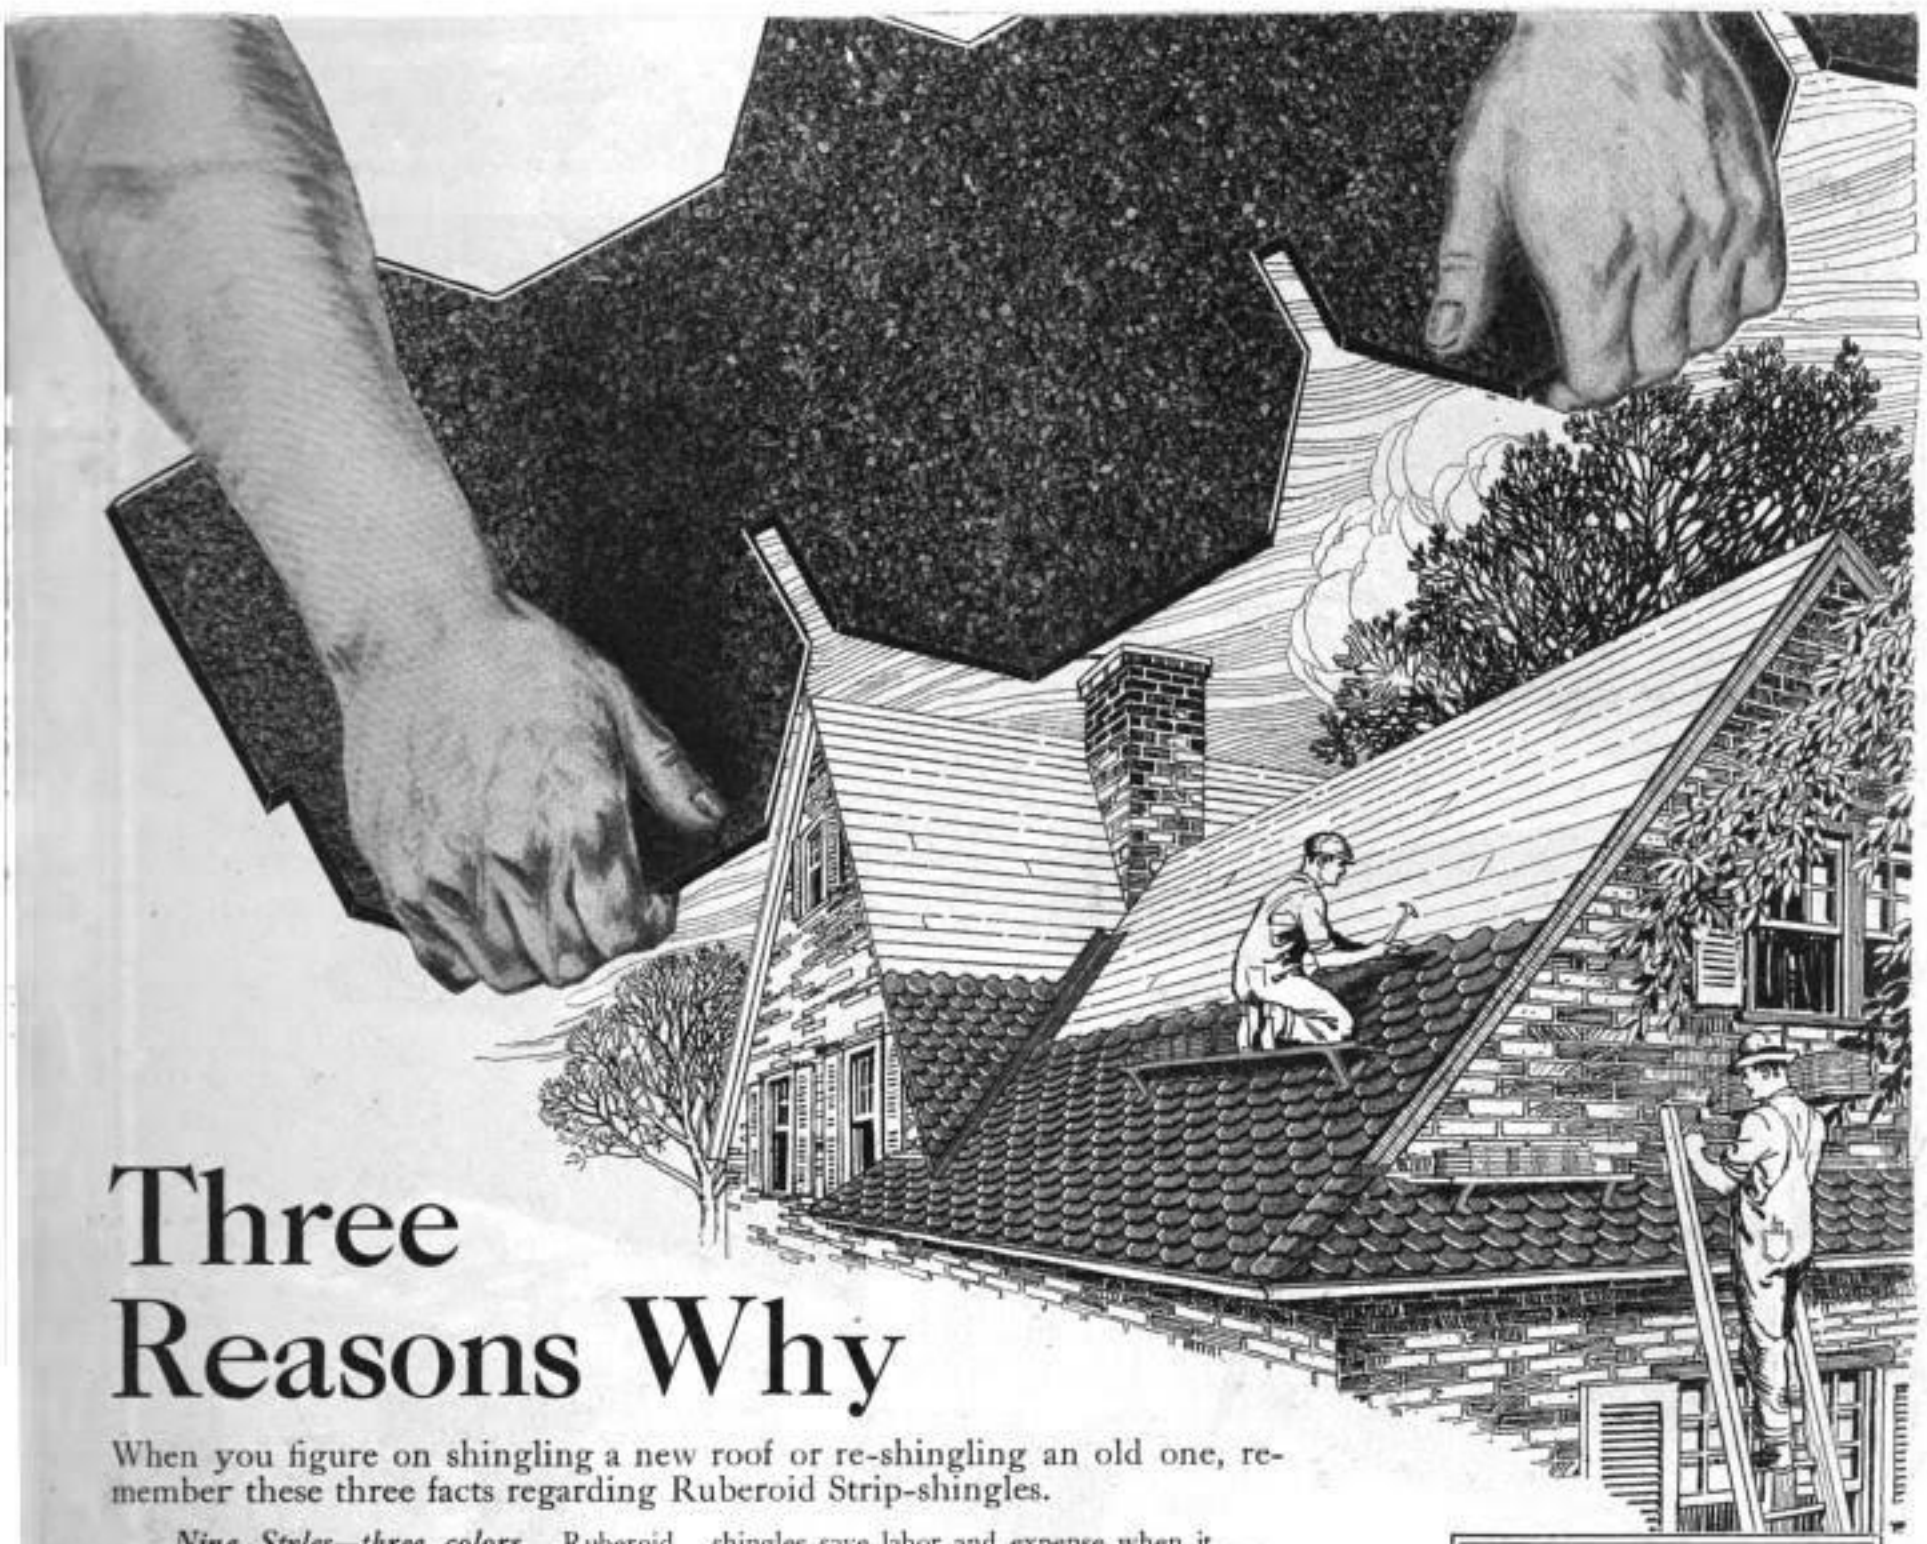
He turned sharply away and retraced the course by the corner of the house, over the cut grass, to the iron fence where his horse was tied. The horse's hoofs made no noise crossing the pasture; but on the hard piece of road below, the steel shoes rang out. They could hear them from the porch, Jalan knew; Emeline would listen to them going along, going out of her life.

Flooded with pity for her, governed as she was by her father, he had no atom of condemnation in his mind. It had always, with the Grahams in Greenstream, been like that. Emeline was a good girl, but she wasn't a girl any more, she was a woman, lovely with the quiet fragrance of May. He had lost her! This came to him with the shock of an unexpected bullet; Jalan swayed as though from the shock of an actual deep blow. Emeline had been taken from his life.

No apparent change took place in Jalan; his life, the pursuit of an object as close to his heart as Emeline, continued unbroken. He was more serious, his voice had a insistent ring; that was all. His stayed noticed, had drawn away from com place, surrounding things and words spoke, he thought, in parables. The tion he had first roused, a humor ceptibly touched, at least, with ser consideration, faded; the valley of the stream, the clearings on the moun slopes grew used to him; men listene him when they were not busy, at noo and through the late summer evenings. was regarded as a kind of preacher dressed to the good of the world, treated with regard; Jalan was presse the houses and lonelier cabins to stay whatever meal might be following, for night, as long as he desired.

The young at times sharply opposed but mostly they held him to be harm And this concerted attitude of a kin inattention was more difficult, obdur than an aggressive opposition. He felt he was thought of as a character, pec and admirable and local, but nothing m Before his door, with a stout hickory c canted back against the house, he d upon his task. A new phase in the past days had fastened upon his ardor: he came angry at the stupidity and blind about him. His outreaching hand, a were, was filled with gold, gold that mi be had for the asking; but nobody want no one, it seemed, could realize *that it* there.

Still, he wasn't discouraged; the fire his desire hadn't slackened; he would w harder, never linger on the road, fail argument. His attention to the order his house had grown mechanical; th were omissions, knives and plates out order. This he no longer noticed; he no very little of all that he had once fully s and weighed. His guns had been brok his powder deliberately spoiled, the lead bullets melted. Jalan Heronbar would nothing, and when he heard a shot in woods or in a purple buckwheat stubble would force a way through the underbru and remonstrate with whoever held gun. Sometimes it would be an *old m* quivering with indignation at Jalan's int ference; sometimes it was a grinning b or a man, a friend of Jalan's, who wou invite him to share in a stew of boiled p



The regard with which he was treat left him increasingly alone. People, began to see, were superstitious abo him. They were reluctant to open a cas conversation with him; the children w often frightened at his approach and ran familiar and saving interiors. This at fi disturbed him, then he failed to notice th too. His resentment at the county, found, increased; from begging them accept his gift of peace he changed periods of rising scorn. In this, as well, was freely indulged; he had a hopele sensation of trying to grasp the water of swift-flowing stream, of hoping to dam with his palms and fingers. What he sa the possibility he held out, was as actual though it existed, like a city on a ne height, before his eyes. But he w baffled by the fact that he could show to no one—to no one, that was, but a ra old man with his sight already dim to th world and filled with inner visions.

Twice, lately, he had seen Emeline; one descending the insecure steps from th store platform to the road. There wer others, idle and curious, around, and so h had delayed at the crossing until she ha gone. Then on an upper road, riding hi mare, he had passed Emeline and Elia Graham in an automobile. They were both going slowly, and she smiled at him an said good evening, but Elias hadn't turne his head. Emeline! Beautiful and fra grant and tender. He had never blame her. Perhaps Elias was right, and his Jalan's, was no life for her to share. An other partner had been secured for th garage in the village; no Heronbar had ever successfully worked the rocky and steep acres which belonged to that family; and he was poor. There wouldn't be proper food for Emeline in the house.

That with, for, her he might have given up his present intention didn't occur to him; such a thing was an impossibility. Jalan and his project were inseparable, one. It was a call. His love for Emeline became a deep and impersonal admiration, a consuming sense of her perfection. Sitting in the dusk it seemed that she had no real existence, that she had never lived, but was a dream, a vision of perfection. It wasn't likely that gentleness like hers had a place

Three Reasons Why

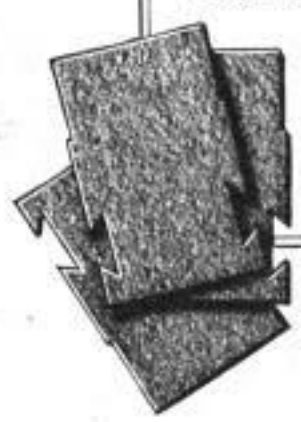
When you figure on shingling a new roof or re-shingling an old one, remember these three facts regarding Ruberoid Strip-shingles.

Nine Styles—three colors. Ruberoid Strip-shingles provide an unusually distinctive roof. Their patented form enables you to choose your roof from *nine* attractive styles. The natural slate-surfacing (red or green) on one face and a substantial grey weather-coating on the other, makes it possible for you to carry out any particular style in either solid colors or in attractive blends of sage green, Indian red, or steel grey—depending upon your fancy.

Less expensive to lay. Ruberoid Strip-shingles save labor and expense when it comes to laying. With every strip, four shingles are fastened in place. No chalk lines are necessary, because the shingles are self-spacing.

No expense for upkeep. Ruberoid Strip-shingles are built according to the well-known Ruberoid standard of quality through and through. They are unusually thick and rigid. *They will not curl or warp.* Surface and back coatings, saturant and felt, are the best that can be made.

On request we will send you a folder which illustrates in colors the nine different styles which may be obtained. Ruberoid Strip-shingles are for sale by lumber and building-supply dealers throughout the country.



The RUBEROID Co.

95 Madison Avenue, New York

Chicago Boston

An improved form of Ruberoid Unit-shingle (Interlocking) is now being manufactured at our eastern plant and is ready for delivery east of Pittsburgh. It *locks* into place on the roof and can be laid in two attractive styles.

A 16 page booklet—"Ruberoid Unit-shingles"—describing the unique features of this product, will be sent you on request.

road followed the base of a range; the left a stream meandered through the grass, and he passed occasional pros- farms. It was all pastoral, quiet, then, beyond a spur, he came abruptly on an incomprehensible crowd confusion. He reined in, startled; and independently his memory, a sub- realization, told him that here the moving-picture company whose coming to Greenstream he had been told was to be secured by Elias Graham.

Driven to the side of the road was an truck filled with an incomprehensible of details. Jalan saw large squares a brilliant silver surface that, when they caught the sunlight, flung out bars of intolerably bright reflections; there were loaded baskets, heaps of materials, coverings and clothes; square, leather carrying cases, tripods, lumber; a hundred objects, familiar and unfamiliar. Beyond the truck were strung out automobiles, two—no, three, four, of them. And before the old rugged cabins of Sim Levering, set above the road, were what he recognized as elaborate cameras, attended by sharp-visaged young men, in the shadow of a great umbrella, fringed and striped in red and white.

Jalan Heronbar's instinctive feeling was antagonistic. He had been surprised, always an uncomfortable sensation, and his deep sense of privacy had been invaded, the secretiveness of the mountains had been broken into. Then a frank curiosity took the place of these, and he urged the mare on. At one side of the cameras a man under a broad shadowing hat was issuing orders from a comfortable folding chair, a group was on Sim's porch—they belonged to the moving picture—and beyond that there was a circle of silent, intent mountain people—women with babies, children fretful and fascinated, girls and awkward youths in rough clothes, and everywhere the uncommunicative men. They nodded variously to Jalan, calling others' attention to his presence. They seemed all to be intent upon him, as though they were waiting for something he might say or do.

A short vigorous individual with his sleeves rolled back on arms covered with designs in pale blue ink passed Jalan Heronbar with a tin bucket of drinking water. He nodded, friendly, and Jalan acknowledged his greeting. He went on carefully until he was stopped by a girl sitting squarely in the middle of the road. She was dressed, Jalan saw, in an imitation of the back-mountain dress; except for that, however, she bore little resemblance to the women among whom his life had passed. Her eyebrows curved in a single hard black line; her hair, with coppery glints in the sun, was cut short at the lobes of her ears; and her legs were thrust out with a careless disregard for exposure that no girl of Greenstream could have attempted. She was painting her face.

On her knees was a wooden box filled with thick colored pencils and gayly stained rags, powders and white and dark greases; the opened lid of the box held a mirror; and after she had made an application to her cheeks she critically examined the reflected result. Or, rather, she alternately painted her face and smoked at a cigarette deposited in busy moments on the arm of her chair.

"Well," she said, finally meeting Jalan's interrogation, "I'm here; you see me. It isn't the result of mountain dew."

The man whose voice had dominated the activities rose and approached. His gaze was rapid, sharp, and his voice, though pleasant enough, abrupt.

"Good morning," he addressed Jalan Heronbar. "I'm Dell Spannard, and I am making a picture in your country. We all hope you'll like it." He studied Jalan further. "Look here," he added; "I've tried making these actors look like mountaineers till I'm sick, and it won't, except with the best, come off. You're the best type I've seen, and you're on a horse. That's a blessing. I wish you would come and work with us. It isn't hard and you'd be well paid."

"Thank you," Jalan replied; "but I'm busy already."

The other broke in shortly.

"I know you are busy—for this country. The truth is you don't know what being busy means. I meant what I said about paying you well. You are really good. Twenty dollars every day you work, and that won't be less than ten days. Probably, if this cursed haze doesn't lift, more."

"There is something else I must do," Jalan repeated.

"At how much?" The demand had sharpened.

"Nothing," Jalan told him; "I'm not after pay." He hesitated. "I want peace here."

The girl turned from her painting with an exclamation of mingled wonder and amusement, but the man standing beside her apparently lost interest in the figure on horseback.

"A religious crank," he said, but not offensively. Then he turned to the cabin. "Not like that!" he shouted, filled with a sudden energy. "Cut, Beitler. That's out. Marple, I went over this with you twice this morning, we wait an hour for the light, and then you die on your feet. Can't you understand the script? You hate and fear this man who is threatening your daughter, and you are making up your mind to kill him. To shoot him; can you get that? It's murder, even in the mountains. Now, again; quick, there's the sun. Camera!"

Spread before Jalan Heronbar, in an exaggeration that made it doubly hideous, was a vivid show of what he most detested, fought against—murderous hatred and revenge and killing. There were smears of simulated blood, the explosions of powder, actual cries and hoarse, desperate breathing. Beyond this loud ugliness the side of the mountain, the distant softened peaks, the gleam of shining water, were prettier, grander than ever before.

An impulse swept over him to force the mare up the slope of the bank and break up, smash the spell of evil on Sim Levering's cabin. The force of his anger must drive it all away—the clicking cameras and glaring umbrella, the gaudy woman with her defiled face; he would still that grating directing voice.

"Watch where you're going!" an exasperated camera man warned him. "You'll upset us. Keep out of the picture anyhow; off the lot!"

Jalan gazed curiously at him; but he was thinking more of himself, of the Heronbar blood. Why, he hadn't even a pistol, nothing but a thin willow switch. Still, that could leave a welt. Jalan saw just where it would lie, from above the right eye down and across the mouth. But that was in the past; it was the old Jalan. What confronted him, he realized, was too solid to be dismissed with a wave of the hand, a sentence or two, however burning. There was, in reality, nothing he could do now.

He rode on down the valley with a pinched mouth and somber eyes, losing every disturbance, every sound but the stream following the road.

He had now in place of a general effort without specific time or needs an immediate and disturbing problem. What he had planned to keep from Greenstream had come into it in a specially evil form. Jalan saw at once the effect of the moving picture all about him. The talk at the store, along the roads, was devoted to it; work was neglected, houses empty, and an increasing number of spectators filled the rocky hill about Sim Levering's cabin. Jalan stayed away from the actual operation of the picture, undecided in his ultimate attitude toward it; but he was kept very fully informed of its progress, the bloodiness of the fights was described to him, the shootings, and the actions of the girl with the short red hair and painted cheeks. As the surrounding idleness grew there were discovered fresh sources of mountain whisky; the fighting was not confined to the picture; there was an encounter in the village which promised to be serious.

Jalan Heronbar was often asked what he intended to do about this invasion of his scheme of quiet and peace. Such questions were pressed sharply on him; and they had an edge, a suggestion of mockery. Here, he was told, was his chance to bar the world from Heronbar's Paradise.

Yet this didn't bother him; it was all too serious in Jalan's mind to permit the mere irritation of assaulted pride. He couldn't see his way clear, he told himself over and over. At the same time he was again conscious that his anger was stirring, an indignation fired by the resolution not to be overthrown by any assault. He began to think of the moving-picture company as a direct and mysterious challenge to him; it had been sent, he told himself, to try him, to test the strength, the reality of his conviction.

Nothing was secured, saved, by witnessing publicly against it; that he had not even tried. The temper of the county was wholly opposed to him; there was an endless satisfied speculation on the beneficial results to be expected from a broadcast showing of the natural beauties of Greenstream. The state road probably would be widened and made safe, a large hotel go up in the village.

Jalan's opposition to every phase of this deepened; he began to see a perceptible enmity to him, toward what he represented, through the high valleys; and his spirit, always intolerant, quickly responded. If no one would help him to drive this iniquity away he'd do it without assistance, severely, forever and at once.

It was noon, an October day keen with sunlight, and the cameras, he knew, would be clicking their records of murderous crime. Riding toward Sim Levering's, almost at the last turn of the road before arrival, he still had no plan, nothing but the determination to scatter the assaulting force. He was conscious of nothing in detail, the actual world was lost in his profound mental prepossession; the mare single-footed without guidance. In reality he was a little light-headed, and he remembered vaguely that he had had no breakfast, no dinner.

In another instant the familiar and hateful operation was spread before him. The laden truck was drawn to one side, the automobiles were strung along the road, a lounging group of actors standing beside one. The screens of silver foil were shifting their blazing reflections; under the striped umbrella the cameras were set up, charged and ready. Jalan heard the incisive voice of the director, who was himself hidden in a small gathering within Sim's fence. Sitting with a ribbon of smoke rising from her cigarette was the girl, with her face livid, unnatural, from paint.

Jalan swung down to the earth and secured the mare, with a half hitch instinctively safe and loose, to a sapling. Then he went forward through the gate to the road. The scene on the porch was the one he had already witnessed in part—a slouching figure in the doorway, with another, a towering menace, tormenting him with a bestial insinuation.

"Get in it!" the director shouted. "This man is threatening your daughter, he's ruining your life. Hate! hate! hate! Think of the satisfaction of stopping him with lead, with a dose of hot lead. That's it! Camera! Slowly now ——"

Jalan moved out to the little patch of trodden grass lying between the cameras and the porch, and instantly a score of voices, of excited curses beat upon him!

The director flinging himself forward yelled, "Cut! cut! That damned mule spoiled my sequence."

He shoved Jalan roughly aside, out of the picture, and Thomas Meekins, the sheriff, dropped a hand on Jalan's shoulder. The director was racked with strain and exasperation.

"I've done my best with you people," he asserted generally. "You have been well paid and considerately treated; I made up my mind to put up with anything; but when a man supposed to be in his senses walks in on me like that I—I could smash him!"

The murmur which had at first swept around the contention died. The mountain people, drawn nearer on the hill, were as motionless as the rocks.

"Anybody decent," the director raced on, "would see that I had a chance; they'd support me; and I'm going to ask the crowd here to do just that, to see that I get a square deal and a good picture without interference."

"You'll have to stop," Jalan told him. "All this you're doing—it's wrong. It belongs to the black past. It can't go on—here."

"It's the crazy man," the director hotly announced. "Is this county going to let a nut, a bug, hold up a two-hundred-thousand-dollar operation for its own good? Is it? Because if it is I won't. I don't need any help, either," he informed the sheriff; "you needn't finger your gun."

"It can't go on," Jalan repeated steadily; "it's all wrong, wicked. You must stop."

"I must?" The director was sarcastic. "I'll go back to my concern and tell them that I brought a company as far as this and then couldn't make the picture. 'The story was all wrong,' I'll say to them. Like that. 'It was wicked. A moron out of the backwoods told me so.'"

The two stood alone; those who had been with them had fallen slightly back. Jalan saw nothing clearly; even the face before him was blurred; the voice opposing him seemed to come from a distance. His suppressed anger, his innate bitterness was like little tongues of flame.

"This must be a place of peace," he explained with stiff lips; "without lies and harm—green hill far away."

"The only way to get peace here," the other told him, "is after trouble. Get out while you can, quick! I'm not afraid of you; the sheriff can't help me now."

"You must be driven away like a plague of locusts, for this is the wilderness of God.

For the Man Who

They Looked Alike This Morning!

Buddy and Barney started out together, both with their faces washed, their ties on straight and their clothes all clean and new. Just look at 'em now!

One took care of his clothes and had a pretty good time. The other—well, you can see for yourself what happened to *him!*

We grown-ups are like that with our motor cars. Some of us just will "treat 'em rough" no matter what it costs us later.

W

'Treats 'Em Rough"

ew car owners admit that they abuse their ıtteries. You for instance. You honestly think ou take good care of your battery—*but the hances are against you!* For service station cords prove beyond question that most drivers e neglectful. They are not systematic in utiliz- ıg the service provided for them.

You can positively lengthen the life of your attery, cut your annual battery cost and prevent ne possibility of being stalled with a dead battery you will follow these two bits of advice.

First: regardless of the make of your battery, orm the habit of driving *every other week* into the Willard Battery Station and having your battery tested. Second: when the time comes for a new battery, be satisfied with nothing less than a Willard Threaded Rubber Battery.

It is powerful, tough and wear resisting—just the battery for those who occasionally "treat 'em rough". And it rewards *good* care by lasting longer and costing less in the end than any common battery.

Car and truck manufacturers know this—as witness the list of 193 makers who use only Willard Threaded Rubber Batteries for original equipment!

(Continued from Page 95)

You must go out with your blood and ruin ——"

The director struck him swiftly on the side of the jaw, and Jalan stumbled back. He swayed from the shock of concussion, and pain filled his mouth. But almost instantly, curiously, he saw the people, the slopes, the stream, with a minute exactness, with the illusion that he was gazing with eyes of glass. The flames of passion that had touched him burst into an annihilating blaze.

"You would have it!" he cried to everyone about him. "And you"—he turned to the director—"this is how it's done."

Jalan plucked the sheriff's revolver from its leather and shot instantaneously. He was over the fence, on his loosened mare, before the echo of the shot had died from the hill. The clatter of the hoofs under him was far in advance of any pursuit coming out of the turmoil he had left.

He carefully shut the door of the stable, thrusting the wooden peg through the hasp, and approached his house from the back. The day was fading, the western sky showed a rim of red; on his left the ground fell away almost as steeply as a well. Cutting down and across it was the dry rocky cavern of a stream. The odor of burning leaves was clear. Jalan's mind was a confused image of what had occurred, what he had done. He was quiet, but breathing sharply; and he was flooded with sadness. "Traveler's Repose." He said the words with a sense of having been baffled, betrayed. As if further to mock him he found that he still had the sheriff's pistol.

It had been the result of a total misunderstanding, a mistake about his meaning. Traveler's Repose! And then his blood had ruined him; the Heronbar blood. He had never, since he was a child, been hit in the face. It was all wrong, a mistake. Then a darker mood settled over him; from the first this had been forced on him. What, except derision, had he been offered in return for the gift he had tried to bring Greenstream? Nothing. The woods in front of the house were slumberous, the road empty. But it wouldn't be empty long; they would come for him soon. The disturbing feeling of being hunted already fastened on him; and mechanically he examined the cartridge chamber of the pistol—five left. That was all he had. Such things of his own had been destroyed for months.

Well, they wanted it, and they had got it. In the middle of the vicious play, the pretended murder, the thing itself had fallen on them. There was no place of peace, none was possible. It had been a dream, coming, as Elias Graham had said, from his living so much alone. What had the director, the whole county, called him? Was it cracked-brained? It was insane, then, to think of a land free from hatred. It was and must always be everywhere. His mood steadily darkened; he had been unable to avoid the fate of the Heronbars. Bad from the beginning. He had tried to be good. That word had a childish sound.

This had been forced on him, and now he wouldn't try to avoid it. Jalan didn't want to live; he didn't want the humiliation of being dragged to jail, the long or short process of trial. The bitterness for so long stored against his family, which for a little had slept, would sweep the county. They could come up to the house and take him, after the pistol was empty. They could throw him into the earth, the last Heronbar, true to his name, true to the past.

He was desperately sorry for what had happened so entirely against his intention. This puzzled him. How could it have occurred, how could it have turned out like this? He had planned a paradise here, Heronbar's Paradise, where there should be no more tears; and he, Jalan, had helped to turn it into a hell.

There was a moving cloud of dust where, turning up the mountain, the road was visible for a little. It was an automobile, and it stopped at the far corner of the Heronbar land. Two men, the sheriff and the storekeeper, advanced steadily up toward the house. Jalan admired them, for it was an act of courage. They drew nearer and nearer; and then it was evident they saw him standing in his doorway.

The sheriff cried: "Will you come with us, peaceable?"

"No," he shouted back, ferociously mocked by the word—which he had made his own—peace.

"You only have what's in my p the sheriff reminded him.

"That'll be enough."

Still they hesitated. "It's the last like this," the officer added.

The storekeeper made a tentative forward.

"That'll do, Ambler," Jalan him.

They consulted for a moment, and the sheriff waved an arm. "Goo Jalan."

After that, about the house, it was quiet. Dusk again threatened, but b it gathered Jalan saw an increasing nu of men reach the lower field and sc out. They wouldn't rush the house, at least until after dark. They were cerned now with posting a circle of gu about him. They might smother him a concerted fire, but that was expe and uncertain. For a while a large nu of men were visible, and then they pr cally all disappeared; there were trac smoke from cigarettes, the gleam alo rifle barrel; a coat with a decided st the coat of a lumberjack from Hunting moved.

Jalan Heronbar wanted to go for and explain, not in order to save him that was an impossibility; but he wis above everything to be understood. wanted them to know that what he tried was for their good. This was oppo and conquered by a growing *feeling* savageness, of implacable temper, and knowledge that it was the tradition of house to be held at any price against vasion.

What finally was taking place in it fitting; it was as though the house its its memories, had called him back from ions and hope.

He had placed a chair just within opened door, where he was largely p tected without losing the widest possi field of vision. A hall went through house to the back; that door, too, open; but he had locked the lower shutt on either side.

He couldn't be taken. A figure mov up from the road, however, brought h tensely to his feet; and then he saw tha was a woman. Jalan realized that it w Emeline. She came slowly on alone, o the rugged path, through the broken g to the fence immediately around the hou and up to the portico.

"Jalan," she called in her low voice.

"Yes, Emeline." He moved forwa "You oughtn't to have come," he went gently. "It was brave and kind of yo Emeline; but it will do no good; you have to go back. I won't let them get me

Against this she mounted the steps a came across the uneven boards.

"Jalan," she said again.

Steadily, with a white face, she put h arms around his neck, and his head we forward on her shoulder. For a long breat they were motionless, silent.

"I'm not going back, Jalan," she sai "I came to stay with you for as long a possible. Isn't it queer—I had to. The tried to stop me, but I lied. I said I woul bring you out to them."

She laughed.

"They think he's dying, Jalan; but, isn' it strange, I don't mind. I had to come t you, to be a part of you."

He looked steadily, deeply into her eyes "It will be bad for a little," he told her.

"I am a part of it with you," she re peated. "I'd rather be with you for an hour, Jalan, than in heaven forever."

"You should go back, Emeline."

But as he said this he held her in th rigid circle of his arms. The darkness in creased.

"They won't raid until he dies," Emeline said; "they made that up. And, Jalan— the stream bed that cuts down to the bottom. They're not watching that; no one, they thought, could get through it. Could they, could we?"

In the past, he replied, Heronbars had escaped that way.

"Then if we can we will try it," she de cided.

Not a movement sounded from without; the night thickened. Jalan felt her hand against his cheek. It was time to go, she said. Out of the back door they slipped, away from the corner of the house, into the steep black cleft. It was dangerous, he whispered, already below her, feeling for a foothold. Then they began their painful descent into the darkness and insecurity of a world where peace, any repose for its travelers, was an illusion.

ICY-HOT VACUUM PRODUCTS

How they keep contents *hot 24 hours cold 3 days*

THE metal case of the Icy-Hot is simply a protecting container enclosing a glass "filler"—two glass bottles, one within the other.

The space between the bottles is a vacuum, formed by exhausting the air, and then sealing.

This vacuum is a non-conductor of heat and cold. Outside temperature cannot affect the temperature of the contents of the bottle. No other insulator is used.

Icy-Hot temperature-retaining superiority is due to the high quality of the glass filler and the skillful workmanship that produces and seals a practically perfect vacuum in the filler.

Icy-Hot is so efficient that every Icy-Hot product carries a guarantee tag showing that it has been temperature tested.

How they are *built for lifetime service*

ICY-HOTS are built to stand every-day service indoors and out. All Icy-Hot cases are metal and the glass filler is further protected against injury or breakage by shock-absorbing construction.

A rubber ring at the neck, supported by a metal collar, absorbs jolts and jars.

Asbestos pads between the outer and inner walls of the glass filler prevent vibration of inner bottle and relieve neck strain.

The tip of the glass filler rests in a rubber cushion supported by a heavy coil spring—a protecting shock absorber.

Icy-Hots are made in attractive styles for every purpose—bottles, jars, jugs, carafes, tankards, lunch kits, etc. Sold by dealers everywhere. Send for illustrated catalog.

THE ICY-HOT BOTTLE CO.,
Dept. S-2, Cincinnati, Ohio

Chicago Program by Benson's Orchestra, of Victor record fame; saxophone solos by M. Amaturo; Benson's Saxophone quartet, M. Amaturo, R. Adkins, E. Cary, J. McClure; and vocal numbers by Irving Berlin Trio.

New York Program by Joseph Smith's famous orchestra (Smith photo above); Saxophone solos, H. Benne Henton (center); Trombone solos, Charles Randall (below). Vocal numbers by Irving Berlin Trio.

Denver Program Cornet solos and duets by John Leick (above) and Mabel Keith Leick (below); numbers by Hal J. Nichols' Jazz Orchestra; Saxophone solos, Guy Hopkins; Tenor solos, Horace P. Wells.

San Francisco Program Popular numbers by Rosebrook's band; Cornet solos by D. C. Rosebrook (above); Trombone solos by Fred Tait; Soprano solo, Miss Helen O'Neill.

Hear these Great Artists by Radi

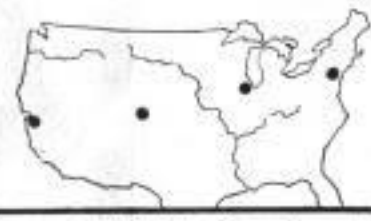
APRIL 14th IN THE CONN CONCERT SERIES

MARK this as a Red Letter Date. For C. G. Conn, Ltd., has arranged a series of popular concerts *extraordinaire*, broadcasted from New York, Chicago, Denver and San Francisco.

From coast to coast CONN music will fill the air. The concerts will be given 8 to 9 P. M., *sending station time*. Tune your instrument to the nearest station. Invite your friends and neighbors. Make it a gala night!

Dance by wireless to the music of America's great orchestras. Hear soloists of renown. Enjoy music with a swift, irresistible appeal.

Conn dealers in most cities will entertain at Radio Concerts. Watch for your dealer's invitation in the newspapers. *He wants you as his guest*, especially if you have access to no other radiophone.



Another striking evidence of Conn Leadership—a Leadership acknowledged by the world's great artists. Their appreciation of Conn instruments is reflected by the enthusiasm with which they are co-operating in these concerts.

Beauty and clarity of tone, as well as mechanical perfection in Conn instruments, make them the choice of these and other famous players.

This is the first of a series of Conn Radio Concerts. Watch for further announcements.

C. G. CONN, LTD., 2436 Conn Bldg., Elkhart, Indiana

Chicago Conn Co., 61 E. Van Buren St.
New York Conn Co., 233-5-7 W. 47th St.
Detroit Conn Co., 243 E. Grand River Ave.
Cleveland Conn Co. 1220 Huron Road

Northwest Conn Co., 708 3rd Ave., Seattle, Wash.
Southern Conn Co., 317 Baronne St., New Orleans, La.
McDougal Conn Co., 129 10th St., Portland, Ore.

Conn Concerts Will be Broadcasted From:

CHICAGO
Westinghouse Radiophone Broadcasting Station KYW Morgan L. Eastman, sending director. Wave length 360 meters. Concert 8:00 to 9:00 P. M. Central Time.

NEW YORK
Westinghouse Radiophone Broadcasting Station WJZ at Newark, N. J. W. H. Easton, wireless director. Wave length 360 meters. Concert 8:00 to 9:00 P. M. Eastern Time.

DENVER
Reynolds Radiophone Broadcasting Station ZAF Mr. William Reynolds, sending director. Wave length 360 meters. Concert 8:00 to 9:00 P. M. Mountain Time.

SAN FRANCISCO
Fairmont Hotel Radiophone Broadcasting Station KDN Mr. S. Peterson, operator. Wave length 360 meters. Concert 8:15 to 9:15 P. M. Pacific Coast Time.

MERTON OF THE MOVIES

(Continued from Page 25)

ever get over this disease that's coming on me. Anyway
u go, and then if you ever see me again you can give me
is." She quickly came to put the watch back in his
nds. "Yes, yes, take it. I won't have it till you give
to me again—if I'm still alive." She held up repulsing
nds. "Now we've had one grand little evening, and
ll let you go."

She went to stand by the door. He arose and stood
y her.

"All this nonsense!" he grumbled. "I—I won't stand
r it—see what I mean?" Very masterfully again he put
is arms about her. "Say," he demanded, "are you afraid
me like you said you'd always been afraid of men?"

"Yes, I am. I'm afraid of you a whole lot. I don't
now how you'll take it."

"Take what?"

"Oh, anything—anything you're going to get."

"Well, you don't seem to be afraid of me."

"I am, more than anyone."

"Well, Sarah, you needn't be, no matter what you've
one. You just forget it and give me a good big ——"

"I'm glad I used my own face in this scene," murmured
arah.

Down at the corner, waiting for his car, he paced back
nd forth in front of the bench with its terse message
'You Furnish the Girl, We Furnish the House." Sarah
as a funny little girl, with all that nonsense about some-
hing he would find out. What did he care if she'd done
mething—forgery, murder, anything?

He paused in his stride and addressed the vacant bench:
"Well, I've done my part."

XIX

"Five Reels—500 Laughs"

IT OCCURRED to him the next morning that he might have taken too lightly Sarah's forebodings of illness. Reviewing her curious behavior, he thought it possible that she might, indeed, be in for something serious.

But a midday telephone call at the Montague home brought assurances from the mother that quieted this fear. Sarah complained of not feeling well and was going to spend a quiet day at home. But Mrs. Montague was certain it was nothing serious. No, she had no temperature; no fever at all. She was just having a spell of thinking about things, sort of grouchy like. She had been grouchy to both her parents. Probably because she wasn't working. So she said she wouldn't come to the telephone. She also said she was in a bad way and might pass out any minute. But that was just her kidding. It was kind of Mr. Gill to call up. He wasn't to worry.

He continued to worry, however, until the nearness of his screen début drove Sarah to the back of his mind. Undoubtedly it was just her nonsense, and in the meantime that long-baffled wish to see himself in a serious drama was about to be gratified in fullest measure. He was glad, indeed, that the girl had not suggested that she be with him on this tremendous occasion. He knew that he wanted to be quite alone, solitary in the crowd, free to enjoy his own acting without the least pretense of indifference.

The Pattersons, of course, were another matter. He had told them of his approaching début and they were making an event of it. They would attend, though he would not sit with them. Mr. Patterson in his black suit, his wife in society raiment, would sit downstairs and would doubtless applaud their lodger; but he would be remote from them; in a far corner of the topmost gallery, he first thought, for Hearts on Fire was to be shown in one of the big downtown theaters where a prominent member of its cast could lose himself.

He had told the Pattersons a little about the story. It was pretty pathetic in spots, he said, but it all came right at the end, and there were some good Western scenes. When the Pattersons said he must be very good in it he found himself quite unable to achieve the light fashion of denial and protestation that would have become him. He merely said that he had struggled to give the world something better and finer.

For a moment he was moved to confess that Mrs. Patterson, in the course of his struggles, had come close to losing ten dollars, but he mastered this wild impulse. Some day, after a few more triumphs, he might laughingly confide it to her.

The day was long. Slothfully it dragged hours that seemed endless across the company of glowing dreams that he captained. He was early at the theater, first of early comers, and entered quickly, forgoing even a look at the huge lithographs in front that would perhaps show his very self in some gripping scene of the drama. With an empty auditorium to choose from, he compromised on a balcony seat. Down below would doubtless be other members of the company, perhaps Baird himself, and he did not wish to be recognized. He must be alone with his triumph. And the loftier gallery would be too far away.

The house filled slowly. People sauntered to their seats as if the occasion were ordinary, and even when the seats were occupied and the orchestra had played there ensued the annoying delays of an educational film and a travelogue. Upon this young actor's memory would be forever seared the information that the conger eel lays fifteen million eggs at one time and that the inhabitants of Upper Burma have quaint native pastimes. These things would stay with him, but they were unimportant. Even the prodigal fecundity of the conger eel left him cold.

"We Thought You Was Just a Beginner, and Here You Got the Biggest Part in the Picture!"

He gripped the arms of his seat when the cast of Hearts on Fire was flung to the screen. He caught his own name instantly, and was puzzled:

"Clifford Armytage—By Himself."

Someone had bungled that, but no matter. Then at once he was seeing that first scene of his. As a popular screen idol he breakfasted in his apartment, served by a valet who was a hero worshiper.

He was momentarily disquieted by the frank adoration of the cross-eyed man in this part. While acting the scene, he remembered now, he had not always been able to observe his valet. There were moments when he seemed overemphatic. The valet was laughed at. The watcher's sympathy went out to Baird, who must be seeing his serious effort taken too lightly.

There came the scene where he looked at the photograph album. But now his turning of the pages was interspersed with close-ups of the portraits he regarded so admiringly. And these astonishingly proved to be the enlarged stills of Clifford Armytage, the art studies of Lowell Hardy. It was puzzling. On the screen he capably beamed the fondest admiration, almost reverent in its intensity—and there would appear the still of Merton bidding an emotional farewell to his horse. The very novelty of it held him for a moment—Gashwiler's Dexter actually on the screen! He was aroused by the hearty laughter of an immense audience.

"It's Parmalee," announced a hoarse neighbor on his right. "He's imitatin' Harold! Say, the kid's clever!"

The laughter continued during the album scene. He thought of Baird, somewhere in that audience, suffering because his play was made fun of. He wished he could remind him that scenes were to follow which would surely not be taken lightly. He was feeling that at least his strong likeness to Parmalee had been instantly admitted. They were laughing, as the Montague girl had laughed that first morning, because the resemblance was so striking.

But now, on the screen, after the actor's long fond look at himself, came the words, "The Only Man He Ever Loved." Laughter again. The watcher felt himself grow hot. Had Baird been betrayed by one of his staff?

The scene with the letters followed—clothes baskets of letters. His own work, as he opened a few from the top, was all that he could have wished. He was finely Harold Parmalee, and again the hoarse neighbor whispered, "Ain't he got Parmalee dead, though?"

"Poor silly little girls!" the screen exclaimed, and the audience became noisy. Undoubtedly it was a tribute to his perfection in the Parmalee manner. But he was glad that now there would come some acting at which no one could laugh.

There was the delicatessen shop, the earnest young cashier and his poor old mother who mopped. He saw himself embrace her and murmur words of encouragement, but incredibly there were giggles from the audience, doubtless from base souls who were impervious to pathos.

The giggles coalesced to a general laugh when the poor old mother, again mopping on the floor, was seen to say, "I hate these mopping mothers. You get took with housemaid's knee in the first reel."

Again he was seized with a fear that one of Baird's staff had been clumsy with subtitles. His eyes flew to his own serious face when the silly words had gone.

The drama moved. Indeed the action of the shadows was swifter than he supposed it would be. The dissolute son of the proprietor came on to dust the wares and to elicit a laugh when he performed a bit of business that had escaped Merton at the time. Against the wire screen that covered the largest cheese on the counter he placed a placard, "Dangerous! Do Not Annoy!"

Probably Baird had not known of this clowning. And there came another subtitle that would dismay Baird when the serious young bookkeeper enacted his scene with the proprietor's lovely daughter, for she was made to say, "You love above your station. Ours is One Hundred Twenty-fifth Street; you get off at Fifty-ninth."

He was beginning to feel confused. A sense of loss, of panic, smote him. His own part was the intensely serious thing he had played, but in some subtle way even that was being made funny. He could not rush to embrace his old mother without exciting laughter.

The robbery of the safe was effected by the dissolute son, the father broke in upon the love scene, discovered the loss of his money and accused an innocent man. Merton felt that he here acted superbly.

His long look at the girl for whom he was making the supreme sacrifice brought tears to his own eyes, but still the witless audience snickered.

Unobserved by the others, the old mother now told her son the whereabouts of the stolen money, and he saw himself secure the paper sack of bills from the ice box. He detected the half-guilty look of which he had spoken to Baird. Then he read his own incredible speech: "I better take this cool million. It might get that poor lad into trouble!"

Announcing a Superb New Eureka

The Eureka Model 9, we believe, marks an advance in vacuum cleaner design never before achieved by any group of engineers.

The winning of more international awards of merit than any other portable cleaner in the world attests the excellence of the Eurekas that preceded it. Yet this new model embodies sound refinements which produce a rare and literally amazing combination of cleaning power, convenience, dependability, and beauty.

No dust or dirt can be so deeply embedded in the rug or carpet as to resist its increased suction. So swift is the movement of air into the nozzle that only the most stubbornly clinging surface litter requires the occasional use of the improved detachable sweep-action brush. Cleaning close against base boards and in corners can be done without inconvenience. Unusually low beds and furniture need not be shifted to permit the Eureka's use beneath them. Portières, upholstered furniture, and mattresses can be renovated with an ease and thoroughness even greater than before.

Unquestionably superior in performance, heightened in beauty, and simplified to a degree which bespeaks the genius of our engineering staff, this new Eureka has been accorded a remarkable reception by those who have seen it and witnessed the ease with which it underwent the most exacting tests ever demanded of any cleaner.

Thirty-three hundred Eureka dealers are now displaying this superb new model. Upon request the nearest one will cheerfully show you how we have multiplied and heightened the qualities that have induced over 500,000 women to select the Eureka as the one cleaner which most completely meets with their requirements.

***Do Not Decide** On Any Cleaner Until You Have Seen This Improved Eureka*

Short sleeve Sock-length suit — Athletic shirt and trunk drawers

"It's absorbent, cool, elastic, because it's knitted!"

"I've tried 'most every kind of underwear made and this Lawrence tailored-knit is the real thing in comfort.

"It takes up the perspiration—keeps you dry and cool—no stickiness.

"It stretches at every point—you don't know you have underwear on.

"It's made in any style you want, and made for *wear*. You can't pull the buttons off, it doesn't split or tear and it won't break in the crotch."

Lawrence Knit—Tailored to Fit

Lawrence Underwear is made of the finest quality long staple cotton—light and soft and silk-like to the skin. Every garment is cut separately to pattern by hand. We do this so it will be true to size—you get exactly the size you ask for.

If you are partial to athletic union suits, take home a couple of the new, loose-fitting Lawrence suits illustrated below—see if you don't have a revelation in underwear comfort—even on the warmest day. *Look for the Lawrence label*—and write us if your dealer hasn't the style you want.

Lawrence Garments come in two qualities:
1—Blue Label—combed yarn—finest quality.
2—Red Label—the same durability and finish—not quite the softness.

Lawrence Manufacturing Co.
Established 1831 Lowell, Mass.

America's Largest Manufacturers of Men's and Women's Light and Medium Weight Knit Underwear, from the raw cotton to the finished garment.

UNDERWEAR

(Continued from Page 101)

Again the piece had been hurt by a wrong subtitle. But perhaps the audience laughed because it had been accustomed to laugh at Baird's productions. Perhaps it had not realized that he was now attempting one of the worthwhile things. This reasoning was refuted as he watched what occurred after he had made his escape.

His flight was discovered, policemen entered, a rapid search behind counters ensued. In the course of this the wire screen over the biggest cheese was knocked off the counter. The cheese leaped to the floor, and the searchers, including the policemen, fled in panic through the front door.

The Montague girl, the last to escape, was seen to announce, "The big cheese is loose! It's eating all the little ones!"

A band of intrepid firemen, protected by masks and armed with axes, rushed in. A terrific struggle ensued. The delicatessen shop was wrecked. And through it all the old mother continued to mop the floor.

Merton Gill, who had first grown hot, was now cold. Icy drops were on his chilled brow. How had Hearts on Fire gone wrong?

They were now in the great open spaces of the Come All Ye Dance Hall. And there was the young actor in his Buck Benson costume, protecting his mother from the brutality of a Mexican, getting his man later by firing directly into a mirror—Baird had said it would come right in the exposure, but it hadn't. And the witless cackled!

He saw his struggle with the detective. With a real thrill he saw himself bear his opponent to the ground, then hurl him high and far into the air, to be impaled upon the antlers of an elk's head suspended back of the bar. He saw himself lightly dust his sleeves after this feat, and turn aside with the words, "That's one lodge he can join."

Then followed a scene he had not been allowed to witness. There swung Marcel the detective, played too emphatically by the cross-eyed man. An antler point suspended him by the seat of his trousers. He hung limply a moment, then took from his pocket a saw with which he reached up to contrive his release. He sawed through the antler and fell. He tried to stand erect, but appeared to find this impossible. A subtitle announced, "He had put a permanent wave in Marcel."

This base fooling had been continuously blown upon by gales of stupid laughter. But not yet did Merton Gill know the worst. The merriment persisted through his most affecting bit, the farewell to his old pal outside—how could they have laughed at a simple bit of pathos like that?

"Looka him doin' Buck Benson!" urged the hoarse neighbor gleefully. "You got to hand it to that kid! Say, who is he, anyway?"

Followed the thrilling leap from a second-story window to the back of the waiting pal. The leap began thrillingly, but not only was it shown that the escaping man had donned a coat and a false mustache in the course of his fall but at its end he was revealed slowly, very slowly, clambering into the saddle!

They had used here, he saw, one of those slow cameras that seemed to suspend all action, a cruel device in this instance. And for his actual escape, when he rode the horse beyond camera range at a safe walk, they had used another camera that gave the effect of intense speed. The old horse had walked, but with an air of swiftness that caused the audience intense delight.

Entered Marcel the detective in another scene Merton had not watched. He emerged from the dance hall to confront a horse that remained there, an aged counterpart of the horse Merton had ridden off. Marcel stared intently into the beast's face, whereupon it reared and plunged as if terrified by the spectacle of the cross-eyed man.

Merton recalled the horse in the village that had seemed to act so intelligently. Probably a shotgun had stimulated the present scene. The detective thereupon turned aside, hastily donned his false mustache and Sherlock Holmes cap, and the deceived horse now permitted him to mount. He, too, walked off to the necromancy of a lens that multiplied his pace a thousandfold, and the audience rocked in its seats.

One horse still remained before the dance hall. The old mother emerged. With one anguished look after the detective, she gathered up her disreputable skirts and left the platform in a flying leap to land in the saddle. There was no trickery about the speed at which her horse, belabored w the mop pail, galloped in pursuit of the o ers. A subtitle recited: "She has wate her dear ones leave the old flat. Now must go out over the hill and mop the ot side of it!"

There was the sensational capture lasso of the detective. But the captor k not known that as he dragged his quarry the rope's end the latter had somehow p sessed himself of a sign which he la walked in with, a sign reading, "Join Good Roads Movement!" or that faithful old mother had ridden up to depo her inverted mop pail over his head.

Merton Gill had twice started to lea He wanted to leave. But each time found himself chained there by the fascination of this monstrous parody. remained to learn that the Montague had come out to the great open spaces lead a band of train robbers from Q. T. Ranch.

He saw her ride beside a train and her lasso over the stack of the locomoti He saw her pony settle back on its haunc while the rope grew taut and the train forced to a halt. He saw the passeng lined up by the wayside and made to p with their valuables. Later, when band returned to the ranch with th booty, he saw the dissolute brother, af the treasure was divided, winning it ba to the family coffers with his dice. He s the stricken father playing golf on bicycle in grotesque imitation of a p player.

And still, so incredible the revealme he had not yet, in the first shock of seemed to consider Baird in any way blame. Baird had somehow been deceiv by his actors. Yet a startling suspici was forming amid his mental flurries, suspicion that bloomed to certainty wh he saw himself the ever-patient victim the genuine hidalgo spurs.

Baird had said he wanted the close-u merely for use in determining how the sp could be mastered, yet here they we Merton Gill caught the spurs in und growth and caught them in his own cha arising from each fall with a look of gen determination that appealed strongly the throng of lack-wits. They shrieked each of his failures, even when he ran greet his pictured sweetheart and fell hea long. They found the comedy almost u bearable when at Baird's direction he h begun to toe in as he walked. And he h fallen clumsily again even when he flew that last glad rendezvous where the p were irised out in a love triumphant, wh the old mother mopped a large rock in t background.

An intervening close-up of this rock r vealed her tearful face as she cleaned t granite surface. Above her loomed painted exhortation to "Use Wizard Spi Pills." And of this pathetic old creature had been made to say, even as he clasp the beloved in his arms: "Remember, s is my mother! I will not desert her n just because I am rich and grand!"

At last he was free. Amid applause th was long and sincere he gained his feet an pushed a way out. His hoarse neighb was saying, "Who is the kid, anyway Ain't he a wonder?"

He pulled his hat down, dreading that h might be recognized and shamed befo these shallow fools. He froze with th horror of what he had been unable to loo away from. The ignominy of it! And no after those spurs, he knew full well tha Baird had betrayed him. As the word shaped in his mind a monstrous echo them reverberated through its caverns- the Montague girl had also betrayed him

He was lucid now and burned with mem ories of her uneasiness the night before She had been suffering acutely from re morse; she had sought to cover it with pleas of physical illness. At the moment h was conscious of no feeling toward her save wonder that she could so coolly have played him false. But the thing was not to be questioned. She—and Baird—had made a fool of him!

As he left the theater, the crowd about him commented approvingly on the pic ture.

"Who's this new comedian?" he heard a voice inquire. But "Ain't he a won- der?" seemed to be the sole reply.

He flushed darkly. So they thought him a comedian! Well, Baird wouldn't think so—not after to-morrow. He paused out- side the theater now to study the litho- graph in colors. There he hurled Marcel to

he antlers of the elk. The announcement was, "Hearts on Fire! A Jeff Baird Comedy. Five Reels—500 Laughs."

Baird, he sneeringly reflected, had kept faith with his patrons if not with one of his actors. But how he had profaned the sunset glories of the great open West and its virile drama! And the spurs, as he had promised the unsuspecting wearer, had stood out! The horror of it, blinding, desolating!

He had as good as stolen that money himself, taking it out to the great open spaces to spend in a barroom. Baird's serious effort had turned out to be a wild, inconsequent farrago of the most repulsive nonsense.

It was over for Merton Gill. The golden bowl was broken, the silver cord was loosed. To-morrow he would tear up Baird's contract and hurl the pieces in Baird's face. As to the Montague girl, that deceiving jade was hopeless. Never again would he trust her.

In a whirling daze of resentment he boarded a car for the journey home. A group seated near him still laughed about Hearts on Fire.

"I thought he'd kill me with those spurs," declared an otherwise sanely behaving young woman. "That hurt, embarrassed look on his face every time he'd get up!"

He cowered in his seat, and he remembered another ordeal he must probably face when he reached home. He hoped the Pattersons would be in bed, and walked up and down before the gate when he saw the house still alight. But the light stayed, and at last he nerved himself for a possible encounter. He let himself in softly, still hoping he could gain his room undiscovered; but Mrs. Patterson framed herself in the lighted door of the living room and became exclamatory at sight of him.

And he who had thought to stand before these people in shame to receive their condolences now perceived that his trial would be of another but hardly less distressing sort. For somehow, so dense were these good folks, that he must seem to be not displeased with his own performance. Amazingly they congratulated him, struggling with reminiscent laughter.

"And you never told us you was one of them funny comedians!" chided Mrs. Patterson. "We thought you was just a beginner, and here you got the biggest part in the picture! Say, the way you acted when you'd pick yourself up after them spurs threw you—I'll wake up in the night laughing at that!"

"And the way he kept his face so straight when them other funny ones was cutting their capers all around him!" observed Mr. Patterson.

"Yes, wasn't it wonderful, Jed, the way he never let on, keeping his face as serious as if he'd been in a serious play?"

"I like to fell off my seat," added Mr. Patterson.

"I'll tell you something, Mr. Armytage," began Mrs. Patterson with a suddenly serious manner of her own: "I never been one to flatter folks to their faces unless I felt it from the bottom of my heart—I never been that kind; when I tell a person such-and-such about themselves they can take it for the truth's own truth; so you can believe me now—I saw lots of times in that play to-night when you was even funnier than the cross-eyed man."

The young actor was regarding her strangely; seemingly he wished to acknowledge this compliment, but could find no suitable words.

"Yes, you can blush and hem and haw," went on his critic, "but anyone knows me'll tell you I mean it when I talk that way—yes, sir, funnier than the cross-eyed man himself! My, I guess the neighbors'll be talking soon's they find out we got someone as important as you be in our spare room—and, Mr. Armytage, I want you to give me a signed photograph of yourself, if you'll be so good."

He escaped at last, dizzy from the maelstrom of conflicting emotions that had caught and swirled him. It had been impossible not to appear, and somehow difficult not to feel, gratified under this heartfelt praise. He had been bound to appear pleased but incredulous, even when she pronounced him superior, at times, to the cross-eyed man—though the word she had used was "funnier."

Betrayed by his friends, stricken, desolated, in a panic of despair, he had yet seemed glad to hear that he had been funny. He flew to the sanctity of his room. Not again could he bear to be told that the acting which had been his soul's high vision was a thing for merriment.

He paced his room a long time, a restless, defenseless victim to recurrent visions of his shame. Implacably they returned to torture him. Reel after reel of the ignoble stuff, spawned by the miscreant, Baird, flashed before him; a world of base shadows in which he had been the arch offender.

Again and again he tried to make clear to himself just why his own acting should have caused mirth. Surely he had been serious; he had given the best that was in him. And the groundlings had guffawed!

Perhaps it was a puzzle he could never solve. And now he first thought of the new piece. This threw him into fresh panic. What awful things, with his high and serious acting, would he have been made to do in that? Patiently, one by one, he went over the scenes in which he had appeared. Dazed, confused, his recollection could bring to him little that was ambiguous in them. But also he had played through Hearts on Fire with little suspicion of its low intentions.

He went to bed at last, though to toss another hour in fruitless effort to solve this puzzle and to free his eyes of those flashing infamies of the night. Ever and again as he seemed to become composed, free at last of tormenting visions, a mere subtitle would flash in his brain, as where the old mother, when he had first punished her insulter, was made by the screen to call out, "Kick him on the kneecap too!"

But the darkness refreshed his tired eyes, and sleep at last brought him a merciful outlet from a world in which you could act your best and still be funnier than the cross-eyed man.

He awakened long past his usual hour, and occupied his first conscious moments in convincing himself that the scandal of the night before had not been a bad dream.

The shock was a little dulled now; he began absurdly to remember the comments of those who had appeared to enjoy the unworthy entertainment. Undoubtedly many people had mentioned him with warm approval. But such praise was surely nothing to take comfort from. He was called out of this retrospection by a knock on his door. It proved to be Mr. Patterson, bearing a tray.

"Mrs. P. thought that you being up so late last night mebbe would like a cup of coffee and a bite of something before you went out."

The man's manner was newly respectful. In this house, at least, Merton Gill was someone.

He thanked his host, and consumed the coffee and toast with a novel sense of importance. The courtesy was unprecedented. Mrs. Patterson had, indeed, been sincere. And scarcely had he finished dressing when Mr. Patterson was again at the door.

"A gentleman downstairs to see you, Mr. Armytage. He says his name is Walberg, but you don't know him. He says it's a business matter."

"Very well, I'll be down."

A business matter? He had no business matters with anyone except Baird.

He was smitten with a quick and quite illogical fear. Perhaps he would not have to tear up that contract and hurl it in the face of the manager who had betrayed him. Perhaps the manager himself would do the tearing. Perhaps Baird, after seeing the picture, had decided that Merton Gill would not do. Instantly he felt resentful. Hadn't he given the best that was in him? Was it his fault if other actors had turned into farce one of the worthwhile things?

He went to meet Mr. Walberg with this resentment still so warm that his greeting of the strange gentleman was gruff and short. The caller, an alert, businesslike man, came at once to his point. He was, it proved, not the representative of a possibly repenting Baird. He was, on the contrary, representing a rival producer. He extended his card—the Bigart Comedies.

"I got your address from the Holden office, Mr. Armytage. I guess I routed you out of bed, eh? Well, it's like this: If you ain't sewed up with Baird yet the Bigart people would like to talk a little business to you. How about it?"

"Business?"

Mr. Armytage fairly exploded this. He was unhappy and puzzled, and in consequence unamiable.

"Sure, business," confirmed Mr. Walberg. "I understand you just finished another five-reeler for the Buckeye outfit, but how about some stuff for us now? We can give you as good a company as that one last night, and a good line of comedy. We got a gag man that simply never gets to the end of his string. He's doping out something right now that would fit you like a glove—and, say, it would be a grand idea to kinda specialize in that spur act of yours. That got over big. We'll work that in again. An act like that's good for a million laughs."

Mr. Armytage eyed Mr. Walberg coldly. Even Mr. Walberg felt an extensive area of glaciation setting in.

"I wouldn't think of it!" said the actor, still gruffly.

"Do you mean that you can't come to the Bigart at all—on any proposition?"

"That's what I mean," confirmed Mr. Armytage.

"Would three hundred and fifty a week interest you?"

"No," said Mr. Armytage, though he gulped twice before achieving it.

Mr. Walberg reported to his people that this Armytage lad was one hard-boiled proposition. He'd seen lots of 'em in his time, but this bird was a wonder.

Yet Mr. Armytage was not really so granitic of nature as the Bigart emissary had thought him. He had begun the interview with a smoldering resentment due to a misapprehension; he had been outraged by a suggestion that the spurs be again put to their revolting use; and he had been stunned by an offer of three hundred and fifty dollars a week. That was all.

Here was a new angle to the puzzles that distracted him. He was not only praised by the witless but he had been found desirable by certain discerning overlords of filmdom. What could be the secret of a talent that caused people, after viewing it but once, to make reckless offers?

And another thing—why had he allowed Baird to sew him up? The Montague girl again occupied the foreground of his troubled musings. She, with her airs of wise importance, had helped to sew him up. She was a witless thing, after all, and false of nature. He would have matters out with her this very day. But first he must confront Baird in a scene of scorn and reprobation.

On the car he became aware that far back in remote caverns of his mind there ran now a teasing memory of some book on the shelves of the Simsbury public library. He was sure it was not a book he had read. It was merely a title that hid itself. Only this had ever interested him, and it but momentarily. So much he knew. A book's title had lodged in his mind, remained there, and was now curiously stirring in some direct relation to his present perplexities.

But it kept its face averted. He could not read it. Vaguely he identified the nameless book with Tessie Kearns; he could not divine how, because it was not her book, and he had never seen it except on the library shelf.

The nameless book persistently danced before him. He was glad of this. It kept him at moments from thinking of the loathly Baird.

XX

The Tragic Comedian

PENETRATING the Holden lot, he was relieved to find that he created no perceptible sensation. People did not halt to point derisive fingers at him; he had half feared they would. As he approached the office building he was almost certain he saw Baird turn in ahead of him. Yet when he entered the outer room of the Buckeye company the young woman there looked up from her typewriter to tell him that Mr. Baird was not in.

She was a serious-eyed young woman of a sincere manner; she spoke with a clear certainty of tone. Mr. Baird was not only out but he would not be in for several days. His physician had ordered him to a sanitarium.

The young woman resumed her typing; she did not again glance up. The caller seemed to consider waiting on a chance that she had been misinformed. He was now sure he had seen Baird enter the building, and the door to his private office was closed. The caller idled outside the railing, absently regarding stills of past Buckeye atrocities that had been hung upon the walls of the office by someone with primitive tastes in decoration. He was debating a direct challenge of the young woman's veracity.

What would she say if told that the caller meant to wait right there until Mr. Baird should convalesce? He managed some appraising side glances at her as she bent over her machine. She seemed to believe that he had already gone. Then he did go. It was no good talking that way to a girl. If it had been a man now ——

"You tell Mr. Baird that Mr. Gill's got to see him as soon as possible about something important," he directed from the open door.

The young woman raised her serious eyes to his and nodded. She resumed her work. The door closed. Upon its closing the door of Baird's private office opened noiselessly to a crack that sufficed for the speaking voice at very moderate pitch to issue.

"Get Miss Montague on the phone," directed the voice.

The door again closed noiselessly. Beyond it Mr. Baird was presently speaking in low, sweet tones.

"'Lo, sister! Listen! That squirrel just boiled in here, and I ducked him. I told the girl I wasn't to be in unless he was laughing all over, and he wasn't doing the least little thing that was anywheres near laughing. See what I mean? It's up to you now. You started it, and you've got to finish it. I've irised out. Get me?"

On the steps outside the rebuffed Merton Gill glanced at his own natty wrist watch, bought with some of the later wages of his shame. It was the luncheon hour; mechanically he made his way to the cafeteria. He had ceased to rehearse the speech that a doughtier Baird would now have been hearing. Instead, he was roughly drafting the one that Sarah Nevada Montague could not long evade. Even on her dying bed she would be compelled to listen. The orator with bent head mumbled as he walked. He still mumbled as he indicated a choice of foods at the cafeteria counter, and he continued to be thus absorbed as he found a table near the center of the room. He arranged his chosen assortment of viands.

"You led me on, that's what you did!" he continued to the absent culprit. "Led me on to make a laughingstock of myself, that's what you did! Made a fool of me, that's what you did!"

"All the same I can't help thinking he's a harm to the industry," came the crisp tones of Henshaw from an adjoining table.

The rehearsing orator glanced up to discover that the director and the sunny-faced brown-and-gray man he called governor were smoking above the plates of their finished luncheon.

"I wouldn't worry too much," suggested the cheerful governor.

"But see what he does! He takes the good old reliable, sure-fire stuff and makes fun of it! I admit it's funny to start with, but what'll happen to us if the picture public ever finds that out? What'll we do then for drama—after they've learned to laugh at the old stuff?"

"Tush, tush, my boy!" The governor waved a half-consumed cigarette until its ash fell. "Never fear! Do you think a thousand Jeff Bairds could make the picture public laugh at the old stuff when it's played straight? They laughed last night, yes; but not so much at the really fine burlesque; they guffawed at the slapstick stuff that went with it. Baird's shrewd. He knows if he played straight burlesque he'd never make a dollar, so notice how he'll give a bit of straight that is genuine art, then a bit of slap stick that anyone can get. The slap stick is what carries the show. Real burlesque is criticism, my boy; sometimes the very highbrowest sort. It demands sophistication, a pretty high intelligence in the man that gets it.

"All right. Now take your picture public—twenty million people every day; not the same ones every day, but with the same average cranial index, which is low for all but about seven out of every hundred. That's natural, because there aren't twenty million people in the world with taste or real intelligence—probably not ten millions. Well, you take this twenty-million bunch that we sell to every day, and suppose they saw that lovely thing last night, don't you know they'd all be back to-night to see a real mopping mother with a real son falsely accused of crime—sure they'd be back, their heads bloody but unbrowed. Don't worry! That reliable field marshal, old General Hokum, leads an unbeatable army."

Merton Gill had listened to the beginning of this harangue, but was now savage-

The worst dirt is *in* your rug not *on* it

This is one of four important reasons why the Royal Electric Cleaner is the machine that will permanently satisfy you

In selecting a vacuum cleaner, you should consider four things chiefly: how well it cleans—efficiency; how long it serves—durability; how easy it is to use—simplicity; how clean it is in operation—sanitation.

As to cleaning efficiency, remember that the worst dirt is *in* your rug—not *on* it. Deep down in the fabric is the germ-breeding, unsanitary dirt; and much of it is finely divided grit that gradually "cuts" the fibre of your rugs. The jar-of-water laboratory test shows how much of this dirt there is in comparison to the surface litter.

How Royal's scientific suction gets the embedded dirt

To take out all of the gritty, germ-laden dirt embedded in your rugs, a cleaner *must*, we believe, do three things. It must produce a *powerful* suction. It must create a *uniform* suction all along the nozzle. And the nozzle must be *adjusted* "directly" to the rug surface.

You will find the Royal meets these three needs. The suction is not only powerful but actually *increases slightly with use*. Because of scientific design, fully patented, the Royal creates an amazingly *uniform* suction along the entire 14-inch nozzle length. And with the *patented* Royal adjustment screw, the *powerful uniform* suction is applied "directly" to the rug surface. Yet the Royal cannot harm the finest fabric. It can be used every day without fear of the slightest injury, even to finest oriental rugs.

Built to last a lifetime

So simply and sturdily built is the Royal that it will last a lifetime with ordinary care. For so many years will it lighten your housework that its actual cost distributed over those years, is extremely *low*. Remember, true economy and thrift lie in the purchase of articles of real value rather than at low *price*.

And with such mechanical precision is the Royal designed and built that it is practically trouble-*proof*. Anybody can use it after one explanation—the Royal Man will show you.

So easy to use!

The Royal weighs scarcely 11 pounds and is easy to use, not only because of this lightness, but also because it requires few strokes over the rug; the *Royal cleans quickly.*

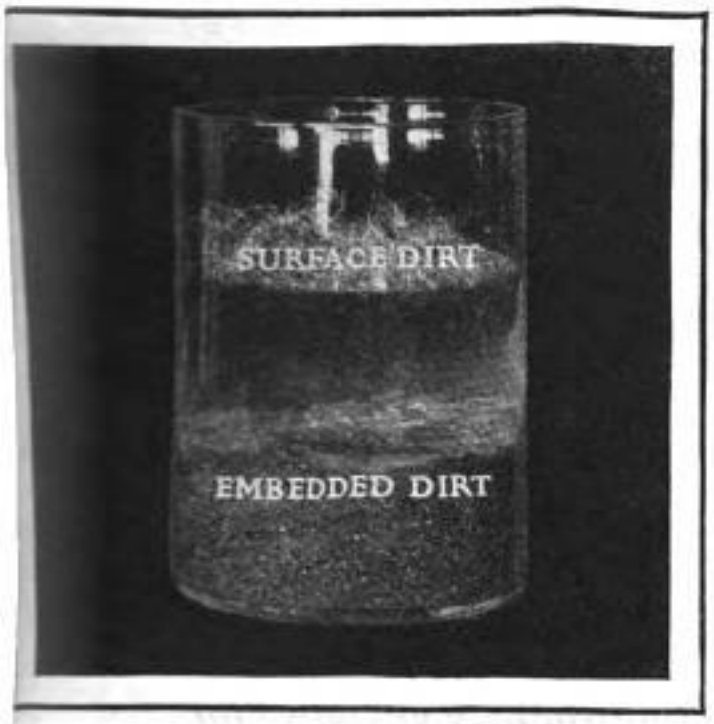
The patented Royal nozzle is designed so that it will go easily into corners and under furniture. And the trigger-switch on the handle of the Royal saves stooping to turn the current on or off. The Royal will never tire you.

Sanitary Cleanliness

Until the embedded dirt is taken out of your rugs they may *look clean*—but they are not sanitary. The worst dirt, the unhealthful, dangerous dirt—large quantities of it—is still in the rug to be beaten into the air at every footstep.

The Royal leaves your rugs not only surface-cleaned, but *sanitary*. And the Royal itself is sanitary in operation. When you are through cleaning with the Royal, all the dirt is in the bag; none remains in or on any part of the machine to fall out again upon the floor.

*Royal engineers worked three years with 136 experimental types to perfect the Royal scientifically designed and patented nozzle. The air, carrying the dirt with it, rushes **directly** into the bag; there are no obstructions to impede it.*



*The Royal adjustment screw, a **patented** feature, produces maximum cleaning efficiency from powerful air suction. Turn on the current, screw the nozzle adjustment down until the rug is sucked up—and high air suction in its most powerful form **cleans** your rugs.*

THE ROYAL

Cleans By

© 1912, The P. A. Geier & Co., Cleveland, O

Digitized by Google

This laboratory test shows how the Royal removes the embedded dirt, as well as the surface litter.

Much of the embedded dirt is gritty and injurious to rugs. Much of it is unsanitary and laden with germs.

Notice that the Royal not only picks up all surface dirt but removes all of the embedded dirt.

Mrs. Hannah Adolphus, 1318 Clay Ave., Bronx, N.Y., thought that her rugs were clean. And they were—as clean as ordinary cleaning methods could make them. But—

In 5 minutes—1½ pounds of dirt from 2 "clean" rugs!

"I purchased a Royal Electric Cleaner today, and I was surprised and amazed to find that after the Royal had been run 5 minutes over my 6 by 9 and 8 by 10 Axminster rugs, it had removed 1½ pounds of dirt!" Practically all of this dirt was embedded, unsanitary dirt that ordinary cleaning methods had failed to remove!

Cleans the whole house from cellar to attic

With the convenient Royal attachments you can clean the whole house quickly, easily, thoroughly; upholstered furniture, drapes, hardwood and cement floors, linoleum, walls, mattresses, even furnaces.

The Royal is more than a rug cleaner. It is a complete cleaning plant that relieves you of the hardest part of your housekeeping tasks.

Let the Royal Man call

Arrange with the Royal Man to clean a rug in your home—without obligation to you. If your electrical dealer or department store does not handle the Royal, write us and we'll arrange to have one of your rugs cleaned without cost or obligation to you.

THE P. A. GEIER COMPANY, Cleveland, Ohio
Manufactured in Canada by
Continental Electric Co., Limited, Toronto, Canada

A ray of sunlight reveals embedded dirt, pounded out of your rugs at every sweep, and filling the air. It is the unsanitary, germ-bearing dirt — the worst kind of dirt. Royal's powerful suction gets it out of your rugs.

THE ROYAL MAN

The Royal Man is trained in matters of housecleaning and can show you many interesting labor-saving methods of cleaning.

Without obligation on your part, he will be glad to clean a rug for you and let you judge for yourself the worth of the Royal.

The P. A. Geier Company expects every Royal Man to be courteous, considerate, and never insistent in his dealings with you. You need never hesitate to ask a Royal Man for a demonstration in your home.

In practically every community there is a Royal Man connected with a reliable retail store handling electrical appliances who will be glad to explain the superiority of this new cleaning method.

If you do not know where to reach him, write us and we will see that you are put in touch with him.

DEALERS: The valuable Royal Franchise may be had by progressive dealers in certain cities and towns. Write for complete information.

RETAIL REPRESENTATIVES: There are numerous desirable opportunities for men of character and ability in the capacity of Royal Men. Inquire of the local Royal dealer about openings in your locality.

The First Dish
of bubble grains
Puffed by Prof. A. P. Anderson

That great day, when Prof. Anderson found a way to puffed grains, brought a new cereal era to millions.

It offered your children whole wheat and whole rice with every food cell exploded.

It made whole grains wholly digestible.

And it made these grains food confections—the most enticing grain foods in existence. So countless children have been won to a larger whole-grain diet.

125 million steam explosions

There are over 125 million food cells in a grain of wheat. They must be broken to digest.

Prof. Anderson sealed the grains in guns, then rolled them for an hour in fearful heat. The bit of moisture in each food cell was thus changed to steam.

When he shot the guns, that steam exploded. Over 125 million explosions occurred in every kernel.

Thus digestion was made easy and complete. All the 16 elements were made available as food.

The grains were puffed to bubbles, 8 times normal size. Each grain became a tidbit, flimsy as a snowflake. And the heat gave a nut-like taste. Thus whole grains were made delightful.

Now you who believe in whole-grain diet can serve whole grains in this ideal form, and make them welcome dainties.

Puffed Wheat

Float in every bowl of milk. It forms a practically complete food, with every element fitted to digest.

Puffed Rice

The finest breakfast dainty ever served. Also mix in every dish of fruit. Douse with melted butter for after-school delights.

(Continued from Page 107)

devouring food. He thought this so-called governor was too much like Baird.

"Well, governor, I hope you're right. But that was pretty keen stuff last night. That first bit won't do Parmalee any good, and that Buck Benson stuff—you can't tell me that a little more of that wouldn't make Benson look around for a new play."

"But I do tell you just that. It won't hurt Parmalee a bit; and Benson can go on Bensoning to the end of time—to big money. You keep forgetting this twenty-million audience. Go out and buy a picture magazine and read it through, just to remind you. They want hokum and pay for it. Even this thing of Baird's, with all the saving slapstick, is over the heads of a good half of them. I'll make a bet with you now, anything you name, that it won't gross two-thirds as much as Benson's next Western, and in that they'll cry their eyes out when he kisses his horse good-by. See if they don't! Or see if they don't bawl at the next old gray-haired mother with a mop and a leading juvenile son that gets in bad!

"Why, if you give 'em hokum they don't even demand acting! Look at our own star, Mercer. You know as well as I do that she not only can't act but she's merely a beautiful moron. In a world where right prevailed she'd be crowned queen of the morons without question. She may have an idea that two and two make four, but if so it's only because she believes everything she hears. And look at the mail she gets! Every last one of the twenty million has written to tell her what a noble actress she is. She even believes that!

"Baird can keep on with the burlesque stuff, but his little old two-reelers'll probably have to pay for it, especially if he keeps those high-priced people. I'll bet that one new man of his sets him back seven hundred and fifty a week. The Lord knows he's worth every cent of it. My boy, tell me, did you ever in all your life see a lovelier imitation of a perfectly rotten actor? There's an artist for you! Who is he, anyway? Where'd he come from?"

Merton Gill again listened; he was merely affecting to busy himself with a fork. It was good acting.

"I don't know," replied Henshaw. "Some of the crowd last night said he was just an extra that Baird dug up on the lot here, and on the subject of burlesque they also said Baird was having him do some Edgar Wayne stuff in a new one."

"Fine!" The governor beamed. "Can't you see him as the honest, likable country boy? I bet he'll be good to his old mother in this one, too, and get the best of the city slickers in the end. For heaven's sake don't let me miss it! This kid last night handed me laughs that were better than a month's vacation for this old carcass of mine. You say he was just an extra?"

"That's what I heard last night. Anyway, he's all you say he is as an artist. Where do you suppose he got it? Do you suppose he's just the casual genius that comes along from time to time? And why didn't he stay straight instead of playing horse with the sacred traditions of our art? That's what troubled me as I watched him. Even in that wild business with the spurs he was the artist every second. He must have tricked those falls, but I couldn't catch him at it. Why should such a man tie up with Baird?"

"Ask me something hard. I'd say that this bird had been tried out in serious stuff and couldn't make the grade. That's the way he struck me. Probably he once thought that he could play Hamlet—one of those boys. Didn't you get the real pathos he'd turn on now and then? He actually had me kind of teary a couple of times. But I could see he'd also make me laugh my head off any time he showed in a straight piece.

"To begin with, look at that low-comedy face of his. And then—something peculiar—even while he's imitating a bad actor you feel somehow that it isn't all imitation. It's art, I grant you, but you feel that he'd still be a bad actor if he'd tried to imitate a good one. I suppose somehow he found out his limits and decided to be what God made him. Does that answer you? It gives you acting plus, and if that isn't the plus in this case I miss my guess."

"I suppose you're right—something like that. And, of course, the real pathos is there. It has to be. There never was a great comedian without it, and this one is great. I admit that, and I admit all you say about our audience. I suppose we can't ever sell to twenty million yes, day pictures that make any demand on human intelligence. But couldn't we something better to one million—or a thousand?"

The governor dropped his cigarette into the dregs of his coffee.

"We might," he said, "if we were dowed. As it is, to make pictures we n make money. To make money we must to the mob, and the mob reaches full m tal bloom at the age of fifteen. It w buy pictures the average child can't g

"Of course the art is in its infancy," marked Henshaw, discarding his own ci rette.

"Ours is the Peter Pan of the arts," nounced the governor as he rose.

"The Peter Pan of the arts?"

"Yes; I trust you recall the outstand biological freakishness of Peter."

"Oh!" replied Henshaw.

When Merton Gill dared to glance u moment later the men were matching co at the counter. When they had gone he left a half-eaten meal, and presen might have been observed on a sw rolling street car. He mumbled as blankly surveyed palm-bordered buildi sites along the way. He was again hearsing a tense scene with the Montag girl. In actor parlance, he was giving hi self all the best of it. But they were n lines. And he was no longer eluded the title of that book he remembered on t library shelf at Simsbury. Sitting in t cafeteria listening to strange talk, lash by cruel memories, it had flashed upon h vision with the stark definition of screened subtitle.

He rang the Montague bell twice befo he heard a faint summons to enter. Up the parlor couch, under blankets th reached her pillowed head, lay Sarah. Sh was pale and seemed to suffer. She greet him in a feeble voice, lids fluttering over th fires of that mysterious fever burning fi back in her eyes.

"Hullo, kid," he began brightly. "Here your watch."

Her doubting glance hovered over hi as he smiled down at her.

"You giving it to me again, Merton?

She seemed unable to conquer a stub born incredulity.

"Of course I'm giving it to you again What'd you think I was going to do?"

She still surveyed him with little veile glances, alive but unrevealing.

"You look so bright you give me Klei eyes," she said. She managed a wan smil at this.

"Take it," he insisted, extending th package. "Of course it won't keep Western Union time, but it'll look good on you."

She appeared to be gaining on her in credulity, but a vestige of it remained.

"I won't touch it!" she declared with more spirit than could have been expected from the perishing. "I won't touch it till you give me a good big kiss!"

"Sure," he said, and leaned down to brush her pale cheek with his lips. He was cheerfully businesslike in this ceremony.

"Not till you do it right," she persisted.

He knelt beside the couch and did it right. He lingered with a hand upon her pale brow.

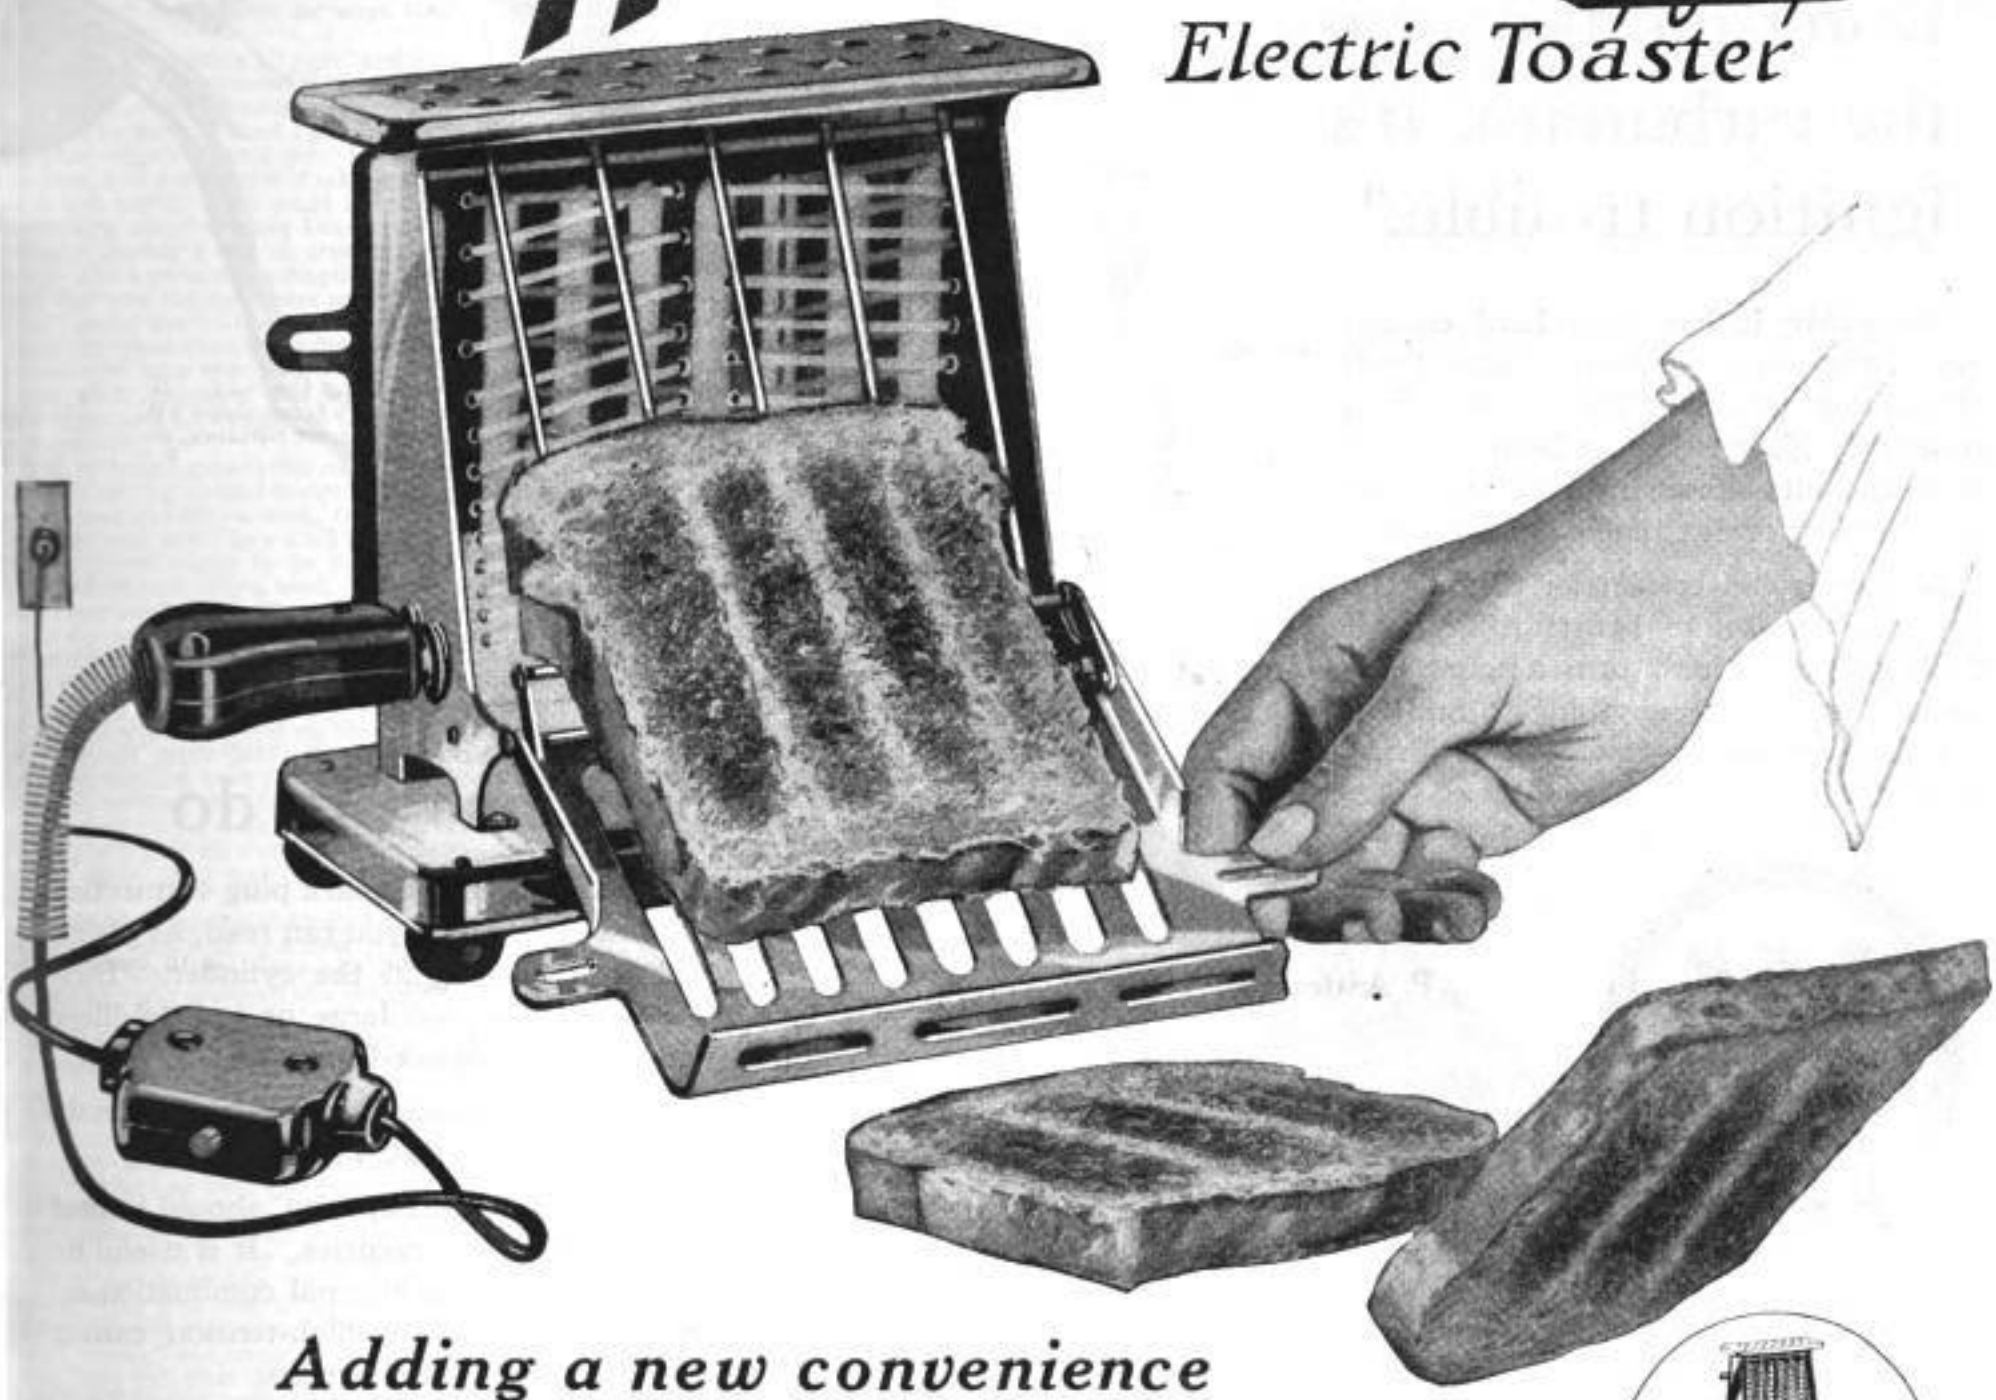
"What you afraid of?" he demanded.

"You," she said; but now she again brought the watch to view, holding it away from her, studying its glitter from various angles. At last she turned her eyes up to his. "Well?"

"Well?" he repeated coolly.

"Oh, stop it!" Again there was more energy than the moribund are wont to manifest. There was even a vigorous impatience in her tone as she went on: "You know well enough what I was afraid of. And you know well enough what I want to hear right now. Shoot, can't you?"

He shot. He stood up, backed away from the couch to where he could regard its stricken occupant and shot gayly:



"Well, it'll be a good lesson to you about me, this thing of your thinking I was fooled about that piece. I s'pose you and Baird had it between you all the time, right down to the very last, that I thought he was doing a serious play. Ho-ho!" He laughed gibingly. It was a masterful laugh. "A serious play with a cross-eyed man doing funny stuff all through! I thought it was serious, did I? Yes, I did!" Again the dry, scornful laugh of superiority. "Didn't you people know that I knew what I could do and what I couldn't do? I should have thought that little thing

Marion

Flipflop Electric Toaster

Adding a new convenience

The pleasure and charm of making toast at the table are greatly enhanced by this *Marion* Flipflop, which turns the toast. When one side is browned as you like it, just flick the grid down and up, your bread is automatically turned, with the other side atoasting. Yes, it's as easy as that. And there are other reasons why using Flipflop will afford you added pleasure—

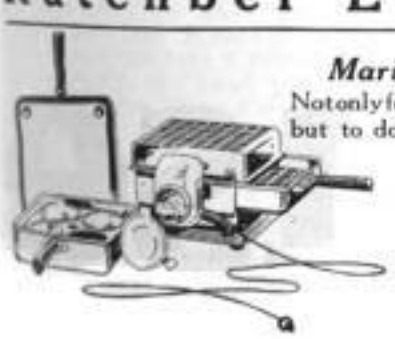
— it is very handsome in design and finish, with no springs to get out of order
— no one need touch the bread. Flipflop turns it automatically
— makes crispy toast, moist inside, or toasted clear through, as you prefer
— handy little push-button switch makes it easy to turn current on or off
— attach to any lamp socket—for luncheon on the porch—or in the sick room
— cost of operation is trivial, as a cent makes toast for several.

Most stores that sell electrical conveniences have this handy table servant in their windows. Others will be glad to get it for you from the factory.

Look for a store where Flipflop is working in the window.

This wonderful little servant is always ready to do your bidding—
—any time, day or night
—anywhere there is an electric light socket.

It goes into action instantly, toasting the kind of toast you best like, as long as wanted.



And turns the toast for you, at a slight touch.

Can you afford to do without this eager little servant that works so very cheaply?

Look for a Flipflop window

Rutenber Electric Company, Marion, Indiana

Marion Table Stove

Not only for the midnight "snack," but to do practical hot-weather cooking for several, right on the table. Bakes—boils—broils—fries—stews, quickly. Three aluminum pans and set of egg cups. Ask to see this stove.

Marion Iron

Perfected through many years of manufacture, you will find many desirable features, as—

—attached stand
—substantial plug
—cool handle
—hot ironing surface
—fully guaranteed.

Ask to see the Marion.

Marion Radiator

The penetrating heat rays make this heater surprisingly effective. Easily carried from room to room. Attaches to any lamp socket. Especially useful in bath room and after the furnace fire is out.

Spark-C

TRADE MARK

tells you:

"Don't monkey with the carburetor. It's ignition trouble."

Previously it has been hard enough even for an expert to discover some kinds of ignition trouble. The average man couldn't. Now either or both can find ignition faults almost instantly, and with no more fuss or dirt than signing a name.

Nothing could be simpler to use than the Westinghouse Ignition Tester—Spark-C. You don't turn a screw, disconnect a wire—or anything to find out whether or not every plug is firing properly.

Sees all
Knows all
Tells all
about your ignition

Price
$1.50
in the United States

All you have to do

Place the point of Spark-C on the spark plug connection, and in the little window of Spark-C you can read, as plainly as if written, what is happening in the cylinder. Dirty plugs, points worn down, gap too large or too small—if there is trouble with the plug, Spark-C tells you.

And if there is anything the matter in the wiring or in the distributor, coil, or magneto, Spark-C finds it for you.

If you have a car or a motor-boat, Spark-C should be used for periodical testings and for emergencies. It is useful for anyone who has an electric-spark, internal combustion engine of any kind. Spark-C records high-tension current from dry cells, storage battery, or magneto.

Spark-C is a fine, sensitive electrical instrument—yet it is made to stand a lifetime of use. There is nothing in it to use up or wear out. It is made by Westinghouse—that name guarantees quality.

Ask your dealer for Spark-C. If he has no stock, place your order with him for a "Westinghouse—Spark-C."

uld of occurred to you all the time. dn't you s'pose I knew as well as anyone at I got a low-comedy face and couldn't er make the grade in a serious piece?

"Of course I know I got real pathos—ok how I turned it on a couple-a times in at piece last night—but even when I'm itating a bad actor you can see it ain't acting. You'd see soon enough I was a d actor if I tried to imitate a good one. guess you'd see that pretty quick. Didn't u and Baird even s'pose I'd found out y limits and decided to be what God eant me to be?

"But I got the pathos all right, and you n't name one great comedian that don't ed pathos more'n he needs anything else. e just has to have it—and I got it. I got ting plus—that's what I got. I knew it l the time, and a whole lot of other people new it last night. You could hear fifty 'em talking about it when I came out of e theater, saying I was an artist and all ke that; and a certain Los Angeles society oman that you can bet never says things he don't mean, she told me she saw lots of faces in this piece that I was funnier than ny cross-eyed man that ever lived.

"And what happens this morning?" Hands in pockets he swaggered to and fro ast the couch.

"Well, nothing happens this morning ept people coming around to sign me up for hree hundred and fifty a week. One of 'em aid not an hour ago—he's a big producer, oo—that Baird ought to be paying me even hundred and fifty a week, because I earned every cent of it. Of course I didn't want to say anything the other day, with you pretending to know so much about contracts and all that—I just thought I'd let you go on, seeing you were so smart—and I signed what you told me to. But I know I should have held off—with this Bamberger coming over from the Bigart when I was hardly out of bed, and says will three hundred fifty a week interest me and promising he'll give me a chance to do that spur act again that was the hit of the piece."

He broke off, conscious suddenly that the girl had long been holding a most peculiar stare rigidly upon him. She had at first narrowed her right eye upon him at a calculating angle as she listened; but for a long time now the eyes had been widened to this inexplicable stare eloquent of hidden things.

As he stopped his speech, made ill at ease by the incessant pressing of the look, he was caught and held by it to a longer silence than he had meant to permit. He could now read meanings. That unflinching look incurred by his smooth boasting was a telling blend of pity and of wonder.

"Then you know, do you," she demanded, "that you look just enough too much like Harold Parmalee so that you're funny? I mean," she amended, seeing him wince, "that you look the way Parmalee would look if he had brains?"

He faltered now, but made a desperate effort to recover his balance.

"And besides, what difference does it make? If we made good pictures we'd have to sell 'em to a mob. And what's a mob? It's fifteen years old and nothing but admirons, or something like that, like Muriel Mercer that wouldn't know how much are two times two if the neighbors didn't get it to her."

Again he had run down under that look. As he stopped the girl on the couch, who had lain with the blankets to her neck, suddenly threw them aside and sat up. Surprisingly she was not garbed in sick-bed apparel. She seemed to be fully dressed.

A long moment she sat thus, regarding him still with that slow look, unbelieving yet cherishing. His eyes fell at last.

"Merton!" he heard her whisper.

He looked up, but she did not speak. She merely gave a little knowing nod of the head and opened her arms to him. Again he knelt beside her while the mothering arms infolded him. A hand pulled his head to her breast and held it there. Thus she rocked gently, the hand gliding up to smooth his hair. Without words she cherished him thus a long time. The gentle rocking back and forth continued.

"It's—it's like that other time you found me."

His bluster had gone. He was not sure of his voice. Even these few words had been hard. He did not try more.

"There, there, there!" she whispered. "It's all right, everything's all right. Your mother's got you right here, and she ain't ever going to let you go—never going to let you go."

She was patting his head in rhythm with her rocking as she snuggled and soothed him. There was silence for another interval. Then she began to croon a song above him as she rocked, though the lyric was plainly an improvisation:

"Did he have his poor old mother going for a minute? Yes, he did. He had her going for a minute—for a minute. Yes, he had her going good for a minute.

"But, oh, he won't ever fool her very long, very long—not very long, because he can't fool his dear old mother very long, very long, and he can bet on that, bet on that, so he can, bet a lot of money on that, that, that!"

Her charge had grown still again, but she did not relax the infolding arms.

"Say," he said at last.

"Well, honey?"

"You know those benches where we wait for the cars?"

"Do I know them?" The imperative inference was that she did.

"I looked at the store yesterday. The sign down there says, 'Himebaugh's Dignified System of Deferred Payments.'"

"Yes, yes, I know."

"Well, I saw another good place—it says, 'The House of Lucky Rings'—you know—rings!"

"Sure, I know! That's all right."

"Well," he threw off the arms and got to his feet. She stood up then.

"Well, all right!" she said slowly.

They were both constrained now. Both affected an ease that neither felt. It seemed to be conceded without words that they must very lightly skirt the edges of Merton Gill's screen art. They talked a long time volubly of other things: of the girl's illness, from which she now seemed most happily to have recovered; of whether she was afraid of him—she professed still to be; of the new watch, whose beauties were newly admired when it had been adjusted to its owner's wrist; of finances they talked, and even quite simply of accessible homes where two could live as cheaply as one.

It was not until he was about to go, when he stood at the door while the girl readjusted his cravat, smoothed his hair and administered a final series of pats where they seemed most needed, that he broke ever so slightly through the reserve which both had felt congealing about a certain topic.

"You know," he said, "I happened to remember the title of a book this morning; a book I used to see back in the public library at home. It wasn't one I ever read. Maybe Tessie Kearns read it. Anyway, she had a poem she liked a lot written by the same man. She used to read me good parts of it. But I never read the book, because the title sounded kind of wild, like there couldn't be any such thing. The poem had just a plain name; it was called Lucile, but the book by the same man was called The Tragic Comedians. You wouldn't think there could be a tragic comedian, would you?—but look at me!"

She looked at him with that elusive, remote flickering back in her eyes, but she only said: "Be sure and come take me out to dinner. To-night I can eat. And don't forget your overcoat. And listen—don't you dare go into Himebaugh's till I can go with you."

One minute after he had gone the Montague girl was at the telephone.

"Hello! Mr. Baird, please. Is this Mr. Baird? Well, Jeff, everything's jake. Yeah. The poor thing was pretty wild when he got here. First he began to bluff. He'd got an earful from someone probably over on the lot. He put it over on me for a minute too. But he didn't last good. And he was awful broke up when the end came. Bless his heart! But you bet I kissed the hurt place and made it well. How about him now? Jeff, I'm darned if I can tell, except he's right again. When he got here he was some heartbroke and some mad and some set up on account of things he hears about himself. I guess he's that way still, except I mended the heartbreak. I can't quite make him out—he's like a book where you can't guess what's coming in the next chapter, so you keep on reading. I can see we ain't ever going to talk much about it—not if we live together thirty years. What's that? Yeah. Didn't I tell you he was always getting me, somehow? Well, now I'm completely got. Yeah. We're gonna do an altar walk. What? Oh, right

Look for this picture, in color, poster size, in the leading men's stores of your community this week. Wherever you see the poster, you will find the best in shirts.

The new shirts for well-dressed men are now on show

Better-class furnishers all over the country are displaying Emery Spring styles

THIS is Emery Shirt Week—looked forward to everywhere by men who value correctness in every detail of dress. They have come to depend upon this event for authentic information as to what is proper in shirts.

Discriminating men have learned that Emery Shirt styles are always distinctive, always original. They have found that Emery Shirts *do* fit—easefully, comfortably; that Emery fabrics keep their good looks throughout long wear; that Emery tailoring refinements are to be had only in shirts with the Emery label.

They look for Emery when they buy shirts—because they know Emery Shirts are equal to custom-made—yet cost no more than ordinary shirts.

Why Emery Shirts are equal to custom-made

Pattern in each shirt perfectly balanced—stripes match in cuffs, front, etc.

Different sleeve lengths. Sleeve placquets (buttoning above cuff) to prevent gaping sleeves and make cuffs set right.

Pre-shrunk neckbands. Nek-ban-tab for inserting collar button on back.

Closely-stitched seams. Clear pearl buttons. Unbreakable buttonholes. And so on!

When purchasing your Easter furnishings, this week, look for the store with the Emery Week Poster—a reproduction, in color, of the illustration at the top of this page.

In the Emery store, you will find haberdashery of the first quality. Merchants who offer you Emery Shirts sell the best in every line.

Their showing of the new shirts, in all of the handsome new fabrics for Spring, is complete. $2, $2.50, $3 and up.

If there is no Emery dealer near you, we will see that you are served, on receipt of money-order and name of your dealer. Mention neck-band size, sleeve-length and color preferences.

W. M. Steppacher & Bro., Inc., Makers of Emery Shirts, Philadelphia.

Emery Shirt Week

Only the hidden value can give you what you seek

How it looks and fits is of course important, and you can see this for yourself—but the real value of a raincoat is "inbuilt." It is hidden. You have to go by the name on the coat.

Backed by forty years' experience in raincoat manufacture, the name Raynster is your guarantee. When you buy a Raynster you get real raincoat protection. Every seam, every inch, is backed by layer on layer of rubber, "cured" to form a single waterproof sheet, yet light and flexible.

There are many different Raynster models, from the rugged rubber-surface types to smart tweeds and cashmeres with the rubber hidden inside and light as silk. Special types for boys, too. Whether you want a raincoat for work, for motoring, or for business, there's a Raynster built especially for you.

Look for the Raynster label! If your dealer should be out of the exact Raynster you want, he can get it in no time from the nearest of our many branches.

United States Rubber Company

Raynsters

A COMPLETE LINE OF RAINCOATS—*A type for every need*

away! Say, honest, Jeff, I'll never have an easy minute again while he's out of my sight. Helpless? You said it! Thanks, Jeff. I know that, old man. Good-by."

XXI
Onward and Upward

AT THE first showing of the Buckeye company's new five-reel comedy—Five Reels, 500 Laughs—entitled Brewing Trouble, two important members of its cast occupied balcony seats, and one of them throughout the piece quite brazenly applauded the screen art of her husband, named in the play "Chester Sap, a simple country boy."

"I don't care who sees me," she would reply ever and again to his whispered protests.

The new piece proved to be a rather broadly stressed burlesque of the type of picture drama that has done so much to endear the personality of Edgar Wayne to his public. It was accorded a hearty reception. There was nothing to which it might be compared save the company's previous Hearts on Fire, and it seemed to be felt that the present offering had surpassed even that masterpiece of satire.

The Gills, above referred to, watched the unwinding celluloid with vastly different emotions. Mrs. Gill was hearty in her enjoyment, as has been indicated. Her husband, superficially, was not displeased. But beneath that surface of calm approval, beneath even the look of bored indifference he now and then managed, there still ran a complication of emotions, not the least of which was honest bewilderment. People laughed, so it must be funny. And it was good to be known as an artist of worth, even if the effects of your art were unintended.

It was no shock to him to learn now that the mechanical appliance in his screen mother's kitchen was a still, that the grape juice the honest country boy purveyed to the rich New Yorker had been improved in rank defiance of a constitutional amendment. Even during the filming of the piece he had suspected that the little sister, so engagingly played by the present Mrs. Gill, was being too bold. With slight surprise, therefore, as the drama unfolded, he saw that she had in the most brazen manner invited the attentions of the city villains.

She had, in truth, been only too eager to be lured to the great city with all its pitfalls, and had bidden the old home farewell in her simple country way while each of the villains in turn had awaited her in his motor car. What Merton had not been privileged to watch were the later developments of this villainy. For just beyond the little hamlet at a lonely spot in the road each of the motor cars had been stopped by a cross-eyed gentleman looking much like the clerk in the hotel, save that he was profusely bewhiskered and bore side arms in a menacing fashion.

Declaring that no scoundrel could take his little daughter from him, he deprived the villains of their valuables, so that for a time at least they should not bring other unsuspecting girls to grief. As a further precaution he compelled them to abandon their motor cars, in which he drove off with the rescued daughter. He was later seen to sell the cars at a wayside garage, and after dividing the spoils with his daughter to hail a suburban trolley, upon which they both returned to the home nest, where the little girl would again languish at the gate, a prey to any designing city man who might pass.

She seemed so defenseless in her wild-rose beauty, her longing for pretty clothes and city ways, and yet so capably protected by this opportune father who appeared to foresee the moment of her flights.

He learned without a tremor that among the triumphs of his inventive genius had been a machine for making ten-dollar bills, at which the New York capitalist had exclaimed that the state rights for Iowa alone would bring one hundred thousand dollars. Ever more remunerative, it would seem, had been his other patent—the folding boomerang. The manager of the largest boomerang factory in Australia stood ready to purchase this device for ten million dollars.

And there was a final view of the little home after prosperity had come to its inmates, so long threatened with ruin. A sign over the door read, "Ye Olde Fashioned Gifte Shoppe," and under it, flaunted to the wayside, was the severely simple trade device of a high boot.

These things he now knew were to be expected among the deft infamies of Buckeye comedy. But the present piece held in store for him a complication that, despite his already rich experience of Buckeye methods, caused him distressing periods of heat and cold while he watched its incredible unfolding.

Early in the piece, indeed, he had begun to suspect in the luring of his little sister a grotesque parallel to the bold advances made him by the New York society girl. He at once feared some such interpretation when he saw himself coy and embarrassed before her downright attack, and he grew certain this was intended when he beheld himself embraced by this reckless young woman who behaved in the manner of many screen idols during the last dozen feet of the last reel. But how could he have suspected the lengths to which a perverted spirit of satire would lead the Buckeye director?

For now he staggered through the blinding snow, a bundle clasped to his breast. He fell half fainting at the door of the little home. He groped for the knob and staggered in to kneel at his mother's feet. And she sternly repulsed him, a finger pointing to the still-open door.

Unbelievably the screen now made him say: "He wears no ring! Back to the snow with 'em both! Throw 'em Way Down East!"

And Baird had said the bundle would contain one of his patents!

Mrs. Gill had watched this scene with tense absorption. When the mother's iron heart had relented she turned to her husband:

"You dear thing, that was a beautiful piece of work! You're set now. That cinches your future. Only, dearest, never, never let it show on your face that you think it's funny! That's all *you'll* ever have to be afraid of in your work."

"I won't," he said stoutly.

He shivered—or did he shudder?—and quickly reached to take her hand. It was a simple and direct movement, yet somehow it richly had a quality of wistful pleading.

"Mother understands," she whispered. "Only remember, you mustn't seem to think it's funny."

"I won't," he said again. But in his tortured heart he stubbornly cried, "I don't, I don't!"

Some six months later that representative magazine, Silver Screenings, emblazoned upon its front cover a promise that in the succeeding number would appear a profusely illustrated interview by Augusta Blivens with that rising young screen star Merton Gill.

The promise was kept. The interview wandered amid photographic reproductions of the luxurious Hollywood bungalow, set among palms and climbing roses; the actor and his wife in their high-powered roadster—Mrs. Gill at the wheel; the actor in his costume of chaps and sombrero, rolling a cigarette; the actor in evening dress; the actor in his famous scene of the Christmas Eve return in Brewing Trouble; the actor regaining his feet in his equally famous scene of the malignant spurs; the actor and his young wife on the lawn before the bungalow, and the young wife, aproned, in her kitchen, earnestly busy with spoon and mixing bowl.

"It is perhaps not generally known," wrote Miss Blivens, "that the honor of having discovered this latest luminary in the stellar firmament should be credited to Director Howard Henshaw of the Victor forces. Indeed, I had not known this myself, until the day I casually mentioned the Gills in his presence. I lingered on a set of Island Love, at present being filmed by this master of the unspoken drama, having but a moment since left that dainty little reigning queen of the celluloid dynasty, Muriel Mercer. Seated with her in the tiny bijou boudoir of her bungalow dressing room on the great Holden lot, its walls lined with the works of her favorite authors—for one never finds this soulful little girl far from the books that have developed her mentally, as the art of the screen has developed her emotionally—she had referred me to the director when I sought further details of her forthcoming great production, an idyl of island romance and adventure. And presently when I had secured from him the information I needed concerning this unique little drama of the great South Seas, I chanced to mention my approaching encounter with the young star of the Buckeye forces, an encounter to which I looked forward with some dismay.

A FASHION HINT FOR WOMEN

BY Natalie Norris

WHAT suitor or husband has not paced in despair up and down the library, choleric under the proddings of his collar, while his lady fair preened before her mirror? Even in the Elizabethan days, it is written, the knight was in his doublet and hose long before his lady appeared ready for the ball.

But procrastination is the prerogative of woman. She knows what she is about. It takes time to make an invulnerable toilette.

Yet, while there is probably no item of feminine apparel which comes in for as close scrutiny as stockings, there are still, otherwise faultlessly dressed women who give apparently little thought to the selection of their hosiery.

Women who would never think of passing a mirror without adjusting a hat, tucking a straying lock in place or administering a few deft pats with friend powder-puff, trip serenely down the street with stocking seams running woefully askew.

And what is more unsightly than a crooked seam?

Will some women never learn they can be forever rid of this dire misfortune by buying Burson Hose?

Burson stockings, as you are probably aware, are fashioned in the knitting so that they conform perfectly to the graceful contour of the leg and ankle, and they have no seams to twist and pull awry.

Years ago, before the wonderful Burson looms were invented, stocking manufacturers hit upon the idea of putting seams in stockings to make a poorly shaped article fit a little better. Even today, some ordinary seamless stockings, with just as many needles to the ankle as the leg, are made to imitate real fashioned hose by sewing a mock seam up the back. It is difficult to detect this until after the stockings are laundered, when they lose their pressed-in shape.

To avoid the risk of getting stockings which are not permanently shaped you should buy Burson, because the fashioning or shaping is plainly visible.

Burson stockings are fashioned perfectly on the loom. They have no ungainly seams to annoy the eye or torture the feet.

Once you have worn Burson I am sure you will agree with me that they are not only more stylish but that they are extremely comfortable.

No other pencil can be like Eversharp

A master idea strikes the world, and a habit changes; the wasteful whittling of wood and lead gives way to EVERSHARP. Evidence of this is in the hands of millions.

The craftsmanship that gave the world this better way to write keeps Eversharp supremely efficient. No other pencil can be like Eversharp.

Definite evidence of superiority is in the balanced weight of Eversharp; in the exquisite precision of its simple, wear-proof parts; in the exclusive tip that keeps the lead from slipping; in the wide range of styles and beautiful finishes in gold, silver and enamel; priced from 65c to $65.

To match Eversharp in efficiency and design is Wahl Pen, with the all-metal barrel that holds more ink. Dealers everywhere sell these perfect writing companions.

THE WAHL COMPANY, CHICAGO

EVERSHARP

(Continued from Page 114)

'Mr. Henshaw, pausing in his task of ecting certain changes in an interior of island hut, reassured me. 'You need e no fear about your meeting with Gill,' said. 'You will find him quite simple and affected, an artist and yet sanely human.' was now that he revealed his own part the launching of this young star. 'I ncy it is not generally known,' he conued, 'that to me should go the honor of ving discovered Gill. It is a fact, how-er.

"'He appeared as an extra one morning the cabaret scene we used in Miss ercer's tremendous hit, the Blight of oadway. Instantly, as you may supse, I was struck by the extraordinary stinction of his face and bearing. In that owd composed of average extra people he ood out to my eye as one made for big ings. After only a moment's chat with m I gave him a seat at the edge of the ncing floor and used him most effectively portraying the basic idea of this proundly stirring drama in which Miss lercer was to achieve one of her brightest iumphs.

"'Watch that play to-day; you will iscover young Gill in many of the closeps where, under my direction, he brought it the psychological, the symbolic—if I ay use the term—values of the great idea nderlying our story. Even in these bits e revealed the fine artistry which he has ince demonstrated more broadly under nother director.

"'To my lasting regret the piece was hen too far along to give him a more imortant part, though I intended to offer im something good in our next play for Muriel Mercer—you may recall her gorgeous success in Her Father's Wife—but I was never able to find the chap again. I made inquiries, of course, and felt a really personal sense of loss when I could get no trace of him. I knew then, as well as I know now, that he was destined for eminence in our world of painted shadows. You may imagine my chagrin later when I learned that another director was to reap the rewards of a discovery all my own.'

"And so," continued Miss Blivens, "it was with the Henshaw words still in my ears that I first came into the presence of Merton Gill, feeling that he would—as he at once finely did—put me at my ease. Simple, unaffected, modest, he is one whom success has not spoiled. Both on the set where I presently found him—playing the part of a titled roué in the new Buckeye comedy, to be called, one hears, Nearly Sweethearts or Something—and later in the luxurious but homelike nest which the young star has provided for his bride of a few months—she was Flips Montague, one recalls, daughter of a long line of theatrical folk dating back to days of the merely spoken drama—he proved to be finely unspoiled and surprisingly unlike the killingly droll mime of the Buckeye constellation. Indeed, one cannot but be struck at once by the deep vein of seriousness underlying the comedian's surface drollery. His sense of humor must be tremendous, and yet only in the briefest flashes of his whimsical manner can one divine it.

"'Let us talk only of my work,' he begged me. 'Only that can interest my public.' And so, very seriously, we talked of his work.

"'Have you ever thought of playing serious parts?' I asked.

"He debated a moment, his face rigidly set, inscrutable to my glance. Then he relaxed into one of those whimsically appealing smiles that somehow are acutely eloquent of pathos. 'Serious parts—with this low-comedy face of mine!' he responded. And my query had been answered. Yet he went on, 'No, I shall never play Hamlet. I can give a good imitation of a bad actor, but doubtless I should give a very bad imitation of a good one.'

"'Et voilà, *messieurs!*' I remarked to myself. The man with a few simple strokes of the brush had limned me his portrait. And I was struck again with that pathetic appeal in face and voice as he spoke so confidingly. After all, is not pure pathos the hallmark of great comedy? We laugh, but more poignantly because our hearts are tugged at. And here was a master of the note pathetic.

"Who that has roared over the Gill struggle with the dreadful spurs was not even at the climax of his merriment sympathetically aware of his earnest persistence, the pained sincerity of his repeated strivings, the genuine anguish distorting his face as he senses the everlasting futility of his efforts? Who that rocked with laughter at the fox-trot lesson in Object Alimony could be impervious to the facial agony above those incompetent, disobedient, heedless feet?

"Here was honest endeavor, an almost prayerful determination, again and again thwarted by feet that recked not of rhythm or even of bare mechanical accuracy. Those feet, so apparently aimless, so little under control, were perhaps the most mirthful feet that ever scored failure in the dance. But the face, conscious of their clumsiness, was a mask of fine tragedy.

"Such is the combination, it seems to me, that has produced the artistry now so generally applauded, an artistry that perhaps achieved its full flowering in that powerful bit toward the close of Brewing Trouble—the return of the erring son with his agony of appeal so markedly portrayed that for the moment one almost forgot the wildly absurd burlesque of which it formed the joyous yet truly emotional apex. I spoke of this.

"'True burlesque is, after all, the highest criticism, don't you think?' he asked me. 'Doesn't it make demands which only a sophisticated audience can meet? Isn't it rather highbrow criticism?' And I saw that he had thought deeply about his art.

"'It is because of this,' he went on, 'that we must resort to so much of the merely slap-stick stuff in our comedies. For, after all, our picture audience, twenty million people a day—surely one can make no great demands upon their intelligence.' He considered a moment, seemingly lost in memories of his work. 'I dare say,' he concluded, 'there are not twenty million people of taste and real intelligence in the whole world.'

"Yet it must not be thought that this young man would play the cynic. He is superbly the optimist, though now again he struck a note of almost whimsical pessimism. 'Of course our art is in its infancy.' He waited for my nod of agreement, then dryly added, 'We must, I think, consider it the Peter Pan of the arts. And I dare say you recall the outstanding biological freakishness of Peter.' But a smile—that slow, almost puzzled smile of his—accompanied the words.

"'You might,' he told me at parting, 'call me the tragic comedian.' And again I saw that this actor is set apart from the run of his brethren by an almost uncanny gift for introspection. He has ruthlessly analyzed himself. He knows, as he put it, 'what God meant him to be!' Was here, perchance, a hint of poor Cyrano?

"I left after some brief reference to his devoted young wife, who, in studio or home, is never far from his side.

"'It is true that I have struggled and sacrificed to give the public something better and finer,' he told me then; 'but I owe my real success all to her.' He took the young wife's hand in both his own and very simply, unaffectedly, raised it to his cheek, where he held it a moment, with that dreamy, remembering light in his eyes.

"'I think that's all,' he said at last. But on the instant of my going he checked me once more. 'No, it isn't, either.' He brightened. 'I want you to tell your readers that this little woman is more than my wife—she is my best pal, and I may also add, my severest critic.'"

(THE END)

A MAN OF PRINCIPLE

(Continued from Page 20)

reached the first vast hallway of the main cell, where the cell-lined corridors receded to left and right, rising over them in gallery after gallery like some cliff dwelling in hell. Bare stone and scoured iron joined themselves in that harsh architecture where the very light was dim and timid like a prisoned thing.

Mr. Ducane, new as yet to prisons, looked about him with intelligent interest. The chaplain ranged beside him.

"Smell it?" he asked. "It couldn't be cleaner or more sanitary; and yet—do you smell it? Clean air should taste queer after twelve years of that smell, don't you think?"

BERLOY SYMBOL OF PROGRESS

STEEL PRODUCTS—the pride of veterans in the craft—exemplify the character, experience and service of lives devoted to constructive progress and excellence

A Proof of Value

The most valuable asset that any business can possess is to have its name regarded as the assurance of a value which needs no further proof. On steel products, the Berloy symbol is so held by many users.

Upon retaining this confidence by keeping each Berloy Product the best of its kind, we concentrate all our years of experience, our vast facilities and our daily efforts.

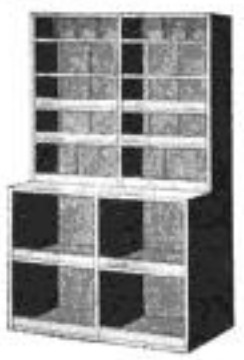
Our products are serving such concerns as: Standard Oil Company, The Hoover Suction Sweeper Company, American Locomotive Company.

Kindly address nearest branch for catalogs.

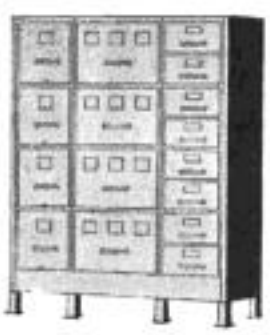
The Berger Manufacturing Company
Canton, Ohio

Branch Warehouses: Boston, Philadelphia, St. Louis, Minneapolis, Los Angeles, New York, Chicago, Kansas City, San Francisco, Dallas, Roanoke, Jacksonville

Berloy Products: Roofing, Spouting, Reinforcing Plates, Floor Cores, Metal Shingles, Foundry Flasks, Culverts, and—



Steel Wardrobe Lockers
Simple to erect, move or reassemble without loss of parts. Fire-resistive. All styles and sizes



Ribplex Metal Lath
Prevents cracks, stops fire. Flattened strands firmly grip plaster, stucco or concrete

Metal Lumber
Joists and studs of pressed steel, cut to fit. Unburnable. Strong, light, everlasting

Steel Bins, Shelving
For economical stock storage. Save space. Adjustable. Do not depreciate

Steel Filing Cabinets
Rigidly built, moderately priced. Horizontal and vertical sections, and Transfer Units

Metal Ceilings
Permanent. Can't burn, crack or fall. Designs of simple beauty; clear detail

Berloy Products are fabricated either from anti-corrosive Toncan Metal or Open Hearth Steel made under Berloy control by the United Alloy Steel Corporation, of Canton, Ohio

The most particular hostess can take great pride in the beauty and simplicity of Wm·Rogers & Son Silverplate.

For this silverplate, even though it is so reasonably priced, is made to lend beauty and charm to the table, and to give unusually long wear. In fact, it carries an unlimited wear guarantee.

La France Pattern, $11.75 per half doz.

"THE BEST AT THE PRICE"

Wm·Rogers & Son Silverplate

Made and guaranteed by Wm. Rogers Mfg. Co., Meriden, Conn. Successor to INTERNATIONAL SILVER CO.

Also made in Canada by Wm. Rogers Mfg. Co., Limited, Niagara Falls, Ont.

Mr. Ducane sniffed obligingly. It was not a stench—scarce even a taint; rather it was a staleness, a stagnancy, as though air and light and stone and iron and souls and bodies had all been overused and refused the repose of decay.

"Very characteristic!" he commented.

The governor left the pair of them together for some moments in the bare and ugly room that was his office.

"The pardon takes effect to-morrow, of course?" asked the chaplain.

"Yes," said Mr. Ducane. "It's customary, I believe, twenty-four hours in which, as it were, to adjust the man for the change. One could hardly lead him forthwith to the gate and thrust him out."

"You think not?" said the chaplain. "Still, we find it possible to lead a man to the gate and thrust him in, with no adjustment at all. Hacker, for instance, has never adjusted himself. Why should he?"

"Eh?"

"Why should an innocent man adjust himself to prison conditions? He was a thief and a rogue, you say; but isn't there a kind of stubborn honesty about his refusal to submit tamely to injustice? I think there is. I have hopes for Hacker at last."

The governor returned. "They're bringing him along," he said. "Better sit down, Ducane. I'm sending him to the infirmary for the night."

A tread of heavy measured feet sounded on the flagstone without.

"Come in!" ordered the governor.

Two warders entered and saluted. Between them, grotesque as a clown in his prison dress by contrast with their neat uniforms, came the man who was to receive the King's pardon for the crime he had not committed.

Mr. Ducane looked at him curiously. He was not entirely without imagination, and here was a man about to be raised from the dead, whom fate, in mere freakishness, had dignified with agony and wrong.

"This gentleman," said the governor to the convict, "is from the Home Secretary. He has some news for you. Listen to him!"

The man's eyes came dully round and rested in mere obedience upon Mr. Ducane.

"Well, Hacker," began that gentleman, "I have to tell you that some new facts have come to light in your case."

He coughed; he had a notion that it behooved him to break the news, and he was uncertain how to proceed.

"I never done it!" said the convict huskily, and the chaplain stirred slightly in his seat.

"No," said Mr. Ducane. "But the jury—a jury of your peers—thought you did. We know now that they were wrong. There was a terrible mistake, and I am here to put it right."

The convict continued to look at him.

"You have had a hard time," went on Mr. Ducane; "but it is finished now. Smee has turned up, alive and well, and to-morrow you will be set free."

Hacker frowned faintly as though in an effort of thought.

"'E owes me twelve pounds," he said finally.

Mr. Ducane smiled. "I don't think you will be able to get that," he said kindly.

Like one who looks at a darkened house and sees a light within carried swiftly past a blank window, so he saw a sudden momentary shine of more than mere life in the man's eyes. "Won't I?" said Hacker.

"But the government owes you something," said Mr. Ducane. "When you get to London you must call at Scotland Yard and they will tell you what to do." He looked at the governor. "I think that is all," he suggested.

The governor nodded. "Take him to the infirmary," he ordered curtly.

The warders laid hands upon him and drew him away.

"Well," said the governor, and sighed. "There's your innocent martyr, Mr. Ducane. Pity I can't show you the warder blinded in one eye, nor the other one half crippled by a kick in the groin. Mr. Hacker's work, you know. Endearing little traits he's got, hasn't he, padre?"

"I think so, certainly," answered the chaplain without smiling. "I shudder to think of myself in his place—innocent like him, but without his fierce courage and endurance! I should have submitted, have set the seal of my acquiescence on a frightful, soul-destroying injustice. But he—he'd go to the stake or the rack sooner; he'd die or do murder for the right in as far as he sees it and knows it. Perhaps some day a Salvationist will capture him and convert him; then you'll see the apostle of slums!"

The governor laughed without m and rose from his desk. "I wish you'd Jack the Ripper," he said. "I'm sure y have loved him. Come on; let's get taste of all this out of our mouths."

"I like the taste," said the chapl "I'm going to the infirmary to get s more of it. Good afternoon, Mr. Ducan

He found Hacker seated on a bed, w his shoes off and the doctor standing be him. The latter turned his round, che face upon the new arrival.

"Come in, padre!" he called. "I'm speedin' the partin' guest. A cigarette a drink is what I was suggesting. To-morr this time," he said to Hacker, "you'll in London. Got any friends there?"

"There'll be Smee, sir," Hacker s "Owes me twelve pounds, 'e does!"

"Good!" said the doctor cheerily, departed to fetch the doped drink.

The government was never called u for the payment of the six hundred pou which it had decided to grant to Will Hacker in compensation for his death s tence, his twelve years of penal servitu his two floggings, his innumerable les penalties, his gruesome labor and his a ing sense of wrong. Hacker had decid that the twenty pounds which the gover had been authorized to advance to h on leaving was a better recompense th the hundreds to be gained by showing hi self at Scotland Yard. He vanished, the fore, into the jungles of London, to waterside wilderness, to the labyrinthi fastnesses where the Orient battens on t vices of the Occident.

And, of course, with twenty pounds his pocket he found friends. It was in co pany with one of these that he first countered Smee.

The bar of the public house where t meeting took place was a reeking jam shabby humanity under its flaring, sque ing gas jets. Hacker—he was calling hi self by the useful name of Smith for t time being—leaned with his friend at vantage point at the end of the bar a drank and looked about him at leisu The friend, known to his friends as You Izzy, was a lean person of about thirty; was doing the honors of the neighborho to the less sophisticated Smith.

He mentioned celebrities in the cro before the bar—a bookmaker, a sporti barge skipper, and the like.

"An' 'im over there—that fat 'un wit the soft 'at! Got money, 'e 'as. Went o on the quiet to foreign parts, and a fell was 'ung for murderin' of 'im."

Young Izzy laughed in a way he ha with lips barely parted and a sound lik an indrawn hiss.

"Tell yer somethin' about 'im!" he sai "Just before he disappears, me an' m brother—yer know my brother Mo——

He went on with his tale, but Hacker wa not listening. He was looking over hi companion's head at the man who ha been pointed out to him. Fatter than o old, burned with South African suns, wear ing the clothes and smoking the cigar o prosperity—it was Smee! Smee, who owe him twelve pounds.

The voice of Young Izzy beat upon hi ears; that man about town was approach ing the climax of his narrative.

"——and there 'e was, sittin' in the road goin' through his pockets an' screechin' 'e'd bin robbed. An' there was us, other sid the street, laughin' at 'im. Twelve quid we 'ad orf 'im—twelve golden sovereigns wrapped up in a bit o' paper. An' w'at do you think o' that?"

Hacker stared at him, slowly comprehending.

"You downed 'im and robbed 'im of twelve pounds?" he asked. He seemed incredulous, and Young Izzy laughed again.

"Smee, his name is!" said Hacker. "He was my mate! An' me thinkin'——" He broke off and Young Izzy stepped back aghast from his furious face. "That was my money, ye thievin' swine—an' I'm goin' to 'ave it! Get out o' this; I'll find yer w'en I'm ready!"

Young Izzy went—backwards and in haste. As the door swung behind him Hacker crushed his way through the throng to where Smee stood, all unconscious of his approach.

"Hullo, 'Arry!" greeted Hacker. "Don't you know me—Bill 'Acker?" He proffered a hearty hand. "'Member the last time we met?"

GOOD HEATING—at lowest cost

A MANUFACTURER who produces in large quantities can sell at a *lower price*. You know that is true because of what you have seen in the automobile industry. It is equally true of furnaces.

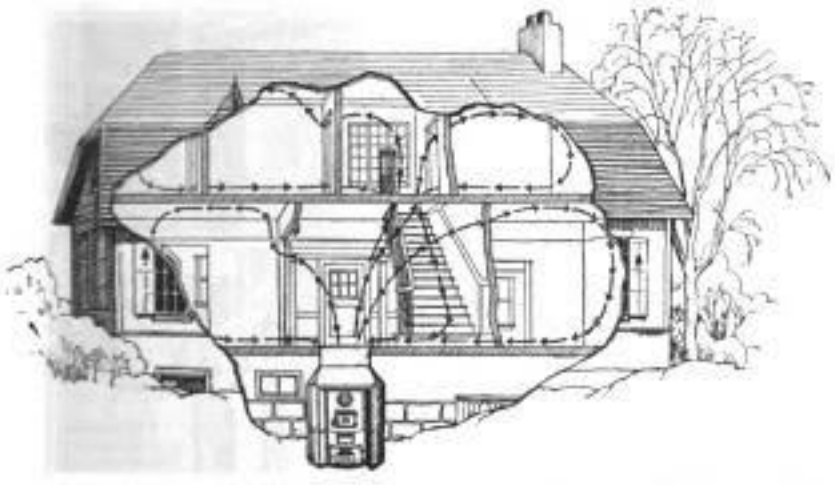
The Sunbeam Pipeless Furnace is made by one of the oldest and largest makers in the country. Never before has it been possible to buy a modern heating furnace at such a small cost.

Takes but little room and does not overheat the cellar

It is guaranteed to be made only of the finest materials. It can be installed within a day. It burns any kind of fuel with remarkable economy. No feature has been omitted which will give greater efficiency, longer life, or a higher degree of fuel-saving. In short, the Sunbeam is designed to give the utmost satisfaction to every user.

The Sunbeam Pipeless Furnace is made in many sizes. It is suitable for homes, stores or churches; in fact, it is ideal for small buildings of every nature.

There are dealers in every section of the United States who sell Sunbeam Pipeless as well as Sunbeam Pipe Furnaces.



The "Sunbeam Book" explains why the Sunbeam Pipeless Furnace can heat your home evenly and thoroughly for so little money. A copy will be sent to you, together with the name of your local Sunbeam dealer, if you will just mail the coupon.

Can be installed without muss or dirt in one day's time

SUNBEAM

PIPE *and* PIPELESS FURNACES

Users say this pipeless furnace "Warms like the Sun"

THE Sunbeam Pipeless Furnace is simplicity itself. Only one register is needed to heat the entire house. As everyone knows, warm air rises and cold air falls. The arrows indicate how nature sets up a constant, even circulation of warm, moist air as soon as the Sunbeam furnace is started.

The register is divided into two parts; through its center, warm air rises, spreading rapidly to every part of the house, and, at the same time, drawing cold air from the house down through the outer part of the register. You get good ventilation as well as ample heat.

As long as there is no obligation, why not tear off and mail this coupon right now?

THE FOX FURNACE CO., P-2
Elyria, Ohio

Gentlemen:
Without obligating me in any way, I would like to learn more about heating my home, and the "Sunbeam" Furnace. Also, please mail me a copy of your "SUNBEAM BOOK."

BIG GAME

(Continued from Page 19)

'Here we are. Listen now, Nita, you ve everything to me."

The way he said that made her nervous. strained forward, looking ahead. The i turned into one of those bleak, expen- e streets, drew up before a stone house of der windows and carvings over a wide ck door. Why, this wasn't a hotel!

"Wait here for me."

Hal sprang out, rang the bell. She sat ing up at the shapely façade.

The door opened a crack. A little man ed suspiciously around the edge. Hal's ulders moved in self-assured advance. e door opened wider on a vestibule. She Hal and the little man in animated k, outlined against white steps. Hal k out his wallet, showed something that ked like a card, put back his wallet, slid hand in his pocket, appeared to be shak- g hands with the little man.

Now he turned, blocking the doorway. is eyes seemed to march forward and give r orders.

"Isn't it a bore, Nita? Monsieur Raton ver got the Putnams' telegram. Must ve gone astray. Beastly service, isn't it?"

Monsieur Raton? A telegram? The utnams? Her face twisted into some kind idiotic expression.

"Dear me! Really!"

Hal gave her no time. "Well, now we're ere we'd better spend the night, anyway. What say, Nita?"

She said nothing.

"*Ma femme est fatiguée. Ce voyage de Londres est mauvais.*" Hal turned to the ittle man, who flapped his shoulders and ands and stared sharply at the trunks in he second taxi.

So she had come from London, had she? Oh, why hadn't she insisted that Hal tell her what it was all about. He was at the taxi door, helping her out. He leaned close, his face secret, familiar.

"It's all right. I'll explain later. Come on, Nita."

There seemed really nothing else to do. The Raton person bowed from the thresh- old—a mean little man with eyes like arithmetic, adding up. Hal, at her elbow, steered her along.

She was in a large hall. The chauffeurs, humped under the trunks, brushed past, wheeled up a circular staircase of white marble, Monsieur Raton, spidery, leading the way. A neat fat woman of pinkish sur- faces bulged, gaping from a doorway. Hal spoke to her in a loud, assured voice. This was Madame Raton, no doubt? His friends, the Putnams, had so often spoken of her.

What were they doing here, and who were these Putnams? The name sounded vaguely familiar. Hal drew her into a room of soft shadows. Damask portières closed behind them. He snapped on a light. What a beautiful room! She clutched his arm, staring about at the creamy tints, the damask, the tapestries, the old gilded chairs and mirrors in which she saw re- flected a little woman in black with very red lips, a tall blurry-faced man.

She whispered, "Whose house is this?"

"Ours for the present. Be back in a moment." He nodded and grinned, left her there.

Of course it was fantastic. A host or hostess would presently appear with nipped gestures of annoyance at being so intruded upon by unwelcome guests. She tiptoed over the soundless Aubusson carpet, watching the door while she fingered curios, old leather-bound books. On a little marquetry table stood the photo- graph of a young woman in a silver frame. Where had she seen that face before? A grand piano nosed forward from a corner of the room like a sleek animal waiting to be stroked. She longed to touch the keys.

"Your room's ready, Nita."

Hal's jovial voice startled her. He stood in the door, smiling at her. She followed him through the hall, up the stairs, into a pink-and-white room of rosewood and laces. There was a chaise longue heaped with embroidered cushions, a bed, canopied and festooned. The trunks showed up big and black against the light carpet.

"Hal, what does this mean?" She de- manded an answer from under light, flat- tened brows.

A finger to his lips, he tiptoed to the door, arched himself over the keyhole. Evi- dently no one there. Good. He turned with an engaging air of candor.

"Phew! I don't mind telling you, old dear, that I wasn't sure we'd get it. Lucky I happened to have Putnam's card and that hundred francs handy."

Oh, dear, she might have known that something was wrong. Her head felt hot. In that steam-heated room torpor gained on her. Hal was looking at her brightly as if he expected her to pat him on the back and say "Clever boy!"

She took off her velvet toque, which pressed on her hot head, ran her fingers through moist, clinging hair. Well, now that he had got in, as he put it, she wanted to know how they were going to get out.

"Better tell me everything, Hal. Who are these Putnams? What about that telegram that never arrived? I can't understand why you have to do these things." She looked at him with hard, bitter eyes. "Really, Hal, if you've got us into another mess I'll never forgive you."

She would always forgive him. He knew it.

"The Putnams? You remember them, Nita," he began in a chatty voice. But he wasn't so confident as he had been down- stairs. "Here, old girl, you look tired. Do lie down." He fussed about her, led her to the chaise longue, propped cushions be- hind her back.

She wasn't going to be put off like that, though. "I'm waiting to hear, Hal."

"Well, now don't you remember that night we had supper at the Eléphant Rouge? The Putnams sat next to us. Nice chap, Putnam. He and I had a long talk."

Those people! The woman in the silver frame was Mrs. Putnam, of course. But they didn't know the Putnams. Hal had picked the man up that night.

"Why, Hal, we only saw them once. They were leaving for London or India or somewhere the next day."

"Pre-cisely." He dropped a thick lid over an eye, jiggled from heel to toe with a little seesaw motion. He acted as if with extraordinary intelligence she had guessed a riddle. But she wasn't going to help him out, so he had to continue. "They were leaving for London. You see you do re- member, my dear. And then they're going off to India for a bit—big-game hunting. Putnam wanted to rent his house. Told me all about it. You weren't listening."

"You don't mean to tell me that we're renting this house from the Putnams?" Her voice rose shrill, worried. She slid for- ward to the edge of the chaise longue, her feet touching the floor.

"Well, you might say it amounts to that." He fished for his cigarette case, lighted a cigarette.

"Amounts to what? For heaven's sake, Hal, don't throw matches on this carpet." Oh, he was exasperating! "Do the Put- nams know we're taking their house?"

She had him there. Of course they didn't know. Mrs. Putnam would never rent her house to strangers. She remembered now the supper as through a mist of lights and music. A gay place, the Eléphant Rouge. Major Brassington-Welsh in a jovial vein, thrusting cigars, champagne, anecdotes on a new acquaintance. The Putnam woman hadn't liked it. Her cool ennui had been wafted like a thin draft from a distant source over her too sociable husband's blond head, reaching Hal, who hadn't felt it, reaching Nita, who had.

She taxed him again. "Hal, they don't know?"

How could they know when they were in London, he blustered. But he meant to write Putnam, of course. Make it all right with him. A matter of business. If she would only listen——

"I'm listening. Hal, please don't throw ashes on the floor here. This isn't a hotel."

He went through an elaborate show of putting out his cigarette in a crystal re- ceiver beside the bed. Now, then, he could explain the whole affair quite simply.

When he was explaining anything he always walked up and down as if he were on the deck of a ship that rolled a bit. It needed all his attention to keep his balance. She watched him.

"It was like this," he said. "Billings was thinking of opening a Paris branch— Biscuits Billings. Good idea, wasn't it? Have to find the right man, though, to direct the thing. What about Major Brassington-Welsh? Just the man for it!" He stood a moment beaming upon her, twirling his mustache.

Ditto Saves This Firm 58% On Every 100 Copies

From headquarters in Pittsburgh, the United Engineering and Foundry Company directs the production of seven busy plants.

More than 5,000 material bills must be pre- pared each year and from 10 to 25 copies of each bill are necessary. A slight error may cost thousands of dollars.

Nine printed forms are used.

With the old-fashioned carbon paper method the cost was $4.36 per 100 copies. Errors were frequent.

Three years ago they put Ditto on the job.

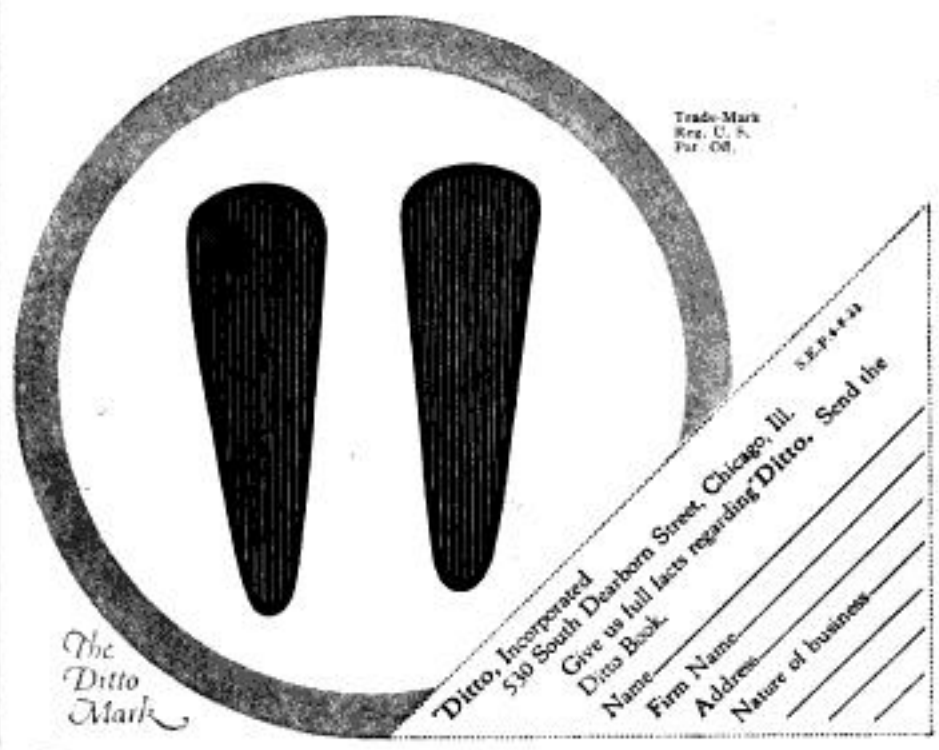
Since then Ditto has saved $2.51, or 58%, on every 100 copies.

They say "Ditto has proved itself accurate, swift and economical."

Wherever Copies are Needed Ditto Will Cut Expenses

In every office or shop, factory or mill, wherever swift, accurate duplicating work is needed, Ditto can effect big savings.

Ditto is a simple, efficient machine that provides in a few minutes up to one hundred copies of anything that can be typed, written or drawn. Ditto copies are exact reproductions of all or any desired part of the original, without any rewriting. Ditto handles closely ruled forms neatly and legibly. Colors can be used; draw- ings, graphs and such data are copied without trouble.



Ditto has no type to set, no carbon paper to pack, no sten- cil to cut. Any bright girl or boy can operate it. Thou- sands of progressive organizations, large and small, throughout the world are saving with Ditto. What Ditto is doing for these firms, Ditto can do for you.

Pin the coupon to your letterhead and send today for the Ditto Book. It suggests many of the countless ways Ditto is making money for others.

"Oh, Hal, has he said anything to you?" She had always hoped for something like this. Why, if it were true it would be the most wonderful ——

He patted her on the shoulder. Well, nothing was settled. Nothing ever could have been settled if they had stayed in that beastly hole of a hotel. What Billings wanted of course was a man with a solid background, a man with a clever little woman who could entertain. Billings knew the value of social prestige; no fool, Billings. He would expect ——

"But, Hal, we don't know anyone to entertain. And this house—we have no right here."

"Now, Nita, we got in, didn't we? I tell you I'll fix it up with Putnam. Once I'm appointed director of an office here, you and I will have the finest little position ever."

Suppose he were telling the truth? Suppose he could pay the Putnams later? Why shouldn't he? Oh, how she wanted to believe! She wished he wouldn't look sideways down his nose as if he were peeking at her from around a corner. Impress Billings—that wasn't a bad idea.

"But, Hal, if Billings doesn't give you that job? How could we ever make it right with the Putnams?"

"You leave that all to me." He looked so strong and sure of himself, as if everything were settled. The keys jingled as he bent over the trunks.

Give Hal his chance. It wouldn't do any harm to stay on here for a little while. Imagine waking up in this lovely room after that horrid little hotel; after all the hotels!

"Hal, don't unpack our old things. The Ratons will think ——"

"Think what, my dear girl?" But he knew what she meant. "Any objections to my taking out my dinner jacket? Madame Raton is fixing us up a bite here."

"Let me, Hal. You're mussing everything." Yes, they had better dress. She would wear her black satin. The sequin gown was too showy. Take a warm bath first in that beautiful white bathroom. What was Hal doing now? "For goodness' sake, don't take out that awful dressing gown! You can't wear that here."

He stood in his shirt sleeves, his hair rumpled. "What d'you want me to wear then to-morrow for breakfast?"

"Oh, I don't know. Your mauve pajamas are all right. Lock the trunks again."

She fluttered to the closet, hung up her black serge, her sequin gown. The hangers were padded and smelt of sachet. There were dozens of them.

"Nita, where's the whisky?" Hal shouted from the bathroom.

"You're not going to drink that horrid stuff now?"

"Just a snack. I've got a glass here. Must have caught a bit of chill driving up."

Get him his beastly bottle. "You can't leave it out, Hal. Hide it in the clothes hamper. Do rinse the glass."

"Oh, hell, Nita, what's the matter with you!" Grumblings and rumblings from the bathroom.

The black satin did very well. Just the note for a quiet evening. The chiffon in the neck needed changing. She must get some to-morrow. You never got tired of black satin.

"Nita, what say if we get the Billingses up here after dinner?" Hal stood admiring himself in the mirror.

She didn't want the Billingses to-night.

She and Hal sat alone in the large tapestried dining room. The round table was like a glassy pool in which rose-colored lights were softly reflected. A simple dinner indeed! Pheasant, endive salad, Brie cheese and a tart. Chablis that gleamed topaz in their glasses. Her smile lifted her face into radiance. She moved her shoulders and wrists daintily, talked in a low polite voice, careful of what she said. Raton might understand English.

Raton nearly spoiled everything. His little eyes added up and added up as he padded about the table. He was like a small sly animal, sniffing things out. She wished he wouldn't apologize so much. He apologized because monsieur and madame had put their silver away. He apologized for the dinner. Madame Raton presented her excuses. It was true that in her time she had been cook in very great houses.

It wouldn't do to be too enthusiastic. Hal overdid it, she thought. She must warn him not to be too familiar with this Raton person. Smile upon him with a shade of condescension. Yes, everything was quite delicious. Of course it was a picnic!

Back in the salon among those [illegible] things. Hal smoked his cigar; she lit cigarette.

"You look ripping to-night, old girl."

She drifted to the piano. She had played for years. Hal lounged over to h side. She tilted her head to smile at hi Good old Hal! Her fingers moved shy touching the keys. Try simple melodi A false note, never mind. Hal's ear w not critical. He nodded, and hummed o of tune.

Strange how she felt, sad with a kind yearning, and yet happy with Hal anchor there beside her. He and she hadn't be like this for a long time. Why couldn't always be like this?

"I say, trot us out something a gayer, Nita."

One of those jazz tunes, he meant. S tried. Jangled a syncopated chord, b somehow it didn't go here. She was gro ing sentimental. She thought of h mother, of the days when she used *to ta* her piano lessons. How she hated to stud She had looked differently then—a live giddy girl, never listening to anyone.

Hal was good to her. He was good to he

III

HAL was bringing Billings back th afternoon. She waited for them in t salon. If it hadn't been for the *Ratons*, a Putnam ghosts in the air—very snipp ghosts, at that—she might have spent pleasant day alone in the house. She ha sent Hal off because she wanted to be alon But from the moment she left her room t Ratons sneaked after her. If she went u stairs one of them managed to be there; she went downstairs she bumped *into t* other one. It was either Madame Rato wheezing from a scramble up the bac stairs, pretending to straighten rugs *in th* wide gallery overlooking the hall, or it w Monsieur Raton pottering about the dinin room. You would have thought they e pected her to steal something; to pick th locks of the cellar and linen closet or t secrete in the simple folds of her blouse an skirt any of the small rare ornaments tha might happen to take her fancy.

Their busy innocent manner didn't de ceive her. "Did madame ring?" "Woul madame like any help unpacking he trunks?"

"No, no, thank you. Quite all right thank you."

Madame Raton had a pulpous cater pillar smile that seemed to crawl awa when she thought you weren't looking. Fo a fat woman she moved with a treacherou speed, silent as a Japanese. Monsieu Raton's shoes squeaked.

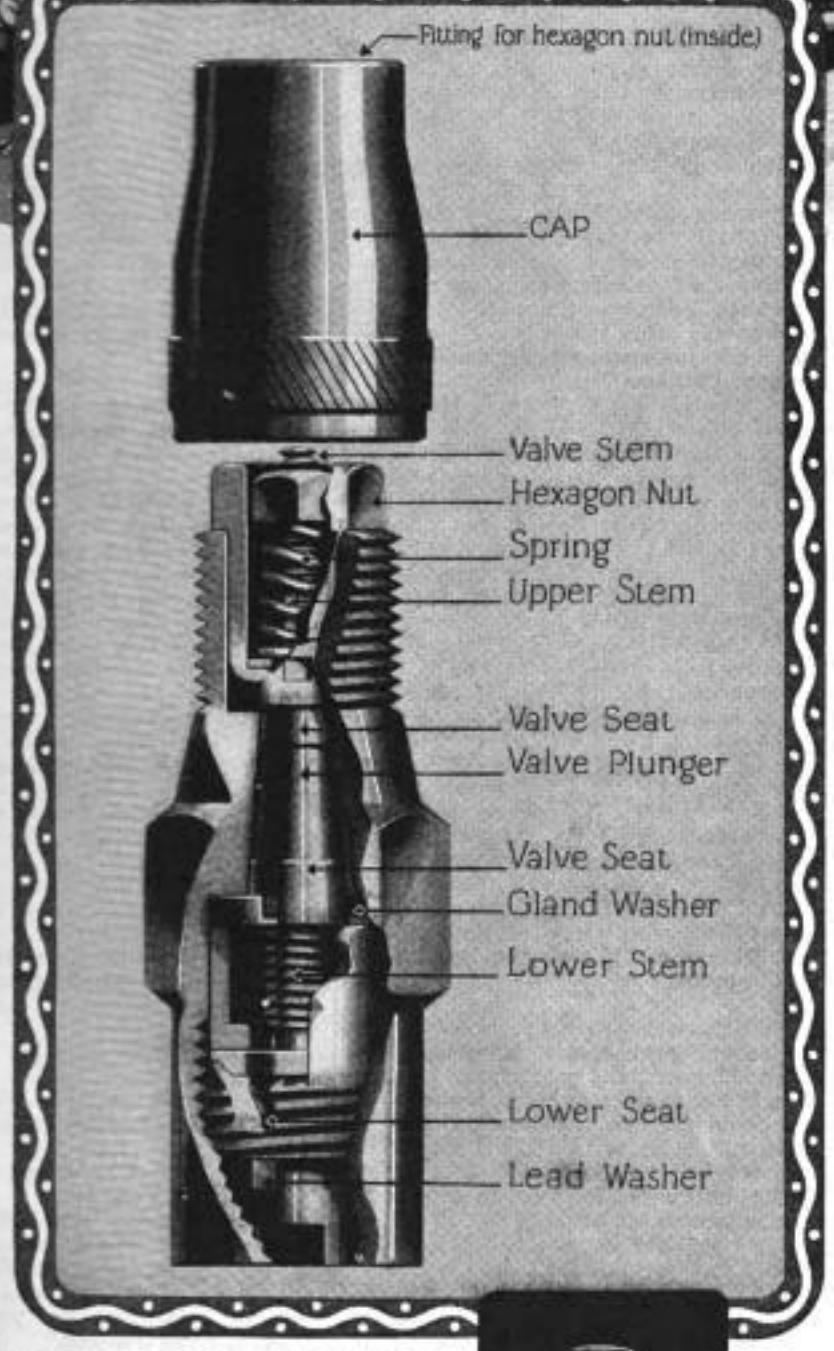
If this was the way they took care of th house, no wonder there was dust every where. She knew how a house should b kept up. There were handsome houses in Stamford. Mrs. Lucas', for instance, with all that old colonial stuff in it; and her own mother's house, which wasn't so grand but which shone bright and speckless.

Those Ratons caught her dusting with her handkerchief the old *réfectoire* table in the hall. They didn't like it, of course. Monsieur Raton venomously apologized. "If we had known that monsieur and madame were coming we should have had the house in order. It is regrettable that the telegram from Monsieur Putnam did not arrive."

Oh, yes, the telegram! Better speak softly and smile. "We are very comfortable, thank you."

Now she had shut herself in the salon. But she couldn't close out the Putnams. She felt them everywhere—in the subdued arrangement of rich objects, in polished surfaces, in damask and high gilded ceilings. She moved the photograph of Mrs. Putnam to a darker corner. Hateful, those slender-necked anæmic women! She could imagine Mrs. Putnam in a teagown receiving guests. Well, she didn't have a teagown, and anyway Billings never took tea. Should she change into the black satin and pretend an early dinner? Those Ratons were prowling around outside. Stay as she was rather than bump into them again.

If only Hal had settled things with Billings! A decent job was the solution. She must manage somehow. Billings admired her; those large, white-faced men had more red blood in them.



That was the doorbell. She heard Hal's voice, round and hearty. She hurried forward.

Hal hadn't settled anything, except probably bills for several rounds of drinks

(Continued on Page 124)

For years car owners have wanted a valve lock to solve their tire inflation troubles. The Trex Air Valve Lock positively locks the air in the tire, stops leaking, and maintains perfect inflation. Outlasts several sets of tires; nothing to take care of.

On the right is the guaranteed Trex Lock, actual size. Below: Trex Lock, attached to the tire. Eliminates all troubles of re-pumping, rim-cutting and premature blowouts.

The Greatest Invention Since the Cord Tire

To replace the ordinary rubber-seated air valve on your tire, this remarkable new invention has been perfected, which positively locks the air in the tire. You have to pump your tires only once.

EACH season has brought its outstanding contributions to the perfection of the motor car.

You have seen the great improvements inaugurated one by one, gradually solving the problems of comfortable transportation: the multiple-cylinder motor, the magneto, the electric light, the self-starter, the cord tire.

Yet through all these years under-inflation has caused untold damage to tires, bringing them to an untimely end, in spite of the intention of the car owner to keep his tires at normal pressure.

Now for the first time the motorist can *lock* the air in his tires—pump them only once, stop all leaking, and maintain perfect inflation. He eliminates all the troubles of re-pumping, rim-cutting and premature blowouts.

This costs only $1.00 for each tire, and in many experiments it has added 2,000 miles to the life of the tire. You'll never buy 2,000 miles cheaper in any tire.

Endorsed Under Hard Usage

Road tests as well as laboratory tests have proved that the Trex Air Valve Lock positively seals the air. The Quaker City Cab Company, of Philadelphia, one of the best known taxi services in the country, writes: "We took our air pressure each day in each tire for each car, and found that with the Trex Air Valve Lock the pressure is always the same."

Only recently the leading tire manufacturers removed all mileage guarantees, because of the damage caused by under-inflation. Therefore, now more than ever before, it is up to the motorist himself to *lock* the air in his tires, get the increased mileage and protect himself from loss.

The Trex Air Valve Lock has no rubber parts which rot or deteriorate. It is all metal, and designed to double-lock the air passage. Made with all the mechanical precision of a time-fuse, to outlast the life of the car itself.

Eliminates Nuisance of Re-pumping

The Trex Air Valve Lock will reduce your tire bill, save you valuable time and the nuisance of re-pumping. Fits any tire and can be transferred from one tire to another, the same as a dust cap—but is its own dust cap. Attach it yourself in three minutes. Endorsed by leading taxicab services, tire engineers and car owners everywhere. Carried by the leading established jobbers and dealers in all parts of the country. You can readily recognize our attractive orange and black display boxes, each holding five Locks, suitable for the four tires and spare tire on one motor car. Sold singly, if you desire. Get a set for your car today.

Ask your own garage man, or write to us. Absolutely guaranteed against defective workmanship or materials, as are all Trex Products.

For forty-two years I have been building Emerson Shoes with the sole idea of making the best shoe that money, experience and brains could devise—a shoe that will always bring the wearer back for another pair.

But I owe a still further duty to the million friends of mine who are wearing Emerson Shoes today.

No man or woman should be asked to pay more than a fair price for my shoes.

So I brand my name and a fair and square retail price on the sole of every Emerson Shoe during the process of manufacture.

I guarantee Emerson values to you no matter where you live or in what store you buy Emerson Shoes. I brand the price at the factory based on the actual cost of material and labor.

Visit the local Emerson Store or dealer and see our wide variety of Smart Styles for Spring and Summer. If you do not find one in your neighborhood write for our catalog of Value Guaranteed Shoes.

Look for the Emerson Shoe with the fair price branded on the sole.

Chas O Emerson

For Men and Women

$5.00 $6.00 $7.00 $8.00

Junior Emersons for Boys

$5.00 and $6.00

Shoes made with genuine Vici kid linings; arch supports; cushion soles and other orthopedic and custom details.

$9.00 and $10.00

The Emerson Shoe
HONEST ALL THROUGH

ROCKLAND, MASS.

(Continued from Page 122)

One look at him was enough. Not a care in the world. He brought with him the warm, pungent atmosphere of cafés, the generous ease of good fellows.

Billings gripped her hand. She toned her own greeting to the room. Mrs. Billings was well, she hoped? So glad he'd come. He was their first visitor. What did he think of their new quarters?

"It's great. Beats any hotel I've ever been in."

He had a trick of half closing his eyes. His voice drifted. His large white face took on a deceptively dreamy expression. He looked at her. She wished she had put on the black satin.

"That's what I've been telling him all day. Finest house in Paris," Hal boisterously put in. "Nothing like it. Your own home. The best little woman in the world waiting for you. Nothing too fine for her. You'll have to admit that, old man." A bit throaty, the way he said that.

Billings admitted that nothing was too fine for her. As if on springs his eyes opened wide, intensely alive, intensely blue.

Her lips could take on a lovely, an alluring curve. Not in the morning, of course, but in this light. She smiled with a tilting motion of head, a loosening of the little clutching lines around her eyes. "Well, if we're to stay in Paris it's nicer to have a house." Very neatly hinted, she thought.

"Better come to the States, major, and bring the missis." Billings strolled about, his hands in his pockets, bending to squint at an ornament. The room seemed to make him restless. He sank finally into a tapestried armchair.

"Take a house here. That's the way to know a country." Hal thrust out his chest, straddling a flowered design on the rug. "Meet the right people. Entertain, and all that sort of thing. England's the place, though. If we were all in England now you'd be staying with us in Brassington Hall. Finest old ——"

She got near enough to him to lay a hand on his arm. Pretty picture. Little green-eyed woman smiling up at her big, good-natured husband. Her finger tips dug in, pinched.

"Ouch, Nita! What the devil ——"

"Poor old dear, your neuritis again?" He knew perfectly well what she meant. He and his Brassington Hall! Some day someone would accept one of these vague invitations. Then what?

"Hal, perhaps Mr. Billings would like a highball?"

"Certainly, certainly. Good idea." With a promising air of hospitality he bustled out.

Billings, deep in the cushioned chair, was staring at her feet. Well, she wasn't ashamed of them, especially in these patent-leather slippers. But if she were Mrs. Billings she wouldn't trust a man with an eye like that. The way he looked at women in restaurants! His idea of Paris, probably. Better be a little careful. Bright, but not too coquettish.

"Hal's like a child with a new toy," she said indulgently. "So full of enthusiasm. He's that way about everything. Don't you think enthusiasm is valuable in business, Mr. Billings?"

"Sure." He looked at her curiously, swung a leg over his knee.

She had to go on now. She sat down near him, not too near, spoke in an intimate confiding manner. "D'you know, I'm very ambitious for Hal." She shouldn't sound too eager. "You big men aren't the only ones who want power." Say that lightly with a little laugh. "Give Hal a chance to make good and ——"

"Hasn't he made good?" Quite another Billings, this. Blue eyes boring through her.

That was a mistake. "Of course," hastily. "But you know how it is. Hal's had so many offers since the war. He wants to find just the right thing, something with a future. He'd like to be here in Paris for a while, anyway."

"Don't blame him." Billings, suddenly genial, lifted himself with one of his brisk movements from his chair; strolled toward her. "You're a wonderful little saleswoman," he said.

Now what did he mean by that?

"Look here, Mr. Billings, I'm not ——"

"That's all right. Everyone sells things, don't they?"

She didn't like his tone. Keep her hands still in her lap, keep her feet still. Wished her cheeks didn't feel so hot.

"Sells or buys—at bargain prices," she retorted.

How he laughed, the insolent creature! But he stopped short, smooth as a high-powered machine. "I'm always ready to look over a bargain," said he.

"Perhaps you don't know, Mr. Billings. We took this house because Hal tells me that you ——"

"Here we are! Here we are!" Hal had to blunder in, followed by Raton, who peered inquisitively at Billings from between the necks of bottles on a tray he carried. He set the tray down, sidled out.

Ice clinked in tall glasses. Hal the jovial host presided over the tray.

"A wee nippie, old girl?"

"No, thank you. Hal, I was just saying to Mr. Billings that you'd be the very person to manage ——"

"Look out! Sorry!" Hal tipped over a bottle, caught it in time.

He'd tipped that bottle on purpose. His voice boomed on and on, filling the room. Very amusing, no doubt, those old stories of his. Billings laughed. The smell of whisky and cigar smoke coarsened the air.

For some reason Hal didn't want her to interfere. You never knew with Hal what he wanted. But this time she wouldn't stand any nonsense. Suddenly she hated their voices, hated their faces, hated the way they lounged around smoking and drinking.

"Nita, wake up, old thing." Hal stood ruddily over her. "Billings suggests that we make a night of it. Stop at his hotel for Mrs. B. We'll dine at the Eléphant Rouge."

"I'm a little tired." She meant him to see that she wasn't pleased.

"Come on, Mrs. Welsh," Billings urged.

She hated to be called Mrs. Welsh. "Really, I ——"

"Be a sport, Nita." They stood on each side of her, tall men, red and white.

She wasn't going to be left alone all evening. "Oh, all right. I'll have to dress, though."

"Good girl." Hal, very expansive, patted her on the back. "Like to see the house, Billings, while we're waiting for Nita?"

She'd wear her sequin gown. Didn't matter if the men weren't in dress clothes. Mrs. Billings would look dowdy of course. All the better.

IV

WAS there ever such a nuisance! In the sequin gown and a large black hat which shadowed the gold of her hair and brought out evening lights in her eyes, she had deliberately keyed herself up to the occasion. In spite of Hal's irresponsible behavior she meant that very night to coax Billings into promising that he would open a Paris branch for his biscuits.

Now here she was, waiting for Mrs. Billings in the drearily rich atmosphere of the Billingses' private salon, from whose windows she could gaze, for distraction, on the handsome proportions of the Place Vendôme. The two men had gone on, as they said, to order dinner. They had gone on, in reality, to escape waiting for anyone who was not in their festive mood. Mrs. Billings hadn't liked being fetched to make a night of it. Billings hadn't liked her not liking it, and had told her so in the curt tones of a man accustomed to command.

Anita couldn't help, in her own invested brightness, serving as a contrast to the bleached manner of Billings' wife. Hardly tactful of him, though, to point out Mrs. Brassington-Welsh as an example of liveliness to be followed. She wasn't so sure that Mrs. Billings couldn't have answered back, precipitating the domestic crisis that had hung for a moment, unexploded, in the air. But Mrs. Billings had only looked at her husband with those quiet brown eyes of hers, and said she would go.

She had been dressing now for over half an hour. Heavens, what chances that woman wasted! All those clothes and nothing fit to wear; all those jewels and she never wore them.

Wonder what she could be doing in there! No harm in tiptoeing to the door and listening. There came a faint sound that she recognized. She knocked gently, opened the door.

Mrs. Billings lay on the bed, face downwards, a limp slender figure in a plain corset cover and starched petticoat. There were clothes on the floor, clothes on chairs; the contents of boxes and closets littered about; a jewel case open on the dressing table. Mrs. Billings was crying. Strange to see another woman cry. Should she tiptoe away again? Billings' fault, this. Brutes men were.

Mrs. Billings lifted her head. She m
hate to be seen like this.

"I have a headache. I don't thin
can ——" She flopped back on the

Of course it wasn't any of her busi

business relations. But you see, I can't
I haven't the training."

It needed, indeed, quite a lot of trainin
to keep up with Billings.

"Why do you let him absorb you?" Sh
sounded a little impatient.

Eight o'clock, and those men waiting a
the Eléphant Rouge. She was hungry
Billings would be furious.

"I don't know whether you can under
stand, Mrs. Welsh. You're so sure of your
self socially, so gay and brilliant. My
husband thinks you're the cleverest woma
he ever met."

She could smile at that. A glance in th
mirror showed her a large black hat unde
which the smile gleamed like a red stitch
If she were clever she would be attending t
her dinner and business at the Eléphant
Rouge this moment.

Mrs. Billings moved nervously to and
fro, came toward her to clasp her hand.

"I feel I need a friend. I —— Oh, Mrs
Welsh, what shall I do? I haven't told you
everything. He leaves me alone so much
of the time. I just sit here and wonder
where he is, and when he comes back he's
irritable and critical. I don't know what
to do."

"Suppose you dress." She was begin-
ning to like Mrs. Billings.

"I look a fright in everything I put on."

"You have no right to look a fright."
Do her good to shake her up a bit. "If you
want to please your husband ——"

"I see that." Mrs. Billings was crying
softly again. "It's this life here. He never
used to care for such things."

"Don't you believe it. They always do
when they get a chance. You're a very
lucky woman, Mrs. Billings. You don't"

A Mighty 2 ton thrust- 30 times a second

Just one thing saves the crank-shaft bearing surfaces from being ground to pieces or fused by the friction of this brutal pressure —a film of lubricating oil no thicker than this sheet of paper.

Your engine turns over. An electrical contact. A spark! The piston plunges downward with a mighty thrust on the bearing—a thrust caused by a two-ton pressure on a piston of average diameter. And this takes place 30 times a second every second your four cylinder car is rolling along at 25 miles an hour.

A thin film of oil must hold those plunging surfaces apart even after the oil has endured the deadly heat generated by the explosion in the combustion chambers—heat as high as 1000 degrees at the piston head, and 300–400 degrees on the cylinder and piston walls. Only an oil that maintains its lubricating value under the ravages of intense engine heat can provide a proper cushion for the bearing surfaces.

Why Veedol Resists Heat and Friction

Veedol is especially manufactured to resist deadly heat and friction. Veedol is a Pennsylvania base oil and is refined *more* than other oils by the Faulkner process. This exclusive Veedol process gives that *extra* heat resisting quality so necessary to the perfect lubrication of your car.

Veedol in your engine insures proper piston seal and full power; longer life for the oil and for your engine; protection for all moving surfaces and for your investment in your car.

There are five Veedol Oils, each different in body, but all of one quality. Go to your dealer. Consult the Veedol Chart on his wall. Select the Veedol Oil designated for your car. Use this oil and no other.

Let us send you a copy of our booklet, "101 Facts," for the car owner who believes that the best oil he can buy is the most economical.

There are Veedol Greases and Trans-Gear Oil for your differential, transmission, cups and springs.

TIDE WATER OIL SALES CORPORATION, 11 Broadway, New York

Branches, Warehouses, Distributors and Dealers throughout the world

Resist deadly heat and friction

VEEDOL

Motor Oils and Greases

VEEDOL LUBRICANTS RESIST HEAT

Stop at the dealer who displays the Veedol sign. There consult the Veedol Chart for the right oil for your car.

You can always be sure of having *genuine* Veedol by purchasing your season's supply in a 15, 30 or 55 gallon steel drum, or a 5 gallon sealed can. Insist upon Veedol!

rs. Billings hovered over her, flushed, ed. "Shan't I ring for my maid? I you to bother."

o bother at all. If Mrs. Billings only s what familiar work it was—ripping, sting, fixing over. Well, she never ght that she'd be doing anything like for another woman. She stood up, ed away loose threads that clung to the ins.

Now, then, sit down and I'll do your ."

How can I ever thank you?"

ine spun brown hair that slipped like er through one's fingers. Have it red to-morrow. For to-night draw it k from that low, rather good brow, k it over the ears, snuggle it tight in the k. Her fingers moved swiftly. A large toise-shell comb—the very thing! Now der, rouge for the lips.

'Do you think my husband will like me make up this way?"

'Rather nice women rouge their lips, a know."

"Oh, I didn't mean ——"

She might be a splendid secretary, but as woman of fashion she was in her infancy. re, now, the dress. It draped itself ound the slim figure. Jewels. What els that woman had!

"My pearls are in the safe downstairs." Oh, she was beginning to be interested, s she! "Never mind. These will do." ould say they would do! Fascinating g sapphire earrings, a sapphire brooch, pphire rings.

"There you are."

A long mirror gave back a tall young man in supple red velvet; red lips ted, silky brown hair folded in a casque und a small head. The young woman iled.

The telephone. Mrs. Billings, before the rror, paid no attention to it. Of course it s Hal.

"That you, Nita? What the devil is the tter? Why don't you and Mrs. B. come ng?"

"We're coming, Hal." There, now, in her rry she tore her sleeve. No time to mend ything either. She saw herself in the mir- r next to Mrs. Billings. Perhaps if she ted her hat a bit it would be smarter. ange hats, after all, made one dumpy. Not hen you were sitting at table, though.

"Shall I wear a hat?" Mrs. Billings was lling out more boxes.

"No, go as you are." She felt tired and ungry. Perhaps she had better take a ditch in that sleeve. Quick then.

"This sealskin is all right, isn't it?" Mrs. Billings held up a magnificent fur.

"All right? Oh, yes. Rather." There were limits to what one woman could be expected to do for another.

"I never can tell you how grateful I am. You look tired, Mrs. Welsh. It's my fault, keeping you from your dinner."

"Tired? I'm never tired."

She leaned back in the limousine that carried them smoothly through street after street, all lighted and gay. Shops, cafés, people moving briskly. She wished she were going home to bed.

The Eléphant Rouge. Hal's and Billings' expressions when they saw Mrs. Billings, who, a little self-conscious, made her way to the table where the two men stood.

No chance of getting anything out of Billings this night. He sat there, his face turned toward his wife like a powerful limelight in which she glowed with increasing animation. Hal, in a magnificent mood, rumbled out compliments. He had never seen Mrs. Billings look so well. That gown she had on was simply ripping.

"Nita, my dear, we'll have to get you something like it. Red's the color—eh, Billings? I always tell Nita ——"

"While you're about it you can buy me sapphires and a sealskin coat," she said sweetly. That held him quiet. Oh, well, better enjoy herself. Billings was paying this time for the dinner. Another glass of Pommery? Yes, thank you. The *poulet en cocotte* was delicious. Her lips curled, uncurled, curled again.

A little over a week ago she and Hal had been sitting at the small table opposite, where now sat a fleshy old satyr gobbling his food. He thought she was staring at him, and leered with piggish eyes. A painted young woman, in black velvet with huge pearls in her ears, and a pale young man sat sipping liqueurs at the table the Putnams had had that eventful night. Same background; same red elephant balloons floating in the thickening air; same excited faces, bored faces, hands holding glasses, cups, cigarettes. A fox-trot; couples seesawing.

Strange how life went. If Hal hadn't picked up Putnam that night, where would they be now? Back in the soiled pink room of the little hotel. Where would they be to-morrow? If Billings didn't ——

Mrs. Billings smiled tenderly at her. Not a bad sort, Mrs. Billings, after all.

Hal was bragging. She knew that tone. Better look after him. His loosened tongue wagged like a bell. "Remember when we were here last, Nita? The Putnams ——"

"The Putnams!" from Mr. and Mrs. Billings. "The Gerald Putnams?"

Oh, if she could only reach Hal's foot! Make him look at her. What did he have to go and drag in the Putnams for! Change the subject quickly.

"Hal, dear, do you remember the last time we heard that Blues they're playing? Makes me want to dance. Is there anything more fascinating than these new jazz tunes?" Fingers on the table, tapping the rhythm. Mrs. Brassington-Welsh, suddenly very gay; green eyes greener, light brows lifted.

"Eh? The Blues? Yes—oh, yes!" Hal looked as if she had waked him up in the middle of the night.

"Putnam used to be in the canning business," Billings pursued. "Great friend of ours, wasn't he, Mary? Someone told us he was in Paris. I'd like to see him again."

Hal had to blunder on. "Gone to India after big game. Nice chap. Don't care much for his wife."

"I wish we could have seen him," Mrs. Billings said in a lively voice. She kept tasting the red on her lips like a child eating candy. "He used to come into the office all the time. He and I got on famously. You never knew, Bert, but he tried to get me away from you when his secretary left him to marry."

That was what half a glass of champagne did to her! Billings didn't like it. You could see he was annoyed, the way he thrust out that jaw of his.

Hal grew fussy, purplish about the cheeks; accepted a cigar, lit it, and on an artificial gust of good cheer launched on one of his oldest stories.

Coffee. Liqueurs. A drop of cognac would do her good. No use to worry. But if Billings ever heard now that the house belonged to Putnam he would think it queer.

She didn't like it; didn't like it one little bit. She felt as if someone had slid a small chunk of ice down her back.

They were going on to a musical revue, then to supper. Mrs. Billings nestled up to her in the motor.

"Oh, I'm having such a good time, and it's all your doing, Mrs. Welsh. Will you come shopping with me to-morrow? You'll tell me what to get, won't you?"

Yes, she would go shopping. Yes, it was fun, wasn't it? She adored these parties. No, Hal didn't dance. His game leg, you know.

Would the evening never end? It was positively indecent the way Billings flirted with his wife. Wish the Putnam name hadn't come up. You never knew what might happen. What a rotten evening!

V

THE Billingses were coming to dinner. Hal never should have invited them to the house, with the Ratons in such a poisonous temper and everything going wrong.

It was all very well to have brought Billings and his wife together. You couldn't wedge them apart since he had seen his wife in that red velvet gown. The money he spent on her, and the money she let him spend! Shopping every day. Gowns, lingerie, hats. And the coiffeurs, manicures, masseuses, swarming about. You wouldn't know Mrs. Billings. But you could see how, when once she made up her mind to a thing, she could carry it through. Yes, she was certainly efficient, and really quite a decent sort. No end grateful too. Insisted on giving dear Nita—it was Nita now—a few rather lovely presents. With the background of the house and all, accepting these things didn't imply humiliation. That lace morning cap, for instance, matched the lace and rosebuds in the bedroom, and the fur-lined slippers went with her quilted blue wrapper. Of course the black lace teagown from Lucille's and the hat from Madeleine Viannet were a bit too much. But it wasn't as if she were taking commissions from dressmakers and modistes for showing Mrs. Billings around. She might have just as well. She didn't.

Hal had been in a vile temper all week, stalking about with that mottled bloodshot look he got when he was worried. She couldn't help it if he were worried. It was his own fault. She told him so. He hadn't written Putnam. At least he wouldn't say he had, and he wouldn't confess he hadn't. And, as for being director of any Paris branch, it was another of those beautiful dreams of his. Probably Billings had said, "Some day I may open a Paris branch. Think Billings Biscuits would go here, major?" And Hal had seen it all done. If he would only leave it to her, she might, through Mrs. Billings, work something out. No hope of reaching Billings direct any more.

Meanwhile the Ratons had drained Hal dry. She knew, because while he was taking his bath she had examined the contents of his wallet. Lean as a fasting priest, it was. And only yesterday he had had a beastly scene with Raton, ending very unwisely in Hal's calling Raton a blinking, bloodsucking rat. Which was true enough, but hardly helpful. Nor was it pleasant for her when Hal, after cursing Raton in French and English with a little Arabic thrown in, had stayed out with Billings the entire day, coming back to announce this dinner for the following evening, in so cheerful a mood that she had felt more worried than ever. What made him so suddenly cheerful? He seemed to think it a huge joke when she told him that she had seen Raton sneaking out of the corner post office late yesterday afternoon. What was he doing there, she would like to know.

"Don't you bother your head, old girl," Hal had said.

But she was bothering. Here was the dinner. Hal had hired a man to wait on the table; had ordered flowers, wine, heaven knew what. Madame Raton's caterpillar smile crawled over the preparations, spoiling the roses in their vases, the damask table cover, the crystal and silver which Hal had somehow wheedled out of the closets. Just showing that the Ratons must have had the keys all the time. She distrusted their eagerness to please. She distrusted Raton's smile, which was like butter smeared over a very sharp knife.

Well, she looked her best that evening, slowly sweeping down the stairs in the black lace teagown, her hair waved and coiled high in the new fashion Mrs. Billings' coiffeur had taught her. Hal came down, brushed and scrubbed, smelling of eau de cologne. He did know how to wear evening clothes.

The bell. Ridiculous to feel so nervous.

Mrs. Billings' manner seemed a little strained. Wonder what was the matter with her. Billings and Hal whispered in a

GARLAND

To automatically hold the Garland oven at a predetermined temperature, simply set the Garland Oven Heat Regulator. On the control dial are indicated the proper cooking temperatures for various foods. The additional cost is small, and it takes up no extra room.

This new Gas Range illustrated at the right is finished in beautiful clean enamel. It is also made in plain finish, both larger or smaller to accommodate every size kitchen.

This Garland Combination Range is designed for the small family kitchen. You change it into an exclusive gas or coal range, by simply pulling a lever. It has four gas burners and two holes for coal. Other models can be had in different sizes in full enamel or plain finish.

The reasons why Garland Ranges are used in more than 4,000,000 homes throughout America are strong and definite.

Garland, and Garland alone, controls the right to use, and does use, certain principles of design, which enable it to cook and bake much better, with less fuel.

These same exclusive Garland features, make Garland Ranges the choice of 80 per cent of our hotels and restaurants and are constantly making new friends for Garland everywhere in America today.

If you do not know the name of the nearest Garland dealer, or if you have any heating or cooking problems, write direct to us because there is a Garland heating and cooking device for every purpose.

It was a relief when dinner was ...ced. If she had money, how she ...love to entertain always this way. ...here in black lace, presiding over ...d silver and napery; smiling at ..., smiling at Hal, who sat solid and ...opposite; smiling at Mrs. Billings, ...ade an effort to be gay.

...hey rose from table to saunter across ...ll to the salon Mrs. Billings clasped ...rm and whispered, "I don't know ...I shall do without you."

...ithout me? Are you going away?" ...as so startled that she raised her ...She didn't want Mrs. Billings to go

...s a shame. I really think you ...be ——" Mrs. Billings began.

...ngs came up with the genial air of a ...no has dined well. "Mary, dear, the ...wants to show you those miniatures ...telling you about."

...Billings hesitated a moment, but ...led to her from the salon. She went. ...gs glanced down, smiling, his eyes ...osed. Even the pearls in his glossy ...looked dreamy, contented. "You ...ly gave us one great little dinner," ...d.

...you going away?"

...oked it abruptly, and let her eyes ...full and green at him under the hang-...hanster lamp of the hall.

...seemed hugely amused, laughed. ...es not."

...en what did Mary mean?"

...butler came heavily out with coffee ...queurs. Hal came out with a box of ...Billings turned briskly as if re-...at the interruption.

...upstairs a moment. Her nose felt ...her nerves were on edge. How quiet ...om was! Turn on the light. She ...like to stay here away from them all. ...what had Mary Billings meant? ...they were going away or Hal hadn't ...er.

...knock on the door. It was Raton. ...lled in, peering about, his mean little ...twisted with malice.

...monsieur here?"

...only had to look at him. He'd been ...ing. He knew perfectly well that Hal ...downstairs.

"Monsieur is not here." Her tone dis-...ed him.

...t he nosed farther into the room, ...y and sly.

"The maître d'hotel wants his money ...re he goes. It's three hundred francs."

"Three hundred francs!

"It's impossible!" she said sharply; ...ght herself up. Better be careful; avoid ...ne.

...e straddled in front of her, his thin ...legs like hairpins, his beady eyes ...ing up.

"Three hundred francs," he repeated, ...edged closer, his voice all oily and ...oth: "*...aut mieux être raisonnable, ma ...ite dame. On peut toujours s'arranger.*"

...Better give him the money. She didn't ...e it.

"You will have to speak to my hus-...d." She turned away; didn't want to ...k at him.

...e whirred behind her like an angry ...ct. "Ah, *c'est comme ça!* But it shall ...pass like this. I know what I know." ...only the blood didn't rush so to her ...eks! She tried to answer quietly: ...ou know nothing. I shall tell my hus-...d of this, and to-morrow ——"

"To-morrow!" He fairly danced in ...t of her, his voice thin and shrill, rising. ...nd I who have risked losing my place. ...morrow it will be too late. I have ——" ...stopped abruptly.

...The creature had played them some ...ien trick. Yesterday—the post office. ...she had warned Hal! And now per-...ps it was too late. She must find out.

..."Monsieur Raton, calm yourself. If we ...e you any ——"

...He went again, higher, shriller. "My ...e was right. You have not even three ...ndred francs. *Voulez-vous que je vous ...e, madame? Eh, bien.*" He thrust his ...an little face close to hers. "You are ...thing, in spite of your fine trunks and ...ir airs. You do not belong here. You ...e no ——"

"May I come in, Nita?"

...Mrs. Billings stood there in the door, ...king at Raton as if he were a spot at her ...et. It took a tall woman in a gold dress ...d pearls to look that way.

...Raton fidgeted, muttered, and sneaked ...ward the door.

Had she better explain? No, never explain. But how much had Mary Billings heard? She must say something.

"All French servants are alike. They think they can rob you. They ——"

"He was drunk, wasn't he?" Mary Billings moved quietly to the dressing table.

There you were now! Suppose she had started explaining, getting all mixed up when it was so simple. Of course he was drunk. But she wished her fingers wouldn't tremble as she opened the dressing-table drawer, got out fresh cotton for her friend, took off the crystal lid of the powder box. Dear me, this would never do. Her face showed blotchy under the powder. Little lines set her eyes in quotation marks, and her lips sagged at the corners. Mary Billings, over her shoulder, was reflected, smooth and young. Not so young either. Possibly thirty. But when a woman has nothing to worry her ——

Embarrassing, this silence. Mary Billings broke it suddenly: "Nita, do you know that your husband has been called to London within a few days on a very important business matter, and that he expects you to spend the winter there with him?"

She found nothing to say. Nothing. Must have looked like an imbecile, staring.

"Well, I think you should know." Mrs. Billings came nearer, put a hand on her arm. "He asked us not to tell you, but I think it's all wrong the way men treat women—not telling them anything. He wanted to spare you, he said, until the last moment. But he knew yesterday and he came right to Bert about it. We were only too glad, of course, to take the house off his hands."

"Take this house? You're taking this house?"

Why, they couldn't take this house! Hal had no right to ——

"Yes, we're subletting it for the winter. Nita, you don't mind? If there's anything I can do I wish you'd tell me."

"No, there's nothing." Her voice was strained.

It was inconceivable that Hal should do this thing. He must have thought it up since yesterday, that business in London and all. How could he, how could he!

"I'm glad it's all right."

But Mrs. Billings as she moved toward the door didn't sound as if it were all right.

Call her back. No use. What could you tell her? Better let her and Billings get away, and then have it out with Hal. Oh, yes, she would have it out with Hal.

They had reached the head of the stairs. What was Raton doing there in the hall? The doors of the salon were closed. Wasn't that a taxi outside? Yes, it stopped, and Raton slid forward toward the vestibule.

"Wait a moment, Mary, please."

They were still on the top steps. Mary Billings turned.

A key scraping in the front door. She could see the hall, the vestibule. The front door opened.

Then Mary Billings, light on her feet, flew down.

"Mr. Putnam! Wherever did you ——"

Well, now they were in for it. Raton had telegraphed, of course. What could she do? Go upstairs? Hide? Go downstairs? Her knees would give way if she moved. She must get to Hal, must warn Hal. Creep a step down. She heard Putnam's voice, unfamiliar:

"Mary Billings! Where on earth? I thought ——"

Slip down the last steps. If only they didn't see her! Putnam stood, slender and blond in his dark traveling suit. That little beast of a Raton hovering in the background touched his arm. He looked up, recognized her.

The salon door opened noisily. Hal blew full tilt into the hall, a large cigar in his mouth.

There was nothing she could do now, nothing.

You really had to admire Hal. For a second he stood clamped to the floor. Then he braced himself with an upward heave of his shoulders and bore down, a bit too red and hearty.

"By Jove, if it isn't Putnam! Well, well, old chap, this is a surprise! Sent you a telegram yesterday. Just come in here a moment and I'll explain."

He took the blond young man by the elbow and tried to tow him into the dining room.

You could see that Putnam didn't know quite what to do. And then Billings

"And they said it wasn't good enough!"

¼ Actual Size

A salesman and an advertising man met in a Hartford hotel.

"I went down to Glastonbury this afternoon," said the salesman, "to show the J. B. Williams Company a sample of a certain oil that they use in their shaving soap. It was the best I carried. Very high grade. *Practically edible. And they said it wasn't good enough!* What do you know about that?"

"I know a lot," said the advertising man. "I know how finicky they are about the stuff they put into their soap. Good enough to eat. That's their motto."

"Not good enough" unless it's the best that can be gotten, whether it forms a large or a small part of the soap. That's the way Williams' Shaving Soap is made. That's the way it has been made for almost a century—only of the purest ingredients always.

Softens your beard? It does. It softens your beard quickly and thoroughly to the last hair; it stands up richly and thickly; it holds its moisture until the shave is done. But that's only part of it.

It livens your skin—makes it soft and flexible—leaves no drawn or leathery "feel"—prepares it to yield smoothly, gently, evenly, as the razor passes. There is no complexion soap like it for its perfect effect upon the skin.

If you are not one of the millions who already know Williams' Shaving Cream, try a few shaves with a

KNIT JACKET

"It's a Tom Wye"

There's a well-groomed look about a Tom Wye Knit Jacket that makes you want one.

It is well shaped and keeps its shape. Shoulder seam is reinforced to prevent sagging.

Buttonholes are strong, and pockets always hug closely.

Scotch heather or plain colors. At men's wear or sporting goods stores.

Look for the Tom Wye Label

TOM WYE, Incorporated
Winchendon, Mass.

appeared, hurried forward, exclaiming; almost shook Putnam's hand off. If Hal would only keep quiet! Any moment now Putnam might say something that would bring it all out, or Billings might.

But Hal had to go on talking about telegrams and letters. He talked louder than anyone until finally Putnam moved toward the dining room, with Hal prancing after him, inviting him to have a drink in his own house. Raton wanted to follow, didn't dare. It was worth while just to see his face as he sneaked away.

"Excuse us a moment, Bert," Putnam said.

She didn't like the sudden businesslike clip to his voice. He wasn't going to let Hal off. Oh, she must do something. Mary Billings—she could help. She was the only one.

"Mary, I must speak to you alone for a moment."

She really was splendid, the way she took her husband by the arm and led him into the salon. "Bert, dear, wait for us, will you?"

"But what the devil? What's going on?" Not easy to handle Billings.

The door closed on him, and Mary came back. Tell her the truth—or nearly the truth.

"Putnam didn't know we were here, Mary. Hal meant to write him. He didn't mean when he sublet the house to you—Putnam wanted to rent his house, you see. And Hal—I never knew until to-night that he—I thought we could pay."

"Let me understand. Putnam didn't know you were in his house?"

"No, he didn't. Hal thought your husband would give him a job if we had a decent background. And then we could have paid. But now he ——" The words were twisted and bitter. It wasn't so easy to explain. Through the dining-room door Hal's voice grew louder and louder, explaining.

"You poor dear!" Mary Billings' arms went around her. "I thought there was something wrong, upstairs. But I couldn't understand."

She didn't want to be pitied; mustn't cry.

"Hal really doesn't mean to ——" Everything she said made it worse.

Mary Billings spoke quickly: "I'm afraid Bert will be very angry. I'll try and manage him and Mr. Putnam. Go up and pack what you can. I'll send your husband to you. I'm afraid you'll have to get him out quietly. Good-by, Nita. I'm sorry."

She had lost her friend. Women like Mrs. Billings might pity, but they never could understand. Well, it couldn't be helped. Hurry up the stairs.

"Nita," Mary Billings called from below, "Bert lent your husband a little something yesterday. Keep it from me."

Oh, dear, Hal had borrowed again. No time to think of it now. Where was the valise? In the closet. Drag it out; pack what she could. Why didn't Hal come? Mary Billings' eyes—how sorry they had looked! And then she had turned away.

A cautious noise outside. Hal stepped into the room.

"Why did you mix the Billings woman up in this?" he said testily. "I could have fixed everything all right."

He couldn't have fixed anything. He had got the worst of it, she could see. The little veins were all swollen in his fa paced the room, cursing Putnam, Raton.

Couldn't get much in the valis suit, Hal's suit, handkerchiefs, a sh couldn't find anything. She ran to fumbling in closets and drawers.

"Nita, old girl, I'm damn sorry. ten for you." Hal put his big hand shoulders. She saw his face, flush poor old sorry face. "I swear to ——"

Yes, he meant to. No time now. There were tears in her eyes. O look at the room, at the chaise lon little rosewood desk, the soft lace-bed. Never to sleep there any mor

For the Lighter Jobs

The "Caterpillar's" field of usefulness is by no means limited to the lighter jobs. There is a "Caterpillar"* of size and capacity for every power need. On farm or ranch, in the mining, oil and lumber industries, for snow removal and other civic work—wherever power and endurance are at a premium, the "Caterpillar"* has no real competitor*

In the "Caterpillar"*T-35, Holt brings to industry and to agriculture a small compact tractor embodying the same dependable qualities found in the larger "Caterpillars."* Simple in design, economical in operation, light in weight, yet with enduring strength and generous power, it clearly reflects the years of Holt experience in every field of tractor service.

The T-35 fits in with the road making and road maintenance programs of every city, town, county, and township. Its range of speeds, short-turning, and ability to operate in any weather or soil, gives it definite and pronounced advantages over teams or other methods of road-dragging and patrol maintenance, in pulling graders, levelers, scrapers, and other road tools. For quickly and economically **handling the lighter jobs, road contractors, engineers, and industrial users find the T-35 invaluable.**

For the farmer, the T-35 fills the need for a long-lived easily operated engine, able under all conditions, to plow, seed, and harvest, do hauling and belt work at a lower cost than can be done by any other method. In orchard and vineyard for subsoiling, discing and cultivating, operating in close quarters, the usefulness of the T-35 is practically unlimited.

Our motion picture, "The Nation's Road-Maker," shows "Caterpillars"* in actual operation, and we will gladly arrange an exhibition at your convenience. Write for a copy of catalog describing the T-35, or a copy of our booklet, "Caterpillar Performance."

"Here's the hatchet you want to buy"

"IT'S a Plumb—the kind the mechanics buy," says the hardware man. "It's drop forged from one solid bar of Plumb special analysis tool steel, hardened, toughened and tempered to give it 'Double Life.' It will take care of your odd jobs for years—until you lend or lose it.

"Don't run chances with an ordinary hatchet that may break just when you need it most."

The Plumb Hatchet holds its edge. The bit is tapered for fast cutting; the full striking face makes nail driving easy.

Try the "hang" and "feel." You automatically grip the hand-comfort handle at the point of greatest power. You find the weight where you want it—the perfect balance saves your strength. The mahoganized, springy, air-dried hickory handle is pleasant to the touch and pleasing to the eye. It stays clean. The black, hand-forged finish protects the head from rust.

Your hardware merchant wants you to have good tools. Take his advice: let your new hatchet be a Plumb. Carpenters insist "They're worth more."

Price $1.60 (except in Far West and in Canada)

THE AVERAGE WOMAN

(Continued from Page 11)

leaning her head back, laughed. The g blue eyes narrowed into slits of gleam- blue, with radiating spokes of muscle cing from the outer corners—an engag- crinkle of flesh across the bridge of her e. As a pictorial achievement it featured leniable charm, but as a device for mak- a young man feel perfectly at home it ed signally. The still ruddy frown the lyst turned into the murmurous fire was ominous one; so ominous that bending ward she asked with sirupy meekness: ou said you were in the advertising iness, didn't you? How did you come take that up?"

After several moments of brooding silence rallied to the blue friendliness of her e, and suddenly found himself expand- into autobiography. It seemed he had rked his way through Harvard after the ath of his father and the collapse of his pectations· with college ambitions that d cnanneled in other directions than ad- rtising. Immediately after graduation, wever, a cough following pneumonia d stethoscoped respirations which de- anded suspended aspirations and Western one. Elkins, a friend of his father's, had pped in and bundled him off to the mer's Colorado ranch. When a year ter, he returned, bronzed and brawny, to e East, his identification with the Elkins ency had seemed the inevitable thing.

"I see!" Infinite pity softened the phrase. You got coughed into your job. But ll, couldn't you take up steam fitting or lliard marking or something by corre- pondence?"

"My dear young lady," Straun informed er crisply, "I consider advertising the reatest power of the age, fraught with ro- ance and adventure. It is the literature f supply and demand. It is ——"

"Spare me!" An upheld hand halted im. "I know that oration by heart, having Chicago cousin in the profesh. The rouble is, though, that you advertisers hink you can take any darn old thing, ark it in a dressy box, and serve. While our ads prove you know nothing at all at ll about what you're talking about."

"For instance?"—with invitational ea- erness.

"Well, the other day in a soap advertis- ment I saw a portrait of the family wash, with a petticoat—ha, ha!—hung up by the waistband."

Such housewifely scorn fluted in this that Straun lost no time in finding out how it should be suspended. Her information, however, seemed valid, based on domestic- science information garnered from expert sources.

Then another soap picture showed Ruby in her Saturday-night tub, and even a *sense faux pas!*" she again contributed. "Which was?"

The blushing query elicited further elu- cidation; after which Straun faltered. Al- though a firm believer in Victorian reticences he knew of the realistic tendency featured in modern dialogue; hence this rapid prog- ress from petticoats to ablutionary inti- macies promised a sequence that dictated abandonment of the subject. Still, it was with the gratification of an evening well spent that he drew out the note book on his way home and scribbled:

(a) A petticoat should be hung up by piece of lace, so that wind can funnel through it.
(b) A woman does not take a bath with her hair hanging down.

The next Friday he found her in a foggy gray frock and a mood of even more spir- ited restlessness. From mockery to meek- ness, from nonsense to horse sense, from laughter to sighs—she skipped with such swiftness he despaired of focusing her atten- tion upon the static facts of advertising.

Eventually, however, his challenging "And are you still a conscientious ob- jector to advertising?" proved productive.

"Absolutibly!" was her report. "Oh, how you simiths do love to take the joy out of life! This morning I started out, full of Polly-Animation and pep, and what's the first thing I see? A cheerful reminder that eight per cent of us land in the poorhouse after we're fifty."

"But—ah——" he leaned forward so sud- denly that the wiry forelock sprang over his brow. "Doesn't that inspire you to start a savings account at that particular bank?" he pushed on after the forelock had been adjusted.

"Absolutibly not. I store my unearned increment at the Second National, be- cause ——" She furnished a perfectly good feminine reason.

Thus another entry was possible for our investigator on his way home:

An. wom. patronizes bank where ladies' writing room is cozy.

(Author's note): The surroundings, if suffi- ciently cheerful, can create an illusion that money really ain't the root of all evil.

With the third Friday came the con- viction that the probation officer was a five-foot fiend. For half an hour she embroidered the theme of mashing and mashers, and with jabbing audacities pricked Straun's sense of personal dignity into complete collapse. At first he had tried to reason her into seriousness, but the attempt merely served to stimulate her impertinence; so finally he lapsed, red and resentful, into silence. It was then she seated herself on the edge of the table before the fire, bending toward him with a mocking smile.

"Of what are you thinking of?" She ad- dressed him crooningly, chummily, just as if she'd known him all her life.

"Oh, nothing in particular." The re- sponse came stiffly, in a tone asking her to remember, please, he had known her but a short time.

"Well, you've evidently got something on your mind"—a riper smile half shut- tered the blue eyes—"besides that lock of hair that just won't lie flat on the brush."

Automatically his hand flew to his head, and at her responsive glee his scowl deepened. But suddenly he shrugged his shoulders. After all, why pay any attention to her? She meant nothing but copy, and this reflection accounted for the subsequent deformation of the truth.

"To be frank," he said, "I was just both- ering about a certain business quirk. A certain manufacturer conceived the idea of a square-headed clothespin. A good idea, you see; more easily made and packed. But somehow it wouldn't sell."

"I wonder why?" Instantly she so- bered, her small face in puckered response to the problem; then she clapped her hands. "Oh, of course!" And she gave a reason culled from a camping experience in laundry activities. And it was so plausibly utilitarian that Straun laughed.

"Oh, and another thing. A snap fastener was recently launched with an impressive advertising campaign. It proved, appar- ently, an adequate article; yet it, too, failed to sell. How ——"

"Probably because ——" She imme- diately tendered her version of a satisfac- tory snap fastener.

So into the notebook that night went two more entries:

(a) The av. wom. puts clothes pin in mouth while hanging up laundry. Square-headed va- riety uncomfortable.

(b) The av. wom. demands snap fastener that distinctly clicks when closing.

The next Friday his hostess was swaying before the phonograph when he entered. Halting her hummed accompaniment to the syncopation she greeted him gayly with: "Doesn't that tune go right to your instep?"

Straun smiled. "Not exactly. You see, I don't dance!"

"You don't dance?"—incredulously. "Why, you poor thing! But never mind. I'll teach you to think with your feet in one lesson."

"Oh, not now, please!"

The analyst's sense of the fitness of things rejected such a suggestion from a proba- tion officer. But already she had kicked aside the rugs, and when she held out her arms he perforce submitted. And somehow in the next half hour he managed to put his best foot forward in spaces unoccupied by hers so successfully that it evoked a final "Great! One more lesson, and you'll be a he-Pavlowa."

Which goes to show that a knowledge of the point of contact and motor principle may be applied in other spheres of life be- sides advertising.

"Whew!" She fanned herself with a handkerchief framed in Duchess lace. "Come over here on Madame Récamier, and cool off."

"Madame Récamier?" he questioned.

"Yes, Mr Straun." Demurely she patted the place beside her invitationally.

"I see." He grinned as he sank beside her on a couch structurally related to the chaise-longue school of relaxation. "Named after the divan in David's picture of the madame, I presume."

"Guessed it the first time," she twin- kled at him. "You see, I'm starting a movement against the anonymosity of the household gods, so I name everything. That"—nodding toward a cabinet of bijoux across the room—"is Little Jack Horner. It always stands in the corner, you know. Then the angel bed granny brought me from Belgium is of course Macduff."

"Ah! 'Lay on, Macduff!'" There was a smiling commerce between them, during which Straun put his æsthetic O. K. upon the corrugated effect that amusement wrinkled across her nose. "Then, I sup- pose," he contributed, "that the phono- graph is John Alden."

"John Alden?" A momentary pucker of perplexity cleared with a gurgle: "Oh, it speaks for itself. That's too slick! Here!" With a caracoling movement she spun to the bell. "Let's christen him now."

And so, after a servant had supplied water, Straun, the dignified analyst of the Elkins Advertising Agency, entered zest- fully into the business of flicking a drop of water over a mahogany surface, while a Puckish priestess solemnly chanted: "In the name of His Master's Voice I christen thee John Alden!"

Another session, then, on Madame Ré- camier, during which she told him a little of her life. She had been under the guard- ianship of a grandmother since her moth- er's death some ten years earlier. She had one married brother living in Baltimore, and a pet of a father. She had gone to a traveling school abroad before the darn old war; and then she had meant to be an opera singer or a nun; only she hadn't any voice and belonged to the Presbyterian church. Anyway, you know how one's family is or are, whichever it is!

Then followed an intimate exchange of irrelevancies, and Straun found this aver- age woman, with her endless ingenuities of charm, her quick nerves and imagination so persuasive and provocative that not until he reached his rooms did he realize that it was a wasted evening as far as advertising was concerned.

And yet, was it? Wasn't there a meaty, suggestive psychology in her habit of chris- tening the household gods? Vaguely he recalled feminine applications of human attributes to their belongings—his aunt's faithful umbrella, his secretary's comfort- able hand bag, his waitress' temperamental wrist watch. He remembered, too, a friend who, having taken cheap feminine notions and boxed them attractively, with a bit of paint, poetry and a name—Dolly Dumpling, for example—had turned over profits not to be sneezed at, even in golden-rod districts. All of which signified that woman's de- mand for the personal expressed itself even in her property sense. Possibly it ac- counted for certain modern advertising tendencies; but in it Straun saw capabili- ties for even richer expression. Certainly it would prove of value to the unimagina- tive merchandiser who called a spade a spade.

It was the next Friday afternoon that our analyst met his Miss Whipple on Fifth Avenue, radiant in a new kolinsky coat. She was on a shopping spree, it seemed, and he might tag her into several shops without fear of arrest if he cared to. Did he? A chance to witness at first hand the merchandising mechanics of the average woman?

"Absolutibly!" he smiled, and subse- quently attended the exchange of a thou- sand or so for articles ranging from a hair net to a jade lavallière. It proved most illuminating. In analyzing her preferences, through adroitly casual questions, he gar- nered enough material to fill eight pages of notebook. Yet something more personal than gratitude dictated his invitation to dinner; and when, later, they sat before her fire and toasted marshmallows his de- light in the curve of her cheek seemed dif- ferent from that tendered to ogive curves on platting paper.

"But see here," you are thinking, "are marshmallows supposed to be moral nour- ishment for sidewalk weaknesses? And haven't these sessions between an ostensi- ble masher and his probation officer pre- sented rather fantastic aspects?"

"travelo"
KNIT JACKETS
TRADE MARK

All-around Jackets for Year-round Wear!

Different men find different uses for "travelo" knit jackets. Every man ac- cording to his own habit, hobby or habitat. But to each, "travelo" is the favorite knit jacket for his particular activ- ity—business, recre- ation, or plain knock- abouting. If you would like to know how Madge Evans, herself, chooses her hats, just write: *"Dear Madge: Send me your new booklet—'Secrets of a Young Movie Star,' and I promise to look for a Madge Evans Hat before buying my Spring Hat." Address:*
MADGE EVANS HAT CO., *594 Broadway, New York City*

DEALERS: If there is no Madge Evans representative in your locality, write us at once for exclusive agency.

Undoubtedly; and Straun had by this time begun to speculate about the disregard of the involved issue. Yet his modesty and a certain naiveté refused admittance to most theories, and now, his attention given to the consumption of the bloated confections, he was enjoying himself too much to bother; too busy following the deft trickery of her mind, the butterfly restlessness of her hands. And it is surely significant that on the way home, mechanically extracting his notebook, he wrote with a whimsical grin:

She asked me to call her Teddy.

And perhaps moreso, next Friday's entry:

She calls me Alum.

The following memo,

Yellow roses are her favorite,

of course accounted for the florist's box delivered to the Whipple home the ensuing week.

Now what Straun was trying to say with flowers was this—that Fridays had become red-letter days in his calendar, ending as they did in sessions with blue eyes that laughed all the seriousness out of life. But since six weary days intervene he soon made other demands upon her engagement book. They began dancing and dining in New York. She made him read her favorite book, Alice in Wonderland; and he, mind you, read Emerson to her. Through him she became acquainted with Beethoven; through her he rediscovered Gilbert and Sullivan. Then as spring approached they ventured into Long Island picnics, usually under the chaperonage of her trim roadster, Paul Revere—who had a record himself, in midnight rides, you know. Now and then, however, they were accompanied by Granny, a tiny gracious lady of the Watteau school of grandmotherhood.

Naturally in this new intimacy he was teased ruthlessly; but now it meant piquancy, not pique. He had, you see, become rather expert in handling the zippy come-back. Certainly under her influence his somnolent play instinct awakened with surprising spontaneities. At the office he quoted Stephen Leacock, and practiced new fox-trot steps on the way to the water cooler.

Yet, however interesting this may be to the student of character, its value is negligible in revolutionizing business. And the sad part is that Straun's attitude now toward the average woman precluded any use of his copy. No, he simply couldn't do it! The advertising business could go to—the jabberwocky, before he'd turn her personality into publicity.

This decision had fully crystallized when he found Teddy one evening seated on the arm of a chair in which sat—the jocular gentleman of the courthouse.

"Oh, Alum!" she fluttered to him. "This is Judge Whipple, my paternal parent. But I forget"—with impish glee—"you two have met before."

Straun managed to absolve the orthodox amenities gracefully, but later, as the other turned to leave, there passed between daughter and father a wicked conspirational wink; and abruptly the analyst stiffened in outraged dignity.

"So"—he confronted his hostess grimly—"that was your father! Why didn't you tell me?" In the light of their intimacy, which had included acquaintance with Granny and the Baltimore brother, this omission was informed with the darkest collusion.

"I thought you knew, old stupid!"—with maddening unconcern.

"Then my supposed probation was just a frame-up; you knew I was no masher."

"Oh, absolutibly!"

"And you were willing to subject me to the humiliation of being dragged through the streets by a policeman just to exercise your peculiar sense of humor!"

Even now the memory of that ignominy stippled his brow with perspiration. The enormity of it! What if Beevee had seen! What if Elkins had heard! What if the newspapers ——

"Oh, not exactly," he heard her gurgled enjoyment of the situation. "But no man plays a follow-up system all afternoon without liking the lady's back hair or something. I just gave you an opportunity you were too spineless to make for yourself. 'Fess up now. You were frenzied to speak to me, weren't you?"

Blithely she tripped to Little Jack Horner, and selecting an antique ivory fan unfurled it across her face. Over its top her arched brows challenged a denial of her charm; her eyes gleamed an invitation to further climactic flirtatiousness. And at this childlike confidence in her attractiveness, a confidence to which every man had doubtlessly ministered, there came Straun an unaccountable impulse to wa her. Back of him generations of courtlin made this difficult. Twice he essa speech, and failed; then a triumph twinkle ignited him.

"Yes, I was frenzied to speak to you,' quoted in a dry statistical voice; "not cause you struck me as an extraordin girl but because you gave signs of bein the average woman." Then beginning v the clipping he told her everything, endi "Is this plain to you or shall ——"

"Oh, quite!" She tried to dissemble hurt in her voice with the flippancy "Say no more, my good man. Your planation is like liniment—penetrates w out rubbing it in."

For a moment she wilted; then draw her five feet to a Brunhild impressiver her eyes flashed thunder and lightning.

"So" — witheringly — "you thou you'd pick my birdlike brain to help with your darned advertising, eh? 'V do you know what you are?" Her curled in a sardonic twirl. "*You're* a co blooded, hard-boiled trout! Get out of sight. Get out of my sight!"

There was nothing else to do, so Stra went out into the night, with bla bordered, deckle-edged thoughts about women in general and the average wom in particular; really awful thoughts, s as you would hesitate to tell *your* b friend.

Once in his rooms, off came his coat a out came his notebook. By three A.M. was finished, the paper destined to re lutionize industry, entitled The Aver Woman as the Ultimate Consumer. Un his fountain pen the rather inconclus data of his notebook broadened into a co prehensive cross-section of woman's p chasing psychology. The concrete examp widened into significant general tendenc

Yet curiously enough, when he read paper that Tuesday to the advertisi club he saw it was the clothespin th pinned them to their seats; and the sn fastener that so fastened their attenti upon him.

"By George, Straun," Buell, the head a competitive agency, told him afterwa "that paper convinces me there's som thing to this psychology stuff. You' given us concrete facts to get our teeth in

Later there were many other indicatio that the article had created a definite st yet after the first flush of gratification t author sank into an emotional murk, pa ticularly noticeable on Fridays. The tru was that his conscience began functio ing painfully. Teddy was right. He ha proved himself a cold-blooded, hard-boil brute, commercializing friendship, whic according to Mr. Emerson, should be th uncommercialest of human relations. A his indignation toward her became co sumed in his own sense of guilt; and time wore on, his hunger to see her inte preted itself as the natural impulse of social sinner to exchange a whole-hearte apology for even a half-hearted pardon.

A month dragged by, and he could stan it no longer. A box of yellow roses was di patched with the plea—could he come Immediately came the answer: Yes, Wed nesday at 8:32.

Yet it was 8:21 when he raced up th steps; and 8:23 when she appeared, vividl lovely in white chiffon.

"Aha!" She struck a dramatic pose "Don't say a word. It is Mr. Sniffkins, c Seattle! I never forget a name."

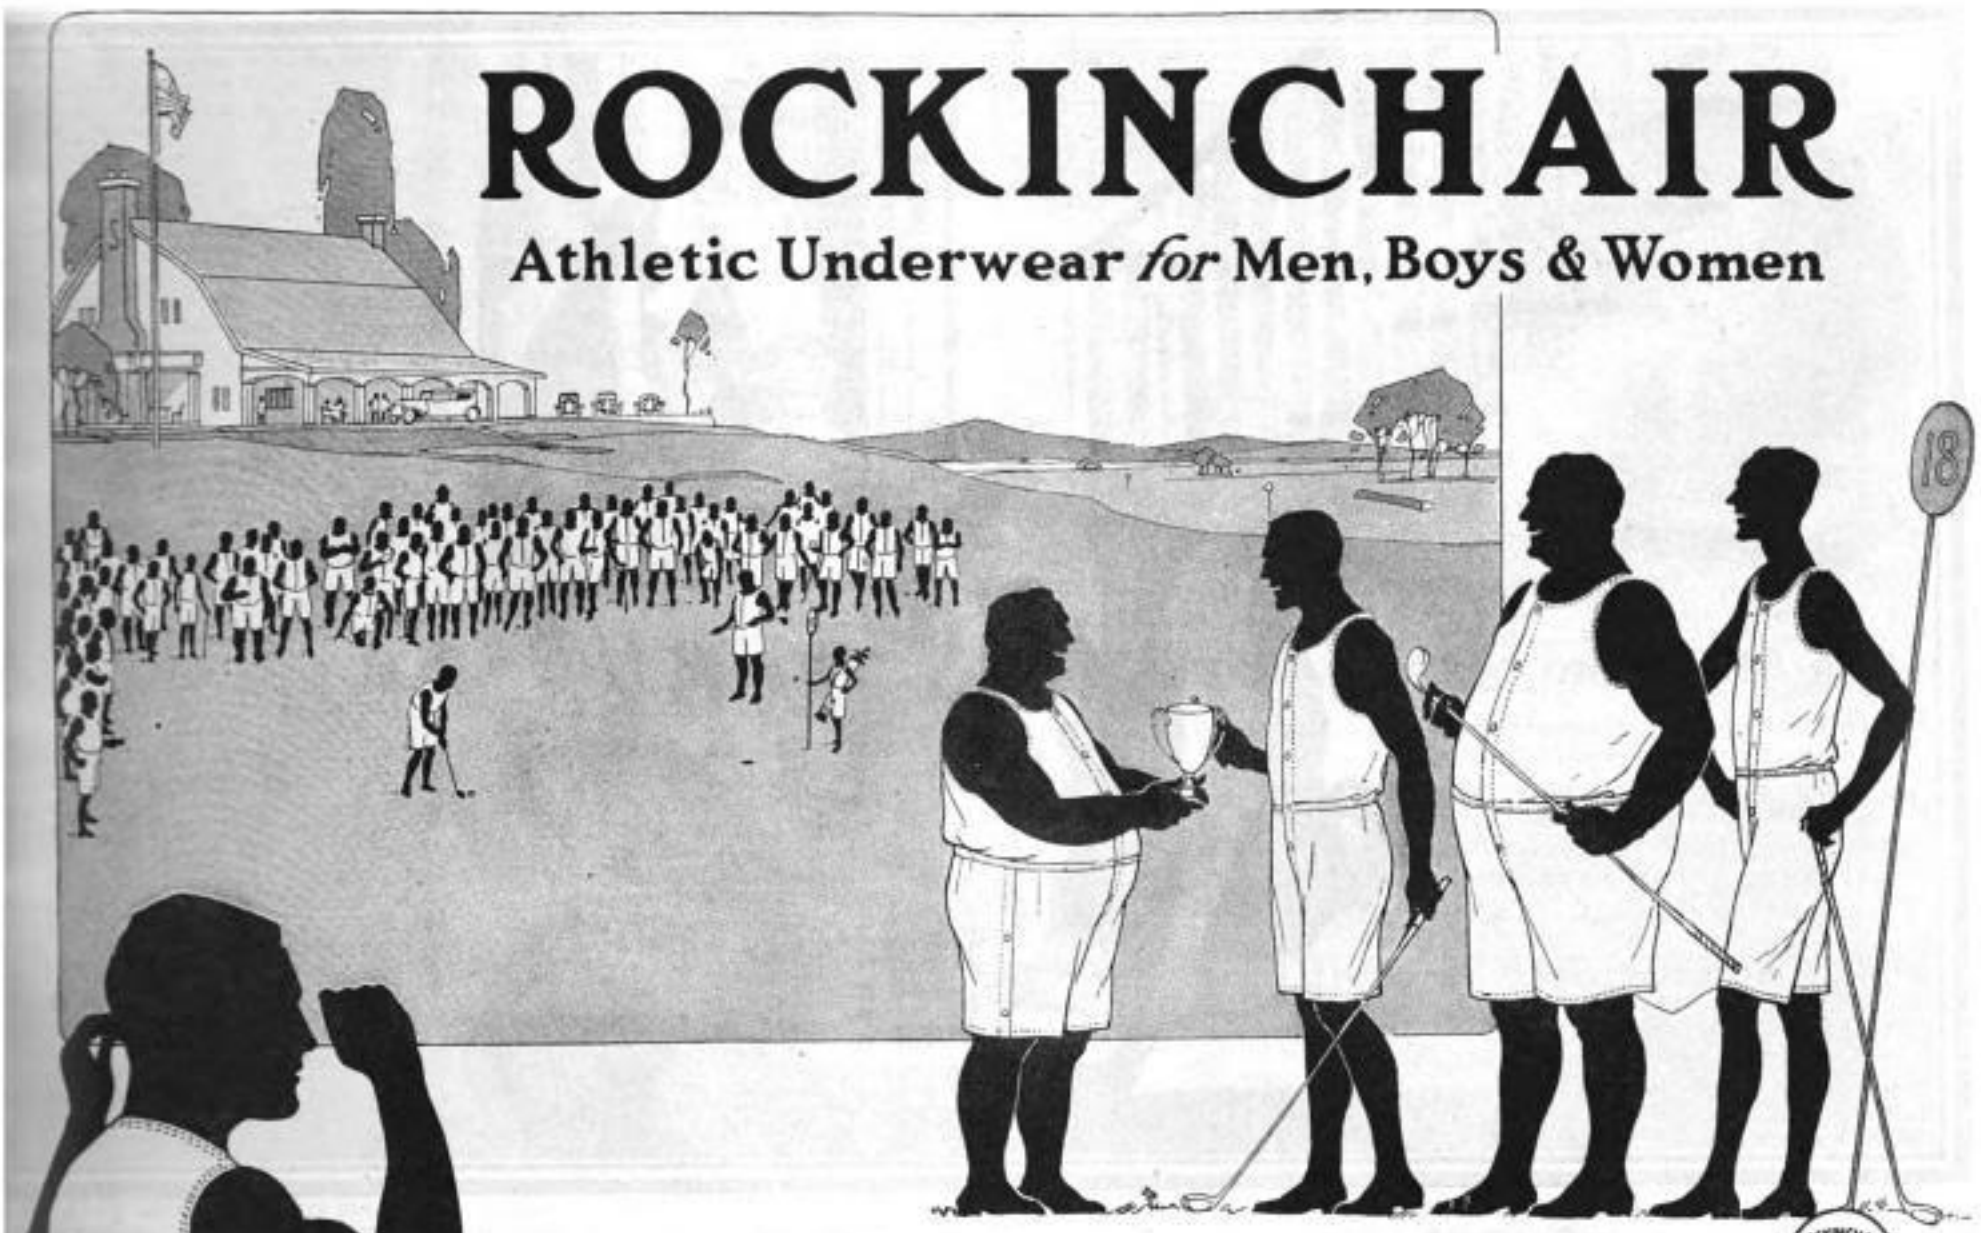
Ignoring this flippancy he stalked to he and captured a butterfly hand. "Teddy I've been a perfect bounder!" and the confessed the foul deed.

"Just a moment, please." She sped to quarreled secretary, and returned with paper, which she extended. Perplexedly Straun read in his own handwriting:

THE AVERAGE WOMAN

(a) Adds postscripts to her letters.
(b) Uses hairpin for repair work.
(c) Is afraid of mice.

"That fatal day in the hotel," she bubbled, "after you left to phone, I reached over for some stationery, and this got mixed with it. Without thinking, I read it, and then staged that trick rehearsal. Of course I didn't write any postscript; nothing ailed my music roll; and as for mousie—well, there warn't no sich animal."



Straun grinned through the horn-rimmed goggles. "Well, I'll be darned!"

ROCKINCHAIR

Athletic Underwear *for* Men, Boys & Women

Perfect Fit for *All* Figures

The short stout, the regular, the tall slim and the big heavy man can *all* be *perfectly* fitted, with absolute comfort, in Rockinchair Underwear ——

—— *because every CHEST size of Rockinchair is made in these FOUR models—Short Stout, Regular, "Slim Jim" and "Big Bill."*

No matter what your build you can get solid underwear comfort in Rockinchair, because there is a model to fit *you*—not only at the chest, but in the *trunk* and *girth* as well.

And it is easy to be properly fitted. You are one of these four builds. You simply ask for your chest size in that model and you get a trunk and girth as well as chest measure that *fit your particular figure.*

Then there's the blouse in back that allows such unusual bodily freedom, the closed, sanitary seat and crotch and the side-leg opening, adjusted in a jiffy.

You see, Rockinchair is really *tailored* underwear, intelligently designed to fit and please men of all sorts of figures. There is class and character to Rockinchair—in the way it fits, the happy comfort it provides and in its very appearance.

Yet it is reasonably priced.

There is no underwear like Rockinchair. There are imitations but no substitutes—so ask your dealer for it by name.

HENDERSON & ERVIN **331 Fourth Avenue** **New York City**

CHICAGO: 234 S. Wells Street BOSTON: 52 Chauncy Street ATLANTA: 601 Silvey Building

Duofold for Winterwear *Rockinchair for Summerwear*

Comfort with Feminine Daintiness—for Women

Rockinchair for women is a truly feminine union suit that combines splendid comfort features with a dainty elegance so much desired.

Seat and crotch are fully closed—no bunching or binding. Convenient side-leg opening closes with one button, the only button on the garment. Has blouse effect above the waistband that allows bending over without straining the garment.

Made in zephyr mull, silk and cotton, and crepe silk—flesh and white. Neat lingerie pins make the shoulder straps adjustable.

Ask your dealer or write us.

(Continued from Page 134)

So, you see, as an a. w. I'm a fake, so old paper was false testimony. Hence, rdingly and therefore, spare me the ogy." She sank into the softnesses of ame Récamier, and Straun relaxed le her.

Alum!" For several moments she d at him solemnly. "You came into fe at a psycho-illogical moment." An- long pause. "When I cut school years ago I got in with some speed ialists, here and in Manhattan. Our s were beset with olive pits and gin, ly gin. The girls were all sweet young s, 'standing with jazzy feet, where the ny Brook and the Green River meet.' the men"—with a reminiscent frown— re anticurfew cuties with nothing much e the collar except a snappy conviction we're a long time dead. Well, after a le I fell in love with one of these organ- s, and life seemed just one rosy blur, ll—until—he turned yellow on me. I d his ethics was or were—whichever it so broad that the only thing a perfect t wouldn't do was spit on the sidewalk hrottle his grandmother."

The smile with which she halted was the mocking one, but Straun sensed it was mask for a smarting scar.

"You poor child," he murmured, and ed a hand which snuggled into his own. "Then I saw he measured up to the rest em. I saw, if I may be perfectly Frank- ne, that you can't get loose on one of r soul-sides without rattling all over. I sickened of the whole gang, and was ning my farewell that day in the hotel. n suddenly," she sighed, "I glanced r at you; and you looked so darn de- ndable and sensible in those horn-rimmed ndshields that my faith in men revived." Here Straun permitted himself a pressure the snuggling hand, which was lightly re- rned, as she pursued: "Course it's a ean thing to say about anybody, but you emed so wholesome, so different from or an—whichever it is—that other bunch at, well—I wanted you in my life, as an tidote maybe. And when I found that lipping I saw a chance to start something, d I finished it, too, by gosh!"

"Do—do—you—mean"—with a goggled re of incredulity—"that—you—er—you ked me?"

"Absolutibly. I felt somehow, Alum"—tender note seeped into the soft soprano—"you were the sort who could save me from yself——"

"Oh, my dear," was the inadequate ex- ression of the analyst's tattooing pulses; at he made a move toward her and be- fore he knew it she was in his arms.

"Kiss me, angel man," she requested, and, after he had filled the order satisfac- torily, drew away to ask: "And now, where are we going to get married?"

"Get married?"—a little weakly.

"Certainly. You love me, don't you?"

"Oh, my sweet, I do!" And in it was the ringing conviction of a man who has long feared and meant to propose just as soon as—"And you?"

"I'll adore you forever and ever," she assured him gravely; then, addressing a French print above them, whispered smil- ingly, "Reno papers please copy." Straun was grinning idiotically as she ended, "As for orange blossoms—'eventually, why not now?'"

A worried frown sprang between the reddish-brown eyes then as they inven- toried the luxuries about them. "Dearest, I make a fair salary, but not nearly enough to warrant the life you've been used to," he tritely parried. "We must wait, I'm afraid, until I get an increase."

"No"—with the serenity of one whose initiatives have ever been ultimatums— "we'll do it now. I like the present style in wedding rings, and they may change any day. Besides, we don't need much to start with, just a teeny little apartment the size of a pie board. Then Granny will give me a mahogany and we can fill in with ash-ivers."

"As-ivers?" he queried.

"The kind of furniture that's tagged: 'Formerly $200; as is, $4.98.'"

This the young man receipted with a hug and a tender "You little mental gymnast," before she resumed: "Then, I'll do the cooking. I told you I'd taken a course in domestic science, and if I do say so as oughtn't, I can shake a pretty mean skillet. Give me some milk from contented cows, eggs from happy hens and honey from bliss- ful bees, and I can compose French pastry like an."

Rational thinking, of course, became more and more difficult in close proximity to such persuasiveness, so at last Straun rose and, pacing in front of John Alden, hands in pockets, tried to reëstablish his old acquaintance with the fourness of two and two. French pastry! Ah, that sym- bolized the whole situation! Her life had been all French pastry, and though the froth of her personality was largely tem- peramental its preservation was due to freedom from responsibilities and the re- strictions attendant upon the daily-bread realities of existence. Moreover, he loved the meringue of her too much to see it crusted over with sodden economies.

Now to you who married on fifteen per and achieved the French-pastry touches by saving soap wrappers, this will sound like foolishness. But Straun, it seemed, had carried over into this age of marital co- partnerships archaic ideals of the good provider—a sentimental hang-over from the days when feminine shoulders were so sloping that the lightest burdens slipped off.

And yet when he dropped into a near-by chair Teddy was instantly on its arm, and with the first playful tweak of the rebellious forelock reason was ruinously uprooted. He forgot the French-pastry prohibitions of his pay envelope; he forgot everything in the bliss of being engaged to not an average woman, please understand, but the most wonderful little girl in the world. It was not until after the good-night ir- relevancies were over that he connected up with reality sufficiently to promise: "I'll see Elkins about an increase to-morrow."

But that gentleman, a vegetarian whose conservatism extended far beyond dietetics, blasted this hope over his nut loaf the next day at lunch. Good Lord! Didn't Straun know what present conditions were? A raise was simply out of the question? When things opened up—well, he'd see.

Of course the lover's spirits dropped with a thud, and as he sought his rooms that night his heart was as heavy as—inferen- tially—Teddy's first pastry. Fiercely he applied himself to sordid problems of addi- tion and subtraction, but juggle the figures as he might, the total eternally insisted that his salary could not insure a happy future for a young woman with kolinsky coats, liveried servants and trim roadsters in her past. And oh, how he hated to tell her!

Yet the next evening she met the sad news gayly.

"It's all right anyway, Alum," sooth- ingly. "I told the family weeks ago I meant to propose, and after they'd fumed awhile they sleuthed out your history; finding, of course, that you're the salt of the earth as well as the apple of my eye." She tiptoed up to kiss the forelock into adherence. "So when I told dad you'd accepted me the old lovie said he'd buy us a bungalow on Long Island, so the children would have a yard to play in, and give us an allowance until you got to be president of the chamber of commerce or some- thing."

"No, Teddy, I couldn't accept it." His gentleness was steeled with an inflexible obduracy. "I've seen too many marriages fail that way. They both get a set of false values. The man loses the incentive to get the best out of himself; the girl loses iden- tification with the man's problems and interests. Instead of growing together they grow apart."

Somehow he anticipated a stormy pro- test or tinkling disdain, but instead, the long blue eyes clouded with the fear of a child who's seen a ghost.

"Grow apart! Oh, Alum, we can't let that happen." Fiercely she clung to him, then after a breathy pause: "Probably you're right. You know so much more than I or me—whichever it is—but, oh"— with sudden vehemence—"I've got to have you! You're the only person that can make anything out of a flighty filbert like my- self."

"You dear, divine thing." Straun bent to kiss her reverently. "It's mighty hard, but we'll have to be patient. Business is bound to pick up soon; then Elkins, I know, will come across. So"—he sighed dolorously—"we must wait."

Thus began weeks of waiting, during which Straun was taken to the bosom of the small family whose collective hearts beat in unified adoration of the tiny Teddy. Straun saw that had she elected to marry a Chinese laundryman their acceptance would have been inevitable; and his modesty interpreted their increasing amiabilities as gratitude for escape from this hypothetical *mésalliance*. Yet this friendliness flavored

"The Happy Daisy Boy"

You Can Trust Your Boy With a Gun!

Every boy who loves outdoors and clean, manly sport wants a gun. Most parents—mothers as well as fathers—recognize that the boy's first gun, while harmless, must be more than a plaything; it can be a means of education and training in itself.

Many parents are solving this problem with the Daisy Air Rifle. Harmless because it uses compressed air instead of powder, and so well finished and "business like" in appearance that it satisfies the rightful pride of every boy who owns one. Millions of American men first learned to shoot with a Daisy.

Different Daisy models range in price from $1.00 to $5.00. Ask any hardware or sporting goods dealer.

Established 1832

COTRELL & LEONARD, DANBURY, CONN.

life so pleasantly that not until June did Teddy's growing restlessness reflect itself in his own dissatisfaction with the *status quo*. And then one day the gods grinned.

He was lunching at the Advertising Club, when Buell entered and joined him. The first half hour was wholly absorbed in the latter's homage to the Average Woman paper. Then as the author rose to go he was halted with "See here, old man, I know you're in strong with the Elkins people, but if you ever think of changing, remember, there's a ten-thousand job waiting at our shop."

The analyst gasped. Ten thousand! That meant orange blossoms and little Teddy. It meant enough of the French pastry of life to nourish a love as robust as theirs.

Not that his stammered "Thanks awfully; I'll think it over" meant identification with a competitive concern, but surely this indorsement of value, since business was looking up, would induce Elkins to meet the offer. Yet that vegetarian gave the proposition merely a fishy eye and a grunt. Not until closing time did he grow articulate. Of course, Buell was in a position to make a fool offer like that; but after all, he hinted in veiled circumlocution, wasn't it to his beneficence at a time of physical collapse and financial helplessness that Straun owed his life? To be sure, there was little sentiment in business nowadays, but he still kidded himself that there was such a thing as loyalty still left in the world.

Now Straun knew it was taking advantage of a situation. From his earnings he had repaid every cent entailed in that Colorado sojourn; yet this fact lost all its weight under the pressure of Elkins' assumption that he had saved his life. The vigor of his short-lived expectations showed him now how much the girl meant to him; and his anguish in their collapse became so acute that the next day when he met her for lunch the need for solace dictated a confession. Naturally enough, his ethical delicacies infuriated her.

"Do you mean to say you're going to turn down this offer just because this here Elkins let you graze on his ranch for a year?"

Straun's answer was checked by the entrance of this here Elkins. Seeing his analyst he came to their table and was presented to Miss Whipple; then, meaningly, "My fiancée." After a casual glance at her and some generalities he passed on; but his appearance seemed to madden the young woman. She flashed from scorn to bitterness and a final accusation that Straun's objections had all been alibis anyway. He had never really cared, and so forth, and so forth.

Naturally this evoked a passionate disclaimer, built around the I-could-not-love-thee-dear-so-much-loved-I-not-honor-more theme. Of course he adored her more than all the world, and so forth, and so forth.

"Well, then"—grimly, as she drew on a number-five glove—"you're too darn noble for me. I couldn't live up to these Alpine ideals of yours, Mister Galahad. So it's up to Teddy to store the old hope chest and flutter out of your life."

"You mean"—he caught her wrist tensely—"you want to break our engagement?"

"Absolutibly! Granny leaves Sunday for our New Hampshire place, and I'll go with her."

She paused to lower her veil over eyes that prophesied an imminent wet spell. "Of course if you come to your senses and accept this offer, all right. Otherwise I don't want to see you again."

It goes without saying that he tried every argument known to Romeo and Sir Francis Galton; but nothing melted her.

Then followed weeks in which fifty-seven varieties of pangs competed for ascendancy in his crushed heart. Life degenerated into a product of ashes and Dead Sea fruit, of which he became the ultimate consumer. It seemed purposeless, meaningless, as ironic as an anthracite advertisement in the nether regions. And all this time warfare between instinct and conscience raged; so that even prewar pleasures became marked-down values. Emerson, chess, Beethoven no longer pleased; two and two no more made four, but a five-foot figure of unforgetable dearness.

Then a psychological change deve in his relations with his employer. constraint between them, one which S tried to ignore out of existence, in l began finding expression in active ar nism and faultfinding. The ratio be the manufacturing and selling costs Camille Cough Drop was simply absur for the last chart, it looked as if it had traced by ouija under the control of Khayyam.

Self-consciousness and even self-di showed in the analyst's work; yet hi recation of Elkins' antagonism was most disturbed him.

After all, he had sacrificed the clai love to the obligations of friendship, a find this souring on him was reall much. Human endurance had a reached the saturation point. He gr ritable and embittered; so much so even Beevee noted it.

"What ails you, old hoss?" he rallie malcontent. "You've been going ar looking like a cross between the gladiator and a bird who's just paid h come tax."

So Straun confided Elkins' reactic the Buell offer, and his subsequent host

"Sure!" Beevee snorted. "That's old man's game—to squeeze every dro of us at the lowest price per quart pos You were a chump not to quit."

And later corroborations of this tou tribute did make the temptation to r almost overpowering. But at the tho of a violent disruption of an inhe friendship, through his initiative, an developed conscience always rebelled. it was better to suffer in silence Elkins' accumulative antagonism cr nated in a more or less honorable discha So he continued to suffer.

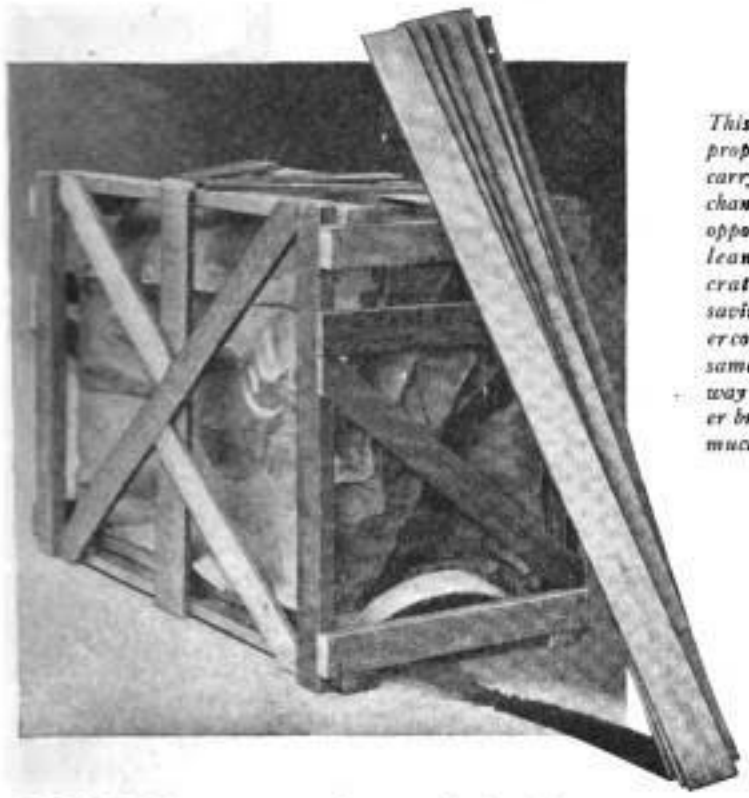
Then one day while in the filing room joining his employer's office he overhea conversation about himself, ending a casual characterization of the most derful girl in the world. It was this which evoked the clenched fist, the po ing pulses and other physiological ackn edgments of the superinsult. Blindly stumbled to his desk. Two minutes lat resignation was handed to the office boy immediate delivery. Then to the ph where, incredible enough, he instantly his party.

"Mr. Buell? . . . Allan Straun sp ing. . . . Is the position still op . . . Good! . . . Sign a contract the first? . . . Fine!"

Yet as a slow train carried him to N Hampshire that afternoon he wa far h happy. A thousand doubts assailed h Would she see him? Could she see hi Perhaps she was dead! Maybe she married! What if that anticurfew boun had —— O Lord!

But at five o'clock, in the prim little tion, the voice over the phone assured h that she and Paul Revere would pick h up in five minutes. And when, later, saw down the road the meteorlike flash Paul his misgivings merged in a grin thankfulness that there were no traffic c in that part of New Hampshire. On t ride back he incoherently reported his ceptance of the Buell offer, which, af they were settled in the viny arbor in t rear of the Whipple garage, resulted activities which the advertising fraterni would recognize as a class of transacti made without conscious decision.

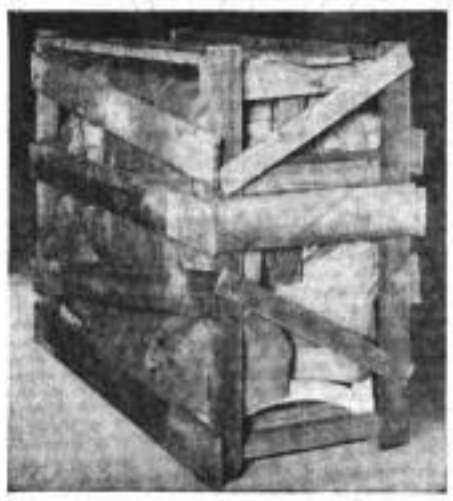
Yet after a while Teddy disengaged h self to say: "But, Alum, to what do y owe your decision to? You haven't yet to me what made you resign."



"Oh—er—something I overheard." took a long moment to cancel his relu tance. "Elkins was speaking of my e gagement, and someone I couldn't identi asked what sort of a girl you were. A then—and then"—the eyes behind th horn-rimmed goggles burned with remini cent resentment—"he said something so so belittling I could stand it no longer. quit."

"What did he say?" Now the butterfl hands were clenched.

"He said, 'Oh, nothing out of the ord nary that I could see. Just the averag woman, I suppose.'"



"Oh, angel man!" Teddy gurgled an held out her arms, and then was forme what might be termed an interlocking di rectorate.

This cut shows a crate properly designed to carry the same merchandise as the crate opposite. The boards leaning against the crate represent the saving made by proper construction. At the same time the three-way corner, and proper bracing, make it a much stronger crate.

A typical crate. More lumber than necessary used, as shown by the crate opposite; weak corner construction; ineffective bracing. The kind of crate that makes for delayed shipments, damage claims, poor collections, dissatisfied customers.

A $100,000,000 *Annual Packing Loss—Most of It Saveable*

HERE are two facts of significance to every shipper in the country.

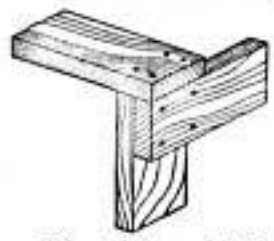
That in twelve cities in a single month a freight inspection bureau was obliged to refuse or repair 43,738 packages received by carriers unfit for shipment.

And that, in spite of such rigid inspection, the railroads of the country in 1919 paid out $103,000,000 in claims on lost and damaged freight.

What is responsible for this condition?

THE PACKING of goods looks like a simple matter.
Just two problems to meet:

1. *To build an economical crate of the right size.*
2. *To make it strong enough to stand the jolts and bumps of shipping and to protect the contents.*



Such an obvious thing that few shippers have questioned whether it was being done right—perhaps not knowing that proper crate construction is no longer a matter of guesswork but is based on definite engineering principles. The U. S. Forest Products Laboratory and other agencies have contributed much in this development.

The Weyerhaeuser organization has for years been at work on this problem—collecting and analyzing the facts, so that every foot of lumber it sells for crating purposes will deliver 100% service and at the same time effect the greatest saving for the shipper.

AS A RESULT, this organization now offers to industrial executives a service that not only tells how to cut shipping costs and losses, but also includes the designing of crates to fit, in each case, the product to be packed.

Here is a service that has, in one instance, *saved a manufacturer* 10% *in his crating lumber costs,* 5% *in labor costs,* and 3% in freight costs; and through his ability to deliver his goods in uniformly better condition, speeded up his collections and increased his sales.

Weak Crate Corner Construction

The corner is the weakest part of the ordinary crate. This illustration shows a common method of crate corner construction in which the lumber is not used to maximum advantage. Nails driven into end grain have comparatively low holding power. This type of crate corner also lacks the bracing effect obtainable, with the same amount of lumber, nails and labor, in the approved "Three-way" corner illustrated below.

The racking and pulling apart of the ordinary crate corner is responsible for much of the damage to goods in shipment.

Strong Crate Corner Construction

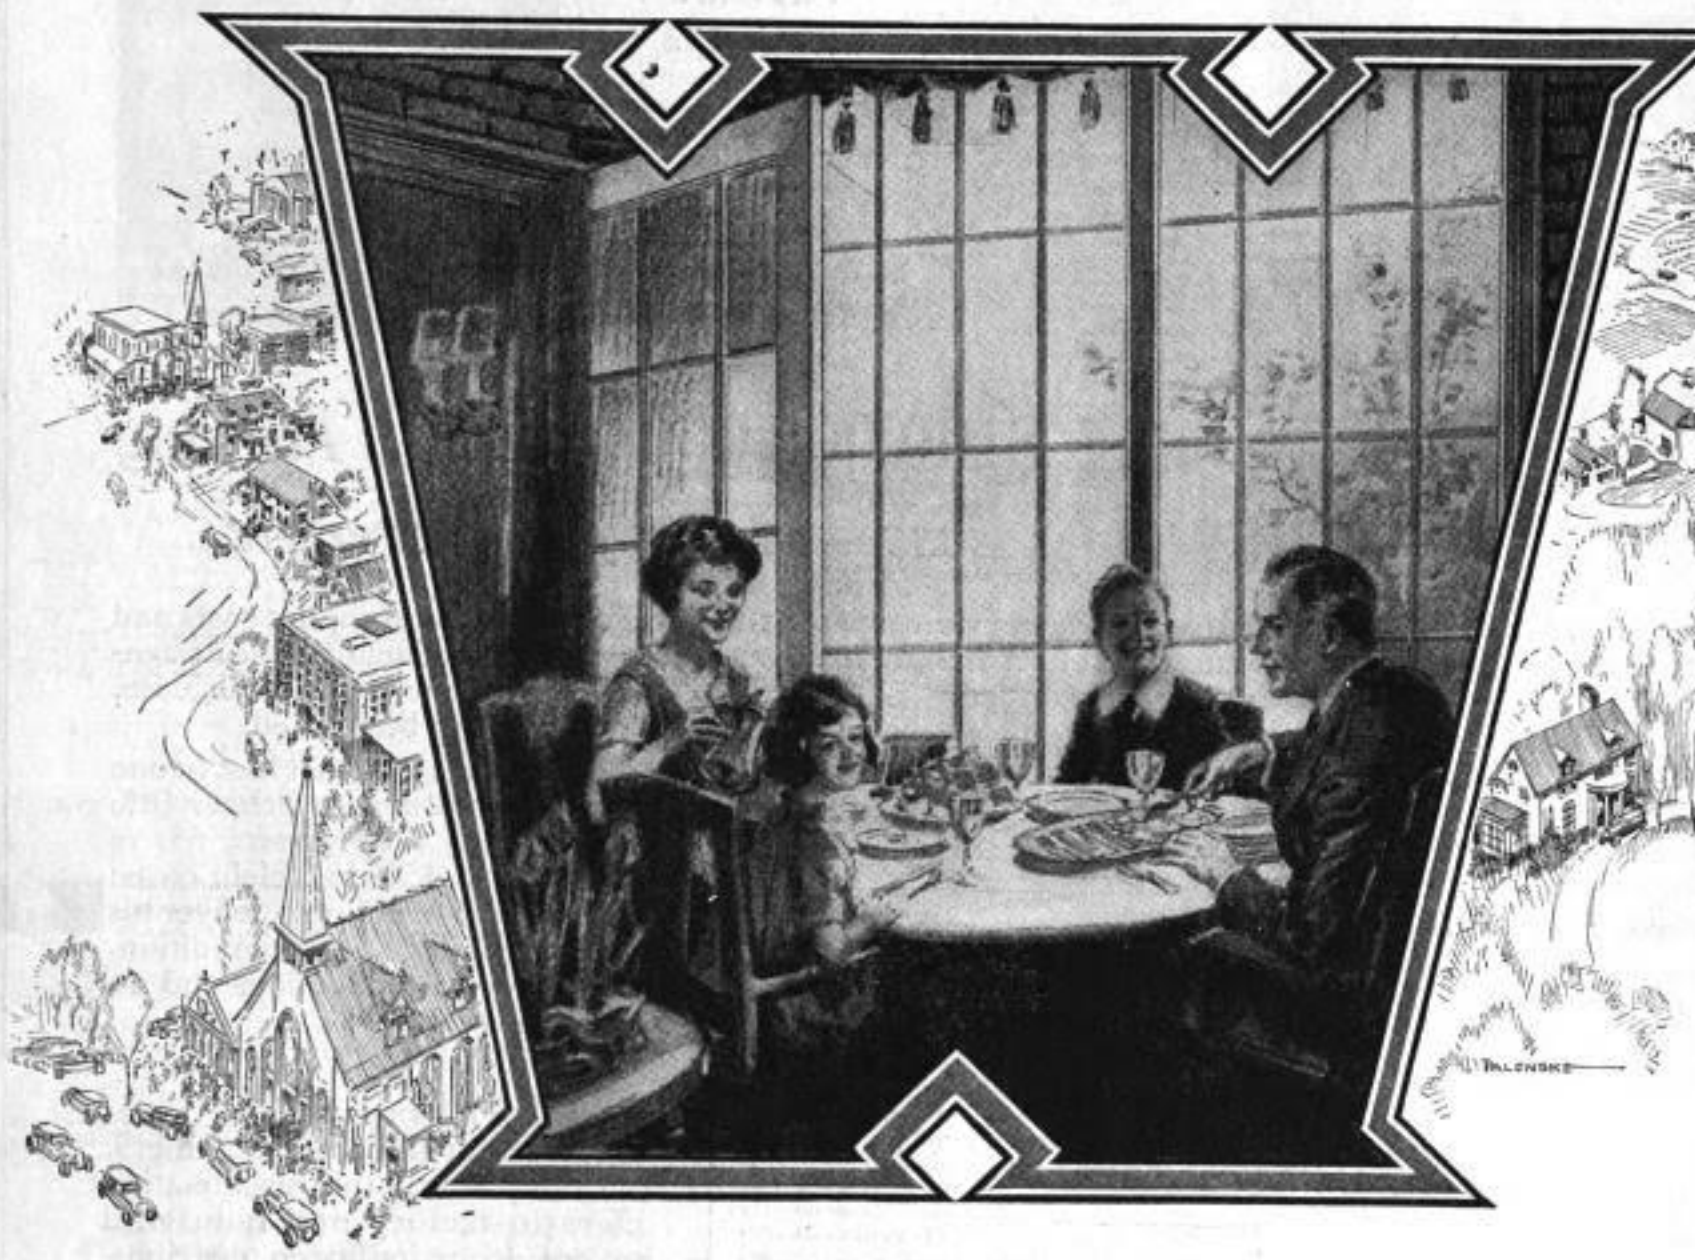
This simple method of fastening together the corners of a crate requires no more lumber, is no more expensive to put together, yet is many times stronger than the method shown above.

In the better "Three-way" corner, each member is nailed to another member and has the third member nailed to it, making it very difficult to destroy the crate with ordinary handling. Note that all nails are driven into side grain. The distinguishing feature of this "Three-way" corner is that each member is held by nails or bolts in two directions. There are 16 ways to build this "Three-way" corner.

Make Every Month Perfect Package Month

LUMBER is the standard material for shipping containers. For this purpose this organization offers to factory and industrial buyers, from its fifteen distributing points, ten different kinds of lumber, of uniform quality and in quantities adequate to any shipper's needs.

A booklet outlining the principles of crate construction and explaining the personal service of Weyerhaeuser engineers will be sent on request to manufacturers who use crating lumber.



Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 S. La Salle St., Chicago; 1015 Lexington Bldg., Baltimore; and 4th and Roberts Sts., St. Paul; and with representatives throughout the country.

WILSON'S

WILSON'S *Certified* BACON on Easter Mornin —the Best Breakfast of the year

This money-saving book free

Over a quarter of a million homes in America own a copy of "Wilson's Meat Cookery." If you have none, we will mail you one free. It tells you how to buy and cook meats most economically and most satisfactorily. Write today for a copy to Wilson & Co., Dept. 438, Chicago.

Users of Wilson's *Certified* Bacon know its goodness—know the appetizing appeal of the crisp, golden-brown, tempting slices on Easter morning. Those who have not eaten it have a real treat in store for them.

Not ordinary bacon this—though it is just as economical to buy as something which would please you a great deal less. Especially selected, it is cured slowly and patiently, and smoked just as carefully, so that it may have the fullest degree of delicious flavor—so that it tastes as good as it looks.

Here are some suggestions for cooking Wilson's *Certified* Bacon. You will find them most s factory. They are taken from "Wilson's M Cookery."

Broiling is the ideal method of cooking bacon. A fine wire rack s be used to hold the slices in place. Place the rack over a pan to the drippings, have a hot fire and turn the bacon as soon as one s lightly cooked, and finish the browning quickly.

Some cooks prefer the following way of frying bacon: Put boiling in the pan to cover the bottom and boil the bacon quickly until the has cooked away; finish the browning with dry heat.

Bacon is an economical meat, as every bit of both fat and lean is uti Left-over bacon may be used in sandwiches, or cut up in scra eggs, omelets, cereals or stuffed eggs.

Your dealer will supply you with Wilso *Certified* Bacon, Ham, Lard, Shortening, a other Wilson's *Certified* products.

"This mark WILSON & CO. your guarantee"

WINTER LIFE IN THE CZAR'S CAPITAL

(Continued from Page 17)

e or less mixed masses, till the tree den down and toys and other gifts nded it. Then the artists would come rom their stepladders or scramble up eir knees, tired and dilapidated, but sely satisfied after a long evening of irty work.

faculty of Russians to do a small th such delight, simplicity and serious ion always seemed to me one of their st charms. That and their love of n. I never could have brought up ree rollicking offspring had it not or the good advice and aid of all the ed aunts and uncles, who knew these people well and were adored by ttet. Somehow in our Russian life ship had a more intimate and greater eance than it has usually elsewhere world, and there seemed more time mpanionship as well. Long hours of were always possible as one sat in the fternoon or through the evening, with inevitable tea and cigarettes being d about.

y, intelligent conversation there was, every sort of subject came up and handled with unconscious brilliancy. tally in the society of old Russia one the same sensation as one has physi- when one's body has been thoroughly ised and is exactly fit. The whole at- phere of a Russian party, whether large intimate circle, seemed full of con- ce and affectionate understanding, of culture, free from all pedantry and , and there was invariably good breed- with no pretensions or mannerisms to it in the least. This, with sparkling good spirits, charity and kindliness, le up a society difficult to reproduce where, and of the most compelling at- tion to all foreigners who had the good to be included in our circle.

The Sovereigns Receive

With the first of the year and the levee d at court the season began in dead nest and society became the serious ness of our young women's lives. When Sovereigns were in town, before the sso-Japanese War occurred, the Em- s held court on New Year's morning d received in person the good wishes of r subjects. These, like herself, were ssed in typical national costumes. exandra-Fëdorovna's perfect features, e beautiful oval of her face, her classic ad and shoulders and her regal carriage re well adapted to the gorgeousness and ight of all she had to wear and the Czar- a's costumes were of legendary splendor. ittle as she cared for extravagance in odern gowns or hats from Paris, her na- re responded to the possibilities of ancient finery. Her love for beautiful brocades, r ancient laces, for rich embroideries of mas and other precious stones, for furs nd rare jewels, led her to create for her- lf clothes magnificent almost beyond elief. She liked, I think, occasions when he wore court dress. It suited the Em- ress' rather heavy figure and she was supremely well built to carry off the massive tuliness of it all. High Kakoshnik head- ress and long lace veil, slashed sleeves that ell to the floor, an underdress of metal and stones embroidered, with overdress and rain that taxed even her strength, became ar- well. Sometimes it was all cloth of gold, r velvet, or brocade, with always wide arderings of priceless dark sables. Over ll this—jewels, row upon row. Her Maj- sty wore about her neck pearls and dia- monds of most startling size, and they spread down on her dress, covering her as with a sparkling buckler.

The grand duchesses and the rich ladies f the court did their best to follow this example, but though they represented the best of taste, with often real creative talent, they had no such supplies to draw on for their costumes, and were forced therefore to modify ambitions which might otherwise have been allowed to soar. Here and there about the palace halls, some original note in color or design among the gowns attracted the eye. Such was a train of turquoise velvet with great sheaves of Easter lilies wrought in metal and soft silks upon it; and further on there was a train where the embroidery reproduced the tail of a proud peacock in its natural coloring. There were very varied patterns and many lovely old brocades. In the immense halls of the Winter Palace enough floor space existed to spread out all the trains, and the ladies of our court could preen themselves and show off their fine feathers beautifully on New Year's morning.

The men meantime were being received in other halls by the Emperor, who in the midst of his courtiers and officials of his army and navy always apparently felt an agony of shyness. Yet he made his round of the diplomatic circle gathered in one hall, and found some short phrase or question to address to each head of mission in that line. He did the same among the Russians.

During the days that followed, the talk of the town bore much on the great function of the New Year's reception, and always it showed the reactions of those who took part toward the central figures in these picturesque scenes. Toward the Empress there was unreserved admiration for her great beauty, no mention of Her Majesty otherwise at all. About the Emperor there was much talk as to what he did and said and how he did and said it, of how he looked, the charm of his expression, of how hard it was for him to do his share in any society program. A mixture of awe for the head of the church and state, of sympathy and a desire to aid the shy man, and a real regret that by his official rôle His Majesty was always forced to do these things which were so against his simple bourgeois tastes. I am sure when New Year's Day was quite over the Sovereigns drew a deep breath in sheer relief, but their guests of the morning kept a warm feeling in their hearts for those who ruled them, and who were to many of their guests really their Little White Father and the father's fairylike consort.

As soon as people left the Winter Palace they were seen rushing about all over town in tiny sleighs or broughams, which stopped and emptied their occupants at the grand-ducal palaces. We all were obliged to inscribe our names upon the books left in their anterooms by the members of the imperial family. This was the equivalent of a call on royalty and the scribbling of one's name was an excellent excuse for a few moments of pleasant conversation and the exchange of a compliment or two with other visitors.

About six weeks of quite mad gayety followed this opening of the season. It was only in old days, before the war with Japan, that the Sovereigns played any part in all this and gave their share of entertainments. Then the Winter Palace was often open. Their Majesties arranged to have at least one great party each week.

Court Entertainments

A large court ball—for three thousand people, who didn't overcrowd—began the series. Four smaller balls followed, where about four hundred was the limit of the guests. Then came the dinner dance which wound up carnival week and was still smaller and very informal. To the first ball every bureaucrat and army and navy officer of colonel's rank or over had the right and duty to go and take his wife. The category of guests for the second variety of party was made up of the court functionaries, the imperial guards, society and diplomats; and these were very attractive balls, where half those who were present looked on, while the younger element danced. Finally the last party of our season occurred in the Hermitage, and only young dancers were commanded to the feast.

At none of these were the guests in court costume, but merely in full ball dress. Yet jewels and uniforms, decorations and gold lace made a fair show to gaze upon. The men were well set up and generally both tall and handsome. The women possessed intelligent faces, with distinction and elegance, even when they had no special claim to beauty. Many were very handsome, too, and they wore their family jewels and their fine clothes without any trace of self-consciousness.

All strangers were struck by the simplicity and charm of these aristocratic people, who bore such ancient names famous in Russia's history, and who had such

REZNOR

GAS BATHROOM HEATER

Bathroom Comfort at the touch of a match

In building or remodeling, be sure you provide a permanent method of heating your bathroom on chilly days when the furnace is inadequate or not operating.

The Reznor Bathroom Heater meets this need completely. Occupies no floor space, is always in place, and gushes heat the instant it is lighted.

Easily installed in any type of wall construction, is a complete unit in itself, and the only appliance of this kind on the accepted list of the underwriters' laboratory, established and maintained by the National Board of Fire Underwriters.

The Reznor Bathroom Heater is the finishing touch to the modern bathroom.

Write for our free booklet of complete information. Then consult your architect, building or plumbing contractor, and be sure "Reznor" is on the heater you install.

REZNOR MANUFACTURING CO., 10 Main St., Mercer, Pa.

Doubles Business In Four Months

Anderson Brothers, retailers, of Joliet, Illinois, have *doubled* their business in four months through the use of a Rotospeed Stencil Duplicator.

George K. Birely and Sons of Frederick, Maryland, secured $25,000 worth of *new business* by using it. It *saved* a manufacturer more than $1,000, and it earned, for another user, a net profit of *six times* its cost from *one day's work.*

ROTOSPEED STENCIL DUPLICATOR

Here is a machine that prints form letters for 20c a thousand, good, clean-cut letters with all the power of typewritten originals. Any operator can turn them out at the rate of 75 a minute—enough for a large mailing list in an hour.

Simply write or draw the form on a sheet—attach to machine and turn the handle—that's all.

You can save half your printing bills, for this same machine, without additional equipment, prints bulletins, price lists, ruled forms and announcements—anything that can be hand-written, typewritten, drawn or ruled—even illustrated letters with fac-simile signature—*in one operation.* The price, complete with full equipment, is only $43.50.

$43.50 Complete

Try It Free

You can put Rotospeed in your own office for ten days absolutely free. You can prove for yourself that Rotospeed will increase your business and decrease your expense. At the end of ten days decide whether you want to keep it or not.

Ideas You Can Use

Do you want copies of sales letters that sell goods—bulletins that bring in new business—collection letters that bring home the cash? We will gladly furnish you copies of letters printed on Rotospeed and used by firms in *your* line of business. These letters will cost you nothing. Check the coupon below and we will send you at once either the machine, fully equipped and ready for work, or booklet, samples of work and details of our free trial offer.

THE ROTOSPEED COMPANY

776 East Third St., Dayton, Ohio

Mail This NOW

Indicate by check mark whether you want sample only, or the fully equipped Rotospeed on FREE TRIAL.

THE ROTOSPEED CO., 776 E. Third St., Dayton, O

☐ Please send me complete Rotospeed Machine and Free Trial Equipment. After 10 days' Trial I will pay $43.50 or return the machine.

☐ Please send samples of work, booklet and details of your Free Trial offer. This does not obligate me in any way.

MACGREGOR

Bristol STEEL SHAFTED WOOD AND IRON CLUBS

In certain parts and with certain players there has existed a desire for steel shafted golf clubs. For several years we have experimented with steel construction and have this season perfected for the market a wide range of both Wood and Iron models fitted with a tubular steel shaft. Our assortment of these clubs is illustrated below.

In actual practice MACGREGOR Steel Shafted Clubs have been meeting every test. They may not give *you* greater distance or please *you* so well, but there are many who assert that they get greater distance and accuracy with all their shots. They certainly do give excellent control, splendid timing, remarkable direction and unquestioned durability.

We urge you to try at least one steel shafted club—and others if the first appeals to you. Ask your Pro or Dealer about them. Also get our complete free catalog. MACGREGOR Steel Shafted Wood Clubs in all standard models, $8.00 each—Iron Clubs, $7.00 each.

The Crawford, McGregor and Canby Co. Dayton, Ohio.

splendor of estates, palaces and jewels for their background. It is true I never heard a Russian say, nor saw him do, anything inspired by snobbishness. All were judged by their personal merits and not by any glittering thing which belonged to their frames. Nothing could change the verdict nor society's point of view, once taken. Some of those best liked and most invited in society lived in small, cheap homes and had but shabby clothes, yet everyone went to their apartments with as much enthusiasm as to the largest palace's fine fêtes.

It was the same with the diplomats who came to Russia. They were asked to a few official parties, and were examined at these calmly enough. If their personalities attracted, they found themselves quickly taken into society's intimate circle. If they didn't make good when they were thus inspected, these foreigners might stay for years accredited to our court, yet never advance farther toward success. No matter how much they happened to offer in the way of entertainment, they could not overcome the prejudice against them. Puzzled and defeated in their efforts they would call our society cold and indifferent, never dreaming they had merely been looked over and found wanting, and that no one was taking the trouble to be rude. Simply that particular outsider didn't exist, no one even thought of him again, and he would never realize he had had the same opportunity others had had who made a real success.

Late hours were the rule in Russia. Men and women liked sitting up, and we were asked to supper at midnight more frequently than to dine at eight o'clock. The Russians could sit indefinitely over their wineglass or cup of black coffee, listening to gypsy music or merely talking. It was pleasant never to be restless nor to see others so. Time was without value, and so long as the company was congenial, as some foreigner said, a matter of spending one's night in sleep became purely a conventional idea, easy to discard. Political work was done at night, cabinet meetings were held and even business was transacted across a table in some restaurant.

Spoofing the Professor

Another curious and agreeable trait of Russian society life was the democratic way people mixed. Some simple self-made man, were he sympathetic, was included at once, and might become the center of all gatherings in which he took a part. This was so of a number of our cabinet ministers. Springing from the peasantry or the small bourgeois class, they gained interest or approval always were they genuine and interesting personally. The most notable example of this was Krivachène, the Minister of Agriculture for years. Of humble origin, born with great brains, with charm and of dignified manner, he was a favored guest always everywhere; and there were many others who were of his fine type in our capital.

There was no drunkenness in society; never once in the nearly twenty years I lived in Russia did I meet a man at dinner or at a ball who had had too much to drink. It was not spoken of or discussed, but simply did not exist. Wine was served everywhere plentifully; in all houses old port or sherry with biscuits stood on a smaller table near our tea tables of an afternoon; and those who did not like tea sipped their wine in comfort. Red wine and white were served at all meals, champagne at every dinner or supper, and as much as anyone cared for. It was a matter of proper training, how much one drank. Good taste left each individual to decide when to stop, but all the hospitable wealth of alcohol made no apparent trouble. No man aimed at drinking too much any more than at overeating, and no watching of the youngsters by anxious hosts or hostesses was ever necessary in St. Petersburg.

Among the peasants and the working people vodka was considered a necessity because of the cold, and was used constantly. There was much hard drinking of a Saturday night or on a holiday; and in the streets then one saw those who had had too much, sitting about, talking, embracing, singing or wandering home in zigzags; but hardly ever were they fighting or scolding one another.

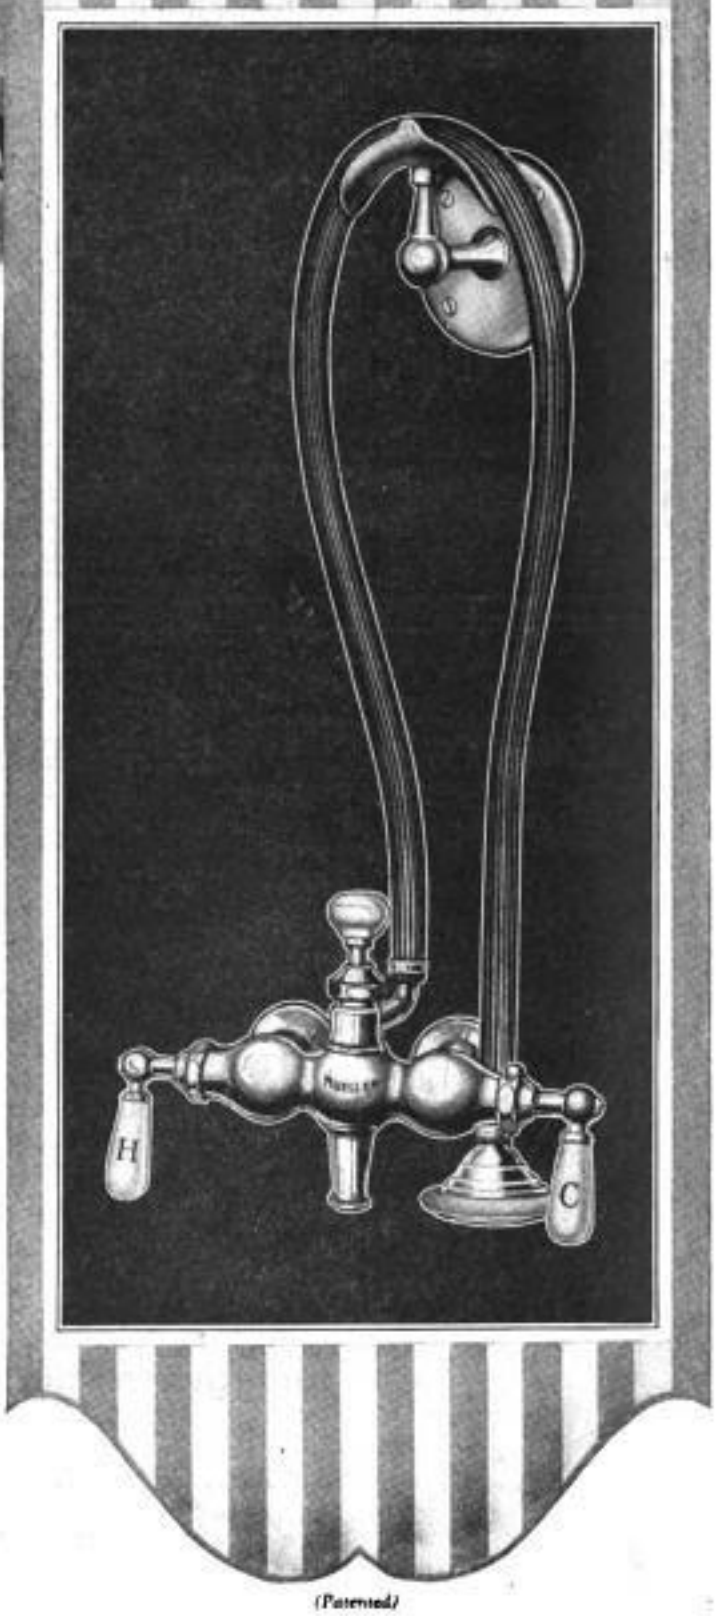
At the regiments, when the officers congregated at their mess for lunches, dinners or suppers on the feast day of their patron saint, or met to celebrate some victory over their rival comrades in the field of sport, or when they invited the officers friendly regiment, the wine flowe through long hours and toast aft was drunk. It was well known th regimental parties were of fixed ha traditions, and they were put in a by themselves. Occasionally some story leaked out in spite of di but not often; and though various ladies then shook their heads in di this or that youngster's prank, t fathers understood and condon wives smiled amiably and found occupations for themselves on the of such entertainments.

One delightful anecdote was re me of some youngsters who, be time in Russia, between high spi champagne had gotten beyond the in the wee small hours of morning their barracks they had rung up phone the imperial observatory capital. A weary man on du answered their call was told to Professor —— by orders from the quarters, and to request the profe report at the instrument at once. the sleepy voice of the scientist over the wire asking for orders, and rejoinder was carried back: "We w ask a serious question of you, sir. With what do you habitually feed th Bear?" Professor ——'s reply i corded, but within a few days be report to the Emperor, who in turn young chaps severely reprimande incident made those who origin famous, and people long after woul to it in connection with any gay party, asking if curiosity hadn't scientific matters? But one nev occasion to wonder if the man sit one at dinner or dancing with one a was in condition; for in society o sure of safety, and no man dran women present, save in the privat *cabinet particulier*, where the wome consenting parties to the bout.

Dinners at court, at the embassies great houses, were pleasant ways of ing together old and young in groups than at the entertainments were set for later in the night, and carnival season there was never an e free and hardly ever one without parties to follow one another. Nor flicted, however; and one of the attractive traits in the Russian cour was the declared intention of each l to go to others' entertainments, and to draw guests away from a rival' Each in turn did her best to amus attract, and the general amiability for an enjoyable atmosphere. Ther really wonderfully perfect suppers music, flowers and food all admiral were the magnificent homes, which the proper frames for such gay gath

Indescribable Magnificenc

One would like to describe in deta people and their jewels, the splend their dresses, the brilliant convers and the greatness of many names i traditions and the history of their One would like to tell of the art tre collected about these men and wom the marbles, paintings, carvings, br porcelains, and the many precious ob worked by old masters' hands, the staircases and the sumptuous halls retainers devoted to each house, old in service there and jealous of an house's reputation. The fact of the m is, one must have seen it to quite reali this. Russia's magnificence and hospit beggared description and were above parison.



Legendary in size and quality, buil through centuries, this bloom of in civilization was swept away before winds of war and revolution. An ago suffering occurred which drew no n and these people showed heroism suc few in the world's history have ever sh and prove to-day a faith which will into the far future. To rebuild with lib forgiving spirit a new Russia on the rui the old feudal one, which had outlive time, and to refuse to cry for mercy is fine Russian's ambition wherever he vives. Sometimes it is difficult to bel that the old life is a closed chapter and so many millions of our people have off or been killed in the past seven ye while their land has been blighted and constructive effort or the results of it h been destroyed.

A bath a day—
the Mueller way

(Patented)

The New Mueller Tub-Shower Faucet

WITH this new invention you can take a tub-bath or a shower-bath. You can enjoy a hot tub, followed by a warm or a cold shower. You get the combined advantages of both tub and shower. Cold, warm or hot water can be drawn from either spout or spray.

The hose is permanently attached and independent of spout.

Dad and the boys can have their cold showers—mother and the girls can have warm showers or tepid tubs and luxurious shampoos—all with the Mueller Tub-Shower Faucet.

Any good plumber can install this device on short notice. It fits any regulation bath-tub. It requires no attention—is always ready to add to the comfort and convenience of all the family. It lasts a lifetime.

Write for the free book on "Dependable Plumbing" describing the many useful Mueller Plumbing Faucets, made to meet every known need. Where building or remodeling is contemplated, file this advertisement for future reference.

Mueller Tub-Shower Faucet No. E-3175—makes the tub you now have into a shower—encourages the bathing habit with the children—saves time and adds to comfort. Also recommended for use in hotels and apartment buildings. Order today through your local plumber. Price $12.50 in United States; $15.25 in Canada.

THERE is no sympathy so helpful to a family that is bereaved as that of true friends and no help so reassuring as that of the good funeral director.

Acting in your stead, he understands that he must act in your spirit, performing each task with the reverence and tenderness with which your own hands would perform it if they could.

Sympathy which cannot be gracefully conveyed by words is revealed through his acts of service which bring the comforting assurance that every attention has been given with thoughtfulness and skill.

There is a good motion picture theatre near you, furnishing clean amusement at a modest price.

Visit it tonight!

PATHÉ Exchange, Inc.

(Continued from Page 142)

Even so, though, Russia is the richest country in the world in natural resources, and in its people, too, for it has in spite of famine, war and pestilence, the largest population of all white nations, and the nation's birth rate remains high. Its spirit, too, is fine, for faith and hope and charity toward all mankind are shown. Such traits as the above make for survival and for constructive force whatever comes.

Between balls and dinners at court there was another form of entertainment, which was one Her Majesty the Empress Alexandra particularly liked. It was the theater; and about once a week a performance of opera, play or ballet was commanded in the tiny jewel of a playhouse which the Winter Palace held. The stage with its settings was perfection, as were the decorations in the pretty auditorium, and it held only a small portion of the members of the court, since nothing was ever allowed to be crowded or uncomfortable. "Commands" to one of these performances were greatly sought and hoped for.

A thing which struck foreigners very much in our society of St. Petersburg was that the Russian never talked of money. If he had it he spent lavishly on others and on himself; did his charity and entertaining in quite regardless style, sent to the Crimea for fruits and to the Volga for caviar, to the Riviera for his flowers, elsewhere still further to gratify a whim, but with unfailing tact the price of all this luxury was never mentioned, not even thought of. The gold was there to be used where needed; and that was all. If one was quite poor it didn't matter, one had just as good a time and no responsibility, no sordid or snobbish thought or word disturbed the elegance of lives full of refined comfort, without thought of ostentation. I delighted in this trait, for it was so very unusual in our day in other lands. Open-handed charity was theirs in word and deed, a warm and cordial welcome to those who came among them was offered whether it was to the self-made man who had worked his way from peasant bed rock, or whether it was to a foreigner married into the charmed circle. Provided their personality pleased, they were asked for nothing more. Among the many American girls married to Russians not one that I can recall had any money, and all were very happy, I think, in their adopted homes.

Carnival Week

The season drew on to its carnival week, and the parties grew later and later, gayer and gayer, as they followed one another. A British diplomat once said to me, "During the season I never feel I've had a successful evening until in closing the door of my car about five in the morning, and after the third party, our footman says to me, 'Where next, sir?'"

There were costume balls, *bals à têtes*, and plain balls or those with some feature such as a gay quadrille in fancy dress to open with. For Christians of the Russian Orthodox Church, Lent begins always on a Monday, therefore our carnival lasts for a complete week, and in old days it piled up pleasure upon pleasure for the gay young set of the imperial court. The special carnival dish, *blini*, was eaten twice a day. A *blini* is a rather thick batter cake, heavier than our pancake and fried in butter, in heavy small round metal pans. Served sizzling in the pans, these cakes were delicious, especially when covered with drawn butter, fresh caviar, smoked salmon or sour cream. Such combination of excellent things would have been a real problem to any digestion but that of a Slav, but with him it seemed nothing worth mentioning to put away five or six of the heavy cakes and their attendant mixtures as a mere beginning of a meal. To do it through seven days was a test, yet a number of people I knew had much better records than five or six! I was told stories of carnival celebrations in Moscow, in earlier days, when men raced with one another, and considered it proper to swallow as many *blinii* as it took to build up from one's plate upon the table, a leaning tower the top of which should reach to and support one's chin! I have never had opportunity to verify this interesting statement, however, and it may well be a little exaggerated.

On the last day of the carnival a dinner, followed by a cotillon, was given at court. It lasted only till midnight and it ended the season. In many ways it was much the most wonderful fête of the whol

Emperors, Empresses, favorites and
men of centuries long past presided
our gayety, and a grand array of t
ures, such as no other dining halls in al
world possess, stood about. It had t
many millions wisely spent to collec
the beautiful things. Jeweled ornam
from the sovereigns of Asia given to
great Catharine, others offered Eliza
or Peter crowded those belonging to otl
of their line. There were things made
patient, clever fingers in all parts of
world—porcelains, enamels, the finest
embroideries, weavings and arms, cabi
work and ancient furniture, all rare pie
which meant years of effort in old days
which in their way seemed as perfect as
paintings.

The Unassuming Czar

Rich magnificence of background we
tainly had for our feasting, though it
with some difficulty one singled out t
main objects meriting admiration. Eve
thing was so perfect, and the owner of it
was so unconscious, so little aware of h
great power or his great treasures as h
moved about or sat shyly down among h
guests. Never, even among all the sigh
seers who by day passed through th
museum, had a simpler or more modest ma
walked in those halls than the Czar of a
the Russias, Nicholas II. I often looked a
him and wondered how he could be as h
was. Completely unassuming, never did h
say anything that would have led thos
who talked with His Majesty to infer tha
any of this grandeur belonged to him, o
even that he was connected distantly with
all the state about him. Sometimes one
felt tempted to speculate as to whether
anyone else in all the world could be so
detached from the attributes of the position
he occupied as was our sovereign. He had
been kept exceptionally young both in his
education and in his family life by the
dominating old autocrat and giant Alexander III, who had made all Europe tremble
through the years he reigned. Then the
son, left with a great load upon his
shoulders, found it impossible to follow in
his father's footsteps. He didn't need or
want much for himself. A modest bourgeois in his habits, seriously he was interested in what his ministers reported to
him, intelligently he questioned them, and
honestly he tried to make decisions on the
information given. He hated the pomp
and ceremony, yet went through it without
complaint, suppressing what he could, escaping when there was a chance left open.
For the rest, if escape was not to be, he
accepted his destiny and had an expression
of bored patience or resignation, almost
sadness, which came over his quiet face.
Sometimes one saw real longing spring into
his eyes, as some young officer passed by,
a laughing woman with her hand upon his
arm.

Everyone felt sorry for His Majesty at
his own parties. The Empress was generally absolutely silent and her beautiful
mask wore a cold, tense look, the hard lips
had a bitter curl as she watched the dancing
or heard the laughing of her guests. It was
left constantly for the Empress Mother to
strike a note of cheerful hospitality and
welcome. She was always beautifully
dressed whenever she appeared, and her
musical laugh and graceful manner put
everyone at ease. The balls and dinners
to which she went were the brighter for her

h in great numbers were singing hap-
, and it seemed a bit of fairyland where
pair weary of dancing might wander.
re were few who left the ballroom, how-
r, for if one moved about one missed
only the dancing but the beautiful
vers given out to every guest. It was
h a floral figure this ball ended. There
e delicious bouquets from the imperial
enhouses—violets, mimosa, jonquils,
rcissi and lilies-of-the-valley in large,
nerous bunches. They seemed miracles
fragrant beauty, especially if one
ought of the climate outside, with snow
d ice and blizzards enveloping the
pital.

A Serious Undertaking

So the season was concluded, and then
th their usual intensity the gayest of the
ussians turned toward higher things, and
t about the saving of their souls with real
thusiasm. "We are doing our devotions
d will see no one for a time," was the
planation given for many an attractive
uple's disappearance from their usual
unts. And "doing devotions" was a se-
ious undertaking. It meant a week of con-
ant fasting—that is, of limited food, and
ost of that fish cooked with oil and vegeta-
les. It meant two or three hours of church
rvices daily, and these were the most dry
nd dull of all the services on the church
alendar. Finally Friday, the fifth day,
brought the devotions to the point where
confession relieved a penitent's soul. This
once over, spirits rallied and the solemnity
of patriarchal worship left that particular
household, not to return again for a whole
year.

During Lent some of the embassies gave
great official dinners, and there was music
at the opera and at concerts as well as in
many homes. It seems to me all Russians
I have ever known were musical, to some
extent at least, and that they could con-
tribute always, when called on for it, to the
pleasure of a quiet evening gathering. We
had many such evenings in our own home,
where amiable amateurs were able to sing
or play for us, and if their program con-
tained well-known songs every member
of their audience joined in. At the opera
and playhouses it was wonderful to see the
enthusiasm. It might be either for a man
or for a woman, but when their favorite
appeared the people's applause was deafen-
ing, and after each act the whole audience
would rise and make a terrible racket, call-
ing madly the artist's name and renew-
ing their handclapping. And the singers
responded cordially. Many a time I've
looked about me with surprise as some one
of the capital's best artists asked what was
wanted, and then sang some simple old
folk song or a gay modern air to please an
audience so excited by its hero worship
that it could hardly stand quietly to listen.
I don't believe I ever saw Russians excited
by anything but music—and I liked them
the better for their single exception to an
unpublished law.

Easter ended our winter festivities with
a last splendid celebration, the most typical
in all the Orthodox church year.

Generally at Easter St. Petersburg still
wears its soft white garments of snow, and
the beautiful architecture takes on an
added mystery, to which the deep night
sky above gives only further attraction. It
was far from dark along the thoroughfares
of our old capital on Easter night, however.
Wide as the streets were, the crowds which
moved along them filled them completely,
but one could in spite of this see that every-
one wore his best clothes and felt pleased
and kindly, for there was no jostling. On
the houses there were everywhere electric
decorations. Great stars or brilliant crowns
or the imperial arms and monogram, made
in small bulbs, shone out like diamonds,
and lanterns and red bunting aided in the
effect of general festivity. The lamps to-
gether with the arc lights of the street
showed long processions of carriages, sleighs
and pedestrians to advantage. The people
were all well worth examination. Never
shall I forget our throngs, the neat, pros-
perous aspect of which was immensely
striking.

Easter Customs

Contentment and shining cleanliness
reigned, for in no phase is the gentle Rus-
sian so typical as in his religion or his
hospitality. Easter is the time above all
when these two elements combine to put
our nation at its best. Seven weeks of
fasting, of penance and of prayer, when fol-
lowed sincerely, prepared him to appreciate
the deep joy which Easter means to a
primitive and faithful Christian. At the
end of Holy Week, having confessed, he was
absolved, of course, and took communion;
then on the Saturday, late, the Russian
baths all over town had done their work,
and best clothes—civilian or uniform—had
been withdrawn from their wrappings and
donned to celebrate.

With everything at home burnished and
decorated, the whole family was finally
ready to wander out, laden with the dishes
which must be sanctified at church. Such
quaint bundles these made. Held in white
or in embroidered cloths which were a riot
of gay color, there were round platters piled
high with brilliant red, green, purple, blue
and yellow eggs, hard-boiled. These were
held by the father of a family, and the
mother was carrying the *Paskha*, or creamy
cheese with raisins in it. Children trotted
along and brought the family *Koulitch*, a
round cake appropriate to the Easter festi-
val. On each dish must always be a great
flower of brilliant pink or red tissue paper.
Sometimes one small platter held all the
modest repast of an individual or of a poor
family, but some extra food was always ob-
tainable, and it was always as gay and cheer-
ful looking as the face above the platter was
serene.

Threading their way along the great
Nevskii Prospekt the vast crowds parted
here and there to let sleighs, court equi-
pages and motors pass, and the latter moved
slower than usual, for it would have been a
crime to upset one of the precious bundles
in the concourse. Smiling eyes turned to
look at one. It was impossible not to smile
back and exchange a word of greeting, and
truly that night, at least, all men were
brothers in their happiness. Out at one
end of the Nevskii Prospekt was the mon-
astery of St. Alexander Nevskii, patron
saint of the great city, and there in the
ancient church the service would include
the singing of a choir called the most won-
derful in Russia—not a mean reputation in
a land where all the inhabitants have a
genius for song. At the opposite end of the
street the magnificent mass of buildings
visible included the Winter Palace, the
Admiralty and the Cathedral of Saint
Isaac. The latter's gold dome glistened in
reflections against the dark sapphire sky,
for on the four corners of the edifice flamed
up great torches held by bronze groups of

Mother Wants Your Photograph

COLLINS

You can identify Collins folders by the Oak Leaf trademark on the back. Mention "Oak Leaf" to your photographer and he will know that you desire the best he can give.

No PORTRAIT is so completely satisfying as one made by a professional photographer.

O, sons far away, and daughters, too! Remember your mother on Mothers' Day. Send her your photograph; a good one, the best you can get. Let it speak for you on this day of gratitude.

Go to a professional photographer. He records personality. By light and shadow, by masterly blending of paper and chemicals, he produces that other "you" which never grows old. As a final touch, to enrich the picture, he will encase it in Collins Photographic Mountings—the professional settings for portrait-gems.

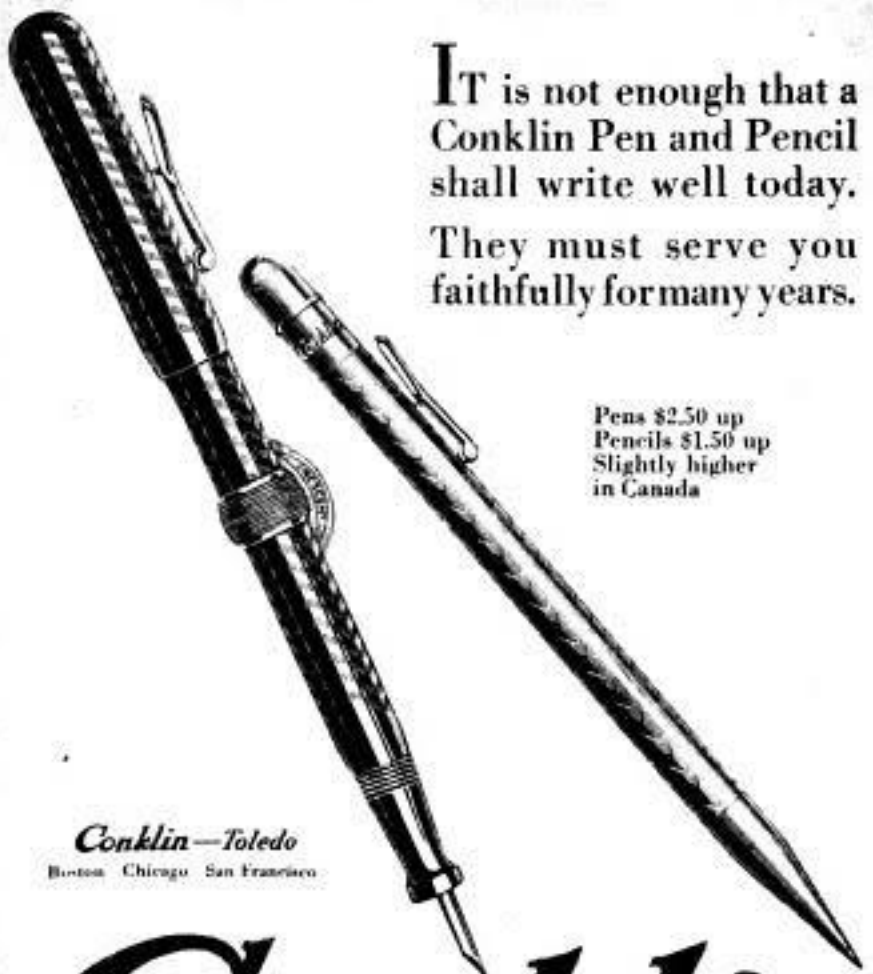
EVINRUDE OUTINGS No. 2
Distant fishing grounds are easily reached when your row-boat or canoe is Evinrude-powered.

Fishin' De Luxe!

THERE'S a new joy to fishing—a new "e-fish-ency"—when your boat is Evinrude-powered. No long, tiresome row to take the edge off the day's sport. You reach the best fishing grounds early, and you're fresh and fit when you get there. You've set up your tackle on the way.

With this sturdy little motor to do your oar-work, you can go from weed-bed to weed-bed until luck is with you, without a thought of your distance from camp or cottage.



The Evinrude is now made in two models, Standard and Lightweight. Both motors are the same in design, power and speed. The Lightweight is more portable—due to judicious use of aluminum, it weighs just 50 pounds complete.

See these Evinrude motors at your sporting goods or hardware dealer's. Ask him about the Built-in-flywheel Magnum, Tilt-up Attachment and other Evinrude features. Or write for catalog and new prices (recently cut to pre-war level).

angels of colossal size. Outside, it was a marvelous sight, while a fairyland of color and sound existed inside the mysterious and magnificent cathedral. Lined with rare marbles and semiprecious stones, their splendid colors gleamed, reflecting back thousands of tiny tapers held by humble worshipers.

It was to Saint Isaac's that the diplomats went for their midnight mass at Easter. The women in light gowns and the men in gold-laced uniforms looked very fine indeed in such a rich frame. Halfway up the Nevskii the Cathedral of Our Lady of Kazan was also packed with people, and their clothes and platters divided one's attention with the gold decorations of the church itself. This Madonna with the Christchild in her arms was an icon much revered and cared for. Had she not escaped the hands of the Tartar enemy and floated on the Volga's waters? Had she not granted many miracles to such as sought them of her in true faith? On Easter night the tapers twinkled by the hundred in the candleholders all about her, and gave full value to this icon's strange beauty. One gasped with wonder at the masses of jewels piled up as thank offerings by the devoted at this shrine.

The mass of humanity extended forth from the altar screen out into the church, and it overflowed into the colonnades, even to the little park outside. This was so of all the churches and chapels in the capital, however. Around Saint Isaac's the great square was filled to capacity, and in the smaller churches and the private chapels of various ministries or palaces the rooms beyond the actual church space were filled also with well-dressed crowds, who came to join in celebrating the Resurrection with the inhabitants of each house.

At a few minutes to midnight long processions formed: Bishops and priests, deacons and choir boys, with all the others who composed the Russian church officialdom. They moved out among the people, carrying banners and crosses, incense and tapers, and as the clock struck midnight a chant of triumph rose announcing that the Christ was risen to save all men from sin and punishment. Louder and louder in its full glory spread the news, and new tapers blinked and burned, adding more light and color to the lovely scenes and glorious sounds. One of the hours well worth living was this midnight time of a Russian Easter, one of the hours whose fine memories linger when the splendor of a whole nation bends in adoration of the best the world has known. High and humble over the whole land then gravely embraced and kissed three times, announcing to one another in brotherly affection, "Christ is risen," and answering, "Verily he is risen!"

Following the church ceremony came the happy feasting, full of touching incident. Every commander of a regiment or of a squadron kissed three times each soldier under his command. Every owner of a palace kissed each mujik in his employ, and so it was through all society class or caste.

My women friends and I, like m and I, followed the quaint old cus exchanged pretty jeweled or enam or other little gifts appropriate to son. In our home kitchen stood table with the traditional dishes and to every servant in the hou allotted a dozen eggs and part of a pig or mutton and ham, togeth *Paskha* and *Koulitch* in due propor share of beer or wine, of which our generous supplies prepared, was added. Then a sum of money was the household servitors by us for t party; and this was so in every ho any patriarchal self-respect in old

Great pride was taken both by t and by our simple servitor guests in their table heavily laden and beau look upon. When an Easter feast plentiful to transport to church it nearest priest who came to us to b food and scatter holy water on it, ceremony in itself was charmingly and touching in its symbolism. A of the Grand Ducal palaces the re in holiday clothes, stood about th room, where long tables were *laid* ou care for them, and the priest walk and down blessing their provisions, the Grand Duke and Grand Duchess with all their suites and friends lookir

My husband and I went first to ou regimental church always, and it was an the soldiers and our comrade officers their families that the earliest congrat tions and embraces were exchanged. T from the paschal feast at the command quarters we sallied forth into the illu nated night to visit other homes, those the friends we knew and loved the b In all these palaces both servants a owners received us with open arms and t classic salutations. It always impress me immensely to think that in the Czar capital the night was spent this way b some two million citizens, while out farth in the land one hundred and eighty milli Russians did the same things, believin with a deep faith that Christ had given hi life to save them, and that he was risen again and all was well with this great work of ours. Russia at prayer and Russia feast ing and believing was a wonderful sight.

Those who know the Russians best often think of them thus. They feel that when the criminals who have seized the land and so cruelly bled the people fall at last by their own weight of rottenness, the real Russians' spirit will again rise high above the destruction and death of this ghastly period. The nation will live again, and again will pray and feast in somewhat the old way and will say to other nations in brotherly faith and love, "Christ is risen for all of us once more." And as one looks about at civilization one wonders what will those others reply to them. How will they explain some of their words and actions during Russia's time of agony?

INSIDE

can do this job better, whyn't you talk up and tell folks so? Kind of used to voting for me; you want to beat me you better campaign some."

He could see the pucker at the edge of Cole's eye. He nodded gently and patted the wet cloth of the bundle on his knees.

"Sim, I ain't going up in the hills after those boys. It don't look like good sense to me to kill a lot of decent folks on the chance of hanging a few bad ones. We ain't going to bring Joe Macrimmon back alive no matter how many we hang anyways."

Cole risked a quick side glance at him.

"You mean you aim to leave 'em alone—not do a thing?"

"Comes to something like that, maybe."

"Guess it's time somebody run against you then."

Mackenzie nodded.

"That's what I'm saying, ain't it? You go ahead, Sim. Talk to folks. Kind of got in the habit of voting for me, like I said. But you got plenty to tell 'em now."

"Aim to," said Cole.

III

DAN MACKENZIE could feel the thing in the air as he gingerly brought the panting car to a stand in the blot of shadow beside the warehouse. It reminded him of the queer way he could feel the coolness on his cheeks when he dipped into one of the deep hollows where the cold air settled and hung like water in a pool. Sim Cole had been talking, he knew. But it was strange to meet so many eyes without friendliness in them. He answered nods and words in kind, a faint taste as of bitterness on his lips. They'd known him all their lives, these men, and they judged him now as they might have judged a stranger.

He turned in at the driveway where the carts entered to unload. It was still early, and the narrow lane was full of wagons from which men were lifting sticks on which the hands of tobacco were spitted like mutton on a ramrod. The warehouse negroes slipped the leaf deftly off, piled it in neat circular heaps on the flat wicker trays, wheeled these to the big scales, where the weigher marked each with the grower's name and the number of pounds. Arranged in long rows on the cement floor, the full trays left narrow aisles, through which men strolled or loitered here and there to inspect a particular lot.

Mackenzie imitated their procedure, conscious of covert, curious stares behind him. He came face to face with the proprietor, Len Ganton, a plump, smooth-shaven veteran, whose thick hair seemed strangely

This Comer Coat is the only coat you'll need

Here is a new Comer Coat for men. One coat that takes the place of many, and serves a dozen purposes. A coat for business, for sport, for travelling, for fine weather and bad, for sunshine, rain, storm or cold.

It is made in a wide choice of fine, rich worsteds, cashmeres and twills, with a hidden inner layer of light, flexible rubber to keep out wind and rain.

You will wear this coat to the theater and for all social occasions in preference to any other, for it is always correct and in good taste.

You will take it when you travel, for it is ready for any weather, is easy to carry, and can be packed in little space.

You will wear it when you drive, for it is comfortable and keeps out dust as well as rain.

In stormy weather you will simply button up the convertible collar and your fashionable top-coat becomes a weather-resisting raincoat, different in appearance, but with the same style that always characterizes a genuine Comer Coat.

Here, then, is the ideal combination of utmost style and serviceability—an unusual coat that you will wear every day, every season, and for every purpose.

Four Distinct Advantages in buying the "Comer Way"

This coat is one of many that can be bought only from a Comer Representative.

The Comer line includes coats for every member of the family, men, women and children, in an almost unlimited variety of fabrics, styles and prices.

Through this plan you can choose your coat in the comfort and privacy of your own home, without the tedium of shopping and without the bother of tiresome try-ons. Your coat will be delivered to you direct from our factory by parcel post.

There are four distinct advantages in buying your coat this way:

First—The Comer Plan enables you to select the exact model that best suits your taste. It gives you a wide variety of materials from which to choose. It gives you a wider selection than could possibly be offered in any stock of coats.

Second—Every Comer Coat is a new coat. New in style, new in material. It comes direct from our factory to your home by parcel post.

Third—Through this plan the cost of manufacturing and selling has been reduced to a minimum, and therefore every Comer Coat represents an unusual value. Prices are established by the factory and are uniform wherever you live.

Fourth—The Comer Representative who calls at your home takes your measurements to insure you a perfect fit.

The Comer Representative will probably call on you soon. It will pay you to welcome him, for he offers you through the Comer Plan the utmost in quality and the greatest of value.

If you are not acquainted with Comer Coats, a copy of our style book, illustrating some of the Comer models, will be sent on request.

white against the clear color of his skin. Ganton's eyes dwelt on Mackenzie's frankly as they shook hands.

"Dan, what's this they're saying? Sim Cole was down last week ——"

"Sim he ain't right pleased with how I'm handling this Macrimmon case. He figures I'd ought to take a posse up in those hills and shoot it out with the Rayfield boys."

Ganton's eyes half shut.

"Whyn't you leave Sim do it, Dan? He can have my share without fighting for it."

"Seems like a pity to waste the next sheriff, don't it?" Mackenzie spoke gravely. "Whoever goes up there's apt to bring back lead in him. And I reckon the Rayfields ain't hankering to come down our side again."

Ganton looked sober.

"That's all't frets me, Dan. I figure they will come back if this talk gets up to 'em. The way tobacco's selling this year it's good stuff to steal, and they's aplenty of it where a man can get it. I ain't easy nights when I figure how much money lays on the floor right here."

Mackenzie shook his head.

"Reckon they ain't apt to bother you, Len. Where'd they carry the leaf to sell it if they did? Can't freight it over them hill roads to Kentucky, can they? And it's a burley market over there anyways."

Ganton was silent a moment; his eyes narrowed. Mackenzie faced him. He had known Len Ganton for fifty years.

"I come right near taking a stub and wearing Sim down for his chat, Dan. Reckon, maybe, you'd just as soon I didn't."

"Hate to have him spoiled, Len. He's right handy, Sim is."

"One thing—primary's getting close, Dan. You ain't aiming to get beat?"

"Kind of used to being sheriff; for a fact. Always figured it was a good business for an old man, Len. Maybe it ain't. Sim'd make a mighty busy sheriff."

He straightened and glanced around.

"I got a parcel out in the car, Len. You mind if I set it in the office? Hate to lose it."

"Fetch it in, Dan." Ganton studied him keenly. "Shake your sleeve. You know I ain't talking."

"Nothing in it but an arm, Len."

Mackenzie walked away. His shoulders felt straighter and lighter, and the level, doubting glances between narrowed lids didn't trouble him now. He might have counted on Len Ganton all along. He lifted a package from the floor of the car and carried it inside. Kit Harney obligingly stowed it in the big safe. When Mackenzie emerged to the main floor the day's selling had begun. Ganton's voice echoed a singsong of figures from the far end, where a queue of buyers stood between the rows of trays. Mackenzie could tell that the bidding was brisk. He felt a sort of savage pleasure in this. A kind of hatred seized him against these aliens and the more alien companies they represented; even local men, acting as buyers, seemed outlanders now. Let 'em claw each other till they bled! It meant money for the lean, stooped, silent men who looked on and listened—money that would bring a bit of comfort into the scattered houses in the hollows, send children to school in shoes this winter, set driven farmers free of their debt slavery for a season. It drew him. He moved toward the group, listened to the bidding. Somehow a bit of money above their bare needs had already changed these men. They stood straighter; there was less of the submissive, puzzled look in their eyes. Some of them even dared to reject the bids made for their offerings, high as they were in comparison to the prices of other years.

Ganton lifted a hand from a high-piled tray, began a brisk patter of praise, started the bidding with his own offer of a dollar a pound. Mackenzie saw a man lean forward, a man who stood well apart from the group at the tray. His glance rested on the face below the faded, limp-rimmed felt hat, a face masked by a shadow across the thin, broken nose. The sheriff turned away abruptly. In the office, where Kit Harney was feverishly making out checks against the sales reports brought to him, he apologized for interrupting, took his parcel from the safe and fumbled with the string. He carried it outside without opening it.

The single-file procession had moved on to another lot. Mackenzie sauntered past it to the trays which had just been knocked down. The broken-nosed man had come up now to paw the sales tickets. Mackenzie joined him, lifted a hand from the heap, noted the figure the leaf had fetched.

"Right pretty tobacco, sir," he
"You make it?"
The man nodded without turning.
kenzie lifted another hand.
"Nice tying too. You grade it your
Again a nod answered him. The
imitated the gesture. His voice was
gentle.
"Reckon you got good soil, sir.
at's your place?"
The man jerked an arm vaguely.
kenzie stepped close with a surp
quickness. His free hand came fro
sagging pocket and a revolver barrel pu
against the flannel shirt.
"Stand right still," he said. His
lifted sharply. "Oh, Len, step over
away! Like a little expert advice fro
you gentlemen."
The man in front of him stiffened s
Mackenzie could see lean, long muscl
taut under the shirt. He pressed th
muzzle tighter against the ribs.
"Stand right still."
Without moving his eyes from the
of the man's head he could see the c
gathering about him in the narrow
Len Ganton stood beside him.
"What's wrong, Dan?"
"You take and open this parcel, Le
got a notion they's some *of this* same
bacco inside it."
He had no share in the absorbed comp
ison which followed. He kept his attenti
singly on the motionless man at his gu
mouth, while Ganton and the buyers a
liberated. They took it soberly, compa
ing the marked samples with the tobac
in the trays for color and weight *and fe*
They were at one about it.
"I'd almost swear to it," said Ganto
slowly.
Mackenzie nodded.
"Maybe you all can't swear to the leaf
but how about the tying? *This man* say
he graded and tied this lot himself. Fetch
some loose leaf and leave him show us how
he done it. It looks to me like these hen
hands was tied by the same man't tied
what's in my parcel."
A volunteer fetched a handful of loose
leaves and thrust them at the prisoner.
He fumbled with them clumsily, dropped
them on the tray.
"I never said I tied this lot myself. I
hired nigras to do that."
Mackenzie nodded.
"You didn't say where your place was at
when I asked you. Maybe you'd tell us
now."
"Over in Bethune Township," the man
said glibly. "Along the Big Branch."
"Who owns next to you?"
There was an instant of hesitation and
then names. A man on the fringe of the
group broke in harshly.
"I live over on the Big Branch. They
ain't no folks named Hunter in the town-
ship, nor McNab, neither. He's lyin',
sheriff."
"Maybe they moved in right lately,"
said Mackenzie mildly. "We ain't in no
hurry, gentlemen. We got time to find
out."
Somebody laughed.
"Better hang him while we got him. He
never made no tobacco—that's Joe Macrim-
mon's leaf, sure enough. I got a rope out
to the wagon."
Mackenzie dropped his free hand on his
prisoner's shoulder.
"Reckon we'll go now, you and me.
They's too much mean chat here. State's
able to do its own hanging mostly."
He thrust the man through between the
trays and followed him. For a moment he
felt the indecision of the crowd. He knew
how little they needed to become a mob.
Ganton's voice lifted behind him.
"No hanging, gentlemen. We ain't no
ways sure yet."
Mackenzie beckoned to him with a side-
wise motion of his head, and the ware-
houseman stepped over the trays to his side.
"I want you should save them marked
samples I fetched over, Len. And pick out
a few hands off the tray he was selling and
mark them so's some of the buyers can
swear to them. And they's a piece of old
blanket I had wrapped around them hands,
Len—save that too. I got it up to Joe's
the day he was shot." He addressed the
prisoner: "Where's your team?"
The man cursed him in a whisper. He
nodded.
"Len, you can easy find which one's his.
Maybe he figured it was safe to come down
here with the rest of Joe's blanket to wrap
his tobacco. If he did you see't they's wit-
nesses can swear to that. I better not

Digitized by Google

wait, the way things stand. They'll hang him on me yet if the blanket's there. And, Ben, make out his check to Letty, and mail it up to her, will you?"

"Better take two-three with you, Dan. It's a good ways back to Tyre."

"I can make out to carry him there." Mackenzie jerked his heavy old handcuffs from his pocket and snapped them on the lean wrists. "He ain't offering no trouble."

The crowd followed them to the car, still a potential menace. Mackenzie seated his captive and scrambled past him to the wheel. He paused to lash the handcuff fast to the top support. Somebody tugged obligingly at the crank and the engine barked spitefully through the broken muffler. He drove away with a sudden jerk, followed by a straggling cheer. It was late in the afternoon when he turned the key of the cell door on his man, but no word had passed between them.

"Make you comfortable's we can," he said cheerfully. "It's a right pretty jail, inside."

IV

MACKENZIE nodded approvingly over his plate. Sim had his wits about him anyway. It must have been an ugly jolt to come back to town after a day of still hunting along the branches and hear that one of the Rayfield gang was in the jail, but you'd never guess it to look at Sim or hear him talk. He acted as if the news tickled him. He made a ceremony of his handshake. There was even in his tone the note of benevolent condescension with which a man might praise a smart boy for a clever deed.

"Wish I'd gone along with you myself instead of chasing stills all day," he was saying. "Like to've been there with you. Wanted a hand in this job."

Mackenzie broke a fresh slab of corn bread. He met Cole's glance and held it a moment before he answered.

"You done your share, Sim. Reckon I got to thank you for my luck. Folks tell me you spread that chat about me just like you meant it. Whole county's been saying't maybe I'm getting too old for my job, losing my nerve. Reckon them Rayfields heard it clear up in the hills, just like we figured."

He saw Cole's jaw sag and shut again, saw the eyes turn blank and narrow with understanding. Sim was right quick-witted. He could follow a lead like this.

"Hated to do it, sheriff, but it looks like it worked. The Rayfields wouldn't never've had the nerve to carry that tobacco down to Randall warehouse without they figured it was plumb safe."

He sent a swift glance about the table. Mackenzie followed it. Sim wanted to make sure that the others understood. He saw his way out, thanks to Mackenzie's assumption that he had only spread his slanders as a trick. The sheriff watched him recover his normal aspect. His questions about the arrest found an edged tone, the brisk, crisp manner of authority.

"Was the feller alone?"

Mackenzie raised his brows.

"Guess so, Sim. Didn't see nobody with him anyways."

There was a pause.

"You mean to say you ain't sure?"

Mackenzie shook his head.

"I was right busy, Sim. You see, they was some talk about a rope, and I judged I better get him safe in jail quick's I could. Might've been somebody with him. I ain't sure."

Cole drew a deep breath. Again his glance sped around the circle of faces.

"Well, I am, mighty near. They must've been two anyways. The gang wouldn't leave one man come down to get that money." He beat his fist on the cloth. "Sheriff, you left one of 'em get away, sure's you're born! I wish I'd gone along! We'd got both of 'em!"

Mackenzie pushed back his chair.

"Reckon I better get back to the jail, Sim. Only Clay Duggin on guard now. You come over when you get through supper."

Cole straightened.

"Sheriff, we got to get ready for trouble. Whoever was with that feller must be back home by now, and they're bound to come down here to bust him out'n that crazy jail! Might try it to-night; they could get here easy enough. We got to get help right quick, or else"—he got to his feet excitedly—"I'll tell you, you and me can run this feller over to Cray to-night! They won't bust nobody out'n that jail!"

Mackenzie shook his head.

"Guess it ain't as bad as that, Sim. You and me can stand 'em off if they come, and it don't look right sensible to take him out on the road to-night. Reckon we won't bother 'em over in Cray yet a while."

He did not wait for the answer, but as he passed the dining-room windows he could hear Cole's voice inside, high and excited and angry. He nodded as if what he heard pleased him and went on out of earshot.

At the jail he dismissed the day guard and went in to make sure of his prisoners. The formidable presence of the white man in the next cell had reduced Dill Coomber to an uneasy silence. Mackenzie stood before the door a moment, and then unlocked it, beckoning. Dill shuffled out, his eyes showing white. Mackenzie led him close to the open door of the cell room before he spoke.

"Dill, how far do you reckon you could travel before daylight?"

Dill shifted uneasily on his wide, flat feet.

"As far as they is, she'iff, suh! All I needs is room!"

Mackenzie jerked his hand toward the door and Dill seemed to melt into the dusk of the corridor beyond it. The sheriff followed him slowly, giving the big door a twitch as he passed it. It swung home with a solid jar behind him. He could hear the double click of the spring bolts in the frame. He turned and studied it, pleased by the solid-steel security it offered. He lighted the lamp in the hall and came back to the door, testing it by trying to shake the heavy bars. Sim Cole found him thus engaged.

"Sheriff, we got to do something. They're bound to come after him, and they'll come quick. They ain't going to wait till we can carry him over to a real jail like Cray County's got. They'll get him out'n this one without we get help to stand 'em off."

Mackenzie surveyed him gravely.

"Think you said enough to give 'em the notion I wouldn't fight, Sim?"

The deputy's mouth opened and shut.

"I—it don't matter what I said. They'd come anyways, and they'll come shooting. We could get help—they's six-eight good men right around here ——"

"Paying taxes to hire you and me to do their fighting for 'em," said Mackenzie slowly. "Sim, maybe you're right about me getting old. It don't look right sensible to me to take and kill two-three good men over one ornery feller. You and me draw pay for resking it. That's different. But they ain't no call for Bill Fraser to do it, or Bruce McDow or Neil Barton ——"

Cole made a gesture of impatience.

"What could the two of us do against that gang? They'd settle us quick!"

"Maybe. But that wouldn't get 'em inside, would it?" Mackenzie patted the heavy door. "How they going to bust through that?"

Cole laughed.

"Think it would stop 'em? Why, it opens inwards! All they'd need would be a good-sized log. Four-five of 'em could bust that door down with one slam!" His voice dropped. "Le's get the car and take him over to Cray to-night—that's the best way, sheriff. They'd never get him over there."

Mackenzie shook his head.

"Reckon we'll keep him here, Sim. Maybe they won't come for him; maybe you and me can stand 'em off if they do."

"It's plumb crazy!" Cole's voice lifted angrily. "You might's well take and shoot me yourself! They'll get us both!"

"Maybe not, Sim. You figure it ain't right for me to make you stay?"

"They's no sense to it! I ain't scared to fight—guess you know that—but this, why, they just ain't no sense to it!"

"You don't have to stay, Sim, if that's how you feel."

Cole drew in his breath noisily.

"Don't have to stay! What'd folks say if I lit out, the way things stands? How'd it look?"

"I got another job for you, Sim. Nobody won't talk if you carry out orders. That Dill Coomber nigra he took and sneaked past me when the door was open and got clean away." Cole looked startled. "You take the car and see if you don't ketch him on the railroad bridge. Without he finds a skiff he can steal he'll likely go to cross on the trestle. You can get there long afore he does."

He could see relief in Cole's eyes. "I—I got to do it if you say so, sheriff."

"That's right! Better start! Dill he's a-traveling every minute you and me's talking."

Cole hesitated.

A DIFFERENT
CHOCOLATE TASTE

The distinctive flavor of the chocolate coating on Apollo pieces is the result of expert blending of the choicest cocoa beans.

No chocolate confection, regardless of its other ingredients, can hold a high place in the public's favor if the coating is indifferently made.

There are 38 Apollo assortments made up from 193 different pieces

The Madbury Lavatory

At house-cleaning time, let your plumber show you the advantages of having a new lavatory, closet, tub — or kitchen sink

This message in the interest of the plumbing contractor is published by a firm that has devoted the energies of three generations to the development of sanitary fixtures for the home—

MADDOCK

THOMAS MADDOCK'S SONS CO., TRENTON, N. J., U. S. A.

"Your offer looked good to me,"

is the reason JOHN H. PARSONS of Quebec gives for taking up Curtis work. And it is good, as his experience shows.

In one afternoon he earned $6.00

HE found a ready demand for *The Saturday Evening Post*, *The Ladies' Home Journal* and *The Country Gentleman* that brought him liberal profits from the very start. And as his work progresses he is laying the foundation of a permanent business that will pay bigger profits year after year.

Let Us Make You a Cash Offer for All or Part of Your Time

THE increasing popularity of our three publications makes necessary a continual enlargement of our subscription staff. There is room now for you. Whether you want to devote all of your time or only a few hours a week, whether you wish to work on a large scale or merely forward the orders of your friends and neighbors, we have a liberal cash offer to make you. Let us tell you about it—you assume no obligation in doing so.

CLIP AND MAIL*

The Curtis Publishing Company
619 Independence Square, Philadelphia, Pennsylvania

Gentlemen: Please tell me what you offer for part-time and full-time work. I assume no obligation in asking.

Name_____ Street or R. F. D._____

*If you prefer not to cut your copy of The Post, use a post card instead of this coupon.

"How you going to handle 'em if they come? You can't fight that crowd single-handed."

"Maybe they won't come, Sim. Anyways you're out'n it. You got orders to go ketch Dill Coomber. Might stop down at the store and say so. Don't want it to look like you was running off."

Cole shrugged and obeyed. Mackenzie watched him crank the car and turn it into the road. He filled his pipe and sat on the steps. It was very still; there wasn't even a wind to stir the dead leaves which clung to the oaks. He could hear the putter of Cole's car for a long time, till it dulled to a remote, drowsy thrumming like the sound of a big bee. After a weary wait he saw the lights go out in the windows of hotel and store, and presently caught a glint of the lamp in Bruce McDow's house farther down the road. He nodded approvingly at this. Bruce was going to bed. There wouldn't be any promiscuous fighting in front of the jail to-night. Mackenzie guessed that Sim Cole must have made them believe down at the store that there wasn't any danger of an attack. He'd have to make it look decent for him to go off after a negligible bootlegger, leaving the jail guarded by one old man. He must have done it or Bruce would have fetched his rifle and come to help. He was the only one who liked a row for its own sake. The other men would have answered a summons willingly enough, but they wouldn't look for trouble unasked. Mackenzie stretched his thin arms and stood up. He was going to be allowed to deal with the situation alone. Nobody else would get hurt if he bungled it.

He went inside and studied the heavy door of the cell room. Cole was right. Opening inward, it wouldn't resist a battering-ram very long. And there was a pile of six-by-six pine timbers just across the road.

He rubbed his chin doubtfully. He had a sort of affection for that big door; it always seemed to redeem the shabbiness of the building's outward aspect. It would be a pity if it should be battered out of shape. He shook his head and fumbled for his key ring. If he unlocked it now and left it ajar they wouldn't harm it. He swung it open carefully. No use in damaging the county's property without purpose or need.

Again he lighted his pipe and sat on the steps, waiting. The time dragged. He was glad when a hound lifted a mournful chant far out in the scrub woods. There was a sort of companionship in the sound. It must be one of McCallum's, he guessed, locating the noise. Silence again, and long minutes. Perhaps they weren't coming after all. It must be well past midnight. He started up at a faint rumble. Hoofs on the plank bridge over the branch—any minute now. His hand went to his pocket and came away empty. He'd left the gun inside. He sat down again, his elbows on his knees. He did not change this posture when a rush of hoofbeats sounded in the road and a thin, hard voice hailed him:

"Stick 'em up and keep 'em up!"

"Evening, gentlemen. Reckon you got me in a jam. My gun's inside."

He spoke levelly. A man slid to the ground before him and a revolver covered him. He could see them clearly now—count them—six men and seven horses. He could even recognize the nearest, from description, as Sid McKane.

"Gimme the keys."

"Right in my pocket, Sid. Guess you better help yourself so you won't think I'm going after a gun."

He rose and turned deliberately so his pocket was in easy reach. The c crowded up as McKane seized the ch ring.

"Go in and get him, Hub. I'll here. It looks funny—even by what say." He gestured menacingly with gun. "If they's any monkey business get it first, Mackenzie."

Mackenzie wagged his head.

"Nobody here only me and the man come for. Step right in and help yo selves."

The others hurried past him into building. He could hear the rattle of keys as they tried them on the cell lo the low-pitched voices which cursed so and steadily as they worked. Presen Hub Rayfield emerged.

"Which key opens that there cell, M kenzie?"

The sheriff fumbled with the ring.

"This here's the one, but it's a m lock. You got to tease it a mite."

"Fetch him in and make him open Sid. I plumb wore out my fingers on fool thing."

"Now that ain't using me right, boy Mackenzie spoke quickly. "You-all hadn ought to make me do that. It's bad enou the way folks'll talk anyways. You c easy open that door without me."

The refusal seemed to determine M Kane.

"Go on in," he ordered. "Nev' yo mind about folks talkin', Mackenzie. Th here gun'll hurt a heap worse."

The sheriff lifted his shoulders.

"Reckon I ain't got much choice, Sid."

He followed Rayfield into the corridor, feeling the ungentle pressure of McKane's gun against his spine. Inside the cell room he seemed to stumble, and fell sprawling at McKane's feet. He reached out helplessly and his fingers caught the grating of the main door, by which he pulled himself painfully erect, admonished by harsh warnings from McKane.

"Kind of jarred me, Sid," he said, hanging to the door. "Ain't so spry's I used to be." He turned toward the group at the far end of the room, his hand still on the grating. As he let go he straightened his arm sharply. There was a thud and a double click as the door shut. McKane whirled.

"You done that a-purpose, Mackenzie!"

The sheriff straightened slowly.

"Sid, maybe Letty Macrimmon ain't going to swear to all of you, but I reckon that wouldn't matter a heap if you was to shoot me. I left the key to this here door hanging on a nail by my bed, out front. Reckon we'll all be right here when Sim Cole gets back."

There was a tight silence. The barrel of the gun leveled, wavered, dropped. Mackenzie wagged his head approvingly.

"That's good sense, Sid. Reckon you must be getting old same as me. Done heard I was played out, didn't you? Sim Cole he claims I'm too old to fight. Maybe you all heard it up there. Sim's right, Sid. I got so old I got to figure how to miss trouble 'stead of hunting for it."

He surveyed the slack-jawed group benevolently.

"Saved me a heap of work by coming down like this. Maybe you-all heard what Sim Cole says about this here jail too—figured you could take and bust her wide open like he claims."

He paused to send an affectionate eye around the cage-lined walls.

"Sort of sorry-looking outside f'r a fact, but it's right pretty, ain't it—inside?"

Storm at Santo Domingo City. Waves Coming Over the Wreck of the U. S. S. Memphis

Automotive Retailers

of every class and description find Burroughs Machines indispensable in controlling expense and increasing profit

In the Garage

Mr. W. J. Chittenden, Jr., of the Chittenden Motor Sales Company, Pontiac, Mich., says, "I would not be without my Burroughs Adding Machine. We use it for all kinds of figuring in a day's business. It saves a great amount of time and labor and gives the bookkeeper more time for other kind of office work. I really believe the machine has more than paid for itself in time saved and in the accuracy of its work."

In the Accessory Store

Mr. E. E. Davis, of the Detroit Tire Company, says, "We use our Burroughs for all kinds of figuring. We can write our monthly statements in a few hours —a job that formerly took two days."

In the Battery Station

Mr. H. E. Green, of Vesta Battery Sales Company at Cleveland, says he would not run a station without a Burroughs. On miscellaneous work theirs saves the cashier fully two days a month.

Successful retailing in the automotive industry—as, indeed, in any other—demands the very thing that Burroughs Machines are built to give—*accurate figures in less time and at less cost than you can get them in any other way*.

With these machines you prevent many little losses due to errors in adding items in sales; you can get out accurate statements in less time; you can total your receivable, or cash and charge reports, or bank deposit slips—there are many different jobs in which a Burroughs will save time and prevent mistakes.

For garages and dealers that want a more complete record of transactions, Burroughs has a Simplified Accounting Plan that keeps a man in daily touch with his costs and profits in every department.

He gets his daily figures all on one sheet. He has a monthly statement on his business condition that is easy to understand and with practical suggestions on how to use it. He can get out a statement for his banker or an income tax report without closing his books.

The nearest Burroughs office can help you find out just what equipment is best for your business, to give you what you need for the least cost and trouble. Consult your banker or telephone book for the address, or you can write to the Burroughs Adding Machine Company at Detroit, Michigan.

$2000.00 cash prizes

Many people have discovered that 2 in 1 Shoe Polishes are good for other things than for shining shoes. *For example:—*

2 in 1 BLACK—Good for polishing automobiles, refinishing suit cases, cameras, black gloves, rubbers, hats, etc.

2 in 1 WHITE—cake or liquid—Good for cleaning hats, stains in white skirts, white kid gloves, auto tires, etc.

2 in 1 TAN PASTE—Good for polishing automobiles, furniture, hardwood floors, etc.

We will award cash prizes as follows, for lists containing the greatest number of practical uses, similar to examples. All prizes will be paid on or before October 1st, 1922, and in the event of a tie for any prize offered, the full amount of such prize will be awarded to each tying contestant.

1st award	$500.00	for the	most practical list	
2nd "	300.00	" "	second most practical list	
3rd "	200.00	" "	third " " "	
10 Prizes of	25.00	" "	next ten most practical lists	
20 " "	15.00	" "	next twenty " " "	
50 " "	5.00	" "	next fifty " " "	
50 " "	2.00	" "	next " " " "	
100 " "	1.00	" "	next 100 " " "	

2 IN 1 Shoe Polish Saves You Money

Send us your lists of uses of the 2 in 1 Shoe Polishes, either black, tan, oxblood, or brown paste, white cake or white liquid, and black liquid.

Write on one side of paper only. List uses according to colors. All lists must be mailed before September 1st, 1922, and to become our property. Address:

Baring the Scandals Long Hidden by Vests

ALL winter long many a man's vest has been charitably hiding a scandal—charitably concealing an ancient and tired-out or faded and frazzled belt. Or maybe one that's joltingly discordant in color—that doesn't harmonize with the suit.

Time for shucking the shielding vest is about here. All such disreputable or erring belts will soon be bared to public view—unless their owners take thought. And take time to buy a new one.

Pays to pick a Marathon—the big step ahead in belts.

Strap made of *Flexyde*. Outlooks and outlasts calfhide or cowhide or any other hide that ever came from any animal.

The fine finish doesn't scuff or fray off—and doesn't scar up from buckling. The color doesn't fade or wear dim—because *impregnated through and through*.

And you can *wash* it—it dries as soft and pliable and pleasing as new. The only *fine* belt that provides for a quick and easy antidote against a belt's natural tendency to soil from daily handling.

A splendid strap plus a splendid buckle—the famous Marathon Giant Grip—handsome, handy, practical, dependable. Instantly adjusted to *just the right snugness* for complete comfort and for complete sureness at keeping your trousers up. And holds with a grip that never slips.

AT most good stores that sell men's and boys' things. Choice of widths, choice of finishes, choice of four correct colors—*Black* for a *Dark* suit; *Cordovan* for a *Brown* suit; *Grey* for a *Light* suit; and *White* for a *White* suit or White Trousers.

Why not get a set of two, three or four—a color for each suit? Including your golf or tennis togs.

LOOK for the Marathon-Runner trademark—a little precaution that assures big satisfaction.

THE COVERED WAGON

(Continued from Page 23)

more scows built and the seams calked in the wagon boxes."

Surely enough, the Banion plan of crossing, after all, was carried out, and although the river dropped a foot meantime, the attempt to ford en masse was abandoned. Little by little the wagon parks gathered on the north bank, each family assorting its own goods and joining in the general *sauve qui peut*.

Nothing was seen of the Missouri column, but rumor said they were ferrying slowly, with one boat and their doubled wagon boxes, over which they had nailed hides. Woodhull was keen to get on north ahead of this body. He had personal reasons for that. None too well pleased at the smiles with which his explanations of his bruised face were received, he made a sudden resolution to take a band of his own immediate neighbors and adherents and get on ahead of the Missourians. He based his decision, as he announced it, on the necessity of a scouting party to locate grass and water.

Captain Woodhull

Most of the men who joined him were single men, of the more restless sort. There were no family wagons with them. They declared their intention of traveling fast and light until they got among the buffalo. This party left in advance of the main caravan, which had not yet completed the crossing of the Kaw.

"Roll out! Ro-o-o-ll out!" came the mournful command at last, once more down the line.

It fell on the ears of some who were unwilling to obey. The caravan was disintegrating at the start. The gloom cast by the long delay at the ford had now resolved itself in certain instances into fear amounting half to panic. Some companies of neighbors said the entire train should wait for the military escort; others declared they would not go farther west, but would turn back and settle here, where the soil was so good. Still others said they all should lie here, with good grass and water, until further word came from the Platte Valley train and until they had more fully decided what to do. In spite of all the officers could do, the general advance was strung out over two or three miles. The rapid loss in order, these premature divisions of the train, augured ill enough.

The natural discomforts of the trail now also began to have their effect. A plague of green-headed flies and flying ants assailed them by day, and at night the mosquitoes made an affliction well-nigh insufferable. The women and children could not sleep, the horses groaned all night under the clouds of tormentors which gathered on them. Early as it was, the sun at times blazed with intolerable fervor, or again the heat broke in savage storms of thunder, hail and rain. All the elements, all the circumstances seemed in league to warn them back before it was too late, for indeed they were not yet more than on the threshold of the Plains.

The spring rains left the ground soft in places, so that in creek valleys stretches of corduroy sometimes had to be laid down. The high waters made even the lesser fords difficult and dangerous, and all knew that between them and the Platte ran several strong and capricious rivers, making in general to the southeast and necessarily transected by the great road to Oregon.

They still were in the eastern part of what is now the state of Kansas, one of the most beautiful and exuberantly rich portions of the country, as all early travelers declared. The land lay in a succession of timber-lined valleys and open prairie ridges. Groves of walnut, oak, hickory, elm, ash at first were frequent, slowly changing, farther west, to larger proportions of poplar, willow and cottonwood. The white dogwood passed to make room for scattering thickets of wild plum. Wild tulips, yellow or of broken colors; the campanula, the wild honeysuckle, lupines—not yet quite in bloom—the sweetbrier and increasing quantities of the wild rose gave life to the always changing scene. Wild game of every sort was unspeakab dant—deer and turkey in every thousands of grouse on the hills, va of snipe and plover, even number green parrakeets then so numerou that latitude. The streams abou game fish. All Nature was easy a erous.

Men and women grumbled at so rich and beautiful a land lying None had seen a country more su attractive. Emotions of tenderness ness, also came to many. Nostal not yet shaken off. This strained co of nerves, combined with the trai ships, produced the physical irritatio is inevitable in all amateur pionee Confusions, discordances, arising o most trifling circumstances, grew int lance, incivility, wrangling and in as happened in so many other earlie vans. In the Bat excitement of the ing catch-up, am bellowing and ru of the cattle evadi yoke, more selfis less friendly acco dation now app and men met wi speaking, even this on the road.

The idea of four allel columns had since been disca They broke forma and at times the caravan, covering depressions and nences of the pra wound along in mile- detachments, each which hourly grew n surly and more i pendent. Overdri oxen now began to d By the time the prairies proper were reac more than a score of oxen had died. T were repeating trail history as recorded the travelers of that day.

Personal and family problems also m divisions more natural. Many suffe from ague; fevers were very common. old woman past seventy died one night a was buried by the wayside the next d Ten days after the start twins were born parents moving out to Oregon. There w numbers of young children, many of th in arms, who became ill. For one or oth cause, wagons continually were droppi out. It was difficult for some wagons keep up, the unseasoned oxen showing d tress under loads too heavy for their dra It was by no means a solid and compa army, after all, this west-bound wave the first men with plows. All these thin sat heavily on the soul of Jesse Wingat who daily grew more morose and grim.

As the train advanced bands of antelo began to appear. The striped prairie g phers gave place to the villages of coun less barking prairie dogs, curious to t eyes of the newcomers. At night the how ing and snarling of gray wolves now mad regular additions to the coyote chorus an the voices of the owls and whippoorwill Little by little, day by day, civilization wa passing, the need for organization daily be came more urgent. Yet the original cara van had split practically into three division within a hundred and fifty miles from th jump-off, although the bulk of the trai hung to Wingate's company and began t shake down, at least into a sort of toler ance.

Granted good weather, as other travele had written, it was indeed impossible to evade the sense of exhilaration in the bold, free life. At evening encampment the scene was one worthy of any artist of all the world. The oblong of the wagon park, the white tents, the many fires, made a spectacle of marvelous charm and power. Perhaps within sight, at one time, under guard for the evening feed on the fresh young grass, there would be two thousand head of cattle. In the wagon village men, women and children would be engaged as though at home. There was little idleness in the train, and indeed there was much gravity and devoutness in the personnel. At one fireside the young men might be roaring "Old Grimes is dead, that good old man," or "Oh, then, Susannah"; but quite as likely close at hand some family group would be heard in sacred hymns. envisagement it all made, in a strange environment, a new atmosphere, here on the threshold of the wilderness.*

XII

THE wilderness, close at hand, soon was to make itself felt. Wingate's outriders moved out before noon of one day, intending to locate camp at the ford of the Big Vermilion. Four miles in advance they unexpectedly met the scout of the Missouri column, Bill Jackson, who had passed the Wingate train by a cut-off of his own on a solitary ride ahead for sake of information. He was at a gallop now, and what he said sent them all back at full speed to the head of the Wingate column.

Jackson, riding ahead, came up with his hand raised for a halt.

"My God, cap'n, stop the train!" he called. "Hit won't do for the women and children to see what's on ahead yan!"

"What's up—where?" demanded Wingate.

"On three mile, on the water where they camped night afore last. There they are—ten men, and the rest's gone. Woodhull's wagons, but he ain't there. Wagons burned, mules standin' with arrers in them, rest all dead but a few. Hit's the Pawnees!"

The column leaders all galloped forward, seeing first what later most of the entire train saw—the abominable phenomena of Indian warfare on the Plains.

Scattered over a quarter of a mile, where the wagons had stood not grouped and perhaps not guarded, lay heaps of wreckage beside heaps of ashes. One by one the corpses were picked out, here, there, over more than a mile of ground. They had fought, yes, but fought each his own losing individual battle after what had been a night surprise.

The swollen and blackened features of the dead men stared up, mutilated as savages alone mark the fallen. Two were staked out, hand and foot, and ashes lay near them, upon them. Arrows stood up between the ribs of the dead men, driven through and down into the ground. A dozen mules, as Jackson had said, drooped with low heads and hanging ears, arrow shafts standing out of their paunches, waiting for death to end their agony.

"Finish them, Jackson."

Wingate handed the hunter his own revolver, signaling for Kelsey and Hall to do the same. The methodical cracking of the hand arms began to end the suffering of the animals.

They searched for scraps of clothing to cover the faces of the dead, the bodies of some dead. They motioned the women and children back when the head of the train came up. Jackson beckoned the leaders to the side of one wagon, partly burned.

"Look," said he, pointing.

A long stick, once a whipstock, rose from the front of the wagon bed. It had been sharpened and thrust under the wrist skin of a human hand—a dried hand, not of a white man but of a red. A half-corroded bracelet of copper still clung to the wrist.

"If I read signs right, that's why!" commented Bill Jackson.

"But how do you explain it?" queried Hall. "Why should they do that? And how could they in so close a fight?"

"They couldn't," said Jackson. "That hand's a day and a half older than these killings. It's Sam Woodhull's wagon. Well, the Pawnees like enough counted coup on the man that swung that hand up for a sign, even if hit wasn't one o' their own people.

"Listen, men," he concluded, "hit was Woodhull's fault. We met some friendlies—Kaws—from the mission, and they was mournin'. A half dozen o' them follered Woodhull out above the ferry when he pulled out. They told him he hadn't paid them for their boat, asked him for more presents. He got mad, so they say, and shot down one o' them and stuck up his hand—fer a warnin', so he said.

"The Kaws didn't do this killin'. This band of Pawnees was away down below their range. The Kaws said they was comin' fer a peace council, to git the Kaws an' Otos to raise against us whites, comin' out so many, with plows and womenfolks—they savvy. Well, the Kaws has showed the Pawnees. The Pawnees has showed us."

"Yes," said the deep voice of Caleb Price, property owner and head of a family; "they've showed us that Sam Woodhull was not fit to trust. There's one man that is."

"Do you want him along with your wagons?" demanded Jackson. He turned to Wingate.

"Well," said the train captain after a time, "we are striking the Indian country now."

"Shall I bring up our wagons an' jine ye all here at the ford this evenin'?"

"I can't keep you from coming on up the road if you want to. I'll not ask you."

"All right! We'll not park with ye then. But we'll be on the same water. Hit's my own fault we split. We wouldn't take orders from Sam Woodhull, an' we never will."

He nodded to the blackened ruins, to the grim dead hand pointing to the sky, left where it was by the superstitious blood avengers.

Wingate turned away and led the wagon train a half mile up the stream, pitching camp above the ford where the massacre had occurred. The duties of the clergy and the appointed sextons were completed. Silence and sadness fell on the encampment.

Jackson, the scout of the Missouri column, still lingered for some sort of word with Molly Wingate. Some odds and ends of brush lay about. Of the latter Molly began casting a handful on the fire and covering it against the wind with her shawl, which at times she quickly removed. As a result the confined smoke arose at more or less well-defined intervals, in separate puffs or clouds.

"If ye want to know how to give the smoke signal right and proper, Miss Molly," said he at length, quietly, "I'll learn ye how."

The girl looked up at him.

"Well, I don't know much about it."

"This way: Hit takes two to do hit best. You catch holt two corners o' the shawl now. Hist it on a stick in the middle. Draw it down all over the fire. Let her simmer under some green stuff. Now! Lift her clean off sideways, so's not ter break the smoke ball. See 'em go up? That's how."

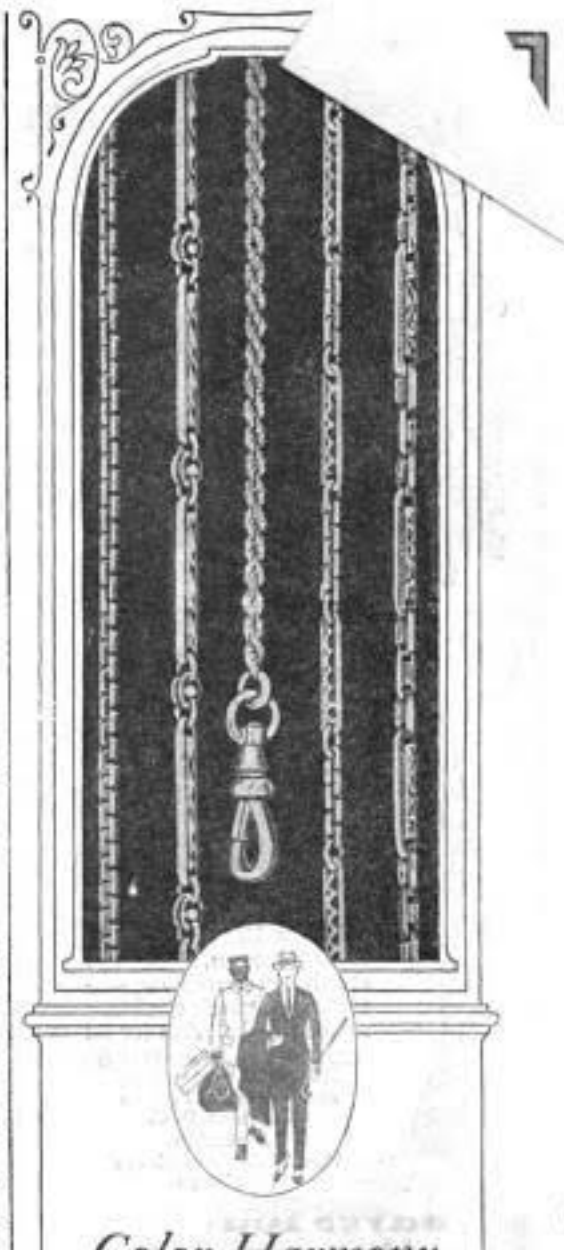
He looked at the girl keenly under his bushy gray brows.

"That's the Injun signal fer 'Enemy in the country.' S'pose you ever wanted to signal, say to white folks, 'Friend in the country,' you might remember—three short puffs an' one long one. That might bring up a friend. Sech a signal can be seed a long ways."

Molly flushed to the eyes.

"What do you mean?"

"Nothing at all, any more'n you do."



Jackson rose and left her.

XIII

THE afternoon wore on, much occupied with duties connected with the sad scenes of the tragedy. No word came of Woodhull or of two others who could not be identified as among the victims at the death camp. No word, either, came from the Missourians, and so cowed or dulled were most of the men of the caravan that they did not venture far, even to undertake trailing out after the survivors of the massacre. In sheer indecision the great aggregation of wagons, piled up along the stream, lay apathetic, and no order came for the advance.

Jed and his cow guards were obliged to drive the cattle back into the ridges for better grazing, for the valley and adjacent country, which had not been burned over by the Indians the preceding fall, held a lower matting of heavy dry grass through which the green grass of springtime appeared only in sparser and more smothered growth. As many of the cattle and horses even now showed evil results from injudicious driving on the trail, it was at length decided to make a full day's stop so that they might feed up.

*AUTHOR'S NOTE—In dealing with times three-quarters of a century ago, a writer must rely in part on tradition, but much more on the contemporary written word. The author asks leniency for lack of specific credit to scores of earlier writers. All the first explorers—Pike, Long, Lewis and Clark, etc.; all the standard historians—Parkman, Irving, etc.;—all the chronicles of the early fur trade; all the pioneer records of early Oregon—these come as matter of course in any readings on our great Western treks. In addition are the still more useful personal journals of actual Western travelers of that day, such men as Jesse Applegate, Joel Palmer, Edwin Bryant, William Kelly, many others who set down chapter and verse as they went across the continent. From such as these, for sake of verity, free and often almost literal quotations are made, so that as far as possible we may get the atmosphere of a day now gone and see the Western country as it really was at that time.

Color Harmony and Style in Chains

IN Simmons Chains there is variety of color as well as of beautiful design. PLATINUMGOLD, green gold, polished gold, green and white effects—these give color tones to harmonize with all the patterns of dress, and impart style and distinction to a man's appearance.

One may own several of the new Simmons Chains at less expense than one old-fashioned heavy gold chain. Simmons exclusive, patented process of drawing solid gold and PLATINUMGOLD over a less expensive metal provides both durability and moderate cost. Ask your jeweler to show you the new beautiful styles in Simmons Chains.

Molly Wingate, now assured that the Pawnees no longer were in the vicinity, ventured out for pasturage with her team of mules, which she had kept tethered close to her own wagon. She now rapidly was becoming a good frontierswoman and thoughtful of her locomotive power. Taking the direction of the cattle herd, she drove from camp a mile or two, resolving to hobble and watch her mules while they grazed close to the cattle guards.

She was alone. Around her, untouched by any civilization, lay a wild, free world. The ceaseless wind of the prairie swept the grass down into a continuous undulating surface, silver crested, a wave always passing, never past. The sky was unspeakably fresh and blue, with its light clouds, darker edged toward the far horizon of the unbounded, unbroken expanse of alternating levels and low hills. Across the grass lands passed the teeming bird life of the land. The Eskimo plover in vast bands circled and sought their nesting places. Came also the sweep of cinnamon wings as the giant sickle-billed curlews wheeled in vast aërial phalanx, with their eager cries, "Curlee! Curlee! Curlee!"—the wildest cry of the old prairies. Again, from some unknown, undiscoverable place, came the liquid, baffling, mysterious note of the nesting upland plover, sweet and clean as pure white honey.

Now and again a band of antelope swept ghostlike across a ridge. A great gray wolf stood contemptuously near on a hillock, gazing speculatively at the strange new creature, the white woman, new come in his lands. It was the wilderness, rude, bold, yet sweet.

Who shall say what thoughts the flowered wilderness of spring carried to the soul of a young woman beautiful and ripe for love, her heart as sweet and melting as that of the hidden plover telling her mate of happiness? Surely a strange spell, born of youth and all this free world of things beginning, fell on the soul of Molly Wingate. She sat and dreamed, her hands idle, her arms empty, her beating pulses full, her heart full of a maid's imaginings.

How long she sat alone, miles apart, an unnoticed figure, she herself could not have said—surely the sun was past zenith—when, moved by some vague feeling of her own, she noticed the uneasiness of her feeding charges.

The mules, hobbled and side-lined as Jed had shown her, turned face to the wind, down the valley, standing for a time studious and uncertain rather than alarmed. Then, their great ears pointed, they became uneasy; stirred, stamped, came back again to their position, gazing steadily in the one direction.

The ancient desert instinct of the wild ass, brought down through thwarted generations, never had been lost to them. They had foreknowledge of danger long before horses or human beings could suspect it.

Danger? What was it? Something, surely. Molly sprang to her feet. A band of antelope, running, had paused a hundred yards away, gazing back. Danger—yes; but what?

The girl ran to the crest of the nearest hillock and looked back. Even as she did so, it seemed that she caught touch of the great wave of apprehension spreading swiftly over the land.

Far off, low lying like a pale blue cloud, was a faint line of something that seemed to alter in look, to move, to rise and fall, to advance—down the wind. She never had seen it, but knew what it must be—the prairie fire!

Vast numbers of prairie grouse came by, hurtling through the silence, alighting, strutting with high heads, fearlessly close. Gray creatures came hopping, halting or running fully extended—the prairie hares, fleeing far ahead. Band after band of antelope came on, running easily, but looking back. A heavy line of large birds, black to the eye, beat on laboriously, alighted, and ran onward with incredible speed—the wild turkeys, fleeing the terror. Came also broken bands of white-tailed deer, easy, elastic, bounding irregularly, looking back at the miles-wide cloud, which now and then spun up, black as ink toward the sky, but always flattened and came onward with the wind.

Danger? Yes! Worse than Indians, for yonder were the cattle; there lay the parked train, two hundred wagons, with the household goods that meant their life savings and their future hope in far-off Oregon. Women were there, and children—women with babes that could not walk. True, the water lay close, but it was narrow and deep and offered no salvation against the terror now coming on the wings of the wind.

That the prairie fire would find in this strip fuel to carry it even at this green season of the grass the wily Pawnees had known. This was cheaper than assault by arms. They would wither and scatter the white nation here! Worse than plumed warriors was yonder broken undulating line of the prairie fire.

Instinct told the white girl, gave her the same terror as that which inspired all these fleeing creatures. But what could she do? This was an elemental, gigantic wrath, and she but a frightened girl. She guessed rather than reasoned what it would mean when yonder line came closer, when it would sweep down, roaring, over the wagon train.

The mules began to bray, to plunge, too wise to undertake flight. She would at least save them. She would mount one and ride with the alarm for the camp.

The wise animals let her come close, did not plunge, knew that she meant help, allowed her trembling hands to loose one end of the hobble straps, but no more. As soon as each mule got its feet it whirled and was away. No chance to hold one of them now, and if she had mounted a hobbled animal it had meant nothing. But she saw them go toward the stream, toward the camp. She must run that way herself.

It was so far! There was a faint smell of smoke and a mysterious low humming in the air. Was it too late?

A swift, absurd, wholly useless memory came to her from the preceding day. Yes, it would be no more than a prayer, but she would send it out blindly into the air. . . . Some instinct—yes, quite likely.

Molly ran to her abandoned wagonette, pushed in under the white tilt where her pallet bed lay rolled, her little personal plunder stored about. Fumbling, she found her sulphur matches. She would build her signal fire.

It was, at least, all that she could do. It might at least alarm the camp.

Trembling, she looked about her, tore her hands breaking off little fagots of tall dry weed stems, a very few bits of wild thorn and fragments of a plum thicket in the nearest shallow coulee. She ran to her hillock, stooped and broke a dozen matches, knowing too little of fire-making in the wind. But at last she caught a wisp of dry grass, a few dry stems—others, the bits of wild plum branches. She shielded her tiny blaze with her frock, looking back over her shoulder, where the black curtain was rising taller. Now and then, even in the blaze of full day, a red, dull gleam rose and passed swiftly. The entire country was afire. Fuel? Yes; and a wind.

The humming in the air grew, the scent of fire came plainly. The plover rose around their nests and circled, crying piteously. The scattered hares became a great body of moving gray, like camouflage blots on the still undulating waves of green and silver, passing but not yet past—soon now to pass.

The girl, her hands arrested, her arms out in her terror, stood trying to remember. Yes, it was three short puffs and a long pillar. She caught her shawl from her shoulder, stooped, spread it with both hands, drove in her stiffest bough for a partial support, cast in under the edge, timidly, green grass enough to make smoke, she hoped.

An instant and she sprang up, drawing the shawl swiftly aside, the next moment jealously cutting through the smoke with a side sweep of the covering.

It worked! The cut-off column rose, bent over in a little detached cloud. Again, with a quick flirt, eager eyed, and again the detached irregular ball! A third time—Molly rose, and now cast on dry grass and green grass till a tall and moving pillar of cloud by day arose.

At least she had made her prayer. She could do no more. With vague craving for any manner of refuge, she crawled to her wagon seat and covered her eyes. She knew that the wagon train was warned—they now would need but little warning, for the menace was written all across the world.

She sat she knew not how long, but until she became conscious of a roaring in the air. The line of fire had come astonishingly soon, she reasoned. But she forgot that. All the vanguard and the full army of wild creatures had passed by now. She alone,

Of Course You Have Spare Hours To Sell!

CHARLES PIFER imagined he was a pretty busy chap—and well he might! He is a student in the University of Illinois, and to help pay his way through college he works eight hours a day in the University Printing Office. There is no exaggeration in his statement: "I have but a short time to devote to your work each day. Some days I can't solicit at all—I haven't time." Yet, in his very first month as our subscription representative, we paid him $29.30 extra for his spare time.

Even if you are busy eight or ten hours of every day, you can still find a few minutes to spare—and those few minutes are worth money to you.

Let Us Buy Them For Cash

AS a subscription representative of *The Saturday Evening Post, The Ladies' Home Journal* and *The Country Gentleman*, you have an opportunity to pick up extra money at all hours of the day—whenever you have a spare moment to tell your neighbors, friends and others that you are ready to take orders for these three popular publications. You need not neglect your regular work—this profit is *extra;* it is *clear gain*. You will be surprised at the ease with which an inexperienced beginner can gather orders in odd moments that would otherwise be wasted.

Let us tell you about YOUR profit opportunity.

THE CURTIS PUBLISHING COMPANY
620 Independence Square, Philadelphia, Penna.

Gentlemen: I haven't much time to spare, but I'd like to know, without obligation, what you will pay me for it. Please send details.

But this is only—someone may say—what all men and women in the public eye are subjected to—the politician, the general, the society leader. Of course it is the price of all publicity. But these other people enjoy, by comparison, an ephemeral prominence. The politician is released after the campaign is over; the general slides into obscurity in peacetimes; the society leader intrigues the public only on stated occasions. Whereas this other publicity never stops. There is not a day in the year when a given movie star is not being beheld of thousands. The real actor has periods of retirement and rest, when people forget about him. He can go to Europe or betake himself to rural solitude. So can the movie star, in the flesh; but his *alter ego*, the self that the public knows, never withdraws from the public gaze, never rests, never, as long as he is professionally successful, has a holiday of oblivion. Modern inventions are uncanny, indeed. No opera singer can refuse to sing so long as there is one phonograph record of his voice existent in the land. No moving-picture actor can refuse a public appearance so long as there is a demand for a film in which he has acted. Whether he is asleep or awake, has married a wife or gone on a journey, he is there, being seen and considered of thousands, the hours of his greatest activity perpetually relived and reproduced. From eleven A.M. to eleven P.M. three hundred and sixty-five days in the year his *alter ego* is on the job somewhere; he is never out of sight, and therefore never out of mind. By George Eliot's definition he would seem already to have achieved immortality. There is no other publicity like this in our modern times. Presumably the stars desire precisely this success; certainly their managers want it for them.

But how they could have expected, under these conditions, to be let alone, one does not see. Nor should they have forgotten that the more you are admired by the public the more resolutely the public invades your privacy. If it has pa to see you it feels that you have n become, to the extent of that s ticket, its property. No "joy i commonalty spread" is going to e reforming appetite for long. Refo we have hinted, never go after sm They wait until their stroke can tacular, and can affect vast nu people.

The tiny or obscure minority, r how vicious, is practically always them. They haul with nets, the fish with rods. When you ma Crippsville yours, gentlemen of th you were simply asking for this come upon you.

It is, I hope, needless to say article is in no sense a defense of l is not even an expression of perso ion, except as one is always willin oneself on record as being against and self-defeating censorship in a That, I take it, is a duty of every gent person. Both you and I, of would like, on general principles, assured that only decent films w shown, and that Hollywood condu self better than Spoon River. B is not the point. I have simply invi to consider with me an ancient law sponsors of the motion picture hav aged to make movies everybody's bu Even now some of us do not take magnitude of that triumph. But wh have once taken it in you are bou look for Nemesis round the corner never fails to keep an appointment, this one she was positively a little ov It would seem that men who make i business to appeal to millions of h hearts might have investigated the h heart a little more exhaustively. O might have paid themselves the c ment of realizing that they had pulled it off too wildly well not to a the attention of that power which, Greek times, has never stood for a broken run of luck.

amatized Facts out of The Day's Work

No. 13

The next day they stood in the engine om of the great South Works of the J. I. Case Company.

"The temperature outside is 29 degrees," said the Plant Engineer, "and ou see," pointing to the control board, my outgoing hot water is 140 degrees. After traveling through over a mile of welded mains, through thirty miles of heating coils, and through 75,000 square feet of cast-iron radiation, the water comes back to me at 123 degrees."

nd competitors thought they were losing money

Nine hundred automobile dealers are expecting a night letter from me ing the price of our car has been cut 10%," said the President, fixing Consulting Engineer with his steel-gray eyes.

"We've shown you a 7% saving without counting increased labor effi- ncy," came back the Production Manager.

"So far, so good; the only other idea you propose is to remodel the old ating system," snapped the President. "I'll grant you half the coal ving you claim, but what does it amount to per car?"

"I'm talking increased labor output, not coal savings ——"

"Output, fiddlesticks; it's only on a few zero days that the plant is really comfortable."

"That's where so many manufacturers miss a bet," replied the Consulting ngineer. "They think workmen are only affected when their fingers are umb with cold."

Like a flash the Production Manager cut in with: "There's just one right tem- erature at which labor unconsciously and without effort works at top speed."

"Oh, I know all that," said the President, testily, "but an automobile lant isn't a hospital. Keeping acres of plant space always at the right emperature is a pipe dream!"

Consulting Engineer: "Come up to Racine with me tonight and I'll how you a heating system that's a *dream* of piping."

* * * *

The next day they stood in the engine room of the great South Works f the J. I. Case Company, illustrated above.

"The temperature outside is 29 degrees," said the Plant Engineer, "and you see," pointing to the control board, "my outgoing hot water is 140 degrees. After traveling through over a mile of welded mains, through thirty miles of heating coils, and through 75,000 square feet of cast-iron radiation, the water comes back to me at 123 degrees."

Buzz! Buzz! Buzz! An impolite telephone interrupted him. He answered, then paused to turn a valve slightly.

"Somebody kicking for more heat, eh?" quizzed the visiting President, with a sly wink at the others.

"Oh, no," was the quiet reply. "That was just our regular half-hour report from the Weather Bureau. It's three degrees colder outside than it was at ten o'clock. I just turned in enough exhaust steam to meet that drop ——"

"Exhaust steam!" exclaimed the President. "That means heat for nothing. Had I known our proposed system would utilize exhaust steam, I would have granted the enormous coal saving claimed.

"One question more, about the control and the workman's efficiency: Isn't there something peculiar to this plant that makes so remarkable a showing?"

"No," replied the Consulting Engineer. "The working of the system is due to the exactness of the engineering; the excellence of the construction work; and the intelligence of the operating engineer. Take *my* word on the calculations and the Grinnell Company's guarantee of performance."

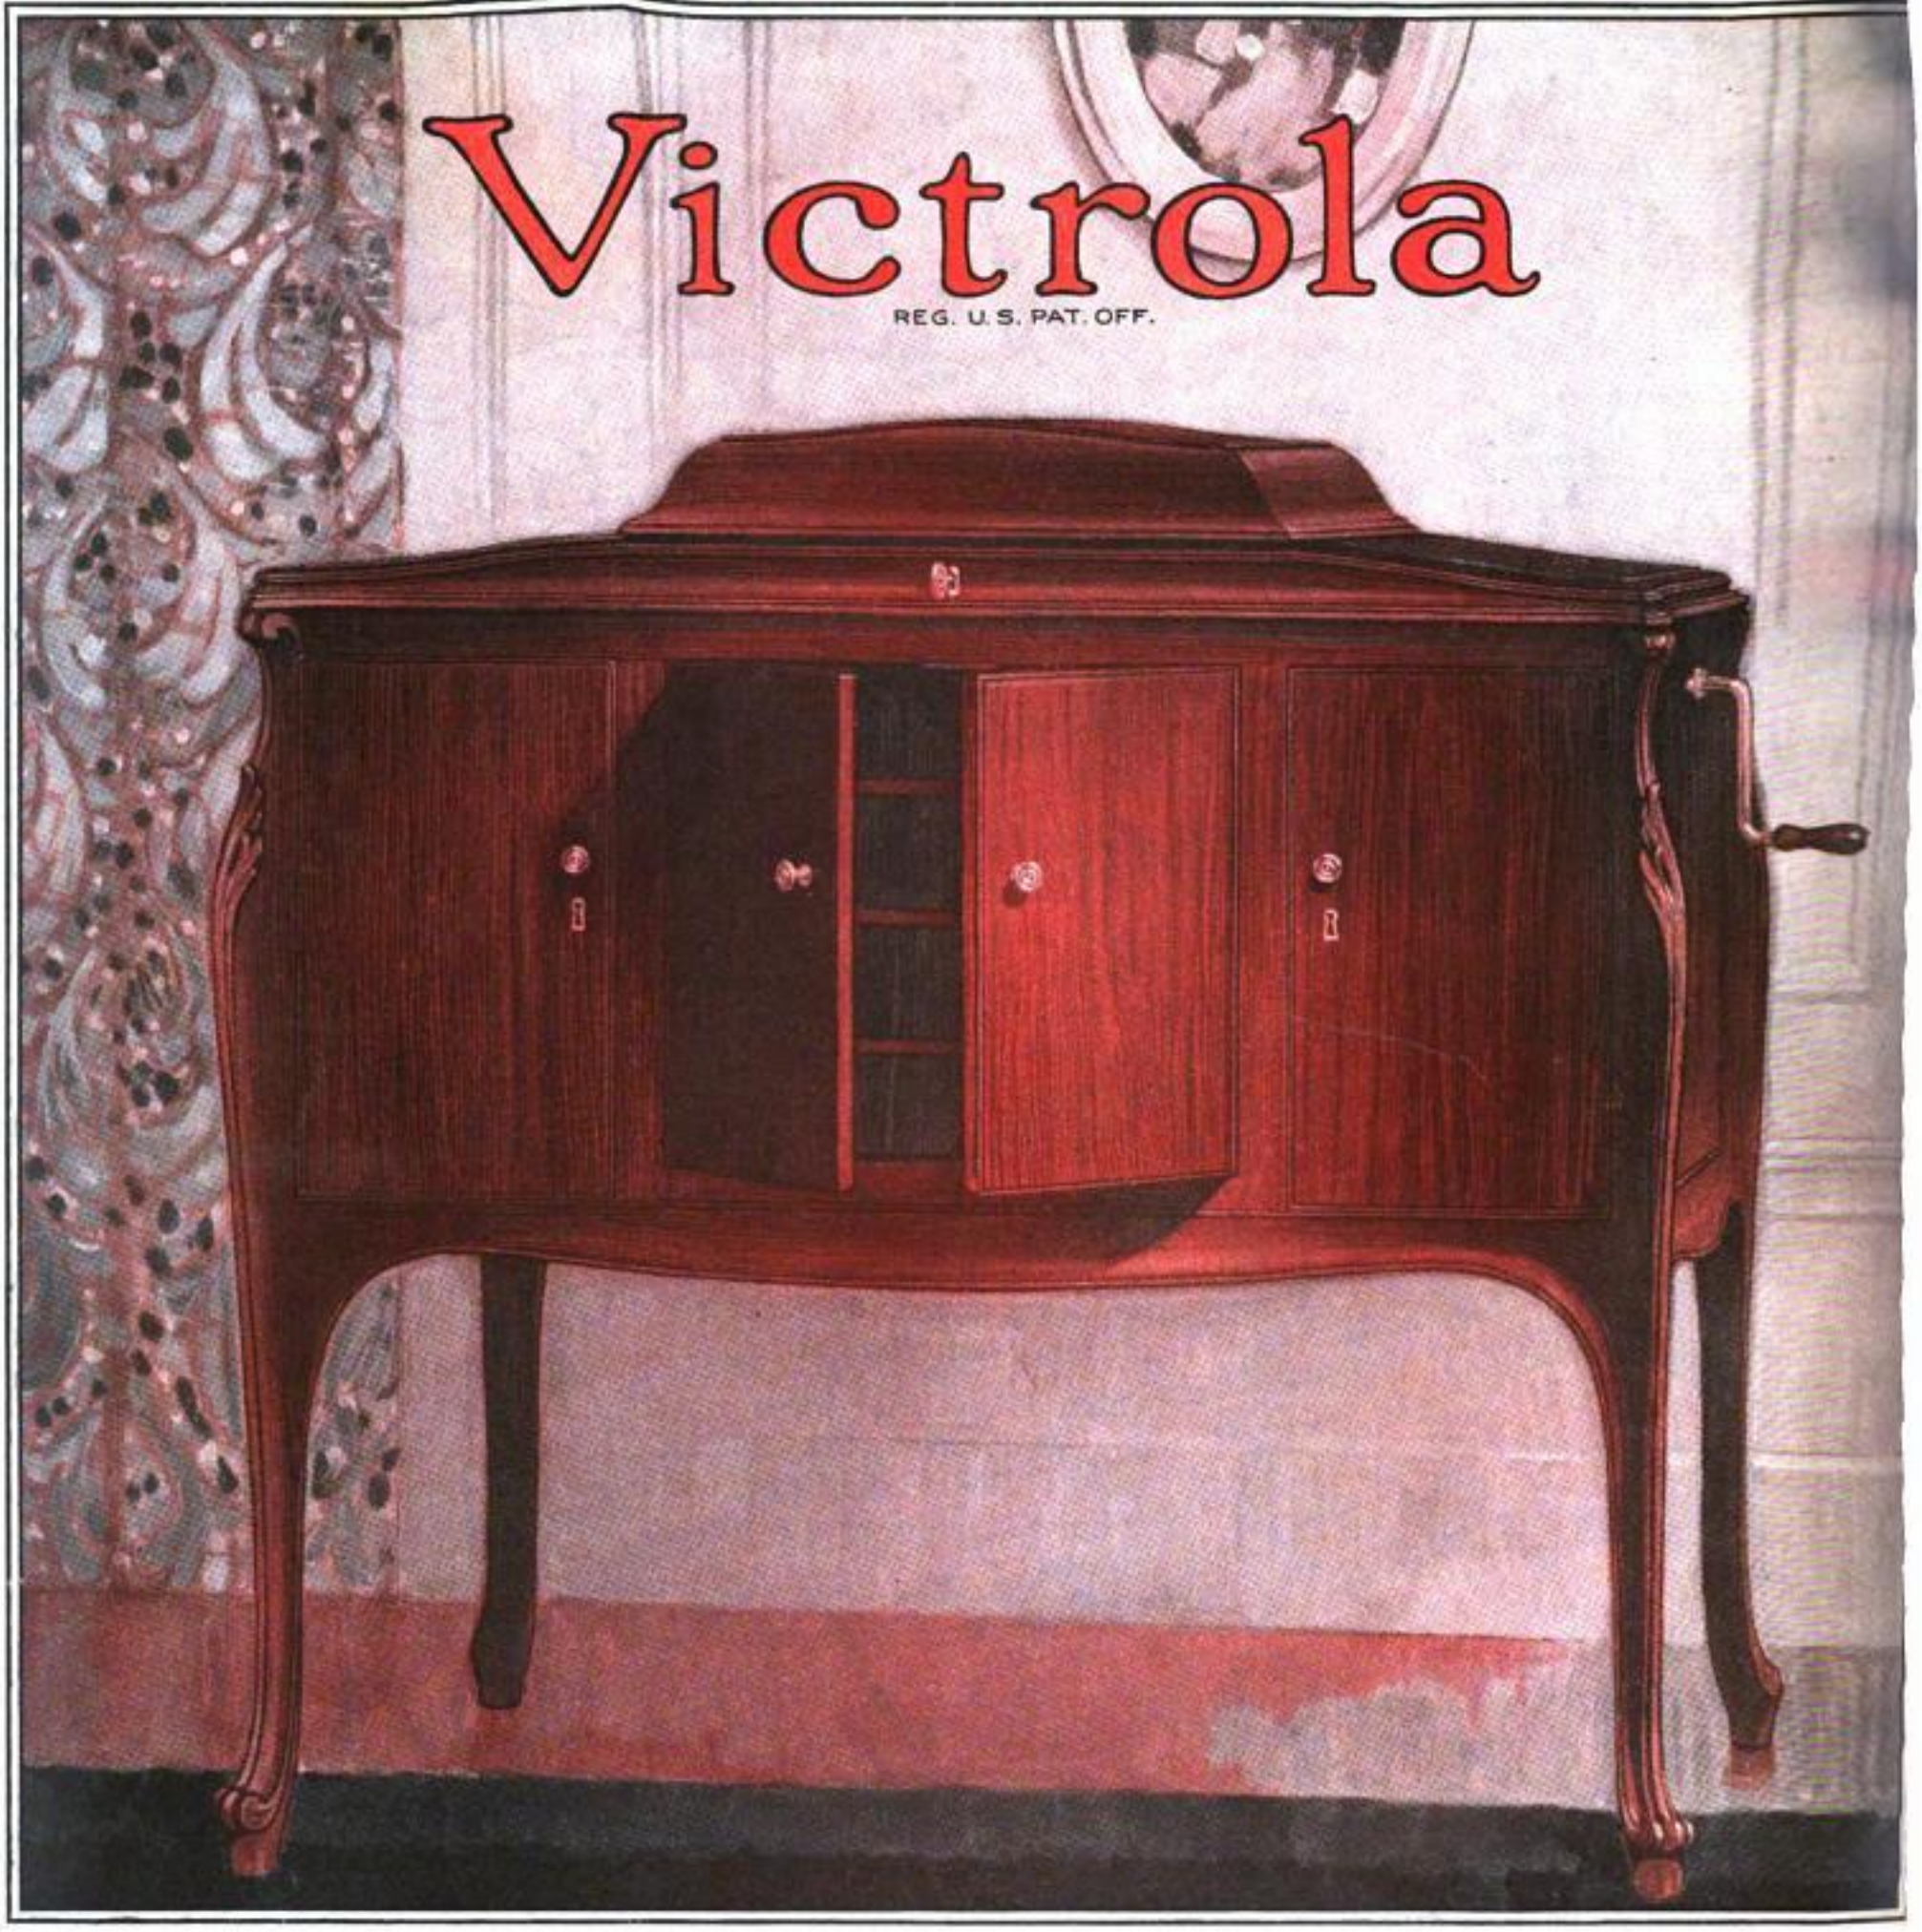
All the nourishment and food value of Malted Milk
A delicious chocolate flavor in addition

YOU can *now* get *Chocolate* Malted Milk—all of the ingredients blended in dry form—in one convenient package. Mixed with water or milk, it is ready for serving—hot or cold—a home beverage just like that served at your soda fountain.

Over a million people in this country depend upon malted milk taken daily as an energy and health builder, restoring nerves, keeping the body young and fit.

This addition of *chocolate*—the most popular flavor—makes Chocolate Malted Milk a better health food. It is delicious—everyone likes it.



You can well make Borden's Chocolate Malted Milk a daily addition to the children's meals. Serve it regularly for luncheon or supper. They will love it as they do a special treat. Yet it is an ideal *food* for growing boys and girls—digestible, rich in proteins, full of nutriment that makes firm muscles, strong bodies, glowing faces.

Chocolate Malted Milk is made and guaranteed by the *Borden Company*, whose *Eagle Brand Condensed* Milk, *Evaporated* Milk, and other milk products are familiar in every household.

Do you use the frying kettle as much as the frying pan?

FEW women do. Most of them consider deep frying an expensive, disagreeable, difficult way to cook, and deep fried foods unappetizing and hard to digest.

Just the reverse is true. The trouble is with the fat—not the kettle. A frying kettle used with the right fat consumes less fat than a frying pan, cooks without smoke or odor, and enables the housekeeper to prepare easily many delicious, digestible dishes that no other method can produce.

To be satisfactory for deep frying a fat must have the following qualities:

It must be odorless and tasteless and must not smoke at frying heat. It must give up its heat quickly so as to form a protecting crust on the food, thus preventing the food from absorbing an excess of fat. It should be a vegetable product so as to digest easily.

Professional cooks and experienced housekeepers say that Crisco is the ideal medium for deep frying because it has all these qualities, and because it simply has to be strained after using and it is ready to use again. It absorbs no taste from anything cooked in it and gives none to the food it cooks. Moreover, it is strictly vegetable; simply the pure, white, solid cream produced by hardening edible vegetable oil.

If you want to serve foods that are *different* the frying kettle is your greatest help. Get the cookbook offered at the left and you will have the simple rules that will enable you to do deep frying as easily as ordinary boiling and stewing. Get Crisco from your grocer and you will have the ideal fat.

Cheese Fingers

A delightful substitute for meat—strictly vegetarian when fried in Crisco.

¾ pound cheese, grated (1 cupful)
½ cupful soft sifted bread crumbs
½ teaspoonful salt
1 teaspoonful mustard
½ teaspoonful paprika
2 tablespoonfuls Crisco
1 cupful milk
1 egg beaten light
(1 egg, milk, soft sifted bread crumbs, Crisco)

Cook the cheese, crumbs, seasoning, and milk over hot water, stirring constantly, until the cheese is melted and the mixture is thickened somewhat. Add the beaten egg and turn mixture into a square dish of such size as will give it a depth of three-quarters of an inch, set dish in a pan of boiling water, and cook in a moderate oven for about fifteen minutes. Cool mixture, and cut it into strips three-quarters of an inch wide and the length of a finger. Roll in crumbs, dip in beaten egg diluted slightly with milk, roll again in crumbs, and fry in Crisco which has been heated until it browns a crumb of bread in 40 seconds; drain the fingers, when browned, first over the kettle, then on soft paper. Serve at once with bread and a green vegetable salad or stewed fruit.

Why does smoking fat make fried foods hard to digest?

Knowing the reasons why you should or should not do certain things is what gives assurance in cooking. Learn the expert "whys" of all branches of the culinary art from "The Whys of Cooking", the unique cookbook written by Janet McKenzie Hill, founder of the Boston Cooking School and editor of America's foremost cookery magazine. Over 100 pages of rules, original recipes, cookery time tables, tables of weights and measures, and instructions in table setting and serving. Bound in blue and gold and illustrated in colors. If you could buy this book in a bookstore, it would cost at least 75c.

We will send you one copy for only 10c, on receipt of your request, addressed to section K-4, Department of Home Economics, The Procter and Gamble Company, Cincinnati, Ohio.

Of course, you can use Crisco for all your cooking. The delicacy and richness that make it so satisfactory for frying are the qualities that you need in cake baking and pastry making.

Crisco is sold in sanitary, dust-proof cans of 1, 3, 6, and 9 pounds, net weight. Cheaper per pound in the larger sizes. Never sold in bulk.

RITA COVENTRY

"Then, Caro Mio," She Retorted Gayly, "I Have Not Altogether Lost the Power to Surprise You"

By Julian Street

ILLUSTRATED BY HENRY RALEIGH

AMONG New Yorkers it is recognized that the changing seasons do not first announce themselves from almanacs, nor in precocious items upon menus, nor yet among the growing things of Riverside Drive and Central Park. The first signs make themselves apparent on the treeless, grassless reaches of that hard-paved highway extending from the Waldorf to the Plaza. And to-day, though it was but mid-February according to the calendar, the dense and animated crowds upon Fifth Avenue, the brightening costumes worn by women and exhibited in windows, and a bursting golden something in the air proclaimed the spring.

To Richard Parrish the miracle was the more wonderful because he had not seen it come to pass. It had burst upon him, a thing accomplished, on his return this morning from a brief trip to Chicago. Only a week ago he had left New York plunged in its miserable winter; slush swimming in the streets and a solution of slush swimming in the heavy atmosphere above them, mixed with the gaseous breath of coughing motor cars. Chicago had been as bad or worse. The weather there, coupled with what Parrish regarded as a provincial taxi service, had forced him to the purchase of a pair of rubbers—things abominable alike to his bachelor fastidiousness and to his feeling as a young and active man in the late thirties that rubbers properly belonged to the equipment of decrepitude.

A wet snow had been falling yesterday in Chicago. He had worn the rubbers to the train, but once in his Pullman had quickly slipped them off, and in expression of their permanent dismissal from his life had pushed them far into the recess under the opposite seat. And though this renunciation implied in him nothing of the ground hog's gift of prophecy, the weather in New York this morning had seemed to give benignant sanction to the act. It was a day for open windows. The windows of his limousine had been open as he drove home from the station, yet he had felt the weight of his winter overcoat uncomfortably. Entering his apartment he found the windows open there; for Ito, his servant, had seen to that. The curtains swayed gently in a soft breeze; a pattern of dappled sunshine, sifting through them, wavered over the fixed pattern of the library rug, and from the streets ten floors below floated up to him a medley of sounds blending into a not altogether inharmonious symphony.

He had not telephoned to Alice until after bathing, and looking through his accumulated mail; nor did the thought strike him that in the year and a half of their close comradeship this was the first time the telephoning, on his return after an absence from New York, had been thus postponed. That, however, was the fact. In the course of the year he had made four of these short business trips. After the first two he had telephoned her from the station. Last time he had come home before telephoning. This time he had not telephoned until he was ready to start down to his office.

Then he had departed for Wall Street wearing for the first time this season a light overcoat and a soft gray hat, and carrying a wanghee cane. The day in the Street had been one of mere routine. The market was dull. At the close he had come uptown on a leisurely Elevated train in preference to the swifter Subway, and descending at Thirty-third Street had walked the remaining distance on Fifth Avenue. Then and

Digitized by Google

then only had he felt entirely at home again, for it is not until he has walked Fifth Avenue that the returned New Yorker feels certain of his reinstatement.

Now, seated in the library of his apartment, with the late sun shining through the west windows like a rose-colored calcium in the theater, his thoughts were on the Avenue and what had happened there. Not only had he seen the spring emphatically confirmed but his walk was illumined by a circumstance the adventurous flavor of which seemed to him exquisitely suited to the season, and left him filled with a strange restlessness.

The restlessness was more than merely vernal. There was contrition in it; and because the contrition had to do with Alice Meldrum, Parrish felt now, as the time when he must go to her drew near, an obscure sense of annoyance with her. When a man is about to wound the feelings of a tender-hearted and adoring woman he is likely to feel a little bit annoyed with her.

In a sense, he reflected, Alice would have no right to feel hurt. He had made no definite engagement with her for this evening. Yesterday, before departing from Chicago, he had wired her that he was starting. This morning he had telephoned that he was back and would be in to see her late in the afternoon. Specifically that was all. But the trouble was that at the time of telephoning he had planned to take her out to dinner, and had known that she would understand it so. There lay his difficulty. So many things were understood between them in that way.

Of course it was not his fault that his plans were changed. When he telephoned to Alice, how could he have foreseen that in the glory of the afternoon he would meet Larry Merrick proudly escorting the gorgeous Rita Coventry, or that Larry would stop and present him—for the purpose, Parrish suspected, of exhibiting his privilege of addressing the singer by her first name? By a happy chance the meeting had occurred in front of Yoshioka's, which led to the discovery that Rita and he had a kindred interest in Japanese prints. But even so, who could have anticipated that on what was evidently an impulse the prima donna would invite him to a dinner party at her house that night?

Of course he had accepted. Really there had been nothing to prevent his doing so, and an opportunity to know Rita Coventry did not present itself every day. Besides, there were her prints—she had promised to show him some Utamaros and Toyokunis. Even Alice, in whom he had inculcated a certain interest in Japanese prints, was aware that he was particularly fond of the works of those two artists. Surely, under the circumstances, she could spare him.

For more than ten years he had admired Coventry, knowing her only through the press, through gossip, through her voice and through his opera glasses. At the time of her sensational début in Paris he had heard her sing Circe at the Opéra Comique, and one day in the same season had seen her lunching at Larue's. She had eaten heartily, laughed heartily, gestured heartily with her hands, arms and shoulders. That was as near as he had ever been to her until this afternoon. The elderly man who had sat across from her at the table was manifestly not the king with whom her name was linked by gossip. It was her father, so his waiter had informed him. The story was that her father had been a postman in Rochester, New York.

Two or three years later, after she had captured London, Parrish heard her there, and since she had left Covent Garden and become the adored of New York opera goers, he had heard her in many parts. Season after season he had listened and observed without detecting any change in her save that her figure, displayed in certain of her rôles with such striking generosity, had with the passing years become if possible more perfect.

Her back was famous. In it was revealed the strength which enabled her to give such energy to her performances. Newberry the sculptor said that a back like Coventry's, reproduced in marble, would look too anatomical. "It's the life, the motion, that makes it so fine," Parrish once heard him declare. Life! That was it. She fairly flashed with life.

"I Have to Dine With Some Friends of Larry Merrick's. I Didn't Know Until This Afternoon. It's a Dinner Party"

She had been dressed this afternoon as one felt a beautiful opera singer ought to dress. Her costume was utterly unlike that of other fashionable women; she was, so to say, elegantly noticeable. The gown of gray cloth with black braid in unexpected places, and a skirt rather short, somehow looked Russian, though perhaps that suggestion was rather the effect of her dark and lustrous furs; her rather small black hat had a hedge of black feathers depending from the brim in such a way as partially to conceal the eyes—but only partially. Glimpsing them through the fringe of feathers as through heavy lace, he had been conscious of an impulse to bend over and look directly at them. But that had not been necessary, for presently she had thrown back her head and let him see her eyes. That was when she invited him to dinner. It had seemed to him that an agreeable vibration was set going between them when their eyes met, and he even fancied he detected a little note of challenge in her look as she gave the invitation—something dashing, like the gesture of a cavalier flinging a gauntlet.

This pleasant and stimulating picture in his mind was dispersed abruptly by the striking of the grandfather's clock. Five. His car would be waiting, and by going at once to Alice's he could spend two hours with her before coming home to dress for dinner. That would not satisfy her, but it ought to help a little.

Going down in the elevator he began to think of the explanation he would make. She would not reproach him—there was nothing of that in their relationship—but she would feel hurt, and though pride would make her try to conceal her feelings, she was too artless to be able to conceal them, especially from him. How he knew her! And all in less than two years.

Of course she was sensitive. Very likely she was becoming more so. That was not unnatural. To a man an attachment such as theirs, running along as theirs had run along, pleasantly but without a definite objective, was an agreeable thing. It gave a man a deep interest without too much responsibility. But to a woman, however much she might at first endeavor to deceive herself into a belief in equality between the sexes, such a relationship could not bring permanent contentment. In the beginning he had tried to point that out to her; but she had shown long strain, very strange, he thought, in a woman temperament, and had professed herself satisfi things as they were. Thence they had drifted.

He had tried always to be c ate. Had he not, for example, her twice from during the pas busy though been? Little att of that kind ples so. When at hom ephoned herever ing. Often he s flowers. For her day last year h given her a har lamp, and at Chr a Chinese rug f living room of her ment. She had twenty-six when I met her, and in M would be twenty- Already he had l at flexible-linked l lets of platinum, se square diamonds, and costly—and stocks gone absol to the devil too!

"Park Avenue, said to his chauffe he got into his car.

Then suddenly, the first time, his r focused sharply on fact that somehow it had come t understood between his chauffeur himself that Park Avenue meant All address. Habit. He had become a habit with A and she a habit with him. It was habit that m her expect to dine with him to-night. When he been away he always took her out to dinner on the nigh his return. Moreover, they dined together three or f times a week, now at a restaurant, now at her apartm occasionally at his. On Thursdays and Sundays he alm always took her to a restaurant, because her maid was on those evenings—and this was Thursday.

Their habits were so fixed that others understood the the elevator men in the building in which she lived, i instance. Parrish knew them as well as he knew those his own building. He even tipped them. They nev announced him by telephone, but took him right up Alice's floor. Nor had he to mention the number of t floor. All that was understood.

Also it was understood that one long and two sho pressures on the doorbell button was his ring. Alice maid, Otillia, did not answer the doorbell when she hear that ring, for it was understood that Alice herself liked to le him in. Parrish thought well of Otillia, though he some times found himself wishing she would treat him more as caller and less as a member of the household.

As his car stopped before the tall apartment building where Alice lived, Parrish was aware of a feeling of rebel lion against all this mass of understanding.

"You've been away, sir," said big Henry, the door man.

"Yes, yes," Parrish replied, and hastened across the sidewalk.

"Back again, Mr. Parrish?" said Michael, the elevator man. And as the car ascended, "Unusually fine weather we're having for this time of year."

"Yes, fine."

Parrish was wishing that he knew some other tenant of the building in order that he might astonish Michael by getting off at any floor other than the seventh—the same old seventh. At Alice's door he allowed his feeling of perversity to triumph. He pressed the button only once. But even so, it was Alice, not Otillia, who answered.

II

SHE was tall, deep bosomed, golden haired, with a delicate skin which, when she flushed, as she did now on seeing him, made him think of an evening gown she sometimes wore—a gown in which a glow of cerise showed faintly through a sheer fine drapery of creamy satin.

"Dick!"

"Hello, Alice." He entered the little hall.

"Why, you rang only once!"

Then after a moment, as he drew away from her and slipped out of his overcoat, Otillia appeared.

"Oh, it's Mr. Parrish!" she exclaimed, surprised and a little confused.

"You didn't recognize my ring, eh?" He was smiling.

"No, sir." She turned back toward the kitchen.

"There's one thing Otillia doesn't understand at any rate," he thought to himself with a certain satisfaction.

taking his coat and hat and hanging them in a closet nked arms with him and led him to the living

y didn't you ring the way you always do?" she "I thought it must be you, but I ——"
ause it's spring," he answered.
at has that to do with it?"
e starts anew in the spring. Everything is new, even y I ring your bell."
y!"
patted his cheek. He sat down in an upholstered his chair—and she perched upon the arm.
d you think of me while you were away?" she asked. dn't I write you twice? Didn't I wire?"
s, you were a good boy." She stroked back a lock of ir. "But did you think of me often?"
f course, of course." Then as though to dismiss the he asked, "What have you been doing with yourself?" m still looking for something to do in my spare time," id.
ou haven't found anything?" It was as much a nent as a question.
lothing I liked. You don't take much stock in my unting, do you, Dick?"
f you needed a job you'd get one."
Yes. But as money isn't particularly a consideration, t you think I ought to wait for something I'd like?"
I think you'd be pier with some- g to do."
Just anything?"
Perhaps not, ——"
"Because," she nt on, "I did have b one day. Clara I went around d acted in a vie."
"You did? What t that in your ad?"
"Clara knew a l who did it. We ought it wouldn't rt to try it. They ed us in crowd enes. It was rather n, just for once. ut the lights are ard on your eyes, nd they keep you aiting around do- ng nothing for hours t a time, and some f the people are terribly queer. I shouldn't like the movies."
"I understood when I went away that you were think- ing of taking up dress designing."
"I asked Madame DuCharme about it. She says the field is overcrowded. Any- way, I don't be- lieve I sketch well enough."
"Have you thought of anything else?"
"Yes. I went around to a *crèche* and inquired, but they didn't need any help with the children—just an office worker."
"Well ——"
"I'd rather work with children. That was my whole idea in going there."
"I wonder if you'll ever find anything you do care for," he said, shaking his head as though he did not believe she would.
"I care for you."
"I know; but car- ing for someone isn't enough to fill a per- son's life. That's just the point."

"Not a man's, perhaps," she answered.

He saw his opportunity.

"But, my dear girl, it's not good for you to have no outside interest. It's not fair to yourself. We can't be together every evening, even when I am in New York. Take this evening, for instance. When I telephoned this morning I was expecting to take you out to dinner, but as things have turned out I shan't be able to."

Her eyes, which had been on him, turned to the rug.

"I'm sorry," she said, drooping.

"So am I. But it can't be helped. I have to dine with some friends of Larry Merrick's. I didn't know until this afternoon. It's a dinner party. If I didn't go it would throw things all out of joint. They have some fine Japa- nese prints they've been wanting me to see."

"I suppose you couldn't see them any other time." She was still looking down.

"Not very well. They're going away."

"Maybe you'll be able to come in later in the evening," she suggested.

"I'm afraid not. I'm invited for eight; that means we won't be at table until 8:30 or so. And afterwards there'll be the prints to see. I don't expect to get away much before midnight. For heaven's sake, Alice, don't look like that! You make me feel like a brute."

"I'm sorry. You're anything but a brute. I couldn't help being disappointed."

"But I ought to be able to go out to dinner and look at some prints without your making a tragedy of it." There was a slight note of irritation in his tone.

"I know it. It was just for a minute. You've been away, and I was expecting —— But I'm all over it now." She smiled as though to offer proof. "It was selfish of me, and you're never selfish with me. I want you to go to- night and have a fine time."

"That's a dear girl," he approved. Then he added, "But don't say I'm unselfish."

"But you are. You've always done everything I wanted."

"Not always."

"Yes, you have."

"What about Blenkinswood?" he reminded her. Some- how it salved his conscience to remind her of something he had refused her in the past.

"That's different," she said. "You had your point of view about it and I had mine, but it was for you to decide."

Becoming interested in the topic itself, he forgot his reason for having brought it up.

"Well," said he, "now that you look back, don't you see that I was right?"

"I see that it was for you to decide," she repeated, evading a direct answer.

"Yes; but be honest with yourself—wasn't I right?"

"I've never been able to see," she said after a moment's hesitation, "why you couldn't have taken me to Blenkinswood if you'd really wanted to."

"Good Lord!" he exclaimed. "I thought you had stopped talking about it because you'd come around to my point of view."

"No," she an- swered; "I stopped because I saw it was annoying you to hear what I thought. It's your place. If you want to forget about it ——"

"And I do," he put in with a rueful little chuckle.

He did want to forget about Blenk- inswood. That old house in Virginia weighed upon his conscience like a neglected poor rela- tion. With its mort- gaged acres it had come to him as an inheritance—a tumble-down ances- tral home, symbol- izing the decay of the proud colonial family whose name his mother as a maiden had been the last to bear. He had paid off the mortgage, spent some money in put- ting the place in better condition, brought to New York the portraits, the mahogany and such old silverware as the Yankee sol- diers had not found, and installed a farmer to run the plantation on shares.

The farm had never paid. For a dozen years he had sent annually a check to cover re- pairs and replenish- ments, yet each year there was a deficit. In all that time he had gone down there

UP IN THE AI

By Floyd W. Parsons

WE HAVE heard a lot about the various ages through which civilization has passed. Centuries ago there was the Stone Age, and in later times people have talked of the ages of steam, steel and electricity. Now we have come to a time which might be termed the Age of Air, for out of the earth's atmosphere and the ether that lies in and beyond it are coming wonders that amaze us and veritable miracles we do not understand.

In years gone by our attention was chiefly given over to thoughts concerning land and water; now we find that the air must be reckoned with and considered as something more than a mere mixture of oxygen and nitrogen which we must breathe in order to live. The airplane has converted the air into a highway of travel; the skill of the chemist has transformed the earth's atmosphere into an infinite storehouse of useful elements of great commercial value; and radio has made space a wonderful medium of communication.

It would be difficult to predict in just what way we shall profit most from our use of the air. The nitrogen we shall get from it in ever-increasing quantities will enrich our farms, greatly increasing the productivity of the soil. The oxygen of the air is already being used in such large quantities that important industries and arts, like welding, are based on its constant production. The cost of producing oxygen has been reduced from twenty cents a cubic foot, in 1906, to one cent at present, and yet we have hardly commenced to produce and use oxygen as we should in our industrial life. One blast furnace turning out 500 tons of iron a day requires five times as much oxygen in its operation each twenty-four hours as is produced daily by all the oxygen plants in the country.

The useful properties of oxygen have been known to scientists for more than a century, but because of the magnitude of the project the development of a great oxygen-producing industry has been retarded. What the future holds for us along this line of development is difficult to imagine. Perhaps some day, due to the slight difference in the ratios of density of oxygen and nitrogen, it may be possible to employ centrifugal force to stratify air into layers of increasing oxygen content toward the outer edge of the rotating mass. Again, there is the possibility that we may hit upon some cheap substance possessing oxygen-absorption properties similar to those possessed by the blood. Theoretically speaking, oxygen should be produced from the air at about 1 per cent of the cost of producing it by the electrolysis of water. Even if we fail to realize these dreams we have gone far enough in this line of scientific endeavor to make it certain that in the near future we shall witness the production of oxygen at a much lower price than is possible to-day, and then the practice of medicine, chemistry, steel making, gas manufacture and other pursuits will be wholly revolutionized.

But oxygen and nitrogen are not the only elements in the air, although they compose 99 per cent of it. In addition we find the rare gases, argon, helium, neon, krypton and xenon, all of which may one day become useful elements. Argon, the most common of the rare gases, is now used to fill electric bulbs, for it has been found that the efficiency of incandescent lamps is increased by filling them with an inert gas instead of making them vacuous, and argon, as well as the four other rare gases, is absolutely inert. Not only does argon increase the brilliancy of the lamps but it lengthens the life of the filaments. The use of argon in electric bulbs last year saved the nation about $60,000,000.

Air No Longer Free

HELIUM is being used to inflate dirigibles and observation balloons. A few years ago it cost $1700 to get a cubic foot of helium out of the air; to-day this gas is being produced for ten cents a cubic foot. Neon is being used by a few lamp makers to produce electric bulbs and tubes that give off a beautiful orange-pink glow. Krypton and xenon are present in the air in such small quantities that little is known of them. However, if it were not for krypton there could be no aurora borealis. At any rate, science has gone along far enough in its investigations of the atmosphere to prove beyond doubt that the air is a storehouse of elements of untold commercial value.

The Radio Transmitter Gets Everything But the Smile. Above — Listening to an Evening Concert by Radio

At present we are deriving only a few of the possible benefits that will result from a proper utilization of the air. The air brake has been one of the most useful inventions of man, and has been the chief governing factor in the development of railroad transportation. Air power is also used in painting surfaces, salvaging sunken ships, conveying and handling materials, cleaning the fronts of city buildings with a sand blast, picking cotton with vacuum machines, coating surfaces with cement, boring, drilling and tamping, and in other operations too numerous to mention.

Often we have heard the expression "free as the air," but since the advent of the airplane and radio the air is no longer free. Slowly but surely the advances of science are rendering it necessary for the nations of the earth to exercise control over the air. The development of aërial travel is already presenting problems requiring legislative action. It is perfectly obvious that there must be international laws regulating the travel of aircraft from one country to another. Furthermore, aërial navigation in the future will be chaotic unless it is carried on in systematic fashion. There will have to be specified lanes of travel and prescribed elevations for various types and classes of air machines. Fast-moving planes will speed along at certain elevations, while the heavier and slower freight-carrying craft will move at other levels designated for them.

All of which is intended to create a wholesome respect for the air, and lead the reader's thought to the important fact that the air certainly is no free. We may breathe it as often generously as we please, but we h right to use it as a dumping pl unhealthy fumes, smoke and smell air has become an asset of unme importance to civilization, but its depends on a general acceptance truth that the earth's atmospher become public property which can polluted by the individual to sat personal whim, or selfishly used for ure or profit by the few to the inco ience of the many.

Radio Audiences

THE newest wrinkle of the air i radio, and here we have a new ma a new industry, in fact, the future of w depends entirely upon a careful sys atic national control of the use of atmosphere. Most businesses lo government meddling, but radio ca exist without it. The value of the w art of wireless communication is fou on the proper control of the origin length of the electrical waves that imparted to the air, or rather to the et by the radio apparatus. Just as one v singing or speaking may be drowned by a hubbub of other voices, so the ra waves of a song or speech have their fulness destroyed and are made u telligible by other wireless waves broadcast at rand without any observance of prescribed rules or schedu

Radio has a wonderful future, but in a limited fi Its usefulness depends on the settlement of proble that business men and legislators have never bef considered. Everybody cannot use the air to advert some special line of business or popularize some p ticular hobby; so it is a question as to what will be p mitted and what will be barred. Who will bear the c of broadcasting the various features of news, educati and entertainment? Before long the radio audience the United States will be the largest audience that c be reached by anyone instantly and simultaneously. is perfectly plain that the air cannot be sold to a individual or corporation for so many dollars, to use any way and for any purpose the purchaser desire Advertising matter in papers and magazines is censore by the post-office authorities. So far as possible no o is permitted to use the mails to deceive the public. Lik wise radio must be regulated to prevent its misuse.

Radio is not new, for it was pretty generally under stood by electrical folks twenty years ago. But unlik the automobile and the telephone, its development ha come all at once rather than gradually. In less tha six months approximately 500,000 radio-receiver sets have been sold in the United States. The fact that for more than a dozen years the public generally saw very little in radio except an agency for intercommunication, is responsible for the slow development of the art. Lots of people for years have carried a mental picture of a day when busy individuals would carry a little portable radiophone about with them and use it to talk to their offices, their homes or friends whenever occasion arose. For transoceanic communication radio has an interesting future, but for universal intercommunication here at home it is out of the question. One person may use it to talk to a multitude, but the multitude can't talk back. Perhaps the chief of police of a great city might arrange to talk to the members of his force, but the stalwarts on duty would not be able to reply.

The moment one or two large corporations interested in the manufacture of radio apparatus hit upon the plan of popularizing wireless communication by establishing broadcasting stations and sending news, market reports, sermons, bedtime stories and concerts through the ether, free to any and all who have an apparatus and care to listen in, the new industry, for such it is, jumped ahead in amazing fashion. Upward of 5000 newspapers in this country at the present time print the regular radio programs in each issue. The press has found that radio has opened up a new and fertile field which provides profitable advertising; so papers of all kinds and classes have been quick and willing to foster the growth of the infant industry. The telephone and cable companies have been far-sighted enough to understand that radio will increase their business by widening rather than curtailing the uses of the phone and the cable, and these corporations have viewed wireless as an ally rather than a competitor. In the logical

Digitized by Google

of things it is altogether likely that our big telephone any will become the most interested user of radio and untry's principal broadcaster.

us look ahead to the evening before the next presi- l election, which takes place in 1924. By that time doubtless will be an organized business, and likely s what will happen: Arrangements will be made with lephone company by the chairmen of the national ittees of the leading political parties to have their ctive presidential candidates address the people of ation in final campaign speeches which will be de- d on a prearranged time schedule during the evening. candidates will talk into a telephone apparatus, and voices will be carried by wire to the ten or a dozen casting stations belonging to the telephone company located throughout the country in such a way that y town and hamlet in every state will be able to hear final arguments of the presidential nominees. The hone company of course will charge a tidy sum for lling the job of broadcasting, and the campaign mana- will consider the service cheap at the price asked.

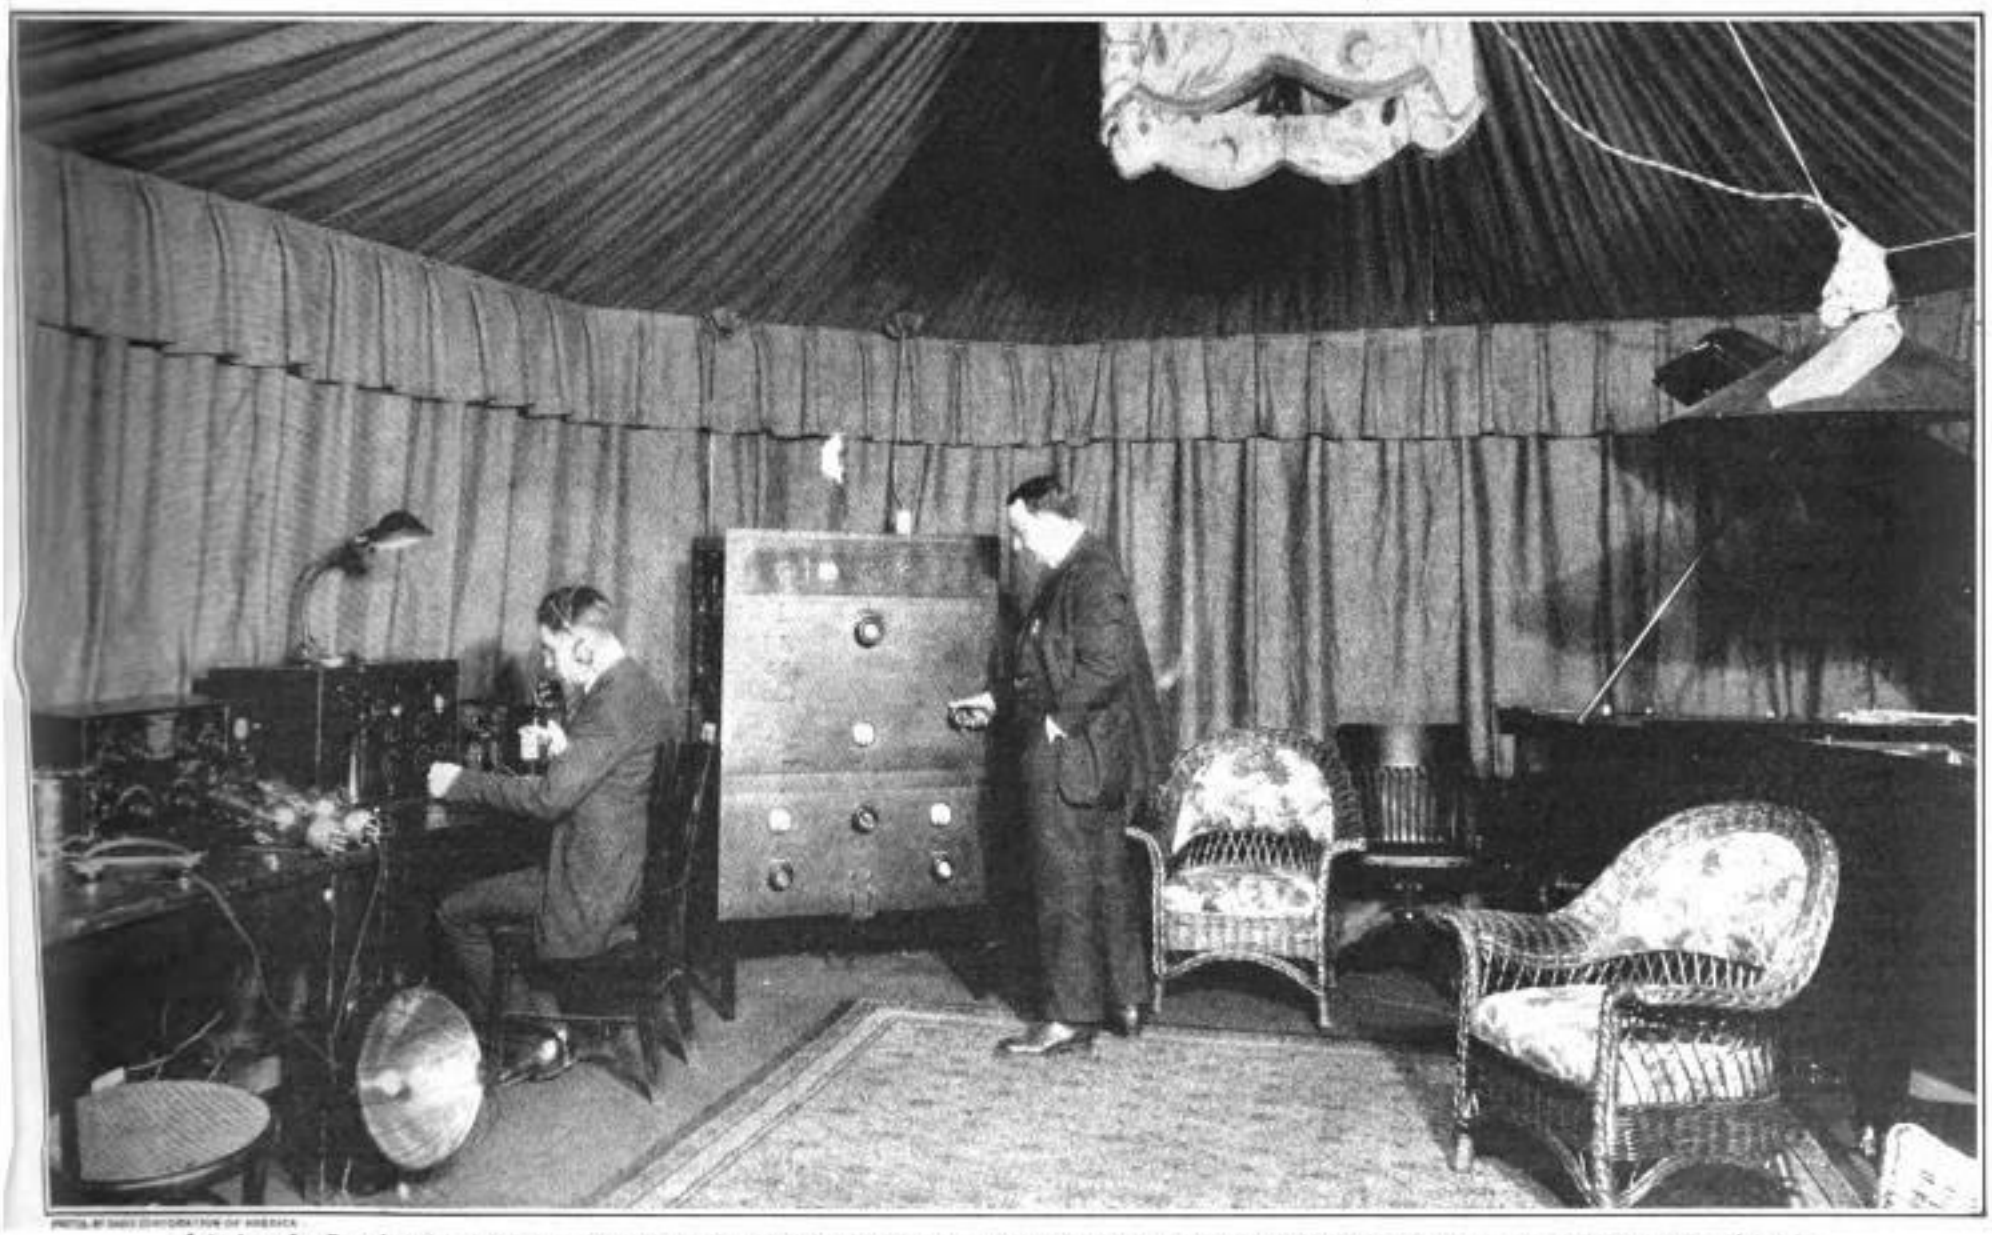
Who Should Pay for Broadcasting?

HIS is what must happen to the radio business: Wire- ss service will have to be paid for by those who use ust as advertising is paid for by those who buy space in newspapers and magazines. At the present time the e companies that are bearing the expense of broad- ting news, music, educational and other features are precisely the same position that the manufacturers of nographs would be if they were satisfied with selling ir instruments and then giving away records free of arge to all the owners of their machines. The present rangement is not satisfactory and will not be lasting, though it is not an easy guess to determine just what nd of scheme can be substituted for the present plan. lready there have been all kinds of suggestions for shift- g a part of the expense of radio broadcasting to the people ho have wireless outfits and who therefore enjoy the nefits of the service. None of the proposals, however, ppears to be sufficiently practical to justify mention. As consequence this phase of the problem remains a puzzle hich will tax the wits of radio leaders for some time to ome.

It will not be difficult to find people ready and willing o construct broadcasting stations and bear the expense of applying artists to amuse the public; in fact, almost any ne of the great metropolitan newspapers would jump at the chance of undertaking such work. But any newspaper or other organization or individual that would attempt to carry out such a plan very naturally would expect to profit directly or indirectly from the venture, so that such an arrangement of course is impossible and would be bitterly assailed by the competitors of any individual or concern that might make the attempt.

Government forces, led by Secretary Hoover, are following the rapid developments in radio without partiality, and with an eye to conserving the full benefits of the new art for the whole public. Mr. Hoover sees no future for radio if we attempt to use it for promiscuous intercommunication. It is his idea that the wireless telephone has one definite field, which is for the spread of certain predetermined material of public interest, from central stations. The matter sent out must consist almost entirely of features that are of importance to large groups at the same time. He holds the opinion that the number of sending stations must be definitely limited, and that the big problem is to determine who will do the broadcasting and what will be his purpose.

Singing Into a Radio Transmitter in a Wireless Broadcasting Station



Owen Young, chairman of the board of the Radio Corporation of America, appeared to be most interested in the use of wireless for transoceanic communication. He believes wireless will be a great improvement on our present cable service. Talking by radio at the rate of 100 words a minute is certain of accomplishment, while it is quite possible we may attain a speed of 400 or more words a minute through the use of the wireless.

Already radio stations of considerable strength have been established in Norway, Poland, Sweden and other countries, and Mr. Young believes that the natives of all these countries living in the United States will use the radio to a large extent. Natives of Europe now living in America do not use the cable very often, but when wireless rates to Europe have been reduced to a level as low as the telephone and telegraph rates now charged for communicating from New York to Chicago the European element in the United States will commence to talk to the folks back home, and a substantial volume of business will result.

Possibilities

FURTHERMORE, radio will not put the cable out of business, any more than the telephone displaced the telegraph. Radio will draw the nations of the world closer together, and as a result the cable lines will profit materially, for there are certain kinds of communications that must be transmitted with absolute accuracy and with secrecy, and in such work the cable will find its proper field. According to Mr. Young the various governments must control the ether that carries the wireless waves, but not the stations. Radio offers the greatest opportunity ever presented for the establishment of an immense news exchange. The educational possibilities are unlimited. The real masters among us will be able to talk to the multitude. Then, going to the other extreme, it will be easy for the housewife to listen in at a certain time in the morning and find out in a few minutes just which of the big stores are holding sales that day and what bargains are offered. The basic principle on which wireless must be conducted is that it must be

The Darned Little Bolshevik

By LUCY STONE TERRILL

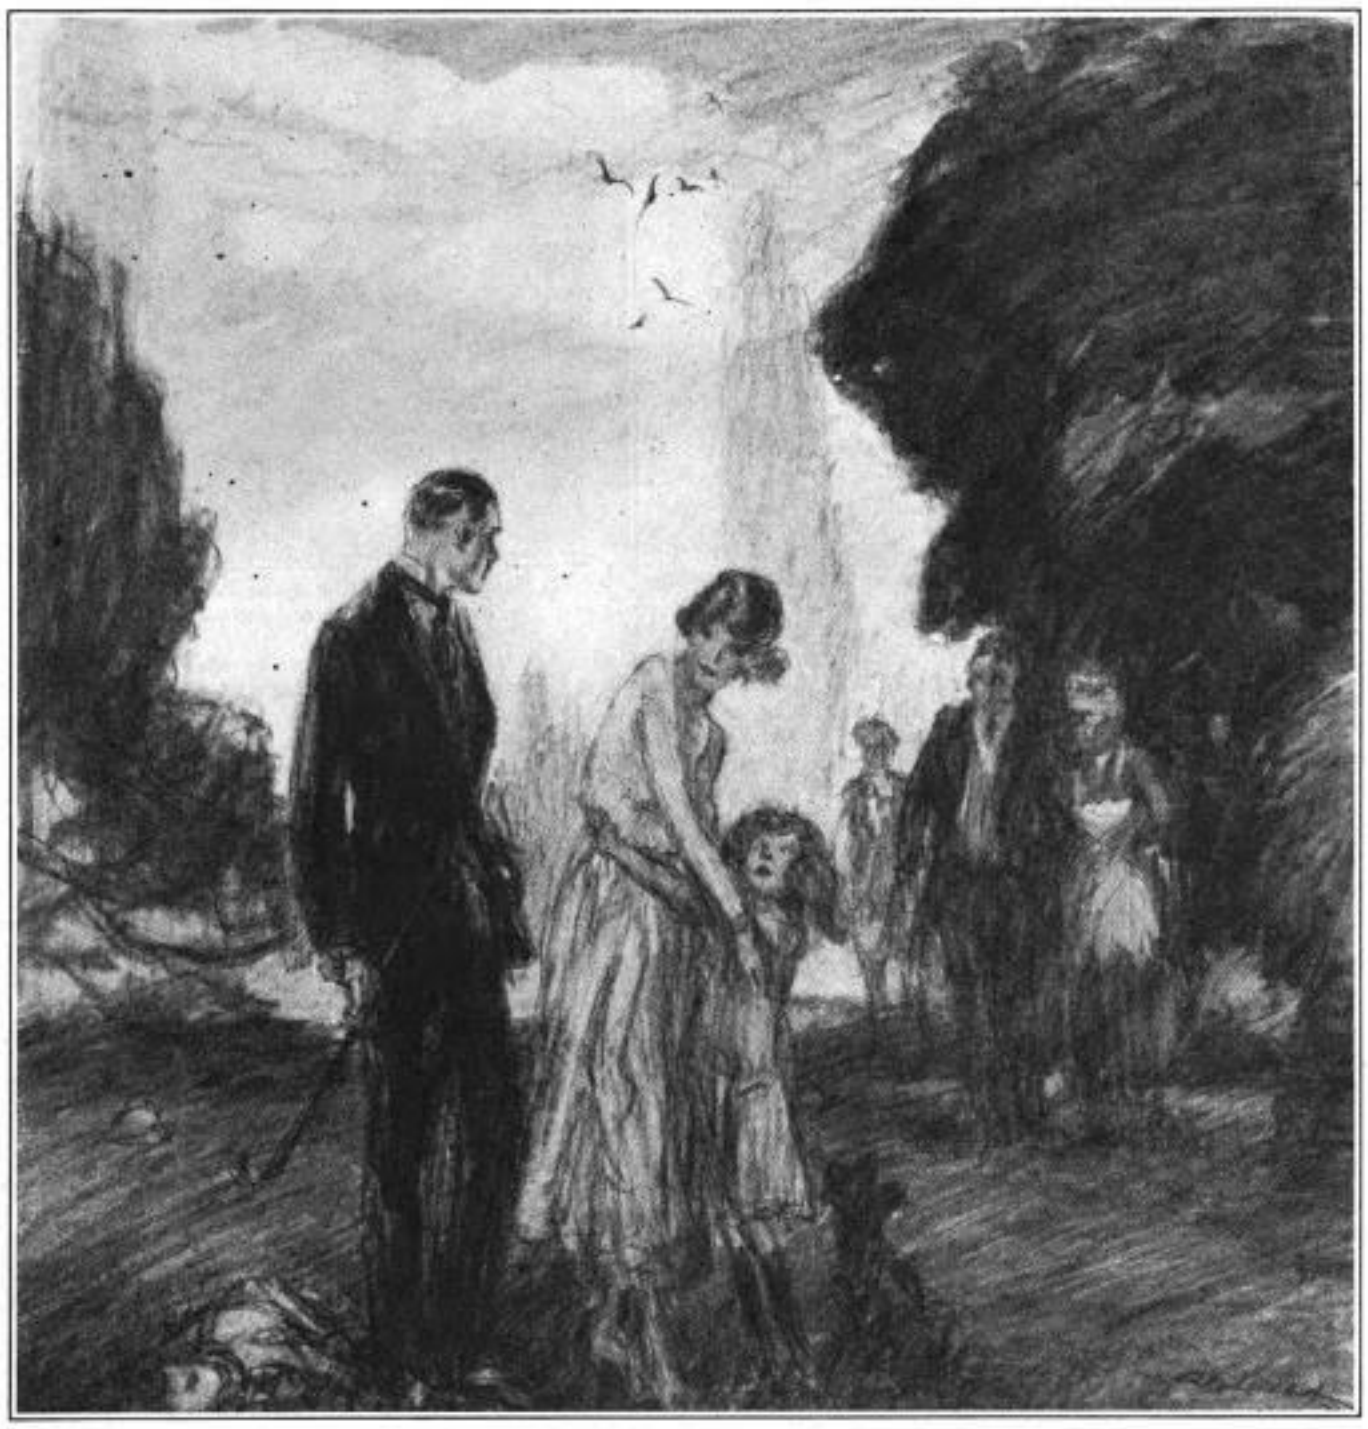
ILLUSTRATED BY HENRY RALEIGH

THIS is not a technically told tale, for it spills out of the approved short-story pattern through a dozen little holes: Its viewpoint is criminally agile; both unity and sedate sequence are missing; there is no climax; and it possesses no element of suspense. However, I will give it the dynamic beginning recommended by textbooks and night-school teachers of fiction writing in order to clutch the reader's interest immediately. It follows:

My husband is a maniac. That is really dynamic. For he is a golf maniac. And when he saw Mrs. Bangor Ellington Stevenson glide down our driveway in her electric one Saturday morning his maniacal manner fell upon him. We had arisen early—and stealthily, that we might escape any demands of our four modern offspring, who were sleeping late after their Friday-night movie privileges. Now all was lost. My husband spat fierce words upon me.

"Now what the devil has she come for? I'm not going to wait a minute, Elizabeth"—my name is Betty when he is normal—"not a minute! I won't have my day spoiled on account of that leopardess."

"Why, John! What an unspeakable thing to say!"



"No such thing. And she shan't come over here and prey on me, I'll tell you that! I begin to feel like a potato bug the minute she looks me over with her devilish eyes. The boys say she's eaten everything human out of Stevenson till he isn't fit to live. Now are you going to play golf with me or send her on her way rejoicing?"

I never play golf, but John insists that I keep up my record as an also ran, and I appreciate it; so I suggested meekly that he go out and manage the ceremonies, at which suggestion he gestured dangerously with his new mashie and departed toward the kitchen.

"I'll not go near her! She never comes here, and you know it, unless she wants you to do a favor for her. Listen to her! Let's sneak out the back way and let her ring her head off.".

Mrs. Bangor Ellington Stevenson—hereafter called Ann—had remained in her electric and was regally ringing for my appearance. It's true, Ann does rather patronize me, but she can be relied on for generous contributions to my charities. With this virtue in mind I sent John on, happily grumbling to be rid of me, and went out to greet Ann, who always wants my undivided time and attention whenever she favors me with her presence; at which times I am invariably prepared to hear that she is miserably unhappy and wishes she were dead. I never knew of Ann discussing her affairs with anyone except myself, and gossip regarded her as a reserved, haughty woman, entirely satisfied with her wealth and beauty. And though never once had she asked me not to repeat her confidences, and though I am far from immune to the lure of gossip, I had never betrayed her secrets. She has a strange power of commanding fidelity.

But on this particular morning she surprised me into silence by remarking calmly that she was on her way to adopt a baby. Silence is so unusual with me that it alarmed her.

The Red-Headed Child Put Her Shaking, Spindling Little Arms About Her Waist and Burrowed Her Face in the Soft Gray Dress

"Don't tell me you haven't any babies left!"

I continued to stare at her. Though Ann and I were girls together, she looked so young and so very pretty, sitting there against her velvet cushions, that she seemed to have gathered nothing from the years except the hardness of her eyes.

"Of course we've got babies—scads of 'em. But, Ann, a baby is too serious a thing to take up for a fad. If you want one why don't you have one of your own?"

She yawned. "We-ell, I think the season's getting a trifle advanced, don't you? Besides, Bang has left me. You needn't smile. He has. He left for England yesterday, and I'm going to break in a baby while I'm getting my divorce papers in shape. Evelyn Hill is having a perfectly wonderful time with the baby she took, and so is Hildegarde. Yesterday Evelyn broke up a bridge game to chase home and personally mash up steamed apple for her baby."

"There are times that babies aren't amusing," I said very firmly. "I'm afraid we haven't any babies for you to take to play with."

"To play with? What do you mean? Evelyn looks like a trained nurse on a death case. But it must be interesting or she wouldn't be so keen about it. However, I'm not going to sit here and be lectured. I thought perhaps you'd drive over to the home and choose one for me. You'll know if their heads are a good shape, and everything."

Imagine wanting someone el choose a baby for you! But the tunity to advise is a magnet that me relentlessly into strange and ways happy situa so I hurried und hat and went wit I was perishing to more about Ba but instead I obs tactfully that mo not the only ess for motherhood, asked Ann if she sure she would m good mother.

"No, I'm not s sure that I will," replied calmly, there are lot motherly look women in the de ment stores. I'll one if I have to. W shall I take, a boy girl?"

Having two of I am naturally neu "Besides," I told "we don't make babies to order at home. The ones yo probably want, beca they're the pretti are Mexicans a Indians."

"Well, I prefe pretty one, but I'm ing to get one of so kind this morning i have to take a Ho tentot. Perhaps I take two. Bang's go tearing off to Engla to drag home a lot mo dogs to appease hims with, and I've made my mind to drag hom a few things myself spend his alimony o Ugh, how drunk an horrible he was—th beast!"

This was an ol formula, so I merel remarked brusquely "Oh, you'll be all ove this in a few days Ann. Then what wil you do with the baby? You can't just throw it in the wastebasket, you know. I can't see why on earth you won't admit that you love your husband. It's no disgrace."

"For a long time I didn't think I did. It was just like acquiring a taste for garlic. At first it's unbearable, but if it's forced on you long enough you get so the salad tastes like chips without it."

To my great surprise her lips trembled over the tart words, and feeling that it would be as bewildering to see tears fall from those granite-gray eyes of hers as to witness animal cookies tumbling from stars I said hastily and with my best severity, "Well, for heaven's sake, Ann, telegraph Bangor to come back and have an end to it. I can't let you adopt one of our babies just for a ridiculous whim."

Ann stopped her electric in the middle of the traffic, utterly disregardful of the five-ton truck just behind us, whose driver regretfully avoided squashing us by the profanest hair's breadth.

"Betty, can't you at least simulate intelligence? I am not divorcing Bang. He is divorcing me. Nothing could bring him back. He has made up his mind. He told me it had taken him fourteen years and nine months to make up his mind to be rid of me—we've been married fifteen years, you know—and he's constitutionally unable to change his mind. I've never known him to, once. So you can be responsible for either of two things, for my adopting a baby or for my returning straight home and arranging myself with flowers in my folded hands."

I said nothing, and we continued on our way toward the home—just as she had known we would. Ann was famous for her facetious threats, but she was even more famous for her gruesome habit of carrying them out. One does not

I've killed it, to save my soul."
"Ann, what are you talking about?"
"I'm talking about my kind of love! I must talk about
Do you mind?"
In all our acquaintance Ann had never before men-
ned love in any relation to herself. I shivered with
ticipation.
"Of course you know why I married Bang," she began
olly.
"Certainly." I strove to be equally cool. "For his
oney."
"And he knew it too."
"Why of course. I imagine you never let him forget it."
"Thank you, Betty. You're so helpful. No, I never did.
covered my own shame for having sold myself with a
retense of contempt for his having bought me."
"But, Ann, I do think he loved you!"

"Yes. Poor thing—he couldn't help himself. He told me the day he left that God had wished me on him as a curse. That's just what I've been all my life—a curse."

"Why—why, Ann"—my pleasant curiosity was rapidly changing to acute discomfort—"why, Ann, I don't think you need blame yourself for Bangor's—ah ——"

"Say it, Betty! My Lord! Why be afraid of words? His drunkenness and gambling and other unpleasant habits. Well, I am to blame for them," she went on in the same uninflected voice. "Do you remember what fits of temper I used to have as a girl?"

I remembered.

"My whole married life has just been one long tantrum. I was determined to break Bang's phlegmatic acceptance of my beastly nature. You know how it used to be when I had a spell? The only thing that appeased me was to finally tear up a frock I most liked or to break or ruin something I was really terribly fond of. I never could stop until I'd made myself miserable. Then I was satisfied. We-ell, I worked for fifteen years to break Bang—to make him whine. Well, I did it."

I said nothing. I was thinking of what John had said about her having eaten everything human out of one of the kindliest men in the world. I was even regretting that I could never tell him all this because of Ann's peculiar power of commanding secrecy.

"He hates being so homely," she was saying; "you can't imagine how sensitive he is about it. He simply worships beauty. When I realized it I used to pretend he was offensive to me. I made fun of the way he looks."

"Why, Ann!"

"Oh, I did. I never let him forget how bitterly I was paying for my bargain. I've been horrible. I am horrible. But he would not admit that I hurt him. He couldn't do a thing because, just as he said, his love was a curse. Of course he finally began drinking and gambling and—and the usual things that men do. Then I'd act human for a day or two—just to enjoy his remorse. But now, you see, I've finally done it. I've lost him, gone too far—and I'm cured. Now that I've made him whine. Oh, he was drunk, wretchedly drunk, but he was beaten. Why, now—now—now ——"

She finally stopped saying "now," and the word seemed to hang accusingly in the air around our heads. The thought of big, homely, phlegmatic Bangor Stevenson, whining and broken, made me feel sick.

"Betty, he—he even cried—terribly!" she said in a whisper. Unconsciously she had expressed the spirit of triumph, even in her horrified confession.

"Oh, Ann, for heaven's sake have the decency to keep it to yourself!" I burst out.

Immediately I was ashamed of myself, seeing her flushed cheeks go quickly white.

"I'm sorry," she said stiffly.

The silence between us grew as tangible as a curtain of frost.

"You—you think I'm gloating over it, don't you?" she said at last with evident effort.

"You are," I said.

"I don't want to," she said simply, with such utter bewilderment and misery of herself that I was swept clean of all my disapproval. I always cry when I want most not to. So I began reluctantly to indulge myself.

"Great heavens, I'm not worth your tears, you nice old thing," she helped me brusquely to recover myself. "Don't you really think a baby is a good idea?"

She sat there, still looking as tranquil and undisturbed as a stately calla lily, of which she constantly reminded me, and I tried valiantly to affect her own composure.

"For you, perhaps. But babies don't stand treatment like yours very well. You can't sew a baby together like a dress, once you've torn it up."

She smiled at me companionably. "How comforting you are when you say what you think! But I've always had a feeling I wouldn't mistreat a baby. Then—you see, there's another reason. I'm going to make up to it for every beastly thing I've ever done to Bang. I'm going to make it the happiest thing that ever lived on earth. I am! Truly I am, Betty."

She searched my face for any doubts of the matter, but at the moment I had none.

"Well, we'll try to pick out a good sturdy child," I said hopefully, keenly relieved that at last we were driving up to the home.

Since the morning was Saturday the children were scattered about the grounds under the scraggly eucalyptus trees—a motley little crowd of gingham aprons and faded overalls.

The Psychology of the Sucker

By Bozeman Bulger

DECORATIONS BY GUERNSEY MOORE

THE late Paul Armstrong, creator of several crook plays, and a picturesque raconteur, once laid down this fundamental truth: A sucker is a sucker from birth to the crack of doom! "And," he added with an emphatic blow of his fist on the table, "in all history there has never been one cured." To amplify this Mr. Armstrong explained that a sucker may be educated to the point where he is no longer a boob, but at heart he is ever a sucker, is sure to fall at a well-aimed shot.

This learned discourse was delivered eight years ago at a supper in Chicago, following the première of a crook play.

In the party were a reformed gunman and a man who had spent most of his life in pool rooms and bucket shops, Mr. Armstrong's consulting experts on sucker technic. They nodded sage approval.

This principle, so clearly outlined by the playwright then, was confirmed in a manner most positive, if not so amusing, to the same bucket-shop man a few weeks ago in New York. I looked him up.

This time, he explained, the shots had been too well aimed. The casualties among suckers were so great that the bucket shops fell with them. In the crash the expert was rousted out of his job.

"Paul had it right," he said, "but he didn't go far enough. A man who makes a living trimming suckers is often a sucker himself through inoculation. I went for every cent of my salary trying to beat the game in our own bucket shop. I ask you, is there any excuse for a guy like that? Yes, sir, 'to the crack of doom' is right."

We went to dinner at a little French restaurant that he might list and check up his experiences for presentation to suckers, or potential suckers, in the hope of effecting at least one or two cures.

"But it won't work," he protested. "I'm willing, but people who read what I have to say will take the angle that I am the sucker and that they are wise. That's exactly what perpetuates a sucker."

Almost Like Mindreading

A BIT of fortune fell right into our lap. I assure you this is not fiction. At the big table a young man, apparently French or Alsatian, sat opposite us. He listened with undisguised attention to what we were saying about stocks, bonds and the recent failures. He was bursting with desire to say something. Finally he asked for the salt and pepper, an obvious move to get into the conversation—so obvious as to be funny.

The young man appeared to be around twenty-five. His dark brown eyes flashed enthusiasm and youthful eagerness to unload some important information. The bucket-shop man kicked me under the table. Then he asked the stranger what he had found good on the menu card.

The boy—he really was a boy—leaped at this bait. His slight accent proved him to be Alsatian.

"So you gentlemen are interested in stocks?" he asked. "I'm sure you are, and that you are men of understanding. I have the most interesting proposition, the greatest opportunity I know of to-day. You will appreciate it."

"And it's no secret?" encouraged the expert, eying him shrewdly.

"Oh, not at all. It is the Great Interlocking Tire."

Without hesitation he began speaking his piece, a letter-perfect description of this tire, and how it was bound to revolutionize the market. His boyish enthusiasm, his absolute sincerity and innocence caused the lines in my friend's face to soften.

"That company failed twice, didn't it?" he asked kindly.

"I did hear something about that—out in Pittsburgh," the boy admitted, "but this is entirely different. The company has been reorganized and the tire made by a new process. You see, the threads are woven in an absolutely new way like this." He illustrated with his interlocked fingers; also with a diagram on the tablecloth.

"You also have a good proposition in a rapid-fire combination tool, haven't you?" asked the expert.

"Yes. And you knew that?"

"And if a fellow wanted to, you could let him in on a company just organized to manufacture a new kind of gas burner for kitchen stoves?"

"Why, yes—good thing, too," admitted the surprised youth.

"Did you ever get any training at one of those schools that can make ten-thousand-dollar business men out of college students in a month?"

The young Alsatian nodded agreement with this, looking at his questioner in awe.

"I wouldn't be surprised," went on the bucket-shop man, "if one of your relatives or nearest friends gave you your first order, didn't he?"

"My uncle," he said. "The man who owns this restaurant."

The boy began to fidget, to lose his assurance. These questions from an utter stranger were so unerring as to make him nervous.

"Well, son, let me tell you something. Go back to your business instructor and ask him to try you out on some standard stocks or bonds, and to give you the names of some investors of financial standing. See what he'll say."

The fresh-laid stock salesman went away, puzzled and uncomfortable.

That, my companion informed me, is one of the newest wrinkles in working off hard stocks on the unwary, of exploring and opening up virgin fields of suckers.

"Before we get down to business let me tell you something," he said. "There are numbers of stock sharps running schools of instruction for young salesmen, with no other real purpose than to place their bad stuff. They get these students by clever advertising, pointing out that these prospective ten-thousand-dollar men can earn while they learn. Now isn't that natural sucker bait?

"When enough students have been secured they are given a few nights of intensive training on how to approach possible customers. In time the young men get anxious to try these things out in practice. Then it happens. They are given two or three tough-selling stocks of concerns desperate to raise some cash.

"Naturally the boy wants to make a showing, so he goes to a member of his family or someone who has a personal interest in his future and will give him a start. The relative or friend takes a few shares of the stock just to encourage the boy. Then other friends help send him along. When that stage has been reached the instructor organizes his students into competitive units to encourage rivalry. Family pride, the spirit of contest, and so on, dig up others to help. In a short while a big lot of the deadwood has been unloaded on encouraging friends and relatives. Then names get on the sucker lists and they are well launched on a sucker career. In time the boy goes back to college or maybe some real work.

"And the worst of it is, those relatives will go on for years refusing to believe that they've been gypped. They think they used good judgment. No sucker ever admitted that his or her judgment was bad. Listen," he said, leaning over the table, "if I were to tip off the old Alsatian that his stock certificates were worth no more than cigarette coupons it's a hundred to one he'd put us out of his restaurant."

We took no chances. The expert began arranging his data, occasionally looking up to ask how far he could go with this and that. When it was all arranged ready for dictation he suddenly wrote something across the top of his notes.

"Say," he observed, "there's no use in putting my name on this because it wouldn't mean anything. All I ask is that you put this at the top—and I'm telling you it's the real dope."

So we agreed to let it go just as it lay:

BY A SUCKER HIMSELF

To be a real sucker is a gift. It's got to be born in a fellow. He may improve and he may get worse, but a sucker can't be cured. Don't you remember that old fellow who invented so many of the automobile appliances that he made millions? Well, I can tell you where he is now. He is sitting right out in the hall of one of the buildings in New York, at a little desk. After that old man made the millions and finally had time to think over his early tendencies he put so much money into bunk stocks and fake schemes that his boys put him out of the office and made him sit in the hall. The sons have got millions, but the old boy is flat broke.

Men Who Never Learn

THE old gentleman, one of the great inventors, is a sucker to the manner born. Though he has the ability to make millions simply by business methods I honestly believe he'd rather be out there in that hall, broke, than lose the pleasure of buying up trick stocks and going into fake schemes. That's one idea that common-sense people don't seem to get. A sucker likes to be a sucker, and any time you try to cure him he'll fight back. I hope you won't think I'm stringing you or trying to be fresh. I'm not. That old man simply got worn out inventing things, and wanted to get some natural enjoyment by being a sucker.

I think I know suckers. I know them so well and have worked with them so long that I have to change jobs sometimes to keep from joining up with them myself. Never be afraid of anybody exaggerating about a sucker. They can't do it. Right in my pocket, for instance, I have a letter from a man whom I regard as the champion sucker of all times. He is a stake entry—no selling plater. He writes, placing an order in the bucket shop where I worked, for a few shares of new oil stock:

Gentlemen: So far I have invested in twenty-four different oil stocks, and not one of them has made good. But I'm still game. Put me down for two hundred shares of this one.

Digitized by Google

t to my mind wins the all-around championship. g been soaked twenty-four times this fellow is willing e another chance, just to show he's game!

arted out as a telegraph operator in a race-track oom. I later got to be a tout. After that I landed as operator in a bucket shop out West. From that luated into what is known as a producer—one who o out and produce suckers. All stock peddlers, by ay, are known as producers.

bucket shop gets but a small percentage of the gen- ucker output. The stock peddler lands the biggest , and the race tracks come next. It is impossible to estimate the number of suckers who get bold gh to step right out in Wall Street. They are usually heeled enough to be open game. It is the little igno- fellow with something sewed up in the toe of his who is shot out of season.

hat is really the cruel feature of sucker trimming. I r minded figuring out ways and means for taking one e big, rich, wise guys. A long time ago I drew the at selling stock in a patent stove lifter to a poor old le who had but five hundred dollars in the world. man who did take that old couple is now doing time. he wasn't convicted until that old couple had put up a t in his defense.

n the complaint of a lawyer friend of that old couple xpert investigator was put on the trail of the salesman his new company. They were forced to disgorge and ke restitution of the five hundred dollars. But do you nk those old people were grateful? Not on your life! week after the money had been returned that slick ducer called on the couple again. He pointed out to m that he was a martyr; that a rich concern was trying rob him and his stockholders of their profits. The old n and his wife promptly loaned this crook the five hun- ed dollars to aid in his defense. There have been many nilar cases, some very recent.

When the Stars Picked a Loser

THOUGH trimming a sucker in a bucket shop is a sort of sport, especially the know-it-all fellows, I could never et going as a producer. Either my sense of pity or sense f humor always stopped me. It's something to have nat much conscience anyway.

One day I was sent out with a crack salesman to see if couldn't learn the business. He took me to a little shack f a house way up in the Bronx, then outside of New York ity. A truck farmer and his wife lived there, paying bout twenty-five dollars a month rent. Both of them ere over sixty-five years old.

I sat in the little stiff parlor while my friend went into the kitchen to talk to the old lady and her husband. He was selling stock in a new-fangled gas burner for cooking stoves.

"I have heard of your business ability," he said to them, "and I can see that you both know what sound investment means. You are interested in practical things—things that save people time and money. Right?"

Both agreed with him.

With a lot of similar patter he produced his burner, attached it to the gas stove and showed them how it worked. Apparently it gave more heat with half the amount of gas. He convinced them that everybody in the world would simply have to buy one of those burners. The upshot of it was he took twelve hundred dollars from that old couple, giving them for it some fancy-looking stock certificates. That was all the money they had.

"You are a pretty tough guy," I said to him as we walked away. "I've seen the time when I could laugh at the squawk of a race-track sucker, but that stops me. That cleans them, and they are both well over sixty."

"Well, what of it?" he came back at me. "It may be tough, but if I didn't take them somebody else would. Why not me?"

"All right, you take them," I said. "But I'll be no producer. How much of that is your bit?"

"My end of the twelve hundred ought to be about three hundred dollars."

Think of what a chance that poor old couple had! Even the salesman had one-fourth of their money already.

The first bait at which any sucker bites is the chance of getting in on the ground floor. They'll jump at the chance of trimming another sucker. And that spirit is not limited to poor or ignorant people. Not at all. Some of the choicest fish are caught right out of the eddies about the big Wall Street pool. The rich and haughty will fall just as easily as the poor and humble. You see, a sucker to the manner born is a sucker always. He is likely to bob up in any surroundings.

Just a few weeks before the big smash of brokerage houses—many of them bucket shops—in New York, a member of our firm called up the wife of a rich financier. She was entertaining some friends with whom she was interested in studying psychic phenomena.

This suave talker had heard of the woman's unusual knowledge of copper production, he said. She was pleased. He also knew of her interest in the psychic stuff, and casually mentioned it. Finally he suggested that if she were really interested in the copper business he knew of a concern whose stock had not yet been listed. It would be possible for him to allot her a block of stock before it was put on the market.

"I will consult the stars to-night," she declared in all seriousness, "and will let you know to-morrow."

I don't know what happened in the skies that night, but the stars certainly ran true to form—for us. This woman invested thirty thousand dollars in trick copper stock. She left strict orders that under no circumstances was her husband to know the state of her account with the firm.

That stock on the curb would probably bring a thousand dollars. As a matter of fact it is worth nothing. Still the stars put the woman right, and nobody's going to tell her that her judgment is bad. No, indeed. I'll bet my hat right now that woman will chip in to help the company out of a hole before the end of six months.

The main thing that starts a sucker and makes him stick is an unshakable belief in the correctness of his or her judgment. If a loser, he satisfies himself that conditions went wrong temporarily—never his judgment. For that reason he figures that things are bound to right themselves, and when they do it will be a good laugh on his friends who were timid about going in. His sound judgment must finally prevail.

Often I have been asked what it is that makes a sucker come back for more. The person who asks that should remember, in the first place, that a sucker never believes that he has been trimmed. His vanity precludes a thought of that. If his stock goes down rapidly he jumps in and buys more because he regards it as a chance to get a sure thing cheaper. When it does rise, as his judgment has so clearly pointed out, his profits will be all the greater.

For instance, if a sucker buys one hundred shares of oil stock for one hundred dollars and it drops to twenty-five cents a share—why, there is a chance to buy a sure thing for twenty-five dollars when a few days before it cost him one hundred. In the drop he has made seventy-five dollars according to his mysterious way of thinking. Simple enough, if you can be that satisfied with your judgment, isn't it? Remember, the impelling motive of a sucker always is to get something for nothing.

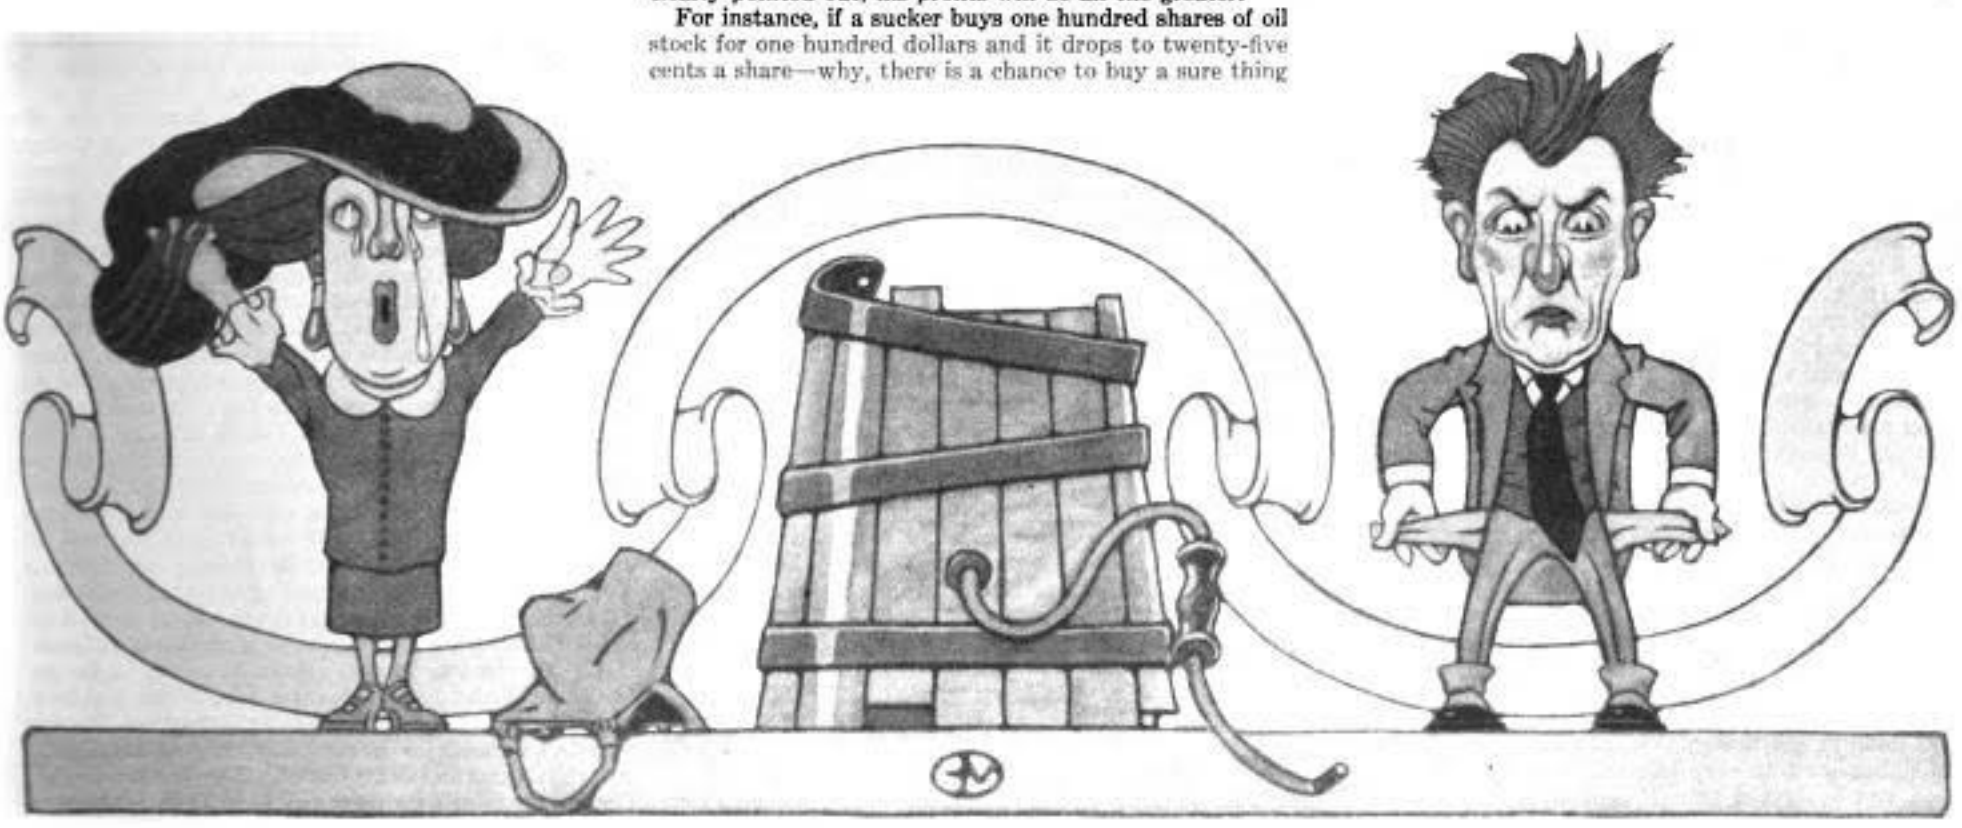
We wipe them out on bucket-shop margins, and all that, but they are right back again. There is simply no use trying to cure them. Every one of them has read or has had a chance to read of how bucket shops are run. But do they heed this? I should say not. They think the fellow who wrote the warning was either badly informed or had some ulterior motive. He can't trick them that way!

There isn't enough room in this periodical to list the various schemes and tricks of bucket shops, and I am not going to attempt it; in fact it is often impossible nowadays to draw the line between a bucket shop and a regular, legitimate brokerage house. A bucket shop is not a bucket shop until caught with the goods. Sometimes they actually execute their orders and sometimes they don't. And they can trim you even if they do execute the orders and have everything perfectly proper on their books.

Where Did Your Money Go?

A BUCKET shop is very similar to a hand book at the race track. Sometimes the man, feeling sure that your horse cannot win, will hold the bet and make the money himself. If there be any doubt he will place it with some real bookmaker and take his commission. When these men hold too many bets and the long shots win they simply go smash. They cannot settle. So it is with the bucket shop. It is no trick at all to dope up the books so as to fool an inspector.

But here is the tip-off: Any time when you see where a brokerage house has failed just take a look at the liabilities and the assets. Always the liabilities are far in excess. Of course they are, or there wouldn't have been a failure. Then think a moment. If these houses actually executed their orders on a commission basis, what did they do with all this money of customers that is shown in the amount of liabilities? The answer is obvious. They did not execute their orders, but gambled with your money. Or maybe they simply split it up and went South with it.



Folks try to make too much mystery out of this Wall Street business, and that's what appeals to suckers. A concern is either on the level or it isn't, that's all. Personally I've never worked for one that was on the level.

I've knocked around this old country a lot. I'm willing to make the crack right here that there isn't a 100,000 population city in the United States that hasn't a bucket shop in operation this very minute. On a strict commission basis I doubt if they could pay their employes and the rent. Just calculate the number of daily orders in any one of those cities and see how it comes out.

Take this as a tip: Any concern that will take a stock order for legitimate or standard stuff for less than five hundred dollars should be given the once-over. They may not get you, but petit larceny is bound to break out somewhere along the line.

Except for the fact that he was born that way, a sucker is not entitled to an awful lot of sympathy. In any small city there is no necessity for him to go to a brokerage house or bucket shop. If he really wants to invest in some sound security he can place his order through his bank

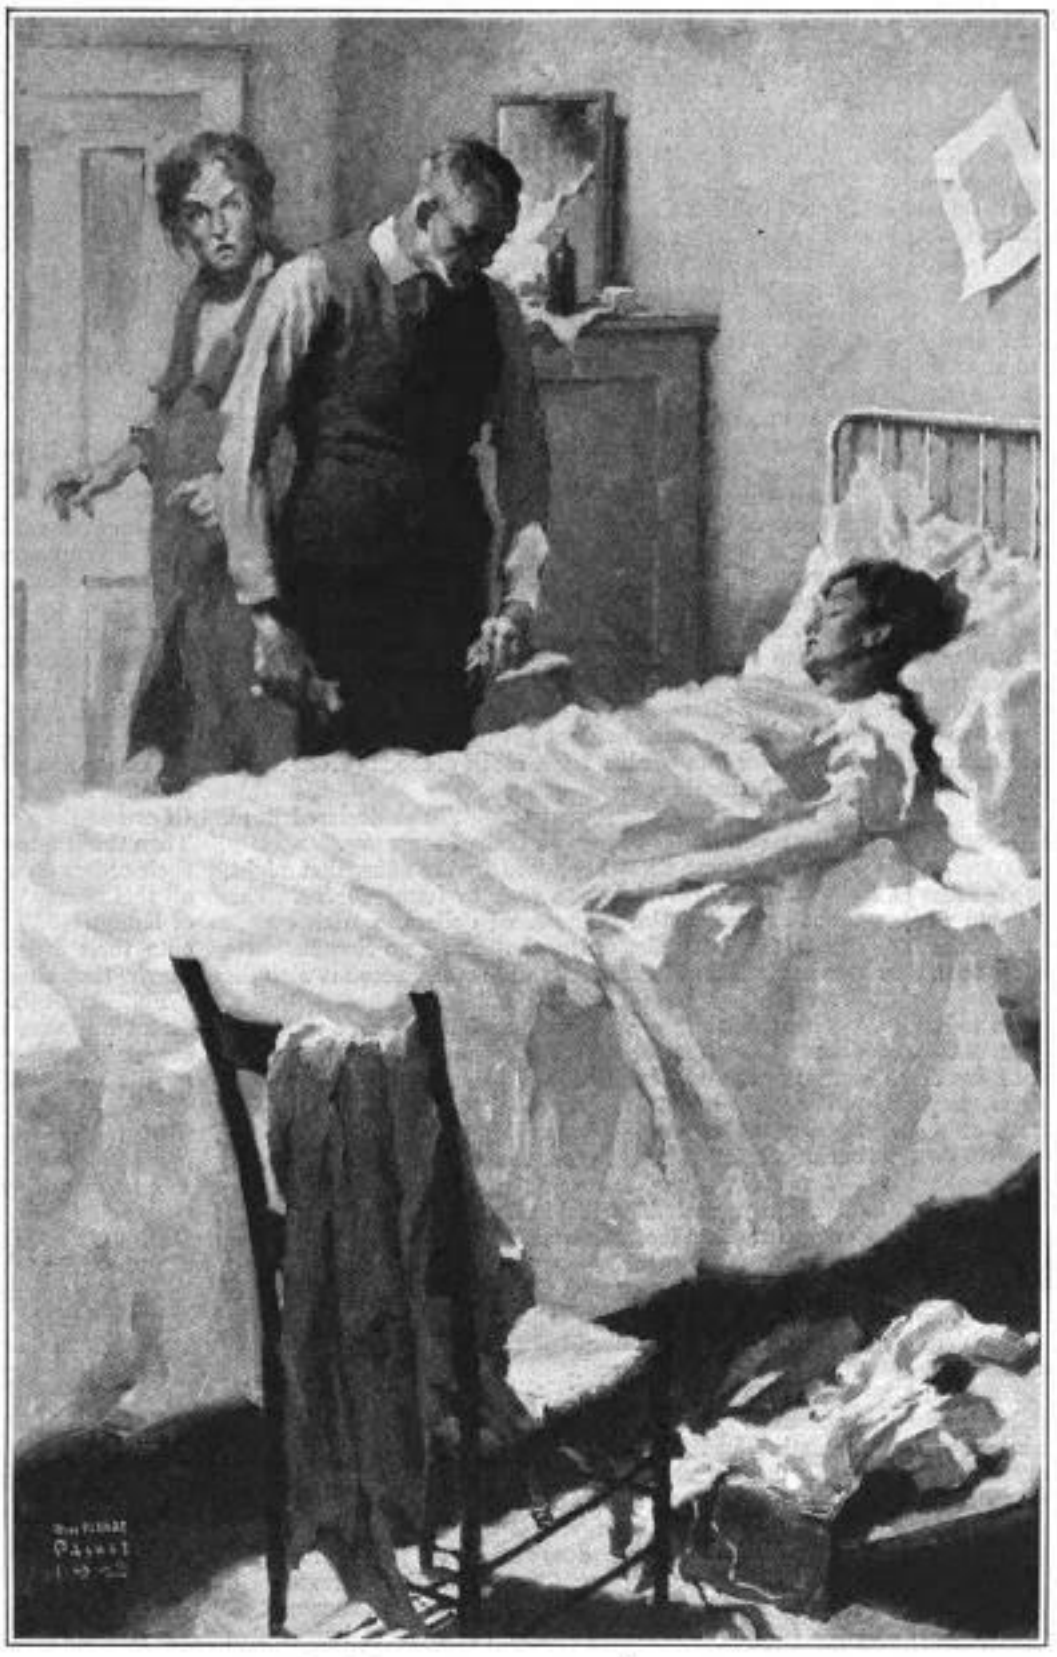
TAPE

By MAXIMILIAN FOSTE

ILLUSTRATED BY WILLIAM MEADE PRIN

THE night had come on bleak and dark; it was raining—a thin pelting downpour; and as Nat Truax left the brokerage office and walked up New Street into Wall the clock on Trinity's spire struck, clanging the hour with sledgelike strokes. Five o'clock! It was at five o'clock, and on a night just such as this, he remembered, that for the last time he had gone up Wall Street with Harvey Nash, the trader; and he stopped short, the rain beating on his upturned face while he stared down the narrow, dimly lighted slope. A little street with a church at one end and the river at the other, someone has called it, but what he thought of that is another matter. In the old days Fred's Place, the saloon, was round the turn in Broad Street; and night after night in those bygone times he'd stopped like this and waited till Harvey Nash came lurching up the hill.

"Huh!" he grunted to himself.



A tough bird, wise and as hard as nails, was Nat Truax's reputation; but as he stood at the curb, staring intently into the dark, the rain dripping from his clothes, the men at the brokerage offices where he dealt would have wondered had they seen him. Twenty years had gone since that night, the time he'd last taken his partner home; and in Wall Street twenty years is a lifetime, an age. It was, in fact, only when some old-time broker or trader saw him drifting by that the other man was remembered. "There goes Harvey Nash's old pal," they'd say.

Then, their memories quickened, they'd tell of the time Northern Pacific was cornered—the Nipper panic—recounting how on that night long after the market's close Harvey Nash had been carried out of the back room of a brokerage office, limp, insensible.

He was a tape reader, it seems—one of the few, too, that for all the brag and talk Wall Street has ever known; and having read the signs from the tape he had played Nipper all the way up from the low, raking down a fortune meanwhile; but he had cracked in doing it. A man who lives high, drinks hard and wears a number eighteen collar must be wary of excitement like that; and on the third day, when Nipper touched 1000, a stroke of apoplexy stretched him on the floor beside the ticker.

It might as well have laid out Nat Truax too. Harvey Nash, at any rate, was the one who'd had all the luck—read the tape and knocked down the killings for the two; and a year or so later, but for a chance, the help another trader gave him at the eleventh hour, Nat Truax would have been on the rocks—cleaned out, broke. Joe Cartright, it happened, was the trader; and there you are again! He was then a new hand to the Street—a young man hardly more than a boy; and for a time, like Nash, he too, had rolled it high. Cartright, though, long had disappeared—gone with Nash and the rest of them; and of the old bygone crowd Nat Truax alone was left. It was little wonder men thought him harsh, as hard as nails. In Wall Street, as he could have told you, it's every man for himself.

A gust, knife-edged in its piercing sharpness, boomed down the slope from Broadway; and he swore softly as the wind searched through his clothes. The night before, in the lodging uptown where he roomed, Nat Truax hadn't slept. A woman in the next room was ill of something; and through the night she had tossed and talked incessantly. A child, too, was with her—a boy; and hour after hour he, too, had clattered about, his voice shrill as he spoke with the woman on the bed. That wasn't all, however. If Nat Truax hadn't slept there was more than what went on at the lodging house to keep him wakeful; and as the gust passed and he braced himself against it he looked back over his shoulder, his mocking eyes roaming along the length of New Street, up which he just had come. In one of the buildings down the block a light was shining from a plate-glass window on an upper floor; and he stared at it intently. Nat Truax was on the rocks now. The place was the brokerage office of Rooker, Burke & Co., an odd-lot shop; and that afternoon, just before the market's close, the firm had sold out his account.

He Took One of Her Hands in His. "Look at Me, D'you Hear!" He Ordered. "Mrs. Cartright, Look at Me!"

The crowd thronging past toward the Subway and the L stared curiously at the grim harsh-faced figure standing there in the darkness and the wet. "Damn! Damn!" he said. It was a deal in oil—Mex Pete—that had done it. On a sudden bulge unlooked for by him he had seen his scant handful of dollars dissolve like snow on the desert's sands. That was nothing new though. It was only that he had pawned and sold the last of his available possessions to margin the ten-share lot. "Damn! Damn!"

He did not stand there long, though, gazing up at the lighted window. A gust again came booming down the slope; and when it had gone, with his head shrunk down between his shoulders he turned and sped up the hill toward Broadway. A moment later, still hurrying swiftly, he was lost to view in the darkness.

Back in the brokerage office—Rooker, Burke & Co.'s—Buck Rooker, the firm's head partner, was smoking a last cigar for the day when the door of the back room opened, and Beeks, the manager of th tomers' department, put in his

"Say," said Beeks, his face "that bird, Nat Truax, was bac a minute ago. You ought to hav him, Buck."

"That so?" inquired Rooker thought you gave him the gat afternoon."

"So I did," answered Beeks, " that's not what I mean. He wa here in the customers' room just and what do you think he was d He was reeling up all the tape i ticker basket."

The cigar Rooker was rolling in his jaws came to a sudden hal end cocked up like an astonishe clamation point. "He was d what?" ejaculated Buck.

"Rolling it up," repeated Be "stuffing it into his inside poc When I asked him what he was d he told me to go to hell."

"Well, I'll be dished!" ejacul Rooker. "Must be going nuts, say."

"Nuts, I guess," returned Be

He had seen many queer *thing* his downtown experience, but was the first time he'd ever know customer to come back to the of and roll up the tape for a souve They often came back, true; *but* was usually just to put up a squeal kick. He said as much, in fact, face puzzled.

Meanwhile, a long way now fr Rooker, Burke & Co.'s, Nat *Tru* was still hurrying.

II

TWENTY years. The lodging hou was over near the Twenty-thi Street ferries; but it was not alwa in a dim, dingy neighborhood like th that Nat Truax had dwelt. Eas come and easy go had been the rul with him too; the plan of most those who get their money that way and in the days when he, too, ha rolled it high the best had not bee any too good. The man, however was not thinking of that as he left th L station at the corner and sped down the wet, shadowy side street. It had been years, a lifetime, since he'd had out of the life he led any thrill o pleasure.

Year in and year out Nat Truax had kept on dabbling in the market; yet the lust for it, or, for that matter, any liking even, he long had lost. The Street he hated. Most of all he hated the brokerage offices where he dawdled day after day, gaping at the quotation board with its rows of changing figures. The air, too, of easy, glib good-fellowship that was the atmosphere of these places sickened and disheartened him; and it was little wonder the others thought him harsh, hard as nails. A single purpose was all that kept him going. It was the hope, the longing for a stroke of luck, just one, that would let him leave the Street for good. The old story—that. A last strike, a final killing! The brokerage offices are filled with men like Nat Truax.

Feverishly he kept on playing the market; but the only sensation he got from it now was fear. It was the terror that some day the market would clean him out, leave him penniless. Only Nat Truax—he, or at any rate, the men like him—could tell you the sweating terror of that fear. However, though the market that day had cleaned him out, Beeks and Buck Rooker would have marveled had they seen him. As he neared the lodging house his pace quickened. He was almost running as he reached its door.

The room he occupied was at the top floor, back. It was like the house itself—dingy, down at the heels, its furnishings worn and threadbare. Here, however, for the past years Nat Truax had made his home. "The Wall Street gentleman" was the term he went by in the place. The other tenants, transients for the most part, the flotsam and jetsam of the city, came and went; but with these he never mingled. The harsh, grim face they saw gave little invitation to closer acquaintance, in fact; and they went their ways and

Digitized by Google

s, each heeding little and caring less about the . It was only when some among them grew too or annoying that the top-floor lodger made himself n to them. The night before was a sample. Hour hour the woman in the next room had kept him ess; and when he first heard the noise he had rapped ly on the wall. It was queer though. The noise had broken out again; and he had lain and listened unprotesting. But never mind now about that. ing up the steps he put the key into the latch and t open the street door.

rust of flat, tepid air greeted him as he stepped into the Overhead a single gas jet was burning dimly, but the years he had dwelt there he needed no light to him up the stairs. He had just closed the street door, ver, and turned, when he was conscious of a figure— d, rather—at the other end of the hall. The basement were there; and the woman, the lodging's slatternly ant, was peering at him over the rail.

Where's Mrs. Mangin?" he demanded.

rs. Mangin was the landlady.

Upstairs," answered the servant; and when the lodger ed "Where upstairs?" she answered sulkily, "She's in room next to yourn."

he man's face, at the reply, twitched itself into a den scowl, and he stared, his brows working.

Say!" he snapped, his voice a snarl. "She's turning woman out, isn't she?"

The servant didn't know. She mumbled something or er in reply, but Nat Truax didn't wait to hear it. The wl still working in his eyes, he turned and stamped on way up the stairs.

The house was silent. As he reached the top floor where lived he could hear a murmur of voices though; and at stairhead he halted, his head cocked, listening. It was ly for a moment, however. The voices died away as if in room they'd heard him; and unlocking the door he pped inside and shut it. Then fumbling on the mantel he found a match he struck it and lit the gas burner erhead.

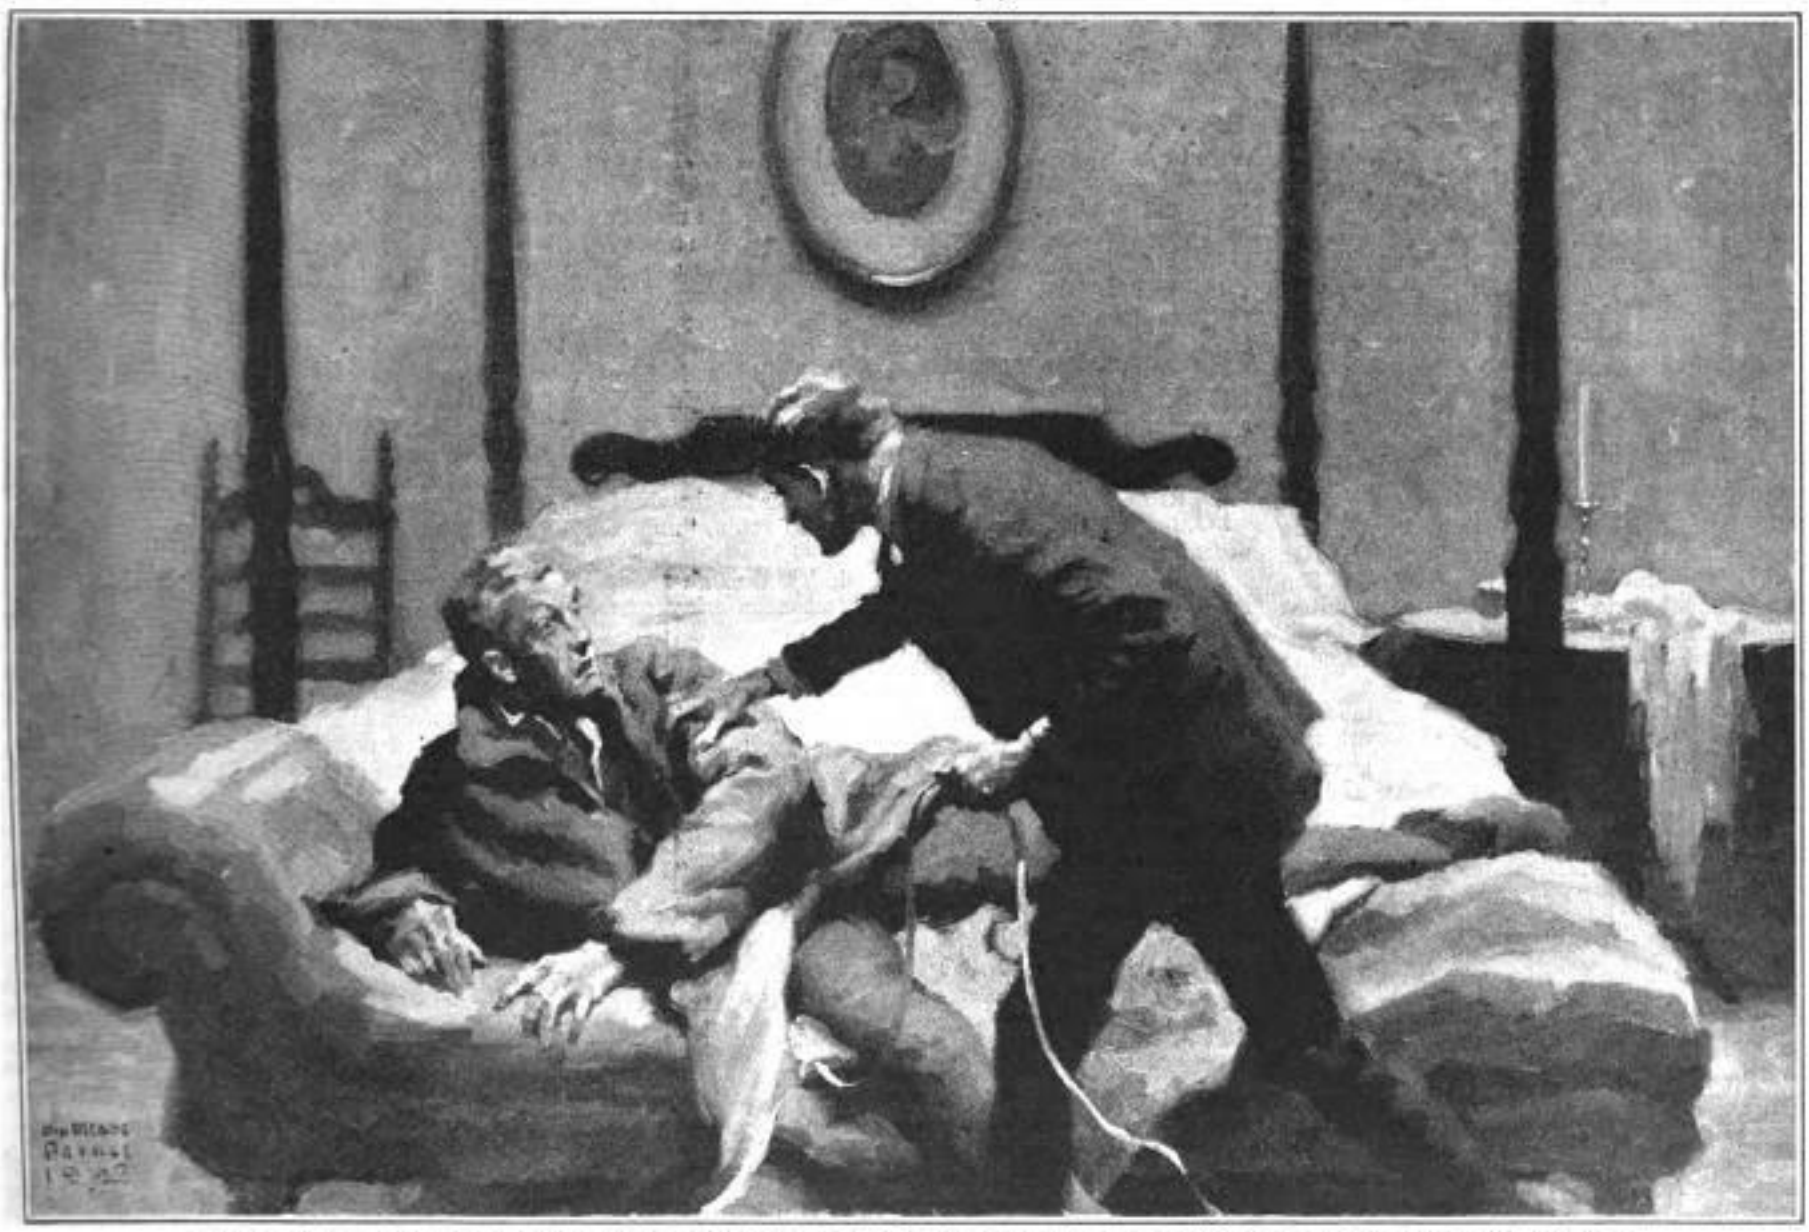
His hat he put on a chair. It was soaking from the rain, so, too, was his coat; but the coat he did not remove. rom its inside pocket he drew a folded newspaper. This laid upon the center table, after which he drew from nother pocket the tape he had filched that afternoon at Rooker, Burke & Co.'s. There were yards and yards of it, all wound carefully into a roll. This, too, he put upon the table. Then he went to the door and turned the key in the lock.

The procession of drab, slatternly servants that came and went at the lodging house often had wondered what went on behind the closed door of the top-floor room. Mrs. Mangin also. It, too, was an old story though. It was as old and as trite as the story of any dabbler like Nat Truax; any of the sort that haunt the odd-lot shops and other brokerage houses, honing for one last strike, a killing. The newspaper on the table was an evening issue; its financial page spread double-banked columns of that day's quotations in the market. With these and a pencil to aid him, night after night for years now Nat Truax had sat there, striving to solve the riddle of his failure. The mistakes, the false steps he'd made he could see; but how and why he made them he never had been able to discover. Here in the room when he played the market like this he almost always won. He could, for example, take a fictitious amount—a few hundred dollars, say—and in effigy run it into a fortune. Trade after trade came his way.

Downtown, though, let him try it on, and what happened? Scanning the tape and vitally sure he was right, downtown he would plunge his dollars on the outcome, only to find he'd gone wrong again. Nash had had the trick. The tape he'd been able to read, with uncanny prescience forecasting nearly every turn; but though again and again in those bygone days Nash had tried to teach him the knack, that subtle extra sense, Nat Truax never had been able to grasp it. To-night, however, he wasted no time in his usual futile, footless endeavor, the effort to find where he had failed. Once he had locked the door behind him he hurried back to the table.

His coat he took off as he came. It was dripping from the rain; his shoulders, too, were soaked, but though he shook with a momentary chill he gave no heed to that. With the same feverish activity he had shown as he sped on his way uptown he drew up a chair, seated himself, and spreading the wet garment on his knees he took a penknife from his pocket. Swiftly he began to rip out the lining in the breast.

A last strike, a final killing! To-day was the culmination—the end, rather, of his effort. The market that day had cleaned him out at last; but though it had, the calamity had not left him penniless; not yet, at any rate. Nat Truax in his fears, his apprehension, had seen to that; and working swiftly, feverishly, he laid open the soggy dripping lining of the coat. Sewed to the cloth with clumsy stitching was a small flat packet; and from this, too, he cut the wrapping. It was a packet of bills—ten of them. Each of the bills was for one hundred dollars; a thousand dollars.



He had for years kept them by him like this. When one coat wore out he sewed them in the next. That was why in the brokerage offices where he dealt he had almost always looked so dingy and unkempt, his clothes wrinkled, never ironed; as if he'd slept in them. Even when he'd had for a time a little run of luck, and money was coming to him at some broker's, it was the same. One might ask of course why he had not put the thousand dollars in a bank, laid it away there in safety. He knew himself too well, that's all. He knew the temptation, the blind hope that sways every dabbler while he still has a dollar left. A check is too easy to write. Had he been caught by the market, called to make good his margins, with the money in the bank and a check book in his pocket, he was sure to a certainty he'd succumb to the temptation, the dabbler's usual deluding hope, that the next turn would recoup his losses. But if this he'd resisted and he had the money yet, what now?

Rising slowly Nat Truax crossed the floor, the money in his hand, till he came to the wall of the room adjoining. Then, his ear laid to the plaster, he stood there listening.

A low murmur came to him. The voice of Mrs. Mangin, the lodging house keeper, he could detect, and he could hear, too, the higher, shriller tone of the child, the boy, as he replied to her. Then came another sound, low yet penetrating. It was the rambling, incoherent voice of the woman lying on her sick bed. As the man listening at the wall heard it a scowl twitched his heavy brows together.

He heard it again. Another of those small sordid tragedies to which the lodging house was no stranger manifestly was taking place in the room next door, but his interest in it was not clear. The scowl, the snarl bared his teeth. That week downtown in the brokerage office he had sat with a scowl like that, staring at the quotation board. Something was doing in the market—all the signs showed that; but when he'd made his guess and played it he'd

THE LIBERTY OF THE JAI

There are two kinds of lawyers—the one who knows the law and the one who knows the judge. —JOSEPH H. CHOATE.

There is a third kind of lawyer—the one that knows his fellow man. —EPHRAIM TUTT.

By Arthur Train

ILLUSTRATED BY ARTHUR WILLIAM BROWN

"I'd Like to Draw and Quarter Him, Burn Him in Chains and Boil Him in Oil!"

ONE of those breezy, back-slapping fellows; javelin-collar type, you know, or thought he was; feather in his hatband; tartan silk neckerchief; cigarette with his initials; coat cut in at the tenth vertebra; hand in glove with the head waiters; a masher, a dasher, a wise one, a devil, except when it came time to pay the check; talked secretively out of the corner of his mouth about all the big fellows—Charlie Schwab and Charlie Hughes, Sam Untermyer and Sam Bernard, Irv Cobb and Herb Hoover, Nick Butler and Warren; the kind that calls his stenographer "sister," but always writes to a girl on the machine and signs his name that way; known in belles-lettres as a paper sport; a mean one; T. Otis Crabb, his name.

He had foozled everything from the time he wore kilt skirts—sold books, bonds, hardware, soft stuff, real estate, automobiles, everything except himself; out of Lowell, Massachusetts, via Fall River to Columbus Circle; up to 1914 had worn a kaiseresque mustache; after that a little stenciled one like the headlights on a B. R. T. local; this not his life story, but merely an episode. To cut it short, about his fifty-fifth year he met a rich widow—another mean one—called her "sister." They landed each other—easy money!

Mrs. T. Otis Crabb, *née* Peterman, would have had you know that she was of another sphere. Really she was very much like Otis, although she had always had what she called position, due to the circumstance that Father Peterman had reached New York in 1870 instead of 1910, when all one had to do was to buy a swamp lot and hold it to become a millionaire. Lucretia was his only child, but even to his prejudiced eye she lacked that indescribable thing called charm. Time sped and she still dangled, a withering pippin on what the bard calls the virgin tree. Her father and mother died, leaving her a fortune outright. Suitors came, but turned away. At last old Admiral Buck was put in command of the Brooklyn Navy Yard—seventy-one, his eyes bad, but his taste for wine still good. So Lucretia became Mrs. Admiral Buck. Since she gained somewhat by being both married and official, her position became stronger than ever.

Then the admiral, having been retired by a grateful country, quickly drank himself to death, leaving the Widow Buck with not much in her life except bridge. Her second blooming synchronized with the jazz era. She might just as well have married her dancing teacher, but as it happened she ran into T. Otis at a *thé dansant;* thought him a dashing fellow. She had always wanted a dashing husband, and now she had one—gave him three thousand a year pin money. On their return from the honeymoon at Miami he developed influenza, had to give up work and lost all interest in girth control. After a month or so he got on Lucretia's nerves, sitting around the house and doing nothing but take the little white dog out in the afternoon. Also, with returning health he began to get a bit skittish. So she bought an interest for him in Smith, Murphy & Wasservogel to get him out of the way.

After a while T. Otis didn't mind, particularly in the summer when Lucretia was out of town, although he always ran down to Atlantic City from Friday afternoon until Monday—liked the bathing. The rest of the time he devoted to his young-man-about-town complex. As he was gray-haired and fifty-five, it came high. It cost a great deal of money—more than he got either from Lucretia or out of his share in Smith, Murphy & Wasservogel. He was a good spender—overdrawn at both banks.

His only friend was a dasher like himself, another of those rosy young-old boys you see on the billboards ogling a cigarette, a bachelor—Algie Fosdick, known on the Rialto as Fozzy. They hunted in the same leash. All summer long he and Algie palled it on the roof gardens, at Long Beach and at Coney, and Lucretia let him use her runabout—the little yellow one with red wheels you always see on Broadway. It kept him quiet. He was a poor thing, but her own. Not nice people—any of them.

That is how the accident happened, the worst in years—T. Otis driving the yellow runabout back from Coney after a shore dinner with Algie and a couple of girl friends. He had had a little too much clam broth and thought he'd show 'em what the little bus would do.

II

"MR. TUTT," said Tutt, hopping in over the threshold from the outer office like a belated robin, "may I disturb you for a moment?"

The old lawyer turned from the window through which he had been contemplating the Syrian wash fluttering from the roofs of the nether tenement houses.

"Tutt," said Mr. Tutt, "you may."

"I want to kill a man!" said Tutt.

"Dear, dear!" answered his elderly partner. "Only one?"

"At the present writing, only one. But believe me, at that, hell's too good for him!"

"You surprise me, Tutt!" exclaimed Mr. Tutt, reaching down into the recesses of his desk for a decrepit bottle and pouring out a glass of amber-colored liquid. "Have some Malt Extract?"

"No, thanks," replied Tutt. "I never drank until prohibition, and somehow I can't seem to get used to it."

"I confess it is hard to break the habits of a lifetime," agreed his partner, absorbing the contents of the tumbler; after which, having replaced the bottle, he seated himself in his swivel chair, leaned back, crossed his long legs upon his desk, lit a stogy and locked his hands behind his head—his customary office attitude—while Tutt started an all-tobacco cigarette as a sort of back fire and sank into the chair reserved for paying clients.

"You remember Wallace Barrington," began Tutt—"that young accountant we did some business for? His wife died two years ago, and he's been looking after his old mother and four children ever since. Firm paid him fifty-five hundred a year—pretty good; but his wife ness took all his savings. They lived over in Flat somewhere near the Coney Island Boulevard."

"Well?" inquired Mr. Tutt, exhaling a cloud of p gas.

"Well," echoed Tutt, "he was walking home fro overtime job the other night and a drunken bounder m ing back from Coney with a party of women ran him and smashed him up. He's done for. Wheel chair a life, I guess. Earning capacity entirely gone. Not for it but to send the children t orphanage and the mother to ar folks' home."

"What's the brute's name?" manded Mr. Tutt, all attention.

"T. Otis Cr He's a banker broker."

"Sue him fo hundred thous dollars!"

"Won't do good. He says l broke. Threaten we do sue, to through ban ruptcy."

"Whose mo was it?"

"His wife's."

"Sue her!"

"Can't! She w out of town, at A lantic City, a swears he was usi the car without h permission.

"Rotten luck, f Crabb's wife is wor a couple of million I asked her if sh would do somethi for the Barrington and she laughed i my face.

"'Me?' she say 'What have I got t do with it? I wasn' in the car!'

"'But,' I said, 'i was your car that broke Barrington's back, and your drunken husband wa driving it. Haven't you any heart?'

"At that she rang a bell and the butler threw me out."

"The female of the species!" muttered Mr. Tutt. "Won't either of 'em pay anything?"

"Crabb offered me five hundred dollars for a complete release. A good nerve! What?"

"Where's Barrington?"

"In the charity ward at Bellevue."

Mr. Tutt brought his feet down with a bang, and his tall frame shot toward the ceiling like an avenging jack-in-the-box suddenly released.

"Where is this cur, Crabb?" he shouted.

"Right over in his office—smoking a perfecto paid for by Mrs. Crabb. Says he's sorry, but hasn't any money of his own. She underwrites him—all right; but if she keeps him she ought to be responsible for the damage he does!"

"Poor Barrington! I'll go over and see him at once," said Mr. Tutt. "Meantime just you call up this Crabb animal and inform him that unless he sidles over here with twenty thousand dollars by to-morrow morning at ten o'clock we'll bring suit against him and his wife for one hundred thousand, and that it's going to cost them exactly five thousand more for every week he holds back. Meantime tell Barrington's mother to send us the bills for the rent and household expenses. It isn't exactly ethical for us to pay 'em, but what's a little ethics when an old woman and four children are starving? Eh, Tutt? Did you say you wanted to kill a man? I'd like to draw and quarter him, burn him in chains and boil him in oil! I'd like gently to peel off his epidermis and shake salt and pepper on his quivering subcuticle! I'd like—I'd like ——"

He stood quaking with rage, his fist shaking in midair.

"U-r-r-h!" he roared. "And, by heck, I will!"

III

"THERE are two kinds of lawyers," said Joseph H. Choate—"the one who knows the law and the one who knows the judge."

But this cynically jocular aphorism is true only in a general sense. It is not enough for a lawyer to know either

Digitized by Google

aw or the judge, or even both. To succeed in his ession he must above all else know his fellow man. In atter quality Ephraim Tutt excelled. Inevitably he his man, whether the latter were a mean-spirited com- ant, a weak or timid juryman, or an uncertain or lying ss. The last thing he did was to look up the law; the to study the characteristics, temperament and rela- hips of the various *dramatis personæ* involved in any and he was accustomed to illustrate this great iple of practice by a certain litigation which much to body's surprise had resulted favorably to the defense he sole but sufficient reason that the only witness for complainant—who had a perfectly good case—owed efendant's lawyer twenty-five dollars.

e used to say that it was as important to know what ey men owed or what women they were in love with o be able to quote the Statute of Frauds or the Fif- th Amendment. By this we do not intend to intimate Mr. Tutt ever resorted to improper means to win his fcts, but only that he placed a proper value upon the alled human element in every case. The law might be irely against him, and so might the facts; but that er disturbed his equanimity so long as there was a jury e appealed to; and he believed that the chief require- nts for the legal career were a good digestion and a stout r of legs. In a word, he was a practical man.

To him every case that came into the offices of Tutt & tt presented a concrete triangular problem, standing on own bottom, and exposing three sides, on one of which s inscribed "What are the facts?" on another "What's e law?" and on the third "What then?" And Mr. Tutt, gangrenous stogy protruding from his mouth, his hands rust beneath his coat tails, would saunter contempla- ively around said problem, viewing each side in turn, but ausing inevitably before the last, where, if the truth must e known, the question of what the law or the facts actually ere played a small part. There is more than one way to ill a legal cat, and Tutt & Tutt's job was to find the best ethod of executing every such feline that wandered into heir office. Both Tutts enjoyed the law as a science and elighted in it as a craft, joyfully uniting science and craft n a scientific craftiness in which inevitably a pleasant time was had by all—except their opponents. They loved their profession for its own sake, apart from the fact that they earned their living by it; but they cared for it rather upon its pragmatic than upon its academic side.

Mr. Aaron T. Lefkovitsky, on the other hand, though also a legal pragmatist, was the kind of lawyer who mistakenly thought he knew both the law and the judge, and everything else. Like seeks like. A smart-Aleck client is apt to engage a smart-Aleck lawyer, much as men are said, out of personal vanity, to marry women who in general resemble them. Thus it was natural that T. Otis should have retained Aaron T. to defend the damage suits brought on behalf of the Barringtons against him and his wife. It was also natural that after Aaron had blustered around for several months, loudly asserting that Tutt & Tutt could never get a verdict against his clients, the several juries interested should have soaked the latter an aggregate of fifty thousand dollars in damages. This unlooked-for consummation might have resulted in a loss of mutual confidence had it not been for the fact that T. Otis was unquestionably judgment proof.

Nevertheless, one shadow still stalked behind him by day and hovered above his bed at night—his liability to arrest and imprisonment for debt in default of paying the judgment. This lever old Mr. Tutt still had concealed upon his lanky person, and both T. Otis and Aaron T. knew that he would certainly make use of it, the fact being that he had served written notice upon them that unless someone should pay that fifty thousand in full, with interest, costs and disbursements added thereunto, within five days he proposed to cast Mr. Crabb into durance vile, which, as it happened, would be just when Mrs. Crabb desired to take her departure to Atlantic City for the summer. As the lady did not want to go without her husband, and wanted neither to pay the aforesaid fifty thousand dollars nor to have it publicly known that T. Otis was visiting the warden of the city prison, she immediately and in some distress telephoned to the Hon. Aaron T. Lefkovitsky, who stood not upon the order of his coming.

Hence there were assembled on a certain June evening, in the gilt drawing-room of the golden suite of the rococo apartment house upon Riverside Drive overlooking the Hudson where dwelt the Crabbs—the lady herself, the Honorable Aaron, her dashing spouse, and Algie Fosdick, his friend.

"Well, Mr. Lefkovitsky," she was saying, "what kind of a mess have you got us into now, losing all these cases, and my husband threatened with jail?"

Mr. Lefkovitsky received the broadside good-naturedly.

"Jail!" quoth he nonchalantly. "A good joke, that is!"

"Joke!" repeated Mrs. Crabb in dudgeon. "It may be a joke to you, but a nice thing for me to have it in all the papers just as I'm going away for the summer! I'd almost rather pay the fifty thousand dollars and be done with it!"

"Not much you won't!" asserted the lawyer grandly. "And your husband won't go to jail, either; that is, really go to jail. All he has to do is to give a bond for the amount of the judgment, and under the law he gets the liberties of the jail. At the end of six months the bond is automatically discharged and that's the end of it. Nobody need ever know he's even been arrested."

He nodded his glossy black head sagely.

"I don't understand!" declared Mrs. Crabb suspiciously, for she was suspicious of all men, her only experience with the sex having been with the admiral and T. Otis. "First you say he'll have to go to jail, and then that he won't have to go to jail! What sort of bunk is that?"

"A Nice Thing for Me to Have It in All the Papers Just as I'm Going Away for the Summer! I'd Almost Rather Pay the Fifty Thousand Dollars"

"They call it going to jail, but practically he can go anywhere he chooses," said Lefkovitsky. "The jail limits in New York County are New York County itself!"

"You mean Otis can live right here in this apartment and still be in jail?" she demanded incredulously.

"That's it!"

"I told you he was a smart lawyer, mamma," murmured Mr. Crabb.

"Don't you call me mamma," she retorted, "or go to jail you shall!"

As between Mrs. Crabb and jail, less hardened men might well have chosen the latter.

"All he has to do is to get a responsible party to go surety on his bond that he won't go outside the jail limits—Mr. Fosdick can act as surety. And then he stays right here, and sleeps at home."

"That's a funny sort of law!" ventured Mr. Fosdick. "How do you know the sheriff would accept me as a surety on the bond? I haven't a cent of my own!"

"He'll have to accept you if you put up the right sort of security," announced Mr. Lefkovitsky with authority.

"But where shall I get it?"

"Mrs. Crabb can loan it to you," suggested the attorney. "She merely deposits fifty bonds, or an equivalent amount in any good securities convenient to her, and at the end of six months, when Mr. Crabb is released and the bond is discharged, she gets them back."

"Are you sure I will?" she insisted doubtfully.

"Absolutely! I'll show you the law if you want to see it. Your husband just gives bond and walks around New York for six months and then it's all over. He can't be arrested again."

"Easiest way to save fifty thousand dollars I ever heard of!" beamed Fozzy. "Ain't it grand to be a lawyer?"

"But suppose there was some slip-up? What would happen to the money?" Mrs. Crabb inquired. "I'm a bit leery of this law stuff."

Mr. Lefkovitsky smiled with condescension.

"There won't be any slip-up."

"But if there should be?"

"Of course, if the bond was forfeited the securities would be used to satisfy the judgment."

"You mean the Barringtons would get our—I mean my—money?"

"If the bond was forfeited, yes," he replied rather impatiently. "But it wouldn't be forfeited. There's not a chance in the world. As I tell you, a man who has secured the liberties of the jail can go anywhere he wants in New York County. That's why I say that being arrested for debt is a joke."

"If that's all being arrested amounts to," pondered Mrs. Crabb, "why have any jail limits at all? The only thing I don't like about it is that Otis can't come down to Atlantic City over the week-ends."

The Honorable Aaron looked knowing.

"Maybe I could fix that too," he admitted modestly.

"Well, what do you think about that?" ejaculated Fozzy.

"Oh, if you can ——" brightened the lady.

"Listen," said Lefkovitsky, helping himself to a cigar out of the silver box at his elbow on the strength of it. "I'll tell you something. Very few lawyers know it, either. When a man's arrested for debt and locked up—as when he isn't able to give a bond to remain inside the jail limits—the sheriff becomes personally responsible for him; and if the debtor escapes the sheriff is liable to the creditor in damages. But—and here's what most people aren't wise to—if the debtor voluntarily returns before the creditor can begin an action for damages by serving his summons and complaint on the sheriff the law says that any harm that has been done by his escape has been undone by his return, and that the action no longer lies. Get me?"

The Print of My Remembranc

By AUGUSTUS THOMAS

IN THE early summer of 1889, finding myself in New York and unemployed, I was glad to accept the offer of Mr. William G. Smythe, who had associated himself with another young manager named Charles Matthews, to produce a four-act play, The Burglar, which I had built up from the sketch Editha's Burglar. Maurice Barrymore had just closed his engagement at the Madison Square Theater in a successful run of Haddon Chambers' Australian play, Captain Swift.

Barrymore at that time was not only the matinée idol but was the favorite leading man of most of the theater-going men of New York. My first meeting with him, in fact my first identifying sight of him, was in an office on the second floor of a converted dwelling on Broadway near Thirty-first Street, where Smythe and Matthews had desk room. Will Smythe introduced us.

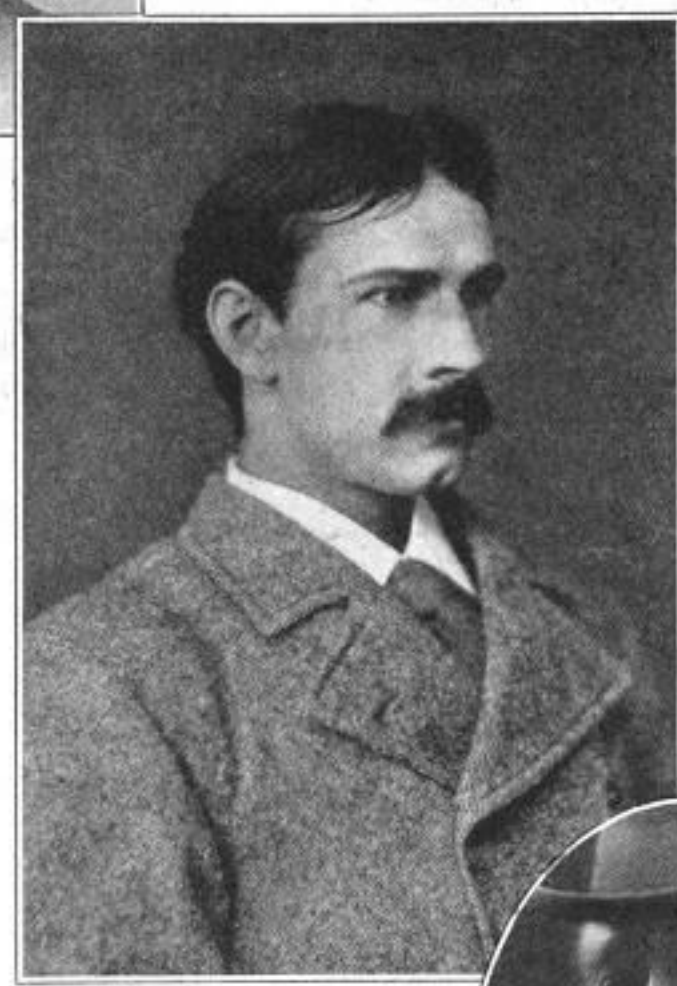
Emma V. Sheridan

As this smiling, keen-eyed, handsome, athletic fellow shook hands with me and looked me over as critically as I was regarding him he said, "Somewhat of a husky, eh?" and, still holding my right hand, jabbed in playful burlesque ponderousness at my ribs with his left. As I instinctively stopped him he added, "Know something about that, do you?" I have seen boys of ten begin acquaintance in similar pretense.

That meeting characterized the intercourse between us that covered the next twelve years or more—the last of his active life. He had an army of friends, but that during that final period I was the nearest to him I believe none informed will dispute. During that time he played in six pieces of mine, The Burglar, A Man of the World, Reckless Temple, Alabama, Colonel Carter and New Blood, his parts in all but the first two being written for him.

Maurice Barrymore Offstage

I NEVER saw Harry Montague, but I have seen numerous portraits of him. All the other popular idols of the American theater from 1880 to 1900 I saw in person. Barrymore was easily the finest-looking and best-carried man of them all. His features were in drawing almost identical with those of his son Jack, with the difference that for Jack's poetical expression and fiber the father had the challenge and the sturdiness of a Greek gladiator. Physically he was five feet eleven inches tall, with a shoulder breadth accentuated by the smallness of his head, and weighed about one hundred and seventy pounds. In romantic costume or in evening dress on the stage he had the grace of a panther. On the street or in the club or coffee-house he was negligent and loungy and deplorably indifferent to his attire. In the theater a queen could be proud of his graceful attention. Outside, a prize fighter or a safe blower was of absorbing interest to him unless some savant was about to discuss classical literature or French romance.



At that time the stationers' and jewelers' windows displayed silver frames containing photographs of him as Captain Swift in a dress suit, standing in a conservatory, holding in his hands a saucer and demi-tasse from which his attention had just been sharply distracted. Some observer, Wilton Lackaye, I think, said not long ago that Barrymore in transmitting his traits had definitely separated two personal and principal characteristics. The teacup quality he had bequeathed to Jack and the prize-fighting excellence had gone to Lionel. There is enough truth in the comment to justify it, although both the boys are much more protean than it suggests.

Mentally Barrymore was capable of interest in the most abstruse questions, but as far as I was qualified to judge he did not care to seem profound. He was vastly more amused in surfaces, but to the depth that facts and theories, forces, events and expression in all forms did i[illegible] him his was the quickest, most alert, the most [illegible] the wittiest and most graceful intelligence that

Once, describing to me a fight between a pet mongoose that he owned and a cat, he said, "All you saw was an acrobatic cat and a halo of mongoose."

The line could have been paraphrased to describe any tilt in repartee in which I ever heard Barry himself take part. And yet I never heard him speak a line that left a scar. It is hard to quote some of them and convey this conviction, but his smile and manner, true declarations of his intent, made the most acid speeches amiable.

I was delighted, of course, to have him chosen for the lead in my first big play in the East. These young managers were considerate of my wishes in getting the entire cast. Other prominent artists engaged were Emma V. Sheridan, who had been playing leading business for Richard Mansfield; Sydney Drew, then in his early twenties, but already a favorite as a comedian—he had been featured in a play

Maurice Barrymore

of Gillette's and was regarded as starring material by more than one manager; John T. Sullivan, a prominent leading man for second business; and Gladys Rankin, the beautiful daughter of McKee Rankin. I went into the company to play the old man and to understudy Barrymore in the part of the burglar. Willie Seymour, later the general stage manager for Charles Frohman, was engaged to rehearse the play. Mr. Seymour was an experienced producer; as a matter of fact, had been in the theater all his life, having gone on as a child with Edwin Forrest in Metamora.

The managers had little money and were staking all on our trial in Boston. As a matter of economy the organization was taken there by the Fall River boat. Nobody in the company had any important money. Salaries at that time were not what they are to-day. The largest on that list was Barrymore's at two hundred dollars.

On the palatial Plymouth at the dinner table we sat down somewhat a family group. Barrymore took the head of the table, with Miss Sheridan to his left. The rest of the company strung along on the[illegible] There arose somehow a pretend[illegible] pute over the honor of ordering [illegible] for Miss Sheridan.

Drew said, "We'll toss for it."

A cube of sugar was marked on its six sides li[illegible] ordinary die and given to Sydney for the first thro[illegible] was an anxious moment, the comedy of it irrepressi[illegible] his temperament, and as he shook the cube in his han[illegible] looked at the other derisive men before throwing he[illegible] "High man out." Barrymore had to remind him th[illegible] stake was the honor of ordering dinner for a lady[illegible] Sydney's line had revealed the situation. Before al[illegible] finished throwing, Joe Holland, who was with an[illegible] company on the same boat, noticing the hilarity o[illegible] party, joined us and wanted to know what the gam[illegible] was for. Sydney, who had lost, told him it was dinn[illegible] the entire party. Barry added, "A large stake."

Joe threw and lost, and after the order was given, h[illegible] also in an actor's summer, made a tour among the men[illegible] of his own company, borrowing for the prospective[illegible] When the checks came Barrymore paid for all the din[illegible] But Sydney's line of "High man out" passed into[illegible] company's quotations, and on all occasions was use[illegible] exclude anybody from polite or generous enterprises.

Our rehearsals were in Boston. Knowing how m[illegible] depended upon the result of the venture, I was es[illegible] cially watchful, trying to detach myself and look[illegible] the presentation objectively, as a critic in the thea[illegible] I could see nothing but success. As a touchst[illegible] for my estimate I had of course the rather full r[illegible] ord of the little play which was now the third act[illegible] the big one. Naturally the story mounted to th[illegible] and the fourth act, which was a logical sequence, [illegible] not seem to drop.

Sitting Up for the Papers

OUR first night was not more short of its endeavor[illegible] effects than most first nights are. The nervousne[illegible] of men and women in a new play is such that at a fir[illegible] performance they never give their best interpretatio[illegible] At this opening the calls were sufficient, the applau[illegible] and laughter were great. Behind the curtain w[illegible] thought we had a success. The thing that chilled [illegible] was the failure of the inexperienced management t[illegible] say so. They had been in touch with the men fro[illegible] the papers, and we felt that they reflected the opinio[illegible] of those men.

Most actors have a light dinner around six o'cloc[illegible] and a supper when the work is over. That night i[illegible] Boston we men were all too excited to think of goin[illegible] to bed even at the actor's hour. Four of us, Barry[illegible] more, Drew, John Sullivan and I, decided to sit up for the morning papers. We were joined by dear old Gen. George Sheridan, the silver-tongued Republican spellbinder, father of our leading lady. He had been with us during our four weeks' preparation.

The impression upon a sensitive author may mislead me, but as I remember the morning papers they had very little to comfort anyone. Barrymore's indignation and revolt were magnificent. He consigned all the critics to the bowwows, and was disposed to send the audience with them.

His finishing line as he slapped me encouragingly on the shoulder as daylight was breaking through the window was, "Boston, my boy! Why pay any attention to it? What is it? A city of Malvolios."

Sharing my first faith in the piece, trying to analyze and weigh the elements of success against everything in the other scale, he was sympathetically bracing me up.

Sydney Drew, who lacked Barrymore's ability to do this, but who had an equal good will, broke in by saying, "Now Gus, I've been in too many first nights ——"

His brother-in-law said playfully, "You have, Mr. Drew, you have," and pushed him out of the conference.

Sydney, with his comedy smile and a gesture of recovery, added, "Well, I'm a wonder."

"You do yourself an injustice—you're a freak," Barry added, and returned to lifting my soggy spirit.

Two or three managers had come down to Boston to see our opening, among them Joseph Grismer, at that time

Success Despite the Critics

I SHALL never forget his hearty laugh or the strong soldierly face as he said, "Why, my boy, it'll make a fortune for everybody!"

That was a hard Tuesday for me. The day before I would have bet upon my ability to brace up under any conditions. But when I found Smythe and Matthews discounting also Grismer's optimistic opinion and acceptance, and regarding both as peculiar to his isolated territory and his personal needs, I was a demoralized author. One thing that hurt me much was what I thought injustice in important press comments. In the first act of the play my burglar was a man in refined surroundings, speaking good English; in the third act he was talking thief jargon. I had believed that subtly effective, because in my railroad experience I had seen educated men quickly adopt the ungrammatical and slangy speech of the man on a box car. Mr. Clapp, then the principal critic of Boston, cited this departure as a mark of my immaturity. The opinion marked only his own inexperience with actual life in that stratum and environment. Two or three days later some other paper took issue with him upon the point, but on that Tuesday I was submerged by that and other objections equally valueless.

During a walk alone in the afternoon I found myself looking into a shop window with no accurate consciousness of my surroundings or recollection of how I had acquired them. It was only a dazed minute or two before objects fell into their proper categories and I was able to get my bearings, but the lapse alarmed me. A half block farther on I met Mary Shaw, whose home was Boston. Mary had seen the play and was enthusiastic in her approval of it and of the work of the company. This, however, was to me unimportant in the presence of the lapse of consciousness I had just been through. In frightened fashion I told her of it.

Mary put back her head and with her contagious laugh of those early days, said, "Good old-fashioned biliousness, my boy, nothing more." Mary's diagnosis was correct.

Our Boston engagement was for two weeks. The business showed such healthy signs that we were regretful that it was not for a longer period.

On Wednesday after the matinée Wesley Rosenquest, managing the Madison Square Theater for A. M. Palmer, proposed to Smythe and Matthews that the piece be brought to New York for as long a time as it would hold up in the summer. His terms were for the theater to take each week the first two thousand dollars. It was of course possible to play to much less than this on the gross, and for the management also to be stuck for salaries and advertising.

As they hesitated Barrymore said, "Take it! If the money doesn't come in you'll owe me nothing, and I think I can answer for most of the company."

This decided the managers. As they started to thank Barrymore he interrupted them: "I'm not doing it on your account. This is for Thomas."

Charles L. Harris and E. M. Holland in "Alabama"

The New York opening was a night of almost equal anxiety to that of Boston. As one of the cast I had only the actor's biased opinion as to how the play was going. I was heartened during the first intermission by a visit of the comedian, Louis Harrison, who came to my dressing room with a message from Bronson Howard, commending the workmanship of the act just finished; and when the play was over Harrison came again to Barrymore's room and mine to bring us good news and to give his own opinion—by no means an unskilled one—that we had the best melodrama offered in New York since The Two Orphans.

Bronson Howard was then in New York with his production of Shenandoah at the Star Theater, where its great success was so substantially the beginning of Charles Frohman's fortunes. Other attractions running at that time were Rosina Vokes with her little company at Daly's in repertoire, including My Milliner's Bill, The Rough Diamond and His 'Art Was True to Paul. Maude Adams was making her first hit at the old Bijou Theater in Hoyt's A Midnight Bell; Francis Wilson was playing The Oolah at the Broadway; Sothern was rehearsing Lord Chumley by Belasco and De Mille to go on at the Lyceum on Fourth Avenue, the beautiful little second-story theater managed at that time by Daniel Frohman and supported by a clientele second only to Daly's. The McCaull Opera Company, with Digby Bell as principal comedian, was in the midst of a run at Palmer's; Lillian Russell was playing The Brigands at the Casino; Ferncliffe, by William Haworth, was at the Union Square, and Helen Barry had in rehearsal Love and Liberty to follow. Denman Thompson was in the midst of his popularity with The Old Homestead at the Academy.

A Beginner's Royalty

THE BURGLAR was a success in New York, and after its first year on the road played with two and sometimes three companies throughout the country almost continuously for the next ten years. I report this to record a fact which may be useful to other writers. When I was in St. Louis Will Smythe had written to say that forty dollars a week was a fair royalty for a four-act play by a beginner. In his own inexperience he had consulted Howard P. Taylor, then somewhat in the public eye as a dramatist. That royalty was agreed upon. I was sure that Smythe had been misinformed, but the terms were adhered to. The lowest royalty that a beginner of a play worthy of production should have received would have been 5 per cent of the gross receipts, amounting on The Burglar's average business to more than ten times forty dollars. Smarting under what I felt to be the injustice of the arrangement, and yet declining to ask anything not in the contract, after the first few weeks I sold my rights for twenty-five hundred dollars. The piece did, as Grismer had prophesied, make small fortunes for all owners associated with it.

When The Burglar went away for its first season, however, its royalty of forty dollars a week was my total income. I don't know what decree of fate led to such a general agreement upon this figure as my value, but with certain obligations in the West economy was essential. Smythe relinquished a second-story front room at 205 West Twenty-fifth Street, over a parlor that was occupied by an Italian who gave a table d'hôte dinner for thirty-five cents with a pint of red wine thrown in. That was the dinner to which I treated Barrymore and asked him if it wasn't a fine offering for the money.

THE REAL STORY

By WALLACE IRWIN

ILLUSTRATED BY LESLIE L. BENSON

IN ORDER to shield myself against those careful readers who gloat over the inaccuracies of the hard-working fictionist, let me begin by saying that I know little more about newspapers than what the average citizen learns at breakfast. And I never, never read the New York Bugle, because I do not care to have opinions furnished me by a somersaulting juggler turning world news into a comic song.

Many of the facts herein contained I got from the thin hard lips of Miss Cissy Ragnell, that able spinster whose temporary collapse out of the society page of the Bugle and into a rest-cure sanitarium cried havoc in the office and brought forth the dogs of war and love.

Mr. Trask, who has been recently promoted from city editor to managing editor of the ever-strident Bugle, was in a state of high tension one late fall afternoon in the year 1921. Insufficient it was to Mr. Trask that the affairs of Mexico, Ireland and Russia should be performing, three rings at a time, under the personal management of Mr. Trask, who looked like Napoleon and, like the First Consul, was limitless in his ambition. The society page was on Mr. Trask's mind during the comparatively calm hours of afternoon.

He had never approved of the lovely amateur, Miss Corless, in the nominal editorship of that important department. But what was he to do? Cissy Ragnell had, as I have said, collapsed. Miss Corless, child of an illustrious family newly impoverished, had done very well as an occasional contributor of sprightly items. Cissy Ragnell, moaning on her pillow less than a month before, had insisted that Miss Corless knew Manhattan society down to the slightest glove button. That no doubt she did, but——

"Dead from the neck up!" growled Mr. Trask.

A fortnight before he had given Miss Corless up, editorially speaking; he had demoted her to the post of space writer and taken the society page under his own charge.

Behold, then, the sporting department of the New York Bugle, where Mr. Hadley (Brick) Minor sat that afternoon, his brilliant pince-nez tilted to a scholarly angle. He was an average-sized, average-looking man whose rough complexion suggested fresh sandpapering; you would scarcely have recognized in him the nimble-legged Minor who once held the intercollegiate record for the mile. Indeed, as he leaned rather fussily, making marginal notes with a fine-pointed pen, you might have put him down as a young professor perfecting a monograph on South American fauna. As a matter of fact he was giving the finishing touches to a prophetic utterance which would soon be syndicated under the title Big League Dope.

Occasionally he would look up, as for inspiration, at an enlargement of Jack Dempsey's fighting face, which hung in a frame over his desk; then he would steal a glance through a half-open door where he could see Julie Corless' willowy back as she bent over the work to which a malign fate had called her. How like fury he loved her, and how he wished he could help her out of the bog.

Occupying the third corner in this triangle—a triangle of wills—Julie Corless uttered a little moan and prayed for extinction. She was a lovely picture of despair, her creamy neck framed in a cobwebby collar, her slim body incased in one of the simple street costumes which anybody can wear—if she knows how.

At this instant she had her character on the witness stand and was subjecting it to a harsh cross-examination. In the process she had said several things which should have been ruled out of court. "Are you weak," she had asked, "or are you just stupid? Certainly you have rushed in where angels fear to tread. You're a field marshal all swollen up with his importance and going into battle without any plan of campaign. You never really knew anything about life."

"I'm Sorry I Have Caused You Suffering," She Said Softly. "How Could I Have Known? Please Tell Me"

She groaned again, and Brick Minor, seated in his cell, would have come to her had she not with an impatient gesture come to him. Her pale oval face, with its clear Scotch-gray eyes and beautiful, rather heavy eyebrows, was filled with anguish as she stood beside his desk and laid down an untidy bundle of paper.

"Brick, I can't do it!" she wailed. "Mr. Trask insists on yellow articles. I hate the horrid things!"

"And you've faced the music like a soldier," he grinned consolingly. "Sit down, won't you, Julie?" He had slid into the habit of calling her by her first name, and she had never resented it.

"I'm too busy. I can't do anything I want to," she lamented. "I've got to go into the art department and look over those trashy illustrations. Oh, Brick, please tell me what to do with the stuff!"

She whisked out of the room and left her confidant to the unpleasant duty of criticism. The manuscript—its pages unnumbered, after the manner of journalistic amateurs—embodied a dignified, rather dull article on Mrs. Hassett-Cromer's *bal masque*. He had read the article half through and had picked it up in order to straighten out its crumpled pages when another and disconcerting matter came to his notice. It was a cheap yellow post card which fluttered out of the mess to the floor. Brick Minor, by instinct a gentleman, was no spy, but the misbehavior of his eyes was involuntary as he translated a scribbled line of French:

. . . to endure anything for the sake of thy beauty, oh, cruel and unattainable! . . .

And the signature below was "Del Argo"!

Now to love is to be jealous, and a pang shot through Brick Minor's heart as he tiptoed into Miss Corless' office and laid the card among her papers. He would not, at least, have her embarrassed by the knowledge that he knew.

Mr. Trask poked his Napoleonic head into the door and almost caught the sporting editor in his sly act.

"Miss Corless around?" he asked sharply.

"She's just stepped into the art room," responded Brick.

"Here I am
Julie quietly,
ing back by
Minor's office.
"Oh," said
Trask, and his
indicated tha
chose to be

remaining at Newport this fall.' N
that's rather bald."
"It's what people who know t
Ribbel-Standishes want to know
declared Julie defensively.
"There's my point!" Mr. Trask grinned. "We're n
running the society page for society. Get that out of yo
head. We've built this page up into one of the most pop
lar features in the paper. Why? Because we've given t
people who aren't in society their own idea of what socie
looks like. You don't expect a servant girl or a tru
driver—the sort of people we rely on for circulation—to
satisfied with the bare statement that Mr. and Mr
Ribbel-Standish are remaining in Newport. They want
know how many thousands a year Mrs. Ribbel-Standis
spends on perfume, and why Mr. Ribbel-Standish go
drunk and kicked his butler, and why the butler left with
out claiming damages. Our readers demand to know th
worst, within reason. If people want sad solemn fact
about society they read some other paper. Our policy
classy jazz, pep, romance. That's why we're featuring
Lady Sombrey's Sin next to your column. There's a
knock-out in every installment."
"In other words," drawled Julie, recalling an ancient
proverb on yellow journalism, "when the dog bites the man
it isn't news. When the man bites the dog it is."
"Keep that in mind and you won't go far wrong in this
office," said Mr. Trask. "But you've got to have enough
facts about the dog to protect us. Now what I want out
of you is bigger feature stories—some good divorces,
snappy facts about visiting noblemen, some wild stuff
about what's going on behind the scenes in Park Avenue.
Pep and yet more pep—that's our motto."
That Julie Corless did not brush the papers off her desk
and resign on the spot was a tribute to early training. Pep
and yet more pep! She saw the abominable motto em-
blazoned on the Bugle's yellow flag. She had gone into
the work with the high ideal of giving a cultured tone to
the paper.
And heavens, how she had wanted the money with which
to buy the pretty fragile clothes which meant more than
warmth and life to her!
Raging with equal fury at herself, fate and the managing
editor, Julie reached out blindly for Del Argo's fervid post
card. All day, in her desperation, she had been planning
to do an audacious thing. Why not? The mysterious
Spaniard was no longer a romance to her. In his volumi-
nous one-sided correspondence he had furnished ample
material for a sprightly biography.
She found the card among her papers and was again
glancing over its ardent French when a rat-tat as sharp
as the knock of conscience sounded upon her door.
"Come in!" she called, making haste to conceal the
damaging evidence.
In the doorway she beheld the quiet fastidious man of
forty whose somewhat auburn cast was his only claim to
the sporting sobriquet of "Brick." She was glad that he
had come, though she could tell him nothing worth while.

Digitized by Google

The horse follows the cart, Jonah swallows the whale, the Christians torture Nero," he began quite solemnly. You've been listening," Julie accused him.
How could I help it? Mr. Trask has a nose tone which ies like a Cremona violin."
Brick," she told him desperately, "there's no use try- to make anything out of me. Just give me up and let resign."
Eighteen years ago I said the same thing," Brick nor assured her. "I was a trifle young, I think, though idn't realize what was the matter with me. Then the E. came to me and told me to put more whoop into my agraphs or I'd have to quit. And, behold, how I have ooped!"
"Your page is tremendously vulgar," she informed him ch a smile.
"Isn't it!" he exclaimed, complimented. "A great deal the slang which you abhor—and my department is the ngiest in America, I believe—I invented myself. It's ng de luxe, most of it. The Bugle's sporting page has character all its own. Our cartoons, our prize-fight nes and our column of baseball patter so absolutely nchronize that not one line of really good nglish ever slips in."
He said this with one of his quizzical oks which always left Julie in doubt as to hether he was joking or in earnest.
"Aren't you too good for this sort of ing?" asked she.
"Am I?" he responded, and his eyes inkled again.
"With your education and fine mind you ight be a great lawyer or—or a master of nglish. To degrade one's standards like his is entirely too easy."
"Disabuse yourself of that idea," he said eriously. "It took five years of the hardest hinking and keenest analysis to work my age up into what it now is. Take slang done. In order to equip myself for the work I approached slang from a purely intellectual angle. Much of the current slang of to-day comes from my invention."
Julie Corless looked up and smiled. What was wrong with Brick Minor?
"All this, I suppose," she said archly, "is because I ask to resign before they turn me into a social gunman."
"If you live in Rum you must do as the Rum'uns do," he persisted; then with his queer puckering smile: "I think you're right in wanting to resign."
He had risen and was standing over her. At that instant she had the thought that Brick Minor, though far from handsome, was one of the most attractive men she had ever known.
"I—I know I shall have to," she informed him, trying to keep her voice steady.
"I'm not a poor man, Julie," he was saying. "I've made money in business of my own. I'm not going to be here much longer, and—and there's one thing I've got to tell you ——"
He stood silent for an instant, and Julie's impressionable heart turned over ere he said: "When you leave this office about all that's ever given it charm goes with you."
"Oh! It's so nice of you to ——" she began tritely enough. She had undergone too many proposals of marriage not to understand what was imminent.
"I'm not a good match—what you would call a good match. But I've saved for years and I've never made a poor investment."
He stopped abruptly while she sat looking wide-eyed into his interesting, troubled features. She felt no surprise. It seemed quite natural that the man whose companionship she had enjoyed during these unconventional weeks should have burst forth into this romantic avowal. And Julie was nothing if not romantic. But the avowal was strangled at the whim of its author.
"What the devil am I saying?" he blurted, snapping his fingers impatiently as he rushed out of the office.

II

JULIE CORLESS went home to dinner, stinging with the memory of a rebuke and glowing with the memory of a proposal. Had Brick Minor brought it to a definite question she felt almost sure that under the stress of impulse she would have accepted him—to regret it afterward. For Julie was not an easy maid to win, as Mrs. Corless found these seven years since her daughter had been of a marriageable age. Self-willed, her discouraged elders called her, little guessing how deeply a living share in one storybook romance had influenced her girlish heart. Had you accused her of being something of a snob she would have flamed indignantly; yet the taste of a noble title charms the feminine heart, even in these days of tumbled thrones.

Journeying homeward by Subway, Julie's inner mind argued the ethics of this case, while Julie's outer mind exhausted itself in its quarrel with Mr. Trask. Several times she decided to resign, just as she should have done. Then she considered Brick Minor's advice to the effect that she should quit; and being all feminine, hence partly perverse, she determined to stay in the office and fight it out.

Pep and yet more pep! How she loathed that detestable phrase, haunting her like a strain from some cheap popular song!

She got off at her station in the early thirties and walked over to Madison Avenue, where in a high-stooped Victorian house that had once been a private residence the Corlesses maintained a flat with a modest show of the grand style that had characterized them before the crash. Julie mounted the walnut stairs and entered, to see her mother, looking cool and handsome in a dinner frock of half mourning as she sat crocheting under a reading lamp.

"My dear, how tired you look!" exclaimed Mrs. Corless, giving one of her calm kisses. "I hope you're not overdoing on that dreadful paper."

To call the Bugle a dreadful paper was but a part of Mrs. Corless' creed.

"I've had rather a busy day," said Julie.

"How hot you are!" the mother cried, holding one of Julie's hands against her cool cheek. "And now do hurry, dearest; Monsieur Duval is coming to dinner. He's just up from Washington. I've laid out your gray dinner frock—almost everything's at the cleaner's. And dearest ——"

By the clear look in her mother's gray eyes Julie knew that something was coming.

"—— dearest, why do you keep that foolish Spaniard's letters lying about where anyone can read them? They don't mean anything to you, and if someone who understands French should pick them up—think how they might misconstrue ——"

"Oh, mother!" cried Julie, and whisked out of the room.

Julie was no sooner in her bedroom than she saw the foolish Spaniard's letters, an obese bundle on the glassy top of her dressing table. As she dressed for dinner her eyes roved more than once toward the dog-eared one-sided correspondence which had wrought such havoc in the soul of a girl ripe for romance yet not sufficiently mature to understand love.

When Julie was just out of school she had gone touring France with a Mrs. Mapes, a widow qualified for tutor and chaperon. It was one of those educational pilgrimages which young ladies of Julie's class so often undergo without appreciable damage. In order to live in intimacy with what Mrs. Mapes called "atmosphere" they had taken quarters in an exclusive *pension*—mostly devoted to wealthy American and English tourists—in a handsome street not far from the Luxembourg Gardens.

One morning in May—what better start for a tale of romantic adventure?—pretty Miss Corless, slender as a lily and pink as a rose, dutifully followed the guidance of her conscientious chaperon to the Luxembourg Gallery. Julie, being very much alive, was in no mood for ecstasies over the paint daubs and chisel scars of geniuses. It was a divine day in Paris and as Julie wandered from romanticist to impressionist, in the back of her busy little brain she was aching to be out in the sun, joy-riding in one of those lanky little river boats that scuttle under the Pont Neuf down the Seine, or rolling in a crazy open fiacre along the Champs Elysées, or sipping something pinkish under the awning of an open-air restaurant in the Bois, where the tablecloths were pink, where swans were wont to play in the crystal pond, and slim chasseurs, removing silvern helmets with horsehair plumes, lolled in their chairs, leering amiably like illustrations out of Sourire.

"What a day for love!" sighed Julie, who translated the novels of the younger Dumas too well for Mrs. Mapes' liking. And it was almost upon that thought that romance had come to her in a flash of eyes.

Mrs. Mapes had discovered a pea-green impressionist, and while the dutiful chaperon was enjoying her ecstasy the restless girl escaped to the foyer, where, casting lack-luster eyes from wonder to wonder, she spied what caught her maiden fancy. Jewels!

In the upper compartment of a high glass cabinet which stood between aisles, the treasure of a queen lay haughtily on its velvet cushion. It was a wreath of diamonds and emeralds, and the placard explained that this coronet had been worn by the Empress on a historic occasion.

Female-wise the young girl viewed the gem-wrought wreath quite personally, scanning it from every angle as she would a sweet spring hat. How would it look on her own head, her hair cunningly arranged to be made perfect by that flashing foliage? It must be heavenly, thought she, to be a queen with lapidaries and goldsmiths vying to please and ——

How Long She Stood There Playing the Ridiculous Game of Eye-to-Eye She Never Knew

Digitized by Google

At the instant there flashed out at her through two layers of plate glass a gleam more vivid than that of any diamond on the royal wreath. A pair of remarkable, luminous, soul-searching, somber, romantic black eyes!

Julie's heart stood still. No poetic anthology could have contained words to tell her more distinctly that those eyes were for her, seeking her out, appealing, adoring. In that crowded moment she had little time to study the man behind and surrounding those eyes. She had only an impression of a distinguished figure in a morning coat. He seemed rather young, she thought; but the rest of her impression was buried in the hypnotic beauty of his eyes.

It was a May morning, as I have said; also it was Paris, and Julie was eighteen.

How long she stood there playing the ridiculous game of eye-to-eye she never knew. Finally the apparition behind the showcase made a move, which caused the girl a frantic impulse to escape. As she turned she ran almost into the arms of Mrs. Mapes, who was panting out her horror and casting suspicious eyes toward the tall young man behind the jewel cabinet.

Now if such an adventure had befallen Julie Corless in New York—at the Metropolitan Museum, say, or the Public Library—she might have put the intruder down as one of those handsome and venomous insects whom the common call a masher. But I must again repeat the mystic formula, May, Paris and eighteen, in order that the drift of her springtime thoughts may not be misunderstood.

The flash of those magnificent eyes, competing successfully with garlands of crown jewels, haunted her waking hours. The silent, momentary meeting had come as the stimulating reaction she had craved.

That afternoon when Julie was going out the concierge at the door smuggled a note into her hand. He did it skillfully. Not until the dressing hour did she dare break the seal. A coronet, embossed in blue, met her eyes, and below, scribbled fiercely, as though with the point of a bayonet, the passionate avowal, which she translated from its perfect French:

Mademoiselle: I gazed through the glass and saw your beauty. The world is changed for me. Whatever you do, wherever you go, my heart will follow you always. Forgive my impetuosity—I am of a race which acts quickly and forgets slowly. I do not ask to see you at once if that offends your sense of propriety. But let me say that I can offer you a coronet more precious than that you gazed upon to-day. Permit me to call on your parents or guardian that I may make my offer for your hand.

Eternally, devotedly,
DEL ARGO.

Julie was at first indignant, then amused, then captivated. There had been something so boyish in those wonderful dark eyes wooing her through the glass of the royal jewel case! Apparently her impetuous lover had bribed the concierge for her name. She dreamed over this until after dinner; then she acted as a good girl should, and showed the note to Mrs. Mapes, who was properly horrified.

Notes came to Julie every day after that—sometimes there would be two—smuggled in by the cautious hand of the concierge, who was a Swiss.

Del Argo's words, glowing from the dull red of live coals to the blue heat of a blast furnace, revealed that love in his case was a progressive disease. She did not show these letters to Mrs. Mapes. There is no doubt that fine words make fine feelings; and Julie became so charmed by Del Argo's beautiful wooing French that she came to imagine his voice, repeating the phrases over and over. Between protestations of undying love he furnished biographical data. His father was richer than an Inca. Young Del Argo was a swordsman of repute and had fought many duels. Once he implored so poetically for her photograph that Julie yielded to a crazy impulse. She wrote to an address he mentioned in Boulevard Raspail. It was a discreet schoolgirl letter, penned at midnight; but she mentioned a photographer's where her picture could be found.

In those days Julie's sense of humor was undeveloped. Otherwise she surely would have laughed at Del Argo's frenzies. One miserable morning she peeped out of the window, to see a young man in a handsome red runabout sitting quite unsheltered under the drizzling rain. He had equipped himself with a waterproof coat and sporting cap, but he allowed the moisture to rill down his back and gave no heed. His attitude was in keeping with the weather. Once he looked up, and Julie, afraid he had spied her out, popped back behind the curtains.

An hour later Mrs. Mapes came in to report: "That silly impostor has been sitting out there, wet to the skin, all morning. He has a coat of arms as big as a teakettle on the side of his car, and I think somebody ought to report him to the police. This thing will have to stop!"

And stop it did within a very few days. What settled Del Argo's case, so far as Julie was concerned, was a frantic appeal, written on a cheap post card and sent to her by *pneumatique*. It vowed again undying love, threatened suicide, proposed marriage, and ended in an avalanche of verbal flowers. Mrs. Mapes got the postal, read it, and was frantic at the man's abominable effrontery. Forthwith she declared that they would move at once. She acted upon the impulse; but the transfer of locale took them three days, as a matter of fact.

On the very afternoon that their baggage was being shipped to the opposite bank of the Seine, Del Argo's last despairing wail arrived, postmarked Biarritz:

Mademoiselle: Nemesis pursues the unhappy lover. I must fly from the vengeance which pursues me. If the envious gods have prepared this stroke because I love too much, remember that I bear the penalty of what I have done, for your sake, without complaint or remorse. If there is pity in your heart, remember me.

Your forsaken,
DEL ARGO.

"I thought he was dishonest," said Mrs. Mapes, "but now I believe he's only crazy."

They went to England shortly after that, Mrs. Mapes congratulating herself upon escape from a nuisance, Julie filled with girlish sighs. It was the last they heard of him, save for a scrap of gossip that came to Miss Corless' sharp ear in the autumn, when they were returning to America.

An Englishwoman, well versed in Continental scandal, was chatting with Mrs. Mapes between deck chairs:

"Oh, Del Argo? You know him then? The Marquis del Argo ——"

"There seems to be an adventurer using the name."

"Probably. He would be. . . . A great family. . . . Wealthy and very close to the throne. . . . Young Raphael del Argo. . . . Why, he's the greatest catch in Spain!"

III

JULIE CORLESS, aged twenty-five, stood before her mirror putting the finishing touches to her toilet. For the first time in seven years she realized how musical-comic that romance had been. Ever since morning, when she had taken the flowery post card with the idea of weaving it into an article for the Bugle, she had viewed her girlish indiscretion with a new cynicism. In the reaction she would have burned the bundle of sentimental letters had she not become possessed with a daring idea.

The impertinent, passionate post card lay where she had restored it, at the top of the heap, and ere she went to dinner she glanced sarcastically over the opening lines of the lyric:

. . . to endure anything for the sake of thy beauty, oh, cruel and unattainable! . . .

Then came to her memory the words of Mr. Trask: "'Pep and yet more pep."

Inspiration overwhelmed her. Why not? She glanced guiltily at the bale of Del Argo correspondence. Then she went to dinner.

She was inattentive to the charming elderly Monsieur Duval, even though he spoke with more than usual sprightliness on European politics. Her own ax was grinding, grinding under her silky hair.

Toward dessert she looked up and asked, apropos of nothing: "Is there more than one Marquis del Argo in Spain?"

"But yes, mademoiselle," replied the knowing Frenchman. "It is a very noble house, but there are many of that title. The family of Del Argo, by royal patent granted by Philip IV, may confer the title of marquis upon all sons."

Coffee was scarcely over when Julie excused herself on the plea of unfinished office work. Her temples were throbbing with generic fever as she locked the door of her room, unpacked her portable typewriter and began busily ticking:

"New York thinks she has set a pace for the world during the reign of slam-bang dance music. Now let me breathe a word into Mademoiselle Gotham's ear.

"A newer, faster, wilder pace is going to be set. 'Cause why? 'Cause of Spain!

"Marquis del Argo—ever heard of him?—is coming to town. Marquis del Argo of the romantic disposition, that has set Paris by the ears, Madrid on its toes.

"He is young. He can't be more than twenty-seven. He is wealthy beyond the dreams of Golconda. His family, very near royal, is close to the royal house of Spain. He's unmarried. Look to your laurels, girls! Dance with him, glory in his eyes, which are said to be the most beautiful in Europe. And, for heaven's sake, have him tell you his sporting adventures in the mad, glad town of Biarritz. Do you glory in the code duello? Then tease him to 'fess up, for Raphael is a dangerous man with the sword.

"When he takes his suite at the Hotel Merlinbilt—which will be right soon—New York society will be in competition ——"

Julie Corless paused, shifted the ribbon of her typewriter and glanced over the pile of letters for further sensational facts about the Marquis del Argo, facts that would introduce pep and yet more pep.

It was after ten o'clock when she called for a messenger to carry her copy in haste to the office.

IV

EARLY in the afternoon of the next day Mr. Trask, beaming with satisfaction, came out of his den and walked over to the society editor's cage for the purpose of apologizing. In his short fingers he held a clipping f that morning's Bugle.

"A knock-out!" he chuckled.

"Thank you," said Julie faintly. "I thought ma I had your idea."

"Now slam this stuff at them, hot off the griddle, you'll have all America asking who you are."

"Heaven forbid!" was Julie's inner prayer. But said aloud, "I think I can give you a great deal more that."

"Fine! Follow this up when that spigotty Del A comes to town. Get all the stuff about his doings in N York." A cautious look came into his keen little eyes as asked, "This is all verified, I suppose?"

Julie hesitated, frightened at possible consequenc then she stiffened proudly in her chair and *evaded:* "I information came in personal letters."

"That ought to satisfy a jury," he grinned.

Through the half-open door she could hear Brick M nor's typewriter ticking merrily. She wished he wo come in and help her, but he gave no heed.

"I've got an item for your department," went on M Trask. "It seems that Harry Leek, the tennis champio is going into the movies. Of course I'd rather you'd tack this in the style of that Del Argo article ——"

"I suppose I could," said she.

Human vanity is a weak thing, and Julie was blossomi under the sun of flattery.

"Good. He's stopping at the Merlinbilt. We've phone him."

Brick Minor did not look up as she passed his door. H scholarly features, slanted toward the keys of his typ writer, suggested intellectual concentration; a new su was rising in the pugilistic world.

At the Merlinbilt, Julie Corless found Harry Leek eve more accessible than she had anticipated. But as sh passed through the handsome lobby she encountered Mr Ramsey Burgstaller, the manager, with whom she had ha a speaking acquaintance for years. Julie's father, up to few months before his death, had been an important stock holder in the Merlinbilt.

"Good afternoon, Miss Corless. Got a nice item fo you," he twinkled. "Mind stepping round to my office?"

She was no sooner inside the mahogany-walled com partment and seated by his desk than he wheeled in hi chair and said beamingly: "Great item that you had o your page—that article about Marquis del Argo. But say! You've certainly got a nose for news. Know more about my hotel than I do, by George!"

Apparently he was nursing the best joke in the world. Julie struggled to return his smile and to falter out something to the effect that she was learning her business. Vague misgivings tickled her heartstrings.

"How in the world," resumed Mr. Burgstaller, "did you get onto that?"

"Get onto what?" she asked.

"This Del Argo's coming, and all the rest."

Julie turned in her chair and faced him blankly.

"To tell you the truth, Miss Corless, I thought I knew about all the big arrivals in New York. And here, an hour before I saw your article, comes this."

He reached into a pigeonhole and brought out a scrap of paper. It was a telegram, and Julie saw the typewritten words through a mist at first. Then she read:

Beyond, N. J. Reserve large suite for Marquis del Argo four o'clock to-day. C. L. JONES.

"'Beyond, New Jersey'!" Mr. Burgstaller tittered. "Marvelous place for a noble Spanish grandee to be arriving from."

Julie drew a deep breath before she suggested, "He might be an impostor."

"Well, I thought of that," said Mr. Burgstaller. "But when I read your article I came to the conclusion you wouldn't stand for the story unless the man was all right. But 'Beyond, New Jersey'!"

"The marquis is a little eccentric," Julie temporized.

Her mind was not concerned with Beyond, New Jersey. She was glancing nervously at the dial of her wrist watch, which indicated three minutes after four.

"Have you reserved the rooms for him?" she managed to ask.

"Up to ten minutes after four," replied Mr. Burgstaller. "If he doesn't show up by then I'll know the telegram isn't serious."

Julie rose, her mind concentrated on one object—escape.

"Won't you stick round?" invited the kindly manager.

"Thank you, Mr. Burgstaller, I'd like to—really. I'll have to be getting back."

"Might be a spry interview for you," he urged. "He's rather a young devil ——"

"He isn't very old," she informed him idiotically, and all but ran out of the place.

When she came to the revolving glass doors leading to the street her flight was interrupted by the entrance of several porters laden with luggage. She let them by and

THE COVERED WAGON

By Emerson Hough

ILLUSTRATED BY W. H. D. KOERNER

"Now, Men, Come On!" Called Out Banion. "Ride Them Down!"

XIV

"IT WAS the wind!" Will Banion exclaimed. "It was the sky, the earth! It was fire! I don't know what it was! I swear it was not I who did it! Don't forgive me, but don't blame me. Molly! Molly!

"It had to be sometime," he went on, since she still drew away from him. "What chance have I had to ask you before now? It's little I have to offer but my love."

"What do you mean? It will never be at any time!" said Molly Wingate slowly, her hand touching his no more.

"What do you yourself mean?" He turned to her in agony of soul. "You will not let me repent? You will not give me some sort of chance?"

"No," she said coldly. "You have had chance enough to be a gentleman—as much as you had when you were in Mexico with other women. But Major William Banion falsified the regimental accounts. I know that too. I didn't—I couldn't believe it till now."

He remained dumb under this. She went on mercilessly.

"Oh, yes, Captain Woodhull told us. Yes, he showed us the very vouchers. My father believed it of you, but I didn't. Now I do. Oh, fine! And you an officer of our Army!"

She blazed out at him now, her temper rising.

"Chance? What more chance did you need? No wonder you couldn't love a girl—any other way than this. It would have to be sometime, you say. What do you mean? That I'd ever marry a thief?"

Still he could not speak. The fire marks showed livid against a paling cheek. "Yes, I know you saved me—twice, this time at much risk," resumed the girl. "Did you want pay so soon? You'd—you'd ——"

"Oh! Oh! Oh!"

It was his voice that now broke in. He could not speak at all beyond the exclamation under torture.

"I didn't believe that story about you," she added after a long time. "But you are not what you looked, not what I thought you were. So what you say must be sometime is never going to be at all."

"Did he tell you that about me?" demanded Will Banion savagely. "Woodhull—did he say that?"

"I have told you, yes. My father knew. No wonder he didn't trust you. How could he?"

She moved now as though to leave the wagon, but he raised a hand.

"Wait!" said he. "Look yonder! You'd not have time now to reach camp."

In the high country a great prairie fire usually or quite often was followed by a heavy rainstorm. What Banion now indicated was the approach of yet another of the epic phenomena of the prairies, as rapid, as colossal and as merciless as the fire itself.

On the western horizon a low dark bank of clouds lay for miles, piled, serrated, steadily rising opposite to the course of the wind that had driven the fire. Along it more and more visibly played almost incessant sheet lightning, broken with ripping zigzag flames. A hush had fallen close at hand, for now even the frightened breeze of evening had fled. Now and then, at first doubtful, then unmistakable and continuous, came the mutter and rumble and at length the steady roll of thunder.

The Sioux War Chief

They lay full in the course of one of the tremendous storms of the high country, and as the cloud bank rose and came on swiftly, spreading its flanking wings so that nothing might escape, the spectacle was terrifying almost as much as that of the fire, for, unprotected as they were, they could make no counter battle against the storm.

The air grew supercharged with electricity. It dripped, literally, from the barrel of Banion's pistol when he took it from its holster to carry it to the wagon. He fastened the reins of his horse to a wheel and hastened with other work.

A pair of trail ropes lay in the wagon. He netted them over the wagon top and lashed the ends to the wheels to make the top securer, working rapidly, eyes on the advancing storm.

There came a puff, then a gust of wind. The sky blackened. The storm caught the wagon train first. There was no interval at all between the rip of the lightning and the crash of thunder as it rolled down on the clustered wagons. The electricity at times came not in a sheet or a ragged bolt but in a ball of fire, low down, close to the ground, exploding with giant detonations.

Then came the rain, with a blanketing rush of level wind, sweeping away the last vestige of the wastrel fires of the emigrant encampment. An instant and every human being in the train, most of them ill defended by their clothing, was drenched by the icy flood. One moment and the battering of hail made climax of it all. The groaning animals plunged and fell at their picket ropes, or broke and fled into the open. The remaining cattle caught terror, and since there was no corral, most of the cows and oxen stampeded down the wind.

The canvas of the covered wagons made ill defense. Many of them were stripped off, others leaked like sieves. Mothers sat huddled in their calicoes, bending over their tow-shirted young, some of them babes in arms. The single jeans garments of the boys gave them no comfort. Under the wagons and carts, wrapped in blankets or patched quilts whose colors dripped, they crawled and sat as the air grew strangely chill. Only wreckage remained when they saw the storm muttering its way across the prairies, having done what it could in its elemental wrath to bar the road to the white man.

As for Banion and Molly, they sat it out in the light wagon, the girl wrapped in blankets, Banion much of the time out in the storm, swinging on the ropes to keep the wagon from overturning. He had no apparent fear. His calm assuaged her own new terrors. In spite of her bitter arraignment, she was glad that he was here, though he hardly spoke to her at all.

"Look!" he exclaimed at last, drawing back the flap of the wagon cover. "Look at the rainbow!"

Over the cloud banks of the western sky there indeed now was flung the bow of promise. But this titanic land did all things gigantically. This was no mere prismatic arch bridging the clouds. The colors all were there, yes, and of an unspeakable brilliance and individual distinctness in the scale; but they lay like a vast painted mist, a mural of some celestial artist flung en masse against the curtain of the night. The entire western sky, miles on untold miles, was afire. All the opals of the universe were melted and cast into a tremendous picture painted by the Great Spirit of the Plains.

"Oh, wonderful!" exclaimed the girl. "It might be the celestial city in the desert, promised by the Mormon prophet!"

"It may be so to them. May it likewise be so to us. Blessed be the name of the Lord God of Hosts!" said Will Banion.

She looked at him suddenly, strangely. What sort of man was he, after all, so full of strange contradictions—a savage, a criminal, yet reverent and devout?

"Come," he said, "we can get back now, and you must go. They will think you are lost."

He stepped to the saddle of his shivering horse and drew off the poncho, which he had spread above the animal instead of using it himself. He was wet to the bone. With apology he cast the waterproof over Molly's shoulders, since she now had discarded her blankets. He led the way, his horse following them.

They walked in silence in the deep twilight which began to creep across the blackened land. All through the storm he had scarcely spoken to her, and he spoke but rarely now. He was no more than guide.

But as she approached safety Molly Wingate began to reflect how much she really owed this man. He had been a pillar of strength, elementally fit to combat all the elements, else she had perished.

"Wait!"

She had halted at the point of the last hill which lay between them and the wagons. They could hear the wailing of the children close at hand. He turned inquiringly. She handed back the poncho.

"I am all right now. You're wet, you're tired, you're burned to pieces. Won't you come on in?"

"Not to-night!"

But still she hesitated. In her mind there were going on certain processes she could not have predicted an hour earlier.

"I ought to thank you," she said. "I do thank you."

His utter silence made it hard for her. He could see her hesitation, which made it hard for him, coveting sight of her always, loath to leave her.

Now a sudden wave of something, a directness and frankness born in some way in this new world apart from civilization, like a wind-blown flame, irresponsible and irresistible, swept over Molly Wingate's soul as swiftly, as unpremeditatedly as it had over his. She was a young woman fit for love, disposed for love, at the age for love.

Digitized by Google

Now, to her horror, the clasp of this man's arm, even when repelled in memory, returned, remained in memory! She was frightened that it still remained—frightened at her own great curiousness.

"About—that"—he knew what she meant—"I don't want you to think anything but the truth of me. If you have deceived people, I don't want to deceive you."

"What do you mean?"

"About—that!"

"You said it could never be."

"No. If it could I would not be stopping here now to say so much."

He stepped closer, frowning.

"What is it you are saying then—that a man's a worse brute when he goes mad, as I did?"

"I expect not," said Molly Wingate queerly. "It is very far out here. It's some other world, I believe. And I suppose men have kissed girls. I suppose no girl ever was married who was not ever kissed."

"What are you saying?"

"I said I wanted you to know the truth about a woman—about me. That's just because it's not ever going to be between us. It can't be, because of that other matter in Mexico. If it had not been for that, I suppose after a time I wouldn't have minded what you did back there. I might have kissed you. It must be terrible to feel as you feel now, so ashamed. But after all ——"

"It was criminal!" he broke out. "But even criminals are loved by women. They follow them to jail, to the gallows. They don't mind what the man is—they love him, they forgive him. They stand by him to the very end!"

"Yes, I suppose many a girl loves a man she knows she never can marry. Usually she marries someone else. But kissing! That's terrible!"

"Yes. But you will not let me make it splendid and not terrible. You say it never can be—that means we've got to part. Well, how can I forget?"

"I don't suppose you can. I don't suppose that—that I can!"

"What are you going to say? Don't! Oh, please don't!"

But she still went on, strangely, not in the least understanding her own swift change of mood, her own intent with him, vis-à-vis, here in the wilderness.

"While we were walking down here just now," said she, "somehow it all began to seem not so wrong. It only seemed to stay wrong for you to have deceived me about yourself—what you really were—when you were in the Army. I could maybe forgive you up to that far, for you did—for men are—well, men. But about that other—you knew all the time we couldn't—couldn't ever—I'd never marry a thief."

The great and wistful regret of her voice was a thing not to be escaped. She stood, a very splendid figure, clean and marvelous of heart as she was begrimed and bedraggled of body now, her great vital force not abated by what she had gone through. She spread her hands just apart and looked at him in what she herself felt was to be the last meeting of their lives; in which she could afford to reveal all her soul for once to a man, and then go about a woman's business of living a life fed on the husks of love given her by some other man.

He knew that he had seen one more miracle. But, chastened now, he could, he must, keep down his own eager arms. He heard her speak once more, her voice like some melancholy bell of vespers of a golden evening:

"Oh, Will Banion, how could you take away a girl's heart and leave her miserable all her life?"

The cry literally broke from her. It seemed in her own ears the sudden voice of some other woman speaking—some unaccountable, strange woman whom she never had seen or known in all her life.

"Your—heart?" he whispered, now close to her in the dusk. "You were not—you did not—you ——"

But he choked. She nodded, not brazenly or crudely or coarsely, not even bravely, but in utter simplicity. For the time she was wholly free of woman coquetry. It was as though the elements had left her also elemental. Her words now were of the earth, the air, the fire, the floods of life.

"Yes," she said, "I will tell you now, because of what you have done for me. If you gave me life, why shouldn't I give you love—if so I could?"

"Love? Give me love?"

"Yes! I believe I was going to love you, until now, although I had promised him—you know—Captain Woodhull. Oh, you see, I understand a little of what it was to you—what made you ——" She spoke disconnectedly. "I believe—I believe I'd not have cared. I believe I could follow a man to the gallows. Now I will not, because you didn't tell me you were a thief. I can't trust you. But I'll kiss you once for good-by. I'm sorry. I'm so sorry."

Being a man, he never fathomed her mind at all. But being a man, slowly, gently he took her in his arms, drew her tight. Long, long it was till their lips met—and long then.

But he heard her whisper "Good-by," saw her frank tears, felt her slowly, a little by a little, draw away from him.

"Good-by," she said. "Good-by. I would not dare, any more, ever again. Oh, Will Banion, why did you take away my heart? I had but one!"

"It is mine!" he cried savagely. "No other man in all the world shall ever have it, Molly!"

But she now was gone.

He did not know how long he stood alone, his head bowed on his saddle.

The raucous howl of a great gray wolf near by spelled out the lonesome tragedy of his future life for him.

Quaint and sweet philosopher, and bold as she but now had been in one great and final

"I Call One on 'em Blast Yore Hide—She's a Ute. The Other is Younger an' Purtier. I Call Her Dang Yore Eyes"

imparting of her real self, Molly Wingate was only a wet, weary and bedraggled maid when at length she entered the desolate encampment which stood for home. She found her mother sitting on a box under a crude awning, and cast herself on her knees, her head on that ample bosom that she had known as haven in her childhood. She wept now like a little child.

"It's bad!" said stout Mrs. Wingate, not knowing. "But you're back and alive. It looks like we're wrecked and everything lost, and we come nigh about getting all burned up, but you're back alive to your ma! Now, now!"

That night Molly turned on a sodden pallet which she had made down beside her mother in the great wagon. But she slept ill. Over and over to her lips rose the same question:

"Oh, Will Banion, Will Banion, why did you take away my heart?"

XV

THE great wagon train of 1848 lay banked along the Vermilion in utter and abject confusion. Organization there now was none. But for Banion's work with the back fires the entire train would have been wiped out. The effects of the storm were not so capable of evasion. Sodden, wretched, miserable, chilled, their goods impaired, their cattle stampeded, all sense of gregarious self-reliance gone, two hundred wagons were no more than two hundred individual units of discontent and despair. So far as could be prophesied on facts apparent, the journey out to Oregon had ended in disaster almost before it was well begun.

Bearded men at smoking fires looked at one another in silence, or would not look at all. Elan, morale, esprit de corps were gone utterly.

Stout Caleb Price walked down the wagon lines, passing four score men shaking in their native agues, not yet conquered. Women, pale, gaunt, grim, looked at him from limp sunbonnets whose stays had been half dissolved. Children whimpered. Even the dogs, curled nose to under the wagons, growled surlily. But Caleb Price f at last the wagon of the bugler who had been at the and shook him out.

"Sound, man!" said Caleb Price. "Play up Susannah! Then sound the assembly. We've got to l a meeting."

They did have a meeting. Jesse Wingate scented mu and remained away.

"There's no use talking, men," said Caleb Price, use trying to fool ourselves. We're almost done, the things are. I like Jess Wingate as well as any man I knew, but Jess Wingate's not the man. What shall we d

He turned to Hall, but Hall shook his head; to Kels but Kelsey only laughed.

"I could get a dozen wagons through, maybe," said "Here's two hundred. Woodhull's the man, but Wo hull's gone—lost, I reckon, or maybe killed and *lying* somewhere on these prairies. You take it, Cale."

Price considered for a time.

"No," said he at length. "It's no time for one of us take on what may be done better by someone else, becau our women and children are at stake. The very best ma none too good for this job, and the more experience he h the better. The man who thinks fastest and clearest at t right time is the man we want, and the man *we'd follow* the only man. Who'll he be?"

"Oh, I'll admit Banion had the best idea of crossing t Kaw," said Kelsey. "He got his own people over, too.

"Yes, and they're together now ten miles below u And Molly Wingate—she was caught out *with* her tea by the fire—says it was Banion who started the back firing. That saved his train and ours. Ideas that come to late are no good. We need some man with the right idea at the right time."

"You think it's Banion?" Hall spoke.

"I do think it's Banion. I don' see how it can be anyone else."

"Woodhull'd never stand for it."

"He isn't here."

"Wingate won't."

"He'll have to."

The chief of mutineers, a grave and bearded man, waited for a time.

"This is a meeting of the train," said he. "In our government the majority rules. Is there any motion on this?"

Silence. Then rose Hall, of Ohio, slowly, a solid man, with three wagons of his own.

"I've been against the Missouri outfit," said he. "They're a wild bunch, with no order or discipline to them. They're not all free-soilers, even if they're going out to Oregon. But if one man can handle them, he can handle us. An army man with a Western experience—who'll it be unless it is their man? So, Mister Chairman, I move for a committee of three, yourself to be one, to ride down and ask the Missourians to join on again, all under Major Banion."

"I'll have to second that," said a voice. Price saw a dozen nods. "You've heard it, men," said he. "All in favor rise up."

They stood, with not many exceptions—rough-clad, hard-headed, hard-handed men of the nation's vanguard, and Price looked them over soberly.

"You see the vote, men," said he. "I wish Jess had come, but he didn't. Who'll be the men to ride down to Wingate?"

"He wouldn't go," said Kelsey. "He's got something against Banion; says he's not right on his war record—something ——"

"He's right on his train record this far," commented Price. "We're not electing a Sabbath-school superintendent now, but a train captain who'll make these wagons cover twelve miles a day, average.

"Hall, you and Kelsey saddle up and ride down with me. We'll see what we can do. One thing sure, something has got to be done, or we might as well turn back. For one, I'm not used to that."

They did saddle and ride—to find the Missouri column coming up with intention of pitching below, at the very scene of the massacre, which was on the usual Big Vermilion ford, steep-banked on either side, but with hard bottom.

Ahead of the train rode two men at a walk, the scout, Jackson, and the man they sought. They spied him as the man on the black Spanish horse, found him a pale and tired young man, who apparently had slept as ill as they themselves. But in straight and manful fashion they told him their errand.

The pale face of Will Banion flushed, even with the livid scorch marks got in the prairie fire the day before. He considered.

Digitized by Google

entlemen," he said after a time, "you don't know you are asking of me. It would be painful for me to that work on now."

t's painful for us to see our property lost and our fam- set afoot," rejoined Caleb Price. "It's not pleasant ne to do this. But it's no question, Major Banion, ; you or I find painful or pleasant. The question is on women and children. You know that very well."

I do know it—yes. But you have other men. Where's dhull?"

We don't know. We think the Pawnees got him among others."

Jackson"—Banion turned to his companion—"we've to make a look-around for him. He's probably across river somewhere."

Like enough," rejoined the scout. "But the first thing e all us folks to git acrost the river too. Let him go to ."

We want you, major," said Hall quietly, and even ney nodded.

'What shall I do, Jackson?" demanded Banion.

'Fly inter hit, Will," replied that worthy. "Leastways, n hit on long enough so's to git them acrost and help git ir cattle together. Ye couldn't git Wingate to work der ye no ways. But mebbe so we can show 'em fer a y er so how Old Missoury gits acrost a country. Uh-h?"

Again Banion considered, pondering many things of hich none of these knew anything at all. At length he ew aside with the men of the main train.

"Park our wagons here, Bill," he said. "See that they e well parked too. Get out your guards. I'll go up and e what we can do. We'll all cross here. Have your men t all the trail ropes out and lay in a lot of dry cottonwood gs. We'll have to raft some of the stuff over. See if ere's any wild grapevines along the bottoms. They'll elp hold the logs. So long."

He turned, and with the instinct of authority rode just half length ahead of the others on the return.

Jesse Wingate, a sullen and discredited Achilles, held to is tent, and Molly did as much, her stout-hearted and ust-minded mother being the main source of Wingate ews. Banion kept as far away from them as possible, but ad Jed sent for.

"Jed," said he, "first thing, you get your boys together nd go after the cattle. Most of them went downstream with the wind. The hobbled stuff didn't come back down the trail and must be below there too. The cows wouldn't swim the big river on a run. If there's rough country, with any shelter, they'd like enough begin to mill—it might be five miles, ten—I can't guess. You go find out.

"Now, you others, first thing, get your families all out in the sun. Spread out the bedclothes and get them dried. Build fires and cook your best right away—have the people eat. Get that bugle going and play something fast—Sweet Hour of Prayer is for evening, not now. Give 'em reveille, and then the cavalry charge. Play Susannah.

"I'm going to ride the edge of the burning to look for loose stock. You others get a meal into these people—coffee, quinine, more coffee. Then hook up all the teams you can and move down to the ford. We'll be on the Platte and among the buffalo in a week or ten days. Nothing can stop us. All you need is just a little more coffee and a little more system, and then a good deal more of both.

"Now's a fine time for this train to shake into place," he added. "You, Price, take your men and go down the lines. Tell your kinfolk and families and friends and neighbors to make bands and hang together. Let 'em draw cuts for place if they like, but stick where they go. We can't tell how the grass will be on ahead, and we may have to break the train into sections on the Platte; but we'll break it ourselves, and not see it fall apart or fight apart. So?"

He wheeled and went away at a trot. All he had given them was the one thing they lacked.

The Wingate wagons came in groups and halted at the river bank, where the work of rafting and wagon boating went methodically forward. Scores of individual craft, tipsy and risky, two or three logs lashed together, angled across and landed far below. Horsemen swam across with lines and larger rafts were steadied fore and aft with ropes snubbed around tree trunks on either bank. Once started, the resourceful pioneer found a dozen ways to skin his cat, as one man phrased it, and presently the falling waters permitted swimming and fording the stock. It all seemed ridiculously simple and ridiculously cheerful.

Toward evening a great jangling of bells and shouting of young captains announced the coming of a great band of the stampeded livestock—cattle, mules and horses mixed. Afar came the voice of Jed Wingate singing, "Oh, then, Susannah," and urging Susannah to have no concern.

But Banion, aloof and morose, made his bed that night apart even from his own train. He had not seen Wingate—did not see him till the next day, noon, when he rode up and saluted the former leader, who sat on his own wagon seat and not in saddle.

"My people are all across, Mr. Wingate," he said, "and the last of your wagons will be over by dark and straightened out. I'm parked a mile ahead."

"You are parked? I thought you were elected—by my late friends—to lead this whole train."

He spoke bitterly and with a certain contempt that made Banion color.

"No. We can travel apart, though close. Do you want to go ahead, or shall I?"

"As you like. The country's free."

"It's not free for some things, Mr. Wingate," rejoined the younger man hotly. "You can lead or not, as you like; but I'll not train up with a man who thinks of me as you do. After this think what you like, but don't speak any more."

"What do you mean by that?"

"You know very well. You've believed another man's word about my personal character. It's gone far enough and too far."

"The other man is not here. He can't face you."

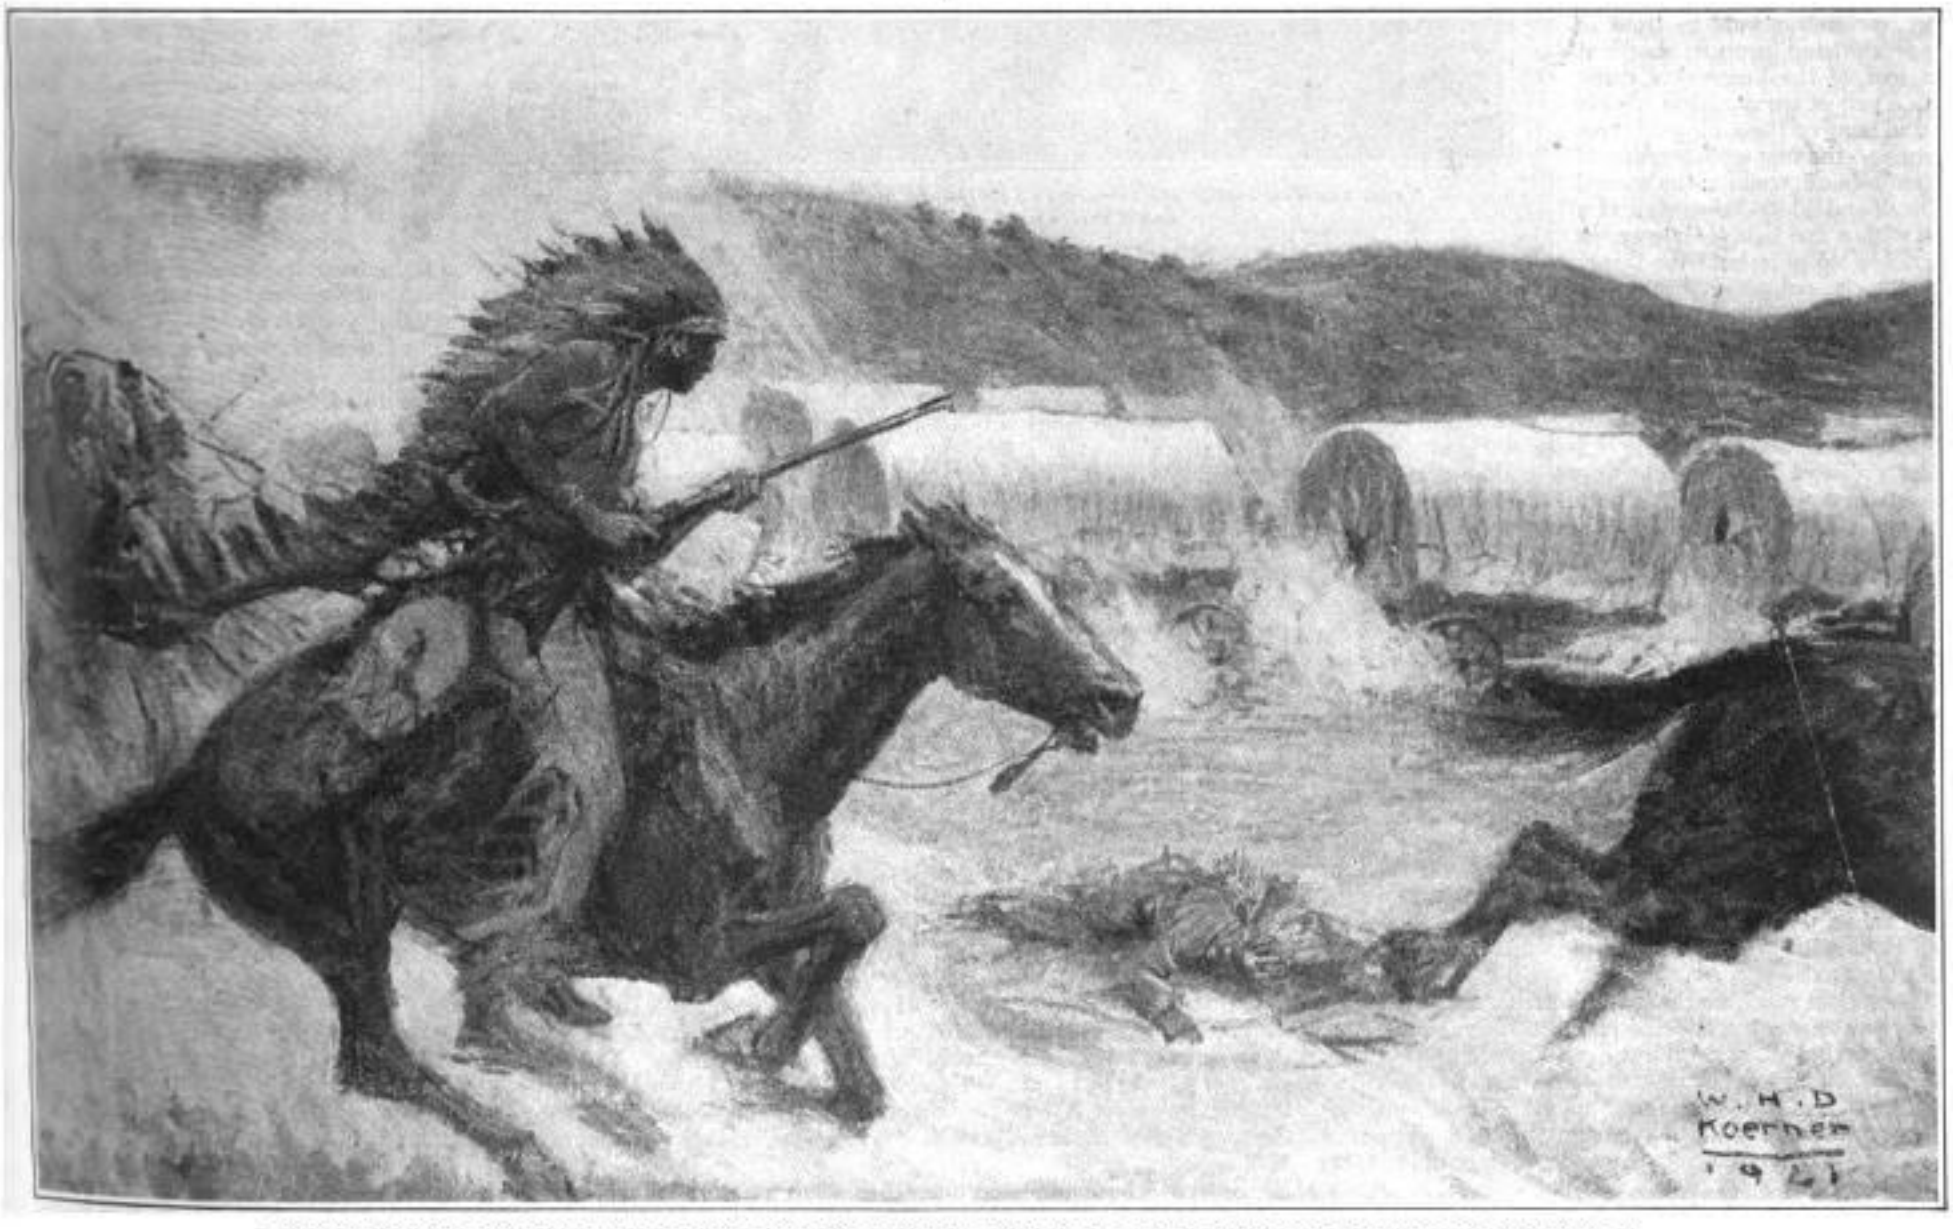
"No, not now. But if he's on earth he'll face me sometime."

Unable to control himself further, Banion wheeled and galloped away to his own train.

"You ask if we're to join in with the Yankees," he flared out to Jackson. "No! We'll camp apart and train apart. I won't go on with them."

"Well," said the scout, "I didn't never think we would er believe ye could; not till they git in trouble agin, er till a certain light wagon and mules throws in with us, huh?"

"You'll say no more of that, Jackson! But one thing: you and I have got to ride and see if we can get any trace of Woodhull."



"Like looking fer a needle in a haystack, an' a damn bad needle at that," was the old man's comment.

XVI

"ON TO the Platte! The buffalo!" New cheer seemed to come to the hearts of the emigrants now, and they forgot bickering. The main train ground grimly ahead, getting back, if not all its egotism, at least more and more of its self-reliance. By courtesy, Wingate still rode ahead, though orders came now from a joint council of his leaders, since Banion would not take charge.

The great road to Oregon was even now not a trail but a road, deep cut into the soil, though no wheeled traffic had marked it until within the past five years. A score of parallel paths it might be at times, of tentative location

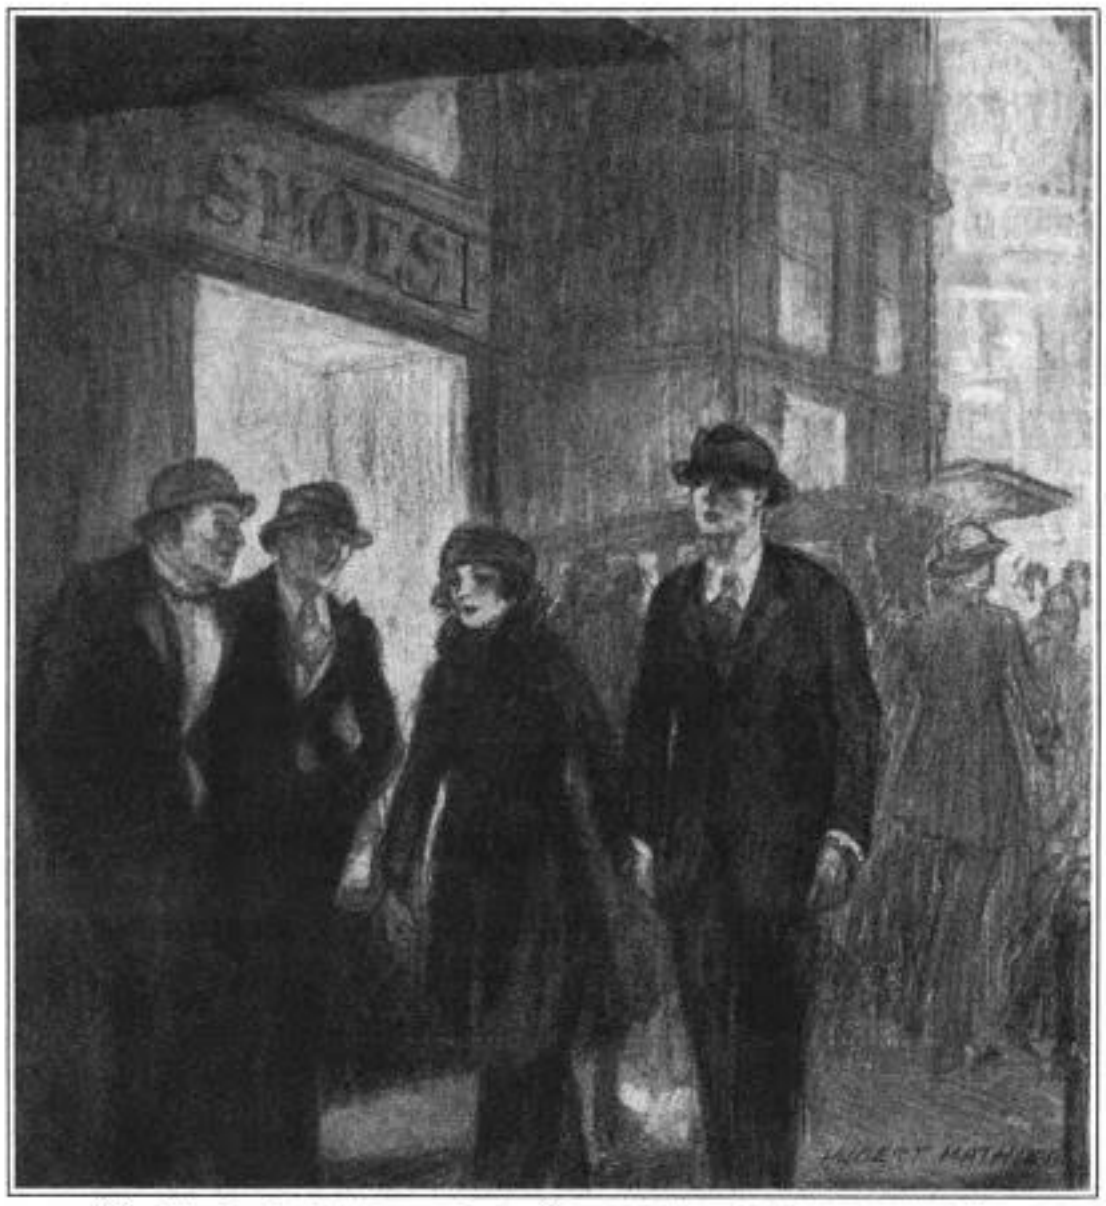
THE GOLDEN EGGS

By George Weston



ILLUSTRATED BY HUBERT MATHIEU

LIKE many a greater man—and many a wonderful woman, too, no doubt—Paul Sohmer hated to get up in the morning. Indeed, at the moment when our story opens, if you could have looked into his room while he was yet asleep you would have seen that his face was curled into an expression of discontent as if, though slumbering still, he was already subconsciously dreading the moment when the alarm clock under the head of his bed would begin its shrill command.

It was a small room—the room of a young man who had come to New York to find those golden eggs which are presently hatched into motor cars, and trips back home in fur-lined coats, and beautiful wives, and names in the papers, and similar sundry items—and for the benefit of those who may be thinking of following Paul's example it might be well to describe a little more closely the room in which our hero sleeps—dreaming perhaps of his search for the golden eggs.

In size, then, it didn't differ a great deal from those stately apartments, six feet deep and six feet long, to which we shall all make our last great move. Against one of the walls was a white iron cot of such exceeding narrowness that to sleep on it was the equivalent of an education in tight-rope balancing, and to toss upon it was one of those acrobatic feats, generally attempted to the accompaniment of a crescending roll of drums, in which the sons and daughters of Nippon are popularly supposed to excel.

At the head of the bed was a chiffonier—such as are generally seen on the sidewalk in front of the secondhand furniture shops; at the foot of the bed was a trunk with a pair of trousers draped over it; and hung on the walls were three pictures—the first a photograph of a gentle-faced woman; the second a black-and-white lithograph of a lion with a fine pair of Galways on his noble old phiz; and the third a copy of one of Degas' ballet girls, poised on her toe and looking enraptured. Mother, lion and dancing thistledown—perhaps from these you can begin to get a line on the discontented sleeper who is still doing the balancing act on his iron cot.

"Yes, You Can Look," He Seemed to Say, "But This Young Lady's Walking With Me, and I Know How to Take Care of Her!"

And now, for the benefit of those young men who can see only a few odd miles of landscape from their bedroom windows and who are thinking of going to the city to get a wider vision of life, we might do worse than describe the view from Paul's window. The first thing that met the eye was a line of staggering clothes posts, each about as long as a telegraph pole. To these posts, by means of pulleys, a network of lines was attached; and when these lines weren't freighted with family washes too numerous to mention and too mysterious to catalogue, they were nearly always sporting drying dishcloths and associated articles. Beyond these poles and lines were the backs of the houses on the next block—and that was the view which Paul enjoyed from the only window in all New York which he could call his own.

"Rrrr-rrr-rr-r!" suddenly shrilled the alarm clock under the bed.

With a movement of his arm which betokened practice Paul reached under and shut off the lever; and then, as though to demonstrate the superiority of mankind over the other animals, he started the day by drawing one of those long sighs with which the sons of Adam too frequently greet the dawn.

"Looks like rain," he thought, and reluctantly swinging his feet out upon the floor he picked up his shoes. They were typical shoes of a typical clerk—that is to say, they looked smart on top but weren't very staunch beneath.

"They'll leak if it does rain," he told himself, pushing his finger against the hole in the soles, "but they've got to last a couple of months yet. I wonder if those old rubbers are any good."
